Quantity adjustment is similar to price adjustment in that it is also linked to both market regulation and government regulation. The quantity adjustment under market regulation means that the government does not intervene and the market performs quantitative rationing regulation on its own. For example, when a commodity has supply gap, some of the commodity will be sold following the priority principle, or "first-come, first-buy," until it is sold out. When a commodity encounters demand shortfall, a portion of the demand will be met in accordance with the priority principle, or "first-come, first-sell," until all needs are met. These cases are quantity adjustment by the market. Here is another example. Under the circumstance of either commodity supply gap or demand shortfall, if some enterprises are in a monopolistic position in the market, the monopolies can employ quantity adjustment methods (such as divvying up market shares or sources of supply), which of course is not the quantity adjustment under government regulation, but the quantity adjustment in the monopolistic competition market or the monopoly market. The quantity adjustment under government regulation means that the government utilizes all sorts of quantity adjustment measures in various markets to regulate the economy to make up for the shortfalls of price adjustment.

Therefore, when we analyze the relationship between quantity adjustment and price adjustment, we have to first of all understand that either market regulation or government regulation can include price adjustment or quantity adjustment measures, and we cannot think that price adjustment is primarily linked to market regulation or that quantity adjustment is primarily linked to government regulation.

5.2.3 The Mutual Influence of Quantity Adjustment and Price Adjustment

Next, let us analyze the relationship between quantity adjustment and price adjustment in a different sense.

If quantity adjustment and price adjustment can be regarded as two adjustment methods that impact the business behavior of microeconomic units (i.e., enterprises and individuals), we can come to the conclusion that pure quantity adjustment or pure price adjustment does not exist and these two types of adjustment methods have a mutually influential relation when they work in the economy. That is, quantity adjustment, once executed, must create some price adjustment effects, and price adjustment, once executed, must also create some quantity adjustment effects. Any one of these two adjustment methods must rely on its own regulation effects as well as the effects of the other regulatory method to work on commodity supply gap or commodity demand shortfall. To better illustrate this point, we will discuss price adjustment method and quantity adjustment method separately.

A. Quantity Adjustment Effects in Price Adjustment

Based on our earlier discussions, we have known that any change of price, interest rate, wage, rent, foreign exchange rate, or tax rate is to some extent a way of price adjustment. The effects of price adjustment itself are manifested in these changes that influence the current and expected interests of microeconomic units in a way that can change their business behavior accordingly. However, after price adjustment is executed, the effects of quantity adjustment are gradually manifested.

(i) Commodity Market. If the commodity market performs autonomous price adjustment, the demand and supply of commodities will change as the price of commodities changes, and commodity supply gap or commodity demand will also change, and so does the quantitative rationing regulation that the market or monopolistic enterprises carry out. The quantity adjustment in the market (i.e., rationing regulation) following the price adjustment is done without government intervention. As a matter of fact, if price adjustment performed by the market causes commodity supply gap or commodity demand shortfall to shrink, we should consider the contraction the

result of both price adjustment and quantity adjustment.

If in the commodity market, the government performs price adjustment on purpose, there will be price adjustment effects after the government raises or lowers fixed prices. Not only that, changes to fixed prices will certainly influence non-fixed prices, the ratio of fixed prices to non-fixed prices, and the sales volume of commodities that adopt fixed prices and non-fixed prices as well as their respective weights in total commodity sales. Hence, price adjustment influences government's rationing regulation. The government needs to adjust its future regulatory measures according to changes in demand and supply brought about by the price adjustment, including adjusting quantity adjustment measures. Therefore, if the government performs price adjustment that lessens commodity supply gap or commodity demand shortfall, the result should also be attributed to both price adjustment and quantity adjustment.

(ii) Other Markets. Other markets are similar to the commodity market. When the market performs autonomous regulation of interest rate, wage, or rent or the government regulates interest rate, wage, or rent on purpose, they adopt price adjustment measures. When supply gaps in these markets change with the implementation of price adjustment measures, the effects of quantity adjustment are manifested. For example, changing interest rate will impact the allocation of credit quotas; changing wages will impact the quota of job openings; changing rent will impact the quota of rental properties. These examples demonstrate that the ultimate results obtained through regulating supply gap or demand shortfall are related not only to price adjustment but also to the joint effects of price adjustment and subsequent quantity adjustment.

The quantity adjustment effects arising from price adjustment are perhaps more obvious in other markets than that in the commodity market. This is because there are so many different commodities, and some commodities can be substituted by others. Buyers have many alternatives. If a commodity buyer is a person, he or she can also

choose to postpone consumption to a later time, i.e., a decision on consumption and savings. These are the characteristics of the commodity market. Other markets do not necessarily have these characteristics. The reason is that there are relatively few different types of "commodities" in the money market, labor market, or real estate market, and substitutions between different "commodities" in these markets are relatively few and far between. Buyers also have relatively few alternatives. Therefore, when there is a supply gap or demand shortfall, quantity adjustment effects are very obvious. For example, if there is a surplus of capital in the money market, money suppliers will try their best to find a solution, or they will lose interest income. If instead money is tight in the money market, borrowers will try their best to find funds, or they will risk business shutdown. In this case, either surplus funds seeking solutions or shortage of funds forcing borrower to secure capital will quickly give rise to rationing by the money market (allocating surplus funds to meet limited demand) or the rationing of money itself (allocating scarce funds to meet excess demand). These quantity adjustment effects will be quickly reflected in the money market, regardless of whether or not there is coordinated price adjustment. As a matter of fact, once money supply gap or demand shortfall occurs, the market will start autonomous interest rate adjustment even though the government chooses not to. Autonomous market regulation will soon take effect, together with quantity adjustment effects. It is the same with the quantity adjustment effects in terms of the adjustment of employment and rent.

B. Price Adjustment Effects During Quantity Adjustment

Price adjustment effects during the execution of quantity adjustment further reveal the mutually influential relation between quantity adjustment and price adjustment. The autonomous quantity adjustment by the market or the planned quantity adjustment by the government must take advantage of rationing regulation to influence the current and expected interests of microeconomic units in a way

that affects their business behavior. As long as quantity adjustment is launched, price adjustment effects will be gradually revealed. This situation is similar to quantity adjustment effects during price adjustment.

(i) **Commodity Market.** If the commodity market performs autonomous quantity adjustment, i.e., demand and supply are adjusted according to quantitative rationing so that limited supply can meet excess demand or limited demand can be allocated to excess supply, price will change accordingly. Because under the circumstance where supply gap or demand shortfall coexist, autonomous quantitative rationing regulation will surely entice the buyers whose needs are not met to raise their bid price or the suppliers whose needs are not met to lower their offer price. Therefore, price adjustment effects (even though price adjustment is autonomous) are reflected during quantity adjustment.

If quantity adjustment is executed by the government in the commodity market, price adjustment effects will also appear after the launch of quantity adjustment. For example, the government adopts some measures to adjust the scope of commodities that are sold at fixed prices. This will undoubtedly influence the prices of the commodities that are sold at nonfixed prices, driving them up or down, which will impact the demand and supply in the commodity market. For another example, the government can adopt measures to equally allocate the supply of commodities that have a supply gap or equally allocate the market of commodities that have a demand shortfall, which is also one way of quantity adjustment. Once again, the government can adopt measures to allocate the supply or demand of commodities that have supply gap or demand shortfall according to the target priority determined by the government. This method of quantity adjustment will also cause price to change. Overall, quantity adjustment measures adopted by the government, regardless of which method is used, will demonstrate price adjustment effects.

(ii) **Other Markets.** Price adjustment effects of the quantity

adjustment carried out by the government are more obvious in other markets, such as the capital market, the labor market, the real estate market, and the foreign exchange market, than in the commodity market. This has something to do with the differences between the commodity market and other markets discussed in our analyses of quantitative adjustment effects during price adjustment.

For example, if the government sees money supply gap or demand shortfall in the money market and chooses quantity adjustment measures such as adjusting the credit scale, the ratio of planned credit scale to market credit scale, and the required deposit reserve ratio, the changes of money demand and supply in the money market will influence market interest rate by driving it upward or downward, even though the official interest rate may remain unchanged. Changing market interest rates will sooner or later influence the official interest rates. This is reflective of the price adjustment effects of quantity adjustment in the money market.

Another example is the labor market. If the government sees supply gap or demand shortfall in the labor market and adopts such quantity adjustment measures as adjusting the employment size or the ratio of permanent jobs to contract jobs, these measures, in spite of having no direct influence on wages, will undoubtedly influence the speed of labor migration and the direction of employment, which will sooner or later have an impact on wages as well as the demand and supply of labor.

The real estate market and the foreign exchange market are similar. As long as the government adopts some quantity adjustment measures, they will always have some price adjustment effects, and thus the demand and supply in these markets will be influenced by both quantity adjustment and price adjustment.

5.2.4 The Coordination of Quantity–Price Adjustment Measures in the Commodity Market

The mutually influential relation between quantity adjustment

and price adjustment helps the government regulate the economy as it consciously coordinates quantity adjustment measures with price adjustment measures. Keep in mind that if the government cannot consciously enforce coordinated adjustment measures, the market itself will autonomously coordinate price adjustment and quantity adjustment so that they can work together. Under economic disequilibrium conditions, if sole market regulation (including price adjustment and quantity adjustment that the market performs autonomously) fails to mitigate losses from economic disequilibrium, the government can consciously coordinate quantity adjustment measures and price adjustment measures so that government regulation can work.

Next, we will separately discuss two situations, one in which only commodity supply gap exists and the other in which commodity supply gap and commodity demand shortfall coexist.

A. Coordinating Quantity–Price Adjustment Measures in Presence of Commodity Supply Gap

We have to first of all point out that the commodity market, the money market, the labor market, the real estate market, and the foreign exchange market are all closely interconnected, with changes in supply and demand in one market leading to changes in supply and demand in another market. We cannot think that we can alleviate or close the commodity supply gap by taking adjustment measures only in the commodity market. Although it seems necessary to adopt adjustment measures in the commodity market, as commodity supply gap is revealed by signs of supply shortages in the commodity market, the changes resulting from the adjustment measures in the commodity market with other markets unchanged will not improve or eliminate commodity shortages. Therefore, to coordinate quantity–price adjustment measures in the presence of commodity supply gap actually means to coordinate quantity–price adjustment measures both in the commodity market and in other relevant markets.

Per our earlier discussions, the priority for quantity adjustment

measures and price adjustment measures when they are jointly performed in the presence of commodity supply gap should be determined by the degree of disequilibrium. That is, the higher the degree of disequilibrium, the heavier the quantity adjustment measures should weigh. When commodity supply gap and commodity demand shortfall exist simultaneously, the respective weights of quantity adjustment and price adjustment should also be determined by the degree of disequilibrium. Next, let me list the ways of coordinating quantity–price adjustment measures available in the presence of normal commodity supply gap¹:

(i) In the commodity market, government regulatory measures targeting commodity supply gap that fall into the category of price adjustment include:

1. Increasing the selling prices of shortage commodities in order to reduce demand

2. Lowering the prices of the production materials used in producing shortage commodities in order to increase supply

Government regulatory measures targeting commodity supply gap that fall into the category of quantity adjustment include:

3. Adjusting the range of the commodities sold at fixed price in order to reduce demand, for instance, selling certain commodities at fixed price instead of non-fixed price or vice versa

4. Initiating quota controls over some commodities and removing or loosening quota controls over other commodities in order to reduce demand

5. Adjusting the range of commodities sold at fixed price in order to increase supply, i.e., selling commodities at non-fixed price instead of fixed price or vice versa, which is the exact opposite of point (3)

6. Adjusting the range of commodities that are subject to sales quota in order to increase supply. The commodities that are subject to quota, freed from quota controls, or subject to lower controls are exactly opposite to point (4)

(ii) Some adjustment measures can be adopted in the money

market to tackle commodity supply gap. They can be coordinated with the adjustment measures in the commodity market. Of these measures, those considered price adjustment are:

7. Increasing interest rate with the intention of suppressing the purchase of shortage commodities in order to reduce demand

8. Lowering interest rate with the intention of increasing the production of shortage commodities in order to increase supply

Those measures applicable to the money market that are considered quantity adjustment are:

9. Shrinking the credit scale with the intention of suppressing the purchase of shortage commodities in order to reduce demand

10. Expanding the credit scale with the intention of increasing the production of shortage commodities in order to increase supply

11. In order to reduce demand, adjusting the respective weights of planned credit and market credit in total credit scale with the intention of reducing the demand for shortage commodities

12. In order to increase supply, adjusting the respective weights of planned credit and market credit in total credit scale with the intention of increasing the production of shortage commodities

(iii) Some adjustment measures can be adopted in the labor market to tackle commodity supply gap. They can be coordinated with the other adjustment measures in the commodity market. Of these measures, those considered price adjustment are:

13. In order to reduce demand, controlling the growth rate of wages until wages are lowered so that consumption funds in society and their growth rate can be reduced

14. In order to increase supply, increasing wages for the sectors that produce shortage commodities as well as for the sectors that supply production materials used in producing shortage commodities and allowing their wages to grow to a certain level

Those measures applicable to the labor market that are considered quantity adjustment are:

15. In order to reduce demand, adjusting the credit scale,

controlling the labor force and employment growth rate, and adjusting the respective weights of permanent jobs and contract jobs in total job openings so that the quantity and growth rate of consumption funds in society can be reduced

16. In order to increase supply, loosening restrictions on the number of people employed by the sectors that produce shortage commodities as well as those who supply production materials used in the production of shortage commodities and allowing the number of people employed by these sectors to grow to some extent

(iv) Some adjustment measures can be applied in the real estate market to tackle commodity supply gap. They can be coordinated with the other adjustment measures in the commodity market. Of these measures, those considered price adjustment are:

17. Adjusting rental rate so as to suppress aggregate demand in order to reduce demand

18. Adjusting real estate prices to ease the pressure from commodity shortages in order to reduce demand

19. Adjusting rental rate to increase the production of shortage commodities in order to increase supply

20. Adjusting real estate prices to increase the production of shortage commodities in order to increase supply

Those measures applicable to the real estate market that are considered quantity adjustment are:

21. Increasing the supply of leasable and usable land and housing to ease the pressure from commodity shortages in order to reduce demand

22. Adjusting the size of leasable and usable land as well as that of housing supply to increase the production of shortage commodities in order to increase supply

(v) These price adjustment and quantity adjustment measures listed above are only applicable to the commodity market, the money market, the labor market, and the real estate market. However, there are other adjustment measures available to tackle commodity supply

gap. Of these measures, those considered price adjustment are:

23. Using foreign exchange regulation to reduce domestic demand and increase domestic supply, for example, adjusting foreign exchange rates and using the changes of exchange rates to influence import, export, and money inflows and outflows

24. Using tax rate regulation (in which tax rate is basically treated as price adjustment) to suppress domestic demand and increase domestic supply, for example, adjusting tax rates and using the changes of tax rates to influence investment and consumption as well as the demand and supply of commodities and labor

Those measures considered quantity adjustment are:

25. Imposing control on foreign exchange or loosening control on foreign exchange to influence import, export, and money inflows and outflows so as to suppress domestic demand and increase domestic supply

26. Adjusting fiscal expenditures to influence investment and consumption as well as the demand and supply of commodities and labor so as to suppress domestic demand and increase domestic supply

As a matter of fact, we can list a few other adjustment measures in addition to those listed above, and each one of them can be further broken down into several specific measures. Therefore, we will have various combinations of measures to choose from according to specific situations in each period to tackle commodity supply gap, taking advantage of both price adjustment effects and quantity adjustment effects and avoiding solely relying on one type of adjustment measures (i.e., price adjustment measures only or quantity adjustment measures only) or the negative effects from only adopting one type of adjustment measures in a market.

We also have to keep in mind that coordinating price adjustment and quantity adjustment in the presence of commodity supply gap that we are discussing has a third connotation, besides the first connotation (which refers to using both price adjustment measures and quantity adjustment measures) and the second connotation

(which refers to using adjustment measures in the commodity market as well as some appropriate adjustment measures in other markets). The third connotation of coordinating quantity–price adjustment measures is that quantity–price adjustment can be carried out to suppress demand or increase supply. Only by understanding these three connotations of coordinating quantity–price adjustment measures can we truly recognize the role that quantity–price adjustment measures play in balancing national income.

The third connotation of coordinating quantity–price adjustment measures is undoubtedly an option available to manage the economy under the circumstance of commodity supply gap. But coordinating quantity–price adjustment measures is more important if commodity supply gap and commodity demand shortfall coexist. In this circumstance, it appears that it would be quite difficult to handle economic complexities if quantity–price adjustment measures had only the first and second connotations.

B. Coordinating Quantity–price Adjustment Measures Under the Coexistence of Commodity Supply Gap and Commodity Demand Shortfall

When commodity supply gap and commodity demand shortfall coexist, adjustment measures are coordinated in the same way as when only commodity supply gap exists. In this circumstance, the government needs to not only coordinate quantity adjustment measures and price adjustment measures but also apply coordinated measures in many other markets that are correlated.

However, this situation is different from the one in which only commodity supply gap exists. When commodity supply gap and commodity demand shortfall coexist, it is more important to implement and coordinate adjustment measures with the purpose of both suppressing demand and increasing supply. The reason for this is that the coexistence of supply gap and demand shortfall makes it difficult to enforce government regulation. If the government tackles only one of the two issues, suppressing demand or increasing supply,

demand may continue to grow while the government tries to suppress demand, or supply may continue to decrease while the government tries to increase supply. This is a phenomenon called economic "side effects." To alleviate the "side effects," we will have to adopt a combination of adjustment measures.²

There are five different ways of coordinating adjustment measures. They are as follows: coordinating the quantity adjustment intended to adjust demand with the price adjustment intended to adjust supply, coordinating the price adjustment intended to adjust demand with the quantity adjustment intended to adjust supply, coordinating the quantity adjustment intended to adjust demand with the quantity adjustment intended to adjust supply, coordinating the price adjustment intended to adjust demand with the price adjustment intended to adjust supply, and coordinating the quantity-price adjustment intended to adjust demand with the quantity-price adjustment intended to adjust supply. Next, we will discuss each of them separately.

1. Coordinating the quantity adjustment intended to adjust demand with the price adjustment intended to adjust supply. This way of coordination features its ability to adjust aggregate demand using relatively powerful measures so as to prevent significant price fluctuations and to narrow commodity supply gap. Meanwhile, to prevent the adjustments to demand from negatively impacting economic growth, e.g., to prevent the excessive suppression of aggregate demand from stunting the growth of supply, we can apply price adjustment measures targeting supply so as to gradually alleviate commodity supply gap, which will help ease both commodity supply gap and commodity demand shortfall.

If the quantity adjustment intended to adjust demand and the price adjustment intended to adjust supply are well coordinated, the government's intention to adjust demand and supply can be realized simultaneously without any direct conflict. The main reason is that using quantity adjustment measures to adjust demand and using price

adjustment measures to adjust supply to some extent allow microeconomic units to change their economic behavior in accordance with different signals. For example, they can adjust investment and consumption according to the quantity signals so as to meet the government's requirement for demand adjustment, or they can adjust investment and consumption according to the price signals so as to meet the government's requirement for supply adjustment. This can reduce the frictions of economic behavior among microeconomic units and also help alleviate supply gap and demand shortfall in the economy.

2. Coordinating the price adjustment intended to adjust demand and the quantity adjustment intended to adjust supply. The coordination of these adjustment measures is basically the same as what we have just discussed. That is, both ways of coordinating adjustment measures can serve the government's purpose of gradually alleviating commodity supply gap and commodity demand shortfall while avoiding direct conflicts in the process of reaching the dual goals.

However, this way of coordinating adjustment measures is different from the prior one in the following way: Since price adjustment measures are used to adjust demand, i.e., using changes in the price of some commodities or changes in interest rate or rent to influence investment and consumption, in addition to a possibility of relatively strong resistance from microeconomic units, the effects of the adjustment measures may also only be seen after a relatively long period of time. Therefore, this method of coordinating adjustment measures is primarily suitable for immature commodity supply gap. On the other hand, as supply is influenced by quantity adjustment measures, which have fairly quick adjustment effects, demand may experience relatively large swings as a result. Therefore, this method of coordinating adjustment measures is primarily suitable for immature commodity supply gap. In other words, if relatively severe commodity supply gap has already been in existence and demand

adjustment has become a pressing task, the first method will probably be more appropriate in order to simultaneously alleviate commodity supply gap and commodity demand shortfall. If the situation is different, we can adopt price adjustment measures to suppress demand and quantity adjustment measures to increase supply.

3. Coordinating the quantity adjustment intended to adjust demand with the quantity adjustment intended to adjust supply. Under the circumstance where both commodity supply gap and commodity demand shortfall exist, adopting quantity adjustment measures with the purpose of adjusting both demand and supply is very likely to require the following preexisting conditions: The market has been in such a bad shape and the market mechanism has been so underdeveloped that price adjustment cannot function, and it is necessary to apply quantity adjustment to both demand and supply to alleviate commodity supply gap and commodity demand shortfall.

At this point, there is one issue that is worthy of our attention: We need to prevent any conflict or offsetting effects between quantity adjustment measures intended to adjust demand and those intended to adjust supply. How can we do that? Generally speaking, we have to take the following three points into consideration:

First, in terms of quantity adjustment, we need to apply different measures in different markets according to different situations. For example, in order to adjust demand, we can start with the money market and adjust the credit scale or turn to the real estate market and adjust the land available for transfer and the quantity of housing supplies. In order to adjust supply, we can start with the labor market and adjust the size of employment and the ratio of permanent jobs and contract jobs or target the commodity market and adjust the type and quantity of certain commodities that are sold at fixed price rather than non-fixed price.

Second, the quantity adjustment measures, though implemented in the same market or in the same area, can be treated appropriately based on the structural differences so that the offsetting effects

between demand-targeted and supply-targeted measures can be avoided. For example, in terms of fiscal expenditures, we can appropriately adjust the structure of fiscal spending in the following way: We can adjust the fiscal spending amount of some projects in order to adjust demand while adjusting the fiscal spending amount of other projects in order to adjust supply. Another example is bank credit, which can also be appropriately adjusted through structural adjustment of credit expenditures: We can adjust credit availability to some industrial sectors or certain manufacturers in order to adjust demand while adjusting credit amount for other sectors or manufacturers in order to adjust supply.

Third, even if we can apply different quantity adjustment measures in different markets according to different situations in each market or adjust the structure of quantity adjustment according to specific measures adopted in each market and make proper arrangements, sometimes it is inevitable to see conflicts arising as long as quantity adjustment measures are adopted to adjust demand and supply simultaneously. Therefore, we need to consider the lagging effect, the direct and indirect effects of each adjustment measure, as well as the net effect resulting from positive effects being offset by negative effects. The timing of the lagging effect varies as quantity adjustment measures vary. As a result, we can prevent, to some extent, the adjustment measures intended to adjust demand from offsetting the adjustment measures intended to adjust supply during the same period of time. Since there are direct and indirect effects and various adjustment measures have different direct and indirect effects, the offsetting of the adjustment measures intended to adjust demand and those intended to adjust supply can be mitigated. The final effect of various adjustment measures adopted by the government is dependent upon the net effect as a result of positive effects being offset by negative effects. Commodity supply gap will not necessarily be exactly equal to commodity demand shortfall. As a matter of fact, either commodity supply gap is larger than commodity demand

shortfall or vice versa. Therefore, the net effect of adjustment measures as a result of positive effects being offset by negative effects will help us detect which of the supply gap or demand shortfall has been largely alleviated.

4. Coordinating the price adjustment intended to adjust demand and the price adjustment intended to adjust supply. Generally speaking, the way of coordinating adjustment measures has a prerequisite that is slightly different from the former one (i.e., coordinating the quantity adjustment intended to adjust demand and the quantity adjustment intended to adjust supply). The prerequisite for this way of coordination is largely applicable when the market is not in such a bad shape, and the market mechanism, although incomplete, is far from being severely underdeveloped. Thus, price adjustment measures, rather than quantity adjustment measures, can be adopted to alleviate commodity supply gap and demand shortfall.

Meanwhile, we will have to pay attention to the same issue as the one related to the former way of coordinating adjustment measures that we have discussed, i.e., we need to prevent potential conflicts between the price adjustment measures intended to adjust demand and the price adjustment measures intended to adjust supply as well as the effect of one measure offsetting another. Therefore, the arrangement under this way of coordinating adjustment measures is the same as under the former way, i.e., some price adjustment measures are applied in some markets while different price adjustment measures are applied in other markets. For example, to adjust demand, we can change interest rate or rent, while in order to adjust supply, we can change the prices of shortage commodities or lower the prices of production materials used to produce shortage commodities. In addition, we can take advantage of the structural adjustment of prices so that the price adjustment intended to adjust demand and the price adjustment intended to adjust supply will not conflict with each other. For example, in order to adjust demand, we can change the tax rate applicable to the production and sales of

certain products, while we can change the tax rate applicable to the production and sales of the other products to adjust supply.

The lagging effect, the direct and indirect effect of the adjustment measures, as well as the net effect as a result of positive effects being offset by negative effects that we discussed in the former way of coordinating adjustment measures are also worthy of our attention when we apply the current way of coordinating adjustment measures. As long as different price adjustment measures are properly arranged, we will at least be able to significantly reduce, if not completely eliminate, any potential conflict between different price adjustment measures.

5. Coordinating the quantity–price adjustment intended to adjust demand with the quantity–price adjustment intended to adjust supply. Real economic activities can be complex. The four ways of coordinating adjustment measures discussed above may seem too simple when commodity supply gap and demand shortfall coexist and therefore are not necessarily applicable to complex economic activities. It is probably necessary to coordinate the quantity–price adjustment intended for both demand and supply, i.e., it is necessary to apply quantity–price adjustment intended to adjust demand while applying quantity–price adjustment intended to adjust supply.

In this scenario, one of the main problems we will encounter is that these adjustment measures tend to be offsetting each other. All that has been discussed above is also applicable to this scenario.

Yet we have to pay attention to the dual coordination. This means that in order to tackle commodity supply gap, it is necessary to coordinate quantity adjustment and price adjustment so that demand can be effectively controlled or that in order to tackle commodity demand shortfall, it is also necessary to coordinate quantity adjustment and price adjustment so that demand can be increased and supply can be decreased effectively. Therefore, the first tier of coordination lies in the coordinated quantity–price adjustment measures to tackle either commodity supply gap or commodity

demand shortfall, and the second tier of coordination lies in the coordinated quantity–price adjustment measures to tackle the coexisting commodity supply gap and demand shortfall. These two tiers of coordination are important. If any tier of coordination is not well executed, adjustment measures may offset each other. Research on the socialist economic "side effects" as well as some treatments has revealed that the dual coordination of these two tiers is feasible and that the key point is to arrange measures properly and take the lagging effect of various adjustment measures into consideration.³

貳 商品市场上数量—价格调节措施的运用

一、广义与狭义的数量—价格调节措施

在经济只存在商品供给缺口的条件下，要做到商品市场的事后均衡，有赖于采取数量—价格措施，而且应当根据商品市场事先的不均衡程度，确定数量调节措施与价格调节措施在整个调节措施中的位置。简单地说，商品市场事先的不均衡状态越严重，数量调节措施相对而言就越重要；商品市场事先的不均衡状态轻一些，那么价格调节措施相对而言就不重要一些。

在讨论数量与价格调节措施时，必须了解到这里所说的价格调节是指广义的价格调节，数量调节也是指广义的数量调节。广义的价格调节与狭义的价格调节不同。狭义的价格调节仅指商品价格（包括生产资料价格和消费品价格）的调节，例如降低价格以导致成本下降，从而促进供给；提高价格以导致制成品销路下降，从而抑制需求，这样都可以达到消除商品供给缺口的目的。广义的价格调节则把价格调节范围从商品价格调节扩大到各个市场上的价格的调节。资金市场上的利息率调节、劳务市场上的工资率调节、房地产市场上的价格变动和租金率调节、外汇市场上的汇率调整等等，都属于广义的价格调节。广义的数量调节也与狭义的数量调节不同。狭义的数量调节仅指商品数量（包括生产资料数量和消费品数量）的调节，例如在一定的情况下扩大自由购销的商品数量或缩小自由购销的商品数量，缩小按固定价格配售的商品数量或扩大按固定价格配售的商品数量等等，都有助于增加供给或抑制需求，从而消除商品供给的缺口。广义的数量调节则把数量调节范围从商品数量调节扩大到各个市场上的数量调节。例如：

在资金市场上，信贷规模的调节就是一种数量调节。二元信贷制度（计划信贷与市场信贷并存的制度）的运用，以及计划信贷数量与市场信贷数量各自在信贷总量中所占的比例的变化，也属于数量调节范围。再以中央银行调节手段中的存款准备率调节来说，尽管存款准备率调节与利息率调节有相似之处，但这是数量调节，而不是价格调节，因为存款准备率的变动直接影响着商业银行的信贷规模。

在劳动力市场上，就业规模的调节、劳动力的组合方式的变更、退休年龄的调整，以及二元用工制度（固定工制度与合同工制度的并存）的运用等，都属于数量调节范围。

在房地产市场上，对房地产出租和出售的数量控制就是这一市场上数量调节方式。

在外汇市场上，不采取汇率调整而采取诸如出口津贴、进出口限额、外汇管制之类的措施，也都属于数量调节范围。

此外，财政调节手段基本上是一种广义的数量调节，而不是价格调节。关于财政支出的数量调节性质，是比较容易理解的。那么财政收入的调节的性质又如何呢？政府债券的出售主要是数量调节方式，因为这是需要确定通过出售政府债券而增加的政府收入数量。国有资产的出售，情况也是如此。这里涉及价格问题，但数量调节是首要的。对于税收的调节，应当持有这样的看法：税收总量的确定、税收结构的调整无疑是数量调节，而税率的确定和调整，也具有一定程度的数量调节的性质。税收数量多少不一定涉及价格调节所依据的市场供求比例问题。当然，在西方经济学家的论述中，也有把税收看成是公共产品市场上的价格的观点。现在姑且不去评论这种观点正确与否到何种程度，即以公共产品市场来看，它与以上所提到的商品市场、资金市场、房地产市场、外汇市场等等在性质上是有区别的。这是因为，最重要的公共产品——国防、司法与治安，即所谓“安全、公正与秩序”——的惟一供给者是政府，需求者别无选择。这些最重要的公共产品价格由供方所决定，这种价格一般不涉及供求比例是否协调的问题或供给价格弹性和需求价格弹性大小的问题。因此，即使我们可以认为税率调节也在一定程度上具有价格调节的性质，但它与一般市场上的价格调节是很不相同的。我们同样可以认为税率的变动在一定程度上属于数量调节之列。

二、数量调节、价格调节与市场调节、政府调节的关系

如上所述，无论是在单独发生商品供给缺口还是在商品供给缺口和商品需求缺口并存时，数量调节与价格调节总是配合使用的。在了解二者的配合方式之前，有必要先对二者之间的关系进行分析。

能不能简单地认为价格调节主要同市场调节有关，而数量调节主要同政府调节有关呢？应该说，这种提法在理论上没有根据，而在实际经济生活中，也与事实不符。价格调节，既有市场调节中的价格调节，又

有政府调节中的价格调节，市场调节中的价格调节是指：在政府不干预的条件下，如果国民经济中出现了供大于求或供不应求的现象，那么市场的供求关系将导致价格的变动，而价格的变动又导致供求关系的变动，最终使供求趋于平衡。价格的这种自发的变动就是市场调节中的价格调节。政府调节中的价格调节是指：如果国民经济中出现了供大于求或供不应求的现象，政府对价格进行干预，例如提高或降低固定价格，对市场价格规定了最高限价或最低支持价格，以及给市场价格以一定的浮动幅度等等，以影响供求关系。因此，政府调节中的价格调节就是指政府运用价格杠杆来调节市场的供求。以上关于市场调节中的价格调节和政府调节中的价格调节的解释，既适用于狭义的价格调节，又适用于广义的价格调节。

数量调节的情况与此相似。数量调节也是既与市场调节有关，又与政府调节有关。市场调节中的数量调节是指：在政府不干预的条件下，由市场自身按数量进行配额调节。比如说，在商品有供给缺口时，一定量的商品按照“谁先来，谁来买”的优先原则进行销售，直到销售完毕为止；在商品有需求缺口时，一定份额的市场按照“谁先来，谁先卖”的优先原则进行销售，直到市场被占领完毕为止。这些都属于市场的数量调节。又如，在商品有供给缺口或需求缺口时，如果一定的市场上有垄断企业存在，那么垄断企业也可能采取数量调节方式（如分配市场份额，分配货源），但这不是政府的数量调节，而是垄断竞争市场或垄断市场上的数量调节。政府调节中的数量调节是指：政府利用各种数量调节手段在各种市场上进行调节，以弥补价格调节之不足。

由此可见，在分析数量调节与价格调节之间的关系时，首先应当了解到，不管是市场调节还是政府调节，每一种调节都包括价格调节和数量调节，而不能认为价格调节主要同市场调节有关或数量调节主要同政府调节有关。

三、数量调节与价格调节的相互渗透关系

接着，让我们再就另一个意义上的数量调节和价格调节之间的关系进行分析。

如果把数量调节和价格调节都看成是影响微观经济单位（企业和个人）的经济行为的一种调节方式，那么可以认为，纯粹的数量调节和纯粹的价格调节都是不存在的，这两种调节方式在发挥作用的过程中，彼

此有一种相互渗透的关系，即数量调节进行后，必然兼有价格调节的效应，而价格调节进行后，也必然兼有数量调节的效应。这两种调节方式中的任何一种，都是依赖着本调节方式的效应和另一种调节方式的效应而发挥其消除商品供给缺口与商品需求缺口的作用的。为了更好地说明这一点，不妨从价格调节方式和数量调节方式两方面来加以论述。

（一）价格调节中的数量调节效应

根据前面的论述，我们已经知道，凡是价格的变动、利息率的变动、工资率的变动、租金率的变动、汇率的变动以及一定程度上的税率的变动，都是价格调节方式。价格调节方式本身的效应在于通过这种变动而影响微观经济单位的现期利益和预期利益，进而影响它们的经济行为。但一旦实行了价格调节，数量调节的效应也就逐步表现出来。

1. 商品市场的情况。在商品市场上，如果是市场的自发的价格调节，那么在价格变动以后，商品的供求比例会发生变动，从而随着商品供给缺口和商品需求缺口的变动，由市场自身按数量进行的配额调节也就发生变动，或者由垄断企业按数量进行的配额调节发生变动。市场上这种继价格调节之后而发生的数量调节（配额调节）都是在政府不干预的条件下实现的。实际上，如果说通过市场的价格调节而导致商品供给缺口或商品需求缺口有所缩小的话，那么应当把这种缩小看成是价格调节和数量调节都发挥了作用的结果。

在商品市场上，如果是政府的有目的的价格调节，那么在政府提高或降低固定价格之后，不仅发生了价格调节效应，而且由于固定价格的变动而势必影响了非固定价格，影响了固定价格与非固定价格的比例，影响了按固定价格销售的商品和按非固定价格销售的商品各自的销售数量以及它们在总销售数量中的比例，这样，也就对政府的配额调节发生影响。政府需要根据价格调节而引起的供求变化状况，调整下一步的调节措施，其中就包括了数量调节措施的调整。因此，如果说政府通过价格调节而导致商品供给缺口或商品需求缺口有所缩小的话，那么这种缩小同样是价格调节和数量调节都发挥了作用的结果。

2. 其他市场的情况。其他市场上的情况与商品市场上的情况是类似的。当市场自发地进行利息率、工资率、租金率等等调节时，或者，当政府有目的地进行利息率、工资率、租金率等等调节时，虽然这些都是价格调节，但一旦这些市场上的供求缺口随之而变动以后，数量调节的效应也就表现出来了。例如，利息率的变动将影响信贷配额的调整；

工资率的变动将影响就业岗位的配额的调整；租金率的变动将影响租赁对象的配额的调整。这表明，供求缺口的最终调节结果，固然与价格调节的作用有关，但也与价格调节以及随之而发生的数量调节二者的共同作用有关。

在其他市场上，价格调节中的数量调节效应也许比商品市场上的价格调节中的数量调节效应更加明显一些。这是因为，商品的种类是繁多的，各种商品之间存在着一定的替代关系，需求者在购买对象之间的选择余地较大，而且，假定商品需求者是居民个人，这么他们还可以在现期消费与延期消费之间作出选择，即在消费与储蓄之间作出选择，这些都可以被看作是商品市场的特色。其他市场则不一定具有以上所谈的这种特色。这是因为，资金市场、劳务市场、房地产市场上的“商品”的种类较少，各种“商品”之间的替代性较弱，需求者的选择余地也较小，因此，只要出现了供给缺口或需求缺口，数量调节的效应就明显地表现出来。比如说，资金市场一出现资金过剩，资金供给者就竭力想给过剩的资金找出路，否则利息损失过大，而在资金市场一出现资金不足时，资金需求者也会多方设法获取资金，否则整个经济活动就会停顿下来。这样，无论是过剩的资金寻找出路还是资金的短缺所引起的对资金的追求，都将迅速导致资金市场的配额调节（过剩资金在有限的资金需求者之间的分配）或资金本身的配额调节（不足的资金在众多的需求者之间的分配）的出现。数量调节的这种效应不管在资金市场上是否出现了价格调节都会迅速反映出来。实际上，只要有了资金供给缺口或资金需求缺口，即使政府不进行利息率调节，市场的自发和利息率调节就已经开始了，于是市场的自发的利息率调节效应也就很快地同数量调节效应共同发生作用。工作率调节和租金率调节中的数量调节效应，也可以用同样的道理来加以说明。

（二）数量调节中的价格调节效应

数量调节中的价格调节效应进一步说明了数量调节和价格调节之间的相互渗透关系。数量调节是通过数量配额而发挥其调整供求比例的作用的。无论是市场自发的数量调节还是政府有目的的数量调节，都通过配额的调整而影响微观经济单位的现期利益和预期利益，进而影响它们的经济行为。但只要数量调节被推出，价格调节的效应也就逐步表现出来，这些情况与价格调节中数量调节效应的发挥过程是相似的。

1. 商品市场的情况。在商品市场上，如果市场自发地进行数量调

节，即按照数量配额来调整供求关系，使有限的供给符合众多的需求者，或使有限的需求符合众多的供给者，那么这样一来，价格也会随之变动。这是因为，在供给缺口或需求缺口存在的条件下，采取了自发的数量配额的调节，必然会使得未能满足要求的需求者提高价格；使得未能满足要求的供给者降低价格，所以在数量调节过程中，价格调节（尽管是自发的价格调节）的效应将得到反映。

如果在商品市场上实现的是政府的数量调节，那么在实现这种数量调节以后，也会表现出价格调节的效应。比如说，政府采取措施，调整按照固定价格销售的商品的范围，这就不可避免地影响非固定价格销售的商品的价格，使之上升或下降，从而影响商品市场上的供求比例。又如，政府采取措施，对供给不足或需求不足的商品实行平均分配货源或平均分配市场的办法，这也是数量调节的方式之一，它同样会带来价格的变动，影响商品供求关系。再如，政府采取措施，对供给不足或需求不足的商品根据政府所确定的目标原则，按优先顺序排列来分配货源或分配市场，这种数量调节方式无疑也会引起价格的变动。可见，政府采取的数量调节中，无论哪一种数量调节方式，都兼有价格调节的效应。

2. 其他市场的情况。政府采取的数量调节中的价格调节效应，在资金市场、劳务市场、房地产市场、外汇市场上的反映同样要比在商品市场上的反映更加明显些和突出些。这与前面在分析价格调节中的数量调节效应时所提到的商品市场与其他市场的区别有关。

例如，在资金市场上，如果政府根据资金供给的缺口或资金需求的缺口而采取调整信贷规模，调整计划信贷与市场信贷的比例，或调整存款准备率等数量调节方式，那么即使政府制定的利息率不变，但由于资金市场资金供求状况的变化必然影响到市场利息率，使之或升或降，而市场利息率的变动迟早会影响政府制定的利息率。这就是资金市场上数量调节中的价格调节效应的反映。

又如，在劳务市场上，如果政府根据劳务供给的缺口或劳务需求的缺口而采取调整就业规模或调整固定工所占比例和合同工所占比例等数量调节方式，那么即使这些措施并不直接影响工资率，但它们却无疑地会影响劳动力的流动速度和劳动力的职业选择方向，而劳动力的流动状况和职业选择方向的改变迟早也会影响工资率，进而影响劳动力的供求。

关于房地产市场和外汇市场上的情况，也与此相似，即只要政府采

取了数量调节，它们总会兼有价格调节的效应，使这些市场的供求关系受到数量调节和价格调节二者的共同影响。

四、商品市场上数量—价格调节措施的配合

对数量调节与价格调节之间存在的相互渗透关系的了解，有助于政府在进行调节时自觉地把数量调节措施与价格调节措施配合运用。要知道，假定政府不能自觉地采取这些配合措施，那么市场本身也会自发地把市场的价格调节与市场的数量调节结合起来，使它们共同发生作用。在经济处于非均衡的条件下，如果已经不可能单纯依靠市场调节（包括市场自发的价格调节和市场自发的数量调节）来减少非均衡所造成的损失的话，那么政府自觉地把数量调节与价格调节配合起来加以运用，就可以更好地发挥政府调节的作用。

下面，按商品供给缺口的存在以及商品供给缺口和商品需求缺口的并存这两种不同的情况分别论述。

（一）商品供给缺口存在条件下数量—价格调节措施的配合

在这里首先应当指出，商品市场、资金市场、劳务市场、房地产市场、外汇市场等等是紧密地联系在一起，一个市场的供求关系的变化会影响到另一个市场的供求关系。我们不能认为商品供给缺口的缓和或消除仅仅靠商品市场上采取调节措施就能奏效的。虽然商品供给缺口所表现出来的是商品市场上的供不应求，从而在商品市场上采取调节措施十分必要，但如果其他市场的情况不变，那么商品市场这一市场上的变化并不能导致商品供不应求现象的缓和或消失。因此，在讨论商品供给缺口存在条件下数量—价格调节措施的配合时，实际上意味着商品市场以及其他有关市场上数量—价格调节措施的配合。

如上所述，在商品供给缺口存在的条件下，数量调节与价格调节共同使用中的主次排列应以非均衡程度大小为依据，即非均衡程度越大，数量调节所占的比重就越大。商品供给缺口与商品需求缺口并存时，数量调节与价格调节各自所占比重的大小也同样地以非均衡程度为转移。下面，让我们根据商品供给缺口存在条件下的一般情况，把可供选择的数量—价格调节措施的配合方式列举如下¹：

A. 在商品市场上：针对商品供给的缺口，可供选择的政府调节措施中，属于价格调节的有：

①从抑制需求的角度着眼，提高短缺商品的销售价格；

②从增加供给的角度着眼，降低用于生产短缺商品的各种生产资料的价格；

属于数量调节的有：

③从抑制需求的角度着眼，调整按固定价格销售的范围，例如把某些商品从按非固定价格销售改为按固定价格销售，把另一些商品从按固定价格销售改为按非固定价格销售；

④从抑制需求的角度着眼，对某些商品实行配额制，对另一些商品，则取消配额制或放宽配额限制；

⑤从增加供给的角度着眼，调整按固定价格销售的范围。哪些商品应从按固定价格销售改为按非固定价格销售，哪些商品应从按非固定价格销售改为按固定价格销售，与③项所指的相反；

⑥从增加供给的角度着眼，调整商品配售制的实行范围。哪些商品实行配额制，哪些商品取消配额制或放宽配额制，与④项所指的相反。

B．在资金市场上：针对商品供给的缺口，可以相应地采取调节措施，这些调节措施应当同商品市场上所采取的调节措施相配合。属于价格调节的有：

⑦从抑制需求的角度着眼，提高利息率，旨在压缩对短缺商品的购买；

⑧从增加供给的角度着眼，降低利息率，旨在促进短缺商品的生产；

属于数量调节的有：

⑨从抑制需求的角度着眼，紧缩信贷规模，旨在压缩对短缺商品的购买；

⑩从增加供给的角度着眼，扩大信贷规模，旨在促进短缺商品的生产；

☐从抑制需求的角度着眼，调整计划信贷和市场信贷二者在信贷总量中的相对份额，旨在压缩对短缺商品的购买；

☐从增加供给的角度着眼，调整计划信贷和市场信贷二者在信贷总量中的相对份额，旨在促进短缺商品的生产。

C．在劳务市场上：针对商品供给的缺口，可以相应地采取调节措施，这些调节措施应当同商品市场上所采取的调节措施相配合。属于价格调节的有：

☐从抑制需求的角度着眼，抑制工资增长率，直到降低工资率，以

压缩社会的消费基金及其增长；

☐从增加供给的角度着眼，提高短缺商品的生产部门以及向短缺商品生产部门提供生产资料的那些部门的工资率，并容许其工资有一定的增长；

属于数量调节的有：

☐从抑制需求的角度着眼，调整就业规模，控制就业人数及其增长率，调整固定工与合同工在就业人数中的相对份额，旨在压缩社会的消费基金及其增长；

☐从增加供给的角度着眼，放宽短缺商品的生产部门以及向短缺商品生产部门提供生产资料的那些部门的就业人数限制，容许其就业人数有一定的增长。

D. 在房地产市场上：针对商品供给的缺口，也可以采取一些调节措施，这些措施同样应当同商品市场上所采取的调节措施配合。属于价格调节的有：

☐从抑制需求的角度着眼，调整租金率，以达到压缩社会需求的目的；

☐从抑制需求的角度着眼，调整房产价格，以减轻短缺商品市场所面临的压力；

☐从增加供给的角度着眼，调整租金率，旨在促进短缺商品的生产；

☐从增加供给的角度着眼，调整房产价格，以促进短缺商品的生产；

属于数量调节的有：

☐从抑制需求的角度着眼，扩大可供租让使用的土地面积或增加可供出售的房屋数量，以减轻短缺商品市场所面临的压力；

☐从增加供给的角度着眼，调整土地租让使用的规模，调整房屋出售的规模，以促进短缺商品的生产。

E. 以上所列举的各项价格调节措施和数量调节措施，还只限于商品市场、资金市场、劳务市场、房地产市场上的调节措施。除此以外，针对商品供给的缺口，还有其他若干调节措施可供选择。属于价格调节的有：

☐通过外汇方面的调节，达到抑制国内需求和增加国内供给的目的。例如，调整汇率，并通过汇率的变动来影响进口、出口、资金流

入、资金流出；

□通过税率方面的调节（这里把税率当作一定程度上的价格调节方式来对待），达到抑制国内需求和增加国内供给的目的。例如，调整税率，并通过税率的变动来影响投资和消费，影响商品和劳务的供给量和需求量；

属于数量调节的有：

□采取外汇管制措施或放宽对外汇的管制，以影响进口、出口、资金流入、资金流出，进而达到抑制国内需求和增加国内供给的目的；

□通过财政支出的调整，影响投资和消费，影响商品和劳务的供给量和需求量，进而达到抑制国内需求和增加国内供给的目的。

实际上，除了以上这一系列调节措施以外，还可以再列举一些调节措施。而且，每一项调节措施中，又可以再细分为若干具体的措施。这样，对于商品供给的缺口，就可以根据每个时期的具体情况，采取各种不同的组合方式，兼收价格调节和数量调节的效果，而避免单纯采取某一类调节措施（即单纯采取价格调节或单纯采取数量调节）或单纯在某一个市场上采取调节措施所带来的不利影响。

还应当注意到，这里所谈的商品供给缺口存在条件下的数量—价格调节措施的配合，除了它的第一种含义（指既采取价格调节措施，又采取数量调节措施）、第二种含义（指既在商品市场上采取调节措施，又在其他市场上采取相应的调节措施）以外，还有第三种含义，这就是：既可以从抑制需求的角度着手进行数量—价格调节，也可以从增加供给的角度着手进行数量—价格调节。只有从上述三种含义的数量—价格调节措施的配合来理解，才能真正认识到数量—价格调节措施对于国民收入均衡的作用。

第三种含义的数量—价格调节措施的配合，对于商品供给缺口存在条件下的经济管理，无疑是可供选择的。但更加重要的，则是在商品供给缺口与商品需求缺口并存条件下的第三种含义的数量—价格调节措施的配合。在这种条件下，如果只有第一种含义和第二种含义的数量—价格调节，显然难以应付复杂的经济形势。

（二）商品供给缺口和商品需求缺口并存条件下数量—价格调节措施的配合

与商品供给缺口单独存在条件下的调节措施的配合方式相同，在商品供给缺口和商品需求缺口并存的条件下，政府既需要把数量调节与价

格调节配合起来运用，也需要在若干个相互联系的市场上采取配合性的调节措施。

与商品供给缺口单独存在条件下的情况不同，在商品供给缺口和商品需求缺口并存时，将更需要从抑制需求和增加供给这两个不同的方面来采取调节措施并使之配合。这是因为，两种缺口的并存给政府调节带来了困难，如果只从抑制需求或增加供给中的某一方面着手调节，那么很可能在抑制需求的同时，需求又增长了，或者在增加供给的同时，供给又下降了。这就是经济中的“并发症”的表现之一。而对于这种“并发症”，惟有采取不同调节措施的配合，才能使它趋于缓和。²

需要探讨的是调节措施配合中的五种不同的方式，即：从调整需求着手的数量调节与从调整供给着手的价格调节的配合；从调整需求着手的价格调节与从调整供给着手的数量调节的配合；从这两个不同角度着手的数量调节配合；从这两个不同角度着手的价格调节配合；以及两个不同角度的数量—价格调节的配合。现分别讨论如下：

1．从调整需求着手的数量调节与从调整供给着手的价格调节的配合。这种配合方式的特点在于能够以较强的措施来调整社会总需求，防止物价波动过大，以缓解商品供求的缺口，同时，为了不至于使得调整需求的措施对经济增长产生较大的消极作用，例如，为了不至于因抑制社会总需求过度而阻碍供给的增加，从调整供给方面着手的价格调节措施可以逐渐缓解商品供求的缺口，也就是有利于商品供给缺口和商品需求缺口都趋于缓和。

这种配合方式只要运用得当，政府调整需求的意图与调整供给的意图可以同时达到而不至于发生直接的冲突。这主要是因为，用数量调节方式来调整需求和用价格调节方式来调整供给，在一定程度上可以使微观经济单位根据不同的信号来改变自己的行为。比如说，根据数量信号来调整自己的投资和消费，以适应政府调整需求的要求；根据价格信号来调整自己的投资和消费，以适应政府调整供给的要求。这样，就可以减少微观经济单位自身经济行为中的摩擦，对缓和社会的两个缺口也是有利的。

2．从调整需求着手的价格调节与从调整供给着手的数量调节的配合。这里所讨论的调节措施的配合方式与前面谈到的那种调节措施的配合方式在性质上基本上是一样的，即二者都可以逐步实现政府的既要缓和商品供给缺口，又要缓和商品需求缺口的目的，同时也可以避免在实

现这两个目的过程中的直接冲突。

但与前一种调节措施配合方式的区别在于：由于在调整需求方面采取的是价格调节措施，即用变更某些商品的价格的方式或用变更利率、租金率的方式来影响投资和消费，不仅有可能遭到微观经济单位较大的抵制，而且调节的效果可能需要较长的时间才能表现出来，因此，这种调节措施的配合方式主要适用于商品供求缺口尚未十分严重的时候，另一方面，由于在调整供给方面采取的是数量调节措施，虽然调节效应的反映较快，但也有可能导致需求的变动幅度较大，因此，这种调节措施的配合方式同样主要适用于商品供求缺口尚未十分严重的时候。换言之，如果客观上已经形成了较为严重的商品供求缺口的形势，调整需求已经成为更为迫切的任务时，那么为了同时缓和商品供给缺口和商品需求缺口，前一种调节措施的配合方式可能比较适合些。如果情况不是那样，那么，可以采取以价格调节来抑制需求和以数量调节来增加供给的调节措施配合方式。

3. 从调整需求和调整供给这两个角度着手数量调节的配合。在商品供给缺口与商品需求缺口同时存在的情况下，如果从调整需求和调整供给这两个角度都着手进行数量调节，那么这多半有一个前提条件，就是市场情况很不好，市场机制很不完善，以至于价格调节难以发挥应有的作用，于是有必要从调整需求和调整供给这两个角度都采取数量调节，以便缓和商品供给的缺口和商品需求的缺口。

这时，一个值得注意的问题是：要防止从需求方面着手的数量调节措施同从供给方面着手的数量调节措施发生冲突，防止二者的效应的抵消。怎样防止呢？一般来说，可以考虑以下三点：

第一，在数量调节方面，根据具体情况，在不同的市场上采取不同的措施。例如，为了调整需求，可以从资金市场着手，采取调整信贷规模的措施，或者，从房地产市场着手，采取调整土地转让使用和房屋出售的数量；而为了调整供给，则可以从劳务市场着手，采取调整就业规模和调整两种用工制度的就业人数的比例等措施，或者，在商品市场上，对按固定价格销售和按非固定价格销售的商品种类和数量进行调整。

第二，即使是同一个市场上或同一个领域内的数量调节措施，也可以从结构的角度加以妥善的处理，以免从需求方面采取的措施同从供给方面采取的措施彼此抵消。例如，在财政支出措施方面，可以通过财政

支出结构调整进行妥善的处理：为了调整需求，可以调整某些财政支出项目的数额，而为了调整供给，则可以调整另一些财政支出项目的数额。又如，在银行信贷规模方面，也可以通过信贷支出结构调整进行妥善的处理：为了调整需求，可以调整某些产业部门或某些产品生产单位的信贷规模，而为了调整供给，则可以调整另一些产业部门或另一些产品生产单位的信贷数额。

第三，即使在数量调节方面既能根据不同市场情况而采取不同的措施，又能根据每一个市场的具体措施而对数量调节的结构进行了调整，并作出妥善的安排，但只要同时采取数量调节措施来调整需求和调整供给，那么调节效应之间的冲突有时仍然很难避免。为此，就需要考虑每一项调节措施的效应的滞后性、效应的直接性与间接性，以及正负效应相抵后的净效应问题。效应的滞后期的长短因数量调节措施的不同而不同，这样，就可以使得在需求方面采取的调节措施与在供给方面采取的调节措施不至于在同一时间内发生效应的抵消。效应有直接效应与间接效应的区别，不同的调节措施的直接效应与间接效应不一样，从而也可以缓和需求方面的调节措施同供给方面的调节措施的效应的抵消。至于政府所采取的各种调节措施的最终效果如何，则要根据正负效应相抵以后的净效应大小来确定。商品供给缺口与商品需求缺口不一定是恰好相等的，实际上，不是商品供给缺口更大些，就是商品需求缺口更大些，因此，调节措施的正负效应相抵后的净效应大小将有助于判明两个缺口中究竟哪一个缺口得到较大的缓和。

4. 从调整需求和调整供给这两个角度着手价格调节的配合。这种配合方式的前提条件总的说来与前一种配合方式（从调整需求和调整供给这两个角度着手数量调节的配合）有所不同，即这种配合方式的前提条件多半是市场情况并不十分严重，市场机制虽然不完善，但也没有达到严重不完善的程度，从而可以通过价格调节手段来缓和商品供给缺口和商品需求缺口，而不必采取数量调节措施。

这时，所需要注意的问题仍然与前一种配合方式在运用中所需要注意的问题一样，即需要防止从需求方面着手的价格调节措施同从供给方面着手的价格调节措施发生冲突，防止二者的效应的抵消。因此，同前一种配合方式运用时所要作出的妥善安排一样，在运用这种配合方式时，可以在一些市场上采取某些价格调节措施，而在另一些市场上采取另一些价格调节措施。比如说，为了调整需求，可以变更利息率、租金

率；为了调整供给，可以变更短缺商品的价格和降低用于生产短缺商品的生产资料的价格。此外，还可以通过价格结构的调整，使用于调整需求的价格调节与用于调整供给的价格调节不至于发生抵触。例如，为了调整需求，可以变更某些产品的生产和经营的税率；为了调整供给，则可以变更另一些产品的生产和经营的税率，等等。

在分析前一种配合方式时所提到的每一项调节措施的效应的滞后问题、效应的直接性与间接性问题，以及正负效应相抵后的净效应问题，在运用这种配合方式时也是同样需要注意的。只要把不同的价格调节措施安排妥当，它们之间的效应冲突即使还不能完全避免，至少可以大为减少。

5. 从调整需求与调整供给这两个角度着手的数量—价格调节的配合。实际的经济生活是复杂的。在面临商品供给缺口与商品需求缺口并存的场合，以上四种配合方式都比较简单，从而不一定适用于复杂的经济生活。因此，有可能需要从需求与供给两个不同的角度进行数量—价格调节的配合，即为了调整需求，需要采取数量—价格调节，而为了调整供给，也需要采取数量—价格调节。

在这种情况下，所遇到的一个主要问题仍然是调节措施的效应的相互抵消问题。前面所分析的一切，在这里也是适用的。

然而在这里需要注意的是双重配合的问题。这是指：在应付商品供给缺口时，需要把数量调节与价格调节配合使用，以便有效地抑制需求，增加供给；而在应付商品需求缺口时，也需要把数量调节与价格调节配合使用，以便有效地增加需求，减少供给。因此，第一层配合体现于单独应付商品供给缺口或商品需求缺口时数量—价格调节措施的配合，第二层配合体现于在应付商品供给缺口与商品需求缺口并存时数量—价格调节措施的配合，这两层配合都是重要的。如果某一层的配合不当，调节的效应就会抵消。但有关社会主义经济运行过程中的“并发症”及其对策的研究，已经表明，这两层配合仍然是可行的，关键在于措施的安排得当和考虑到不同调节措施的效应滞后问题。³

Chapter 6 Easing Supply and Demand Mismatch Under Economic Disequilibrium Conditions

第六章 经济非均衡条件下供求矛盾的缓解

6.1 THE COUNTER EFFECTS OF GOVERNMENT PRICE ADJUSTMENT

6.1.1 The Rigidity of Supply Gap Under Economic Disequilibrium Conditions

As we know, current economic disequilibrium in China is not only due to an underdeveloped market but also the fact that enterprises are not yet goods producers who make their own business decisions and take responsibility for their own profits and losses. Therefore, when commodity supply gap occurs, especially under the coexistence of commodity supply gap and commodity demand shortfall, even if quantity adjustment or price adjustment measures adopted by the government can be effective to some extent, government regulation will have limited results and the mismatch between supply and demand cannot be reduced to a large extent if the enterprise operation mechanism is not truly overhauled and enterprises are still affiliated with and controlled by government administrative institutions. This should be the starting point of our research on current Chinese economic issues.

To further illustrate these issues, let us start with the features of

supply gap and demand shortfall under the conditions in which enterprises are not goods producers who can make their own business decisions or are responsible for their own profits and losses and the market has not been fully developed.

In the presence of supply gap, if the economy is in the midst of the abovementioned conditions, it will be unlikely for the market to deliver an accurate message about supply gap to enterprises because it has not been fully developed, nor will it be able to encourage enterprises to allocate resources available to produce commodities to fill the supply gap. As enterprises lack the operation mechanism of a normal goods producer who can make its own business decisions and is responsible for profits and losses, they are not only unable to receive an accurate message on supply gap but also unable to adjust their allocation of the means of production even after receiving those messages, or unable to obtain from the market all necessary resources needed to adjust production, or even unable to increase their own profits by providing the market with commodities in demand. Obviously, supply gap is rigid and cannot be alleviated via market self-adjustment.

In the presence of demand shortfall, the nature of demand shortfall and its characteristics are similar to that of supply gap in many ways. Supply gap drives prices higher, whereas in the case of demand shortfall, commodity overstock or sluggish sales do not necessarily lower the prices, which may even ride higher in tandem with the prices of shortage commodities. Why? It has something to do with economic disequilibrium. Because the market has not been fully developed, it is impossible for the market to deliver to enterprises accurate messages about demand shortfall, nor is it possible for the market to encourage enterprises to transfer the resources that experience inventory buildup or sluggish sales to other areas. Because enterprises lack the operation mechanism of a normal goods producer who makes its own business decisions and is responsible for profits and losses, they are not only unable to receive accurate information

on demand shortfall but also unable to adjust the allocation of the means of production even after receiving the information, or unable to effectively transfer all excess resources after adjusting production, or may even incur some real losses due to providing the market with commodities that are not in demand. Obviously, demand shortfall is also rigid and cannot be alleviated via market self-adjustment.

Because the rigidity of supply gap and demand shortfall does exist under economic disequilibrium conditions, the market cannot fully develop and government adjustment measures, regardless of the implementation of quantity adjustment measures or price adjustment measures, cannot produce satisfactory results if the status of enterprises is not changed. Not only that, in some cases, some adjustment measures adopted by the government to reduce supply gap or demand shortfall may even bring about counter effects. That is, supply gap that is expected to shrink after the implementation of adjustment measures turns out to be wider after the adjustment, or demand shortfall that is expected to shrink after the implementation of adjustment measures turns out to be worse afterward. These counter effects are worthy of our attention.

6.1.2 Commodity Supply Gap and the Counter Effects of Government Price Adjustment Under Economic Disequilibrium Conditions

The potential counter effects from government regulation under economic disequilibrium conditions can be viewed from two different perspectives, supply gap and demand shortfall.

Let us assume commodity supply gap occurs and the government decides to apply price adjustment measures to increase supply and suppress demand. As long as enterprises lack a proper operation mechanism and the market is not fully developed, the following things may happen:

A. The government removes price control to stimulate supply and uses market price to support supply growth. However, as resources are

constrained and limited resources are distributed by means of rationing, it is impossible for supply to grow proportionally after the price decontrol. In other words, the growth rate of supply will be lower than that of price. On the other hand, after price controls are lifted, because enterprises are not guided by the maximization of self-interest or budget constraints, rising prices may prompt them to harm consumers (i.e., passing higher costs along to consumers) or the nation (i.e., lowering fiscal income due to higher costs and lower income) in order to adapt to new economic conditions. As a result, removing price control as a method to stimulate supply growth will fail to reach its goals and only cause vicious price escalation.

B. After the government removes price control, as resources are limited and the market has not been fully developed, each enterprise will fare differently depending on whether it can obtain limited supply of resources via rationing. Some are neither able to secure the supply of production materials nor bear price increases or higher costs. As a result, they are forced to cut back or stop production, which directly reduces supply. Other enterprises are able to secure the supply of production materials via rationing. However, these enterprises, in anticipation of price increases due to limited supply of resources, are more likely to withhold production materials so that they can profit from reselling production materials instead of using them in production. This situation also leads to lower supply.

C. Assuming that the government chooses to lower interest rates to stimulate supply. This method may have another outcome. As banks and enterprises lack a proper operation mechanism, lowering interest rates stimulates the supply of some products, but the demand for these products increases by an even larger quantity. As a result, the growth of demand exceeds the growth of supply, driving commodity supply gap even wider. In other words, both aggregate imbalance and structural imbalance get even worse.

D. If the government removes price control or raises prices to suppress demand, there may be some unwanted consequences. One of

the reasons for this is that enterprises lack budget constraints or the mechanism to maximize self-interest. The public sector is no different. These entities will not lower their purchasing power at all simply because prices are higher. As a result, price increases far outpace demand decreases, or demand basically stays put without any significant change. This is a very common occurrence. A commonly known phenomenon that is worthy of our attention—public purchasing power is not constrained by rising prices—can be explained by the lack of the profit maximization mechanism or budget constraints.

E. Another reason why the price decontrol or increase initiated by the government to suppress demand may usually give rise to unwanted consequences is that price increases tend to bring about uncertainty or disturb people's expectations. When people realize that supply is not going to improve in the short term, they will accelerate consumption in order to avoid the depreciation of cash on hand or the deposits in their bank account, changing the situation of "withholding cash and waiting for purchase opportunities" to "using cash to expedite purchases," or the situation of "holding bank deposits and waiting for purchase opportunities" to "withdrawing bank deposits to expedite purchases." As a result, price rise will not curb demand. Instead, it will stimulate purchases. Using cash to expedite purchases or withdrawing bank deposits to expedite purchases will in turn aggravate commodity supply gap, drive prices higher, and further disturb people's expectations.

F. There is one more reason why the price decontrol and price increase initiated by the government to suppress demand may normally give rise to unwanted consequences. That is, when resources are scarce, commodities are in short supply and the market is not fully developed, and some microeconomic units (including not only small business owners, private enterprises, and enterprises but also residents) may add a special meaning to the purchase of consumer goods, which is called "extra investment," as people's economic

behavior has been distorted. For example, people buy gifts, such as expensive cigarettes, luxury wine, high-end electronics, precious herbal materials, and luxury clothes. The purchase of these goods is not constrained by high prices. Since purchasers consider these commodities to be a sort of "extra investment," they believe the benefits exceed the costs. Because of high prices, these gifts are getting even more precious and their benefits are getting larger. In addition, rising prices are less likely to restrain consumers from spending as a way to show off wealth. Even though prices are high, spending of this nature will not necessarily decline.

G. If the government raises interest rates to suppress demand, it will be unlikely to see any good effect, at least not from the investment perspective. Because enterprises lack a proper operation mechanism and money supply is limited, enterprises will not necessarily lower their demand for capital because of higher funding cost. This demonstrates why relatively small increases in interest rates are unable to curb investment. Considerable increases in interest rates will likely have opposite consequences, i.e., normal business production and operation are impacted, and while demand is suppressed, supply is also subdued. Subdued supply is exactly contradictory to what the government has hoped for, i.e., closing the supply gap.

All the above has fully revealed that price adjustment implemented by the government to alleviate supply gap under economic disequilibrium conditions is likely to generate some counter effects. As long as we understand the current situations in China, we will not blindly trust price adjustment to alleviate supply gap.

6.1.3 Commodity Demand Shortfall and the Counter Effects from Government Price Adjustment Under Economic Disequilibrium Conditions

From the structural imbalance perspective, it is highly likely to have commodity demand shortfall concurrent with commodity supply

gap. In the case of commodity demand shortfall, if the government decides to apply price adjustment measures to increase demand and suppress supply so as to reduce commodity inventories, it is likely to see counter effects resulting from government price adjustment, which prevents the government from achieving its goals. The reason remains the same. That is, enterprises lack a proper operation mechanism and the market has not been fully developed.

A. The government executes price adjustment by lowering the price of some commodities to stimulate demand and suppress supply. However, because the producers of these commodities are not responsible for their own profits and losses nor are the buyers of these commodities, price signals will not be effective in stimulating demand and suppressing supply as expected. Demand may increase slightly and supply may decrease slightly, but the changes are not compatible with the magnitude of price declines.

B. Assuming that some enterprises see the signal of declining prices and start to lower production. Because asset ownership is not clear, enterprises are not going to deal with excess production materials or labor. As a result, lowering production only causes higher losses that in turn reduce the proceeds that the state collects. The new macroeconomic situations may force the government to alter its original decision of lowering prices.

C. Assuming that some enterprises see the signal of lowering prices and start to increase the purchase of some commodities. Because enterprises operate under the circumstance of limited resources, they must adjust raw materials and production equipment to realign their product portfolios so as to increase the production of shortage commodities and reduce the production of the products that have poor sales. If they only increase the purchase of some commodities (attracted by lower prices) while unable to secure complementary products(due to resource supply constraints), they will have to stop buying the commodities of reduced prices, which makes it hard for the government to reach its goal of stimulating demand. Or

they will have to store the commodities of reduced prices instead of using them to increase the supply of shortage commodities, hoping that they can resell at higher prices, which also makes it hard for the government to fulfill its plan of product restructuring.

D. If the government uses price adjustment measures to increase demand in the presence of commodity demand shortfall, it may impact the enterprises that do not make their own decisions and are not responsible for profits and losses in the following way: They not only increase purchases by taking advantage of reduced prices but also use the additional purchases to produce the commodities that have already experienced inventory buildup or sluggish sales. As a result, although demand increases, unjustified supply also increases. Commodity demand shortfall, instead of shrinking, may end up wider, which is also inconsistent with the government goal.

E. If the government lowers interest rates to increase demand with the intention of reducing commodity demand shortfall, the increase of supply might not be lower than the increase of demand, because banks and enterprises lack a proper operation mechanism. On the contrary, if the government increases interest rates to control supply with the intention of reducing commodity demand shortfall, it may also end up with flat or slightly lower supply, for the same reason that banks and enterprises lack a proper operation mechanism. Therefore, if banks and enterprises lack a proper operation mechanism, interest rate adjustment with the intention of reducing commodity demand shortfall will barely fulfill government goals.

All the above has fully revealed that price adjustment implemented by the government to alleviate demand shortfall under economic disequilibrium conditions is likely to have some counter effects. As long as we understand the current situations in China, we will not blindly trust price adjustment to alleviate demand shortfall.

6.1.4 Behind the Dual-Track Price System: Potential Issues Related to Rationing Adjustment

Under economic disequilibrium conditions with a relatively large commodity supply gap, it is not possible for the government to remove price control. We have discussed this point earlier. During the transition from the traditional product economy to the new commodity economy, the dual-track price system will be maintained for a relatively long period of time. This is the second best choice. Under the dual-track price system, the economy has all kinds of frictions, causing all kinds of irrational economic behavior, as can be reasonably expected. We would like to discuss two points here. First, if the economy cannot remove price control immediately and transit to uniform market price, nor is it possible to return to the traditional product economy, i.e., uniform price under the mechanism of the planned economy, the only alternative currently available is the dual-track price system. Between two necessary evils, the lesser will be selected. It is harmful to either immediately adopt the uniform market price system at the current stage or return to the traditional sole price system of the planned economy. Either way will cause more damage than the dual-track price system does. Therefore, we would maintain rather than terminate the unreasonable dual-track price system at the current stage. Second, the dual-track price system will undoubtedly cause all kinds of issues. One of the most noticeable issues is the illegal trading carried out by someone who takes advantage of the gap between two prices and earns huge undue profits, which will harm not only consumers but also the nation. We should point out that the gap between two prices is inseparable from the dual-track price system. There would not be a dual-track price system if there were no gap between two prices. The issue is not the existence of price gap, but who illegally profits from the price gap and how he or she takes advantage of the price gap to earn undue profits. As a matter of fact, many of the issues related to the dual-track price system have precisely exposed the fundamental flaws inherent in the traditional economic system. Only after reaching behind the dual-track price system can we discover the core of the issues.

The first point mentioned above is almost indisputable. If we remove price control and terminate the dual-track price system, we will end up with nothing but social and economic turmoil. Currently, we cannot rush to this decision. Meanwhile, it is also impossible or unfeasible for us to return to the traditional sole price system of the planned economy. If we do that, the economy will shrink and dwindle.

As for the second point mentioned above, we need to discuss it in greater detail. The uniform price mechanism in the market can be realized only when demand is relatively close to supply. When supply gap is fairly large, even if we terminate the dual-track price system and revert to uniform market price, there will not be only one price in the economy, but two prices. At this time, these two prices are actually different from those under the dual-track price system. The two prices under the dual-track price system are fixed price, or planned price, and non-fixed price, or market price. After price control is lifted, two prices actually exist when supply gap is fairly large. One is open-market price and the other is non-open-market price. Why do we have these two prices at this time? In order to explain the reason why market price can be classified as open-market price and non-open-market price, we will have to analyze rationing adjustment at time of relatively large supply gap. We know that illegal trading arising from the gap of the two prices under the dual-track price system is associated with rationing adjustment. If we terminate the dual-track price system at time of relatively large supply gap, there are still two prices and a gap in between, which is also associated with rationing adjustment.

Rationing adjustment is a form of quantity adjustment. Rationing adjustment can be broken down into two types. The first type is the rationing adjustment that the market voluntarily performs, and the second one is the rationing adjustment that the government carries out according to some specific rules. Under the dual-track price system, there must be rationing adjustment performed by the

government according to some specific rules to begin with. Then, on the basis of government rationing adjustment, the market autonomously performs rationing adjustment. Profiting from the gap between two prices exactly follows this pattern. For example, if a certain type of nonferrous metal is a scarce commodity, the government can allocate it among relevant enterprises according to the equalization principle, the target principle (or the priority principle), or the history principle.

Regardless of which rationing principle the government uses for allocation, the price of the underlying commodity is always lower than its market price. There are always some enterprises who resell their share of allocated scarce commodities, and the principle that they follow is one for market rationing, including the priority principle (or the principle of first-come, first-buy), the monopoly principle (under which monopolistic enterprises determine to whom they sell), or other principles. Regardless of which principle is followed, the price of the underlying commodity is always higher than its fixed price, or planned price. As long as the supply gap of a specific commodity is relatively large, profiting from the price gap will be inevitable.

Let us assume that we terminated the dual-track price system for shortage commodities in this circumstance. What would happen then? It should be admitted that the relatively large supply gap would not disappear as a result. As we have pointed out earlier, aggregate supply will not see immediate significant increase because of various resource constraints. As long as shortage remains, the principle of market rationing will continue to work. Whether the market follows the priority principle (or the principle of first-come, first-buy) or the monopoly principle to allocate shortage commodities, buyers will have to pay some extra expenses on top of open-market price in order to secure those commodities, such as fees paid to retrieve relevant information and charges associated with the close of a transaction, which as a matter of fact becomes a part of non-open-market price of

those commodities. Moreover, as long as a commodity is still short, buyers who purchase it at a certain price are still able to resell it, and its non-open-market price goes up every time it changes hands. Escalating non-open-market price will influence open-market price and drive it higher. It will end up with non-open-market price continuing to push open-market price upward and open-market price always trying to catch up with non-open-market price. As soon as open-market price appears to do so, non-open-market price will start to jump again. The catch-up game will undoubtedly lead to continuous escalation of both open-market price and non-openmarket price and end up with prices way over its original level, but the gap between these two prices will persist.

Why will open- and non-open-market prices keep rising one after another after the dual-track price system is terminated? How can we stop these two prices from escalating? This is an issue that calls for further research. Obviously, this abnormal phenomenon is related to the scarcity of resources as well as the relatively small price elasticity in the circumstance of resource shortages. This is not the end of the story. If the potential buyers of these shortage commodities are subject to profit constraints and budget constraints, their demand for the commodities will be influenced by higher prices, as they will refrain from buying when prices reach a certain level. In other words, the fact that the demand curve slopes downward to the right demonstrates that buyers react against to higher prices by reducing their purchase volume. Their reactions will hinder and eventually stall the price rise. If buyers are not subject to profit constraints or budget constraints, the shape of the demand curve will change, i.e., it no longer slopes downward to the right, and the upward trend in price will no longer be influenced by buyers. In the current Chinese economy, enterprises are not buyers of shortage commodities who are subject to profit constraints and budget constraints. If enterprises stay the way they are, terminating the dualtrack price system for shortage commodities will not only create two prices (open-market price and non-open-

market price), but these two prices will also rise continuously (with open-market price chasing nonopen-market price and non-open-market price continuing to rise in order to avoid being caught up by rising open-market price). Therefore, the behavior of profiting from the gap of two prices cannot be explained by the price itself.

壹 政府价格调节的逆效应

一、经济非均衡条件下供求缺口的刚性

正如我们所了解的，当前我国经济所处的非均衡状态并不是仅仅与市场不完善有关，而且与企业尚未成为自主经营、自负盈亏的商品生产者有关。因此，当经济中出现商品供给缺口时，特别是当经济中出现商品供给缺口与商品需求缺口并存的情况时，政府采取的数量调节手段或价格调节手段虽然能够收到某种效果，但如果企业的运行机制没有得到真正的改造，企业仍然处于行政机构附属物的地位，那么政府的调节效果必然受到限制，供求缺口仍然难以有较大幅度的缓和。这一点，应当成为我们考察当前我国经济问题的出发点。

为了进一步说明这些，让我们从企业尚未成为自主经营、自负盈亏的商品生产者以及市场不完善条件下供给缺口与需求缺口各自的特征谈起。

从供给缺口的角度来看，在经济处于上述情况时，由于市场的不完善，市场不可能把供给缺口的正确信号传递给企业，也不可能起到动员企业把已有资源转移到用于弥补供给缺口的商品的生产方面的作用；而由于企业缺乏一个自主经营、自负盈亏的商品生产者应有的运行机制，它不仅接收不到市场发出的关于供给缺口的正确信号，而且即使得到了这些信号，它也不可能根据这些信号来调整自己的生产要素组合状况，不可能从市场上得到为调整产量所需要的资源，甚至不可能因提供市场所需要的商品而增加自己的收益。这样，供给缺口具有明显的刚性，它是不可能通过市场的自行调节而缓解的。

再从需求缺口的角度来看，需求缺口的性质和特征在不少方面同供给缺口相似。供给缺口导致了物价上涨，而在存在需求缺口的条件下，积压、滞销的商品的价格并不一定下降，甚至还有可能尾随稀缺商品价格的上涨而上涨。为什么会这样？这同样与经济的非均衡有关。由于市场的不完善，市场不可能把需求缺口的正确信号传递给企业，也不可能起到动员企业把用于生产积压、滞销商品的资源转移到其他方面的作用；而由于企业缺乏一个自主经营、自负盈亏的商品生产者应有的运行机制，它不仅接收不到市场发出的关于需求缺口的正确信号，而且即使

得到了这些信号，它也不可能根据这些信号来调整自己的生产要素组合状况，不可能把调整产量所多余出来的资源有效地转移出去，甚至可能因继续提供市场所不需要的商品而使自己受到实际的损失。这样，需求缺口同样具有明显的刚性，它也不可能通过市场的自行调节而缓解。

正由于经济非均衡条件下供给缺口刚性和需求缺口刚性的存在，所以无论是政府采取数量调节措施还是采取价格调节措施，只要企业的现状没有改变，市场机制也就不可能趋于完善，调节措施的效果就不可能令人满意。不仅如此，在某些场合，政府用以缓和供给缺口与需求缺口的调节措施，甚至可能产生逆效应，即采取调节措施之后，本来指望供给缺口缩小一些，结果，供给缺口反而扩大了；或者，本来指望需求缺口缩小一些，结果，需求缺口也扩大了，这种逆效应是十分值得注意的。

二、经济非均衡条件下的商品供给缺口与政府价格调节的逆效应

关于经济非均衡条件下政府调节中可能产生的逆效应，可以按供给缺口和需求缺口两种不同的情况分别予以论述。

假定客观上存在着商品供给缺口，政府决定采取增加供给和抑制需求的价格调节措施。但只要企业仍然缺乏应有的运行机制，再加上市场的不完善，那么有可能发生以下一系列现象：

1. 政府放开价格，旨在以价格的放开来刺激供给，促使供给的增长。但由于供给受到资源的约束，而有限的资源又要通过配额来分配，这样，价格放开以后，一方面，供给不可能因价格上升而同比例增长，或者说，供给增长的幅度必然低于价格上涨的幅度；另一方面，由于企业缺乏利益的约束、预算的约束，在价格上升以后，企业很可能以损害消费者（即把成本的增加转嫁给消费者）和损害国家（即企业因成本增大和利润减少而使财政收入减少）的方式来应付新的经济形势。结果，以价格放开来刺激供给增长的目的并未达到，价格放开所刺激的只不过是价格的轮番上涨。

2. 政府放开价格以后，由于资源有限，市场不完善，企业的处境因企业能否通过各种配额而得到有限的资源供给而异。一些企业得不到所需要的生产资料，或者承受不了价格上升和成本上升所加重的负担，于是不得不停产、减产，这将直接导致供给的下降。还有一些企业，虽然能够通过各种配额得到了生产资料的供给，但由于资源有限而引起预

期生产资料价格上涨，从而，这些企业有可能以囤积这些生产资料和转卖这些生产资料来获利，而不愿把它们投入生产领域，结果也将导致供给的下降。

3．假定政府采取降低利息率的办法来刺激供给，这种做法有可能导致另外一种结果，即由于银行和企业缺乏应有的运行机制，降低利息率固然可以刺激某些产品的产量增长，但需求所受到的刺激则更大，结果，需求增长的幅度大于供给增长的幅度，商品供给缺口更大了，也就是说，无论总量失衡还是结构性失衡变得更加严重了。

4．政府用放开价格或提高价格的办法来抑制需求的做法，也可能事与愿违。造成这种情况的原因之一是：企业缺乏利益的约束、预算的约束，公共部门也缺乏类似的约束，它们完全不会因为价格的上升而相应地降低自己的购买力，结果，需求或者只能以大大低于价格上升的幅度减少，或者需求基本上维持原状，没有明显的变化。这种情况是屡见不鲜的。通常所说的“社会集团购买力不受价格上升的制约”这一值得注意的现象，可以从利益约束、预算约束的不存在得到解释。

5．政府用放开价格或提高价格的办法来抑制需求的做法之所以往往事与愿违，另一个原因在于：在资源短缺、商品短缺的非均衡条件下，价格的上升易于引起居民的预期不稳定或预期紊乱。当居民了解到短期内供给状况不可能有较大好转的时候，他们为了使手头的现金和银行中的存款少受损失，会把延期的消费变为现期的消费，使“持币待购”变为“持币抢购”，“存款待购”变为“提款抢购”。这样，价格的上升不仅没有起到抑制需求的作用，反而使得购买量增长，而“持币抢购”、“提款抢购”现象的发生又势必进一步扩大商品供给缺口，再度引起物价上升，再度引起预期紊乱。

6．政府用放开价格或提高价格的办法来抑制需求的做法之所以往往事与愿违，还有一个原因，这就是：在资源短缺、商品短缺而市场又不完善的条件下，一些微观经济单位（不仅包括个体户、私营户、企业，甚至还包括居民个人）由于经济行为的扭曲而可能赋予消费品购买以另一种含义，即赋予“额外投资”这一特殊的含义。比如说，名烟、名酒、高档家用电器、名贵药材、高档衣料等等，可能作为“礼品”而被购买，这些消费品的购买量可能不受价格上升的制约。既然购买者把购买这些商品作为一种“额外投资”，那么他们肯定认为“收益”会大于“成本”，从而价格上升之后，这些“礼品”就更显得名贵，“收益”也将更大。

此外，在某种意义上，消费者的炫耀性消费也可能较少受到价格上升的制约。即使价格上升了，炫耀性消费也不一定会下降。

7. 假定政府采取提高利息率的办法来抑制需求，至少就投资的角度来看，效果是不好的。原因在于：企业缺乏应有的运行机制，再加上资金供给是有限的，所以企业不一定会因利息率的上升而减少对资金的需求。这表明：如果利息率上升幅度较小，则起不到压缩投资的作用；如果利息率大幅度上升，那么又有可能得出相反的结果，即企业正常的生产和经营活动受到了影响，在需求被抑制的同时供给也被抑制了。供给的被抑制恰恰是与政府希望弥补供给缺口的愿望相抵触的。

以上这些充分说明了在经济非均衡状态中，政府旨在缓和供给缺口的价格调节可能产生逆效应。只要我们了解了当前我国的国情，就不会迷信价格调节在缓和供给缺口方面的作用。

三、经济非均衡条件下的商品需求缺口与政府价格调节的逆效应

从结构性失衡的角度来考察，客观上完全有可能在商品供给缺口存在的同时存在着商品需求缺口。在商品需求缺口存在的条件下，如果政府决定采取增加需求和抑制供给的价格调节措施，以便减少积压、滞销的商品存货，那么这也有可能产生政府价格调节的逆效应，使政府的意图得不到实现。原因同样在于企业缺乏应有的运行机制以及市场的不完善。

1. 政府对某些商品的价格进行调整，旨在以降低的价格来刺激需求和抑制供给的增长。但由于生产这些商品的企业本身不负盈亏，购买这些商品的企业也不是自负盈亏的，因此价格信号对它们起不到预定的刺激需求和抑制供给的作用。需求可能有所增加，供给也可能有所下降，但都与价格下降的幅度不相适应。

2. 假定某些企业接收到价格下降的信号而着手减少有关商品的产量，但由于企业的财产关系不明确，企业对于多余的生产资料 and 人力无法处置，结果，产量的减少只可能导致企业亏损的增加，而企业亏损的增加又导致财政收入的减少，这一新的宏观经济形势可能迫使政府改变原先的降低价格的决定。

3. 假定某些企业接收到价格下降的信号而准备着手增加有关商品的购买量。但是，由于企业是在整个经济中存在着资源供给有限的条件下进行生产的，企业为了增加社会短缺的商品的产量和减少滞销商品的

产量，必须对原材料和设备结构调整，这样才能改变产品结构。如果企业只增加某些商品的购买量（这是由于价格下降所导致的），而未能购买到与此相配套的另一一些商品（这是由于受到资源供给有限的制约），那么企业要么停止购买这些降了价的商品，从而政府预定要实现的刺激需求的目标难以实现，要么购买了这些降了价的商品，但并不是用于增加社会短缺的商品，而是把它们囤积起来，等到以后价格上升后再转卖出去，从而政府调整产品结构的意图仍难以实现。

4. 在商品需求缺口存在的条件下，如果政府采取价格调节措施来增加需求，那么在企业不能自主经营、自负盈亏时还可能产生如下的结果，即某些企业不仅利用降低了的价格来增加购买量，而且把所增购的商品用于增产本来已经积压、滞销的商品，结果，需求即使增加了，但不该增加的供给也增加了，商品需求缺口不仅没有缩小，反而还有可能继续扩大，这又是与政府预定的意图相违的。

5. 假定政府用降低利息率的办法来刺激需求，以便缩小商品需求缺口，但由于银行和企业缺乏应有的运行机制，降低利息率的结果有可能使得供给的增长不低于需求的增长；反之，假定政府用提高利息率的办法来抑制供给，以便缩小商品需求缺口，同样由于银行和企业缺乏应有的运行机制，提高利息率的结果有可能使得供给基本不变，或只是稍有下降。因此，在银行和企业都缺乏应有的运行机制的条件下，利息率调整在缩小商品需求缺口方面的作用难以符合政府的预定意图。

以上这些充分说明了在经济非均衡状态中，政府旨在缓和需求缺口的价格调节也可能产生逆效应，只要我们了解了当前我国的国情，也就不会迷信价格调节在缓和需求缺口的作用了。

四、价格双轨制的背后：配额调节可能带来的问题

在存在着商品供给缺口较大的经济非均衡状态中，政府不可能寄希望于价格的放开。关于这一点，前面已经作了说明。这样，在从传统的产品经济体制向新的商品经济体制过渡的过程中，价格双轨制在较长的一段时间内将继续被保持，这是一种次优的选择。价格双轨制之下，经济生活中必然会产生各种摩擦，并且还会导致各种不合理的经济行为，这是可以预料的。在这里，我们想论述的只是这样两点：第一，如果说经济中既不可能立刻实行价格的放开和过渡到市场的单一定价制，又不可能返回传统的产品经济体制，即返回到计划的单一定价制，那么价格

双轨制是我们在现阶段惟一可能作出的选择。两害之间取其轻。现阶段就立即实行市场的单一定价制或返回传统的计划单一定价制，都是非常有害的。这样做的弊端要大于双轨价格制的弊端。因此，目前宁肯保持这种不合理的双轨价格制，这也比取消双轨价格制好一些。第二，双轨价格制无疑会带来种种弊端，而在这些弊端中，最令人瞩目的弊端就是有人利用两种价格之差进行倒买倒卖活动，从中牟取巨额利润，这既损害消费者利益，又使国家受到损失。但应当指出，两种价格之差的存在与双轨价格制是不可分的。没有两种价格之差，也就没有双轨价格制了。问题不在于两种价格之差的存在，而在于究竟是谁利用两种价格之差来牟取巨额利润，他们是怎样利用两种价格之差来牟取私利的。实际上，双轨价格制实际中的不少问题，恰恰反映了传统经济体制的根本缺陷。只要深入到价格双轨制的背后去探究，就不难发现问题的实质所在。

关于上述第一点，基本上已经没有可争辩的了。现阶段就放开价格和取消双轨价格制，只能引起社会经济动荡，而不可能有其他结果。目前不能在实际经济生活中作出这样轻率的决策。至于返回传统的计划单一定价制，那是根本不可行的，也是做不到的。如果那样做，经济就萎缩了，僵化了。

而上述第二点，则有进一步展开讨论的必要。市场的单一定价制，只有在供求基本上接近的情况下才有可能实现。在供给缺口较大的情况下，即使取消了双轨价格制，转入市场的单一定价制，但实际上，经济中也不会只存在一种价格，而是依然存在两种价格，这时实际上存在的两种价格不同于双轨价格制之下的两种价格。双轨价格制之下的两种价格是：一是固定价格，即计划价格，另一是非固定价格，即市场价格。放开价格后，供给缺口较大的情况下实际存在的两种价格则是：一是市场的公开价格，另一是市场的非公开价格。为什么这时仍然会出现两种价格？要说明市场价格区分为市场的公开价格与市场的非公开价格存在的原因，就需要对供给缺口较大条件下的配额调节进行分析。要知道，双轨价格制之下两种价格之差所引起的倒买倒卖现象同配额调节问题有关，供给缺口较大情况下取消双轨价格制之后所产生的两种价格以及两种价格之差，同样与配额调节问题有关。

配额调节是数量调节的一种形式。配额调节可以分为市场自发进行的配额调节与政府按照一定的原则进行的配额调节。在双轨价格制之

下，先有政府按照一定的原则进行的配额调节，然后，在政府配额调节的基础上，再由市场自发地进行配额调节。靠两种价格之差牟利，正是这样实现的。比如说，某种有色金属是短缺商品，政府按照平均分配原则、或目标原则（优先照顾原则）、或历史上形成的比例分配原则把它们分配给有关企业。不管政府按照什么样的配额原则进行分配，其价格总是低于市场价格的。于是总会有一些企业把自己所分配到的这种短缺商品转卖出去，它们所按照的是市场配额原则，如优先原则（“谁先来，谁先买”的原则）、或垄断原则（由垄断企业决定究竟卖给谁）、或其他原则，其价格总是高于固定价格，即计划价格。只要这种商品供给缺口较大，靠两种价格之差获利的情况是难以避免的。

假定在这种情况下就取消了短缺商品的双轨价格制，那又会发生什么情况呢？应当承认，供给缺口较大的现象不会因此而消失，正如前面已经指出的，供给总量由于受到资源的约束而不会立即增加很多。只要短缺状况继续存在，市场配额原则也就继续起作用。不管市场是按照优先原则（“谁先来，谁先买”的原则）分配短缺商品还是按照垄断原则分配短缺商品，需求者要得到这种商品，除了要付出市场的公开价格以外，还需要付出追加的费用，包括获得信息的费用、达成这笔交易的附加费用等等，这实际上形成了该种商品的非公开价格。不仅如此，只要该种商品仍然是短缺的，当需求者以一定的价格买到它们以后，仍然有机会转卖出去。每经过一次转卖，市场的非公开价格就会上升一次。而市场的非公开价格上升之后，市场的公开价格也会受到影响而相应上升。结果，势必形成了市场非公开价格带动市场公开价格上升的格局。市场公开价格总想追上市场非公开价格，但一旦它起步追赶，市场非公开价格马上又上升了。这种“你追我赶”的后果无疑是市场公开价格和市场非公开价格都在原有水平上不断提高，但市场公开价格与市场非公开价格之差却始终存在。

为什么双轨价格制取消之后短缺商品的市场公开价格与市场非公开价格会相继上升呢？两种价格相继上升的情况怎样才能被制止住呢？这又是一个值得我们研究的问题。不言而喻，这种不正常的现象与资源的短缺有关，与资源短缺条件下供给的价格弹性较小有关。但问题绝不仅限于此。假定准备购买这些短缺商品的需求者是受利益约束、预算约束的，他们的需求必将受到价格上升的制约，价格上升到一定程度就会遇到需求者的抵制。换句话说，需求曲线向右下方倾斜这一情况表明：需

求者对价格上升的抵制方式就是减少购买数量，这种抵制将使得价格的上升会遇到一种障碍，最终使价格上升趋势停顿下来。假定需求者是不受利益约束、预算约束的，那么需求曲线的形状将会改变，即不再是向右下方倾斜的，价格上升的趋势也就不会遇到来自需求方面的抵制了。在现阶段我国经济生活中，企业正是这种不受利益约束、预算约束的短缺商品需求者。只要企业仍然处于这样的地位，短缺商品的双轨价格制取消之后，不仅必定出现两种价格（市场的公开价格和市场的非公开价格），而且两种价格都会不断上升（市场公开价格追赶市场非公开价格，市场非公开价格继续上升，不让市场价格追上来）。既然如此，依靠两种价格之差的牟利行为也就不可以从价格问题本身得到解释。

6.2 REFORMING THE ENTERPRISE OPERATION MECHANISM

6.2.1 Reforming the Enterprise Operation Mechanism and Easing Supply and Demand Mismatch

The analyses above naturally lead us to the following conclusion: In order to resolve the current issue of large commodity supply gap in China, it is necessary to first and foremost turn enterprises into goods producers who are responsible for their own business decisions as well as profits and losses and establish a normal business operation mechanism under which entities pursue the maximization of self-interest and are subject to budget constraints. If the enterprise operation mechanism is not properly reformed, simply hoping to immediately terminate the dual-track price system will only bring about the outcomes that we have discussed above.

To resolve the issue of supply being unable to meet demand, we will undoubtedly have to increase supply. Supply increases need to be ultimately realized by increasing production capacity. Increasing supply means higher productivity. Increasing supply with the purpose of resolving the issue of supply being unable to meet demand is not only effective but also very important.¹

To increase supply requires additional inputs. When supply is not able to meet demand, if we add inputs excessively or simply regard adding extra inputs as the way to increase supply, demand can increase, which is contradictory to the intention of suppressing demand in the first place. Therefore, we should not hope that supply will increase with additional inputs. Instead, we should do our utmost to increase supply by minimizing additional inputs.

How can we do that? The government can adopt several adjustment measures, such as quantity adjustment measures and price adjustment measures. Keep in mind that if the market has not been

fully developed and enterprises are not motivated, not only price adjustment measures but also quantity adjustment measures will be less effective. The fundamental solution to the issue of insufficient supply is to recombine production factors and motivate enterprises and their employees. This is the issue of reforming the enterprise operation mechanism.

If enterprises have not become goods producers who take responsibility for their business decisions as well as operational profits and losses, or enterprise ownership has not been normalized, or the property right of enterprise fixed assets remains unspecified, it will be very difficult to recombine production factors. Reforming the enterprise operation mechanism refers to changing enterprises that are affiliated with and controlled by government administrative institutions to business entities that operate with clearly specified property rights under profit constraints and budget constraints. During the process of reforming the enterprise operation mechanism, we will see continuous improvement in the recombination of production factors because the reform will clarify enterprises' property rights, specifying who are the owners and the managers of enterprises' fixed assets, which will facilitate mergers and acquisitions, encourage enterprises to invest in other enterprises, accelerate the forming of enterprise conglomerates, and optimize the industrial structure and product structure. As a result, we can reach the goal of increasing the supply of products and services with as minimal additional inputs as possible.

Reforming the enterprise operation mechanism includes reforming how enterprises distribute corporate earnings. The mechanism that enterprises follow to distribute corporate earnings directly impacts the motivation of enterprises themselves as well as that of their employees. Reforming corporate earnings distribution mechanism can only be completed by normalizing enterprises' property rights and by truly transforming enterprises to goods producers who are responsible for their business decisions and

operational profits and losses. If enterprises themselves as well as their employees are motivated, which is as important as recombining production factors, they will likely produce more products and services with as minimal additional inputs as possible.

The discussions have demonstrated that there are a series of alternative measures available to the government to increase supply and resolve the issue of supply falling short of demand. If the main hurdle to supply gap alleviation is enterprises' lack of a proper operation mechanism as well as a necessary interest-maximization mechanism and budget constraints, the main measure that the government adopts should not be price adjustment nor quantity adjustment, but the reform of the enterprise operation mechanism, i.e., transforming enterprises to goods producers who are responsible for their business decisions and profits and losses.

Let us further analyze the issue from the perspective of suppressing demand.

To increase supply is certainly the most important way to resolve the issue of supply being unable to meet demand. Yet to some extent, to suppress demand is also very meaningful, which can be done by applying price adjustment measures and quantity adjustment measures under government regulation. Although some of the adjustment measures to suppress demand may take effect in a relatively short period of time, they are after all temporary relief. These measures are nothing but forcing demand to adjust to the current level of productivity rather than increasing productivity to meet current demand. In addition, we also have to consider the side effects from suppressing demand. Demand needs to be suppressed appropriately. Excessively suppressing demand will bring difficulties to the economy in the future.

The issue that we have to discuss here is as follows: In order to suppress demand, should we start with reforming the enterprise operation mechanism, in addition to price adjustment measures and quantity adjustment measures implemented by the government? The

answer is yes. We should point out that to suppress demand by first of all reforming the enterprise operation mechanism when enterprises lack a proper operation mechanism, the indispensable mechanism of pursuing the maximization of self-interest, and budget constraints, will not only be more effective than quantity–price adjustment measures but will also avoid some side effects, such as negatively influencing resource utilization efficiency, discouraging enterprises and their employees, and unfavorably impacting supply growth. We can look at this argument from two different perspectives, suppressing investment demand and suppressing consumption demand.

The primary method of suppressing investment demand should be to create a mechanism for the investment entity, i.e., enterprises, so that they can be self-restrained and make self-adjustments according to changing investment environment. If the investment principal lacks such a mechanism, any quantity–price adjustment measure that the government adopts will fail to produce satisfactory results. In order to create such a mechanism for enterprises as the investment principal, we will have to reform the enterprise operation mechanism so that they can be restrained by their self-interest and budget. As a result, enterprises will take their self-interest into consideration and stop making inefficient or ineffective investments. It is only on that basis that the price adjustment measures and quantity adjustment measures adopted by the government to suppress investment demand can gradually take effect as enterprises adjust their business behavior.

The primary method that the government adopts to suppress consumption demand is the same, that is, to create the mechanism for the consumption principal so that it can exercise self-restraint and make self-adjustments as the market changes. As for enterprises, controlling their consumption demand is closely related to the enterprise operation mechanism. On the one hand, enterprise is one of the consumption principals in society. If enterprises are not restrained by the maximization of self-interest nor subject to budget constraints, their consumption demand will unlikely be contained, which can be

explained by the commonly discussed phenomenon that corporate purchasing power never appears to diminish. On the other hand, consumption demand from enterprise employees is related to their disposable income, which ultimately depends upon various types of income they receive from their employers. If the enterprise operation mechanism is not reformed, it will be impossible to have enterprise employees' income link up with labor productivity as well as the growth of labor productivity. This can also explain why enterprises constantly compare and show off their compensation such as salaries and bonuses, a topic that is commonly discussed.

Therefore, from the perspectives of increasing supply and suppressing demand, we can reach this conclusion: Under economic disequilibrium conditions, the basic approach to easing the mismatch between supply and demand is to reform the enterprise operation mechanism so that enterprises can be restrained by the maximization of self-interest and subject to budget constraints. If the issue of enterprise operation mechanism is resolved, we can increase the supply of products and services from the supply perspective with as minimal additional inputs as possible through recombining production factors and motivating enterprises and their employees. From the demand perspective, through establishing the mechanism under which enterprises exercise selfrestraint in their investment decisions as well as their spending, we can not only control demand effectively but also reduce the side effects that come along with demand suppression.

6.2.2 Reforming Enterprise Operation and Alleviating Structural Imbalance

Alleviating the supply gap of some key commodities due to structural imbalance can be tackled by following the same basic method as we have discussed above, i.e., reforming the enterprise operation mechanism to increase supply and suppress demand. How do we alleviate the shortfall of demand for some key commodities due to structural imbalance? Should we go with reforming the enterprise

operation mechanism as the basic approach to suppressing supply and increasing demand as well? The answer is also positive. If enterprises are not goods producers who take responsibility for their own business decisions and operational profits and losses, or they are not restrained by the maximization of self-interest nor subject to budget constraints, no matter what quantity adjustment measures and price adjustment measures the government adopts, supply will not necessarily decrease and demand will not necessarily increase, which will not necessarily lead to lower commodity demand shortfall. In our previous analysis of the commodity demand shortfall and the counter effects of government price adjustment under economic disequilibrium conditions, we actually explained the necessity of reforming the enterprise operation mechanism. Next, we will discuss in further detail from two different perspectives, suppressing supply and increasing demand.

When the supply of some key commodities exceeds their demand, it is necessary to suppress supply. How can we suppress the supply of these commodities without impacting the income of enterprises, enterprise employees, and the government? Simply relying on the government to adopt quantity-price adjustment measures can lead to lower supply, but these measures will not be able to maintain the income of enterprises, their employees, and the government. Moreover, these adjustment measures may not necessarily be effective when the reform of the enterprise operation mechanism is not complete. In this case, we can use such measures as accelerating resource circulation or transfers to suppress the supply of the commodities that have excess inventories or experience poor sales and to provide the production units that produce shortage commodities with resources via product restructuring or industrial restructuring, which will not only reduce the supply of the products from the units that are being targeted but also grow the units that we plan to grow. Meanwhile, the income of enterprises, enterprise employees, and the government will remain intact. In order to accelerate resource

circulation or transfers, it is necessary to clarify the property rights of enterprise assets and allow enterprises to be goods producers who are responsible for their business decisions and operational profits and losses. All we have discussed so far has demonstrated that it is critical to reform the enterprise operation mechanism in order to suppress the excessive supply of some key commodities.

When the supply of some key commodities exceeds their demand, it is also necessary to increase the demand for these commodities. How can we increase the demand for these commodities without aggravating the demand that has already been somewhat inflated due to structural imbalance? What kind of methods can we use to direct enterprises to consume the commodities that have excessive inventories or poor sales? It appears that one viable solution is to utilize these commodities to produce other commodities that society needs through product restructuring, industrial restructuring, and technological restructuring. All of these are closely related to the reform of the enterprise operation mechanism. If the enterprise operation mechanism is overhauled, enterprises will be restrained by the maximization of self-interest and subject to budget constraints and will be able to choose investment opportunities as well as make independent operational decisions. Consequently, they will be driven by self-interest to pursue technological improvement, merge with other businesses, or set up business alliances to utilize the commodities that have poor sales and design new products. These enterprises are motivated due to the reform of the enterprise operation mechanism, which also makes it possible for enterprises to increase the purchase of commodities that have poor sales.

Of course, while emphasizing the impact of the reform of the enterprise operation mechanism on alleviating excessive supply or excessive demand under disequilibrium conditions, we are not denying the usefulness of quantity adjustment measures and price adjustment measures that the government adopts in a particular period of time according to some specific situations. What we are

trying to explain here is nothing but the following: Reforming the enterprise operation mechanism is the premise of various quantity adjustment measures and price adjustment measures. If enterprises are still affiliated with and controlled by government administrative institutions and lack the interest-maximization mechanism and budget constraints, how can quantity–price adjustment measures adopted by the government be effective in tackling supply gap or demand shortfall?

6.2.3 The Progressive Nature of Price Reform

The dual-track price system is a price mechanism during the transition from the old economic system to the new economic system. The transition from the dual-track price system to the mechanism of pure market price is an important condition for the establishment of the new commodity economy. The mechanism of pure market price refers to a system in which price is completely open without direct interference from the government and it is totally determined by market demand and supply, with only indirect influences from government adjustment measures.

The above analyses have revealed that the existence of the dualtrack price system is traced to the existence of commodity supply gap and commodity demand shortfall, especially the commodity supply gap. We have analyzed earlier that the reasons why commodity supply gap will last for a long time and why the trend of rising price level cannot be kept in check are not only because the market is not fully developed, but more importantly because enterprises are not responsible for their business decisions and operational profits and losses. Moreover, as we have pointed out earlier that to prevent the economy from sliding into recession and prices from rising continuously in the presence of commodity and resource shortages, the government will have to take adjustment measures to reach rationing equilibrium. From these discussions, we can clearly see that the transition from the dual-track price system to the mechanism of

pure market price cannot be done by simply removing price controls. The transition is dependent on three basic conditions:

The first condition: Has commodity supply gap shrunk?

The second condition: Are enterprises responsible for their business decisions and operational profits and losses or be restrained by the maximization of self-interest and subject to budget constraints?

The third condition: Has the government adopted various adjustment measures during the period of dual prices and effectively reached ex post equilibrium, or rationing equilibrium, such that the trend of rising price level has been held in check or the inflation rate has declined slightly?

These three conditions must be met. If only two of them are met and one is unmet, then it is not yet the right time to transit from the dual-track price system to pure market price. Rushing into fully removing price controls before all conditions are met will certainly cause economic fluctuations. Should we do that, it would delay the removal of price controls, forcing the dual-track price system to maintain its status quo for an extended period of time.

Keep in mind that since dual prices turn out to be a measure to achieve rationing equilibrium under the condition of commodity supply gap, it is necessary to reduce commodity supply gap if we decide to terminate the dual-track price system that is incompatible with the market economy. If commodity supply and demand are balanced, commodity supply gap will disappear, and of course dual prices will no longer be needed. However, reaching the balance between supply and demand is not easy, regardless of aggregate balance or structural balance. It is impossible for us to imagine waiting for the day when the supply and demand of commodities are balanced to come before starting the transition from the dual-track price system to pure market price. That is unrealistic. What can we do then? Generally speaking, we should force commodity supply and demand to gradually approach a balance on the aggregate basis with commodity supply gap gradually shrinking. On the structural basis, we

should treat different commodities in different ways. When the supply gap and demand shortfall of certain commodities have shrunk and approached an approximate balance, it demonstrates that the dual prices for these commodities can be terminated. If the supply gap of some commodities is still fairly large, it signals that it is not yet the time to terminate their dual prices and the dual prices should remain for a longer time. In summary, when the conditions for a specific commodity are met, its price can be opened up. When the commodities of the same category are ready, their price controls can be lifted. If conditions are not met, price decontrol should be postponed. In this way, we will gradually realize the transition from the dual-track price system to pure market price.

Regardless of how large commodity supply gap and commodity demand shortfall are or which commodities have or have not met the requirements of price decontrol, deepening the reform on enterprises is critical to the termination of the dual-track price system. As we have discussed many times before, if enterprises are responsible for their business decisions and operational profits and losses, they will be able to utilize market price signals to adjust production and operation, which helps them adapt to the new economic environment after price decontrol. However, this by no means indicates that we can terminate the dual-track price system in the presence of relatively large commodity supply gap, even though enterprises are responsible for their business decisions and operational profits and losses. This is because price rises are inevitable when commodity supply gap is relatively large. If enterprises were not responsible for their business decisions or operational profits and losses, it would be very difficult to control the rising price level. The reason why the rising price level can be controlled after enterprises take responsibility for their business decisions and operational profits and losses is that they will be induced to increase supply and decrease demand to alleviate supply gap. Whether or not the rising price level can be really controlled is still dependent on the magnitude of commodity supply gap and the

severity of constraints on resource. This demonstrates that allowing enterprises to make independent decisions and take responsibility for profits and losses is a necessary condition, but not the only condition, of the termination of the dual-track price system.

Let us take another look at the third condition we discussed earlier, i.e., the government makes progress in controlling the rising price level by adopting adjustment measures. Let us assume that enterprises have become independent goods producers who are responsible for their business decisions and operational profits and losses after economic reforms and that commodity supply gap has shrunk to some extent. However, prices have not been stabilized due to structural reasons. Meanwhile, government adjustment measures have not been very effective in controlling rising prices. At this time, it is not yet the time to remove price controls. The reason is that society is not completely ready for the removal of price controls nor is the state as far as its financial position is concerned. Since prices have not stabilized, removing price controls may bring about the tremor of instability, which will induce people to increase the purchase of commodities or even withdraw their savings accounts to purchase commodities as inventories. As price has not been stabilized, it is unlikely that the austerity measures adopted by the government have reached its goal. Removing price controls at this time will render government measures self-contradictory and put the government in a difficult position. Price decontrol will not only create barriers to enforcing the austerity measures but may also end up in a new situation in which fiscal revenues are unable to catch up with higher government spending after prices are opened.

Therefore, these three basic conditions discussed above are all required for the transition from the dual-track price system to pure market price. If we understand this, we can naturally understand the following four issues:

A. The transition from the dual-track price system to pure market price in China can only happen by taking baby steps, i.e., gradually

removing price controls step by step. The proposal of "reaching the goal by taking one giant and final step" or "reforming prices by taking giant steps" is both unrealistic and harmful.

B. The transition from the dual-track price system to pure market price in China can only happen in accordance with the progress of the enterprise reform. The progress of the enterprise reform determines that of the price reform. The proposal of using a "breakthrough" of the price reform in the first place to jump-start other reforms (including the enterprise reform) will only throw the economy into chaos and will be harmful to pushing reforms forward.

C. The transition from the dual-track price system to pure market price in China can only be realized when the upward trend in price is under control or the downward trend in price sets in. The proposal that ignores economic environment as well as the tolerance of society and the nation's fiscal situation will not only lead to price reform failure but also disrupt overall economic reforms.

D. In light of current situations in China, the government should continue to maintain the dual-track price system and apply rationing equilibrium to shortage commodities. Although the dual-track price system and the rationing equilibrium for commodities may somewhat harm the economy, it is undoubtedly less harmful than removing price controls right now.

Everyone who studies economic theories as well as the reality of economic reforms will know that the optimal solution in an economic reform does not really exist. Such an optimal solution only exists in the mind of theorists. In real economic reforms, what happens can only be the second best, and it is also a realistic and practical solution. "Price reform first" is perhaps doable in theory. If the Chinese economy were in type I disequilibrium conditions, I would have no doubt about that. My concern is that whether or not "price reform first" is doable under type II disequilibrium conditions. The question is, if the dual-track price system is changed to pure market price while enterprises have not become independent goods producers who make

their own business decisions and are responsible for their own profits and losses, how can the enterprise reform proceed? Wouldn't the enterprise reform come to a halt? Therefore, we should follow the reality and go with the second best solution, which is to "first of all shrink supply gap and then proceed with the enterprise reform and lowering inflation." We should not be fascinated by the proposal of "price reform first," which may sound very appealing according to some "research."

贰 企业运行机制的改造

一、企业运行机制改造与供求矛盾的缓解

以上的分析不能不使我们得出如下结论：要解决我国现阶段的商品供给缺口较大的问题，必须首先使我国的企业成为自主经营、自负盈亏的商品生产者，使它们具有受利益约束和预算约束的正常的企业运行机制。如果企业运行机制没有得到应有的改造，单纯寄希望于立即取消价格双轨制，那就只能带来上面所分析的后果。

要缓解供不应求的矛盾，无疑需要增加供给。增加供给，归根到底是在提高生产能力的基础上实现的。供给的增加意味着生产力水平的增长。用增加供给的办法来解决供不应求问题，不仅行之有效，而且具有决定性意义。¹

增加供给是需要追加投入的。在供不应求的条件下，如果过多地追加投入或只把追加投入看成是增加供给的途径，那就会增加需求，而需求的增加却是同供不应求条件下要求对需求进行抑制的意图相抵触的。因此，不能把增加供给的希望主要寄托在追加投入之上，而应当在尽可能少追加投入的基础上使供给增加。

怎样才能做到这一点？政府可以采取若干调节措施，包括数量调节措施和价格调节措施，但要知道，在市场不完善和企业缺乏活力的情况下，不仅价格调节措施会受到限制，而且数量调节措施也会受到限制。解决供给不足问题的基本途径在于生产要素的重新组合和发挥企业、职工的积极性，这就涉及企业运行机制的改造问题。

如果企业尚未成为自主经营、自负盈亏的商品生产者，企业的财产关系尚未规范，企业固定资产的归属问题尚未确定，那么重新组合生产要素是十分困难的。企业运行机制的改造是指如何把作为行政机构附属物的企业的运行机制改造成产权明确的、受利益约束和预算约束的企业运行机制。在改造企业运行机制的过程中，生产要素的重新组合将不断取得进展。这是因为，通过这一改造，将明确企业的财产关系，使企业的固定资产具有确定的所有者、经营者，于是就可以在此基础上推进企业合并，鼓励企业相互参股，加速企业集团的建立，进行优化产业结构、产品结构的各项调整，从而达到在尽可能少追加投入的条件下增加

产品和劳务供给的目标。

企业运行机制的改造包含了企业收益分配机制的改造。企业收益分配的机制直接影响着企业自身的积极性和企业职工的积极性。但要使企业收益分配机制转换，则必须依靠企业产权的规范化，依靠企业真正转变为自主经营、自负盈亏的商品生产者。同生产要素重新组合的作用一样，只要企业自身的积极性和企业职工的积极性发挥出来了，企业就有可能在尽可能少追加投入的基础上提供更多的产品和劳务。

由此可见，在政府有一系列措施可供选择，以便增加供给和解决供不应求的矛盾时，如果说阻碍供给缺口缩小的主要障碍在于企业缺乏应有的运行机制，在于企业缺乏必不可少的利益约束和预算约束，那么政府应采取的基本措施绝不是价格调节，也不是数量调节，而是企业运行机制的改造，即把企业改造为自主经营、自负盈亏的商品生产者。

再从抑制需求的角度进行分析。

要缓解供不应求的矛盾，增加供给当然是最为重要的，但抑制需求也具有一定的重要意义。抑制需求可以通过政府的价格调节措施和数量调节措施来实现。虽然抑制需求的这些调节措施可以较快地产生一定的结果，但它们毕竟只是治标的办法，它们无非是使需求适应现有的生产力水平，而未能用提高生产力水平的办法来适应现有的需求。加之，抑制需求的后遗症也是必须考虑的。对需求的抑制只能适度而不能过分，否则会今后的经济带来困难。

这里需要探讨的是：在抑制需求方面，除了政府的价格调节措施和数量调节措施以外，是不是也应当从改造企业运行机制方面着手呢？回答是肯定的。而且应当指出，从改造企业运行机制方面着手来抑制需求，在企业缺乏应有的运行机制和缺乏必要的利益约束、预算约束的场合，不仅要比采取数量—价格调节措施更为有效，而且不会有诸如影响资源的合理利用，挫伤企业和职工的积极性，对供给增长有不利影响等等后遗症。关于这一点，可以从抑制投资需求和抑制消费需求两个不同的角度来分别论述。

要抑制投资需求，基本途径应当是让作为投资主体的企业具有自我制约、自我适应投资环境变化的机制。假定投资主体缺乏这种机制，不管政府采取什么样的数量—价格调节，效果必定不理想。而要让企业作为投资主体具有这种机制，那就必须进行企业运行机制的改造，使企业行为受到利益的约束、预算的约束。这时，企业出于自身利益的考虑，

将会自行制止无效益的、低效率的投入。在这个基础上，政府为了抑制投资需求而采取的价格调节措施和数量调节措施，才能通过企业的经济行为的调整而逐渐收效。

要抑制消费需求，政府应采取的基本措施同样是让消费主体具有自我制约、自我适应市场变化的机制。对于企业来说，消费需求的约束是同企业运行机制密切相关的：一方面，企业作为公共消费的主体之一，如果企业不受利益约束和预算约束，那么它的消费需求也就不可能受到约束，通常所说的来自企业的社会集团购买力居高不下的现象，可以由此得到解释；另一方面，企业职工的消费需求同他们的可支配收入有关，而他们的可支配收入归根到底来自他们从企业取得的各种收入，假定不进行企业运行机制方面的改造，那么要想让企业职工的收入受到劳动生产率及其增长率的制约，也是不可能的事情。人们通常议论的企业之间在工资、奖金方面相互攀比现象也可以由此得到解释。

因此，无论从增加供给还是从抑制需求的角度来看，均可以得出这样的论断：在经济非均衡条件下，要缓解供不应求矛盾，基本途径应当是改造企业运行机制，使企业具有利益的约束、预算的约束。这个问题解决了，从供给方面看，通过生产要素重新组合和发挥企业、职工的积极性，可以在尽可能少投入的条件下增加产品和劳务的供给；从需求方面看，通过企业自我制约投资和自我制约消费基金增长的机制的建立，不仅可以有效地抑制需求，而且可以使得这种抑制需求的方式较少地产生后遗症。

二、企业运行机制改造与结构性失衡的缓解

结构性失衡中的关键性商品供给缺口的缓解，可以根据以上所提出的基本思想进行，即通过企业运行机制的改造来增加供给和抑制需求，拟定对策。那么结构性失衡中的关键性商品需求缺口，又将如何缓解呢？是不是也应当把企业运行机制的改造作为抑制供给和扩大需求的基本途径呢？回答同样是肯定的。这就是：假定企业还不是自主经营、自负盈亏的商品生产者，企业的经济行为不受利益的约束、预算的约束，那么即使通过政府的数量调节和价格调节，供给不一定能减少，需求也不一定能扩大，从而商品的需求缺口不一定能缩小。前面在分析经济非均衡条件下商品需求缺口与政府价格调节的逆效应时，实际上已经把改造企业运行机制的必要性说明了。下面，可以进一步从抑制供给和扩大

需求两个不同的角度作一些论述。

关键性商品出现了供大于求的情况，有必要抑制供给。怎样才能既导致供给的下降，又不至于影响企业的收入、政府的收入和职工的收入？单纯采取政府的价格—价格调节措施，即使能够使供给减少，但却无法使得企业、政府和职工的收入不受影响，何况在企业运行机制未得到改造时，这些调节措施还不一定取得成效。因此，在这种情况下，用加速资源的流动、转移的办法来抑制滞销的、过剩的商品的供给，并通过产品结构、产业结构的调整，使短缺商品的生产领域得到资源的供给，这样就可以既导致预定要抑制的那些部门的供给的下降，又导致预定要发展的那些部门的供给的增长，并且企业、政府、职工的收入也不至于受到影响。而要加速资源的流动、转移，则必须明确企业的财产关系，使企业成为自主经营、自负盈亏的商品生产者。这表明企业运行机制的改造对于抑制关键性商品过多的供给的重要意义。

关键性商品出现了供大于求的情况，也有必要扩大对这些商品的需求。怎样才能既导致对这些商品的需求的扩大，而又不至于在结构性失衡条件下使本来已经存在的需求偏大的事实进一步加剧呢？究竟采取什么样的措施才能引导企业去利用这些积压的、滞销的商品呢？看来，一种可行的办法是通过产品结构、产业结构、技术结构的调整，为这些过剩的商品找到销路，并利用这些商品创造出更多的为社会所需要的商品。这就同企业运行机制的改造紧密联系在一起了。如果企业运行机制得到了改造，企业的经济行为有了利益的约束、预算的约束，以及企业有了投资机会的选择权和经营活动的自主权，它们就可以根据自己的利益，或者自行改造技术结构，或者同其他企业合并、联营，利用社会上滞销的商品来开发新商品。企业的这种积极性来自企业运行机制的改造，企业扩大对滞销商品的购买的可能性也来自企业运行机制的改造。

当然，当我们强调企业运行机制的改造对于缓解非均衡条件下供大于求或供不应求的决定性作用时，并不否认政府根据每个具体时期的具体情况采取数量调节措施和价格调节措施的意义。我们想说明的始终是这样—这样一个道理：企业运行机制的改造是各种数量调节措施和价格调节措施得以发挥作用的前提。只要企业仍然处于行政机构附属物的位置上，企业仍然缺乏利益约束和预算约束，在面临供求缺口时，政府的价格—价格调节怎么能取得理想的效果呢？

三、价格改革的渐进性

价格双轨制是从旧经济体制向新经济体制转变过程中的一种价格制度。价格双轨制向单一的市场定价制的过渡，是建立新的商品经济体制的重要条件。单一的市场定价制就是指价格全面放开，政府不直接定价，价格由市场供求力量自发地决定，政府采取间接调控的方式来影响市场上价格的形成。

从以上的分析可以了解到，价格双轨制的存在与商品供给缺口与商品需求缺口的存在有关，尤其是与商品供给缺口的存在有关。前面还分析到，商品供给缺口之所以会旷日持久，物价上涨趋势之所以不易被遏制，不仅取决于市场不完善，而且更重要的是与企业不能自主经营、自负盈亏有关。此外，前面也曾指出，要避免商品短缺、资源短缺条件下出现经济状况的恶化和抑制物价的不断上涨，就需要由政府采取调节措施，实行配额均衡。这样，我们就可以清楚地看到，由价格双轨制过渡到单一市场定价制并不是简单地放开价格就能够实现的。这一过渡取决于三个基本条件：

第一，商品供给缺口是否有所缩小？

第二，企业是否自主经营、自负盈亏，是否受利益的约束与预算的约束？

第三，在价格双轨制存在的时期，政府通过各种调节措施，是否有效地实现了事后的均衡，即配额均衡，从而抑制了物价上涨的势头，使物价上涨率有所下降？

这三个条件是缺一不可的。假定只有其中两个条件而缺少另一个条件，那就表明双轨价格向单一市场价格的过渡的前提尚未成熟。在前提未成熟时就仓促地全面放开价格，必然导致经济的动荡。从效果上看。这样做反而延误了价格放开的时间，使价格双轨制不得不继续维持下来。

要知道，既然双轨价格作为一个配额均衡的措施是在商品供给缺口存在的条件下产生的，因此要取消这种不符合市场原则的双轨价格，就必须使商品供给缺口缩小。假定商品供求平衡了，商品供给缺口不存在了，那么当然就不再需要双轨价格了。但要实现商品供求的平衡，无论是总量上的平衡还是结构上的平衡，都不是一件容易的事情。我们不可能设想等到某一天商品供求平衡了再来实现由价格双轨制向单一市场定价制的过渡。这是不现实的。那么我们可能做的是什么呢？这就是：在

总量上，使商品的供给与需求逐渐接近，商品供给缺口逐渐缩小；在结构上，按不同种类的商品区别对待。某些商品的供求缺口缩小后，已经接近于基本平衡的状态，那就表明这些商品的双轨价格可以取消；如果某些商品的供给缺口仍相当大，那就表明取消双轨价格的条件尚未成熟，双轨价格应当继续保留一段时间。总之，按照商品的类别，条件成熟后，价格就放开，成熟一批，放开一批；条件不成熟的，就暂缓一缓。这样，就可以实现由价格双轨制向单一市场定价制的逐步过渡。

但无论商品供求缺口有多大，也不管有哪些商品已符合放开价格的要求，还有哪些商品不符合放开价格的要求，企业改革的深化对于价格双轨制的取消来说都是不能缺少的。正如前面已经一再提出的，企业的自主经营和自负盈亏将有助于企业利用市场的价格信号来调整自己的生产和经营活动，使得价格放开以后企业能够适应新的经济形势。但这并不意味着在商品供给缺口较大时，只要企业自主经营和自负盈亏了，就可以取消双轨价格。这是因为在商品供给缺口较大时，价格的上涨是不可避免的。如果企业不能自主经营和自负盈亏，那么价格的上涨趋势很难被抑制住；而企业的自主经营和自负盈亏则可以使这种价格上涨趋势受到某种抑制，并且会导致企业设法增加供给和减少需求，以缓和供给缺口。然而价格上涨的势头究竟能否被遏制，还要取决于商品供给缺口的大小以及资源的约束程度。这就表明，企业的自主经营和自负盈亏是取消价格双轨制的必不可少的条件，但不是惟一的条件。

再考察一下前面提到的第三个条件，即政府采取调节措施在抑制物价上涨率方面所取得的成效。现在假定企业通过改革而成为自主经营和自负盈亏的独立商品生产者了，并且商品供给的缺口也已经有所缩小，但由于结构方面的原因，物价并没有被稳定住，而政府采取的调节措施在抑制物价上涨率方面的成效不大，那么这时仍然不可以着手放开物价。这主要是由于社会心理对价格放开的承受力不大和财政对价格放开的承受力也不大。既然物价没有被稳定住，放开物价就等于给群众一种新的不稳定感，这将诱使群众增购商品，甚至提取存款来囤积商品。既然物价没有被稳定住，政府已经采取的紧缩措施还没有取得应有的效果，那么这时放开物价就会使政府的措施自相矛盾，使政府处于左右为难的境地，而物价的放开不仅会使政府的紧缩措施的继续推行遇到困难，并且还会使财政无法应付物价放开之后政府支出增加的新形势。

由此可见，上述三个基本条件对于从价格双轨制向单一市场定价制

的过渡而言，都是必要的。只要我们懂得了这些，那就很自然地会理解以下四个问题：

1. 在我国，由价格双轨制向单一市场定价制的过渡只能是“小步走”，即分步骤地逐渐放开价格。那种主张“一步到位”、“价格改革迈大步”的方案，不切实际，有害无益。

2. 在我国，由价格双轨制向单一市场定价制的过渡只能随着企业改革的进展而相应地进行。企业改革的进度决定着价格改革的进度。那种主张在价格改革方面先来一个“突破”，然后带动其他各种改革（包括企业改革）的方案，只会使经济陷入混乱而无助于整个改革事业的推进。

3. 在我国，由价格双轨制向单一市场定价制的过渡只能在物价上涨的势头被抑制和物价出现下降的趋势时才有可能实现。那种不顾客观经济形势，认为可以置社会心理承受力与财政承受力于不顾的方案，不仅会导致价格改革失败，而且会导致整个改革失败。

4. 在我国，根据现阶段的实际状况，政府应当继续保持价格双轨制，实行短缺商品的配额均衡。价格双轨制与商品配额均衡可能给经济带来一些不利，但与目前放开价格所造成的不利相比，无疑小得多。

每一个既研究经济理论、又研究经济改革实际的人都知道，经济改革中的最优选择实际上是不存在的。这种最优选择仅仅存在于理论家的头脑里。在经济改革实践中，所存在的只是次优的选择，也就是具有现实意义的、可行的改革方案。也许，“价格改革先行”可以从理论上说得通。如果我国经济处于第一类非均衡状态中，对这一点，我毫不感到怀疑。我所感到怀疑的是这种“价格改革先行”方案在第二类非均衡条件下的可操作性。试问，在企业尚未成为自主经营和自负盈亏的独立商品生产者的时候，就把价格双轨制改为单一市场定价制，那么企业改革又怎么可能进行下去？企业改革不就停止了吗？可见，我们还是应当从现实出发，宁肯作出“先着手缩小供给缺口，着手企业改革，着手降低物价上涨率”的次优选择，而不要迷恋那种可能“论证”得很动听的“价格改革先行”方案。

Chapter 7 Industrial Restructuring

第七章 产业结构调整

7.1 DOMESTIC SOURCE OF FUNDING FOR INDUSTRIAL RESTRUCTURING

7.1.1 Funding Gap and Funding Potential Under Disequilibrium Conditions

Current economic disequilibria in China have revealed that domestic funding potential cannot be ignored despite an obvious funding gap. The concurrent existence of funding gap and funding potential is one of the features of the current funding problems in China.

A funding gap refers to insufficient supply of capital. During economic growth, the demand for capital has always been very large and the supply of capital has always been limited. Limited supply of capital in the economy is not able to keep up with the demand for capital, pushing the cost of capital higher. However, because the interest elasticity of capital supply is not large and neither is the interest elasticity of capital demand, purely relying on raising interest rates will not be able to increase capital supply and decrease capital demand. As a result, funding gap is inevitable. The situation forces the financial authority to focus on the credit scale to adjust capital supply and demand in its formulation of policies. In particular, quantity adjustment in the capital market is executed by using capital rationing to meet capital supply shortages, while the adjustment of interest rate is only considered a supplementary measure. The adjustment measures adopted by the Chinese financial authority in recent years

turned out exactly the way we are discussing here, i.e., quantity adjustment measures are primary and price adjustment measures are secondary. We should consider that these policies have been largely consistent with current economic disequilibrium conditions in China.

However, we should note that while funding gap and funding potential coexist, the capacity of funding potential should not be underestimated. Funding potential refers to the domestic capital embedded in the economy that can be discovered but has not yet been utilized. Potential capital is seen in the form of either idle cash or noncash resources. More specifically, it has the following five forms:

First of all, the most common form is personal cash on hand. A person's cash on hand is the person's disposable income after deducting his or her consumption and savings deposit at any financial institution. The amount of cash on hand far exceeds the amount of cash reserved by residents for their daily expenditures. Why is it so? It is because of unmet personal consumption needs and lack of domestic investment instruments, besides just a few available forms of assets such as cash, certificates of deposit, and bonds. In other words, insufficient supply of consumer goods and the lack of personal investment opportunities give rise to potential capital.

The second form of potential capital is petty cash on the hands of small business owners and private enterprises. Small business owners and private enterprises are business operators, and their petty cash on hand is different from personal cash on hand. They are reluctant to continue investing cash in production, as they are uncertain about whether they should expand production and operation or reinvest in their businesses. The amount of cash that is not invested in production is likely to be diverted into consumption and become exorbitant and extravagant spending or be reserved for new opportunities.

The third form of potential capital is cash or inventory that enterprises reserve above and beyond the needs of normal business operation. This refers to an excessive amount of petty cash, raw materials, fuel, or parts that are well above the normal quantity. In

the presence of commodity supply gap and capital funding gap, enterprises tend to maintain above-normal cash and inventories out of precaution or for fear of supply interruption or sustained inflation. Regardless of whether it is petty cash or inventory materials that enterprises maintain, capital is unreasonably tied in that form of asset as long as it is above the normal level, which will worsen the capital supply shortages in the economy. If we can persuade enterprises to maintain cash and inventory materials below the normal level, it will be equivalent to decreasing the demand for capital and increasing the supply of capital. Besides enterprises, small business owners and private enterprises sometimes also keep inventory supplies above the normal level. By the same token, that residents store excessive consumer goods (with the purpose of protecting against supply interruption or rising prices) signals that capital is utilized unreasonably.

The fourth form of potential capital is represented by relatively low capital utilization efficiency. Given a fixed amount of total capital supply in the economy, the more inefficiently capital is utilized, the tighter the capital supply will be. In addition, if capital turnover slows down, capital supply will become tight. This demonstrates that given the total amount of capital supply, relatively low capital utilization efficiency and slow capital turnover have both revealed some funding potential. This conclusion tells us that as long as we can increase capital utilization efficiency by diverting capital from where utilization efficiency is relatively low to areas with relatively high utilization efficiency and accelerate capital turnover, we will be able to alleviate the capital supply gap and the imbalance between capital supply and demand.

The fifth form of potential capital is noncash resources. For example, idle labor or production facilities indicate that potential capital exists in the form of noncash resources. If idle labor and production facilities are put into use, we can generate additional income, part of which will become savings that will in turn be

diverted into investment. In this way, noncash potential capital can be turned into real capital in the form of cash. The addition of capital is conducive to alleviating the imbalance between capital supply and demand.

The five points discussed above have led to this conclusion: While we need to pay attention to the funding gap under current economic disequilibrium conditions in China, we cannot ignore domestic funding potential. Both economic growth and industrial restructuring require a relatively large amount of capital. If we see only funding gap but fail to see funding potential, we will likely come up with an overly pessimistic assessment of the situation of domestic capital supply and demand.

7.1.2 Main Approaches to Discovering Domestic Funding Potential

Recognizing the coexistence of funding gap and funding potential will help us formulate the right policies for industrial restructuring.

How to discover domestic funding potential? We can come up with some detailed measures according to the five different situations discussed earlier. The measures available to us are discussed in detail as follows:

First of all, in order to increase the personal savings rate and reduce as much personal cash on hand as possible, we should create more personal investment opportunities, particularly using the equity market as an investment vehicle to reduce cash on hand.

Secondly, in order to encourage small business owners and private enterprises to reinvest, and so as to reduce their cash on hand or to turn the portion of cash on hand that has been designated for exorbitant and extravagant consumption into production funds, we should introduce appropriate policies to strengthen their confidence in investment as well as property ownership rights.

Thirdly, we should try to eliminate enterprises' concerns over supply interruption or sustained inflation so that they no longer have

to maintain above-normal cash and inventory and can instead utilize their capital appropriately. Therefore, we should apply measures to increase the supply of raw materials, fuel, and parts, develop the trading of commodity futures, and reduce the impact of rising prices on normal business activities. These measures will in turn reduce capital demand from enterprises.

Fourthly, in order to increase capital utilization efficiency in society, accelerate capital turnover, and minimize capital deployment by society, we should appropriately adjust the direction and structure of capital deployment by diverting the capital that is utilized less efficiently to the production areas where capital is utilized more efficiently. Meanwhile, we should adopt various measures to accelerate capital turnover, such as improving technologies, shortening manufacturing cycles, organizing balanced production, accelerating the transportation and distribution of finished products, and collecting accounts receivables in a timely manner.

Fifthly, in order to fully utilize idle labor and production facilities to create additional income and increase savings, we should adopt various measures to promote the circulation and recombination of production factors. These measures will help turn potential noncash capital into real cash capital.

From the above discussions, we can understand that as long as appropriate measures are adopted, potential capital can be discovered. The five measures we discussed above can be summarized into the following two points: On the one hand, we should continue pushing economic reforms forward to discover funding potential; on the other hand, we should rely on various measures that aim to adjust product structure, industrial structure, regional economic structure, consumption structure, and technological structure so that we can increase capital utilization efficiency and reduce unreasonable capital utilization.

The economic reforms hereby referred to cover many areas. In terms of financial reforms, the focus should be placed on allowing the

establishment of various financial institutions and the commercialization of state-owned commercial banks. Establishing various financial institutions will help absorb idle capital from society and facilitate the transformation of savings into investment. The commercialization of state-owned commercial banks will not only significantly improve capital utilization efficiency and reduce inappropriate capital deployment but also mobilize and encourage banks to absorb and utilize idle capital in society. Moreover, financial reforms will accelerate the development of the capital market and contribute to the formation of a perfect capital market. Based on how the capital market is developed and perfected, we can gradually remove the controls over interest rate so that it can adjust to changing supply and demand in the capital market.

In terms of the reform of the enterprise operation mechanism, the most important measure applicable to discovering funding potential is to turn enterprises into goods producers who make their own business decisions and are responsible for operational profits and losses and to set up a shareholding system for appropriate enterprises. Recognizing enterprises as independent decision-makers who take responsibility for their own profits and losses will help enterprises save capital and avoid unnecessary capital deployment, hence increasing capital utilization efficiency. To set up the shareholding system by way of stock offering can not only absorb idle capital from society and divert the capital raised to production but also encourage corporate mergers and acquisitions or the formation of business alliances, helping recombine production factors and direct the capital in society to the development of production capacity for the benefit of the economy. These measures are essential to discovering funding potential.

Reforming the social security system will also help discover funding potential. One of the main purposes of the reform is to change the old way of purely relying on the state to provide social security and to establish a social security system that mainly relies on individuals themselves, i.e., a social security system that consists of

personal savings, corporate contributions, and state subsidies. Through the reform, pension funds and various social security and welfare funds will have significant amount of capital under management. These funds can be allocated to where they are needed to alleviate the shortages of capital supplies in society.

We cannot underestimate the importance of investment system reform to the mobilization of idle capital in society and the efficient utilization of capital. We should do the following: Establish and perfect the system of fixed asset investment funds, arranging investment according to capital position and leverage funds provided by the state to pay the interest of the capital collected from society and so as to attract more capital; at the same time, the government should no longer concern itself with the details of operational investment projects, but delegate them to commercial investment companies, who are both investors and future operators of these projects. These commercial investment companies will sell or lease the projects once they are completed, contract with other companies to perform project management, or structure them into a subsidiary by issuing stocks to the public. These measures will effectively contribute to the efficient utilization and payback of investment capital.

The series of economic reforms discussed above are the basic approaches to resolving the capital supply and demand imbalance under the current condition of insufficient capital supply.

Next, we will discuss how to discover funding potential in terms of adjustment measures targeting product structure, industrial structure, regional economic structure, consumption structure, and technological structure.

7.1.3 Restructuring Versus Increasing Capital Utilization Efficiency

We still have to start this topic by discussing type II disequilibrium.

If the market is not fully developed and enterprises are not

motivated, it will be very difficult to execute restructuring plans (including the adjustments to not only product structure and industrial structure but also regional economic structure, consumption structure, and technological structure), and the attempt to discover funding potential via restructuring will also be fruitless. It is from this perspective that we consider pushing economic reforms forward and encouraging restructuring by means of economic reform the basic approach to discovering funding potential in China. We have discussed this point previously.

Undoubtedly, if economic reforms proceed smoothly, the financial system, the enterprise system, the social security system, and the investment system will all be changed fundamentally and the market will gradually become perfect. Under such circumstances, restructuring will accelerate and capital utilization efficiency will improve. The question we have is: If economic reforms are still in progress without making any fundamental changes in the underdeveloped market, will it be impossible to proceed with restructuring, which is relatively important to us, or is it absolutely impossible to increase capital utilization efficiency via restructuring? The answer is: Not necessarily. We cannot wait until after the completion of economic reforms before carrying out restructuring. If we did that, we would lose time. By the same token, we cannot wait until everything is ready before proceeding with increasing capital utilization efficiency via restructuring, or we would be struggling with tight capital supply. The right thing to do is to coordinate economic reforms and restructuring so that both can move forward and work together to discover domestic funding potential, increase capital utilization efficiency, and alleviate capital supply and demand imbalance.

In this circumstance, an applicable restructuring measure is quantity adjustment by the government, which mainly includes the adjustment of credit quantity and the adjustment to the rationing of scarce production materials that are intended to increase capital

supply and decrease inefficient capital utilization. This does not mean that quantity adjustment performed by the government is the best alternative that supports restructuring. At least it is a practical choice in these circumstances.

The adjustment of credit quantity mainly refers to the changes to the quantitative credit structure initiated by the government in accordance with its goals, provided that the total credit scale is under control, with the purpose of changing product structure, industrial structure, regional economic structure, consumption structure, and technological structure. Restructuring credit quantity is to terminate credit support for those enterprises or units who generate low economic returns or those who demonstrate low capital utilization efficiency and to redirect capital to those enterprises or units that have high economic returns or capital utilization efficiency. Meanwhile, restructuring credit quantity is to adjust economic development across different regions, initiate changes to the structure of personal consumption, and facilitate the coordination of the technological structure with the economy. All these measures will be conducive to gradually realizing the government's restructuring plan. Although the adjustment of credit quantity will not tackle the fundamental issues of the enterprise operation mechanism or the banking system, it will still be very effective during economic reforms when the interest rate elasticity of investment is relatively low and the supply gap in the capital market is relatively large, which prevents interest rates from floating freely in a short period of time.

Ration adjustment of scarce production materials can be determined by the target principle, which is used by the government to allocate the quota for scarce production materials (such as electricity, nonferrous metal, and certain chemicals) in order to support the sectors that can help alleviate the supply gap, utilize idle labor and production materials more efficiently, and restrict the growth of those enterprises that have low capital utilization efficiency. Ration adjustment of scarce production materials will not only impact

product structure and industrial structure but also directly or indirectly accelerate the adjustment of regional economic structure, consumption structure, and technological structure. Although ration adjustment of scarce production materials does not tackle the fundamental issues of the economic system and to some extent even prevents the market from working, which may hinder competition among enterprises, we cannot ignore its importance to the economy in alleviating the insufficiency of capital supply in the current economic situations. We have to keep in mind that quantity adjustment measures(including quota adjustment of scarce production materials) are more powerful than price adjustment measures when supply and demand mismatch is relatively severe, which happens to be one of the features of the disequilibrium economy. Moreover, our main task at the moment is to discover funding potential and increase the supply of domestic capital. To this end, we must cut investment in those enterprises or sectors that have low capital utilization efficiency and increase investment in those that have relatively high capital utilization efficiency. While we are trying to reach this goal via restructuring, quantity adjustment can also play a more significant role than price adjustment. Some of the side effects of quantity adjustment (e.g., dampening the motivation of some enterprises, thus putting certain enterprises and sectors in a difficult position) can only be regarded as the inevitable costs of restructuring and the alleviation of capital supply insufficiency. They are acceptable as long as benefits exceed costs.

From the government's perspective, there will always be potential side effects that come along with the adjustment, whether it is credit quantity adjustment or the ration adjustment of scarce production materials. Therefore, it is necessary to try our best to reduce these side effects. The government can do the following:

A. Determining the restructuring goals and action plans in a more scientific way by trying to avoid making blind decisions as much as possible and collecting sufficient information to support credit

quantity adjustment and the ration adjustment of scarce production materials.

B. Upon determining the restructuring goals and action plans, having the government departments responsible for the execution of credit quantity adjustment and the ration adjustment of scarce production materials strictly stick to the rules set by the government and banning any action in pursuit of illegal personal benefits in the name of quantity adjustment.

C. Introducing a dual-track credit system or a dual-track distribution system for certain production materials. To some extent, this can mitigate the disadvantages of quantity adjustment. The dual-track credit system refers to a system in which the market provides credit in addition to the government adjustment of credit quantity. Credit provided by the market allows interest rates of deposits and loans to be set by the market, and the government only sets the upper limit on floating interest rates. Under the dual-track credit system, the government should strictly prohibit any fund loaned to enterprises via the adjustment of credit quantity from entering into the market. Otherwise, there will be new problems. The dual-track distribution system for certain production materials refers to a system in which the production materials with various degrees of scarcity can be distributed partly by ration adjustment and partly by open-market transactions executed in the production material market, except for some extremely rare and vital production materials that are completely controlled by the government via ration adjustment. The price for openmarket transactions is determined by the market, and the government can choose whether or not to set a price ceiling. The ratio of distribution by ration adjustment to distribution via open-market transactions depends on the scarcity of a particular production material.

7.1.4 The Relationship Between Industrial Restructuring and Economic Growth During the Mobilization of Domestic Capital

Economic growth requires additional input of capital, and so does industrial restructuring. With limited supply of domestic capital, if more additional capital is committed to economic growth, capital allocated to industrial restructuring will have to be lessened. The conflict that arises during the distribution of additional capital is real. Of course, if more domestic funding potential is discovered at time of capital supply shortages, tight capital supply can be somewhat alleviated. However, newly mobilized capital will face the same issue, i.e., how should it be allocated between economic growth and industrial restructuring. Thus, we still need to decide on who gets more capital and who gets less.

Between economic growth and industrial restructuring, we can neither prefer one to another nor emphasize only one of them. The reason is that if we only emphasize economic growth and ignore industrial restructuring, economic growth under the current industrial structure will encounter more and more difficulties and we will face the coexistence of supply gap and demand shortfall of some production factors during economic growth, which will lower economic growth rate and cause subsequent structural imbalances. On the contrary, if we only emphasize industrial restructuring and ignore economic growth, industrial restructuring will falter. One of the reasons why industrial restructuring will falter is that lowering economic growth will mothball some production factors, thus lowering enterprises' income, personal income, and fiscal income and hindering industrial restructuring from following the goals set by the government.

Therefore, the choice that we have is to balance economic growth and industrial restructuring and to carry out industrial restructuring during economic growth and maintain continuous economic growth by means of industrial restructuring. Specifically, to execute industrial restructuring during economic growth refers to the following: While maintaining an economic growth rate similar to the past, we will increase the percentage of the output from new industrial sectors in

aggregate output and decrease the percentage of the output from traditional industrial sectors in aggregate output (as the absolute value of the output from traditional industrial sectors may remain unchanged or change slightly). To maintain economic growth by means of industrial restructuring refers to the following: While the percentage of output from traditional industrial sectors in aggregate output keeps declining, the economic growth engine will mainly rely on higher absolute value of the output from new industrial sectors as well as its rising share in aggregate output. Obviously, to balance economic growth and industrial restructuring requires production factors to circulate and recombine. It is also related to the redistribution of capital among various sectors as well as the guidance on societal consumption, savings, and investment.

The key point that we need to focus on here is how economic growth and industrial restructuring are related to mobilizing domestic capital. If the government mobilizes domestic capital by means of voluntary savings, e.g., adjusting interest rates and giving favorable tax treatment to investment to encourage people to increase the share of income allocated to savings and investment, the way that newly discovered domestic capital is actually distributed between new and traditional industrial sectors will depend to a large extent on the differential interest rates and preferential investment tax treatment. The government can determine the differential interest rates and preferential investment tax treatment at a high level according to the current situation and the target model of the industrial structure as well as the probability of economic growth and historical economic growth rates. In summary, mobilizing domestic capital by means of voluntary savings and distributing capital among various sectors appropriately will lead to fewer hurdles, if any, than other ways. If any hurdle does arise, it may originate from the traditional values behind consumption and savings (i.e., people may or may not react to the changes in interest rates or preferential investment tax treatment and correspondingly change their consumption and savings behavior

by raising savings rate and increasing the propensity to invest) or from the financing capability of financial institutions (i.e., they may or may not be capable of effectively and efficiently discovering idle capital in society and using the capital to support the development of new industrial sectors).

If the government tries to discover domestic funding potential by means of compulsory savings in an attempt to mobilize domestic capital, for instance, forcing people to buy government bonds, raising direct and indirect tax rates and increasing the prices of some consumer goods, or lowering the level of cash amount that enterprises are required to hold with the purpose of raising additional capital to be invested in new industrial sectors, we will have the following two outcomes. Firstly, the government will be able to raise a certain amount of cash fairly quickly and allocate the capital to various areas and sectors according to its predetermined goals. On the other hand, as this way of raising funds is to mandatorily change personal consumption behavior and directly interfere with how enterprises conduct businesses and distribute income, personal and business motivation may be hurt, economic growth may be influenced, and business growth may be interrupted, which may hurt economic growth. Therefore, even if the government is not absolutely prohibited from using compulsory savings to raise capital during the process of mobilizing domestic capital, it must act appropriately. Otherwise, it will be difficult to balance economic growth and industrial restructuring.

However, we should realize that both voluntary savings and compulsory savings are acceptable as long as they help support industrial restructuring during the process of pursuing economic growth and maintaining sustained economic growth through industrial restructuring. As the economic regulator, the government has to manage voluntary savings and compulsory savings according to the specific situations at different times. Voluntary savings play a more powerful role in motivating individuals and businesses, while

compulsory savings, if used appropriately and accounting for appropriate ratio, can raise capital fairly quickly to help promote economic growth and restructure industries. Given the current situations in China, how to manage voluntary savings and compulsory savings in such a way that balances economic growth and industrial restructuring is an important topic on which we need to do further research.

壹 产业结构调整在国内资金来源

一、非均衡条件下的资金缺口与资金潜力

从我国经济目前所处的非均衡状态来看，尽管资金缺口的存在是十分明显的，但与此同时，国内资金潜力也不可忽视。资金缺口与资金潜力的并存，是目前我国资金问题的特点之一。

资金缺口是指资金供给的不足。在经济发展过程中，资金需求量一直很大，而资金的供给总是有限的。有限的资金总是不可能满足社会对资金的需求，资金价格呈现上升的趋势。但由于资金供给的利息弹性不大，资金需求的利息弹性也不大，所以单纯依靠利息率的上升并不能增加资金的供给和抑制对资金的需求。资金缺口不可避免地继续存在着。这种情况迫使金融当局把调节资金供求的政策重点放在信贷规模的调整方面，即放在对资金市场的数量调节上，指望用资金的配额来适应资金供不应求的现状，至于利息率的调整则被看成是辅助性的手段。近年来，我国金融当局所采取的正是这种以数量调节为主、价格调节为辅的调节措施。应当认为，这一做法大体上是符合目前我国经济这样的非均衡状态的。

但值得注意的是，在资金缺口存在的同时，资金潜力同样存在，而且对资金潜力的大小不应低估。资金潜力是指潜藏在经济内部的、有可能被发掘出来而至今尚未被发掘出来的资金。这些潜在的资金或者表现为闲置的货币，或者以非货币资源的形式存在着。具体地说，它们有以下五种形式：

第一，最常见的是居民手头保留的现金。居民的可支配收入中，除去用于消费支出的部分和进入各类金融机构的部分以外，剩下的就是手头持有的现金。这些手头持有的现金远远超出了居民日常备用的现金余额。为什么它们会存在？这正是居民的消费意愿未能实现和国内缺乏除现金、银行存款、债券等少数资产形式以外的其他多种资产形式所造成的。换句话说，居民所需要的消费品供给不足和居民个人投资机会的不足导致了资金潜力的存在。

第二，个体户、私营户手头保留的现金。个体户、私营户是经营者，他们手头保留的现金的性质与居民手头保留的现金的性质不同，他

们主要是对扩大生产经营规模和再投资有疑虑，因此不愿继续把货币投入生产领域。这些未被继续投入生产领域的资金有可能转入消费领域，成为挥霍性的、炫耀性的消费支出，但也有可能被个体户、私营户保留在手中，暂时不作安排，待机而动用。

第三，企业的超正常现金和物资储备。这是指：企业保留了超出正常需要的备用现金，以及企业购置了超出正常储备额的原材料、燃料、零部件等等。在商品供给缺口和资金供给缺口存在的条件下，企业之所以会保持超正常的现金和物资储备，无非是一种预防性措施：或者是害怕供给的中断，或者是害怕价格的继续上涨。但无论是企业超正常的现金储备还是物资储备，都是对资金的不合理的占用，从而都加剧了社会的资金供给不足。假定能让企业把现金和物资储备保持在正常水平线以下，那就等于减少了对资金的需求，增加了资金的供给。除企业以外，个体户、私营户也有类似的超正常储备情况。居民储存过量的消费品（其目的也是为了防止供给中断和防止物价上升），同样意味着资金的不合理使用。

第四，社会资金的利用效率偏低。如果社会的资金供给总量为既定额，那么资金利用效率低的资金投入越多，资金供给就越不足。此外，如果社会的资金周转速度缓慢，那么资金供给也会显得紧张。这表明，在资金供给总量为既定额的条件下，资金利用效率的偏低和资金周转速度的缓慢都表明资金潜力的存在，表明只要提高资金利用效率，把利用效率偏低的资金转投于资金利用效率较高的领域，以及加快资金周转速度，就可以缓解资金的缺口，缩小资金供求的矛盾。

第五，潜在的资金还可能以非货币的形式存在着。例如，劳动力的闲置或生产设备的闲置，就意味着非货币形式的资金潜力的存在。只要把闲置的劳动力、闲置的生产设备利用起来，就可以增加收入，而在所增加的收入中，就有一定的份额作为储蓄，并相应地转化为投资。这样，潜在的非货币形式的资金就成为现实的货币形式的资金了。资金的增加将有助于缓和资金供给与资金需求之间的矛盾。

以上五个方面说明了这样一个问题：在当前我国的经济非均衡条件下，我们要注意到资金的缺口的存在，但也不要忽略国内的资金供给仍然具有潜力。无论是经济的增长还是产业结构的调整，都需要投入较多的资金。如果我们只看到资金的缺口而看不到资金的潜力，那么就可能对国内的资金供求形势作出偏于悲观的估计。

二、发掘国内资金潜力的主要途径

正确地认识资金缺口与资金潜力的并存，有助于我们制定科学的产业结构调整的政策。

怎样才能发掘国内的资金潜力？可以根据上述五种不同的情况设计具体的措施。简要地说，可供选择的措施如下：

第一，为了提高居民的储蓄率和尽量减少他们手头保留的现金数额，应当增加居民个人的投资机会，特别是应利用股票集资的方式把它们动员出来。

第二，为了扩大个体户、私营户的再投资的积极性，使他们手头少保留现金，或者使他们把本来准备用于挥霍性的、炫耀性的消费支出转用于生产资金，应当制定适当的政策，使个体户、私营户对投资前景和财产权有信心。

第三，为了使企业不再保留超正常的现金储备和物资储备，使企业合理地使用自己的资金，应当设法消除企业对于供给中断和价格继续上涨的顾虑。为此，应当采取措施增加原材料、燃料、零部件的供给，并发展期货贸易，减少价格上涨对于企业正常经济活动的干扰。这样就等于减少了企业对资金的需求。

第四，为了提高社会资金的利用效率以及加快资金周转速度，节约社会对资金的使用，应当合理调整资金的使用方向，调整投资结构，把利用效率偏低的资金转投于利用效率较高的生产领域。同时，应当采取各种措施来加快资金周转速度，如改进技术，缩短产品生产周期；组织均衡生产；加速制成品的发送和运输；及时收回销货款等等。

第五，为了充分利用闲置的劳动力和生产设备，增加收入和增加储蓄，应当采取各种措施来促进生产要素的流动，便于生产要素的重新组合。这些都有利于把潜在的非货币形式的资金转化为现实的货币形式的资金。

由此可见，只要措施得当，潜在的资金是可以被发掘出来的。可以把以上提到的五个方面应当采取的措施概括为以下两点，这就是：一方面要推进经济改革，靠经济改革把资金潜力发挥出来；另一方面要依靠各个有关的调整产品结构、产业结构、地区经济结构、消费结构和技术结构的措施，既提高资金的利用效率，又减少对资金的不合理使用。

这里所说的经济改革，范围是广泛的。在金融改革方面，应当把重点放在容许多种金融机构的建立和商业银行的企业化之上。多种金融机

构的建立，有利于广泛吸收社会闲置资金，增加储蓄并使之转化为投资。商业银行的企业化，不仅可以大大提高资金的利用效率，减少不合理的资金投入，而且可以调动银行的积极性，促进银行对社会闲置资金的吸收和利用。此外，金融改革的进展将加速资金市场的发展与完善化，在资金市场发展完善化的基础上，利息率将逐步放开，以适应资金市场的供求变化。

在企业体制改革方面，对发掘资金潜力最为重要的改革措施是使企业成为自主经营、自负盈亏的商品生产者，并使其中适宜于实现股份制的企业实现股份制。企业的自主经营和自负盈亏，有利于企业节约资金的使用和避免不合理的资金投入，从而提高资金利用效率。股份制的推广，不仅可以通过股票形式吸收社会闲置资金，把它们用于生产，而且可以促进企业的合并、联营，有助于生产要素的重新组合和把社会资金导向对发展经济有利的生产领域。这些对于挖掘资金潜力都是必不可少的措施。

社会保障制度的改革同样有助于挖掘资金潜力。这一改革的主要目的在于把过去单纯依赖国家的社会保障制度改造为主要依靠居民自身的社会保障制度，即由居民积蓄、企业缴纳、国家津贴三者合一而形成的社会保障制度。通过这一改革而建立的养老基金会、各种社会保障和福利事业的基金会等等，将拥有大量资金，它们可以被使用于社会需要的领域，以缓和社会资金供给的不足。

投资体制的改革在动员社会闲置资金和有效地利用资金方面的积极意义是不可低估的。应当做到这样一点，即建立和完善固定资金投资基金制，根据资金状况安排投资，国家财政提供的资金在基金中起到酵母作用，依靠它们作为社会集资的利息，以吸收更多的社会资金；同时，政府机构不再过问具体的经营性投资项目，经营性投资项目由企业化的投资公司管理，这些投资公司既是投资者，又是未来的经营者，在项目建成以后，投资公司可以有偿转让它们，或租赁出去，或承包出去，也可以增发股票，吸引社会资金，使之成为一个子公司。这些措施将有力地促进投资资金的合理利用和回收。

以上的一系列经济改革措施就是当前我国在资金供给不足条件下解决资金供求矛盾的基本途径。

下面，再就调整产品结构、产业结构、地区经济结构、消费结构和技术结构方面的措施，对发掘资金潜力问题进行一些论述。

三、结构调整与资金利用效率的提高

这个问题仍应从第二类非均衡谈起。

如果市场不完善而企业又缺乏活力，那么结构调整（不仅是产品结构、产业结构的调整，而且包括地区经济结构、消费结构、技术结构的调整）肯定是困难的，要想通过结构调整来挖掘资金潜力的意图也难免落空。正是从这个意义上说，推进经济改革，用经济改革来促进结构调整，是当前我国发掘资金潜力的基本途径。关于这一点，前面已经作了分析。

毫无疑问，如果经济改革进展顺利，金融体制、企业体制、社会保障体制、投资体制等等都有了实质性的变化，市场也将随之而逐渐趋向完善，在这种情况下，结构调整将会大大加速，通过结构调整而提高资金利用效率的格局也会出现。问题是：如果经济改革仍在继续进行之中，实质性的变化尚未发生，市场仍然是不完善的，那么是不是就不可能进行较重要的结构调整呢？通过结构调整而提高资金利用效率的愿望是不是就毫无实现之可能呢？情况未必如此。我们不能等待经济改革成功之后再来进行结构调整，如果那样做，就会丧失时间。同样的道理，我们不能等待条件成熟之后再通过结构调整来提高资金利用效率，否则资金供给的紧张将一直困扰着我们。正确的对策应当是，把经济改革与结构调整结合起来，使之相互促进，在经济改革与结构调整并进的过程中发掘国内资金潜力，提高资金利用效率，缓和资金供求矛盾。

在这种情况下，结构调整的一个可行的措施是政府采取数量调节，主要是以信贷数量调节和稀缺生产资料的配额调节为主的数量调节，以便增加资金的供给和减少对资金的不合理使用。这并不意味着政府采取的数量调节是促进结构调整的最佳选择，但至少是现实条件下的一种可行的选择。

信贷数量调节主要是指政府根据自己的目标，在控制信贷总量的前提下改变信贷的数量结构，使产品结构、产业结构、地区经济结构、消费结构和技术结构发生变化。通过这种信贷数量结构的调整，经济效益差、资金利用效率低的企业和部门将得不到信贷的支持，资金将投入经济效益高、资金利用效率高的企业和部门。同时，信贷数量结构的调整还将使地区之间的经济发展得到调整，使居民的消费结构发生变化，以及促进技术结构与国民经济的协调。所有这些，都有助于使政府预定的结构调整意图逐步实现。尽管信贷数量调节并不触及企业或银行体制方

面的实质性问题，但在经济改革继续进行的过程中，在投资的利息弹性较小，资金市场上供给缺口较大，从而不可能迅速实现利息率自由浮动的条件下，信贷数量调节仍然是有效的、可行的。

稀缺生产资料的配额调节可以按照目标原则来确定。这是指：为了促进那些有利于缓和供给缺口的部门的增长，为了更好地利用闲置的劳动力和生产资料，以及为了限制资金利用效率低的企业的发展，政府可以按一定的配额来分配稀缺的生产资料（如电力、有色金属、某些化工原料等）。稀缺生产资料的配额调节不仅对产品结构、产业结构的调整起作用，而且也可以直接地或间接地加速地区经济结构、消费结构和技术结构的调整。尽管稀缺生产资料的配额调节并不触及经济体制方面的实质性问题，甚至在一定程度上会削弱市场机制的作用，对企业间的竞争发生消极的影响，但根据当前我国经济的实际情况，看来这种做法在缓和资金供给不足中的作用仍然不可忽视。要知道，数量调节手段（包括稀缺生产资料的配额调节）在供求矛盾较大时，其作用要胜过价格调节手段，这一点正是非均衡经济的特征之一。何况，现在所要解决的主要任务是发掘资金潜力和增加国内的资金来源。为此，就必须压缩某些资金利用效率低的企业和部门的投资，使另一些资金利用效率较高的企业和部门能有较大的发展。在通过结构调整而实现这一任务的过程中，数量调节也可以发挥比价格调节更显著的作用。数量调节所带来的某些消极后果（如挫伤一些企业的积极性，使某些企业和部门因此而陷于困难地位等等），只能被看成是为了调整结构和缓和资金供给不足而不得不付出的代价。只要利大于弊，就是可行的。

从政府的角度来看，无论是信贷数量调节还是稀缺生产资料的配额调节，既然都可能带来弊端，那么就有必要尽量地减少这些弊端。政府在这方面可以采取的做法有：

1. 较科学地制定结构调整目标和结构调整方案，使信贷数量调节和稀缺生产资料配额调节有较充足的依据，减少盲目性；

2. 在结构调整目标和结构调整方案制定以后，信贷数量调节和稀缺生产资料配额调节的执行部门应当严格按照政府的规定来实行，禁止在数量调节的名义下以权谋私；

3. 二元信贷制度和某些生产资料的二元分配制度的实施可以在一定程度上减少数量调节带来的弊端。二元信贷制度是指：除了采取信贷数量调节以外，还容许市场的信贷业务的存在，后者的存款和贷款利率

随行就市，政府可以只规定最高利率作为上浮的限界。在二元信贷制度之下，政府应当严禁通过信贷数量调节而贷给企业的资金转流入市场借贷业务之中，否则将会滋生各种新的弊端。某些生产资料的二元分配制度是指：除了少数极其稀缺而且至关重要的生产资料完全由政府实行配额调节以外，有些稀缺程度不等的生产资料，可以一部分实行配额调节，另一部分则通过生产资料市场进行公开议价交易，其价格随行就市，政府可以规定最高限价，也可以不作这种规定。至于配额调节所占的比例大小，则因该种生产资料的稀缺程度而定。

四、国内资金动员过程中产业结构调整与经济增长之间的关系

经济增长需要追加资金投入，产业结构调整也需要追加资金投入。在国内资金供给有限的条件下，一定量的追加资金投入，用于经济增长的比例大了，可以用于产业结构调整的比例就小一些，这种追加资金分配的矛盾是客观存在的。当然，如果能够在资金供给不足的同时尽可能发掘国内资金潜力，资金供给紧张的问题可以有所缓和，但被动员出来的资金同样会遇到如何在经济增长与产业结构调整两个不同的方面进行分配的问题。这样，仍然会面临这一方面的追加资金投入偏多，则另一方面的追加资金投入偏少的选择。

经济增长与产业结构调整是不能偏废的。我们不可能只强调其中一个方面。这是因为，如果只有经济增长，而没有产业结构调整，那么在现有产业结构之下的经济增长将会遇到越来越大的困难，经济增长过程中就会发生生产要素供给不足和需求不足并存的问题，从而经济增长率将下降，结构性失衡不可避免地会出现。反之，如果只顾调整产业结构，而忽视经济增长，那么产业结构的调整不可能是顺利的，而造成产业结构调整困难的原因之一就是：经济增长率下降将导致一部分生产要素的闲置，导致企业收入、居民收入、财政收入的减少，这样就会阻碍产业结构按照政府的预定目标进行调整。

因此，可供选择的做法将是经济增长与产业结构调整的兼顾，力争做到在经济增长过程中调整产业结构，用产业结构的调整来维持经济的持续增长。具体地说，在经济增长过程中调整产业结构是指：基本上维持与过去相近的经济增长率，增加新产业部门的产出，减少传统产业部门的产出在总产出中的比例（传统产业部门的产出的绝对值可能不变，也可能有所增加或有所下降）；用产业结构的调整来维持经济的持续增

长是指：在传统产业部门的产出在总产出中的比例逐渐降低的同时，经济增长率将主要依靠新产业部门的产出绝对值的增加及其在总产出中的比例的上升来支持。由此可见，经济增长与产业结构的兼顾涉及生产要素的流动和重新组合，涉及一定资金在部门间的再分配，以及涉及社会的消费、储蓄和投资的引导等问题。

这里需要着重探讨的，是经济增长、产业结构调整与动员国内资金之间的关系。假定政府采用的是自愿储蓄方式来动员国内资金，比如说，政府用利息率的调整和投资税收的优惠等方式来促使人们把收入的较多部分转为储蓄和投资，那么被发掘出来的国内资金究竟如何在新产业部门和传统产业部门之间进行分配，在很大程度上可以依靠差别利息率和差别投资税收优惠来实现。在制定这些差别的利息率和投资税收优惠时，政府可以根据产业结构的现状和目标模式，以及经济增长的可能性和过去已经达到的水平来统筹安排。总之，以自愿储蓄的方式来动员国内资金，并妥善地在部门之间进行分配，阻力是比较小的。如果说在这方面仍然存在着阻力的话，那么阻力既来自传统的消费观念和储蓄观念（即人们是否受利息率和投资税收优惠的吸引，改变消费习惯和储蓄习惯，提高储蓄率，增强投资意愿），也来自金融部门的融资能力（即金融部门有没有足够的力量，能够有效地、合理地把社会闲置资金发掘出来，并把它们主要用于支持新产业部门的发展上）。

假定政府采取的是强迫储蓄方式来动员国内资金，比如说，政府用类似摊派性质的政府债券推销方式，提高直接税和间接税税率的方式，提高某些消费品价格的方式，或降低企业的现金持有定额的方式等等来发掘国内资金潜力，以便把筹集到的追加资金用于发展新产业部门，那么将会发生这样两方面的后果：一方面，政府可以较快地集中一定数额的货币于手中，然后按照自己预定的目标，分配这些资金于不同的领域和不同的部门；另一方面，由于这种资金集中方式是对居民消费行为的强制性的变更，以及对企业经济活动和企业收入分配方式的强制性的干预，因此它可能挫伤居民和企业的积极性，影响经济增长率；它也可能使企业的发展受到干扰，对经济增长也有消极的影响。因此，在动员国内资金的过程中，政府不是绝对不可以采取强迫储蓄以集中资金的做法，而是说这种做法必须适度，否则就难以兼顾经济增长与产业结构调整这两个方面。

但应当认识到，无论是自愿储蓄还是强迫储蓄，只要有利于在经济

增长的同时不断调整产业结构，有利于通过产业结构的调整来维持经济的持续增长，那么它们都是可行的。作为经济调节者，政府有必要根据每个时期的特定条件，使自愿储蓄与强迫储蓄两种方式配合使用，自愿储蓄在进一步调动居民和企业的积极性方面是有较大作用的，而强迫储蓄只要运用得当，比例适度，就能够较快地使政府集中一笔既可以用于促进经济增长，又可以用于调整产业结构的资金。从我国当前的实际情况出发，配合使用自愿储蓄和强迫储蓄以兼顾经济增长与产业结构的调整，正是我们需要深入研究的重要课题。

7.2 INDUSTRIAL RESTRUCTURING AND LONG-TERM ORIENTATION OF CORPORATE BEHAVIOR

7.2.1 Main Reasons for Corporate Shortsightedness and Impediments to Industrial Restructuring

We know that corporate behavior consists of the decisions related to input, output, and income distribution. Whether an enterprise is focused on only its short-term interests is related to the economic benefits it receives from its input, output, and income distribution decisions. If an enterprise is uncertain about its self-interest, it does not care about any long-term benefit from its decisions on input, output, and income distribution. Instead, it will focus on its short-term interests, thus giving rise to corporate shortsightedness. Under the traditional economic system, an enterprise was nothing but a subordinate of its administrative institution, and the interests of its superior administrative department superseded its own interests. The senior management of an enterprise included officials dispatched by its superior administrative department. They followed every instruction from its superior administrative department that managed every specific area. Decisions on input, output, and income distribution were not made by the enterprise itself, and its self-interest related to input, output, and income distribution had no direct impact on the enterprise itself. It is hard to judge whether the behavior of enterprises under the traditional economic system was longterm oriented or shortsighted. We can even objectively say that this issue is not relevant. The reason is this: If a superior administrative department had long-term considerations and arrangements, an enterprise would exhibit long-term-oriented behavior when making decisions on input, output, and income distribution; if a superior administrative department had short-term considerations and

arrangements, an enterprise's decisions on input, output, and income distribution would certainly focus on short-term interests. An enterprise as of that time is not yet a real corporation.

After the subcontracting system was implemented during economic reforms, enterprises were given rights to make their own decisions on input, output, and income distribution during the subcontracting period. But these decisions obviously reflected the shortsightedness of corporate behavior. For example, subcontractors were unwilling to make an investment that would generate long-term returns, especially an investment that brought no returns but only inputs in the short term. Rather than caring about the fixed assets of an enterprise and keeping them well maintained, a subcontractor would try to utilize the assets to the fullest to get every penny out of them. In terms of earnings distribution, they tend to ignore reinvestment and instead try as hard as possible to satisfy their employees' request for higher compensation. All of these are symptoms of corporate shortsightedness. The nature of the subcontracting system demonstrates that corporate shortsightedness is unavoidable. Of course, there are measures to improve the subcontracting system. These measures, for example, include using a comprehensive index of net income and total taxes paid, not just a single index, to evaluate business performance, appropriately extending the term of a subcontracting period or favoring current contractor at contract renewal according to specific business operational situations, and compensating incumbent subcontractors during the subcontracting period for any investment that produced long-term returns and allowing incumbent subcontractors to receive a portion of future benefits. These measures can overcome some of the shortcomings related to the corporate shortsightedness arising from the subcontracting system, but they are still unable to totally eliminate corporate shortsightedness. This is exactly the defect that the subcontracting system fails to overcome.

It is not difficult to understand why corporate shortsightedness is

detrimental to economic growth, as has been revealed by the fact that economic efficiency fails to grow sustainably or may even continue to decline and that the size of corporate investment is subject to constraints. In other words, business investment rate is hardly maintained at the existing level due to the shortsightedness of decisions on distributing corporate income and also exhibits a downward trend. We know that economic growth depends on two basic factors, investment rate and investment result. Maintaining a certain economic growth rate requires not only a stable investment rate, but also relatively good results from the investment. Given the corporate shortsightedness, low economic efficiency and the downward trend in investment rate will surely reduce the potentiality of economic growth, which is worrisome.

In that case, it is easy to imagine the difficulty in performing industrial restructuring. From the enterprise perspective, they do not care about developing new industrial sectors because they, as subcontractors, only care about their short-term interests. And they do not have sufficient capital to develop new industrial sectors either. In addition, production factors were not allowed to flow freely under the subcontracting system, and there were also many economic constraints on the optimization and recombination of production factors. This shows that the subcontracting system is incapable of aligning enterprise decisions on input, output, and income distribution with the needs of industrial restructuring, even though subcontractors understand the importance of industrial restructuring and know that more investment in new industrial sectors will benefit enterprises themselves as well as the national economy. From a macroeconomic perspective, because macroeconomy is based on microeconomy, the shortsightedness of microeconomic units makes it difficult for the economy to achieve higher efficiency and may even lead to lower efficiency. Therefore, the amount of capital allocated to industrial restructuring by the government is obviously insufficient. Industrial restructuring needs fiscal support. When enterprises themselves are

incapable of changing current industrial structure, fiscal support becomes particularly important. However, the insufficient funds that the government can tap into limit its capability of realizing the predetermined industrial restructuring goals.

Of course, the difficulties in carrying out industrial restructuring in the current economic environment in China are not only due to corporate shortsightedness. The market is not fully developed, there are obstacles to the free flow of production factors and shortage of some key production materials, goods are not priced reasonably, and new industrial sectors lack technological capabilities. These situations make it even more difficult to carry out industrial restructuring. In spite of many other reasons, corporate shortsightedness is an important one that we cannot ignore. In addition, some of the abovementioned reasons that hinder industrial restructuring are also related to corporate shortsightedness. For example, an underdeveloped market and unreasonable prices for comparable commodities surely forced enterprises under the subcontracting system to focus only on their short-term interests, which in turn made it very difficult for the market to fully develop and impossible for unreasonable commodity prices to turn around to bring on additional supplies. As another example, the free flow of production factors encountered obstacles, some key production materials experienced shortages, and new industrial sectors lacked sufficient technological capabilities. All these factors were not only influenced by the shortsightedness of enterprises that adopted the subcontracting system but also responsible for causing corporate shortsightedness. It is hard to imagine enterprises that adopt the subcontracting system and care only about its short-term interests would invest a large amount of capital in a major investment project that brings long-term benefits and develops future technological capabilities. They simply would not do that.

7.2.2 Investors' Interests Functioning as Internal Constraint on

Corporate Shortsightedness

Now, we have to clarify a theoretical issue: Wouldn't corporate shortsightedness be constrained by the corporate operation mechanism? Why does the subcontracting system fail to eliminate corporate shortsightedness, while the shareholding system is capable of balancing shortterm interests with long-term interests? We should clearly point out that any enterprise that adopts the subcontracting system is not really constrained by its investors' interests. If the interests of the subcontractee were supposed to be aligned with that of the investor, it would only manifest during the competitive bidding process, during which the subcontractee can select a subcontractor from multiple bidders that best fits his or her interests. After the completion of the bidding process, it would be difficult to leverage the investors' interests to constrain the shortsightedness of the subcontractor. In addition, when property rights are not normalized and the government is not separated from enterprise, a subcontractor per se may still be affiliated with and controlled by a government institution and is not yet an entity that makes its own business decisions and is responsible for its profits and losses. Therefore, investors' interests do not really function as a constraint even during the process of soliciting bidders to bid for a contract.

The shareholding system is drastically different. An enterprise under the shareholding system that we are discussing here refers to a normal corporation that has shareholders and is established on the basis of public ownership. The interests of various investors, including the central government, local governments, and state-owned enterprises, are fully manifested. This is because every investor expects two types of income from an investment in a shareholding enterprise, dividend and capital appreciation. Between these two types of income, the latter is likely to be more important and attractive than the former. If an investor has a few alternative investment opportunities to choose from, he or she will compare both the first

and second type of income from different shareholding enterprises. If one enterprise has a higher dividend rate but lower expected capital appreciation, as compared with another enterprise that comes with a lower dividend rate but higher expected capital appreciation, an investor will more than likely choose to purchase the stock of the latter enterprise. The investor would think in the following way: If the purpose of the investment is purely to receive dividend rather than equity appreciation, why do I only invest in a stock? Wouldn't it be more reliable to invest in bonds or certificates of deposit that pay interest without equity investment risks? It is these investment considerations and the ensuing investment decisions that urge a shareholding enterprise to carefully formulate its long-term growth strategy and operating policy.

In this circumstance, a shareholding enterprise must pay attention to how to accumulate capital and reinvest, unlike those operating under the subcontracting system that try to pay out as many dividends as possible. By the same token, shareholding enterprises, unlike their peers under the subcontracting system that try to deplete all resources and skip equipment maintenance, must focus on technological innovation, try to develop new products, and tap into new markets so that business can grow. Only by doing so can they achieve share appreciation and attract more investors. Otherwise, investors who own the stock would sell off their holdings and instead purchase the stock of other enterprises that have higher growth potential and expected share appreciation. This is how investors' interests function as the constraint on corporate shortsightedness.

Hence, the decision-maker of a shareholding enterprise must consider both long-term and short-term interests. A shareholding enterprise cannot afford ignoring the importance of capital accumulation and retained earnings reinvestment to its survival. If it does not have enough growth potential, it may appear unattractive to investors, even though it still pays relatively large dividends or maintains a relatively high dividend payout ratio. What an enterprise

operating under the subcontracting system lacks the most is exactly the constraint on the shortsightedness imposed by the self-interest of its investors. If such an enterprise is not transformed into a shareholding enterprise, corporate shortsightedness cannot be eliminated.

7.2.3 Investors' Interests Functioning as External Constraint on Corporate Shortsightedness

The constraint that investors' interests impose on corporate shortsightedness as we discussed in the above section can be called internal constraint, because it arises from the selection of investment opportunities by equity investors. Next, we will discuss a different constraint, i.e., corporate mergers and acquisitions, one that exists in reality and can control corporate shortsightedness. This can be called the external constraint that investors' interests impose on corporate shortsightedness.

We have to know that in a competitive market, every enterprise falls into its competitors' radar screen. Let us assume that a shareholding enterprise realizes a 10% rate of return, which its management may be happy about. However, its competitor may reach a different conclusion after analyzing the enterprise's current status and business prospect. For instance, the competitor may come to the viewpoint that "it is totally possible to reach a 30% rate of return based on its current technology and equipment, employee quality, business reputation, business contacts, and product sales." The enterprise that is capable of achieving a 30% rate of return only achieves 10%. This reveals that it has earning potential, but its current management is incompetent and lacks sufficient operational and managerial skills. Accordingly, the competitor can start purchasing the stock in the market or even launch a hostile takeover campaign. After the competitor has gathered enough shares, a takeover will take place. It will reshuffle the board of directors of the acquiree and reelect its chief executive officer. The enterprise will be managed in a different

way to increase profitability and reach the expected rate of return of 30%.

This demonstrates that as long as the market is competitive, any shareholding enterprise operates in an environment in which it is not only a potential takeover target but also a possible acquiring enterprise. Listing shares on a stock exchange makes mergers and acquisitions possible. Those enterprises that are poorly managed or even those who have earning potential but fail to fully discover it are likely to be taken over by their competitors. Those that are well managed can grow their business by pursuing mergers and acquisitions. This also reveals that a shareholding enterprise, if it wishes to survive in a competitive market, will have to balance its short-term and long-term interests, try its best to improve management and optimize business operations, and maintain a decent earnings retention rate, reinvestment amount, and dividend payout rate. Only after it captures all potential profits as well as reaches the goals of profitability, earnings retention, and the reinvestment for future growth can it retain current investors and avoid being taken over. On the contrary, if a shareholding enterprise only pays attention to its short-term interests and develops severe shortsightedness, its competitors will notice that its operation and development are on a wrong track. They will work on a plan to take it over, reenergize its growth, and redevelop an operational plan. As a result, they will benefit from the long-term growth and profit from share appreciation.

Here, we can clearly see that the internal and external constraints on shareholding enterprises due to investors' interests are closely connected and work at the same time. From an internal perspective, investors will sell off the shares of any enterprise that fails to support share appreciation or maximize potential profits and invest in other enterprises instead. From an external perspective, the competitors of such enterprise will consider purchasing its shares and launching a takeover. The internal and external constraints arising from investors' interests exert influence at the same time. Every shareholding

enterprise will face the following choice: either continuing to focus on short-term interests while ignoring long-term interests and bearing the risk of being acquired or changing its growth strategy and operational plan to balance its longterm and short-term interests while improving business operations and management, increasing reinvestment, and continuing to pursue business growth.

7.2.4 Long-Term-Oriented Corporate Behavior and Rationalization of Industrial Restructuring

The growth of macroeconomic productivity is directly linked to the emphases that enterprises place on capital accumulation, technological innovations, and the discovery of manufacturing and operational potential. All of these will certainly contribute to the rationalization of industrial restructuring.

We will analyze the relationship between long-term-oriented corporate behavior and the rationalization of industrial restructuring from the following three aspects:

First of all, when enterprises place emphasis on long-term development strategy and operational plan, they will certainly adjust earnings distribution, determine reasonable dividend payout, and increase the retention of internal capital. In this way, the tight capital supply, a major issue troubling the economy, can be alleviated. Regardless of how an enterprise invests in a new industry, using retained earnings or fiscal or financial support, the result is conducive to industrial restructuring.

Secondly, advancing technology, improving labor quality, regularly maintaining equipment, as well as increasing capital accumulation, all of which result from long-term-oriented corporate behavior, will enhance the potential of economic growth. Enhanced potential of business growth indicates enhanced potential of economic growth, thus ensuring sustainable economic growth. As we know, the industrial restructuring during sustained economic growth will be much easier than that during economic slowdown or recession. In

other words, the industrial restructuring in an environment that promotes long-term-oriented corporate behavior will be much easier than that in an environment dominated by corporate shortsightedness.

Thirdly, industrial restructuring assumes that production factors can be circulated and recombined. If enterprises adopt the shareholding system, corporate shortsightedness will be constrained by investors' interests. Meanwhile, the shareholding system will support the circulation and recombination of production factors. It is in this sense that we conclude that long-term-oriented corporate behavior and the rationalization of industrial restructuring are closely related.

Based on the discussions above, we can reach the following conclusion: Long-term-oriented corporate behavior or corporate shortsightedness is not an issue that is only related to long-term corporate growth or the fate of a corporation but more of a strategic issue that concerns economic growth and industrial restructuring.

If we dive a little deeper into the issue, it will not be difficult for us to find out that long-term-oriented corporate behavior and the rationalization of industrial restructuring are linked to efficiency.

Efficiency refers to the degree of effectiveness of resource allocation and utilization. When we say a nation, region, sector, or enterprise has relatively high efficiency, we refer to a nation, region, sector, or enterprise where resources are reasonably allocated and effectively utilized, with every kind of resource put to use. If we say someone has relatively high efficiency, we mean that the person tries his or her best or does what he or she is capable of and coordinates seamlessly with other resources, such as production materials and labor (including his or her coworkers). This is also related to the efficiency of resource allocation and utilization. Now, we have to think about this question: Where does efficiency come from?

In terms of resource allocation and utilization, efficiency comes from three aspects: motivation, quality, and environment. Human resources are the most important resource among all and are

represented by the labor force. To achieve relatively high efficiency, the labor force must be motivated. If an enterprise is regarded as an entity consisting of a group of individuals, its production and operation must be driven by motivation, and every member of the entity must also have motivation in order to achieve relatively high efficiency. Motivation varies. They can be economic or noneconomic, such as social responsibility, personal career ambitions, and personal interest or hobbies. In any case, motivation is critical to efficiency.

Efficiency also comes from quality. By quality, we mainly refer to the quality of people. People of high quality can enhance the quality of materials, even when the materials are of relatively low quality. People of high quality can gradually replace the materials of low quality with ones of high quality. The quality of people, including knowledge and technology skills, operational skills, innovation skills, mentality, and moral integrity, also varies. It is less likely for people of low quality to achieve relatively high efficiency.

Efficiency also comes from the environment. People live and work in a certain environment. An enterprise that consists of a group of people also operates in a certain environment. If the environment restricts the motivation of people and enterprise or influences the quality of people or the environment prohibits people from renovating low-quality materials, such environment will not support but limit or kill high efficiency.

We can learn from our discussions that the relatively low efficiency of resource allocation and combination in China is due to relatively poor motivation, quality, and environment. Regarding corporate shortsightedness, a hot topic nowadays, we should ask why enterprises tend to act only out of their short-term interests. If we look at it from the motivation perspective, isn't it because enterprises themselves lack the motivation to operate and grow for the long run and enterprise employees also lack the motivation to work hard for the long run? If we look at it from the quality perspective, isn't it because enterprises themselves lack the quality to organize and

achieve major technological innovations and enterprise employees also lack the quality to achieve major technological and managerial breakthrough? If we look at it from the environment perspective, isn't it because the current environment in which enterprise employees live and work stifles people's motivation and prevents the enhancement of personal quality? Since all three conditions, motivation, quality, and environment, are the way they are, how can enterprises avoid shortsightedness?

Let us look at the industrial structural imbalance that is often discussed and ask why the industrial structure is out of balance and whether it is hard to turn it around in a short time. If we look at the structural imbalance from the motivation perspective, isn't it related to the lack of motivation to recombine production factors as well as the lack of motivation to develop new products and new industries? From the quality perspective, even though we try to turn industrial structural imbalance around in a relatively short period of time, the quality of enterprise employees as well as enterprises themselves are not up to the standard, nor are macroeconomic management institutions staffed with quality personnel who are capable of developing and managing new industries. If we look at it from the environment perspective, a series of issues regarding industrial restructuring are traced back to the environment, including the issues concerning the supply of capital, labor, technology and information, infrastructure, tax and price, and especially property rights. If these issues concerning the environment are not resolved properly, it will still be difficult to proceed with industrial restructuring despite the high quality of enterprises themselves or of their employees.

Therefore, based on the research on corporate behavior and industrial restructuring, we are very clear about the solution to the issue of efficiency. We must systematically resolve the issues concerning motivation, quality, and environment that are related to the creation and increase of efficiency. Only after we resolve these issues can corporate shortsightedness be transformed into long-term-

oriented behavior and the industrial structure be gradually rationalized, thus bringing along high efficiency.

7.2.5 Resource Allocation and Long-Term-Oriented Societal Behavior

After we redirect the focus of our research from corporate behavior to societal behavior, and from analyzing the industrial structure to analyzing the economic structure, we will find out that the low efficiency currently in China is not only due to corporate and societal shortsightedness but also due to industrial and economic structural imbalance. This is exactly the issue at which we need to take another look.

Societal shortsightedness means that the behavior of all walks of life in society, in addition to the behavior of enterprises and their employees, focuses on short-term interests, and even the behavior of some government institutions follows the same pattern. For example, peasants are not willing to grow crops to produce food, students are not willing to study hard in school, and private business owners are not willing to reinvest, all of which demonstrate behavioral shortsightedness. Moreover, the leaders of some government institutions are satisfied with the current situation and fail to have long-term consideration. Some families constantly feel that they are living in uncertainties and are unclear about their future. These examples are all reflective of behavioral shortsightedness. With regard to this issue, I will analyze in further detail in the section on institutional innovation. For now, I will withhold more detailed discussions but only talk about the relationship among economic structure, resource allocation, and societal behavior.

The fundamental cause of societal shortsightedness is the lack of certainty of people's expectations for society. To most enterprises, enterprise employees, peasants, students, private business owners, and government officers, the future is full of uncertainties and very difficult to predict. All sorts of social and economic uncertainties lead

people to focus on their short-term interests and to take action without long-term consideration. A society that mainly focuses on short-term interests is one without efficiency and one with ineffective resource allocation and utilization. If we base our analysis on the three aspects we discussed earlier, motivation, quality, and environment, we can reach the same conclusion: Societal shortsightedness is traced to the uncertainty of expectations, which is due to environmental constraints and lack of motivation and required quality. Among various environmental constraints, the most important one is abnormal property rights, which negatively impact economic activities and restrict the motivation of every entity in society. If property rights are normalized, business expectations will stabilize to some extent and businesses will feel motivated at least during the process of business transactions, which may facilitate the transformation from societal shortsightedness to long-term orientation. Of course, it is not enough to merely normalize property rights. Nonetheless, we cannot deny that it is after all the basic solution to societal shortsightedness and it is especially important to China at this time.

When we redirect our discussions on the industrial structure to those on the economic structure, we will see that relatively ineffective resource allocation and utilization is related to not only industrial structural imbalance but also economic structural imbalance. The economic structural imbalance manifests in the following ways: In terms of ownership structure, cooperative businesses that are more conducive to mobilizing workers and real collective businesses account for a relatively small percentage in the aggregate economy. In terms of regional economic structure, regional advantages are constrained, economic cooperation and specialization among different regions are hindered, and more developed regions that should play a larger role in the economy are restricted in various ways and are forced to go with the flow, while less developed regions are increasingly reliant on state assistance due to their lack of an

economic mechanism to grow and improve the regional economy on their own. In terms of technological structure, we see obvious structural imbalance: We have mastered a few top-notch technologies of the world and established some advanced industries, but raw and primitive labor technologies still account for a large share of the economy, especially in rural and remote areas, where those raw and primitive labor technologies are still dominant. The analysis of economic structure is not limited to that of ownership structure, regional economic structure, and technological structure that we have just discussed. As a matter of fact, in a broader sense, some other structures related to those we have just talked about, such as structure of enterprise size, employment structure, energy structure, and foreign trade structure, all exhibit various degrees of imbalance. Therefore, the opinion that the overall Chinese economic structure is out of balance is not blemishing the Chinese economy at all. We can fully understand why resource allocation and utilization is relatively ineffective in this circumstance. When we set the rationalization of resource allocation as one of the targets of economic reforms, we have to reach the following verdict: If economic reforms failed to rationalize the economic structure after the establishment of the new economic operational mechanism, then we had not reached the target of rationalizing resource allocation, just as low efficiency would be inevitable if economic reforms had not transformed societal shortsightedness (not limited to corporate shortsightedness) into long-term-oriented societal behavior through a series of measures to normalize property rights.

Obviously, economic structural imbalance, resource misallocation, and societal shortsightedness influence one another. It is difficult to resolve one issue if there is no significant improvement to the other. In order to achieve a balanced economic structure, effective resource allocation, and long-term-oriented societal behavior, the key is to deepen economic reforms. Only during the process of deepening economic reforms can we gradually resolve the issues of

motivation, quality, and environment that are critical to increasing efficiency; gradually balance the economic structure, including the industrial structure; raise resource allocation and utilization efficiency; and, correspondingly, develop longterm-oriented behavior and prevent society, including enterprises, from behaving only out of their short-term interests.

In our discussions on resource allocation and long-term-oriented societal behavior, we naturally come up with a question that is often perplexing to many economists. When economic downturn sets in, economists are often asked this question: "When will the economy come out of recession?" A common answer to this question will be like this: By analyzing the cyclical economic trend and using the change of output(or economic growth rate) as the primary indicator, we consider the economy as having come out of recession as long as output bounces back after declining for a few consecutive periods, or economic growth rate starts to increase after declining for a few consecutive periods. Economic growth rate is a primary indicator that is widely used in the world to analyze cyclical economic trend. However, for China's economy, which is currently in type II disequilibrium, using economic growth rate to indicate whether the economy has or has not emerged from a recession is obviously questionable.

The change of output can shed some light on current economic situations, but it cannot reveal the true picture. Given the current economic situations in China, especially with enterprise and societal shortsightedness in presence, increasing output does not necessarily indicate that the economy has turned around. As long as enterprises still lack the constraints imposed by self-interest and budget, they will even likely increase production and ignore real losses or real product sales. Under the influences of societal shortsightedness, it is very likely for the public to focus only on short-term interests while ignoring longterm interests during the process of purchasing goods, which may lead to higher production that is not reflective of the real economic

condition. The government is also constrained by shortsightedness, as seen in its attempt to artificially recover output for various reasons. For example, if a superior government institution decides to use output increase as the indicator to evaluate the performance of the subordinate government institution, the latter will try its best to increase output while totally ignoring everything else. Let us assume that output keeps declining for a few consecutive months. If output increase is used as the main metric to evaluate performances, a subordinate government institution will try every way to increase output, e.g., encouraging manufacturing facilities to commence operations by providing various fiscal and credit support, urging various commercial departments to purchase manufactured goods, and encouraging residents to purchase more goods. In other words, when the change of output is used as the main indicator to judge whether or not the economy has emerged from a recession, it is relatively easy for the economy to come out of it since the government can use fiscal and credit measures to artificially increase output. Emerging from a recession in this way is not necessarily indicative of an improving economy, but only glosses over the real economic situation. Since problems are still unresolved, we can surely conclude that the economy will turn south again after some time or run into another recession. To a shortsighted government or enterprise, there is nothing to worry about. The reason is simple. At least we have come out of the previous recession. Even though another recession comes, can't we just do the same and come out of it in the same way? Under disequilibrium conditions, corporate and societal shortsightedness will only lead us to this result.

The main indicator that is truly reflective of whether the economy has emerged from a recession should not be based on the change of output, but the change of enterprise productivity as well as the change of actual fiscal revenues from enterprises. Only from the changes of these indicators can we tell whether the economy has improved or not. Enterprise productivity is reflected in the profitability per

hundred- *yuan* capital, or the profitability per hundred- *yuan* output, or the profitability per hundred- *yuan* sales. These profitability ratios can measure the performance of business operations more accurately. If enterprise productivity keeps declining for a few consecutive periods, we can say that the economy has encountered some difficulties. Although output during that time keeps rising, the economy may not be really improving. Enterprise productivity reflects not only the operational results of those enterprises themselves but also the situation of resource allocation and industrial structure. If resources are misallocated and the industrial structure is out of balance, business production cost will surely rise, sales will slow down, and profitability will decline. At the same time, as enterprise productivity is closely tied to state fiscal revenues, actual fiscal revenues can also be used as the main indicator to evaluate whether or not the economy has come out of recession. In particular, actual fiscal revenues are calculated net of inflation and various debt proceeds. If actual fiscal revenues keep declining for a few consecutive periods, we can also say that the economy has met with difficulties. Even though output during these periods keeps rising, it does not mean the economy has really improved.

From the analyses of whether or not the economy has come out of recession, we can learn that the key to avert declining enterprise productivity and actual fiscal revenues under the current economic conditions in China still lies in the deepening of economic reforms so as to overcome the negative impact of enterprise and societal shortsightedness on resource allocation, industrial structure, and economic structure and to build a solid foundation for economic stability and growth.

贰 产业结构调整和企业行为的长期化

一、企业行为短期化的主要原因及其对产业结构调整的阻碍

我们知道，企业行为是由企业的投入、产出和收入分配行为所组成的。企业行为是否仅仅着重近期利益，与企业通过自己的投入、产出和收入分配所获得的利益有关。如果企业认为自己获得利益的前景是不确定的，那么它就不可能在投入、产出和收入分配上有长期考虑，而把自己所追求的限于近期利益之上，企业行为的短期化便由此产生。以传统经济体制下的企业来说，那时，企业只不过是行政机构的附属物，上级主管部门的利益代替了企业自身的利益；企业领导人只不过是上级主管部门派遣下来的官员，他们一切听命于上级主管部门；企业的投入、产出和收入分配全都不是由企业自身决定的，投入、产出和收入分配的利益与企业自身没有直接的关系。这样，传统经济体制之下的企业行为，很难说究竟是长期化的还是短期化的，甚至可以说客观上不存在类似的问题。理由是：上级主管部门有长期的考虑和安排，企业就可能有长期的投入、产出、投入分配行为；上级主管部门只有短期的打算，企业的投入、产出、收入分配的决策就肯定是短期化的。这时的企业还算不上真正意义上的企业。

在经济体制改革过程中推行企业承包制以后，企业在承包期内开始有了自己的投入决策、产出决策和收入分配决策。但这些决策明显地反映了企业行为的短期化倾向。例如，企业承包者不愿追加有长期收益的投资，特别是近期内只有投入，长期内才有产出的投资；企业承包者对现有的企业固定资产的保养不关心，而总是力求在承包期间尽量利用它们，耗尽它们，企业承包者在企业收入分配方面，忽视再投资，而尽可能地满足企业职工增加现期收入的要求等等，——这些全部是企业行为短期化的表现。承包制本身的性质决定了企业行为的短期化是难以避免的。当然，通过若干完善承包制的措施（例如把单一的税利指标改变为综合性的指标，作为企业考绩的根据；根据企业的经营状况，适当延长原承包者的承包期，或对原承包者的下一期承包作优先考虑；对原承包者在本承包期内进行的有长期效益的投资项目予以作价补偿，或容许原承包者今后能分享一部分利益），可以克服一些承包制企业的行为短期

化所造成的弊端，但仍然不可能使企业行为的短期化倾向不再存在。这正是承包制的难以克服的缺陷。

不难理解，企业行为的短期化对经济发展是十分不利的。这种不利性既反映了经济效益不可能持续提高，甚至还可能不断下降；又反映了企业投资规模受限制，即在短期化的企业收入分配决策中，企业的投资率不仅不易维持原有的水平，而且必然呈现降低的趋势。要知道，经济增长率取决于投资率和投资效果这样两个基本因素。要维持一定的经济增长率，不仅需要有一定的投资率，而且投资应当具有较好的效果。而在企业行为短期化的条件下，经济效益的低下和投资率的下降趋势决定了经济增长的后劲的不足。这是令人忧虑的。

在这种形势下，产业结构调整的难度也就可想而知了。从企业的角度来看，由于承包制企业只注重近期利益，它不可能把注意力放在新产业部门的发展方面，它也没有足够的资金可以用于新产业部门的发展。加之，在承包制之下，生产要素的流动是受阻碍的，生产要素在社会范围内的优化组合也受到限制。这些都表明：即使承包者懂得调整产业结构的重要性，懂得企业投资于新产业部门对国民经济和对企业本身都是有利的，他们也是心有余而力不足，无法使企业的投入、产出和收入分配决策适应产业结构调整的需要；再从宏观经济的角度来看，由于宏观经济以微观经济为基础，而在微观经济单位的行为短期化的影响下，经济效益难以提高，甚至还出现下降的趋势，所以政府用以调整产业结构的资金显然是不足的。产业结构的调整有赖于财政的支持。在企业没有能力来改变产业结构现状时，财政的支持格外重要。然而，政府掌握的资金不足限制了政府预定的调整产业结构的意图的实现。

当然，在我国当前的经济环境中，产业结构调整困难的原因绝不仅仅在于企业行为的短期化。市场不完善、生产要素流动的受阻挠、商品比价的不合理、若干关键性生产资料的短缺，以及适合于新产业部门要求的技术力量的不足，都加剧了产业结构调整的难度。但不管怎样，企业行为的短期化毕竟是不可忽视的一个重要原因。不仅如此，上述的其他一些阻碍着产业结构调整的原因也与企业行为短期化联系在一起。比如说，市场不完善和商品比价不合理，必然使承包制企业只顾近期利益，而承包制企业的行为短期化又使得市场难以趋于完善，使不合理的商品比价不可能从供给增长的角度来扭转。又如，生产要素流动的受阻挠、若干关键性生产资料的短缺，以及技术力量的不足是同承包制企业

的行为短期化交叉影响的。不能设想一个只顾近期利益的承包制企业会投入许多资金去增加有长期利益的重大投资项目和培养技术力量。它们是不会这样做的。

二、投资者的利益对企业短期行为的内在约束

在这里，我们需要弄清楚的一个理论问题是：难道企业行为的短期化就不受企业运行机制的约束吗？为什么承包制企业避免不了企业行为的短期化，而股份制企业却必定兼顾长期利益和近期利益？应当明确地指出：在承包制企业中，投资者的利益约束实际上是不起作用的。如果说发包的一方代表投资者的利益的话，那么发包方的利益仅仅体现于竞争性的招标承包阶段，即发包方可以选择最符合自己利益的投标人作为承包者，而在承包开始以后，投资者的利益约束就难以对企业的短期行为进行约束了。何况，在产权关系不规范和政企尚未分开的情况下，承包方本身还不是自主经营、自负盈亏的经济实体，而往往是上级主管部门，即行政机构的附属物，因此，即使在发包过程中，投资者的利益约束也不可能真正得到发挥。

股份制企业的情况与此截然不同。这里所说的股份制企业是指在公有制基础上建立的规范化的股份制企业而言。投资者（包括中央投资者、地方投资者、公有制企业投资者等）的利益约束充分体现出来。这是因为，每个投资者的心目中都存在着对股份制企业投资的两种收入，一是股息、红利收入；二是股票本身的增值。这两种收入中，第二种收入可能比第一种收入更加重要，有更大的吸引力。假定投资者有较多的可供选择的投资机会时，他一定会把不同股份制企业的第一种收入和第二种收入拿来比较。如果某个企业的股息和红利率虽然高一些，但股票本身却难以增值，另一个企业的股息和红利率虽然稍低，但股票本身增值的前景是确定的，那么这个投资者多半会选择后一个企业，购买它的股票。投资者会这样想：如果单纯为了取得股息、红利而不考虑股票本身的增值，那又何必非买股票不可呢？买债券或存银行，既有利息收入，又不至于像买股票那样要承担一定的风险，岂不更稳妥吗？正是这种投资心理以及由此决定的投资者的选择，使得规范化的股份制企业必须对自己的长期发展战略和长期经营方针进行较周密的考虑。

在这种情况下，股份制企业必须重视资金积累，重视再投资，而不可能像某些承包制企业那样尽量把利润分掉。同样的道理，股份制企业

必须着重技术创新，不断开发新产品，开拓新市场，使企业规模扩大，而不可能像某些承包制企业那样拼设备，吃老本，把老底子全都耗尽。惟有这样，股份制企业才能使股票增值，吸引更多的投资者，否则，已经购买了该企业股票的社会上的投资者也会把股票卖出去，转购那些有发展后劲的、股票增值的企业的股票。这就是投资者的利益对企业短期行为的约束。

因此，股份制企业的决策者必然既考虑到长期利益，又兼顾近期利益。股份制企业不能不考虑积累和利润再投资对于企业生存的意义。它们如果是没有发展后劲的，那么尽管眼前仍然能够按较高的股息和红利率支付给股票持有人，但仍然缺乏对投资者的吸引力。承包制企业最缺少的就是股份制企业所具有的这种对企业行为的投资者利益约束。不把承包制企业改造为股份制企业，企业行为的短期化就难以消除。

三、投资者的利益对企业短期行为的外在约束

以上所讨论的投资者的利益对企业短期行为的约束，可以称为内在约束，即主要来自股票持有人对投资机会的选择而产生的约束。接着，让我们讨论另一种约束，即客观上存在的企业兼并行为对企业行为短期化的约束，可以称之为投资者利益的外在约束。

要知道，在竞争性的市场上，每一个企业都处在竞争对手的严密注视之下。假定一个股份制企业目前取得了10%的利润率，它的领导人也许聊以自慰。但它的竞争对手通过对这个企业的潜力和现状的分析，却可能得出不同的看法。比如说，竞争对手会认为：“根据这个企业的技术设备状况、职工的素质、过去的信誉与业务联系、产品的销路等等，它完全可以取得30%的利润率。”有条件取得30%的利润率的企业目前只得到10%的利润率，说明这个企业是有盈利潜力的，同时也反映了该企业目前的领导人没有能力，经营管理水平低。于是竞争对手在市场上收购该企业的股票，甚至不惜以抬高了的价格收购该企业的股票。等到收购到一定数额的股票后，竞争对手就接管了该企业，改组董事会，重新任命总经理，按照另一种方式来经营它，以提高利润率，达到预定的30%的利润率目标。

这表明，在竞争性的市场上，任何一个股份制企业都是在既有可能被其他企业所兼并，又有可能去兼并其他企业的环境中生产和经营的。股票上市为这种兼并和被兼并提供了条件。经营不好的、甚至虽有盈利

但盈利潜力尚未充分发挥出来的企业，有被竞争对手接管的可能性；而经营得法的企业则可以通过兼并其他企业而使自己不断壮大。这也表明，一个股份制企业要在竞争性的市场环境中立足，必须兼顾长期利益和近期利益，必须尽量改善经营管理，取得最佳效益，必须既保持一定的积累和再投资规模，又保持一定的股息和红利率。只有当它把一切可能得到的利润全都得到了，把有利于自身发展的利润目标、资金积累目标、再投资目标等等都达到了，它才能既吸引住已经持有股票的人，又能使自己免遭被兼并的命运。反之，如果一个股份制企业只着重近期利益，企业行为短期化倾向严重，那么竞争对手也会了解到它的发展战略和经营方针的错误，了解到如何把该企业接管过来，重新制定它的发展战略和经营方针，那么将会因股票增值而获利，因企业的长期发展而获利。

从这里可以清楚地看出，股份制企业的投资者利益的内在约束和外在约束通常是联系在一起，共同起作用的。一个不能使股票增值或不能把可以得到的利润全部拿到手的股份制企业，从内部来看，股票持有人想卖掉所持有的股票，转购其他企业的股票；从外部来看，该企业的竞争对手就会考虑如何通过收购该企业的股票而接管该企业的问题。投资者利益的内在约束和外在约束一起发生作用，使每一个股份制企业都面临着如下的选择：或者继续使企业行为短期化，使企业陷于被兼并的地位；或者改变原来的发展战略和经营方针，以此兼顾长期利益和近期利益，并改善经营管理，增加再投资，使企业不断发展、壮大。

四、企业行为的长期化与产业结构的合理化

宏观经济效益的提高与企业重视资金积累，重视技术创新，重视生产经营潜力的发挥直接有关。而这一切的结果必然是促进了产业结构的合理化。

为了说明企业行为长期化与产业结构合理化之间的关系，让我们从以下三个方面来进行分析：

第一，当企业把长期发展战略和经营方针作为考虑的重点时，必然调整自己的收入分配，合理安排利润分配比例，增加企业内部的资金积累，这样，资金供给紧张这一宏观经济中的突出问题将会缓和下来。无论是企业自己把追加的资金投入到新产业部门的发展方面还是通过财政、金融等渠道增加了对新产业部门的资金投入，都有利于产生结构的

调整。

第二，由于企业行为的长期化，企业将因技术的进步、劳动力素质的提高、设备的保养与维护，以及资金积累的增加而增大了经济增长的后劲。企业的经济增长后劲的增大意味着国民经济的增长后劲的增大，从而经济的持续增长将得到保证。正如我们已经知道的，在经济持续增长过程中调整产业结构要比经济增长率下降或经济停滞情形下调整产业结构容易得多，也就是说，在企业行为长期化的条件下进行产业结构的调整要比在企业行为短期化的条件下进行产业结构的调整容易得多。

第三，产业结构的调整以生产要素流动和生产要素重新组合为前提。如果企业采取了股份制形式，这样，一方面，由于投资者利益约束的存在，企业的短期行为将被制约，另一方面，股份制将促进生产要素的流动和生产要素的重新组合。从这个意义上说，企业行为的长期化与产业结构的合理化是紧密地结合在一起的。

综上所述，我们可以得出这样的结论：企业行为的长期化或短期化所涉及的不仅仅是某一个企业本身的发展前景和命运的问题，而且在更大的程度上是关系到经济增长和产业结构调整的全局性问题。

如果由此再作深入一层的分析，那么我们不难发现企业行为长期化与产业结构合理化全都与效率问题联系在一起。

效率是指资源配置和资源利用的效率。如果我们说一个国家、一个地区、一个部门、一个企业的效率较高，是指在那里资源配置合理，人们能够有效地利用各种资源，使每一种资源都能发挥作用。如果我们说某个人的效率较高，那也是指这个人能够充分发挥自己之所长，并且能够同其他资源（包括他所使用的生产资料和他共事的劳动者）配合得很好，所以这也是资源配置和资源利用的效率问题。现在我们要考虑的是：效率究竟来自何处？

从资源配置和资源利用的角度来看，效率主要来自三个方面：动力、素质、环境。资源中最重要的是人力资源，人力资源体现在作为劳动者的人的身上。要有较高的效率，人的工作必须有动力。可以把企业看成是由人们组成的集体，那么要使企业有较高的效率，企业的生产和经营必须有动力，组成企业这个集体的每一分子也必须有动力。动力是多方面的：不仅有经济上的动力，而且有非经济的动力，如社会责任感、个人事业心、个人兴趣与爱好等。但不管怎样，动力对于效率来说是必不可少的。

效率也来自素质。这里主要是指人的素质。人有了较高的素质，即使物的素质较差，但人能够提高物的素质，逐渐用高素质的物来代替低素质的物。人的素质同样是多方面的，除了指人的文化技术水平、经营能力、创新能力以外，也包括思想状况、道德修养等等。人的素质较低，肯定不会有较高的效率。

效率还来自环境。人总是在一定的环境中生活和工作的，作为人们组成的集体的企业也总是在一定的环境中生产和经营的。如果环境限制了人的积极性和企业的积极性，或者，如果环境限制了人的素质的提高和人对低素质的物的改造，那么这样的环境绝不是可以保证效率提高的环境，它只能是抑制效率、扼杀效率的环境。

从这里可以了解到，现阶段我国的资源配置和资源利用效率之所以较低，与动力、素质、环境这三者都较差有不可分割的联系。以目前人们经常讨论的企业行为短期化来说，试问，为什么企业行为会出现短期化的倾向？从动力方面看，难道不是由于企业本身缺少长期发展与经营的动力，企业职工个人缺少长期发奋工作的动力？从素质方面看，难道不是由于企业本身缺少为实现重大技术创新、组织创新所要求的素质，企业职工个人缺少为技术和经营管理工作中的重要突破所要求的素质？从环境方面看，难道不是由于企业职工生活与工作在现存企业环境之中，从而个人的积极性被抑制，个人素质的提高遇到阻力？难道不是由于企业生产与经营在现存的社会经济环境之中，从而企业的积极性被抑制，企业素质的提高遇到阻力？动力、素质、环境这三个条件既然如此，企业的行为怎么可能不是短期化的？

再以目前人们经常议论的产业结构失调来说，试问，为什么产业结构会失调，而且这种失调现象一时难以扭转？从动力方面看，难道不是与生产要素流动的积极性不足有关，不是与开发新产品和发展新产业的动力的不足有关？从素质方面看，即使想要较快地扭转产业结构的失调，但不仅企业职工素质、企业本身的素质不易满足要求，而且宏观经济部门工作人员的素质也难以适应新产业部门发展与管理的需要。从环境方面看，调整产业结构涉及一系列与环境有关的问题，例如资金、劳动力、技术、信息的供给问题，基础设施问题，税收与价格问题，尤其是财产关系的确定问题。如果这些与环境有关的问题未能妥善地解决，即使企业本身和企业职工的素质再高，产业结构的调整仍然是困难的。

因此，结合企业行为与产业结构调整来考察，效率问题的解决途径已经十分清楚，这就是必须综合解决与效率产生和增长有关的动力、素质、环境问题。只要这些问题得到了解决，企业行为将会由短期化转向长期化，产业结构将会逐渐由不合理转向合理，高效率也会随之产生。

五、资源配置与社会行为的长期化

一旦我们从企业行为研究转向社会行为研究，从产业结构分析转向经济结构分析，那么我们将会发现，造成我国现阶段低效率的，不仅是企业行为的短期化，而且也是社会行为的短期化；不仅是产业结构的失调，而且也是经济结构的失调。这正是当前值得我们深思的问题所在。

社会行为的短期化是指：除了企业和企业职工的行为短期化以外，社会各阶层的行为也是短期化的，甚至连某些政府机构的行为也短期化了。比如说，农民不愿生产粮食，学生不愿好好学习，个体户不愿再投资，这些都表明行为的短期化。某些政府机构的负责人缺少长远的考虑，得过且过；某些政府主管部门不知道下一步该怎么办，心中无数；某些家庭总感到自己是在动荡不安的环境中生活，不清楚今后的日子该怎么过，如此种种也都是行为短期化的表现。关于这个问题，在本书以下有关制度创新的一章中还要作进一步分析，所以这里不准备展开论述，而只限于就经济结构、资源配置与社会行为的关系问题作些探讨。

归根到底，社会行为短期化的原因在于社会各个方面都缺乏稳定的预期。对企业、企业职工、农民、学生、个体户、政府工作人员等等来说，未来是不可知的，是难以预料的。社会经济生活的不确定性，导致人们主要考虑眼前的利益，采取无远见的对策。一个主要着眼于眼前利益的社会，肯定是低效率的社会，是资源配置不合理和资源利用不合理的社会。如果我们从前面提到的动力、素质、环境三个方面来进行分析，那么所得出的结论是相同的：社会行为的短期化来自预期的不稳定，而预期的不稳定又是由于环境的制约，由于动力的不足，由于应有素质的缺乏。而在环境的制约中，最主要的是财产关系不规范而对社会各方面的经济活动所产生的消极影响，以及对社会各方面的积极性的限制。财产关系规范化了，至少从经济活动来说，可以使企业产生比较稳定的预期，产生一定的动力，这样也就可以促使社会行为由短期化向长期化转变。当然，仅仅依靠财产关系的规范还是不够的，但不能否认这毕竟是一个解决社会行为短期化的基本措施，对现阶段的我国尤其具有

关键意义的措施。

当从产业结构的讨论转入经济结构的讨论时，我们将会看到，资源配置和资源利用效率较低，不仅与产业结构失调有关，而且与整个经济结构失调有关。经济结构失调的表现是：在所有制结构上，比较有利于调动劳动者集体积极性的合作经济、名副其实的集体经济所占的比例偏低；在地区经济结构上，地区的相对优势未能发挥出来，地区之间的经济协作和专业分工依然受到阻碍，经济较发达地区在国民经济中理应发挥更大的作用，但由于它们受到各种限制，只能迁就于整个经济形势，而经济落后地区则缺少自我成长和自我改善的经济机制，它们对国家的依赖性有增无减；在技术结构上，一个显著的失调现象是：一方面，我们已经掌握了若干在国际上处于领先地位的尖端技术，并建立了少数相当先进的部门；另一方面，初级技术和原始手工技术仍然在我国经济中占着重要的位置，尤其是在广大农村和边远地区，这种初级技术和原始手工技术依然成为技术的主体。对经济结构的分析不限于对上面提到的所有制结构、地区经济结构、技术结构的分析。实际上，推而广之，在与上述这些结构有关的企业规模结构、就业结构、能源结构、外贸结构等方面，也都存在着程度不等的失调现象。因此，整个经济结构失调，对目前我国经济而言，并不是一种过甚其词的说法。在这种情况下，资源配置和资源利用效率较低是完全可以理解的。当我们把资源配置趋于合理作为经济改革的一个目标来看待时，我们不得不作出如下的判断：如果经济改革尚未通过新的经济运行机制的建立而导致经济结构（包括产业结构）趋于合理的话，那么资源配置趋于合理这一目标就没有达到，正好像如果经济改革尚未通过规范财产关系等一系列措施而导致社会行为（不仅是企业行为）由短期化转向长期化的话，那么效率的低下仍然是不可避免的。

不言而喻，经济结构失调、资源配置不合理、社会行为的短期化三者之间彼此影响；只要其中任何一种情况没有较大的扭转，都会给解决其他一种情况造成困难。要形成经济结构协调、资源配置合理和社会行为长期化三者相互推动的格局，惟有把经济改革深化作为关键。只有在经济改革深化的过程中，促成效率提高的动力问题、素质问题和环境问题才能逐步求得解决，包括产业结构在内的整个经济结构才能趋于协调，资源配置和资源利用效率才能不断提高，相应地，包括企业行为在内的社会行为才能避免短期化，转向长期化。

在资源配置与社会行为长期化问题的讨论中，我们很自然地会遇到一个经常使经济学界感到困惑的问题。这就是，当我们的经济已陷入困境的时候，人们时常向经济学界提出问题：“经济什么时候才会走出‘低谷’？”对这个问题通常作出这样的回答，即通过经济波动的趋势分析，把产值的变动率（经济增长率）作为主要的指标，似乎只要产值在连续下降之后有了回升，即经济在增长幅度连续降低之后又开始增大，于是就认定经济已经走出了“低谷”。经济增长率是国际上一般采用的分析经济波动趋势的主要标志。但对于处在第二类非均衡经济中的我国来说，以此来说明经济是否走出“低谷”显然是令人怀疑的。

产值的变动率可以说明一些问题。但产值的变动也会掩盖经济的实际情况。在我国经济的现实条件下，特别是在企业行为短期化、社会行为短期化的客观环境中，产值的增加不一定表现经济已经好转。只要企业依然是缺乏利益约束、预算约束的，那么企业就有可能不顾自己的实际损益来增加产值，企业也可以不问市场的真实销路而使产值增加。就全社会而言，在社会行为短期化的影响下对商品的购买很可能采取只顾眼前，不顾长远利益的做法，结果使得产值的增长反映不了经济的真实情况。至于说到政府，那么它同样会受到行为短期化的制约，它会由于种种原因而以人为的方式使产值回升。举一个常见的例子来说，假定上级政府以产值的增长作为对下级政府考绩的指标，那么下级政府就会置其他考虑于不顾，一味地使产值增加。假定过去已连续几个月发生了产值下降的情形，而促使产值回升又成为对经济工作成绩好坏进行考核的主要指标，那么各级政府都会使出一切办法来增加产值，如以财政、信贷方法支持工厂投产，支持商业部门收购，鼓励居民多购买等等。也就是说，在以产值的变动作为判断经济是否走出“低谷”的主要指标时，既然政府有可能以财政、信贷等方式来人为地增加产值，那么这样的“低谷”就是比较容易走出的。以这种方式走出“低谷”，并不意味着经济情况已经真正好转，这只不过是把经济的实际状况作了一番掩饰而已。既然困难依旧存在，那么肯定地说，过一段时间之后经济又会滑坡，又会陷入“低谷”。但对于行为短期化的政府或企业来说，这并没有什么值得忧虑的。理由是：不管怎么说，上一个“低谷”不是走出了吗？尽管新的“低谷”又来到了，如法炮制一通，不也可以再次走出“低谷”吗？在非均衡条件下，企业行为短期化、社会行为短期化的结果不可能不是这样。

真实地反映非均衡的经济是否走出“低谷”的主要指标，不应当是产

值的变动，而应当是企业经济效益的变动以及与之有关的财政实际收入的变动。只有它们才能较准确地反映经济情况是否好转。企业经济效益可以通过每百元资金利润率、每百元产值利润率或每百元销售额利润率等反映出来，它们可以较准确地衡量企业经营状况的好坏。如果在连续一段时间内，企业的经济效益一直是下降的，那就可以认为经济陷入了困境。即使这段时间内产值是上升的，也并不等于经济真正好转了。企业经济效益不仅反映了企业本身的经营状况，而且也反映了资源配置状况和产业结构状况。如果资源配置不当、产业结构严重失调，那就必然形成企业生产成本上升、销售困难、利润率下降。同时，企业经济效益是同国家财政收入紧密联系在一起的，所以也可以采取财政实际收入作为判断经济是否走出“低谷”的主要指标。这就是说，在扣除物价上涨的影响，并且把各种债务收入从财政收入中剔除之后可以算出财政实际收入的数额。如果在连续一段时间内，财政实际收入一直是下降的，那么也可以认为经济陷入了困境。即使这段时间内产值上升了，同样不等于经济已经好转。

从有关经济是否走出“低谷”的上述分析可以了解到，在我国现实经济条件下，要扭转企业经济效益下降和财政实际收入减少的不正常状态，关键的措施仍然在于深化经济改革，克服企业行为短期化、社会行为短期化对于资源配置、产业结构、经济结构所造成的不良后果，使经济的稳定与增长有一个较坚实的基础。

7.3 INDUSTRIAL RESTRUCTURING AND UNBALANCED ECONOMIC GROWTH

7.3.1 A Theoretical Dilemma

One of the unconcluded research topics on the Chinese economy is to find out how to establish a balanced relationship among economic reforms, economic growth, and industrial restructuring so that they can help one another move forward, which will not only lead to effective economic growth during economic reforms but also establish a new resource allocation mechanism by means of economic growth and industrial restructuring and transform the traditional economic system into the new economic system.

This is a challenging task. Keep in mind that the current Chinese economy is in disequilibrium. The market has not been fully developed, resources are in short supply, and enterprises are not real goods producers who act out of self-interest. In this circumstance, if we mainly rely on the market and let it set prices, lack of the constraint by enterprises' selfinterest and the restrictions on the circulation of production factors due to abnormal property rights will drive prices higher and cause market signals to malfunction. As a result, industrial structure will not move toward rationalization, and the industrial structural imbalance that has developed over the long time in history may get even worse, stalling potential economic growth in the future. On the other hand, if we mainly rely on government regulation, i.e., allowing the government to use price limits and commodity quotas, we may to some extent support the relatively fast growth of some industrial sectors while controlling production increases from other sectors, maintaining overall economic growth. However, because enterprises' motivation is contained, they are not motivated to increase efficiency. This will surely delay or

block the establishment of a new resource allocation mechanism. The growth of the economy is achieved by sacrificing efficiency. The industrial structure cannot get out of imbalance due to the lack of guidance by accurate market signals. This is the dilemma that Chinese economists are facing. To resolve this issue, we need to start with analyzing the investment principal.

7.3.2 Determining the Investment Principal of Industrial Restructuring

The principal of economic growth is enterprise. The principal of industrial restructuring is also enterprise. The principal hereby discussed refers to an investment principal. If we want enterprise to be a real investment principal, we must first and foremost allow enterprise to become a real entity with its own interests. In other words, enterprise must have its own independent interests, enterprise must care about its own interests, and enterprise must invest to realize its own interests. Also, enterprise must act under self-control during the investing process with the purpose of realizing its own interests. When we devise economic development plans and industrial restructuring policies, we can probably find a new way if we regard enterprise as an investment principal that has its own independent interests and is constrained by self-interest. If we start with this perception, the primary issue is the enterprise system reform, which is to grant enterprise the status of an entity with self-interest as well as an investment principal and to allow the process of enterprise selecting investment opportunities to constrain and support economic growth and industrial restructuring so that economic reforms, economic growth, and industrial restructuring can coordinate and move forward at the same time.

We know that, in reality, industrial restructuring is to reduce investment in some industrial sectors and increase investment in some other industrial sectors. The industrial structure is reflected not only by the ratio of the outputs from various sectors but also by the ratio of

the inputs into various sectors. Inputs constrain outputs and the ratio of input to output also constrains output. The comment of "letting enterprise be the investment principal of industrial restructuring" has two connotations. First, an enterprise chooses its investment direction and decides on whether to increase or decrease inputs in a certain sector according to its self-interest, which influences the ratio of output from various industrial sectors. Second, an enterprise adjusts its own ratio of input to output. To put it in another way, an enterprise increases or decreases output by means of increasing efficiency. In these two connotations, the second one is probably more important. It is because only after an enterprise has become an entity of self-interest will it be relatively better motivated to increase output by means of increasing efficiency. This is a more reasonable way to resolve commodity shortages, especially when resources are in short supply and various inputs are subject to physical constraints.

If we look at this point from a different perspective, allowing enterprise to be an investment principal also means that enterprise becomes a buyer of production factors. When enterprises adjust their investment directions and the combination of production factors in accordance with their self-interest, they change the demand for production factors, which in turn influences the sales of products produced by others. This will also practically influence the production and capacity of some other industrial sectors and meanwhile point out a direction for industrial restructuring. Therefore, after enterprises become entities with self-interest, they will be able to influence industrial restructuring from the perspective of input (including the quantity of resource inputs and the ratio of input to output) and from the perspective of buyers of products made by other enterprises. Economic growth is ultimately dependent upon the growth of output from each and every enterprise. Since the growth of enterprise output is achieved during the process of industrial restructuring, economic growth and industrial restructuring share the same processes. When enterprise with independent self-interest becomes the principal of

economic growth, it also becomes the principal of industrial restructuring.

7.3.3 The Role of Rationing Equilibrium in Industrial Restructuring Under Disequilibrium Conditions

When we treat enterprise as an investment principal and place emphasis on the role of enterprise's investment and purchase decisions in industrial restructuring, we should keep in mind that it operates under disequilibrium conditions, in which underdeveloped market and resource shortages will inevitably significantly influence its decisions in selecting investment and purchases. With this in mind, we cannot ignore the importance of the roles that the government plays in industrial restructuring. The greater the degree of economic disequilibrium, the more important the role the government plays in industrial restructuring.

The government must be responsible for nonprofit investment projects. This is directly related to the responsibility of a government, from which no government should try to escape. We hardly need any further proof on this point. What we need to discuss now is as follows: Under the circumstances where the market is not fully developed and resources are in short supply, what should the government do as the economic regulator to influence enterprises' decisions on investment opportunities and commodity purchases so that the industrial structure can be adjusted and become more reasonable? The government can meet this goal mainly by rationing equilibrium.

Rationing equilibrium by government can be realized according to the target principle, the average principle, or the historical ratio principle. Every principle is applicable in certain areas and has potential shortcomings. Therefore, the principle that the government uses in certain circumstances should be reviewed according to the specifics of the situation before a decision is made.

The target principle means that the government decides on the pecking order according to the level of importance of each industrial

sector and allocates limited resources accordingly. The way of allocating resources helps ensure that the target of economic growth and the goal of industrial restructuring set by the government can be reached. It can also fairly quickly support the growth of some industrial sectors while limiting the growth of others. But the questions are as follows: Is the pecking order of the industrial sectors reasonable? Can we make sure that the ratio of limited resources allocated by the government rationing and by open-market transactions contributes to realizing the goals of economic growth and industrial restructuring at the same time? Is such resource rationing consistent with the efficiency criteria of resource utilization? Lastly, can we make sure that the resources allocated to an industrial sector either by government rationing or by open-market transactions will not be utilized for other purposes or resold for undue profits? The side effects of the target principle are as follows: Some sectors and enterprises receive special attention, but they are not necessarily highly efficient, while others are practically excluded from the list of the recipients of resources. Despite being highly efficient, they are forced to lower their efficiency due to insufficient supply of resources. Therefore, in the case where the target principle is applied to rationing (even though the principle is appropriate), yet without corresponding measures to support the flow of resources between sectors and to facilitate product modifications and upgrades, rationing equilibrium under the target principle will have to sacrifice resource utilization efficiency of society.

The average principle means that the government divvies up resources evenly according to the demand and availability of resources. From the perspective of industrial restructuring, the average principle may prevent the government from realizing its predetermined goal of industrial restructuring, because applying the average principle means the industrial structure will maintain its status quo. From the perspective of maintaining economic growth, rationing equilibrium achieved by using the average principle at least

stays away from relatively significant economic fluctuations. In addition, from the perspective of supply and demand of consumer necessities, utilizing the average principle to allocate limited resources also helps maintain social stability. Under the average principle, however, the resource utilization efficiency of society will be lower, but the lowered efficiency is attributed more to the insufficient aggregate resource supply than to the structural changes of the industrial sector, as the industrial structure basically maintains its status quo.

The historical ratio principle means that the government allocates resources among sectors and enterprises according to the historical ratio or the ratio that was being used in the past. The way of allocating limited resources has effects similar to that of the average principle, i.e., basically maintaining the status quo of the industrial structure while staying away from relatively significant economic fluctuations. But the question is: Since the historical resource allocation ratio is used as the basis to allocate current resources, how reasonable is the allocation ratio? In this circumstance, can we at the same time make sure that the resources allocated to certain sectors and enterprises are not used for different purposes or resold to other sectors and enterprises for undue profits? Moreover, the historical ratio is not automatically adjusted according to the ongoing real situations. If we want to make adjustments to the historical ratio, how should we adjust new rations for limited resources?

The analyses have revealed that balancing the goals of economic growth and industrial restructuring without harming the motivation of enterprises or lowering resource utilization efficiency is indeed a very difficult task. Regardless of which principle is used by the government in rationing, the way that target rations, average rations, or historical rations are determined must first of all be reasonable. Only by reasonably determining these ratios can the government reduce as many errors and conflicts as possible during the rationing process. Secondly, regardless of which principle is used, we should try to avoid

the leakage of shortage resources, i.e., to prevent the shortage resources that have been allocated to certain sectors or enterprises from being resold to other sectors and enterprises.

A compromise is to apply a portion of all three principles to reach rationing equilibrium under government regulation. Among these three principles, the target principle is a method that can relatively better facilitate the government's efforts to reach its predetermined goals for industrial restructuring. The historical ratio principle is a method that can relatively better support economic growth and will less likely cause relatively violent economic fluctuations. The average principle is a method that is relatively less likely to cause frictions among buyers or harm enterprises' motivation. If the government intends to utilize rationing equilibrium to perform industrial restructuring under disequilibrium conditions, it can mainly use the target principle while taking the features of the historical ratio principle and the average principle into consideration to come up with a systematic ratio for the allocation of shortage resources.

7.3.4 Applying the Policy on Leading Industries and Unbalanced Economic Growth

Economic growth under the circumstance of resource shortages is linked to resource rations among various sectors. If the allocation of shortage resources mainly relies on the target principle, we can surely achieve economic growth during the process of industrial restructuring, and economic growth realized in this way will be tilted. In other words, economic growth is unbalanced.

Now we have an issue of how to evaluate unbalanced economic growth. Keep in mind that the growth of an economy always takes place against a particular economic backdrop, which we call the initial state of economic growth. After certain periods of time, the economy will grow and end up in an expected situation, which we call the final stage of economic growth. In evaluating balanced and unbalanced economic growth, we must not disregard either the initial state or the

final stage of economic growth. If the industrial structure of the initial status of economic growth is balanced and that of the final stage of economic growth is also balanced, it is obvious that balanced economic growth is the ideal way to grow the economy. During this period, unbalanced economic growth may be unnecessary or even detrimental to realizing the goal of a balanced industrial structure. However, since the Chinese economy is currently in disequilibrium and the Chinese industrial structure during the initial state of economic growth has been severely unbalanced, it is not only impossible to achieve balanced economic growth but also inconsistent with the requirements to grow the economy under the rationing equilibrium of shortage resources. Therefore, whether unbalanced economic growth is right or wrong cannot be judged without taking the reality into consideration.

In terms of whether unbalanced economic growth under rationing equilibrium executed by the government allows it to reach its predetermined goals of economic growth and industrial restructuring, it depends not only upon whether the policy on leading industries adopted by the government is reasonable or not but also upon how well the policy on leading industries is executed. If the government does not propose any policy on leading industries and leaves everything to the market and expects it to establish leading industries on its own, both economic growth and industrial restructuring can be realized. However, this normally occurs in a relatively developed market in which enterprises are constrained by self-interest. Despite that, industrial restructuring may still progress very slowly, because when commodity supply or demand is limited, the rationing adjustment done by the market itself (which allows shortage resources or limited market to be allocated autonomously) can only reach its anticipated results through numerous transactions and resource transfers. Current situations in China have demonstrated that because the market has not been fully developed, enterprises have not been constrained by self-interest, and there have been some difficulties

transferring resources autonomously among various sectors, the results of the rationing adjustment by the market itself will not necessarily be consistent with the economic growth and industrial restructuring goals set by the government. Therefore, obviously, it is quite necessary for the government to determine the policy on leading industries and apply it to achieve unbalanced economic growth through rationing equilibrium.

The policy on leading industries is one that favors certain industries. We should, however, note that any leading industry must coordinate with several other industries to which the leading industry is directly related. These industries are further connected to several other industries. Hence, even though the government applies a policy that favors some industries, it cannot only care about one single industry or a few industries while totally ignoring the other related industries. This type of policy can only ration shortage resources according to how closely an industry is tied to the leading industries. This means that when, under disequilibrium conditions, rationing equilibrium is the only way for the government to realize unbalanced economic growth and to consolidate resources in support of leading industries to realize industrial restructuring, the degree of preference (for the leading industries) of the industrial policy will have to be appropriate rather than excessive. Otherwise, this preference will not only fail to accelerate the growth of the leading industries, but even likely prolong or exacerbate industrial structural imbalance.

From these analyses, we have clearly learned that the struggle between balanced and unbalanced economic growth is not what people have thought it would be, nor is it about whether balanced economic growth is better or worse than unbalanced economic growth. If the initial state of growth is accompanied by unbalanced industrial structure, this hotly debated topic will inevitably fall on the magnitude of the imbalance of economic growth, or the degree of preference of the industrial policy. Excessive preference for some industries is more harmful than no preference. Excessively unbalanced

economic growth is likely to exacerbate industrial structural imbalance. If the initial state of economic growth is accompanied by unbalanced industrial structure, balanced economic growth obviously will not help resolve industrial structural imbalance, but more than likely maintain the existing industrial structure rather than worsen structural imbalance. This is exactly what the government should pay attention to when formulating the policy on leading industries.

Now we have come to the question of how to apply the policy on leading industries and how to come up with an appropriate degree of preference of the industrial policy set out by the government. To analyze this issue, we will have to study the roles of enterprise operation mechanism and price signal in the execution of the policy on leading industries.

7.3.5 Enterprise Self-Control and the Constraining Effect on Excessive Preference of the Industrial Policy

The policy on leading industries is initiated and executed by the government. Nonidealized government behavior causes the policy on leading industries to somewhat deviate from the predetermined goals on economic growth and industrial restructuring. It is very difficult for the government to come up with the perfect degree of preference of the industrial policy. In this circumstance, another force is needed to counter the effect of excessive preference of the industrial policy. Now, where does the countering force originate? It is not from the government itself, but from enterprises that are investment principals and entities of self-interest.

If enterprises are unable to sever their subordination to administrative institutions, they will not be constrained by self-interest nor choose investment opportunities according to their current and expected interests. Undoubtedly, when the government ostensibly favors some industries (by granting excessively preferential status to some industries), which will change the supply and demand in the market as a result, it is unlikely for enterprises to respond to

these changes brought about by the government policy. The policy that excessively favors some industries will exacerbate industrial structural imbalance and cause a large supply gap for some commodities and at the same time a large demand shortfall for some other commodities. These problems will remain unsolved until they get worse. Usually, a long time has passed before the government takes action to address those issues. The time lag is usually very long and the consequential damage to the economy is severe. In addition, because the preference for some industries under the industrial policy is tied to the rationing of shortage commodities and enterprises lack the constraint of self-interest, they may take advantage of such industrial policy to earn undue profits. For example, some enterprises may take advantage of shortage resources to develop products that are not urgently needed or to earn profits from activities that are unrelated to manufacturing. These activities not only fail to correct the preference of the industrial policy but may instead cause the industrial policy to be even more unreasonable and heighten the scarcity of shortage resources.

If the abovementioned issues do occur, which is contradictory to the anticipation of the government who initiates the industrial policy that favors certain industries, and in the meantime the government does not believe that the root cause of those issues is that enterprises lack the constraint of self-interest, it may lead the government to a wrong conclusion, i.e., blaming unreasonable prices or the dual-track price system. As a result, the government may try to terminate the dual-track price system and remove price controls to correct severe industrial structural imbalance and resolve commodity supply gap and commodity demand shortfall. These actions seem reasonable theoretically, because the right price signals will guide resources to where they are most needed and the quick reactions of enterprises to price signals will direct them to produce shortage commodities and increase investment in the vulnerable segments of the economy, which can streamline the industrial structure. However, the reality is

completely different under disequilibrium conditions. If the government did that, the results would be nothing but further imbalance and more severe economic trouble. The key issue here is still that it is impossible for an enterprise that is not responsible for its business decisions or operational profits and losses to become an entity with self-interest that can truly function in adjusting the industrial structure.

As we have discussed earlier, it is a known fact that resources are in short supply and the industrial structure is out of balance in its initial state and that the market is not fully developed and that enterprises lack the constraint of self-interest. In the circumstance that resources are short, rationing equilibrium will be inevitable. This has to be completed either by the government or by the market. The dual-track price system indicates that government rationing exists concurrently with market rationing. Government rationing will be carried out on the basis of the target principle (or the average principle, or the historical ratio principle). In this circumstance, if the government decides to replace the dualtrack price system with pure market pricing, this in fact indicates that government rationing will be terminated and it is the market that will take full control of the allocation of shortage resources. The market will do so by following the principle of "first-come, first-served" or the monopoly principle. However, as long as the market has not been fully developed, property rights have not been normalized, and enterprises lack the constraint of self-interest, relatively low price elasticity of supply as well as relatively low price elasticity of demand will certainly generate two new prices, i.e., open market price and hidden market price (or black market price), regardless of which principle that the market applies to allocate resources. Open market price and hidden market price will chase each other but always keep a distance from each other, causing prices to escalate time after time. This is the current Chinese economic reality under disequilibrium conditions. Therefore, replacing the dual-track price system with pure market pricing will not help alleviate

industrial structural imbalance, but will only make it worse.

If the government recognizes the economic disequilibrium conditions and considers the fact that enterprises have not become independent goods producers, it surely should not open up prices and terminate the dual-track price system prematurely when it works toward the goal of completing industry restructuring effectively. Instead, it should maintain government rationing while reforming the enterprise operation mechanism and leverage the enterprise self-control mechanism to balance the excessively preferential arrangements of the industrial policy. The analysis presented in Chap. 6 of this book is also applicable to this issue.

As an investment principal and an entity of self-interest, an enterprise, in making decisions on investment and business operations, will exercise self-control if the enterprise operation mechanism functions. That can serve as the offsetting force to balance the excessively preferential arrangements of the industrial policy. The reason is that enterprises adjust the direction and amount of investment on the basis of their own economic interests. If the official industrial policy excessively favors certain industries, an enterprise under the dual-track price system will have the following two alternatives:

The first alternative for an enterprise is to accept market rationing. That is, it adopts the market price that is higher than the fixed price to produce the shortage commodities that meet the market needs as well as its own economic interests. This can relieve the shortages of these commodities due to excessive preference of the industrial policy. Of course, when an enterprise chooses to do so, it will be exposed to some investment and operational risks. However, as an entity with selfinterest, the enterprise is not only empowered to do so but also willing to take these risks. When there are investment and operational risks, there are returns. Motivated by profits, an enterprise will likely pursue this alternative.

The second alternative for an enterprise is to reject market

rationing. This is primarily because the excessive preference of the industrial policy can lead to highly concentrated government rations and the enterprise, taking its own economic interests into consideration, feels that the price tag for market rations is too high, which may significantly increase its investment and operational risks. Insufficient government rations will surely cause some enterprises to change production capacity and product lines, including producing different products, shutting down product lines, reducing production volume, and merging with or establishing alliance with other enterprises. The flow of production factors and the recombination of resources are guided by the self-interest of enterprises, which are in turn guided by the demand of the market. This helps alleviate the shortages of some commodities arising from the excessively preferential arrangement of the industrial policy. Motivated by profits, enterprises may go with this alternative.

Regardless of which of the two alternatives an enterprise goes with, its choice will first of all help make up for some of the shortages arising from the excessively preferential arrangement of the industrial policy. We can regard the self-control of enterprises as the constraint on the excessively preferential arrangement of the industrial policy. In addition, the selfcontrol of enterprises can serve as a different constraint on the excessively preferential arrangement of the industrial policy. Such constraint is manifested in the changes in the marketplace after enterprises choose one of the two abovementioned alternatives, which prompts the government to alter its original industrial policy that excessively favors some industries or its rationing plan that is excessively concentrated on certain industries.

For example, an enterprise chooses the first alternative to produce a shortage commodity by using production materials purchased from the market at a price higher than its fixed price. As a result, the supply of the production materials will increase, and the price of the shortage commodity made of those production materials produced by the enterprise will fall, which can provide the government who rations

such production materials and shortage commodities with a signal indicating that its original rationing plan (which excessively favors certain industries and results in overly concentrated rations) has been out of sync with market changes. Therefore, it is possible for the government to adjust rationing according to the development in the market.

If an enterprise chooses the second alternative, i.e., it reacts to excessively concentrated government rations by reallocating production factors and recombining resources, the result from the enterprise reactions will lead to increased supply of some shortage commodities in the market, hence changing the market. When the government sees the changes, it will also reconsider its original rationing plan and make necessary adjustments according to the development in the market.

Therefore, only when enterprises are no longer controlled by government institutions and have become independent goods producers who are responsible for their business decisions and their own profits and losses can the equilibrium of the government rationing help improve the industrial structure and prevent industrial structural imbalance from remaining unresolved for a prolonged period of time due to unreasonable government rationing. On the contrary, if the government hopes to perform industrial restructuring by terminating the dual-track price system before reforming the enterprise operation mechanism, the ultimate results can deviate from the goals predetermined by the government.

These discussions have fully illustrated the relationship of economic reforms, economic growth, and industrial restructuring under disequilibrium conditions. In short, if we do not first and foremost effectively reform the enterprise operation mechanism, it will be very difficult to realize the goals of economic growth and industrial restructuring and to achieve economic growth and industrial structuring in the future.

叁 产业结构调整与经济的不平衡增长

一、一个理论难题

在当前我国的经济生活中，一个有待于解决的研究课题是如何在经济改革、经济增长与产业结构调整三者之间建立一种彼此推进的协调关系，以便既能在经济改革过程中实现有效的经济增长，又能通过经济增长和产业结构调整来建立资源配置的新机制，实现从传统经济体制向新经济体制的转变。

这一任务是艰巨的。要知道，当前我国经济正处于非均衡状态，市场不完善，资源短缺，而企业还没有成为有真正的利益约束的商品生产者。在这种情况下，假定主要依赖市场机制的作用，让市场定价，那么在企业缺乏利益约束和生产要素的流动仍然受到产权关系不规范的限制的条件下，就会造成物价的迅速上涨，市场信号扭曲，从而产业结构不但难以朝着合理化的方向调整，甚至历史上形成的产业结构失调状况会加剧，并会阻碍今后的经济增长。另一方面，假定主要依赖政府调节的作用，即仍由政府实行价格限制和商品配额，那么虽然在一定程度上有可能促进某些产业部门的较快发展，抑制另一些产业部门的产量的增加，并且也有可能维持一定的经济增长率，但由于企业的积极性是受到束缚的，企业的效率难以提高，因此势必推迟了甚至阻碍了资源配置新机制的建立，经济增长只可能以牺牲效率作为代价而实现，而产业结构最终不得不以缺少正确的市场信号引导而摆脱不了失调的困境。这就是摆在我国经济学界面前的一个难题。对这个难题，我们准备从投资主体的确定着手进行研究。

二、产业结构调整的投资主体的确定

经济增长的主体是企业，产业结构调整的主体也是企业。这里所说的主体，是指投资主体而言。但要使企业成为有效益的投资主体，必须先使企业成为真正的利益主体。这就是说，企业必须具有自己的独立的利益，企业要关心这种利益，企业进行投资是为了实现这种利益，企业在投资中自我约束也是为了实现这种利益。如果我们在制定经济增长政策和产业结构调整政策时，把具有独立利益和接受利益约束的企业作为投资主体来看待，也许可以在这方面走出一条新路。假定以此为出发

点，那么首要问题将是企业体制的改革，即赋予企业以利益主体和投资主体的地位，由企业的投资选择来制约经济增长和产业结构调整，促进经济增长和产业结构调整，从而达到经济改革、经济增长、产业结构调整三者协调并进的目标。

我们知道，产业结构调整实际上就是压缩一些产业部门的投资和增加一些产业部门的投资，产业结构不仅体现于各个不同部门的产出的比例，而且体现于各个不同部门的投入的比例。投入制约着产出，投入与产出之比也制约着产出。“让企业成为产业结构调整的投资主体”这句话，具有两个含义：第一，企业根据自己的利益而选择投资方向，决定增加对哪些部门的投入，减少对哪些部门的投入，并由此影响产业部门之间的产出比例；第二，企业根据自己的利益而调整投入与产出之比，也就是通过效率的提高来制约产出，增加产出。这两个含义中，第二个含义可能更加重要。这是因为，只有让企业成为利益主体，企业通过提高效率来增加产出的积极性才能有较大幅度的提高。在资源短缺和投入受到客观限制的条件下，这将是克服某些商品短缺的更为合理的途径。

从另一个角度来看，企业作为投资主体，也就是意味着企业作为生产要素的需求主体或购买主体。当企业根据自己的利益调节投资方向和生产要素组合方式时，通过对生产要素的需求的调整而影响其他企业提供的产品的销售量，这样也就从客观上影响一些产业部门的产量和规模的变化，引导着产业结构的调整方向。因此，在企业成为利益主体时，企业既从自己的投入（包括投入的资源数量以及投入与产出之比）方面，又从自己对其他企业提供的产品的购买方面制约着产业结构调整。经济增长率归根到底是由每一个企业的产出增长率决定的，既然企业的产出增长率总是在产业结构调整过程中实现的，所以经济增长与产业结构调整将是同一个过程。具有独立利益的企业在作为经济增长主体的同时，也就成为产业结构调整的主体。

三、非均衡条件下政府的配额均衡在产业结构调整中的作用

当我们把企业看作投资主体并且重视企业的投资选择与购买选择在产业结构调整中的作用时，应当考虑到企业是在非均衡条件下进行经济活动的，市场的不完善和资源供给的短缺不可避免地会对企业的投资选择与购买选择发生有力的影响。这样，我们就不可能忽视政府在产业结构调整中的重要作用。经济的非均衡程度越大，政府在产业结构调整中

所起的作用也越重要。

政府要对非盈利性的投资项目承担责任，这是与政府的性质直接有关的。在任何情况下，政府也不应当回避这方面的投资责任。关于这一点，几乎不需要再作论证了。现在需要探讨的是，假定市场不完善和资源供给短缺，政府作为经济调节者，究竟应当如何影响企业的投资选择与购买选择，进而影响产业结构的调整，使之趋向合理化？这主要是通过政府的配额均衡来实现的。

政府的配额均衡可以通过目标原则，或平均原则，或历史比例原则来实现。每一个原则都有一定的适用范围，每一个原则也都可能出现弊端，因此，政府在何种情况下采取何种原则，应当根据具体条件进行研究，然后作出决定。

目标原则是指政府根据产业部门的重要程度而制定轻重缓急的顺序，把有限的资源配售给各个有关的部门。这种分配资源的方式有利于贯彻政府预定的经济增长目标和产业结构调整目标，并且能够较快地促进某些产业部门的增长，限制另一部门的增长。但问题是：产业部门发展的轻重缓急顺序的排列是否科学？能不能使有限资源配售的比例有助于经济增长目标与产业结构调整目标同时实现？这样的资源配额是否符合资源利用的效率标准？最后，能不能保证配售到某一产业部门的资源不被挪作他用，不被转卖牟利？从某种意义上说，目标原则的副作用在于：它使某些部门和企业处于特殊照顾之下，而这些部门和企业却不一定是高效率的；至于另一些部门和企业，实际上被排除在资源供给以外了，尽管它们可能是高效率的，但由于资源不足而不得不使效率降低。因此，如果只有配额的目标原则（即使目标原则的确定是科学的），而没有促进部门间资源存量转移的措施和促进企业转产的措施，目标原则下的配额均衡将以社会的资源利用效率下降作为代价。

平均原则是指政府根据需求者所提出的需求数量和可供的资源数量进行平均分配。从调整产业结构的角度来看，平均原则可能是阻碍政府预定的产业结构调整目标的实现的，因为这样做意味着基本上维持产业结构的现状，但从维持经济增长的角度来看，平均原则下的配额均衡不至于导致经济增长率的较大幅度的波动。加之，就居民生活必需品的供求而言，按平均原则来分配有限的资源仍然有着维持社会安定的作用。在平均原则之下，社会的资源利用效率也是会降低的，但这种降低应当主要归咎于资源供给的普遍不足，而不一定是改变产业部门结构所引起

的（因为产业结构基本维持现状）。

历史比例原则是指政府根据历史上已经形成的或过去一贯沿用的资源分配比例来确定部门间或企业间的资源配额。用这种办法来分配有限的资源，其效应与采取平均原则相似，即基本上维持产业结构的现状，同时又可以避免经济增长率发生较大幅度的波动。但问题是：历史比例原则的确定既然以既成的资源分配比例为依据，那就涉及既成的资源分配比例的合理程度究竟如何？同时，在这种情况下，能不能保证分配到一定的部门和企业中的资源不再被挪作他用，不再被转卖给其他部门和企业而牟利？还有，历史比例不可能不根据实际情况而有所调整，如果要调整历史比例的话，那么怎样重新制定有限资源的配额？

由此看来，在资源供给不足从而有必要由政府采取配额的情况下，既要兼顾经济增长与产业结构调整目标，又不要挫伤企业经营的积极性，不要使企业的资源利用效率下降，这的确是一个相当艰巨的任务。不管政府按照哪一种原则来实行配额，目标配额的制定（即产业部门重要程度的顺序的排列）、平均配额的制定、历史比例配额的制定，首先都必须具有科学性。只有科学地制定这些配额，才能尽量减少政府配额过程中的差错和矛盾。其次，无论在哪一种原则之下，都应当防止短缺资源的渗漏现象的发生，也就是要防止被分配到一定部门和企业中的短缺资源因牟利目的而被转卖给其他部门和企业。

一种折衷的做法是兼取三种原则，实现政府调节下的配额均衡。三种原则之中，比较有利于达到政府预定产业结构调整目标的是目标原则；比较有利于维持经济增长，较少地导致经济增长率发生较大幅度波动的是历史比例原则；较少引起需求各方之间的摩擦，并且较少地挫伤所有企业的积极性的是平均原则。这样，要发挥非均衡条件下政府的配额均衡在产业结构调整中的作用，不妨以目标原则为主，兼顾历史比例原则和平均原则的特点，制定一种综合地确定短缺资源分配的比例。

四、主导产业政策的运用和经济的不平衡增长

资源短缺条件下的经济增长与短缺的资源在部门间的配额有关。假定在短缺资源的分配中主要依据的是目标原则，那么这时的经济增长必定是在产业结构调整过程中实现的，而产业结构调整过程中所实现的经济增长也必定是倾斜式的增长，即经济的不平衡增长。

这里涉及对于经济不平衡增长的价值判断问题。要知道，任何经济

增长都是从一定的经济现实环境中出发的，我们可以把这种现实环境称作经济增长的初始状态。任何经济增长，在经历一定的时间之后，总会达到某个预期的经济境界，我们可以把这种预期的境界称作经济增长的阶段终点。在评价经济的平衡增长与经济的不平衡增长时，既不能脱离经济增长的初始状态，也不能脱离经济增长的阶段终点。假定初始状态是产业结构协调的，而预期的经济增长阶段终点也是产业结构协调的，那么经济的平衡增长显然是理想的增长途径。在这段时间内，经济的不平衡增长也许是不必要的，甚至还可能不利于预定的产业结构协调目标的实现。然而，在当前，我国经济处于非平衡状态并且初始点上的产业结构就已经处于严重失调的情况下，经济的平衡增长既缺乏可行性，又不符合短缺资源配额均衡下经济增长的要求。因此，对于经济不平衡增长的是与非，不应当脱离实际而作出判断。

政府配额均衡条件下的经济不平衡增长的结果，究竟能否达到政府预定的经济增长目标与产业结构调整目标，与政府制定的主导产业政策的科学性有关，也与这一主导产业政策被贯彻的程度有关。假定政府不制定任何主导产业政策，一切听任市场调节来自发地形成经济中的主导产业，虽然其结果也有可能既实现经济增长，又调整了产业结构，但这通常以市场比较完善和企业具有利益约束为前提。何况，即使如此，产业结构调整过程也可能相当缓慢，因为一旦出现了货源有限或市场有限等情况，通过市场自身的配额调节（短缺资源的自发分配或有限市场的自发分割）总是在无数次交易活动和资源转移之后才达到预期效果的。就当前我国的实际情况来说，由于市场不完善和企业仍然缺乏利益约束，资源的部门间的自发转移有困难，市场的配额调节的结果不一定与政府预定的经济增长目标、产业结构调整目标相吻合，从而由政府制定主导产业政策，并根据这一政策来实现政府配额均衡下的经济不平衡增长，就显得十分必要。

主导产业政策是一种倾斜式的产业政策。但应当注意到，任何主导产业都需要有其他若干产业与之配合，而与主导产业直接有关的其他若干产业又分别与更多的产业联系在一起。这样，即使政府实行的是倾斜式的产业政策，这种政策也只能按照与主导产业的关系的密切程度来实行短缺资源的配额，而不可能倾斜到只顾某一个或少数几个产业而忽略其他有关产业的地步。这意味着，在非均衡条件下，如果说政府惟有通过配额均衡来实现经济的不平衡增长，集中较多的资源发展主导产业，

以调整产业结构的话，那么产业政策的这种倾斜只能适度，而不应当过分，否则不仅不能加速主导产业的成长，反而有可能导致产业结构失调现象的延续或加剧。

通过以上的分析，可以清楚地了解到，关于经济增长的平衡与不平衡之争实际上并非如通常所说的，究竟是不平衡增长优越还是平衡增长优越。既然增长的初始状态是产业结构失调，那么争论的焦点就不可避免地成为经济增长的不平衡程度之争，也就是产业政策的倾斜度之争。过度的倾斜的害处更大于完全没有倾斜。经济的过分不平衡增长可能加剧产业结构的失调，而在经济增长的初始状态表现为产业结构已经失调时，经济的平衡增长虽然无助于产业结构失调现象的消除，但较为可能的是基本上维持产业结构现状，而不一定使之加剧、恶化。这正是在政府制定主导产业政策时需要注意的。

于是问题归结为政府究竟如何运用主导产业政策，如何使产业政策的倾斜适度。为了说明这一点，有必要考察一下企业运行机制和价格信号在主导产业政策实施过程中的作用。

五、企业的自我约束及其对产业政策倾斜过度的制约

主导产业政策是由政府制定并由政府推行的。政府行为的非理想化使得政府所制定和推行的主导产业政策同政府预定要达到的经济增长与产业结构调整目标之间存在一定的差距。政府很难使得产业政策的倾斜恰到好处。这样就需要有一种力量对产业政策倾斜过度加以制约。那么，这种制约的力量主要来自何处？它不是来自政府本身，它主要来自作为投资主体和利益主体的企业。

假定企业没有摆脱行政机构附属物的地位，依然缺乏利益的约束并且不能根据自己的现实利益和预期利益来选择投资机会，毫无疑问，当政府的产业政策严重倾斜（即过度倾斜）时，企业对于由此引起的市场供求比例的变化不可能作出反应。产业政策的过度倾斜所加剧了的产业结构失调，以及具体表现出来的某些商品供给缺口增大和另一些商品需求缺口增大，只有等到问题积累到一定程度，等到政府自己发现它们的严重性了，才有可能纠正过来，但这往往需要较长的滞后期，国民经济因此而受到的损失将是巨大的。不仅如此，由于产业政策的倾斜与政府对短缺资源的配额联系在一起，在企业缺乏利益约束的情况下，企业甚至有可能利用产业政策的倾斜过度来为自己牟利，如利用短缺资源去发

展并非市场所急需的生产，或利用短缺资源进行非生产性的盈利活动，其结果，不但不是对产业政策倾斜过度的制约，反而会加剧不合理的产业政策的倾斜，加剧短缺资源的短缺程度。

如果客观上发生上述这些与政府在制定倾斜产业政策时所预计的情况相违的现象，而政府又不把企业缺乏利益约束视为问题的症结所在，那么政府很可能作出一种错误的判断，即认为这一切主要是由价格的不合理或双轨价格的存在所引起的，于是政府试图以取消双轨价格控制和放开价格来纠正产业结构的严重失调，消除商品供给缺口和需求缺口。从理论上说，这样做似乎是有根据的，因为价格信号的正确将导致资源流向市场所需要的领域，企业对价格信号的灵活反应将导致企业转而生产短缺商品，转而投资于经济中的薄弱环节，促进产业结构的合理化。但这与非均衡条件下的实际情况完全不符。假定政府这样做，所带来的恰恰是产业结构的进一步失调和经济的进一步混乱。关键仍在于：尚未自主经营、自负盈亏的企业不可能成为真正起作用的产业结构调整的利益主体。

如上所述，资源短缺和初始状态中的产业结构失调是既成事实，市场不完善和企业缺乏利益约束也是既成事实。在资源短缺的前提下，配额均衡是不可避免的：不是由政府来实现配额，就是由市场来实行配额。价格双轨制意味着既有政府实行的配额，又有市场实行的配额，而政府实行的配额将根据目标原则（或平均原则，或历史比例原则）付诸实现。如果政府决定在这种形势下把价格双轨制转变为市场单一定价制，那就意味着取消政府的配额，而让短缺资源完全由市场来实行配额：市场或者按照“谁先来，谁先买”的优先原则分配，或者按照垄断原则分配。但无论市场按照什么原则来分配短缺资源，只要市场仍然是不完善的，企业产权关系仍然不规范和企业仍然缺乏利益约束，那么供给价格弹性较小和需求价格弹性较小的事实必然导致新的两种价格的并存，即公开的市场价格或地下的市场价格（黑市价格）的并存。公开的市场价格与地下的市场价格你追我赶，始终保持某种差距，结果导致价格的轮番上涨。这正是我国经济处于非均衡状态下的实际情况。它不仅无助于缓解产业结构失调，而且只会使产业结构失调加剧。

政府如果考虑到经济的非均衡状态，考虑到企业尚未成为独立商品生产者这一客观事实，那么从有效地调整产业结构的目标着眼，绝不能在条件不成熟时放开价格和取消价格双轨制，而只能在保持政府配额的

同时，改造企业运行机制，并依靠企业的自我约束来制约产业政策倾斜的过度。关于这些，本书第六章的分析是完全适用的。

企业作为投资主体和利益主体，将具有投资与经营的自我约束力；而这种与企业运行机制联系在一起的企业自我约束力，将成为对于政府的产业政策倾斜过度的一种制约。这是因为，企业是按照自己的利益趋向而进行投资方向的变动和投资数量的调整的；如果政府的产业政策的倾斜过度，在双轨价格条件下，企业将面临以下两种选择：

第一种选择是，企业宁肯接受市场配额，即利用高于固定价格的市场价格来生产既符合自己的利益，又适应市场需要的短缺产品。这样就可以弥补政府的产业政策倾斜过度而导致的该种商品的短缺。当然，当企业作出这种选择时，企业要冒一定的投资风险和经营风险。但企业作为利益主体，它不仅有权这样做，并且也愿意承担这些风险。伴随着企业投资风险和经营风险而来的，将是企业的盈利。有了盈利的动力，企业是有可能作出这种选择的。

第二种选择是，由于政府的产业政策倾斜过度而导致政府配额过于集中，但企业又不愿接受市场配额（这主要是由企业从自身利益出发，感觉到市场配额的价格过高，从而投资风险和经营风险过大），这样，政府配额的不足必将导致企业改变生产规模和生产方向，包括企业转产、停产、减产、与其他企业合并或联营等等。由此涉及生产要素的流动和资源在部门间、企业间的重新组合。生产要素的流动和资源重新组合以企业自身的利益为指导，而企业的利益又以市场的实际需要为转移。于是也就有助于弥补政府的产业政策倾斜过度而导致的某些商品的短缺，有了盈利的动力，企业也会作出这种选择。

无论企业作出第一种选择还是第二种选择，其结果首先是有助于弥补政府的产业政策倾斜过度而导致的某种短缺。这可以被看成是企业的自我约束对于产业政策倾斜过度的一种制约。除此以外，还存在着企业的自我约束对于产业政策倾斜过度的另一种制约。这就是在企业作出上述任何一种选择之后，市场形势都会发生一定的变化，从而促使政府改变原来的产业政策过度倾斜的做法，修正过于集中的配额方案。

比如说，假定企业作出第一种选择，从市场上用高于固定价格的价格来购买生产资料并用以生产市场所需要的短缺商品，这样，市场上该种生产资料的供给量将增加，而企业所生产出来的该种短缺商品的价格将下降。这将给予实行该种生产资料配额和该种短缺商品配额的政府以

一定的信号，使政府感到自己原来制定的配额方案（即产业政策倾斜过度，配额过于集中的方案）已与新的市场形势不相适应了。于是政府就有可能调整配额来适应新的市场形势。

假定企业作出第二种选择，即企业通过生产要素的流动和资源的重新组合来应付政府原定的配额过于集中问题，那么生产要素流动和资源重新组合的结果将会导致市场上某些短缺商品供给量的增加，引起市场形势的变化。当政府接收到这种信号以后，也会重新考虑原来的配额方案，从而根据新的市场形势进行配额的调整。

由此可见，只有企业从作为行政附属物的地位转到自主经营、自负盈亏的独立商品生产者的地位，政府的配额均衡才有助于产业结构的合理化，才能避免因政府配额不当而造成的产业结构失调迟迟不能解决的情况的发生。反之，如果政府在企业体制未变的条件下，指望用取消双轨价格来协调产业结构，那么就只能得到与政府的预定目标相反的结果。

这一切充分说明了非均衡状态中的经济改革、经济增长、产业结构调整三者之间的关系的实质。简言之，如果不首先进行有效的企业体制改革，经济增长与产业结构调整这两个目标不仅难以实现，而且会给以后的经济增长与产业结构调整造成困难。

Chapter 8 Government Regulation of Agriculture

第八章 政府对农业生产的调节

8.1 DEMAND AND SUPPLY OF AGRICULTURAL PRODUCTS UNDER DISEQUILIBRIUM CONDITIONS

8.1.1 Agricultural Disequilibrium

In our analysis on industrial restructuring, we should treat agriculture and the demand and supply of agricultural products in a special way by specifically studying the demand and supply of agricultural products as well as the development of agriculture in a separate section.

If we regard an underdeveloped market and limited supply of resources as the main features of economic disequilibrium, it will be obvious that the Chinese agriculture has exhibited the features of disequilibrium, which are first of all reflected by the limited supply of land and secondly by the substantial constraints on the free transfers of resources in the agricultural industry. Western economists usually regard agriculture as a perfectly competitive sector and the agricultural produce market a perfectly competitive market. If the agricultural industry and the market of agricultural products they refer to are in a developed capitalist country, the viewpoint is more or less applicable. However, to a developing country, especially China in its current situation, this viewpoint is far from the truth. The current agricultural disequilibrium in China is mainly reflected in the following three aspects:

First, in the circumstance of limited supply of resources, resources

are substantially constrained from being freely transferred due to the system. Free transfer is constrained not only inside the agricultural sector but also between agricultural and nonagricultural sectors and between rural and urban areas.

Second, main agricultural products are in short supply, and hence, there are gaps between the supply and demand of these products. There are also constraints on the market of main agricultural products. Government rationing is applied and so is market rationing. The existence of the dual-track price system reflects that the market of main agricultural products is under imperfect competition.

Third, in terms of the agricultural products that are not subject to government rationing, they are traded in the marketplace with high transaction costs, and the competition of these products is imperfect for several reasons, such as incomplete information, various tangible and intangible constraints on product transfers between different geographical areas, underdeveloped intermediary organizations, and the absence of some necessary institutions.

All these demonstrate that we should not rely on the measures that only focus on price and market, but need to take measures that apply to areas beyond price and market according to specific disequilibrium conditions to resolve agricultural problems in China. Moreover, the reality nowadays has indicated that the primary measures are those other than price and market.

8.1.2 Demand and Supply of Agricultural Products Versus Government Regulation

Based on the features of disequilibria in the agricultural sector discussed above, the government should place its regulatory emphasis on motivating producers of agricultural products, supporting circulation of resources, and ensuring the availability of necessary supplies for agricultural product producers to increase production so that the supply of agricultural products can be increased. Of course, emphasizing on these measures does not mean that there is no need

for other measures such as raising the fixed price of agricultural products and expanding the scope of the agricultural products that are free to trade without restriction. We only mean that in the case of disequilibrium conditions, regulatory measures beyond price and market are relatively more important.

Measures beyond price and market available to the government to increase the supply of agricultural products include the following:

1. Establishing the agricultural production stabilization fund. The government will determine the main categories of agricultural products that are in need of price support from the government in order to maintain production volume and producers' income. When the price of a listed agricultural product falls below its support price, the agricultural production stabilization fund will purchase the product at its support price. The agricultural production stabilization fund is mainly funded by the fiscal budget. Profits from using the fund to manage the purchases and sales of these agricultural products can also be a supplementary source of capital for the fund. The support price of each agricultural product is publicized in advance and kept relatively stable during a certain period of time, which can stabilize producers and avoid violent fluctuations in the production volume of the core agricultural products. In the current circumstance, the support price can be set a little bit higher. Even with the increase of supply of agricultural products and the decline of supply gap in the future, the agricultural production stabilization fund, once established, should be maintained in the long run, and the support price for each product should be adjusted in a timely manner according to demand and supply in the market.

2. Developing farm servicing companies and supporting the relative concentration of land via financial intermediaries. When agricultural producers are not highly motivated to plant and grow crops, together with the constrained circulation of agricultural resources, it is necessary to maintain the stability of the labor force engaging in agricultural production. Therefore, the government should

encourage and support the establishment of farm servicing companies and allow them to grow relatively quickly. These companies can be formed by funds in the market to sign contracts with those households who do not have sufficient labor to grow crops or the required experience or skills to manage their farmland on their own. Farm servicing companies are staffed by relatively stable farm workers, have high productivity, and make profit by charging service fees or by obtaining a percentage of the actual harvest. They can significantly increase production output given the same area of arable land and hence raise land utilization efficiency.

Supporting relative concentration of land via financial intermediaries means that we establish some financial institutions, such as a land savings bank (or a land savings credit union or a farmers' land savings fund) to accept land as deposit from those households who are neither willing to grow crops nor willing to give up their contracted land by paying certain amount of interest. These financial institutions can in turn gather the land received from each depositor and lend it to skilled farmers or farm servicing companies, or they can enter into farm servicing contracts with farm servicing companies, who get paid service fees or a percentage of harvest from the land. These financial intermediaries can be established using funds from society and earn profits from the spread between the deposits of land and the loans of land or from managing the land on their own. The combination of financial institutions, skilled farmers, or farm servicing companies will be the way to economies of scale.

3. Establishing a network of specialized distributors of agricultural production materials and cooperative suppliers of agricultural production materials. In light of the shortages of agricultural production materials and market underdevelopment, we should not terminate but rather enhance government rationing of some key agricultural production materials (such as fertilizer, pesticides, farming equipment and fuel, and agricultural film). The exclusive distributor system is a viable way at the moment.

Government rations should mainly follow the target principle and meanwhile take into account the average principle and the historical ratio principle. When determining the rationing target for key agricultural production materials, the government should first and foremost focus on grain. However, it is not enough to rely on government rations and exclusive distributors only. We should also establish a network of cooperative suppliers of agricultural production materials as early as possible. The network of cooperative suppliers of agricultural production materials mainly refers to a network that primarily handles and supplies agricultural production materials organized and funded by agricultural producers. The network is not only monitored and managed by agricultural producers but also capable of serving them at the same time.

The above describes the measures that the government can adopt to increase the supply of agricultural products. They can also be coordinated with other measures such as raising the price of agricultural products.

8.1.3 Demand for Agricultural Products Versus Government Regulation

In order to regulate demand for agricultural products, the government can also adopt appropriate regulatory measures. The focus of government regulation applicable to this area should also be placed on measures beyond price and market. However, this does not mean that government regulation of the price of agricultural products is useless in reducing the supply gap of agricultural products. Rather, it means that government regulation of the price of agricultural products cannot be the primary measure to effectively alleviate the mismatch between the demand and supply of agricultural products under disequilibrium conditions. The government can still perform rationing on some key agricultural products when faced with extreme shortages. However, this is not a fundamental measure that attempts from the demand side to alleviate the mismatch of the demand and

supply of agricultural products.

Among measures beyond price or market that aim to adjust the demand, there are mainly three measures available to the government:

1. Applying differential tax rates, differential interest rates and differential credit quota to the users who use agricultural products as raw materials so as to adjust the demand for agricultural products. The users of agricultural products can be categorized into three main groups. The first group is enterprises or other production units. They need agricultural products as raw materials. When certain agricultural products are in relatively severe shortage, the government should try its best to reduce the demand for agricultural products from the users who use agricultural products as raw materials and adjust the structure of their demand for raw materials. Although the government may get the same result by adjusting the price of agricultural raw materials or by rationing agricultural raw materials, the former measure may have a relatively large impact, whereas the latter measure may hurt the motivation of enterprises or other production units who use agricultural products as raw materials, nor will it necessarily guarantee more efficient utilization of agricultural products as raw materials. Therefore, one of the alternatives available to the government is to adopt such measures as differential tax rates, differential interest rates, and differential credit quotas to guide enterprises or other production units to adjust the structure of raw materials and reduce the usage of shortage agricultural products. Adjusting the structure of raw materials requires additional inputs. However, if the government adopts differential tax rates, differential interest rates, and differential credit quotas to benefit the enterprises or other production units that make adjustments to the structure of raw materials and cut the usage of agricultural products as raw materials, these enterprises or production units may feel the benefits of following the government. As a result, such government initiatives will benefit the whole of society, including users who use agricultural products as raw materials.

2. Using differential tax rates, differential interest rates, and differential credit quotas, as well as differential foreign exchange retention ratios to adjust the structure of export commodities and reduce the export of agricultural products. Among those three main groups of agricultural product buyers, the second group is agricultural product exporter. They handle the export of agricultural products. When some agricultural products suffer from relatively significant shortages, the government can try to reduce the export of agricultural products by those enterprises. Of course, if necessary, the government will not rule out the possibility of using harsh measures such as applying export quota to reach its goal. However, doing so may negatively influence the motivation of exporters. A better way is to use differential tax rates, interest rates, and credit quotas, as well as differential foreign exchange retention ratios so that exporters can adjust the structure of export commodities according to the demand and supply of agricultural products and reduce the export of shortage commodities. In doing so, the government can motivate exporters relatively easily. Meanwhile, the flexibility of these measures also enables exporters to be more empowered when adjusting their export structure.

3. Applying various methods to change the ratio of personal savings to consumption as well as the consumption structure and guiding consumers to reducing the demand for shortage agricultural products. Among the three main groups of agricultural product buyers, the third one is consumer, who is the direct or indirect buyer of agricultural products. For example, food is the main product that consumers purchase directly, while the main buyers of cotton, linen, silk, and wool are enterprises. Since cloth or clothing that consumers purchase is made from agricultural products such as cotton, linen, silk, and wool, these agricultural products can be considered commodities that consumers purchase indirectly (the same is with manufactured food, which is considered agricultural products that consumers purchase indirectly). In order to reduce the direct and indirect

purchases of agricultural products, the government can try to change the ratio of personal savings to consumption so as to change consumer consumption structure, including the structure of food, clothing, and housing, besides using price adjustment measures and applying rationing. There are a series of measures available to the government in this regard. Here are some examples:

(a) The government can adjust tax rate or interest rate to adjust the ratio of savings to consumption.

(b) The government can levy new taxes to change the ratio of personal savings to consumption (including the structure of food consumption by consumers).

(c) The government can sell houses or gold and silver jewelries to change the structure of personal consumption and sell stocks or issue government bonds to change the ratio of personal savings to consumption as well as the consumer consumption structure.

(d) The government can adopt some measures to encourage consumers to increase spending on services (such as tourism, cultural, and educational services) and so as to reduce their direct or indirect purchases of agricultural products.

(e) The government can adopt fiscal and credit measures to reduce the demand for agricultural products when aggregate demand exceeds aggregate supply.

These adjustment measures can be used together with price adjustment or government rationing of agricultural products.

壹 非均衡条件下的农产品供求

一、农业的非均衡状态

在分析产业结构调整问题时，应当把农业放在特殊的位置上，把农产品供求放在特殊的位置上，把农产品供求与农业增长作为专门一章来进行考察。

当我们把市场不完善与资源供给有限作为经济非均衡的重要标志时，农业显然具有较明显的非均衡性质，这首先反映于土地数量为既定的，资源的自由转移在农业中所受到的限制十分突出。西方经济学家通常把农业作为完全竞争部门来看待，把农产品市场作为完全竞争市场来看待。如果说这种看法对于发达资本主义国家的农业与农产品市场来说，多多少少还有所适合的话，那么对于发展中国家，尤其是对于我国目前的情况而言，这种看法与实际有很大出入。我国当前农业的非均衡状态，主要反映于以下三个方面：

第一，在资源供给有限的条件下，由于体制的原因，资源的自由转移受到很大限制。这不仅是指农业内部的资源自由转移受限制，而且指农业与非农业、乡村与城市之间的资源自由转移受限制。

第二，主要农产品供给不足，这些农产品的供求之间存在着一定的缺口。主要农产品市场相应地存在着限制，即一方面存在着政府的配额；另一方面存在着市场的配额。双轨价格的并存反映了主要农产品交易的不完全竞争性质。

第三，即使在不受政府配额限制的农产品市场交易中，由于信息的不充分、地域之间对流通的有形或无形的限制、交易中介机构的不发达和某些必要的制度未建立，因此不仅交易成本很高，而且竞争也是不充分的。

这表明，要解决我国的农业问题，不能仅仅从价格方面和市场方面采取措施，而必须根据非均衡条件，采取价格以外的和市场以外的措施。并且，就现阶段的实际情况来看，价格以外和市场以外的措施将是主要的。

二、农产品供给与政府调节

针对着上述农业中非均衡的特点，为了增加农产品的供给，政府调

节的重点应当放在调动农业生产者的积极性、促进资源的流动，以及保证农业生产者获得为增加供给所必要的要素供给之上。这些都属于价格以外和市场以外的调节措施。当然，以这些措施为主，并不意味着不需要采取提高农产品固定价格和扩大农产品自由购销范围等措施。这只是说，根据上述的非均衡条件，政府在价格以外和市场以外采取调节措施相对说来更为重要。

可供政府选择的增加农产品供给的价格以外和市场以外的措施包括：

1. 建立农产品平准基金。由政府确定列入国家用支持价格来维持产量和农户收入的主要农产品种类，当农产品价格低于支持价格时，由农产品平准基金按支持价格收购。农产品平准基金的资金主要来源是财政拨款。农产品平准基金在经营农产品购销过程中的收益也可以成为农产品平准基金的补充资金来源。农产品的支持价格事前公布，并保持一定的期限内的稳定性，这样就可以稳定农业生产者的情绪，避免主要农产品产量的大起大落。在目前情况下，支持价格的起点可以稍高一些。今后，即使农产品供给增加了，农产品供给缺口缩小了，但农产品平准基金一经建立，就应当长期保持，而支持价格的水平则可以随着当时的市场供求状况而调整。

2. 发展代耕代收公司，通过金融中介促进土地相对集中。在农业生产者的种植与经营的积极性不高，以及农业中资源流动受限制的条件下，要增加农产品供给，必须有一支稳定的从事农业生产的劳动力队伍，因此，代耕代收公司之类的形式应得到政府的鼓励，较快地建立和发展起来。代耕代收公司由社会集资组成，它们同那些缺乏劳动力或缺乏农业生产经验和技术的土地承包家庭签订代耕代收合同，按付出的劳务收取费用，或根据实际收获量分成。代耕代收公司拥有较稳定的农业工人队伍，劳动生产率高，能在现有土地面积不变的情况下大大增加产量，能够提高土地利用效率。

通过金融中介促进土地相对集中是指：建立土地储蓄银行（或土地储蓄信用合作社，或农民土地储蓄基金会）之类的金融组织，向那些不愿从事农业生产但又不愿放弃所承包的土地的家庭开办土地存入业务，支付一定的利息。它们可以把土地承包者分散存入的土地贷给耕作能手或代耕代收公司，也可以同代耕代收公司签订合同，采取分成制或按劳务付酬。这些金融组织可以通过社会集资方式而组成，土地存贷的利差

以及自身经营土地的收益构成这些金融组织的利润。通过这些金融组织，耕作能手或代耕代收公司可以实现集约化的规模经营。

3. 农业生产资料专营和农业生产资料合作供应网的建立。考虑到农业生产资料的短缺和市场的不完善，对农业的重要生产资料（如化肥、农药、农用主要机械和燃料、薄膜等）的政府配额制不仅不应取消，而且应当扩大。专营制度在现阶段是可行的。政府的配额应当以目标原则为主，同时参照平均原则和历史比例原则。政府在确定主要农业生产资料的配额目标时，应当把粮食放在首要位置上，但只靠政府的配额和专营还是不够的，应当及早建立农业生产资料的合作供应网。农业生产资料合作供应网主要是指由农业生产者集资组织的专门经营主要农业生产资料的供应网，它们既受到农业生产者的监督与管理，又能更好地为农业生产者服务。

以上就是政府可以采取的增加农产品供给的措施，它们也可以同提高农产品价格等措施结合起来运用。

三、农产品需求与政府调节

为了调节社会对农产品的需求，政府同样应当采取适当的调节措施，并且政府在这方面的调节重点也应当放在价格以外和市场以外。这并不是说政府对农产品价格的调整等措施无助于农产品供给缺口的缩小，而是说在非均衡条件下它们不可能成为有效地缓和农产品供求矛盾的主要措施。至于政府对某些重要的农产品的配额，在短缺较为严重的情况下仍是可以采用的，但这毕竟不是从需求的角度来缓和农产品供求矛盾的基本措施。

在价格以外和市场以外的调节需求的措施中，可供政府选择的主要有以下三项措施：

1. 以差别税率、差别利率、差别信贷额等措施来调节农业提供的原料的用户对农产品的需求量。农产品的需求者可以分为三大类。其中，第一类是企业和其他的生产经营单位，它们需要农产品作为原料。在某些农产品短缺情况较为严重时，应当尽可能使农业提供的原料的用户减少对农产品需求量，调整各自的原料结构。政府固然可以用调整农业提供的原料的价格或采取农业提供的原料的配额方式来达到这一目的，但调整价格的波动面较大，而实行配额的做法对于使用农业提供的原料的企业和其他的生产经营单位的生产积极性是有损害的，并且这种

做法并不能保证农业提供的原料的利用效率增长。因此，可供政府采用的一种做法是采取差别税率、差别利率、差别信贷额之类的措施，引导企业和其他生产经营单位调整原料结构，减少对短缺的农产品的使用量。原料结构的调整是需要追加投入的，但如果政府通过差别税率、差别利率、差别信贷额等措施能给那些调整了原料结构，少使用农业提供的原料的企业和其他生产经营单位以实际的利益，使后者感到仍然有利可得，那么对社会和对这些使用农业提供的原料的用户都有好处。

2. 以差别税率、差别利率、差别信贷额以及有差别的外汇留成比例等措施来调节出口贸易商品结构，减少农产品的出口量。在农产品需求者的三大类中，第二类是农产品出口企业。它们经营农产品出口业务。在某些农产品短缺情况较为严重时，可以使这些出口企业减少农产品的出口量。当然，在有这种必要时，政府未尝不可以用农产品出口限额等较硬性的措施来达到这一目的，但这对于调动经营出口商品的企业的积极性不利，不如采用差别税率、差别利率、差别信贷额以及有差别的外汇留成比例等措施，促使出口企业根据农产品供求状况调整出口贸易的商品结构，调整短缺的农产品的出口量，这样，一方面，比较容易激发经营出口业务的企业的积极性，另一方面，这些措施较为灵活，出口企业在调整出口商品结构时有较大的主动权。

3. 以各种不同的方式改变居民的储蓄—消费比例，改变居民的消费结构，引导居民少消费较为短缺的农产品。在农产品需求者的三大类中，第三类是居民，他们直接或间接购买农业提供的产品。如食物，主要是居民直接购买的农产品；以棉、麻、蚕茧、羊毛等而言，其主要购买者是企业，而居民购买的衣料或服装则是以这些农产品作为原料的企业的产品，因此棉、麻、蚕茧、羊毛等等可以被看成是居民间接购买的农产品（居民对于加工食品的购买，也可以视为居民对农产品的间接购买）。要使居民减少对农产品的直接和间接购买量，除了可以采取价格调节措施和实行配额以外，政府还可以设法改变居民的储蓄—消费比例，改变居民的消费结构，包括改变居民的食物结构、衣着习惯、居住条件等。而在这些方面，政府有一系列措施可以选用，如：

（1）政府可以通过调整税率或利息率来调节居民的储蓄—消费比例；

（2）政府可以开征新税来改变居民的储蓄—消费比例以及改变居民的消费结构（包括居民的食物结构）；

(3) 政府可以通过出售房屋或金银首饰来改变居民的消费结构，还可以采取出售企业股票，发行政府债券等方式来改变居民的储蓄—消费比例以及居民的消费结构；

(4) 政府可以采取促进居民增加劳务消费（包括旅游支出、文化教育支出等），以减少居民对农产品的直接或间接购买量；

(5) 政府还可以通过财政、信贷等多种措施，在社会总需求大于社会总供给的情况下压缩社会总需求，从而起到压缩对农产品的需求的作用。

以上所列举的这些调节措施可以同调整农产品价格或实行配额等措施结合在一起使用。

8.2 TREND OF BALANCED DEMAND AND SUPPLY OF AGRICULTURAL PRODUCTS

8.2.1 Long-Term-Oriented Behavior of Agricultural Product Buyers and Sellers

It is not painless to adjust the demand and supply of agricultural products. The difficulty is that these adjustment measures that we have discussed earlier are not directly related to price or market. Those measures change the demand and supply of agricultural products either via fiscal or credit policies or via certain adjustments to the system (such as establishing land savings banks or farm servicing companies). If farmers lack the willingness and motivation to increase scale of production, or they are not interested in changing the structure of raw materials or consumption, or they believe such changes are too costly and bring in low returns, any measure that the government undertakes to change the supply and demand of agricultural products will not be effective at all. In other words, if the buyers and sellers of agricultural products are all only focused on their short-term interests and have no idea of how their short-term interests are related to government measures devised to adjust the demand and supply of agricultural products, it will be impossible for them to operate their businesses following the adjustment goals that the government sets for demand and supply. They probably care less about their long-term interests. In this way, we can easily understand why government regulatory measures are not so effective.

Now we have a question: What kind of regulatory measures should the government apply to guide the buyers and sellers of agricultural products so that they can turn their attention to their long-term interests instead of focusing only on their short-term interests? Basically, whether a microeconomic unit (an enterprise or a

person) acts in its long-term interests or not is dependent upon three conditions: Does it have a clear development goal when it engages in economic activities? Is it motivated internally to realize the predetermined development goal? And is it likely to realize the predetermined development goal with its own efforts? On the contrary, if a microeconomic unit does not have a business development goal and only cares about its short-term interests, or if it is not motivated and believes that its development goal has nothing to do with itself, or if it loses confidence in the long-term prospect or has inconsistent expectations, believing that it will be impossible to realize the development goals regardless of how hard it tries, it will inevitably focus on its short-term interests or ultra-short-term interests. In our discussions on current Chinese agriculture and its development, we will first of all analyze the real situations of agricultural product suppliers from the perspective of the three conditions discussed above that are critical to microeconomic units' long-term-oriented behavior.

(a) The Development Goal of Economic Activities

Here, the most important issue is the determination of the development goal for agricultural product suppliers. Producing agricultural products is just a way to realize their development goal. We cannot regard the development goal of agricultural product suppliers simply as farming, feeding poultry, and providing the market with agricultural products. If they understand that producing agricultural products is making contribution to society, we can regard their development goal as making larger contribution to society. If they believe that producing more agricultural products will bring more income, improve their standard of living, and create more wealth, we can regard increasing material wealth as their development goal. If these two beliefs (social responsibility and material wealth) are combined, the development goal will be more meaningful. Anyway, if the development goal is determined, agricultural product producers will clearly know what they need to

do. However, currently, such a goal has become quite vague. Social responsibility is thought to be too general to be a development goal, and material wealth is thought to be unrealistic because, in real life, producers of many other products may create more material wealth than those of agricultural products do. Therefore, many agricultural product producers are more and more unclear about their development goals.

(b) The Motivation to Achieve a Predetermined Goal

Without a development goal, there is no point in discussing motivation. In the circumstance where many agricultural product producers are more and more unclear about their development goals, it is difficult to believe that agricultural product producers are fully motivated, especially in terms of committing additional investment to increase the supply of agricultural products. Of course, this does not mean that they are not motivated at all to do any business. That they do not care about increasing the supply of agricultural products only indicates that they lack the motivation in this regard. Although pursuing short-term interests can also be considered a "goal," it is not the same as the development goal of economic activities. Because of lack of motivation, any government adjustment measure, be it fiscal, credit, or others, will fail to induce agricultural product producers to adapt their business activities to the intention of the government.

(c) The Confidence in Realizing the Development Goal Through Hard Work

This issue is similar to the motivation problem that we have just discussed. If the development goal is unclear and motivation is insufficient, what is the point of discussing the confidence in realizing the development goal? It is not difficult to find an explanation for behavioral shortsightedness among agricultural product producers. What we need to discuss is as follows: Even though some agricultural product producers may have their own development goals and prepare to increase the supply of agricultural products to realize their goals, can they really do so by working hard on their own? Admittedly, their

confidence is low. In the circumstance where the market is underdeveloped and resources are in short supply, agricultural product producers may not necessarily reach their goals by working hard on their own. As their confidence wanes, so do their efforts to increase the supply of agricultural products. Therefore, it will be difficult for the government to fulfill its plan of increasing the supply of agricultural products by means of various adjustment measures.

The above analyses are based on behavioral shortsightedness from the perspective of agricultural product producers. Next, let us look at agricultural product buyers. Let us simplify the categories of agricultural product buyers and classify them into two groups, enterprises and individuals. When the market is not fully developed and enterprises lack the constraint of self-interest and business budget, it is impossible for any enterprise to come up with a development goal, let alone the motivation and confidence to realize that goal. Therefore, it is not easy for an enterprise to cut its purchases of agricultural products as raw materials by adjusting the structure of its raw materials and lowering its production costs. With enterprise shortsightedness, agricultural product buyers will surely care about their short-term interests only. As for individual agricultural product consumers, we cannot deny that they are not free to change their consumption structure, especially food structure, when their income is relatively low. On the other hand, they will not likely change the way they directly or indirectly purchase agricultural products in response to government measures, because the market is not fully developed, resources are in short supply, and personal expectations are not stable. In other words, unstable personal expectations determine that individual agricultural product consumers only care about their shortterm interests.

These situations can be described as the irregularity of the relationship between government regulation and the demand and supply of agricultural products.

8.2.2 The Optimal Scale of Agricultural Production

One important issue in our research on agricultural disequilibria in China is to find out how to resolve the behavioral shortsightedness of the buyers and sellers of agricultural products. Although the behavioral shortsightedness of agricultural product buyers is closely related to the alleviation of the mismatch between the demand and supply of agricultural products, it is not the primary task we need to deal with in agriculture. The real difficulty we are facing is how to overcome the shortsightedness of agricultural product producers and to increase the supply of agricultural products. It is necessary to provide the producers with a clear development goal and necessary motivation to realize the development goal and to build their confidence in realizing the predetermined development goal through their hard work. Apparently, these are the points that we need to focus on to resolve agricultural issues.

To agricultural product producers, the issue of land ownership and right of use is directly linked to the goal, motivation, and confidence we have discussed. If we can come up with an appropriate proposal for land ownership and right of use according to the actual situations in China, it will not only help motivate agricultural product producers to produce goods but also change the behavior of agricultural product producers and direct them to be more long-term oriented. Now, can we establish private land ownership? Some foreign scholars who propose privatization of land ownership believe that private land ownership can enhance the motivation of agricultural product producers to increase inputs into the land and motivate them to care about their personal properties, harvests, and land, thus leading to higher production. I disagree with this proposal. Public land ownership has been in place for years in China, and people from all walks of life have accepted the concept of public land ownership. If China were to abolish public land ownership and adopt private land ownership, social disorder would arise with detrimental consequences,

especially in rural areas. In addition, private land ownership certainly brings forth the issue of land owners selling their land at will, which would damage agricultural productivity and intensify social conflicts. Moreover, should land ownership be privatized, land owners would care about and preserve their land and cultivate their land with meticulous care, but we cannot rule out the possibility that some land owners profit from land purchases and sell or use their land to engage in some nonagricultural activities. Isn't this behavior also shortsighted? Therefore, we must discuss how to overcome the shortsightedness of agricultural product producers under public land ownership. At the current stage, we can maintain status quo in rural areas, i.e., collective land ownership, and maintain the household responsibility system based on collective land ownership. As for land ownership system in the future, we can imagine the following scenario: First of all, all land inside the People's Republic of China shall be declared as owned by the state at a certain point of time in the future, and a state land commission shall be established to monitor and manage all land in the country, disallowing any encroachment of the land that belongs to the whole nation. Meanwhile, a regulation on land occupancy and utilization under public land ownership shall be promulgated, which would specify that the state is the owner of all land and designate a particular occupier and user to every piece of arable land in the agricultural sector. These specific land occupiers and users are microeconomic units engaging in agricultural production (farmers or agricultural enterprises). The state has the ownership of all arable land in the agricultural sector. A microeconomic unit that specifically occupies and uses a piece of arable land can use, transfer, or leave the land to its successor. As for land transfer or lease, any microeconomic unit (a farmer or agricultural enterprise) that occupies and uses land has no right to determine on its own the transfer or lease of land to another user who intends to use the land for nonagricultural purposes, nor does it have the right to transfer or lease the land to a foreigner because the owner

of land is the state and the "transfer" that we are discussing hereby is applicable to the right of use, so is "lease" or "successor." In addition, when a microeconomic unit transfers the land to another land user who intends to use the land for agricultural purposes, it must register with relevant land management agency—the State Land Commission—who represents the owner of land, records the transfer, and pays certain charges (such as land transfer fees).

Due to the clarification of public land ownership, the property right of land is clearly defined as far as ownership is concerned. Any microeconomic unit that uses land for agricultural purposes can use it for a long term and transfer the right of use to its successor, as long as state ownership of land is not encroached and rule of law on land management is not violated. As a result, microeconomic units will care about land more than before, and land utilization efficiency will increase significantly. Most importantly, it will direct agricultural product producers to be more long-term oriented.

With the long-standing public land ownership and the long-term use of land by microeconomic units, economies of scale in agriculture will make noticeable headway. Keep in mind that it is very difficult to achieve economies of scale with the collective land ownership and the household responsibility system currently in place, not only because land is dispersed and farmers do not have a clear understanding of economies of scale but also because farmers behave in a shortsighted manner without much care about the land or even lack personal interest in economies of scale. Therefore, only a few pilot programs with voluntary participation requirement are currently carried out in a few regions to test agricultural production on an optimal scale. If we could adopt the occupier and user system under public land ownership in the future, arable land would be relatively centralized via leasing or transferring land, and farmers, as they care more about land, would be more interested in agriculture and motivated to engage in optimal agricultural production in various forms(including various degrees of cooperative production). As a result, the trend of balanced demand

and supply of agricultural products would become more and more obvious.

贰 农产品供求均衡的趋势

一、农产品供求双方行为的长期化

对农产品供求的调节不是没有困难的。困难在于：以上讨论中所提到的调节方式都是价格以外和市场以外的措施，它们或者通过政府的财政政策、信贷政策来导致农产品供求比例发生变化，或者以一定的体制方面的调整（如土地储蓄制度的建立、代耕代收公司的建立等）作为导致农产品供求比例变化的前提条件。如果农业生产者自身缺乏扩大生产经营规模的志愿和积极性，或者，如果农产品需求者对于改变原料结构、消费结构等不感兴趣，或认为这些改变的成本偏大和收益偏低，那么无论政府采取何种方式来改变农产品的供求都不易收到显著的效果。换句话说，假定农产品的供给者和需求者双方的行为都是短期化的，都认为政府所采取的调节农产品供求的措施与自己的近期利益之间的关系不明确，那么他们很可能不会按照政府预定的调节的供给和需求的目标去安排自己今后的经济活动；至于长期利益究竟如何，他们可能很少关心，这样，政府调节的效果不明显也就不言自明了。

摆在我们面前的一个问题是：通过什么样的政府调节措施，才能导致农产品供给者和需求者克服行为短期化的倾向，才能促成他们的行为的长期化？从根本上说，一个微观经济单位（不管它是企业还是个人）的行为长期化取决于三个条件，这就是：微观经济单位在从事经济活动时要有明确的发展目标；微观经济单位在争取实现自己确定的发展目标时要有内在的动力；微观经济单位在通过自己的努力走向预定的发展目标时，要感到自己是有希望通过努力而实现这一目标的。反之，如果微观经济单位在从事经济活动时没有任何发展目标，而只顾眼前的好处；如果它们本身没有动力，从而认为实现发展目标与否与自己没有什么关系；如果它们对前景失去信心，或预期是紊乱的，即认为不管怎么努力也不可能使发展目标实现，那么行为的短期化，甚至超短期化，都将是不可避免的。在探讨当前我国农业的现状与发展趋势时，让我们就上述三个有关微观经济单位行为长期化的条件，首先结合农产品供给者的实际情况来进行分析。

第一，关于经济活动的发展目标。

这里最重要的是农产品供给者的发展目标的确定，农业生产者提供农产品，只不过是他们为实现自己的发展目标所必需的手段。不能简单地认为农业生产者的发展目标就是种地、饲养家禽家畜、向市场提供农产品。如果说他们认识到提供农产品是在为社会做贡献，那么他们以多做社会贡献作为自己的发展目标。如果说他们认为多提供农产品可以增加收入，改善自己的生活状况，使自己变得富裕起来，那么就是以物质利益增长作为发展目标。假定这两者（即社会责任与物质利益）是结合在一起的，那么发展目标的内容将更加充实。但不管怎样，只要有一个发展目标，农业生产者就会明确自己将朝什么方向努力。但在现阶段，这样的目标至少已变得含糊不清。社会责任，作为发展目标而言，被认为流于空泛。物质利益，作为发展目标，又被认为不切实际，因为现实生活中，从事农产品供给以外的其他许多经济活动的物质利益很可能大大超过提供农产品所获得的物质利益。于是对于不少农业生产者来说，发展目标变得越来越不确定了。

第二，关于实现预定目标的动力。

没有发展目标，动力问题将无从谈起。在农业生产者的发展目标越来越不确定的前提下，很难认为他们提供农产品（尤其是追加投入以增加农产品供给）的动力是充足的。当然，这并不是说农业生产者从事任何经济活动都没有动力。如果他们不关心增加农产品的供给，只表明他们缺少这方面的动力。尽管他们对眼前利益的追逐也可以被视为他们要达到“目标”，但这与经济活动中所要实现的发展目标不是一回事。正由于动力的不足，所以无论政府采取财政、信贷或其他调节措施，农业生产者不可能以调整自己的经济活动的方式来适应政府的意图。

第三，关于通过努力来实现发展目标的信心。

这个问题与上面所谈到的动力问题是相似的，这就是：如果连发展目标都不明确，连动力都是缺乏的、不足的，那么还谈什么实现发展目标的信心呢？农业生产者的行为短期化不难由此得到解释。现在需要说明的是：即使某些农业生产者有了自己发展的目标，并准备通过增加农产品供给来实现这一目标，但究竟能不能依靠自己的努力而使这一目标得到实现呢？应当说，信心是缺乏的。在市场不完善和资源短缺等情况之下，农业生产者不一定能使自己的努力取得相应的成果，这样，随着他们的信心的减弱，他们在增加农产品供给方面所做的努力也会减弱。政府指望通过各种调节措施来促使农业生产者增加供给的意图也就难以

实现。

以上是从农业生产者的行为短期化的角度来分析的。下面，再从农产品需求者的角度进行探讨。现在把农产品需求者简化为企业与居民两类。在市场不完善和企业本身缺乏利益的约束、预算约束的条件下，企业不可能有自己的发展目标，也缺乏争取实现这一目标的动力和信心。因此，企业难以通过调整原料结构和降低成本的途径来减少对农业提供的原料的购买量。企业本身的行为短期化决定了企业作为农产品需求者的行为短期化。至于居民作为农产品需求者，那么一方面，在居民普遍收入水平仍然较低的情况下，居民改变消费结构，特别是改变食物结构的有限性是无法否认的，另一方面，由于市场不完善和资源的短缺，居民的预期很不稳定，因而他们有可能不按政府调节措施所预定的那种方式来改变自己对农产品的直接或间接购买。换言之，居民本身的预期的紊乱决定了居民作为农产品需求者的行为短期化。

这一切都可以被称为当前我国农产品供求与政府调节之间的关系的非规则性。

二、农业的适度规模经营

关于我国农业非均衡状态的理论研究的一个重要问题是如何解决农产品供求双方的行为短期化。农产品需求者的行为短期化，虽然与农产品供求矛盾的缓和也有密切的联系，但这主要不是在农业中要解决的任务。真正的难点在于克服农产品供给者的行为短期化。根据前面所论述的，为了使农业生产者克服行为短期化，增加农产品的供给，有必要使他们具有明确的发展目标，具有为实现这一目标所必需的动力，以及具有通过自身努力而使预定的发展目标得以实现的信心。看来，要解决农业问题，应当由此着手。

对广大农业生产者来说，与目标、动力、信心直接联系在一起的是土地的占有与使用问题。如果能够根据我国的实际情况制定适宜的土地占有与使用方案，将有利于扭转农业生产者对供给农产品的积极性不足的状况，使他们的行为转向长期化。那么，能不能建立土地私有制呢？主张建立土地私有制的国外一些学者认为土地私有可以使农业生产者增加对土地投入的积极性，使他们关心自己的财产和经营成果，爱惜土地，扩大生产。我是不同意这种主张的。在我国，土地已经公有化多年，社会各界都已经树立了土地公有的观念，如果废除土地公有，变为

土地私有，社会的动荡不安、特别是农村的动荡不安将带来十分不利的后果。加之，土地私有必然涉及土地私有者可以根据自己的意志出售土地的问题，而个人任意出售土地，必然导致农业生产力的破坏，导致社会矛盾的加剧。而且，土地私有化以后，固然有的土地私有者会爱惜地力，保养土地，精耕细作，但不能排除这一事实，即也有一些土地私有者从事土地买卖以牟利，或以私有的土地从事与农业无关的活动，这不也是一种行为短期化吗？因此，我们必须在坚持土地公有的基础上讨论克服农业生产者行为的短期化问题。在现阶段，我们可以维持农村土地集体所有制的现状，维持集体土地所有制基础上的家庭联产承包经营的制度。但未来的土地制度究竟如何，我们不妨作如下的设想：首先，在将来的适当时候，宣布中华人民共和国国境内的一切土地均归国家所有，成立国家土地委员会，监督、管理全国的土地，不容许土地这一属于全国人民的财产受到侵占。与此同时，宣布实行土地国有化之下的土地占有与使用的制度。这是指：土地所有权归于国家，农业中每一块耕地则有具体的占有者与使用者，这些具体的土地占有者与使用者就是从事农业生产的微观经济单位（农户或农业企业组织）。国家拥有这些农业土地的所有权，具体地占有并使用某一块农业土地的微观经济单位，虽然可以使用它，转让它，并可以把它传给自己的继承人，但由于土地所有权属于国家，因此这里所谈到的“转让”是指对使用权的转让，这里所谈到的“出租”或“继承”，也是指对使用权的“出租”或“继承”。而且，即使以“转让”和“出租”而言，由于土地归国家所有，所以占有并使用土地的任何微观经济单位（农户或农业企业组织）无权自行决定把土地转让或出租给非农业的土地用户，也无权自行决定把土地转让或出租给外国人。此外，当这些微观经济单位在把土地转让给农业的土地用户时，要在作为国家土地所有者的代表——国家土地委员会——下属土地管理机构办理过户手续，并缴纳一定的费用（土地转让费等）。

由于确定了土地国有制，因此土地的财产关系在所有权这一层次上被明确了。一切使用农业土地的微观经济单位只要不侵犯国家对土地的所有权，不违背国家的土地管理法规，就有权长期使用土地并把使用权传给继承人。于是使用土地的微观经济单位对土地的关切程度将大大提高，土地的利用效率也将大大提高，更重要的是，这将导致农业生产者行为的长期化。

在土地国有化和微观经济单位长期使用土地的基础上，农业的规模

经营将有较大的发展。要知道，在目前的土地集体所有和家庭联产承包经营的条件下，规模经济实际上很难收效。这不仅由于土地过于分散和农民对规模经营的意义还不够了解，而且由于农民的行为短期化，对土地的关切程度低，以至于对规模经营缺乏兴趣。因此目前只可能在少数地区，通过自愿协议，进行适度规模经营的试点。将来，如果实行了土地国有化条件下的占有与使用土地的制度，通过土地的出租与转让，耕地可以相对集中，并且由于农民对土地的关切程度增加了，他们经营农业的积极性提高了，以各种方式（包括不同程度的合作经济形式）形成的适度规模经营也必定会推广开来，这样，农产品供求的均衡趋势也将变得日益明显。

Chapter 9 Establishing the Order of the Socialist Commodity Economy

第九章 社会主义商品经济秩序的建立

9.1 ESTABLISHING THE ORDER OF THE SOCIALIST COMMODITY ECONOMY: NECESSITY AND DIFFICULTY

9.1.1 The Connotation of the Order of the Socialist Commodity Economy

As we discussed in Chap. 1 of this book, the socialist economic system can be classified into three types, the traditional economic system, the dual-track economic system, and the new economic system. Among these three types of economic system, the traditional economic system is the product economy. The economic order under the traditional economic system is classified as the order of the product economy. The dual-track economic system is the transitional stage when the traditional economic system and the new economic system overlap and coexist. At this time, the order of the product economy is still largely in place, and the order of the commodity economy that is compatible with the new economic system has not been fully established. To put it differently, the order of the commodity economy is still in its infancy. The new economic system established after economic reforms will be the socialist commodity economy, and the compatible economic order is the order of the socialist commodity economy.

The economic order is a set of rules that people must follow in economic activities. Once the economic order is established, people can act accordingly and avoid economic disorder. All kinds of conflicts may emerge in the economy, but they can be reconciled and resolved in accordance with these agreed-upon rules. On the contrary, if the economy were out of order and economic activities were not following certain rules, people from all walks of life would lose confidence in the future of the economy, feeling that they would do business in an extremely uncertain environment without any protection of expected profits or even of their personal properties, which would surely lead to shortsightedness. The shortsightedness is applicable to not only enterprises but also individuals, the government, and society. In the absence of an economic order, economic chaos or even social turmoil would be inevitable.

In this sense, any society or era calls for an economic order to regulate personal behavior so that people can carry out economic activities in an orderly way. Even having the order of the product economy, which was not conducive to economic growth, is better than having no economic order at all. In other words, what troubles people most in economic activities is the absence of rules. Without rules, expectations of business activities cannot be stabilized. In that case, people may even think that any type of economic order will do, even one that is not ideal, because having something is better than having nothing.

China is currently under the dual-track economic system. Although the economy is not totally out of order, the real situation is that the order of the product economy still reigns partially, and the order of the commodity economy is still in its infancy. The existence of the dual-track economic system and the dual-track economic order (with one outdated but not totally retired and the other compatible with the commodity economy yet in its infancy) is not only very abnormal but also detrimental to the economy. This can be partially blamed for stagnation, inflation, and stagflation as well as resource

misallocation. Therefore, it is an important task for us to establish a set of rules as soon as possible to regulate economic behavior, ones that are conducive to the development of the commodity economy and consistent with the coming new economic system, i.e., the order of the socialist commodity economy.

9.1.2 The Order of the Socialist Commodity Economy and the Furthering of Economic Reforms

It is necessary to establish the order of the socialist commodity economy, not only because it provides people with a set of rules to follow during business transactions and prevents people from developing behavioral shortsightedness in business activities due to lack of stable expectations, but also because it is critical to the furthering of economic reforms and to the transformation from the dual-track economic system to the new economic system.

The new economic system that we are about to establish is one in which an enterprise as a microeconomic unit makes its own business decisions and is responsible for its profits and losses. Apparently, the order of the commodity economy is compatible with the new economic system. After the new economic system is established, the order of the commodity economy will control all economic activities. This should not be questionable. Here, we should point out that the reason why we emphasize the establishment of the order of the commodity economy is not only to prepare for the new economic system in the future, but more importantly, to accelerate the transformation from the dual-track economic system to the new economic system through establishing the order of the commodity economy so as to terminate the order of the product economy as well as the product economy itself in a relatively short period of time. In other words, establishing the order of the commodity economy represents a step forward to some degree, and establishing a series of rules can accelerate the development of markets and the formation of a mechanism under which enterprises pursue selfgrowth and exercise

self-control.

As we know, the economy was in a state of disequilibrium under the traditional economic system and so is the economy under the dual-track economic system. Even after the new economic system is established, there will be signs of resource supply constraints, indicating that economic disequilibrium has not disappeared despite somewhat declining intensity of disequilibrium. In support of a relatively smooth transition from the dual-track economic system to the new economic system under disequilibrium conditions, economic reforms need to go further in at least the following three aspects: (1) furthering the enterprise reform and transforming the enterprises that have not severed from their affiliation with government institutions into goods producers who make their own business decisions and are responsible for their own profits and losses; (2) furthering the reform of the planning mechanism so as to reach rationing equilibrium in the commodity market; and (3) transforming government functions, including separating the function of the government as asset owner and regulator of the economy and having the government gradually use economic regulatory measures to regulate the economy.

Furthering economic reforms in these aspects facilitates the establishment of the order of the commodity economy and the transformation from the dual-track economic system to the new economic system. In terms of the first aspect we discussed above, asset ownership will be standardized so that the economic and legal status of enterprise can be changed and they can be directed to serve the market. In terms of the second aspect, the relationship between planning and market will be specified, and some rules on the relationship among government, market, and enterprise will be set up so that government and market can fully function during resource allocation. As for the third aspect, the most important task is to clarify government functions and set up certain rules for the government to adhere to as the asset owner and the regulator of the economy. In summary, if we start establishing the order of the commodity

economy while under the dual-track economic system, it is unlikely for us to complete the task during the same period, but it is conducive to accelerating the transition from the dual-track economic system to the new economic system.

9.1.3 The Relationship Between Order Establishment in the Socialist Commodity Economy and Institutional Innovation

The establishment of any economic order calls for the consolidation of a set of principles via institutions. The form of institutions reflects economic order. The institutions hereby mentioned are discussed in a broad sense. They include not only the mechanisms that are established by the legislature but also certain norms that were established by culture and tradition. The establishment of a new economic order means the termination of an old economic order. A new economic order is represented by new institutions. Therefore, the replacement of the old economic order by a new one is the replacement of old institutions by new ones. We have every reason to believe that the establishment of the order of the socialist commodity economy can be called a series of institutional innovations.

Institutional innovation is the transition from the old institutions to the new institutions. The order of the product economy, which is compatible with the product economy, is represented by a series of traditional institutions. We can use the relationship between government, market, and enterprises to illustrate the features of the traditional institutions under the order of the product economy.

(a) The Relationship Between Government and Enterprises

To meet the needs of the product economy, the government supervised enterprises. Enterprises were controlled by the government in terms of staff, capital, and assets and became the affiliated entities of various government institutions. Enterprises had no rights to make business decisions, let alone take responsibility for profits and losses. All of these have been consolidated by relevant institutions.

(b) The Relationship Between Enterprises and Market

In the product economy, the market was not only limited in terms of coverage but also unauthentic in terms of nature. Business transactions between enterprises were conducted outside the market. Even though some business transactions were conducted inside the market, the real market did not exist as transaction counterparties lacked other alternatives. All of these are also reflected by the various institutions established during the time of the product economy.

(c) The Relationship Between Government and Market

This relationship has also clearly demonstrated that the market was controlled by the government, as has been confirmed by various institutions applied in the product economy. The government dominated the market. Not only that, but the government also directly controlled and manipulated the market as a complete monopoly. The government obtained all the resources it needed not only from various sources outside the market but also from the market that is under its control.

This is the order of the product economy validated by its institutions. Although the institutions that established the order of the product economy came into being on a gradual basis, some introduced as laws and some not as laws, they had guaranteed that the economy could run in a proper manner in the product economy. Currently, if we wish to establish the order of the socialist commodity economy, the very action we need to take is to replace the traditional institutions with new ones. Whether it is about the relationship between government and enterprises, or between enterprises and market, or between government and market, we need new institutions to reflect the order of the commodity economy compatible with the system of the commodity economy. Without these institutional innovations, the establishment of the order of the commodity economy would be no more than empty talk. Therefore, it could be said that the establishment of the order of the commodity economy is no other than institutional innovation that reflects the establishment

of such a new economic order.

9.1.4 Difficulties in Establishing the Order of the Socialist Commodity Economy

The transition from old institutions to new ones has always been difficult. This is because institutions represent the special interest of a group, a class, or a stratum. The transition of institutions is the transition and reallocation of interests. Even though old institutions may have been outdated for a long time, they will not disappear; new institutions may be able to raise productivity, but the birth of new institutions will encounter many difficulties. All of these are linked to adjusting and reallocating interests. Of course, people may ask this question: Take China as an example, why was it relatively easy to establish the product economy and the economic order compatible with the system in the 1950s, while it was fairly difficult to establish the commodity economy and the corresponding economic order in the 1980s? Since the establishment of a new economic order is in fact a series of institutional innovations, why was the institutional innovation in the 1950s easier than in the 1980s? This is a very interesting question. We have to admit that there are some other reasons, besides the important roles of the adjustment and reallocation of interests that we just discussed.

Next, we will compare the transition of the economic order and the change of institutions during the 1950s and 1980s from five different perspectives:

First of all, China completed the transition from an extremely underdeveloped commodity economy to the product economy during the 1950s.

Because the commodity economy was extremely underdeveloped, it was much easier to transform from the commodity economy to the product economy and establish the corresponding economic order. On the contrary, the Chinese economy transformed from a highly developed product economy to the commodity economy in the 1980s.

Because the product economy had been well developed, it was more difficult for the economy to complete its transition into the commodity economy and establish the economic order.

Secondly, the transition from the commodity economy to the product economy during the 1950s had mainly relied upon administrative orders.

History has demonstrated that a series of policies initiated from the top and executed by each level of government institutions in the 1950s, including centralized purchases and sales of goods in rural areas and centralized rationing of goods in urban areas, managed to establish the order of the product economy within a fairly short period of time. When the product economy started its transition to the commodity economy in the 1980s, the central government was no longer able to enforce from top-down similar policies that distorted the balance among production, distribution, and sales. In addition, it must allow enterprises and rural producers to develop a self-control mechanism and pursue self-growth in the marketplace and straighten out various economic relations during the natural evolvement of markets. As a result, it was a slow and natural process going from the dissolution of the order of the product economy to the establishment of the order of the commodity economy.

Thirdly, the product economy has an obvious feature compared with the commodity economy, i.e., the existence of various rigidities.

Keep in mind that because the market under the commodity economy is fully developed or almost fully developed, not only price is elastic, so are wage, interest, rent, and employment. Meanwhile, the status of enterprises as well as their management positions are also flexible and can be changed if necessary. The elasticity or flexibility energizes economic activities in the commodity economy. The product economy, however, was drastically different. In the product economy, price was rigid, so were wage, interest, rent, and employment. Moreover, the status of enterprises and their management positions were not flexible. Once an enterprise was established, it would go on

almost forever. Even though it was unprofitable and unable to cover operating expenses, it could still go on unless its administrative institution decided to shut it down. Despite being shut down, enterprise management and permanent employees would not lose their jobs, and their salaries would not be cut either. The management would likely be assigned to similar positions elsewhere, and workers would likely be relocated to another place. This particular type of rigidity, compared to all other types of rigidities, is the one that is most unlikely to energize the economy, which can be termed "enterprise rigidity." It is because of the various rigidities in the product economy, especially "enterprise rigidity," that have caused many problems during the transition from the product economy to the commodity economy. The institutional innovation in this regard was much more difficult than that during the transition from the commodity economy to the product economy.

Fourthly, if we compare the net interest before and after institutional innovations, we can see that they are very different when the commodity economy transitioned to the product economy versus when the product economy transitioned to the commodity economy.

The net interest we are talking about refers to the total benefit net of related costs. Keep in mind that in initiating any institutional innovation, the initiator and undertaker (who can be an individual, a group, or government) of such institutional innovation will always expect the net interest to be greater than zero. Otherwise, it will not be necessary to perform the institutional innovation. But the question is: What are the criteria for the measurement of net interest from an institutional innovation, how can it be calculated, and most importantly, who is the recipient of net interest? When the commodity economy was transformed into the product economy during the 1950s, it was the government who initiated and undertook the institutional innovation. No one else was able to do that. The government must have believed that net interest was obviously larger than zero and that it would receive all net interest. The government

could utilize all resources available to do whatever it wanted to do. When the product economy was transformed into the commodity economy during the 1980s, the government was still the primary entity that initiated and undertook the institutional innovation. In other words, it assumed the leadership role, among all entities, to initiate and undertake the institutional innovation. However, how large was the net interest of the institutional innovation? Who received the net interest? Could the government obtain resources from the net interest and use them to develop various projects? The answers to all these questions are not clear. We can draw a conclusion only by taking a look at the process of the institutional innovation as well as the actual situations during the establishment of the order of the commodity economy. Thus, the government who initiated and undertook the institutional innovation was not as decisive and resolute in developing policies during the transformation of the product economy to the commodity economy as in deciding to break away from the commodity economy and establish the product economy. We can expect the government to have hesitant moments during a certain period of time.

Fifthly, for all other entities who initiated and undertook institutional innovation (except the government), their roles in and attitudes toward an institutional innovation were quite different when the commodity economy was transformed into the product economy compared with when the product economy was transformed into the commodity economy.

When the commodity economy was transformed into the product economy, the government was the true sponsoring entity of the institutional innovation, and the other entities did not actually exist, or the other entities (such as enterprises and individuals) simply listed their names as initiators and undertakers of the institutional innovation while as a matter of fact they did not act as initiators or undertakers at all. Therefore, when the commodity economy was transformed into the product economy, the relationship among all

these entities that participated in the institutional innovation was simple—the government called the shots. All the other entities, except the government, did not act as sponsors and thus had no say in institutional innovation decisionmaking or implementation. However, when the product economy was transformed into the commodity economy, the government, despite being the primary entity of the institutional innovation, was no longer the only sponsoring entity. All these entities worked with the government to initiate and implement the institutional innovation. Hence, the relationship between the government and all other entities was much more complicated. This is because some of a series of rules that constituted the order of the commodity economy were proposed and implemented by enterprises and individuals who participated in market activities, and in the meantime, normal market activities also relied upon various agreements or contracts between these enterprises and individuals. In other words, every enterprise or individual who participated in market activities is a proactive factor that contributed to the establishment of the commodity economy, contrary to the product economy in which they were simply passive entities. Since the establishment of the commodity economy and its economic order was the result of voluntary actions taken by all entities participating in the institutional innovation, including government, enterprise, and individual, it was impossible for these entities to have no conflicts or differences at all. Therefore, to some degree, this sheds some light on why the process of establishing the commodity economy was not as smooth as that of establishing the product economy.

These analyses fully demonstrate that the task of establishing the commodity economy and the economic order compatible with the commodity economy in a highly developed product economy will be difficult and requires a relatively long time to accomplish the goal. However, as long as the economy is on its way of transition from the product economy into the commodity economy, the trend will be irreversible and the institutional innovation cannot be stopped. The

current challenge for our economists is not to study the necessity of institutional innovation, but mainly to analyze how to minimize the difficulties involved in institutional innovation so that a new economic system and economic order can be established relatively smoothly.

壹 社会主义商品经济秩序建立的必要性和困难

一、社会主义商品经济秩序的含义

根据本书第一章所述，社会主义经济体制可以分为传统经济体制、双轨经济体制和新经济体制三种类型。在这三类经济体制中，传统经济体制是产品经济体制，这种体制之下所形成的经济秩序是产品经济秩序；双轨经济体制是新旧经济体制的交叉、并存的过渡状态，这时，产品经济秩序仍然在某种程度上被维持着，而与新经济体制相适应的商品经济秩序则尚未完全建立，或者说，只是处于产生的过程中；而通过经济体制改革以后所建立的新经济体制，将是社会主义商品经济体制，同它相适应的经济秩序是社会主义商品经济秩序。

经济秩序是指人们在经济活动中所遵循的一定的规则。经济秩序建立了，人们都按照这些规则来行动，就可以避免出现经济中的混乱。即使经济中出现了各种各样的矛盾，人们也能够按照既定的规则来加以协调，作出处理。反之，如果经济缺乏秩序，经济活动是不规范的，社会各阶层的成员都对经济活动的前景失去信心，人人都感觉到自己是在一个极不确定的环境中进行活动，感觉到预期的利益、甚至财产本身没有保障，于是必定会出现行为的短期化。这不仅是指企业行为的短期化，而且包括个人行为的短期化、政府行为的短期化、社会行为的短期化。在缺乏经济秩序的情况下，经济的混乱，以至社会的动荡不安，都难以避免。

从这个意义上说，任何社会，任何时代，要使人们的经济活动正常化，都需要有一定的经济秩序作为人们行动的规范。哪怕是不利于经济发展的产品经济秩序，也比没有任何经济秩序的情况要好。换言之，经济生活中最使人们苦恼的，是无章可循，无规则可依；由于无章可循，无规则可依，人们在经济活动中没有稳定的预期，这样，人们甚至希望有任何一种经济秩序，哪怕是很不理想的经济秩序，因为这毕竟优于无经济秩序。

当前，处于双轨经济体制之下的我国经济，虽然不是毫无经济秩序可依，但实际生活中存在的，却是不完全的产品经济秩序和刚刚处于产

生过程中的商品经济秩序。双轨经济体制与两种经济秩序（其中一种是过时的，但尚未退出经济领域，一种是与商品经济发展相适应的，但刚开始建立）的存在，不仅很不正常，而且对经济有害。“滞”、“胀”、“滞胀”以及资源配置的失调等等，都可以从这里找到部分的解释。因此，摆在我们面前的一项重要任务就是尽快建立适应商品经济发展的、适应即将建立的新经济体制的一套经济行为的规则，即建立社会主义商品经济秩序。

二、社会主义商品经济秩序与经济改革的深化

社会主义商品经济秩序之所以有建立的必要性，不仅在于这将使人们在经济活动中有章可循，有规则可依，从而避免因缺乏稳定的预期而导致的经济行为短期化，而且在于这是深化经济改革，也就是促进由双轨经济体制向新经济体制的转变所不可缺少的。

我们所要建立的新经济体制，是一个以自主经营、自负盈亏的企业作为微观经济单位的经济体制。商品经济秩序显然适应着这样的新经济体制。在新经济体制确立之后，存在于经济生活中并发挥作用的只可能是商品经济秩序。关于这一点，是不会引起疑问的。但在这里应当指出，当前之所以强调建立商品经济秩序，并不仅仅是为了同今后的新经济体制相适应，同样重要的是为了通过商品经济秩序的逐渐建立而加速由双轨经济体制向新经济体制的转变，使产品经济体制以及与之相适应的产品经济秩序较快地退出经济领域。这就是说，商品经济秩序的建立具有一定的超前性，通过一系列规则的建立可以加速市场的发育，加速企业的自我成长、自我约束的机制的形成。

正如我们已经了解的，在传统经济体制之下，经济处于非均衡状态；在双轨经济体制之下，经济也处于非均衡状态；即使在建立新经济体制之后，只要资源供给约束继续存在，那么这只表明经济的非均衡程度有所减轻，但经济的非均衡状态并未消失。在非均衡条件下，要让经济较顺利地由双轨经济体制过渡到新经济体制，至少要在以下三个方面深化经济改革。这三个方面是：第一，使企业改革深化，把尚未摆脱行政机构附属物地位的企业改造为自主经营、自负盈亏的商品生产者；第二，使计划体制改革深化，以便较好地实现商品市场的配额均衡；第三，使政府职能有较大的转变，包括使政府作为资产所有者的职能同政府作为经济管理者的职能分离，并且使政府的经济管理逐步转向运用经

济调节手段的管理。

建立商品经济秩序主要从这些方面来深化经济改革，促进由双轨经济体制向新经济体制转变。就上述第一个方面来说，使产权规范化，将改变企业的经济和法律地位，使企业转向为市场生产。在上述第二个方面，明确计划与市场之间的关系和确立政府、市场、企业三者之间关系的若干规则，就有可能使政府与市场在资源配置中的作用都得到比较充分的发挥。而在上述第三个方面，主要是明确政府的职能，为政府作为资产所有者和作为经济管理者的行为建立一定的规范。总之，在双轨经济体制时期就着手建立商品经济秩序，尽管不可能在这一时期内就使这一任务完成，但这对于早日从双轨经济体制过渡到新经济体制是有积极意义的。

三、社会主义商品经济秩序的建立与制度创新的关系

任何经济秩序的建立都需要用制度形式把一定的原则巩固下来。经济秩序体现在制度的成式上。这里所说的制度，有着较广泛的意义，即不仅包括国家立法所确立的制度，也包括民间约定俗成的若干规范。新的经济秩序的建立，意味着旧的经济秩序的消亡。新的经济秩序用一套新的制度来表现自己，因此，新的经济秩序对旧的经济秩序的代替，就是新的制度对旧的制度的代替。我们完全有理由把社会主义商品经济秩序的建立称作一系列制度创新。

制度创新是新旧制度的更替。同产品经济体制相适应的产品经济秩序是体现在一系列传统的制度之上的。我们不妨从政府、市场、企业三者之间的关系来说明这种体现着产品经济秩序的传统制度的特征：

1．政府与企业之间的关系。为了适应产品经济体制的要求，政府是企业的主管者。企业在人、财、物各方面都受政府支配，成为政府所属各个机构的附属物。企业没有自主经营权，更谈不上自负盈亏了。这一切都由一定的制度巩固下来。

2．企业与市场之间的关系。在产品经济体制之下，不仅市场的范围极其有限，而且市场从性质上看也不是本来意义上的市场。企业与企业之间的经济活动，或者不通过市场进行，或者，即使通过市场进行，由于交易双方都缺乏可供选择的机会，所以市场是名不副实的。这些也体现在产品经济体制时期所建立的各种制度之上。

3．政府与市场之间的关系。这种关系同样清晰地表明了在产品经

济体制之下采用制度形式所巩固下来的市场从属于政府的关系。政府是市场的主宰者，这还不够，政府还以高度垄断者的身份直接操纵着市场，支配着市场。政府不仅从市场以外的各个方面获得了它所需要的资源，而且也从它所操纵、支配的市场中取走了它所需要的资源。

这就是用制度巩固下来的产品经济秩序。尽管这些用来确定产品经济秩序的制度是逐渐形成的，并且有些以法律形式出现，有些并不以法律形式出现，但它们足以保证产品经济体制下的经济按照一定的方式运转。当前，要建立社会主义商品经济秩序，正是需要通过制度的更替，用新的制度来置换传统的制度。无论在政府与企业的关系上，在企业与市场的关系上，还是在政府与市场的关系上，都需要有新的制度来体现与商品经济体制相适应的商品经济秩序。如果没有这种制度创新，商品经济秩序的建立无非是一句空话。因此，可以这样说，商品经济秩序的建立与体现着这种新秩序的建立的制度创新是同一回事。

四、社会主义商品经济秩序建立的困难

新旧制度的变更从来都是艰难的。这是因为，任何一种制度都代表着一定集团、一定阶级或阶层的利益，制度的变更过程同时也就是利益的调整过程和利益的再分配过程。旧制度虽然早已不合时宜，但却迟迟没有消失；新制度尽管符合生产力发展的要求，但它的产生却困难重重，这些全部与利益的调整和利益的再分配有关。当然，人们也许会提出一个疑问：比如说，以我国的情况来看，当初，50年代初期，为什么产品经济体制以及与此相适应的产品经济秩序的建立比较顺利，比较容易，而80年代内，为什么商品经济体制以及与此相适应的商品经济秩序的建立却那么困难呢？既然建立一种经济秩序就是一种制度创新，为什么50年代内的制度创新同80年代内的制度创新相比，难易程度会很不一样呢？这是很有意思的问题，应当承认，除了前面已经提到的利益调整和利益再分配因素起着重要作用以外，这里还有另外的原因。

下面，准备从五个不同的角度对50年代内和80年代内经济秩序的变更和制度的更替问题进行比较：

第一，50年代内，我国是从当时很不发达的商品经济体制转入产品经济体制的。

正是由于商品经济很不发达，因此当时转入产品经济体制和建立产品经济秩序要容易些。而80年代内，我国则是从高度发达的产品经济体

制转入商品经济体制的，正因为产品经济已高度发达，因此转入商品经济体制和建立商品经济秩序相形之下要困难得多。

第二，50年代内，从商品经济体制转入产品经济体制主要有赖于行政力量的运用。

历史表明，50年代内，主要依靠政府自上而下地推行一系列旨在实行产品经济体制的政策（如农村的统购统销，城市的物资统配等），使产品经济秩序得以迅速建立。而在80年代，当经济从产品经济体制向商品经济体制过渡时，不仅不能再依靠政府自上而下地推行类似的扭曲产供销关系的政策，而且必须让企业和农村的生产者在市场中有自我发展、自我制约的可能性，必须让市场在自然发育过程中理顺各种经济关系，这样，从产品经济秩序消失到商品经济秩序的建立只可能是一个缓慢的、自然发展的过程。

第三，与商品经济体制相比，产品经济体制具有一个明显的特点，即经济中存在着各种刚性。

要知道，在商品经济体制之下，由于存在着完善的或接近完善的市场，不仅价格是有弹性的，从而工资、利息、租金、就业是有弹性的，并且企业本身的地位和企业领导人的职务也是灵活的、可变的。这些弹性或灵活性、可变性使商品经济体制之下的经济活动具有充分活力。然而产品经济体制与此截然不同。在产品经济体制之下，价格是刚性的，从而工资、利息、租金、就业也具有刚性。不仅如此，企业本身的地位和企业领导人的职务也都没有灵活性。企业一经建立，几乎就注定要永久存在。即使是亏损的、入不敷出的企业，除非主管部门让它关闭，否则它将一直照常经营下去。而且，即使它被主管部门下令关闭了，从企业领导人直到固定工的职务仍被保留着，收入也不可能减少，企业领导人可能是易地做官，工人则可能易厂劳动。这种刚性是一切刚性中最难以使经济具有活力的刚性，我们不妨称之为“企业刚性”。正由于产品经济体制之下存在着种种刚性，尤其是这种“企业刚性”，所以从产品经济体制转入商品经济体制的道路绝不是顺畅的。这一制度创新所遇到的阻力要比从商品经济体制转入产品经济体制大得多。

第四，从制度变更前后纯利益的对比来看，由商品经济体制转入产品经济体制同由产品经济体制转入商品经济体制是不一样的。

这时所说的纯利益，是指收益减去成本之后的余额。要知道，在进行任何一种制度创新时，倡议这种制度创新和从事这种制度创新的主体

（这里可以指个人或团体，也可以指政府）总是考虑到预期纯利益将大于零，否则就会认为不必进行这种制度创新。但问题在于：制度创新的纯利益用什么标准来衡量，如何计算，特别重要的是，这些纯利益归于谁。50年代内，当经济从商品经济体制转入产品经济体制时，倡议并从事这一制度创新的主体就是政府，并且只可能是政府，它认为预期纯利益显然大于零，而且纯利益是归于政府的，政府可以利用所得到的资源从事自己所希望从事的各种事业。80年代内，当经济从产品经济体制转入商品经济体制时，政府仍然是倡议并从事这一制度创新的主体，或者说，在倡议并从事这一制度创新的各个主体中，政府居于首要位置。然而，这一制度创新的纯利益究竟有多大，纯利益究竟主要归于谁，政府能否通过这一纯利益的获得而掌握可以用于各种事业的资源，这些都是不确定的。只有根据制度创新本身的进程和商品经济秩序建立过程中的实际情况，才能对这些作出判断。这样，对于倡议并从事这一制度创新的政府来说，在有关走出产品经济体制和进入商品经济体制的政策选择中，必然不像当初摆脱商品经济体制和建立产品经济体制时那样果断，那样敢于决策。政府的迟疑、犹豫在一段时间内可能是难免的。

第五，再以倡议并从事制度创新的其他主体（即政府以外的主体）来说，在商品经济体制转入产品经济体制时的情况下与产品经济体制转入商品经济体制时的情况下，政府以外的其他主体所起的作用以及它们对待制度创新的态度是很不一样的。

在商品经济体制转入产品经济体制时，只有政府是制度创新的真正的主体，其他主体实际上并不存在，或者，其他主体（如企业与个人）只是挂了个制度创新的倡议者或从事者的名义，实际上丝毫不起主体的作用。于是在商品经济体制转入产品经济体制时，制度创新主体之间的关系是简单的，一切听命于政府这个主体，其他主体由于不起主体的作用，当然也就影响不了制度创新的决策与推行了。但在产品经济体制转入商品经济体制时，虽然政府依然是主要的制度创新主体，但它已经不是惟一的主体了，政府以外的其他主体同样起着倡议制度创新和从事制度创新的作用，于是政府同其他主体之间的关系变得复杂多了。这是因为，在构成商品经济秩序的一系列规则中，有些是依靠参加市场活动的企业和个人提出和实行的，市场活动的正常化也依靠企业和个人之间达成各种协议，订立各种合同来实现。也就是说，参加市场活动的每一个企业和每一个个人都是建立商品经济体制的积极因素，而不像在建立产

品经济体制时它们只是被动的一方。既然商品经济体制的建立、从而商品经济新秩序的建立是包括政府、企业、个人都在内的所有的制度创新主体的自觉行动，因此这些主体之间的冲突与不协调也就是难免的。商品经济秩序建立过程之所以不像产品经济秩序建立过程那样顺畅，由此也可以得到一些解释。

以上所分析的这些充分说明，在产品经济高度发达的情况下，要建立商品经济体制以及与之相适应的商品经济秩序，任务是艰巨的，时间也必定是较长的。但只要走上了从产品经济体制转变为商品经济体制的道路，经济的这一前进趋势就已经难以逆转，这一制度创新也已经势不可挡。摆在我国经济学界面前的课题已经不仅仅是论证这一制度创新的必要，而主要是分析如何才能减少制度创新中的困难，使新的经济体制、新的经济秩序的建立较为顺利。

9.2 INTEREST ADJUSTMENT DURING THE PROCESS OF ESTABLISHING THE ORDER OF THE COMMODITY ECONOMY

9.2.1 The Expected Net Interest of Various Institutional Innovation Sponsors

In the previous section, we discussed that when the order of the commodity economy was established, different institutional innovation sponsors assessed their own net interest and came up with their own estimate of net interest they could receive from the institutional innovation so that they could decide on how to participate in the institutional innovation. Now we will be looking at institutional innovation from a different perspective—that of three types of entities: government, enterprise, and individual.

1. The Government Acting as an Institutional Innovation Sponsor During the Process of Establishing the Order of the Commodity Economy

During the transition from the product economy to the commodity economy, we need to establish the order of the commodity economy, which includes specifying property rights, setting out transaction rules and regulations for various markets, clarifying the roles of various economic departments of the government, and institutionalizing and standardizing government behavior. After the new economic order is established, the government will be highly capable and efficient. It will no longer directly manage enterprises. Instead, it will regulate the market via economic adjustment measures and use laws, regulations, and policies to maintain normal operations in the marketplace. This is drastically different from the roles of the government in the product economy and the net interest that the

government received from the order of the product economy.

In the product economy, the government could obtain as many resources as possible by all means and control the maximum amount of resources provided by society during each period in history. The net interest that the government receives after the commodity economy is established is certainly lower. With property rights clarified and enterprises retaining a portion of their income, the government can only impose taxes as the regulator and receive its own share of income as an investor. The government cannot obtain all the resources it wants by fiscal means or by printing money. Establishing the order of the commodity economy, in a sense, serves as a sort of restriction over the approaches that the government can use to obtain resources as well as over its share of resources. As discussed above, the government, as an institutional innovation sponsor, was sometimes hesitant and indecisive, due to lower expected net interest from the institutional innovation.

But there is another side of the story. If the government had ever been hesitant, such hesitation would have been unnecessary. From the dynamic perspective, the government's expected net interest would not decrease, but instead increase if the commodity economy were established. This is because the development of the commodity economy and the new economic order will energize the market and generate significant growth in enterprise and personal income. As a result, we expect the government to gain higher tax revenues as the regulator and higher investment income as an investor. The comment that expected net interest of the government would decrease is merely based on a static interpretation of the decrease in the government's share of total revenues. The upward trend in total revenues is neglected.

We should not consider the restrictions over the approaches that the government adopts to obtain resources and the share of resources obtained after the order of the commodity economy is established a bad thing detrimental to the government. Unrestricted utilization of

resources by the government may allow resources to be allocated to inappropriate areas and lead to low efficiency, zero efficiency, or even negative efficiency. On the other hand, it may impede market activities and discourage enterprises and individuals from participating in market activities. In addition, if government behavior (including obtaining resources) were not restricted, the government itself and its officials might be corrupted.

2. Enterprise Acting as an Institutional Innovation Sponsor During the Process of Establishing the Order of the Commodity Economy

What does the order of the commodity economy really mean to enterprises? Basically, it means two things: One, property rights will be normalized; two, transactional activities will be market-oriented and contract-based. As one of the institutional innovation sponsors that establish the order of the commodity economy, enterprise expects its net interest to be greater than zero. The expected positive net interest derives from the abovementioned two aspects.

After property rights are normalized, investors of an enterprise (including a state-owned enterprise) will become the owner of its assets. The portion of investment made by the state shall be owned by various asset supervisory institutions of the state, whereas the portion of investment made by the enterprise itself shall be owned by such institutions as enterprise foundation. The management of an enterprise has the right to manage its assets. As a result, all enterprises will become goods producers who make their own business decisions and are responsible for their profits and losses. An enterprise is a legal entity and all enterprises are legally equal. The relationship between an enterprise and the government that invested in the enterprise is one between an investee and an investor. The relationship between an enterprise and the government as the regulator is that the enterprise must abide by the law and pay taxes in accordance with relevant rules and regulations. Enterprises' expected net interest will increase in three ways: First, enterprises only pay taxes pursuant to relevant rules and regulations. They are no longer liable for other obligations such as

fees, contributions, or allocated charges, nor do they accept any assignment from their administrative institutions. Second, enterprises can take advantage of its capital accumulation and allow assets to appreciate and income to grow. Third, enterprises can take advantage of their accumulated capital to set up business alliance with other enterprises, participate in equity ownership in other enterprises, and establish conglomerates. In summary, normalizing property rights will definitely increase enterprises' net interest.

For every enterprise, market-oriented and contract-based transactional activities are critical to ensuring the steady growth of revenues. In terms of production and sales activities, enterprises will always react to expected prices, expected profitability, and expected interest rate. Without market transactions, contractual protection, and equitable solutions to transactional disputes, enterprises will not maintain stable expectations, which may cause corporate shortsightedness, and in the meantime transaction cost will also increase, lowering enterprises' real income. It is for this reason that enterprises, as institutional innovation sponsors that establish the order of the commodity economy, will proactively participate in institutional innovation activities to execute market-oriented and contract-based transactions, as they are closely related to raising their expected net interest.

Therefore, we can reach this conclusion: If enterprises were neither able to make their own business decisions nor to take responsibility for their profits and losses in the product economy, no institutional innovation at that time could bring higher expected net interest to enterprises, and enterprises were destined to be passive in an institutional innovation. On the contrary, after the product economy is transformed into the commodity economy, enterprises, in anticipation of higher net interest, will propose and endorse any institutional innovation that normalizes property rights and supports market-oriented and contract-based transactions. The reason is obvious and self-explanatory.

3. Individual Acting as an Institutional Innovation Sponsor During the Process of Establishing the Order of the Commodity Economy

As one of the institutional innovation sponsors during the process of establishing the order of the commodity economy, individual functions in the following three ways:

First of all, as workers, individuals are obviously directly related to establishing the order in the labor market, and the development of market-oriented and contract-based activities in the labor market also influences the expected net interest of every member of the labor force. Therefore, individuals or any group that represents workers will not only actively support the establishment of the order of the labor market and the institutional innovation in this regard, but also make significant contributions to substantiating the new economic order.

Secondly, individuals are suppliers of capital, or savers, who are directly related to establishing the order of the capital market. What concerns people most is the absence of the protection of interest income or even principal after funds are transferred. Individuals are also afraid of fraudulence or breach of contracts in the capital market. Should these incidents happen, people would no longer be willing to offer their money as capital. Therefore, the progress of market-oriented and contract-based activities in the capital market influences everyone's expected net interest. Individuals request that certain institutional innovations in the capital market and the new economic order be established. They function as the originator and supporter of the institutional innovation.

Thirdly, individuals buy goods. As consumers, they are also directly related to the order of the commodity market. Because of the varying degrees of resource supply and demand constraints under disequilibrium conditions, we can often see either shortages or excess of commodities. Especially in the circumstance of commodity shortages, individual consumers may worry about declining product quality and higher prices, and meanwhile, they are also concerned about monopolies in the market, all of which will hurt consumers.

Therefore, as commodity buyers, individuals require that the institutional innovation and the new order in the commodity market be established to minimize losses and bring about higher expected net interest. Individuals actively call for and support the institutional innovation in the commodity market and become an important force that drives market-oriented and contract-based activities in the commodity market.

We can imagine that people's economic requests were suppressed or at least not taken seriously in the product economy. If there were any institutional change in the product economy, which served to consolidate the order of the product economy, individuals would be completely passive. Even though they clearly knew that an institutional change would infringe upon their real net interest or expected net interest, they could do nothing. Only when the product economy started to transform to the commodity economy will it be possible for individuals to actively participate in the institutional innovation to increase their expected net interest.

9.2.2 Conflict of Expected Net Interest Among Different Institutional Innovation Sponsors

Government, enterprise, and individual are institutional innovation entities during the process of establishing the order of the commodity economy. Each of these entities can use institutional innovation to increase their expected net interest. Generally speaking, the interests of government, enterprise, and individual are aligned. This statement has two implications: First, as long as the commodity economy grows and productivity increases, gross domestic product will increase. Even though government, enterprise, and individual keep their respective shares of total national income flat, their total interests will be higher. On the other hand, the interests of government, enterprise, and individual are coexistent and codependent. Should the interests of any one of them be hurt, the other two entities would not benefit in the long run. Many real cases

in economic activities have demonstrated that the interests of these entities are aligned as stated. It is the alignment of the interests that drives government, enterprise, and individual to actively pursue the order of the commodity economy and to proactively propose, support, and execute institutional innovation during the process of establishing the order of the commodity economy.

However, we have to admit that government, enterprise, and individual are different entities in the institutional innovation during the establishment of the order of the commodity economy. Hence, their expected net interest will conflict with each other. For example, as the fiscal relationship and government functions are clearly defined, a series of rules applicable to industrial and commercial administration, price, wage, tax, and auditing will be introduced, which will impose certain constraints on the behavior of each of them. Government, enterprise, and individual must follow the order of the commodity economy to estimate their expected net interest. They cannot fall back on the old order of the product economy. The expected net interest under the old economic order will differ from the one under the new economic order in amount, which brings about changes to expected net interest and results in interest reallocation among various groups of society. Here is another example: When the economic order is established in the capital, labor, and commodity market, enterprise can be the supplier, and individual can be the buyer in a certain market, or it can be exactly the opposite, with enterprise being the buyer and individual being the supplier. If it were under equilibrium conditions where every market had equilibrium prices, the market price were the equilibrium price, transactions were concluded only at the equilibrium price, and demand equaled supply, both suppliers and buyers would be able to realize their expected net interest, and the conflict of interest would not be very obvious or could even disappear. However, this is not the case in real life. Despite the establishment of the order of the commodity economy after the transition to the commodity economy is completed, the economy may

still be in the state of disequilibrium, and the equilibrium price may actually be nonexistent in the market as long as there are resource supply or demand constraints. As a result, it is inevitable to see conflicts of expected net interest between enterprise and individual that function as the supplier and buyer in the marketplace. The establishment of the order of the commodity economy can only prevent any conflict of interest between suppliers and buyers from escalating, some nonmarket factors from excessively interfering with the interests of suppliers and buyers, and non-market-based transactions from causing excessive damage to the interests of suppliers or buyers, but it will not completely eliminate the conflict of interest between them. Under disequilibrium conditions, even if property rights are clearly specified, all transactions are market-oriented and contract-based, and every market participant (enterprise or individual) is able to make its own business decisions and is constrained by its self-interest, there will be occasional commodity shortages or surpluses causing conflict of expected net interest between enterprise and individual. This will happen regardless of whether institutional innovation sponsors like it or not.

9.2.3 Conflict of Interest Between Various Types of Rigidity in the Economy and Institutional Innovation Sponsors

In our discussions on the difficulties of the transition from the product economy to the commodity economy, we have mentioned that "enterprise rigidity," together with some other types of rigidity under the product economy, such as wage rigidity, employment rigidity, and benefit rigidity, had made it very difficult for the economy to make the transition. To some extent, this is related to the conflict of interest between institutional innovation sponsors during the process of establishing the order of the commodity economy.

From the perspective of an individual who is a member of the labor force, a market-oriented and contract-based labor market meets the need of developing the commodity economy as well as his or her

personal interest. On the other hand, because of the establishment of some new economic systems, e.g., enterprise employment system has been reformed and permanent employment has been abolished. Thus, enterprises are granted the rights to lay off or terminate their employees, and some workers' income will be lower compared to the past, thus widening income gaps among workers. Those workers who see their income rising at a lowered rate will be disappointed, and they may become a new obstacle to the institutional innovation in the labor market.

The problems do not end here. When the enterprise employment system is reformed, permanent employment is abolished, and layoff or termination is allowed, some workers will become unemployed in some circumstances, and conflict of interest between enterprises and workers will arise. Enterprises hope to eliminate unreasonable wage rigidity and employment rigidity by means of a series of institutional innovations. But workers (at least permanently employed workers) will normally try to maintain some wage rigidity and employment rigidity, which is reflected by a commonly known phrase: "Old rules apply to old people and new rules apply to new people." This is another obstacle to the institutional innovation in the labor market. It is reflective of the conflict of interest not only between enterprises and workers but also among different groups of workers.

Let us take another look at the conflict of interest among enterprise, government, and individual during the innovation of tax institutions. This will also help illustrate the conflict among these different institutional innovation sponsors. To establish the order of the commodity economy, it is necessary to normalize taxation so that taxes are both reasonable and standardized, clearly specified in laws and regulations, and can be checked and monitored more easily. In this sense, the interests of government, enterprise, and individual are aligned. However, the attitudes toward the types of taxes, the level of tax rates, and penalties for tax evasion, tax omission, or late tax payment vary among government, enterprise, and individual. If we

say that there are disagreements among these institutional innovation sponsors, these disagreements can be considered conflict of interest. We can take the analysis one step further by dividing the government into the central government and local governments; the separation of taxes collected by the central government and local governments as well as the allocation of some taxes between them reflect conflict of interest, as the central government and local governments are different institutional innovation sponsors, despite the fact that both of them support the reform of the tax system and the establishment of a new tax system to promote economic development and ensure growth in fiscal revenues.

As a matter of fact, conflict of interest during the innovation of tax institutions is related to the abovementioned "enterprise rigidity" as well as other relevant types of rigidity. Generally speaking, enterprises wish to do business under the commodity economy, and that they can make their own business decisions and take responsibility for their profits and losses gives them hope for a bright future. However, many enterprises are still unable to forget the product economy in which they are not held responsible for any loss, especially when they are under pressures from market competition. They feel that the old way in which the government took care of everything and eliminated the danger of bankruptcy may not be too bad after all. In the old way, enterprises did not care about what types of taxes the government levied or how high tax rates were. The conflict of interest in terms of taxes had been minimized. If enterprises are responsible for their own profits and losses and are subject to shutdown or bankruptcy risks in a new economic environment, they will surely try to minimize taxes and fight for tax benefits in order to make up for any loss arising from the termination of the "enterprise rigidity." This is a clear conflict of interest between enterprise and government during the tax reform. In addition, as taxpayers, individuals will also consider their benefits from the "enterprise rigidity" and some of the other relevant types of rigidity. In the

product economy with different types of rigidity, individuals paid almost zero taxes. Hence, there were no conflict of interest between government and individual in terms of direct taxes. When the economy completes the transition from the product economy to the commodity economy and the "enterprise rigidity" and some other relevant types of rigidity start to disappear, it is easy for people to understand that individuals begin to be sensitive about taxes, especially direct taxes. They start to feel uncertain about living necessities, for enterprises are susceptible to shutdown or bankruptcy; salaries can be suspended, discounted, or changed; employment is no longer stable; and benefits can be impacted. In such an environment, if direct taxes or some relevant measures are adopted, such as the requirement to file personal income tax and register personal properties, people may feel highly uncertain about the security of daily living, despite a relatively high minimum income required to file taxes. As a result, conflict of interest between government and individuals during the tax reform will be exposed.

In addition, we can also see conflict of interest between institutional innovation sponsors due to the "enterprise rigidity" and some other relevant types of rigidity in different areas, such as innovating financial or foreign trade institutions. Take credit as an example: should we lend to selected enterprises, or should we lend to enterprises with the purpose of saving them from bankruptcy, even when they are unprofitable? This represents the conflict of interest among government, banks, enterprises, and workers. Unprofitable enterprises definitely wish to keep the unreasonable "enterprise rigidity" and some other relevant types of rigidity, such as wage rigidity and employment rigidity, and so do the workers of unprofitable enterprises. Therefore, they all believe that banks should lend to unprofitable enterprises. As one of the entities undertaking the innovation of the financial system, banks will undoubtedly oppose that. As for the government, its attitude is rather complicated. From the perspective of the economy, the government believes that it is

necessary for banks to issue loans on the basis of the profitability principle. From the perspective of society, however, it believes that it is not inappropriate for banks to take care of unprofitable enterprises as well as their employees. The conflict of interest among the entities involved in the innovation of financial institutions certainly makes it more difficult to perform institutional innovation. It is the same with the innovation of foreign trade institutions. As the "enterprise rigidity" and some other relevant types of rigidity had been existent for a long time, we have encountered obstacles during the innovation of foreign trade institutions, which requires that specialized foreign trade enterprises be held responsible for their profits and losses and that export goods manufacturers freely participate in the competition in the international market, due to differences in profitability across various enterprises and different attitudes among their employees, despite the acknowledgment of the necessity to pursue institutional innovation by the government.

What we have discussed has once again revealed the difficulties in establishing the order of the commodity economy.

9.2.4 The Roles of the Government in Alleviating Conflict of Interest in Institutional Innovation

As the most important entity of institutional innovation during the process of establishing the order of the commodity economy, the government not only should play a role in alleviating conflict of interest during the process of the institutional innovation, but also has the capacity to do so. This is determined by the position of the government in the economy.

As discussed earlier, in the commodity economy, the government acts as the regulator to monitor and regulate the economy. The government also acts as an owner and investor to protect, own, and operate state assets. Besides, the government represents the interests of the entire nation. In other words, it is the representative of the country's interests and is responsible for reconciling the interests of

the nation, collective groups, and individual persons. When the interests of these three parties are not aligned, the government should act out of national interest as well as out of long-term interests and reconcile any inconsistency that may arise. Of course, this does not mean that national interest can replace collective interest and personal interest, nor does it mean that the government can augment national interest by sacrificing collective interest and personal interest. To alleviate conflict of interest during the institutional innovation, the government must consider and reconcile the interests of these three parties.

How much can government do in this regard? We need to analyze this question in a realistic way. Generally speaking, government behavior cannot be idealized. After all, the government has limited information, its assessment of real situations may not be entirely consistent with the reality, and it is difficult for the government to prevent unexpected economic events from happening. What's more, the effectiveness of government policies lags and microeconomic units take precautionary measures. All of these issues may influence the government's efforts to alleviate conflict of interest during the institutional innovation. Therefore, the government cannot completely reconcile and simultaneously satisfy national interest, collective interest, and personal interest on its own. Nevertheless, the government should not feel relaxed. It is still able to work to alleviate conflict of interest to some extent during institutional innovation, which is demonstrated in the following ways:

1. A series of institutional innovations with regard to the establishment of the order of the commodity economy should be validated by laws and regulations. Although some of the innovations may not be complete or perfect enough at a certain time, having some institutions will be better than having no institution at all, and having some laws and regulations will be better than having no laws and regulations. During the process of formulating laws and regulations, the government should listen to all parties and select the best option.

These laws and regulations should be reflective of national interest, collective interest, and personal interest at the same time.

2. After laws and regulations concerning the order of the commodity economy are established, even though such laws and regulations reflect national interest, collective interest, and personal interest, it is likely that one party may be neglected during the enforcement of these laws and regulations, causing conflict of interest among the institutional innovation sponsors. Therefore, the government should reinforce the monitoring and supervision of law enforcement so that national interest, collective interest, and personal interest can be effectively protected and that the order of the commodity economy can be established by gradually aligning the interests of the three parties.

3. The economic adjustment measures that the government takes can not only stabilize the economy and support economic growth but also ensure coordinated economic and social development. Simultaneously satisfying national interest, collective interest, and personal interest and alleviating conflict of interest during the process of developing the commodity economy and the institutional innovation is one of the tasks that ensure coordinated economic and social development. Therefore, the government can consider actual economic situations and use appropriate economic adjustment measures pursuant to laws and regulations to avoid harming the interests of any of the three parties. This also demonstrates the role of the government.

4. During the process of the institutional innovation, the conflict of interest among institutional innovation sponsors not only refers to the battling of real interests but also includes the psychological discomfort arising from increasingly widening gap among these three entities. This means that if any one of the three interest groups (especially enterprise or individual) feels that its secured interest is not as much as that of the other groups or that its interest is not growing as fast as that of the other groups, it may come to the belief

that it has incurred losses. It is hard to avoid the psychological discomfort during the process of establishing the order of the commodity economy. During any institutional innovation, it is impossible to guarantee that every interest group receive equal share of benefits, and hence it is difficult to prevent people from developing resentment or contradictory attitudes. In an attempt to resolve this issue, the government, as the superior economic regulator and the representative of national interest, should use ideological education and propaganda to help people gain a relatively correct understanding of different entities' interests as well as the interest gap among different entities so as to minimize the psychological discomfort. We should admit that these education and propaganda efforts by the government are better than nothing.

9.2.5 Adjustment of the Relationship of Various Institutional Innovation Sponsors' Interests

As lawmaker, law enforcement body, economic regulator, and economic administrator, the government can probably alleviate the conflict of interest among the institutional innovation sponsors during the process of establishing the order of the commodity economy. Nonetheless, we will have to mainly rely on market-oriented and contractbased transactions to adjust the interests of the institutional innovation sponsors. Even if the economy could be in disequilibrium after the traditional economic system and the dual-track economic system were terminated, i.e., the market could still be underdeveloped and the supply and demand of resources could be faced with multiple constraints during a certain period of time, the interests of the institutional innovation sponsors could be naturally adjusted by business transactions as long as these transactions are market-oriented and contract-based. In addition, the results of the adjustment will also be accepted by both parties of a transaction. Therefore, to understand the meaning and function of market-oriented and contract-based transactions is critical to understanding the institutional innovation

during the process of establishing the order of the socialist commodity economy.

Why can market-oriented and contract-based transactions play such a critical role in the adjustment of the interests of various entities? Why can't this role be assumed by the government? These questions can be answered from the following four aspects:

First of all, we have clearly learned from the functions of the market in allocating resources that the reason why various interests can be adjusted by market-oriented and contract-based transactions is the establishment of the market mechanism with fair competition.

Fair competition hereby discussed is in relative terms, for completely fair competition is impossible under disequilibrium conditions and equilibrium is only a theoretical assumption. For most Chinese enterprises and individuals, being able to set up a market mechanism with fair competition through the establishment of the order of the commodity economy is already quite impressive. With a market of relatively fair competition, every region, sector, and enterprise, except for extremely few that need special attention, is generally placed on a level field. They are standing on the same starting line. The situation in which some regions can receive favorable treatment or some sectors can obtain cheap supplies of raw materials and fuel or some enterprises are granted favorable prices will no longer exist. There is only one policy that is applicable to all market participants when they do business in the market. As a result, even if competition leads to income gap among market participants, the result will be acceptable to all.

Secondly, all market participants share a common benefit from market-oriented and contract-based transactions, i.e., they can have stable expectations for one another.

Keep in mind that the behavioral shortsightedness of enterprises, individuals, and the government as well as government officials can be traced back to the uncertainty of business prospects. Since the economic prospect is unpredictable, it is hard to prevent people from

focusing on their near-term interests. From the perspective of enterprises and individuals who conduct market transactions, the biggest loss incurred by transactions under volatile expectations will be their inability to effectively estimate costs and benefits, which may lead to missed opportunities for investment or profit or losses that could have been avoided. As a result, they may lose confidence in operating their businesses. If the order of the commodity economy were established, business transactions would be market-oriented and contract-based, and the losses would decrease significantly as transaction participants could develop relatively stable expectations. In the circumstance where expectations are relatively stable, the adjustment of various entities' interests is based on how each entity endeavors to minimize its avoidable losses. In other words, the way that various entities' interests are adjusted is traced to their investment decisions and strategic business plans after they effectively weigh costs and benefits.

Thirdly, market-oriented and contract-based transactions will lower transaction costs significantly, which means a higher expected net interest for every market participant (including enterprises and individuals).

Transaction costs refer to the costs of the services provided by service providers in market transactions. In addition to transportation cost, transaction costs also include information cost (or cost related to obtaining market information), contract negotiation cost (or negotiation cost associated with signing a contract), and contract execution cost (or cost associated with executing a contract). Transaction costs always vary with the size of the market. The more developed and complete the market is, the lower the marginal costs of information, negotiation, and execution will be. In other words, the average transaction cost for every unit tends to decrease as the size of the market increases and the market becomes more developed and complete. If a transaction is not conducted inside the market but done outside the market or a transaction is not conducted in the form of a

contract and is not binding on both parties of the transaction, either an enterprise or an individual will be subject to higher transaction costs. Higher transaction costs are not only the direct losses of the enterprises or individuals involved in the transaction but also detrimental to the national economy. This is because the continuous decline in transaction cost is one of the factors that can contribute to economic growth and higher gross domestic product, and also, the adjustment of various entities' interests will be much easier during economic growth and growing gross domestic product than during stagnant gross domestic product in a sluggish economy. This is the common benefit brought to the various institutional innovation sponsors by the lowered transaction costs through market-oriented and contractbased transactions.

Fourthly, in the circumstance where transactions are done in the market and based on contracts, the average rate of return from different investments tends to converge gradually as long as production factors are allowed to flow freely and property rights are clearly specified. This is another way to adjust the interests of various institutional innovation sponsors.

From a static perspective, conflicts may arise during the distribution of interests among various institutional innovation sponsors during the process of establishing the order of the commodity economy due to certain institutional or historical reasons. It is even likely that every entity believes it has not received enough interest and other entities have obtained too much interest. The conflict is hard to avoid. In a static economic environment, it is very difficult to transfer interest from one entity to another, unless the government uses some administrative adjustment measures. However, if the government were to use some administrative adjustment measures to do so, new conflicts would arise and another entity might be dissatisfied. From a dynamic viewpoint, any conflict of interest may tend to diminish as the average rate of return of investments for each entity converges. Market-oriented and contract-based

transactions will allow production factors to flow freely and facilitate the convergence of average rate of return, which to some extent is fair to all institutional innovation sponsors. Of course, market-oriented and contract-based transactions will not eliminate any difference in the rate of return among different investors. The gap in average investment return may get even larger. In this case, can we ask whether this is contradictory to the convergence of average rate of return that we discussed earlier? Why can we believe the average rate of investment return is converging while the gap in investment return may widen on the other hand? As a matter of fact, they are not contradictory.

When we say that the average rate of investment return for each investor will tend to converge when transaction activities are market-oriented and contract-based, we refer to the general trend of cost integration, price integration, and revenue integration due to free circulation of production factors, including capital.

When we say that the gap in investment return for different investors will widen when transaction activities are market-oriented and contract-based, we have considered the outcomes from the rise and utilization of new investment opportunities, the development of new industrial sectors, the application of new technologies, the establishment of new markets, and the adoption of new managerial styles, which are not contradictory to the convergence of the average rate of investment return for each investor. In many cases, these two scenarios represent two different stages of the same process. That is, after the gap in investment return widens among different investors, there is a certain period of time before the average investment return of different investors gets more or less the same. While the average rate of return for each investor is converging, new investment opportunities, new industrial sectors, new technologies, new markets, and new managerial styles will emerge, pushing the rate of return of various investors to widen once again.

The process of economic activities basically follows this pattern.

Therefore, the conflict of interest among different institutional innovation sponsors will likely improve if transaction activities are market-oriented and contract-based. On the other hand, different investors will see their returns vary for various reasons, such as capturing new investment opportunities. Because widening returns among investors are related to the emerging and capturing of new investment opportunities, it is reflective of the existence and consequence of competition in the marketplace. It demonstrates a certain degree of fairness. Normally, market participants recognize and accept the consequences. In addition, as long as the economic order is established and competition is fair, any investor can take advantage of a new investment opportunity and pursue higher returns. The possibility of achieving higher returns is conducive to offsetting the psychological discomfort arising from the widening gap.

These four aspects have illustrated the roles that market-oriented and contract-based transactions play in adjusting the interests of different institutional innovation sponsors. These four aspects are actually correlated. They reveal one important issue: Since the conflict of interest among different institutional innovation sponsors is inevitable under disequilibrium conditions and the government is subject to certain constraints when adjusting the interests of different institutional innovation sponsors, it is necessary, both in theory and in practice, to mainly rely on the market to adjust the interests of these entities so that the conflict of interest among them can be somewhat alleviated.

貳 建立商品经济秩序过程中的利益调整问题

一、制度创新不同主体的预期纯利益

上一节中谈到了商品经济秩序建立过程中，制度创新的各个不同的主体都对制度创新的预期纯利益进行估计，各自从制度创新所能够带来的预期纯利益的大小作出判断，以决定在多大程度上参加制度创新的实践活动。在这里，可以先按政府、企业、个人三类制度创新主体的情况来论述。

（一）政府作为商品经济秩序建立过程中制度创新的主体

在从产品经济体制向商品经济体制转变的过程中，所要建立的商品经济秩序包括明确财产关系，建立各种市场的交易规则和制度，明确政府的经济部门的职能，使政府行为制度化、规范化等内容。在这些新的经济秩序建立后，政府将成为精干的、高效率的政府，它不再直接管理企业，而是通过经济调节手段来调节市场，并根据法律、法规和政策来维持市场的正常运转。这与产品经济体制下政府的作用和产品经济秩序建立后政府所得到的纯利益有很大区别。

在产品经济体制下，政府通过不同途径所获取的资源可以达到最大限度，并且可以在社会每个时期所提供的资源中占据尽可能多的份额。政府的这种纯利益在商品经济体制建立后，毫无疑问是会减少的，财产关系明确以后，企业将保留一定的收入，而国家只是作为管理者取得税金和作为投资者取得应当归于自己的那一部分收入。政府既不可能通过财政渠道，又不可能通过货币发行渠道而使自己得到所希望得到的一切资源。商品经济秩序的建立在某种意义上说是对政府获取资源的方式和份额的一种制约。正如前面已经提到的，在制度创新中预期纯利益的下降使政府作为制度创新的主体有时迟疑不决。

但问题还有另外一面。如果政府曾经有过犹豫的话，那么这种犹豫是不必要的。动态地看，政府预期纯利益在商品经济体制建立后，不仅不会减少，而且将会增加。这是因为，商品经济的发展和新的经济秩序建立后市场活跃的结果，会使企业和个人的收入都有较大幅度的增加，从而政府作为管理者而得到的税金以及作为投资者所得到的收入在总量上

的上升是可以指望的。所谓政府预期纯利益下降的说法，只不过是静止的眼光来看待政府收入在总收入中的份额的减少，它忽略了总收入的不断增长的趋势。

至于商品经济秩序建立以后政府获取资源的方式和份额所受到的制约，也不应该被看成是不利于政府的一件坏事。政府不受任何制约地获取资源，一方面会使资源运用不当，造成资源的低效率、无效率、负效率，另一方面也会使市场活动受到阻挠，使企业和个人的积极性大受挫折。此外，只要政府的行为（包括获取资源的行为）不受制约，那么政府及其工作人员很有可能走向腐败。

（二）企业作为商品经济秩序建立过程中制度创新的主体

对企业来说，与商品经济体制相适应的商品经济秩序，究竟意味着什么？归根到底，这意味着两点：第一，财产关系的规范化；第二，交易活动的市场化、契约化。企业作为商品经济秩序建立过程中制度创新的主体之一，它们的预期纯利益被估计为大于零，这种正值的预期纯利益就来自以上这两点。

通过财产关系的规范，企业（包括国营企业）的投资者就是资产的所有者，国家投资的部分由各级国家资产管理机构持股，企业自己的投资可以由企业基金会之类的机构持股，而资产的经营权则由作为经营实体的企业掌管。于是所有的企业都将真正成为自主经营、自负盈亏的商品生产者。企业之间是平等的法人关系，企业与作为投资者的政府之间是投资关系，企业与作为管理者的政府之间则是企业遵纪守法，照章纳税的关系。企业的预期纯利益将从三个方面增大。一是企业不再承担所规定的纳税义务以外的缴纳、奉献、摊派，更不接受主管部门的平调任务；二是企业可以利用自己的积累，使资产增值，使收入增加；三是企业可以利用自己所形成的企业基金同其他企业联合，参股，建立企业集团等等。总之，财产关系的规范化必然增大了企业的纯利益。

交易活动的市场化、契约化对于一切企业来说都是保证收入稳定增长的条件。企业在产供销活动中，总是根据预期价格、预期利润率、预期利息率作出安排的。不通过市场的交易、没有契约作为保障的交易，以及缺少公正裁决的交易纠纷，不仅会使企业缺乏稳定的预期，从而导致企业行为的短期化，而且必然增大交易成本，使企业的实际收入下降。正因为如此，所以企业作为商品经济秩序建立过程中的制度创新主体之一，在交易活动的市场化、契约化等制度创新活动中，必然采取主

动的、积极的态度。这是同企业预期纯利益的增加有密切联系的。

由此可以得出一个结论：如果说在产品经济体制之下企业不能自主经营、自负盈亏，从而当时的任何制度创新都不能使企业预期纯利益增大，企业注定处于制度创新的被动者地位的话，那么在由产品经济体制转入商品经济体制之后，任何制度创新只要是涉及财产关系规范化和交易活动的市场化、契约化的，企业出于增加预期纯利益的考虑，倡议并推动这些制度创新就是不言自明的道理。

（三）个人作为商品经济秩序建立过程中制度创新的主体

作为商品经济秩序建立过程中制度创新的主体之一，个人起着三方面的作用：

第一，个人作为劳动者，显然同劳务市场秩序的建立直接有关，劳动力供求市场化、契约化的进程影响着个人预期净利益的变动。因此，个人以及代表作为劳动者个人的利益的团体，在劳务市场秩序的建立和这方面的制度创新上，不仅起着积极倡议的作用，而且对于新的经济秩序能否巩固下来也有着十分重要的意义。

第二，个人作为资金供给者，即储蓄者，是同资金市场秩序的建立直接有关的，个人最担心的是个人资金提供以后，不仅收入没有保障，甚至本金也没有保证。个人还担心在资金市场上受欺骗，受愚弄，担心发生违约事件。如果出现这类情况，个人是不愿提供资金的。因此，资金供求的市场化、契约化的进程影响着个人预期净利益的变动。个人要求在资金市场上有一定的制度创新，建立新的经济秩序。个人在这种制度创新过程中起着倡议者和支持者的作用。

第三，个人作为商品购买者，即消费者，也同商品市场秩序的建立直接有关。在非均衡条件下，由于资源供给的约束和需求的约束都在不同程度上存在着，商品的短缺或过剩现象也是经常出现的。特别是在商品短缺的场合，个人作为消费者既要担心商品质量的下降和价格的上涨，又为市场上某些垄断现象感到不安，这些都会使个人受到损失。因此，个人作为商品购买者，要求在商品市场方面有制度创新，要求建立商品市场的秩序，以减少自己可能遭到的损失，使个人预期净利益增加。个人是商品市场制度创新的积极倡议者和支持者，他们是推动商品供求的市场化、契约化的重要力量。

可以设想，在产品经济体制之下，个人在经济方面的各种要求都是受压抑的，至少是不受重视的。在产品经济体制之下，如果说当时有各

种各样的制度变动，以便巩固产品经济秩序的话，那么个人纯粹是被动的一方，他们即使明显地感觉到现实纯利益、预期纯利益受到侵害，他们也无能为力。只有在从产品经济体制向商品经济体制转变的过程中，个人才有可能并有兴趣为增加自己的预期净利益而积极参与制度创新。

二、制度创新中不同主体之间预期纯利益的冲突

政府、企业、个人分别作为商品经济秩序建立过程中制度创新的主体，各自可以通过这些制度创新而增加自己的预期净利益。从总体方面来说，政府、企业、个人的利益应当是统一的。这种统一有两层含义，即一方面，只要商品经济发展了，生产力水平提高了，整个国民生产总值扩大了，那么即使政府、企业、个人三者在总收入中的比例关系不变，三者的利益也都可以增加；另一方面，政府、企业、个人三者的利益是相互依存，彼此互为条件的，任何一方的实际利益受到损害，从长远来看，对另外两方的实际利益都没有好处。经济生活中的大量事例证明了三者利益的上述一致性。正是这种利益的一致，使得政府、企业、个人都具有建立商品经济秩序和在这一秩序建立过程中倡议、推动、实现制度创新的积极性。

但必须承认，政府、企业、个人作为商品经济秩序建立过程中制度创新的不同主体，它们之间的预期纯利益是有冲突的。比如说，在明确财政关系和政府的职能的基础上所形成的一系列有关工商管理、物价、工资、税收、审计等制度，对于政府、企业、个人三者的行为都是一种约束，政府、企业、个人三者都必须根据商品经济秩序之下的经济行为来预计自己的纯利益，而不能再援引产品经济体制之下的旧例来预计自己的纯利益。前一种纯利益与后一种纯利益在数量上是有出入的，由此就会造成纯利益的变动，造成社会各方面的利益再分配。又如，当资金市场、劳务市场、商品市场上的经济秩序建立起来之后，企业和个人在某一个市场上，或者此方是供给者，彼方是需求者，或者恰恰相反，此方是需求者，彼方是供给者。如果是在均衡条件下，每一个市场都达到了均衡价格，市场价格是均衡价格，并且只有在均衡价格水平才成交，供给量与需求量总是相等的，那么无论是供给者还是需求者都可以实现自己的预期纯利益，彼此的利益冲突也就不明显，甚至可以消失。但实际情形并非如此，因为即使在转入商品经济体制，建立商品经济秩序之后，在资源供给约束或需求约束继续存在的条件下，经济依然处于非均

衡状态，市场的均衡价格实际上也是不存在的。这样，在市场活动中，企业和个人作为供给和需求双方，预期纯利益的冲突也就不可避免了。建立商品经济秩序这一事实只是防止供求双方的利益冲突激化，防止市场以外的因素对供求双方之间的利益有过大的干扰，以及防止非市场交易给供求之间的某一方带来过大的损失，但并不能消除彼此之间的利益冲突。非均衡条件下，即使明确了财产关系，即使做到了一切交易活动的市场化、契约化，即使每一个参加市场交易的企业和个人都是自主的、有利益制约的，但商品短缺或过剩现象的存在势必使得企业和个人之间的预期纯利益发生冲突。这是不依制度创新主体的意愿为转移的。

三、经济中的刚性与制度创新主体的利益冲突

前面在论述由产品经济体制向商品经济体制转变的困难时，曾经提到产品经济体制之下的“企业刚性”以及与此有关的工资刚性、就业刚性、福利刚性等等，这些刚性的存在使经济体制的转变特别困难。这在一定程度上也同商品经济秩序建立过程中制度创新主体之间的利益冲突有关。

从个人作为劳动者这一点来看，一方面，劳动力供求的市场化、契约化固然符合商品经济发展的需要，符合广大劳动者增加利益的要求，但另一方面，由于企业用工制度的改革、劳动岗位终身制的废除，以及容许企业对工人的辞退等经济秩序的建立，必然会有一些劳动者的利益与过去相比增加得较少，而另一些劳动者的利益与过去相比增加得较多，于是劳动者的收入差距扩大了。收入增加幅度较少的劳动者将有一种相对的失落感，这将成为劳务市场制度创新的阻力。

问题还不限于此。当改革企业用工制度，废除劳动岗位终身制，容许企业辞退工人，以及在某些情况下工人将成为待业人员的时候，企业与工人之间的利益冲突也会暴露出来。企业希望通过一系列制度创新来消除不合理的工资刚性和就业刚性，但工人（至少是在职的固定工）却会提出在一定程度上继续维持工资刚性和就业刚性，通常所说的“老人老办法，新人新办法”反映了这种情绪。这又是劳动市场制度创新的阻力。它不仅反映了企业与工人之间的矛盾，而且也反映了这部分工人与那部分工人之间的矛盾。

再从政府与企业、政府与居民之间在税收制度创新中的利益冲突来说，这也有助于说明制度创新的不同主体之间的矛盾的存在。要建立商

品经济秩序，就应当使税收合理化、规范化，并运用法律、法规形式使之明朗，使之易于受检查，受监督。从这一点来看，政府与企业、政府与居民的利益是一致的，但究竟征收哪些税，税率定得多高，对偷税、漏税、滞纳税金的处罚规定以多大为合适，这些都有可能引起政府、企业、居民的不同态度。如果说这些制度创新主体之间有分歧的话，那么这种分歧就可以被理解为利益的冲突。还可以作进一步分析。假定把政府分为中央政府与地方政府，那么尽管二者都主张改革税收制度，建立新的税收制度，以促进经济的发展和保证财政收入的增长，但在中央税与地方税的划分上，在某些税的分配比例上，中央政府与地方政府作为不同的制度创新主体，仍有利益冲突。

事实上，在税收制度创新过程中的利益冲突同前面提到的“企业刚性”以及其他有关的刚性是有关的。企业一般说来希望在商品经济体制之下进行活动，自主经营和自负盈亏使企业对自己的前景产生了希望。然而，不少企业仍然忘不了产品经济体制下那种“不亏”的状况，特别是在市场竞争中受到压力的场合，这些企业感到以往那种一切由政府包下来，“不使企业倒闭”的做法未尝没有好处。如果真的维持过去那种状况，那么无论政府决定征收什么税，税率定得多高，企业是无所谓的。政府与企业在税收问题上的矛盾也就淡化了。而在企业自负盈亏，并且有倒闭、破产的威胁的新经济体制中，企业必然要力争少纳税，多得税收优惠，以弥补取消“企业刚性”之后所受到的损失。这就使企业同政府在税收制度改革中发生了明显的矛盾。此外，居民作为纳税人，同样会考虑到“企业刚性”以及其他有关的刚性曾经给自己带来的好处。在存在着这些刚性的产品经济体制之下，居民几乎不缴纳直接税，因此政府与居民在直接税问题上几乎没有什么利益冲突。但当经济从产品经济体制转入商品经济体制，并且在“企业刚性”以及有关的其他刚性也随之逐渐消失的情况下，居民对税收（尤其是直接税）的敏感的产生是可以理解的。居民会由此感到生活保障的不确定性，这是因为，在企业可能倒闭、破产，工资可能停发、打折扣或变动，就业可能失去稳定性，福利也可能受影响的环境中，如果实行直接税制度以及与之有关的措施（如个人收入申报、个人财产申报等），尽管起征点并不低，但居民从心理上会认为这是生活保障不确定性的增加，于是政府与居民在税收制度创新过程中的利益冲突也会明显地暴露出来。

除此以外，在金融制度创新、外贸制度创新等方面，都可以看到“企

业刚性”以及其他有关刚性所引起的制度创新主体之间的利益冲突。以信贷来说，究竟是择优放款给企业呢，还是“为了不让企业倒闭，即使企业无效益，也必须给它们以贷款”？这就是政府、银行、企业、工人之间利益冲突的具体表现。无效益的企业当然寄希望于不合理的“企业刚性”，无效益的企业的工人当然寄希望于不合理的“企业刚性”以及与之有关的工资刚性、就业刚性。于是他们全都认为银行应当向无效益的企业放款。银行作为金融制度创新的主体之一，无疑是不同意这样做的。至于政府的态度，则比较复杂。从经济的角度来看，它认为银行有必要根据贷款的效益原则来选择放款对象，而从社会的角度来看，它又认为银行未尝不应当照顾一下无效益的企业以及在这些企业中工作的职工。金融制度创新主体之间的这种利益冲突，势必增大了制度创新的难度。对外贸易制度创新所遇到的困难也是相似的。由于“企业刚性”和其他有关的刚性曾经长期存在，所以要建立完全从事外贸的企业自负盈亏的制度，或者要让一切生产可供外销的产品的企业自由参加国际市场的竞争，即使政府认识到这样做的必要性，企业的经济效益的差别以及不同企业中的职工的不同态度仍会使这一制度创新遇到阻力。

以上所说的这些，再一次反映了商品经济秩序建立的困难。

四、政府在缓和制度创新的利益冲突方面的作用

尽管政府作为商品经济新秩序建立过程中制度创新的主体之一，并且是最重要的主体，但在缓和制度创新的利益冲突方面，政府不仅应该发挥自己的作用，而且也能够发挥这样的作用。这是由政府在经济生活中所处的地位决定的。

前面已经指出，在商品经济体制之下，政府作为管理者，起着调节经济和管理经济的作用；政府作为所有者、投资者，起着保护、占有和运用国家资产的作用。除此以外，政府作为全体人民利益的代表者，也就是国家利益的代表者，负有协调国家利益、集体利益与个人利益之间的关系的责任。三者利益不一致时，政府要从全体人民的根本利益、长远利益的角度出发，对这种不一致之处加以协调。当然，这并不等于说国家利益可以代替集体利益和个人利益，也不等于说政府可以运用有损于集体利益和个人利益的方式来增加国家利益。政府在缓和制度创新的利益冲突时，必须从兼顾三者的利益方面着手。

政府在这些方面究竟可以发挥多大的作用？关于这一点，需要进行

实事求是的分析。总的说来，政府的行为是非理想化的。政府所掌握的信息毕竟有限，政府对实际情况的判断不一定与事实完全相符，政府还难以控制经济生活中若干意想不到的事件的发生，再加上政策效应本身的滞后性和微观经济单位的预防性措施的作用等等，这都不能不影响政府在缓和制度创新的利益冲突中所作的努力，国家、企业、个人三者利益的兼顾绝不是政府单方面的设想和努力就能完满地实现的。但即便如此，政府在这些方面的努力依然不能放松，政府通过自己的努力依然可能在缓和制度创新的利益冲突中起到一定的作用。这将通过以下途径表现出来：

1．与建立商品经济秩序有关的一系列制度创新，应当以法律、法规的形式巩固下来。尽管这些制度创新在一定时期内有不完善、不成熟之处，但有制度优于无制度，有法律、法规可依优于无法律、法规可依。在制定法律、法规的过程中，政府应当多方面听取意见，择其善者而采纳。这些法律、法规应当是国家利益、集体利益、个人利益的共同体现。

2．在制定与建立商品经济秩序有关的法律、法规之后，即使法律、法规本身是国家、集体、个人三者利益的体现，但在法律、法规执行过程中，却有可能忽视某一方的利益，从而造成制度创新不同主体之间的利益冲突。为此，政府应加强对法律、法规执行情况的检查、监督，使国家、集体、个人三者利益被有效地维护，使商品经济秩序得以在三者利益趋于协调的情况下建立起来。

3．政府所采取的经济调节手段不仅有维持经济稳定和促进经济增长的作用，而且也有保证经济与社会协调发展的作用。兼顾国家、集体、个人三者的利益，缓和三者之间在发展商品经济和制度创新过程中的利益冲突，就是保证经济与社会协调发展的一项内容。因此，政府可以根据经济生活的实际情况，在以法律、法规为准绳的前提下，通过适当的经济调节手段的运用，避免三者之中的任何一方的利益受到损害。这也充分体现了政府的作用。

4．在制度创新中，制度创新主体之间的利益冲突不仅指实际利益的冲突，而且也包括相对利益差距的扩大所引起的心理上的不协调。这就是说，三者之中的任何一方（尤其是企业或个人）如果感到自己所得到的利益没有另一方那么多，或者感到自己的利益的增长幅度没有另一方那么大，它就会认为自己是吃亏的一方，是受损失的一方。这种心理

上的不协调在商品经济秩序建立过程中是难免的。任何一项制度创新都不可能使所有的受益者得到的利益完全相等，于是就难免引起某些方面的埋怨和抵触情绪。针对这种情况，政府作为高层次的经济调节者、全体人民利益的代表者，应当从思想工作、宣传工作上着手，使各方对于相对利益及其差距问题有比较正确的认识，以减少心理上的不协调。应当承认，政府进行这些教育、宣传要比不进行教育、宣传好得多。

五、制度创新不同主体之间利益关系的调整

政府作为法律、法规的制定者和执行者，作为经济调节者和管理者，固然有可能在商品经济秩序建立过程中缓和制度创新主体之间的利益冲突，但制度创新主体之间利益关系的调整，主要有赖于交易活动的市场化、契约化。即使经济在摆脱传统经济体制和双轨经济体制之后仍然处于非均衡状态，即在一定时期内仍然遇到市场不完善或资源供给约束、需求约束等限制条件，但只要实现了交易活动的市场化、契约化，制度创新不同主体之间的利益关系自然就会在交易活动中得到调整，而且这一调整的结果将是交易双方都可以接受的。因此，对市场化、契约化的意义和作用的认识，是了解社会主义商品经济秩序建立过程中制度创新问题的关键所在。

为什么市场化、契约化能够起到这样的作用？为什么市场化、契约化在调整利益关系中的作用是政府所不能替代的？让我们从以下四个方面来加以说明：

第一，根据市场在资源配置中的作用可以清楚地了解到，利益关系之所以能在交易活动的市场化、契约化中得到调整，是同公平竞争的市场机制建立有关的。

这里所说的公平竞争，当然具有相对的意义，因为绝对的公平竞争不仅在非均衡条件下难以实现，而且在均衡条件下也只可能是纯理论上的假设。对于我国的企业和个人来说，能够通过商品经济秩序的建立而建立起相对公平竞争的市场机制，已经相当不错了。假定有了相对公平竞争的市场机制，那么除了极少数地区、部门和企业需要享受特殊照顾以外，一般而言，各个地区、各个部门、各个企业被置于同等的位置上，起点将是公平的。那种只给某个地区以特殊的优惠，给某个部门以廉价的原材料和能源供应，以及给某个企业以价格上的照顾等等情况，

将不再存在。一种政策，对所有参加市场活动的单位都是适用的。这样，即使由于竞争的结果而产生利益上的差别，那么市场活动的参加者将认为是可以接受的。

第二，交易活动的市场化、契约化对于一切参加者说来，有一个共同的利益所在，这就是彼此全都可以有较稳定的预期。

要知道，企业行为的短期化、个人行为的短期化，以至于政府和政府官员的行为短期化都同经济前景难以预测有关。既然经济前景难以预测，那么行为的短期化也就不可避免。从参加交易活动的企业和个人的角度来看，在不稳定预期的条件下进行活动，最大的损失就是难以对成本与收益进行有效的估算，从而有可能错过适宜的投资机会、盈利机会，有可能在原来不应该遭受损失的场合受到损失，有可能导致经营信心的丧失。如果建立了商品经济秩序，使交易活动纳入市场化、契约化的轨道，那么随着交易参加者彼此较为稳定的预期的产生，这些方面的损失就有可能大大减少。在较为稳定的预期的前提下，利益关系的调整是与各方尽可能减少不应有的损失结合在一起的，也是与各方通过对成本与收益的有效估算而作出合理的投资、经营战略部署结合在一起的。

第三，通过交易活动的市场化、契约化，交易成本将会明显地下降，这对于每一个参加市场的单位（包括企业和个人）都意味着预期纯利益的增加。

交易成本是指在市场的交易活动中，因得到市场服务部门所提供的劳务而付出的成本。除运输成本以外，组成交易成本的还有信息成本（即为取得市场信息而付出的成本）、合同谈判成本（即为订立合同而进行谈判而付出的成本）、合同履行成本（即为了使合同实现而付出的成本）等。交易成本总是随着市场规模的变动而变动。市场越完善，越发展，每个企业为取得信息和订立、履行合同而付出的边际成本就越少。换言之，平均每个单位产品所担负的交易成本，随着市场规模的扩大和完善而呈递减的趋势。如果交易活动不采取市场交易的形式，而在市场外进行，或者，如果交易活动不采取契约的形式，而对于交易双方都不具有约束力，那么无论是企业还是个人都将为此付出较多的交易成本。这不仅对参加交易活动的企业和个人是直接的损失，而且对整个国民经济十分不利。这是因为，交易成本的不断下降是促进经济增长和国民生产总值增长的因素之一，而在经济增长和国民生产总值增长的格局中，利益关系的调整要比在经济停滞和国民生产总值不变的格局中容易

得多。这就是通过交易活动的市场化、契约化而降低了的交易成本对制度创新各个不同主体的共同利益。

第四，在交易活动市场化、契约化的条件下，只要生产要素可以自由流动，只要财产关系明确，那么单位投资的平均收益率就会有逐渐接近的趋势，这也是调整制度创新不同主体的利益的途径之一。

用静止的观点来看，商品经济秩序建立过程中，由于某种制度上的安排或由于某些历史上的原因，各个不同的制度创新主体之间在利益分配方面可能会有所冲突，甚至每一方都认为自己的利益较少，认为另一方的利益较多。这种冲突是难免的，但在静态的经济环境中，除非通过政府的某种经济调节，把这一方的一部分利益转移给另一方，否则很难调整利益关系。然而，如果真的按这种方式进行利益的调整，肯定又会产生新的矛盾，使另一方不满意。但用动态的观点来看，那些利益的矛盾是会在单位投资的平均收益率趋于接近的情况下渐渐缓和的。交易活动的市场化、契约化将促进生产要素的自由流动，也就是促进平均收益率的接近，这对于各个制度创新的主体来说，具有一定的公平性。当然，在交易活动市场化、契约化的条件下，不同投资者的收益差别始终存在着，而且收益的差别还会扩大。试问，这与前面提到的单位投资的平均收益率有接近的趋势这一点是不是抵触呢？为什么一方面认为单位投资的平均收益率有接近的趋势，另一方面又认为不同投资者的收益差别会扩大呢？其实，这是不抵触的。

当我们说在交易活动的市场化、契约化的条件下单位投资的平均收益率有接近的趋势时，这是就生产要素的自由流动（包括资金的自由转移）所产生的成本一体化、价格一体化、收益一体化的总趋势而言的。

当我们说在交易活动市场化、契约化的条件下不同投资者的收益差距会扩大时，则是考虑到新投资机会的出现和被利用、新产业部门的兴起、新技术的应用、新市场的占领，以及新的经营管理方式的推行等等所导致的结果，这与单位投资的平均收益率的接近并不矛盾。在许多场合，这两种情况代表了一个过程的两个不同阶级，即在不同投资者收益差距扩大之后，有一定的滞后期，然后进入收益一体化的阶段。而当单位投资的平均收益率接近时，又会有新投资机会、新产业部门、新技术、新市场、新经营管理方式的出现，于是再度出现不同投资者的收益差距扩大。

经济运动的过程基本上是按这种顺序进行的，因此一方面，制度创

新不同主体的利益冲突在交易活动市场化、契约化条件下有可能得到缓和（这正是单位投资平均收益率趋于接近的结果），另一方面，各个不同的投资者会因新投资机会的出现和被利用等等原因而拉开收益的差距。但正因为这种收益差距的扩大是同新投资机会的出现和被利用等联系在一起的，从而体现了市场竞争及其所造成的结果，体现了某种程度的公平性，这一结果一般说来会被参加市场活动的各方所承认和接受。而且，在市场活动中，只要建立了经济秩序，只要竞争是比较公平的，那么任何一个投资者都可以利用新投资机会，得到追加的利益。这种获得追加利益的可能性也有助于减少因收益差距扩大而引起的心理的不协调。

以上从四个不同的方面分析了交易活动的市场化、契约化在调整制度创新不同主体之间的利益关系中的作用。这四个方实际上是联系在一起的，它们说明了一个重要的问题：在非均衡条件下，既然制度创新主体之间不可避免地会出现利益冲突，而政府在调整这些利益关系方面的作用又受到一定的限制，那么无论在理论上还是实践中，都应当主要依靠市场本身来对各方的利益进行调整，使彼此的利益冲突有所缓和。

Chapter 10 The Standardization of Institutional Innovation

第十章 制度创新的规范化

10.1 THE ROLE OF THE GOVERNMENT IN STANDARDIZING INSTITUTIONAL INNOVATION

10.1.1 Contractual Violations During the Process of Establishing the Order of the Commodity Economy

During the process of establishing the commodity economy, economic growth may face multiple setbacks if business transactions are neither market-oriented nor contract-based. We have analyzed this issue in our discussions about establishing the order of the commodity economy and the institutional innovation. Now, what we have to study is this: Even though business transactions are done in the market and based on contract, how is the commodity economy impacted by breach of contract that may often occur? How can we resolve contractual violations?

The consequences of contractual violations are very obvious. They will not only harm the real interests of stakeholders, but also, and more importantly, lead to uncertainties in the expectation of growth and hinder future transactions as well as the expansion of business connections. More specifically, when violations of contracts increase, people may lose confidence in contract-based transactions, which tends to increase the proportion of cash-based spot transactions. The increasing proportion of cash-based spot transactions is incompatible

with the trend of developing the commodity economy.

Many factors can lead to a contractual violation. Under the dual-track economic system, the potential causes of a contractual violation include the interference by government administrative institutions in enterprise and individual business activities, relatively significant price fluctuations, unfavorable influences of resource supply constraints on the supply of products, the existence of special interest tied to non-market-oriented and non-contract-based transactions, and the lack of legal restrictions on contractual violations. Some of the phenomena under the dual-track economic system, such as breaching a subcontract, a lease contract, or a supply order and nonpayment or delayed payment of payables or loans, are caused by the abovementioned factors. Of course, when we analyze violations of contracts, we will need to distinguish intentional violation and unintentional violation. The existence of either intentional violation or unintentional violation demonstrates, once again, the necessity and importance of establishing the order of the commodity economy and pushing forward the institutional innovation for business transactions.

After the transition of the dual-track economic system to the new economic system, both intentional and unintentional contractual violations may still persist as long as the economy is in disequilibrium, i.e., there are constraints on resource supply or constraints on demand for resources. To a large degree, intentional violation is related to the existence of special interest tied to non-market-oriented and noncontract-based transactions. The special interest from non-marketoriented and non-contract-based transactions originates from constraints on resource supply or constraints on demand for resources. An unintentional violation of a contract is closely related to constraints on resource supply or constraints on demand for resources, even if the violator does not really intend to secure special economic interests. Therefore, if we wish to eliminate violations of contracts, we should rely not only on establishing the order of the commodity economy and institutional innovation but also on reducing the degree

of disequilibrium in the economy.

10.1.2 The Government as Institutional Innovation Sponsor

In our earlier discussions on the necessity of establishing the order of the commodity economy and adjusting the interests of various entities during the establishment of the order of the commodity economy, we have talked about the roles of the government as an institutional innovation sponsor. The roles of the government can be summarized as follows: In order to establish the order of the commodity economy, the government must establish a series of laws and regulations that are followed and enforced. For example, market-oriented and contractbased transactions must follow certain laws and regulations. Hence, the government as an institutional innovation sponsor must play their part in stipulating and enforcing the laws and regulations. Now, what exactly should the government do as an institutional innovation sponsor with regard to the violations of contracts that hinder the growth of the commodity economy?

First of all, as a party of a contract in a transaction, the government must abide by the rules and respect the sanctity of the contract. As a matter of fact, doing so is to respect the rights and status of the counterparty of the contract. A contract is binding on both parties who participate in the transaction. The government as a party of a contract should by no means supersede the counterparty of the contract. Unilaterally terminating, cancelling, or breaching a contract by the government is not allowed in the commodity economy. The government itself must strictly abide by the contract so as to serve as a model for society. In so doing, the government can gain the authority to deal with the contractual disputes in society.

Secondly, because several cases of violations of business contracts are related to abnormal property rights, the government as an institutional innovation sponsor must start the institutional innovation with normalizing property rights, reinforce the legislation with regard

to property rights, and strictly execute the laws during the establishment of the order of the commodity economy so as to potentially eliminate violations of contracts. Just as we have discussed repeatedly, if property rights are not normalized, it will be very hard to validate corporate legal identity, and it will be very hard for enterprises to take responsibility for their business transactions independently, which gives rise to various excuses for contractual violations in business transactions. Therefore, to reform property rights is one of the most important institutional innovations during the process of establishing the order of the commodity economy. Our analysis of contractual violations has supported this viewpoint from a different perspective.

Next, some violations of business contracts are intentional. One of the main reasons to do so is the possibility and practicality for the party who violates a contract to easily reap special interest. As for these types of violations, we cannot simply use moral persuasion as a solution. To a party of a binding contract, there should not only be moral constraints (or normally referred to as business ethics), but more importantly, there should also be legal and economic constraints. As one of the institutional innovation sponsors, the government must draw up laws and regulations to maintain order in the market and to ensure that a contract is executed according to binding terms and conditions. If the economic compensation and the penalty for the party who violates the contract exceed the marginal benefit that the violator can receive from doing so, every party of the transaction who intends to violate the contract in the first place will have to reconsider the costs and benefits of such action. As a result, there will be fewer violations of contracts.

Lastly, as the institutional innovation sponsor, the government should use legislation to minimize or lower the interference by a third party in the behavior of the two parties of a contract during a business transaction. The interference of a third party during the execution of a contract has often been one of the reasons for contractual violations. It

should be emphasized that the government has the responsibility to ensure that the process of contract execution is free from interference by any third party as long as the contract is legal. The responsibility of the government is to protect the public interest, support fair competition in the market, and stop or eliminate violations of the law or transactional fraud in businesses. If fraud does happen in business transactions or is included in a binding contract, we should follow the legal procedures instead of allowing a third party to handle it.

All the analysis of the roles of the government in protecting and supporting market-oriented and contract-based transactions is based on the viewpoint that the government is an institutional innovation sponsor. Of course, the government is not only an institutional innovation sponsor. It also plays the role of mediator in business disputes, which is almost as important as the role of institutional innovation sponsor.

10.1.3 The Government as Mediator of Business Disputes

As the dual-track economic system is being transformed into the new economic system, we will not see the government as a party in a business transaction as frequently as before. This is because of changing government functions, i.e., the role of the government as the owner of state assets will be separated from its role as the regulator of the economy, and the government will start regulating the economy indirectly rather than directly. Not only that, the government will standardize property rights so that certain state assets located at an enterprise will be separated from the overall state assets and that the legal person of an enterprise, not the government, will represent the assets of the enterprise. As a result, the representative of state assets in a lease or subcontract will no longer be a government institution, but a company or a specific economic unit who is the lessor (or lessee) or the contractor (or contractee). Moreover, an entity that signs various business contracts, such as a supply contract, a sales contract, and a credit facility contract, will no longer be a government institution, but

a company or a specific economic unit who represents the interests of the state. We should admit that this situation is normal and it is consistent with the nature of the commodity economy as well as the economic development trend.

Under such a new economic system, the government as a mediator of business disputes will play an important role in maintaining market-oriented and contract-based business transactions. When a violation of contract or a contractual dispute arises, regardless of whether it is an intentional or unintentional violation, it needs to be resolved properly. As important as unofficial mediation may be, the government needs to step in to resolve contractual disputes impartially in accordance with the law, which has always been a powerful protection of the order of the commodity economy. Impartial resolution is a resolution based on the law, clearly specifying contractual responsibilities, imposing necessary punishment on the violator, minimizing contract execution costs, and lowering economic losses arising from a contractual dispute.

When the government acts as a judge in a contractual dispute and wins over the trust from all transaction participants, the commodity economy can run relatively smoothly. Before the government takes this role, it used to act as a direct transaction participant and interfered with business activities by giving direct orders. So when there was a business dispute, the government was blamed for it. For example, when a dispute between an enterprise and its workers arose, the workers would see the enterprise and the government as one entity. The dispute between the enterprise and its workers (such as disputes over wages or terminations) would become one between workers and the government. Here is another example. When a seller and a buyer had a dispute (in which the seller failed to deliver an agreed-upon quantity of goods or the buyer failed to pay the amount due), the party who incurred losses would normally regard the party in breach and the government as one entity and thus kept the government involved in the dispute. These situations were very

difficult to avoid under the traditional economic system or the dual-track economic system. After the establishment of the commodity economy, the situation has changed. When an enterprise and its workers have a dispute over wages or employment, the dispute is between the enterprise and its workers. When the enterprise and its workers fail to resolve the dispute appropriately, the government will step in as the judge of business disputes to resolve the issue. By the same token, when there is a dispute between enterprises or between enterprises and consumers, the government will not get involved unless the dispute cannot be resolved appropriately. In that case, the government will act as a mediator of business disputes and help find a resolution. We can see from these examples that the government can play the role as a mediator of business disputes to ensure that the commodity economy can operate normally.

10.1.4 Monopolies in the Socialist Commodity Economy and Government's Solutions

Even after the transition of the dual-track economic system into the new economic system, the market in China is still unlikely to become perfectly competitive. We have discussed this issue earlier. Since the market is not perfectly competitive, it means that monopolies in the commodity economy will still exist. We can only conclude that there will be fewer monopolies under the new economic system than under the traditional economic system or the dual-track economic system and that the damage to the economy caused by monopolies under the new economic system will also be less severe than under the traditional economic system or the dual-track economic system.

Why can we draw this conclusion? Isn't the order of the commodity economy good enough to eliminate monopolies in the economy? Isn't there an institutional innovation that can prevent monopolies from emerging? We can fully understand why people ask these questions. Our analyses of disequilibrium economy and

nonidealized government behavior have actually answered these questions. That is, the development of monopolies in the socialist commodity economy has its economic reasons. We cannot explain monopolies simply from the moral or political perspective, nor can we expect to get rid of monopolies simply by taking moral or political measures.

The root cause of monopolies in the socialist commodity economy is the scarcity of some resources and the consequent exclusivity arising from the scarcity. If resources were abundant, these resources would no longer be exclusive to anyone. As long as every market participant has equal access to these resources, nothing but open and perfect competition will happen, and the foundation of monopolies in the economy will naturally disappear. A monopoly in the socialist economy is after all related to the exclusive control over some resources or production factors. To a market participant, as long as he or she has exclusive control over some resources or production factors, he or she can monopolize the products made from these production factors and have full control over their selling prices. To monopolize the market is actually to monopolize resources. This is not only because any product on its own can be considered a resource, but also because all products are made from certain resources and we can also regard a product as a resource. Therefore, as long as a person monopolizes a resource, he or she can also monopolize any product made from the resource and therefore control the market of that product.

At time of the traditional economic system or the dual-track economic system, monopolies originating from scarce resources were common. Of course, there were some other factors leading to monopolies, e.g., the state granted special economic privileges to some sectors, enterprises, or even individuals and some sectors, enterprises, or even individuals gained monopolistic status in the economy due to their administrative powers. These situations were common. The exact purpose of establishing the order of the commodity economy and the

institutional innovation that aims to create fair competition is to eliminate these monopolies. However, the efforts that we have made so far have at most eliminated the monopolies originating from these other factors discussed above. For example, the state will no longer grant special economic privileges to certain sectors, enterprises, or individuals. The state will also prohibit some sectors, enterprises, or individuals from gaining monopolistic status in the economy. Yet monopolies due to the scarcity of resources cannot be eliminated by establishing the order of the commodity economy or proposing relevant legislation. Monopolies originating from the scarcity of resources can still exist in the new economic system.

This explains why different degrees of monopoly will still exist in the market under the new economic system after the establishment of the order of the commodity economy. The degree of monopoly in various product markets varies. Some markets have a relatively high degree of monopoly (such as the mineral materials market, the heavy equipment market, and the raw chemical materials market), while other markets have a relatively low degree of monopoly (such as the market of some light industry products). Some markets have almost perfect competition (such as agricultural products market), while others are almost completely monopolistic (such as public utilities). The government should pay attention to different characteristics of these markets and do its utmost to minimize potential economic losses caused by the remaining monopolies in the economy.

Generally speaking, after the order of the commodity economy is established, the government can take action in the following four areas to minimize potential economic losses caused by monopolies that originate from scarce resources:

First of all, the government should understand that some monopolies in the economy arise due to resource scarcity. Therefore, it is necessary for the government to initiate laws and regulations to regulate the possession and utilization of scarce resources in accordance with the intensity of scarcity so that everyone can have an

equal opportunity to compete for the possession and utilization of scarce resources. Doing so can prevent some enterprises or individuals from having advantageous opportunities to possess and utilize scarce resources and avoid the development of monopolies in the economy due to privileged possession and utilization of scarce resources.

That is to say, although the intensity of resource scarcity varies, the opportunity to possess and utilize resources should always be equally available for everyone. Except for the possession and utilization of resources for the purpose of national security, which needs special consideration, the possession and utilization of any scarce resource for economic purposes should generally be decided by the competition in the market so that the most suitable candidate can be selected. For instance, the process of public bidding can be used to select the most qualified enterprise to invest in a project or to produce a product.

It is necessary to point out that in several areas or industries, we may not necessarily see numerous participants compete for a project. This is because different areas and industries have different production or operation features. Competitors are subject to certain constraints. For example, the requirements of capital and technological skills can be some of the constraints that enterprises have in participating in competition, and only those who meet the requirements of capital funding and technological capabilities will be qualified. But this does not mean we reject the principle of equal opportunity. Keep in mind that if production factors can flow and combine freely, those enterprises who do not meet the requirements of capital funding and technological capabilities can form business alliances (such as a merger or a joint venture), which will allow them to gain access to new opportunities and raise the odds of winning a bid.

Secondly, even if an enterprise becomes a monopoly via fair competition because of its possession and utilization of scarce resources, we have to know that the price under monopoly and the

"monopolistic profit ratio" will be higher compared to that under perfect competition. Therefore, it is necessary for the government to take action so that a portion of the "monopolistic profit" can be collected and used as public fund.

The way that the government treats the monopoly that originates from scarce resources is in accordance with the compensation principle of resource allocation¹. Here is the reason. If the "monopolistic profit" comes from the possession and utilization of scarce resources, any tax that the government collects from the businesses with "monopolistic profit" because of their possession and utilization of scarce resources, such as resource tax or adjustment tax, will contribute to coordinated economic growth as well as increasing the efficiency of the utilization of scarce resources. The question is whether or not in this case the government should also allow the enterprises that possess and utilize scarce resources to retain a portion of their "monopolistic profit." That is, should the government collect only a portion of the "monopolistic profit" that is above normal profit or all of it? According to our discussions, as the possession and utilization of scarce resources is secured based on competition on a level field with everyone having equal opportunities, the government should only collect a portion of the "monopolistic profit" rather than all of it, especially for the enterprises who need to commit additional resources to organize production factors during their business operations. Otherwise, those enterprises would lose the motivation to operate their businesses to compete in the market. Meanwhile, that will not help increase resource utilization efficiency continuously.

Thirdly, as there are various types of resources, the intensity of the scarcity of various resources varies, and the reasons why and the way how various resources became scarce are also different, the government should adopt different adjustment measures to regulate the "monopolistic profit" that originates from scarce resources by taking each specific situation into consideration, and the adjustment tax rates that the government applies should also vary accordingly.

We should not think that these resources we are talking about refer to natural resources only. It is relatively easy to understand monopolies can originate from the possession and utilization of natural resources, because natural resources are scarce. However, besides natural resources, other types of resources can be scarce too. For example, technology and information are resources. New technologies and new information are all scarce resources. As another example, labor force can be a scarce resource in a specific area or industrial sector, or capital may be a scarce resource in a specific area during a certain time period. Therefore, if an enterprise has a new technology or a piece of new information that is inaccessible to others, it can be in a monopolistic position due to the scarcity of the resource and hence earns "monopolistic profit." If an enterprise located in a region that has shortages of labor or capital is able to secure the supply of labor or capital, it will also be able to earn "monopolistic profit." As for the "monopolistic profit" in this example, the government should have a different attitude, as the profit is different from that earned by possessing and utilizing scarce natural resources. When determining the tax rate or other adjustment measures, the government should adopt a relatively lenient way and allow such enterprises that earn "monopolistic profit" through the access to new technologies and new information, or through securing sufficient supplies of labor and capital, to retain a relatively large share of their "monopolistic profit." The government should take a relatively small portion or even waive the adjustment tax during a certain time period. It is obviously unfair if the government fails to do so, because it may hurt the motivation of those enterprises that have developed new technologies or secured new information as resources for their businesses or those enterprises that have made significant efforts to secure labor and capital as resources for their businesses in a tight supply environment.

Fourthly, a monopoly originating from scarce resources will experience a waning process. We should note that while one

monopoly originating from one type of scarce resource is waning, another monopoly originating from a different type of scarce resource may develop. As a result, monopolies will always exist in the economy. Therefore, it is necessary for the government to understand the reason why monopolies come and go. Thus, the government can adopt the adjustment measures according to real economic situations, follow the trend of the ups and downs of different monopolies, and minimize potential losses caused by monopolies.

Why does a monopoly originating from a scarce resource gradually lose its power? This issue can be illustrated by the features of different resources. If developing a new technology or obtaining new information leads to a monopoly, sooner or later, the new technology and information will not be scarce any more when it becomes widely known and accessible. If that happens, the enterprises with exclusive access to the technology or information will lose their monopolistic status. If a monopoly formed due to access to sufficient labor or capital in an environment with tight labor or capital supply, it is also unlikely for the monopoly to exist forever, because labor and capital can flow freely in the commodity economy and the profit-seeking principle will direct the flow of labor and capital. Once labor and capital flow under the guidance of this principle, the value of labor and capital will diminish and the monopoly will gradually lose its power.

The most complicated case is the monopoly that originates from scarce natural resources. The constraints of the supply of natural resources, which are different from technology, information, labor, and capital, are likely to allow an entity who possesses and utilizes certain natural resources to maintain monopolistic power for a long time. However, keep in mind that as long as we can achieve breakthroughs in scientific research on substituting some natural resources in a competitive economic environment and apply these substitutes in our daily life, it is still possible for us to see a monopoly that originates from possessing and utilizing some scarce natural

resources gradually lose its monopolistic power, and it is impossible for monopolistic price to rise continuously, as the price elasticity of demand will keep a lid on the price escalation and prevent price from being unilaterally determined by the seller. Even though it is a very slow process for the monopoly that originates from scarce natural resources to lose its power, this trend is unstoppable.

Based on these analyses, the government must adopt flexible measures. From the perspective of supporting fair competition, the government should encourage the development and distribution of new technologies and help disseminate new information to facilitate the demise of the monopolies that originate from technologies and information. The government should also apply economic adjustment measures to regulate the supply and demand of labor and capital and to create opportunities for the free flow of these two types of resources so as to facilitate the demise of the monopolies that originate from labor and capital. As for monopolies originating from natural resources, the government can adopt such measures as supporting the research, experiment, production, and distribution of natural resource substitutes, developing new resources and increasing the potential supplies of new resources. If the government adopts these measures, it will to some extent speed up the waning process of a monopoly that originates from scarce natural resources, which will benefit economic growth as well as consumers. Even enterprises that secure a certain scarce resource via fair competition can benefit from these measures. As a result, the monopolies that still possess some scarce resources would realize that they are still under market competition and thus feel the urge to continue devoting themselves to increasing competitiveness, instead of simply relying on their existing monopolistic position and enjoying the monopolistic privilege.

As we have discussed before, while some monopolies gradually lose their power, others will emerge. Some of them emerge due to the scarcity of certain natural resources, some due to the development of new technologies or information. Thus the government should

actually play the dual roles in dealing with monopolies. That is, it should facilitate the trend that some monopolies lose their power, while appropriately regulating any emerging monopoly, including adjusting income. As long as the economy is in disequilibrium and constraints on resource supply still create monopolies, monopolies will remain. The strategies available to the government in response to monopolies should be two-pronged as we discussed above.

壹 政府在制度创新规范化中的作用

一、商品经济秩序建立过程中的违约现象

在商品经济发展过程中，如果交易活动不采取市场化、契约化的形式，那么经济的发展显然要受到阻碍。关于这一点，前面在论述商品经济秩序建立和制度创新问题时，已经作了分析。现在要考察的是：即使交易活动采取了市场化、契约化的形式，但违约现象却经常发生，那又会给商品经济带来什么样的影响呢？怎样才能解决这些违约事件呢？

违约的后果是很明显的。这不仅使当事人的现实利益受到侵害，更重要的是导致不稳定的预期的增长，从而阻碍以后的交易的进行，阻碍经济联系的扩大。具体地说，假定交易活动中的违约现象增多，以至于对于契约形式的交易产生不信任感，这就会促成现金—现货交易在交易中所占比重的扩大，而现金—现货交易所占比重的扩大恰恰是同商品经济的总的发展趋势不适应的。

导致交易中的违约有多种因素。当经济处于双轨经济体制之下的时候，行政机构对企业和个人经济活动的干预、价格的较大幅度波动、资源供给约束对产品供给的不利影响、与非市场化和非契约化的交易活动有关的追加利益的存在、社会习惯势力对企业和个人经济活动的阻挠，以及对不履行契约的法律约束的缺乏等等，都会导致交易中的违约。双轨经济体制之下经济发生的撕毁承包合同、租赁合同、订货供货合同等现象，或拖欠货款、债款和拒付货款、债款等现象，基本上是由上述因素造成的。当然，在对交易中的违约现象进行分析时，需要区分故意违约和被迫违约这两类不同的情况。但无论哪一种情况的出现，都再一次说明了建立商品经济秩序和在交易活动中进行制度创新的必要性和迫切性。

当经济从双轨经济体制转入新经济体制之后，只要经济仍然处于非均衡状态，即只要资源供给约束或需求约束的情况依旧存在，那么故意违约或被迫违约的现象仍会出现。故意违约在很大程度上同非市场化和非契约化的交易活动所提供的追加利益的存在有关，而这种追加利益的存在又是资源供给约束或需求约束所促成的。在被迫违约的场合，即使违约一方并非旨在获取追加利益，但这仍然同资源供给约束或需求约束

的存在有密切联系。由此可见，要消除交易活动中的违约现象，不仅有赖于商品经济秩序的建立，有赖于相应的制度创新，而且也有赖于经济的非均衡程度的不断减少。

二、作为制度创新主体的政府

前面，在谈到建立商品经济秩序的必要性 and 调整商品经济秩序建立过程中的利益关系时，都对政府作为制度创新主体的作用作了论述。可以对这种作用作如下的概括，这就是：要建立商品经济秩序，必须制定并执行一系列法律、法规，即以交易活动的市场化、契约化来说，这也必须以一定的法律、法规为基础，因此，政府作为制度创新的主体，在制定有关的法律、法规并且在执行这些法律、法规方面发挥自己应有的作用。那么，专就阻碍着商品经济发展的交易活动中的违约现象而言，政府作为制度创新主体，它的作用究竟表现在哪些方面呢？

首先，政府作为交易活动中缔约的一方，必须遵守契约的规定，尊重契约的严肃性，实际上也就是尊重缔约的另一方的地位和权利。交易活动中的契约对双方都具有约束力，政府作为缔约的一方绝非处于高踞于他人之上的地位。政府出面来撕毁合同、撤销合同、违背合同规定等行为，是与商品经济秩序不相容的。政府必须自身成为遵守契约的模范，才能对社会尊重契约的行为起示范作用，也才能具有处理社会上契约纠纷问题的权威性。

其次，考虑到交易活动中的违约事件的发生在若干场合与财产关系不规范等情况有关，因此，政府作为制度创新的主体，在关于建立商品经济秩序的制度创新方面，有必要从规范财产关系着手，加强这方面的立法，并严格执行这些法律，这样就有可能消除某些违约事件。这是因为，正如前面已经一再提到的，如果财产关系不规范，企业的法人地位就难以被确认，企业在交易活动中就难以独立负责，这就为交易活动中的违约造成了各种理由。所以说，在建立商品经济秩序的过程中，关于财产关系的制度创新是最重要的制度创新之一。对违约现象的分析从另一个侧面说明了这一点。

再次，考虑到交易活动中的若干违约事件属于故意违约之例，而造成故意违约的一个重要原因是经济中存在着违背契约就可以轻易地获得追加利益的可能性和现实性。对于诸如此类的违约现象，不能单纯从教育的角度来寻找对策。对缔约的任何一方，不仅需要道德的约束（即

通过所说的“商业信义”的约束），更重要的是需要有法律的约束、经济的约束。政府作为制度创新的主体之一，有必要在维护市场正常秩序和保证契约的履行方面制定有关的法律、法规。如果违约一方经济上的赔偿与受到的处罚大大超过因故意违约而获取的追加利益，以至于每个原来准备故意违约的交易活动参加者不得不重新考虑违约的成本与收益之比，这样也就可以减少违约事件的发生了。

最后，政府作为制度创新的主体，还应当通过立法来消除或减少任何第三方对交易活动中缔约双方的行为的干扰。这种来自第三方的对契约履行过程的干扰，往往是造成违约的另一个原因。应当强调，只要契约本身是符合法律的，那么政府就有责任使契约的履行过程不受局外的干扰。政府的责任在于维护公众的利益，维护市场的公平竞争，防止和取缔交易活动中所出现的违法现象、欺诈行为。如果交易活动中确实存在着这些情况，或者所缔结的契约中有诸如此类的内容，那么也应当通过法律的程序来加以解决，而不能由某个第三者横加干预。

以上关于政府在维护交易活动的市场化、契约化的作用的分析，是从政府作为制度创新主体的角度出发的。但政府的作用不限于此。政府作为经济纠纷裁决者的作用几乎同样重要。

三、作为经济纠纷裁决者的政府

随着经济从双轨经济体制向新经济体制的过渡，政府在交易活动中作为缔约的一方出现的情况将会大大减少。这不仅由于政府的职能转变，即政府作为国家资产所有者的职能同政府作为经济管理者的职能将区分开来，政府对经济的管理将由直接的管理逐步转变为间接的管理等等，而且由于通过财产关系的规范化，国家在某一企业的具体的资源同整个国家的资产区分开来了，某一企业的具体资产的代表者只是这个企业的法人代表，而不再是政府。这样，在租赁合同、承包合同上的国家资产利益的代表者，也就不再是政府主管部门，而是作为出租方（或承租方）、发包方（或承包方）的某个公司、某个具体经济单位。再说，在经济中，各种供货合同、销售合同、借贷合同的签约者也不再是政府主管部门，而是代表国家资产利益的某个公司、某个具体经济单位。应当说，这种情况是正常的，是符合商品经济的性质与商品经济的发展趋势的。

在这样一种新的经济体制之下，政府作为经济纠纷裁决者，在维护

交易活动市场化、契约化中的作用将大大突出。当交易活动中出现违约纠纷时，不管它们是属于故意违约还是被迫违约，都需要得到合理的解决。民间的调解工作当然具有一定的重要性，但政府根据法律对契约中的纠纷进行公正裁决，始终是维持商品经济秩序的有力保障。公正裁决的标志就是以法律为尺度，严明契约的责任，对违约一方采取应有的制约措施，并尽可能降低合同的履行成本，减少契约纠纷给当事人造成的经济损失。

当政府以经济纠纷裁决者的身份出现，并取得参加交易活动各方的信任时，商品经济的运行也会顺畅得多。以前，由于政府的职能没有转变，政府在许多场合以直接参与者的身份出现，并以直接管理方式来干预经济活动时，一旦经济活动中发生了纠纷，矛头全都对准了政府。政府成了被责难的对象。比如说，企业与工人之间发生了纠纷，工人便把企业同政府视为一体，工人与企业间的纠纷（如工资纠纷、解雇纠纷等）就变成了工人与政府间的纠纷；又如，供货企业与购货企业之间发生了纠纷（供货企业不按时按量供货，或购货企业不按时按量付款等），受损失的一方也往往把违约的一方同政府视为一体，这样的纠纷也把政府拉扯到里面去了。在传统经济体制和双轨经济体制之下，这种情况是难以避免的。而在建立商品经济秩序之后，情况肯定会发生变化。如果企业与工人之间因工资或就业问题有了纠纷，那么纠纷仅仅在企业与工人之间存在。当企业与工人之间的纠纷不能得到妥善的解决时，政府便以经济纠纷的裁决者身份出现，处理这一纠纷。同样的道理，当企业与企业发生纠纷、企业与居民发生纠纷时，政府也不介入，只有在这些纠纷得不到妥善解决的情况下，作为经济纠纷裁决者的政府才出现，并着手处理纠纷。由此可见，要保障商品经济的正常运行，作为经济纠纷裁决者的政府可以发挥自己应有的作用。

四、社会主义商品经济中的垄断现象和政府的对策

即使经济由双轨经济体制转入了新的经济体制，在我国所形成的市场也不可能是完全竞争市场，关于这一点，前面已经说明。既然所形成的市场不是完全竞争市场，那就意味着商品经济中的垄断现象是始终存在的。我们只能认为，新经济体制下的垄断现象将少于传统经济体制和双轨经济体制之下，并且垄断现象对经济所带来的损害也将小于传统经济体制和双轨经济体制之下。

为什么会得出这样的论断？难道商品经济秩序还不足以根除经济中的垄断现象吗？难道就不可能进行保证取缔经济中的垄断现象的制度创新吗？提出诸如此类的疑问是完全可以理解的。但我们根据对于非均衡经济的分析，以及对于政府行为非理想化的分析，实际上已经对这些问题作出了回答，即社会主义商品经济中的垄断现象的出现有其经济上的原因，它们既不是单纯依据某种道德的或政治的因素就能加以充分解释的，也不可能仅仅从道德或政治上着手就足以使它们匿迹。

社会主义商品经济中垄断现象产生的最根本原因在于某些资源的稀缺性以及由于这种稀缺性而导致的独占。这是因为，如果资源是充裕的，那么也就不可能形成对这些资源的独占；只要一切经济活动的参加者都有同等的机会利用这些资源，那就必然是公开的、充分的竞争，经济中的垄断现象也就自然而然地失去了存在的依据。在社会主义经济中，垄断，归根到底是对资源的垄断、对生产要素的垄断。经济活动的某些参加者只要垄断了资源，垄断了生产要素，就能垄断地利用这种生产要素生产出来的产品，对它们实行垄断价格。对市场的垄断实际上也就是对资源的垄断，这不仅因为任何产品本身都可以被看成是一种资源，而且因为任何产品既然都是由一定的资源转化而来的，所以任何产品也都可以被看成是一定的资源的体现。因此，只要垄断了某种资源，就可以垄断某些产品，垄断这些产品的市场。

在经济处于传统经济体制和双轨经济体制之下的时候，由于资源稀缺而导致的垄断处处存在。当然，这时还存在由于其他因素而造成的垄断。例如，国家使某些部门、某些企业甚至某些个人处于经济上的特殊地位，或者，某些部门、某些企业甚至某些个人利用行政的权力而在经济方面占据了一定的垄断地位等等，这些都是常见的。商品经济秩序的建立和有关公平竞争的制度创新，目的正在于消除上述垄断现象。但這些方面的努力充其量也只能使上面提到的其他因素所造成的垄断现象消失，比如说，今后国家不再使某些部门、某些企业、某些个人处于经济上的特殊地位了，国家禁止某些部门、某些企业、某些个人利用行政的权力在经济方面占据一定的垄断地位了。但由于资源稀缺而导致的垄断现象，却不是只靠商品经济秩序的建立或通过有关的法律就能消除的。资源稀缺导致的经济中的垄断，可以存在于新经济体制之下。

这说明在商品经济秩序建立后的新经济体制下的市场，仍然是有着不同程度垄断的市场。不同产品市场的垄断程度不会一样，有的市场的

垄断程度较高（如矿产品市场、重型机器市场、化工原料市场），有的市场的垄断程度较低（如轻工业品市场）。还有的市场接近于完全竞争市场（如某些农产品市场），有的市场则几乎是完全垄断市场（如某些公共服务市场）。政府应当注意到这些市场的特点，设法减少经济中仍然存在的垄断现象可能带来的损失。

一般说来，在商品经济秩序建立后，为了减少由于资源稀缺而导致的垄断对经济带来的损失，政府可以采取以下四方面的对策：

第一，政府应当了解经济中的不少垄断现象是由于资源稀缺所引起的，因此，政府有必要根据资源的不同稀缺程度，制定稀缺资源的占有和利用的法律、法规，尽可能造成占有和利用稀缺资源的公平竞争机会，而不应当让某些企业或个人具有对稀缺资源占有和利用的特殊机会，再由它们根据对稀缺资源的特殊占有和利用而形成经济中的垄断。

这就是说，虽然资源的不同程度的稀缺难以避免，但占有和利用这些资源的机会则应当是均等的。除了某些与国家安全等有密切关系的资源的占有和利用需要作特殊处理以外，一般来说，在涉及资源稀缺的经济领域内，应当通过市场竞争，选择条件最适合的企业来占有和利用这些资源。例如，用公开招标投标的方式使条件最适合的企业成为某一项目的投资者或某一产品的生产经营者。

需要指出的是，在若干领域和若干行业中，不一定会出现无数个或许多个竞争者参加角逐的情况。这是因为，根据不同领域和不同行业的生产技术或经营的特点，对竞争者的条件有一定的限制，比如说，资金规模和技术水平都会构成对参加竞争的企业的限制，达不到一定资金规模和一定技术水平的企业自然被排除在竞争之外。但这并不等于否认机会均等原则。要知道，在生产要素流动和自由组合的情况下，如果达不到一定资金规模和一定技术水平的企业采取联合的方式（合并或联营），那么同样有参加角逐的机会，也就是有中标的可能性。

第二，即使占有和利用稀缺资源所进行的生产和经营是通过机会均等条件下的竞争而形成垄断的，但考虑到这种垄断所造成的垄断价格和“垄断利润率”高于完全竞争条件的市场价格和平均利润率，因此政府有必要采取一定的措施，使“垄断利润”的一部分归于财政，并利用这笔收入作为公共基金。

政府以这种方式来对待由于资源稀缺而导致的垄断，是符合资源配置的补偿原则的。这是因为，如果“垄断利润”来自对稀缺资源的占有和

利用，那么政府向占有稀缺资源和利用稀缺资源而获取“垄断利润”的企业征收诸如资源税、调节税之类的税金，将有助于社会经济的协调发展，并有助于稀缺资源的使用效率的提高。问题是，在这种场合，政府是否应该使占有和利用稀缺资源的企业也保留一部分“垄断利润”，即政府是否应该只征收“垄断利润”的一部分，而不把超过平均利润的那部分全部归于政府？根据前面已经提到的必须通过机会均等条件下的竞争才能占有和利用稀缺资源的情况，尤其是企业在占有和利用稀缺资源而进行生产和经营的过程中，需要为组织生产要素而投入一定的追加资源等情况，政府只能取走“垄断利润”的一部分，而不应把超过平均利润的部分全都取走，否则将会使企业失去在这一领域内竞争和经营的积极性，同时也不利于资源利用效率的不断提高。

第三，考虑到资源是多种多样的，不同资源的稀缺程度不同，不同资源的稀缺性形成的原因和途径也不同，因此，政府在对由此而形成的“垄断利润”进行调节时，要按照具体情况制定不同的调节方式，政府在这方面所征收的调节税税率也应有所区别。

我们不当把资源仅仅理解为自然资源。自然资源具有稀缺性，从而对这些自然资源的占有和利用可以形成垄断，对这一点，较易于理解。但除自然资源以外，其他资源同样存在稀缺问题。例如，技术、信息都是资源，新技术和新信息都是稀缺的资源。又如，劳动力对特定的地区和产业部门来说，或者，资金对特定的地区和时期来说，也可能成为稀缺的资源。因此，一个企业，如果掌握了其他企业所不具有的新技术和新信息，那么它就有可能凭借这种稀缺资源的优势而处于垄断地位，并由此获得“垄断利润”。一个能在劳动力或资金较为稀缺的地区得到劳动力供给和资金供给的企业，也同样有可能获得某种“垄断利润”。对于这种“垄断利润”，政府就应当采取与对待占有和利用稀缺的自然资源而获得的“垄断利润”不同的态度。政府制定税率或其他调节措施时，应当采取比较宽松的做法，即容许那些因掌握新技术、新信息而获得“垄断利润”的企业，以及那些因得到充足的劳动力供给和资金而获得“垄断利润”的企业，把较多部分的“垄断利润”保留在自己手中，政府只取走较少的部分，甚至在一段时间内不征收调节税。如果不这样区别对待，显然是不公平的，并且还将挫伤企业掌握新技术和新信息并用之于生产经营的积极性，挫伤企业在劳动力和资金供给比较紧张的情况下通过自己的努力而获得较多劳动力和资金，并把它们组织到生产经营中去的积极

性。

第四，由于某种资源的稀缺而导致的垄断会有一个逐渐减弱的过程。但应当注意到，在因这种资源的稀缺而导致的垄断减弱的同时，因另一种资源的稀缺而导致的垄断却会产生，从而经济中始终存在着垄断现象。因此，政府有必要在了解某种垄断减弱和另一种垄断产生的原因的前提下，根据经济中的实际情况，采取调节措施，顺应垄断减弱和垄断产生的趋势，把垄断可能造成的损失减少到尽可能小的程度。

为什么由于某种资源的稀缺而导致的垄断会逐渐减弱？这可以按照不同的资源的特点来加以说明。如果是因掌握新技术和新信息而形成了垄断，那么毫无疑问，新技术和新信息迟早将传播开来，一旦传播开来以后，它们就不再是稀缺的资源了，从而也就难以再凭借这种稀缺资源而居于垄断地位了。如果是在劳动力或资金比较紧张的情况下，由于得到了劳动力或资金的充裕供给而获得了垄断地位，那么这种垄断也不可能永久存在。这是因为，在商品经济体制之下，劳动力和资金都是可以流动的，利益原则对劳动力和资金的流动起着导向作用。一旦劳动力和资金按照利益原则而流动，原来因劳动力和资金因素的作用而形成的垄断必定会减弱。

问题比较复杂的是因自然资源的稀缺而形成的垄断。与技术、信息、劳动力、资金的情况不同，自然资源供给的有限性很可能使得占有和利用这些自然资源的单位长期居于垄断地位。但要知道，只要有一个竞争的经济环境，只要关于自然资源的代用品的科学技术研究不断取得成就并不断被应用于实际，那么因占有和利用某种自然资源而形成的垄断仍有减弱的可能性，而需求价格弹性的作用也会使由此而形成的垄断价格不可能一直上升，不可能是只由供给一方单独决定的价格。尽管因自然资源而导致的垄断的减弱过程通常是相当缓慢的，但这种垄断在经历一段时间以后而逐渐减弱的趋势则是不可避免的。

根据这些情况，政府的对策必须是灵活的，从维护公平竞争的立场出发，政府应当鼓励新技术的开发和传播，帮助新信息的推广，以促进与技术资源和信息资源有关的垄断的逐渐减弱。政府还应当通过经济调节手段来调节劳动力和资金的供求，为这两种资源的流动创造条件，以促进与这两种资源有关的垄断的逐渐减弱。对于与自然资源有关的垄断，那么政府可以采取的措施主要是鼓励代用品的研究、试制、投产和推广，以及尽可能去发现新的资源，增加这些资源可供利用的数量。如

果政府采取了以上这些措施，因资源稀缺而形成的垄断的逐渐减弱的过程就会适当地加快，这无论对于国民经济的发展还是对于需求者都是有利的。即使对于某些通过机会均等的竞争而占有和利用某种稀缺资源的企业来说，也不是没有好处的。这样一来，某些因资源稀缺而处于垄断地位的企业仍然会感到自己置身于市场竞争的环境之中，它们必须继续致力于提高自己的竞争能力，而不能躺在已经获得的垄断地位之上，单纯依靠这种垄断地位而舒舒服服地过日子。

正如前面已经提到的，在某些垄断逐渐减弱的同时，又会有另一些垄断产生。它们或者是因自然资源的稀缺，或者是因新技术、新信息等等的掌握而产生的，这样，政府在对待垄断方面所起的作用实际上是双重的，即一方面，政府要促进已经形成的垄断的减弱趋势，另一方面，又要对新产生的垄断进行适当的调节，包括收入的调节，只要经济处于非均衡状态，只要资源的有限供给仍然是形成垄断的原因，那么垄断现象就会一直存在，政府对待垄断的应有的对策就是上述的双重对策。

10.2 THE STANDARDIZATION OF INSTITUTIONAL VARIATION AND INSTITUTIONAL INNOVATION

10.2.1 Two Types of Institutional Variation in Institutional Innovation

During the process of establishing the order of the commodity economy, there is an issue related to institutional innovation, which is worth our attention. That is institutional variation. Institutional variation refers to the deviation of the actual institutional innovation from its original design during the development process or shortly after the completion of the development process. The deviation from its original design causes the new institution to fail to perform its expected functions. For instance, in terms of enterprise system innovation, the original design of the leasing system, the subcontracting system, or the shareholding system all took the interests of both owners and managers into consideration and were supposed to motivate enterprises during economic growth. But in reality, the leasing system, the subcontracting system, and the shareholding system all experienced certain variations, resulting in some deviations from their original designs. Another example is the institution innovation for the market, which was originally designed to achieve smooth circulation within distribution channels so as to ensure fair competition and to facilitate the circulation and recombination of production factors. Yet once in place, these institutions more or less changed. Some changes even hindered circulation and blocked fair competition as well as the circulation and recombination of production factors. These are the examples of the so-called institutional variation.

The variation of an institution can be in total or in part. It is hereby referred to as the total or partial variation of the institution

that aims to establish the order of the commodity economy or referred to as the total or partial variation of the institution that occurs to different regions or sectors. Even though partial variation of an institution may occur in some regions or sectors, it is worth further research. People tend to think: Why does the institutional variation occur in that particular region or sector, while not in other regions or sectors? Why some institutions have variations while others don't? Why the variation of the same institution differs across different regions and sectors? Research on institutional variation can help deepen the study of institutional innovation.

With further analysis, it won't be difficult for us to find out that institutional variation is not necessarily a bad thing. It can be either good or bad. Now, the criterion of good or bad is whether it is helpful to the establishment of the order of the commodity economy. Since the institutional innovation we are discussing here refers to the one that aims to establish the order of the commodity economy, the criterion for evaluating the effectiveness of the institutional innovation obviously is whether it meets the needs of establishing the order of the commodity economy. Whether the design of a specific new institution by an institutional innovation sponsor can meet its anticipated needs must be determined by its performance. In this case, the following scenario may arise: During or after an institutional innovation, the original design of the institution innovation performs differently in reality, and hence variation arises during the execution. The variation can turn out to be even better than the original design and can better satisfy the needs of establishing the order of the commodity economy. In addition, it can be conducive to revising the original design and improving and completing the new institution. This type of institutional variation, regardless of whether it is a total or partial variation, should be considered a good thing. However, what we should pay more attention to is a different type of institutional variation, one that prevents the order of the commodity economy from being established, or a bad institutional variation, so to

speak. This type of institutional variation, if we use a derogative term to describe it, can be called "institutional distortion" or "institutional deformation." If we use a colloquial sentence to describe it, it is what people normally say: "These rules are very good, but they are simply off when executed at the grass-root level." Why are they "off?" What do we do when they are "off?" These issues are exactly what we need to resolve in our research on institutional innovation. In the following analysis of institutional variation, we specifically refer to bad institutional variation, or "institutional distortion."

10.2.2 The Primary Cause of Institutional Variation

The primary cause of institutional variation can be analyzed from the following four perspectives: government behavior, enterprise behavior, personal behavior, and market mechanism.

1. Analysis from the Perspective of Government Behavior

Nonidealized government behavior is one of the main causes of institutional variation. As we discussed earlier, we can set aside nonidealized government behavior during the design of an institutional innovation in our analysis and assume that the original design is fairly good, but it has gone off the track during execution. This type of institutional variation is likely to occur in the following three scenarios from the perspective of government behavior:

First, improperly organized government institutions and concomitant ambiguously defined government agencies' responsibilities and functions bring obstruction or even drive them to take action to counter the performance of other agencies with rights and responsibilities endowed by the old institution during an institutional innovation. As a result, even if an institutional innovation is well designed in the beginning, it may be difficult to meet the anticipated requirements during execution. To resolve the issues in this scenario, we should start with political reforms and streamlining government institutions as well as simplifying and clarifying the rights and responsibilities of each government agency. As long as

government institutions remain improperly organized, government agencies will continue to obstruct each other, and institutional variation will be inevitable during an institutional innovation.

Second, the quality and capability of government officials cannot meet the requirements of the institutional innovation. It is relatively easy to understand this point. Many examples have demonstrated that the cause of institutional variation was the relatively poor quality and capability of government officials. Some of them misunderstood the meaning of the institutional innovation, some tackled issues using certain measures that were detrimental to the institutional innovation out of habit, some failed to stick to the original plan due to incapability, and some even pursued undue personal benefit from the institutional innovation, all of which would cause institutional variation. Therefore, it is very important to continuously improve the quality and capability of government officials so as to eliminate institutional variation during the institutional innovation.

Third, there are no complementary measures. Any new institutional innovation must have some complementary measures in place if we are to avoid institutional variation. They are put in place to ensure that the institutional innovation can be completed. However, it is not always necessary to have a complete set of complementary measures in place before we can proceed with new institutional innovations. As a result, institutional variation arises. In this case, can government prepare various complementary measures during the planning of an institutional innovation and then introduce new institution only after these measures take effect? In theory, this is possible. If the government did do that, institutional variation would likely be avoided, at least from this perspective. In reality, however, the situation will be much more complicated than our theoretical assumptions. This is because either the government is unable to precisely predict social and economic changes and the changes of personal behavior after a new institution is implemented or it is impossible for the government to take all contingencies into

consideration. Therefore, the government will always feel that there are not enough complementary measures during an institutional innovation. As a result, it is still possible to see institutional variation.

2. Analysis from the Perspective of Enterprise Behavior

Various institutional innovations brought to the economy are traced to the changing interests of enterprises. In response to an institutional innovation, enterprises normally adopt certain strategies to maximize profits or minimize losses from the new institution. If we assume that enterprises are real goods producers who make their own decisions and are responsible for their profits and losses, they will follow the profitability principle as well as their operating budgets and take action by balancing the profits and losses therefrom. In this case, even though some of the action they take may cross the legal boundary, the profitability principle will direct them to consider the consequences of breaking the law. It is for this reason that they have concerns and are forced to behave to some extent. An enterprise that makes its own business decisions, takes responsibility for its profits and losses, and operates under the guidance of the profitability principle will likely take action pursuant to the existing laws and regulations. Generally speaking, such enterprise behavior will not lead to institutional variation, because they are within the boundary of the existing laws and regulations.

Now, let us analyze the scenario where enterprises have not severed their affiliation with administrative institutions. As enterprises are not responsible for profits and losses, or only responsible for profits but not losses, the profitability principle will have limited impact on their behavior or even fail to work, causing enterprise behavioral shortsightedness and driving some enterprises to potentially ignore the consequences of breaking the law. The results will facilitate or foster institutional variation. In other words, the variation of the proposed institution is closely related to imperfect enterprise operation mechanism as well as enterprise behavioral shortsightedness. Nevertheless, this does not mean that every

enterprise that has not been able to make its own business decisions or take responsibility for profits and losses will break the law. If these enterprises act according to the law, institutional variation will be avoided.

Here, we have to answer two questions. The first one: Why won't the actions of the enterprises that make their own business decisions and are responsible for profits and losses cause institutional variation if such actions are permitted by the law? The second one, why are the enterprises that are not responsible for their profits and losses more prone to violate the law than those who are responsible for their profits and losses?

The first question can be answered as follows: Per our earlier assumptions, institutional variation specifically refers to "institutional distortion," excluding any necessary revisions or additions to the original design of an institutional innovation during the execution process. If enterprises act according to the law, it is likely that they have provided the government with some information that will help improve the institutional innovation. With such information, the government can revise and improve the institution. In this sense, we shall conclude that any action that microeconomic units take within the boundary of the law will help the macroeconomic departments of the government improve and revise their decision-making. This scenario, however, does not fall into the institutional variation that we are discussing here.

The second question can be answered in this way: The question is raised based on the premise that the government regular checks, monitors, and punishes all enterprises for any violation of the law. If the government does not check or monitor any violation of the law regularly nor severely punish lawbreaking activities, any enterprise, even those that are responsible for their own profits and losses, may take action beyond the boundary of the law, which contributes to institutional variation. On the contrary, if the government effectively checks and monitors enterprises for any violation of the law and

severely punishes them for any criminal activity, such as confiscating assets, levying financial penalties, revoking business licenses, and sending enterprise management to jail if necessary, we will likely see far fewer lawbreaking activities of those enterprises that are responsible for their own profits and losses. The enterprises that continue to break the law are those that are not responsible for their profits and losses and that are still controlled by government administrative institutions or quasi-government entities. The lawbreaking activities of these entities will to a large extent account for institutional variation.

3. Analysis from the Perspective of Personal Behavior

Basically, individuals should not be blamed for institutional variation. The reason is quite straightforward. Although everyone may have an opinion about an institutional innovation and take action to maximize profits or minimize losses according to his or her own interests, one person has limited power and his or her actions are not powerful enough to cause institutional variation. Compared to government behavior or enterprise behavior, personal behavior plays a much smaller role in institutional variation.

Yet this is what happens in a normal situation. In any one of the following two situations, personal behavior can still play a relatively significant part in institutional variation:

First, when the behavior of a person is no longer representative of that of an individual person but that of a group of individuals, it will exert a much more significant impact on institutional variation. In this case, the individual, be it a consumer, a provider of production factors, or a resident in a community, will likely act collectively according to their own interests, which will lead to institutional variation.

Second, significant changes of personal expectations or extremely unstable or chaotic personal expectations, despite being personal behavior, may have relatively substantial influences on institutional variation. In this case, changing personal expectations and extremely

unstable or chaotic personal expectations will be reflected by personal consumption behavior or personal saving behavior. Abnormal changes in personal consumption or saving behavior will cause institutional variation. Keep in mind that even if a single person's behavior has limited influence, we cannot ignore the power of demonstration effects. Under such influence, abnormal changes of personal consumption and saving behavior will influence society and potentially create disorder in the economy, which will cause institutional variation.

4. Analysis from the Perspective of Market Mechanism

Imperfect market mechanism is another important reason for institutional variation. We have to keep in mind that the implementation of institutional innovation in the commodity economy is linked to market mechanism in every way. For example, the way in which profits and losses of different institutional innovation sponsors are adjusted is always reflected by market activities. To adjust the various economic relations that an institutional innovation requires is actually to adjust the relations among the various market participants in the marketplace. Resource recombination, or the recombination of production factors, that the institutional innovation aims to achieve, cannot come true without the market playing its role in the commodity economy. All these examples have fully demonstrated that the more perfect the market mechanism, the more likely the institutional innovation will meet its anticipated goals. On the contrary, the more imperfect the market mechanism, the more likely an institutional variation will occur.

In view of the current economic realities in China, it is especially important that we pay attention to the impact of the imperfect market mechanism on institutional variation. Because if the market mechanism is not perfect, the market may fail to accurately reflect all information that market participants need, nor will the market be able to quickly deliver economic information in its entirety to every participant. As a result, even if the government may have fully

considered the redistribution of economic interests after institutional innovation before its proposition and implementation and have made all necessary arrangements, market participants may react in various ways and disrupt the government's arrangements, as they are unable to collect accurate economic information from the market to make right decisions. The reason why variation occurs during the process of institutional innovation is often traced to the imperfection of the market mechanism as well as the consequences therefrom.

In addition, the imperfection of the market mechanism can also be revealed by transactions that are nonpublic, noncontractual, and nonmonetary. Nonpublic, noncontractual, and nonmonetary transactions can bring two outcomes that are detrimental to institutional innovation:

First, such phenomena prevent the government who initiates the institutional innovation from collecting accurate market information, leading the government to some superficial signs that divert the government away from various nonpublic, noncontractual, and nonmonetary transactions that significantly impact the economy. As a result, institutional variation may arise during the implementation of the new institution.

Second, because transactions are done on a nonpublic, noncontractual, and nonmonetary basis, market participants may feel the market lacks transparency and become more uncertain about market prospect, which causes behavioral shortsightedness and leads to some unintended precautionary measures, such as purchasing extra raw materials, storing excess cash, and accelerating the purchases of consumer goods. All of these play a part in causing institutional variation.

The above analysis of government behavior, enterprise behavior, personal behavior, and market mechanism allows us to understand why we cannot simply rely on the original correct design of an institution initiated by institutional innovation sponsors to eliminate institutional variation during the process of institutional innovation.

To minimize and eliminate institutional variation, we need to simultaneously work on government behavior, enterprise behavior, personal behavior, and market mechanism. We should not only improve government institutions, enhance the quality and capability of government officials, and implement complementary measures so that enterprises can be goods producers who are responsible for their own profits and losses but also gradually optimize the market mechanism so that market participants can develop stable expectations of their future.

10.2.3 The Possibility of Standardizing Institutional Innovation

In earlier discussions, we have explained the main reasons for institutional variation and pointed out in theory that we must start with multiple areas to minimize or prevent institutional variation, that is, to standardize institutional innovation. Next, let us analyze these two questions:

First, assuming that an institutional variation has occurred during the process of an institutional innovation, is it possible for us to restore the original design in a certain way after the institution is introduced? Restoring a distorted institutional innovation to its original design is called institutional innovation restoration, or institutional innovation standardization. Second, assuming that we have restored the original design of the institutional innovation by making some adjustments to the variation of the institution, does this mean that the institutional innovation is back on track?

These two questions are worth our attention. They tell us that it is necessary to conduct more in-depth research on the institutional innovation process.

We need to recognize the possibility of institutional innovation restoration, which is to change nonstandardized institutional innovation back to standardized institutional innovation. Institutional innovation restoration is dependent upon how the interests of various groups are adjusted. In the aftermath of institutional variation, the

interests of the sponsor and every other stakeholder of the institutional innovation are somewhat changed. It is the changing interests that make it possible to restore the institutional innovation. To what degree can institutional innovation be restored is contingent upon the actual situation.

Now, let us first look at three possible scenarios of institutional innovation restoration.

1. Let us assume that a new institution to be introduced incurs a variation due to improper government organizational structure, lack of capable or quality government officials, and lack of government complementary measures. When institution variation takes place, the government serving as the institutional innovation sponsor fails to realize its expected benefits. This situation may force the government to take necessary action, such as carrying out government organizational reforms, enhancing the quality and capability of government officials, and initiating complementary measures. These measures will likely restore the institutional innovation. Institutional innovation restoration does not mean the self-adjustment of an institution, but the adjustment to an institution initiated by the government.

2. If the variation of a new institution following its implementation is caused by the fact that enterprises violate the law or that personal expectations are chaotic or extremely unstable, the government will take necessary measures upon seeing institutional variation, because it has not received its expected benefits as the institutional innovation sponsor. These measures include reinforcing legislation and law enforcement, banning various lawbreaking activities, and stabilizing personal expectations. On the other hand, if the government realizes that the main cause of institutional variation is that government administrative institutions are still in control of enterprises, it will initiate enterprise system reform to turn enterprises into economic entities that make their own business decisions and take responsibility for their profits and losses as early as possible. All

of these measures will help restore the institutional innovation. Next, let us look at enterprises and individuals. They may or may not react to a new institution and take action that causes the institutional variation. However, as long as their benefits are still likely to increase under the new institution, they will support the new institution. Especially when the government takes necessary measures to prevent enterprises from breaking the law and to stabilize personal expectations, enterprises and individuals for the sake of their own benefits will gradually avoid the behavior that may cause institutional variation, which supports institutional innovation restoration.

3. If the main cause of institutional variation is the imperfect market mechanism, whether the institutional innovation can be restored or not in this case is dependent on how perfect the market mechanism can be. During the development of the commodity economy, perfecting the market mechanism becomes an inevitable trend driven by market participants' common interests. Therefore, we can come to the belief that the interaction between various interests will likely lead to institutional innovation restoration after an institutional variation occurs.

We need to further point out here that institutional innovation restoration is meant in relation to institutional variation. If institutional variation refers to the degree of deviation of an institutional innovation, institutional innovation restoration will refer to the correction to the degree of the institutional variation or restoring the institutional innovation to its original track to a certain degree. To what degree can an institutional innovation be restored is of course dependent upon the efforts of the government as the institutional innovation sponsor and the corrective action of enterprises and individuals in response to the institutional innovation according to the profitability principle and is also closely related to the degree of the institutional variation. That is, if the degree of the institutional variation upon the implementation of the new institution is relatively low, it will be relatively easy to restore the institutional

innovation. On the contrary, the higher the degree of the institutional variation, i.e., the institutional innovation undergoes significant variations, the more difficult the institutional innovation restoration. In other words, not every institutional variation can be restored to its original design. Sometimes, after going through multiple variations, an institutional innovation cannot be restored to its original design. In that case, it is necessary to carry out a different institutional innovation, namely, to give up restoring the institutional innovation and to start the implementation of a new institution from scratch.

In addition, even if an institutional innovation is restored, it may not necessarily return to its original track. Institutional innovation restoration only means making corrections to an institutional variation to a certain degree. We can explain this by using pendulum as an example. When a pendulum swings back and forth, it may not necessarily swing exactly back to its original position. It may deviate slightly from its original position. Why can't it always return to its original position? Why can't institutional innovation restoration completely eliminate the deviation arising from institutional variation? This exactly illustrates the features of market activities and enterprise and individual behavior.

Keep in mind that it is common that the market mechanism is imperfect from the perspective of market activities. What we see is varying degrees of market imperfection. When we say that the market is becoming perfect, we only mean that the degree of market imperfection is abating. Therefore, regardless of how an institutional innovation sponsor or each stakeholder of the institutional innovation adjusts its behavior according to its own interests in response to an institutional variation, institutional innovation restoration will always be constrained by market imperfection and hence unable to completely eliminate institutional variation. This also reflects the limitation of institutional innovation restoration.

From the perspective of enterprise behavior as well as personal behavior, we cannot ignore the power of behavioral habit. When

institutional variation occurs after enterprises and individuals take their own profits and losses into consideration out of their interests, they will likely develop certain behavioral pattern. For example, some enterprises tend to build excess inventories of raw materials, while some consumers tend to change their consumption and saving habits. These habits, once established, can hardly be changed in a short period of time. They will continue influencing economic activities over some periods of time, that is, the influence tends to persist for some time before disappearing, which also restricts the degree to which the institutional innovation can be restored.

In summary, the study on institutional innovation restoration and its likelihood helps us further understand the features of institutional innovation. Our research on the institutional innovation associated with the establishment of order in the commodity economy as well as on the phenomena where some new institutions or measures underwent significant variations at the beginning while experiencing waning variations later is all related to the issue of institutional innovation restoration. Therefore, our discussions are meaningful. Nonetheless, they are still preliminary. If we want to clarify the relationship between institutional variation and institutional innovation restoration, we will have to analyze every new institution or measure on a case-by-case basis. The overall trend is always straightforward:

During the transition from the product economy to the commodity economy, institutional variation and institutional innovation restoration of varying degrees will exist side by side as long as the government functions properly as the institutional innovation sponsor, and they are not contradictory.

10.2.4 Relative Stability Following Institutional Innovation

After an institutional innovation is implemented, the institution will remain relatively stable for a period of time. The relative stability following an institutional innovation can be called "institutional

equilibrium." Institutional equilibrium means that the institutional innovation sponsor has achieved its goal of adjusting the interests of various stakeholders through institutional innovation and there will be no additional benefits for the institutional innovation sponsor if it continues to reform the institution or propose a new one. As a result, all market participants have reached the consensus that there is no need to pursue further institutional innovation, which leads to relative stability after the institutional innovation.

Now, how long can the relative stability following an institutional innovation last? What kind of situations will break the relative stability and drive another round of institutional innovation? It all depends on whether the objective and subjective conditions have changed and how probable the interests of each stakeholder can be readjusted subsequently. In terms of objective conditions, any change in economic conditions, production technologies, and market environment can bring about the prospect of a new institution and allows a market participant to have an opportunity to realize additional benefits. In terms of subjective conditions, if a market participant as an institutional innovation sponsor has gathered sufficient information about the changes in objective conditions, understood the potential changes of various stakeholders' interests due to the new institutional innovation, the benefits to the economy and to the institutional innovation itself as result of such changes, and developed a realistic plan for the institutional innovation, the subjective conditions for the institutional innovation have become mature. When both subjective and objective conditions are met, the relative stability following the original institutional innovation will fall apart, and a new round of institutional innovation will begin.²

From a purely theoretical perspective, the abovementioned process of "institutional innovation—the relative stability following institutional innovation—new institutional innovation" is well grounded and consistent with the overall trend of institutional innovation. The problem is that objective conditions changed fairly

quickly during the transition from the product economy to the commodity economy. Thus after the institutional innovation was implemented, it was hard to maintain the relative stability for a relatively long period of time. Sometimes, no sooner was an institutional innovation implemented than the request for a new institutional innovation was raised. On the other hand, during the transition from the product economy to the commodity economy, more than one institution needed innovation in order to establish the order of the commodity economy. There were several institutions that underwent innovation at the same time, such as the enterprise system, the financial system, fiscal policies, the employment and wage system, and the social security system. The institutional innovation in these areas impacted each other. Even though an institutional innovation in one area had been implemented at a certain time, it was very difficult to maintain the relative stability for a relatively long time as long as institutional innovations in other areas were still in progress. In other words, even if the relative stability had been realized, it would break apart fairly quickly. The reason is simple: Every institutional innovation is one part of a complete system. An institutional innovation in one area is only a component of the systemic institutional innovation. Therefore, after an individual institutional innovation, it is very difficult to see the relative stability that comes with the implementation of the systemic institutional innovation, and the relative stability after the implementation of the individual institutional innovation is also temporary. If we also take into consideration institutional variation and institutional innovation restoration that we discussed earlier, it will be much easier to understand the transience of the relative stability following an institutional innovation.

Of course, we do not deny the possibility of realizing relative stability after an institutional innovation, nor do we mean that we have to undertake institutional innovation continuously in one specific area, i.e., immediately starting the preparation for another round of

institutional innovation right after an institutional innovation in one area is completed. This is not only impossible but also unnecessary. If we force ourselves to do so, more institutional variations will likely occur, which will not benefit the institutional innovation sponsors as well as each market participant. The reason why we mention the transience of the relative stability following institutional innovation is based on two considerations:

First of all, understanding the transience of the relative stability helps us further understand the significance of coordinating and balancing various institutional innovations in different areas. We cannot think that an institutional innovation in one area will remain for the long term once implemented. The understanding of institutional innovation as a systematic and coordinated project helps us understand that an institutional innovation in one specific area cannot work without a series of other institutional innovations. The transition from the product economy to the commodity economy is dependent upon how well the systematic institutional innovation performs, not simply upon one component or a few components of the systematic institutional innovation. The institutional innovation during the establishment of the order of the commodity economy should be viewed dynamically rather than statically.

Secondly, having understood the transience of the relative stability, we should hold the belief that it is applicable to each particular institutional innovation. To be specific, we cannot require that everything be perfect right from the start or even wait for the perfect condition by postponing the implementation of an institutional innovation, nor can we hope, on the other hand, that a new institution can be launched once and for all, thinking it will last forever with no need for further revision, addition, or improvement after being implemented. The scientific attitude should be as follows: When the time is right, an institutional innovation shall be launched, and there is no need to wait for the new institution to become flawless; after the new institution is implemented, we should understand that it will be

relatively stable over a short period of time and that it will need to be revised, added, or improved according to how well other relevant institutional innovations proceed during economic reforms.

As a result, our understanding of the relative stability following institutional innovation is comprehensive and beneficial to the establishment of the order of the commodity economy.

贰 制度变型与制度创新规范化

一、制度创新中的两类制度变型

在建立商品经济秩序的过程中，与制度创新有关的一个值得注意的问题，就是制度的变型。制度变型是指：一种按照制度创新主体原来的设计而出现的制度创新，或者在它产生的过程中，或者在它形成后不久，就发生了变化，同原来的设计有较大的差异，从而起不到它本来应当起的作用。比如说，在企业制度创新方面，原来设计的租赁制、承包制、股份制等等都是既考虑到所有者的利益，又考虑到经营者的利益，并且力求在经济发展过程中使企业具有较大活力的，但在实际生活中，却发现租赁制、承包制、股份制都有不同程度的变型，同原来的设计有一定的出入。又如，在市场制度创新方面，原来设计的关于促使流通渠道畅通，保证公平竞争的实现，以及有利于生产要素转移和重新组合的若干新制度，一旦产生之后，也在不同程度上变型了，有的甚至成为阻碍流通，阻碍公平竞争，或阻碍生产要素转移和重新组合的制度。这些都可以称为制度变型。

制度变型分为全部的和局部的。这既指一种旨在建立商品经济秩序的制度本身的全部变型或局部变型，也指这种制度在不同的地区和部门全部变型或局部变型。但即使是某个地区和某个部门内发生了某种制度的局部变型，那么这也是值得研究的课题。人们会思考：为什么在其他地区和部门不曾发生制度变型，而偏偏在这一地区和部门发生制度变型呢？为什么有的制度在创新以后没有变型，而有的制度却会变型呢？为什么同一种制度在不同地区和部门变型的程度很不一样呢？对制度变型问题的研究将有助于制度创新问题研究的深化。

再作进一步的分析，不难发现，制度变型并不一定是坏事，即它可能是坏事，也可能是好事。在这里，评判好与坏的标准是有助于商品经济秩序的建立与否。既然我们所讨论的制度创新是指那些旨在建立商品经济秩序的制度创新，那么评价制度创新效果的标准显然就在于能否符合预定的建立商品经济秩序的要求。制度创新主体对某一具体的新制度的设计究竟能否符合预定的要求，必须由实践来检验。这样就不排除下述情况的出现，即制度创新过程中或制度创新以后，原来关于制度创新

的设计同实际情况有出入，从而在实行中发生了变型，这种制度变型反而比原来的设计更符合预定的建立商品经济秩序的要求，并且它有助于修改原来的设计，使创新后的制度完善化。这样的制度变型，不管是全部变型还是局部变型，都应该被认为是好事。但在这里我们要着重考察的，并不是这一类制度变型，而是另一类有碍于商品经济秩序建立的制度变型，即那些可以被称为坏事的制度变型。对于这一类制度变型，不妨用一个贬义词来表示，即称之为“制度的走样”或制度创新的不规范化。如果用通俗的语言来说明，那就是人们口头常说的：“本来是挺好的制度，一到下面，就走样啦！”为什么会“走样”？“走样”以后该怎么办？这正是我们在研究制度创新时要解决的问题。下面，在分析制度变型时，制度变型一词专指贬义的制度变型，即对“制度的走样”而言。

二、制度变型的主要原因

制度变型的主要原因可以从政府行为、企业行为、居民个人行为、市场机制四个方面来进行分析。

（一）从政府行为方面分析

政府行为的非理想化是导致制度变型的主要原因之一。正如前面已经提到的，在作这种分析时，可以把政府在设计制度创新时的行为非理想化撇在一边。我们不妨假定原来的制度设计是较好的，只是在执行过程中走了样。这种制度变型，从政府行为方面来分析，可能与以下三种情形有关：

第一，政府机构组成不合理，从而在实现某种制度创新时，与此有关的各个政府机构职责不明，相互牵制，甚至各自从原来的制度所赋予的职权范围出发，采取彼此抵消作用的行为。这样，即使原先设计的某种制度创新是较好的，但在实现过程中很难符合预定的要求。对于这种情况，应当从政治体制改革和政府机构调整、精简和职责明确化的角度去着手解决。只要政府机构组成仍然不合理，政府机构相互牵制的现象继续存在，制度创新过程中就难免出现制度变型问题。

第二，政府工作人员的素质与能力不能适应制度创新及其实现的要求。关于这一点，是比较容易理解的。不少事例都表明某些制度之所以变型，就与政府工作人员的素质与能力较差有关：他们或者错误地理解制度创新的意义，或者习惯地用一些不利于实现某项制度创新的手段来处理问题，或者由于能力的限制而把工作做偏了，甚至还有可能利用制

度创新而谋取私利，从而导致制度变型。因此，不断提高政府工作人员的素质与能力对于消除制度创新过程中的制度变型是十分必要的。

第三，缺乏配套措施。任何一项制度创新，如果要使它不变型，必须有相应的配套措施。配套措施的作用就在于保证制度创新的实现。然而，并不是在任何情况下都是先有了充分的配套措施，才推出一定的新制度的。于是就会发生制度的变型。那么，政府在设计某项制度创新时，能不能事先就把各种配套的工作做好，使配套措施都生效了，然后再推出新制度呢？从理论上说，这种可能性是存在的。如果真的那样做了，至少从这个角度来看就不容易发生制度变型问题。但在实际生活中，情况要比理论上的假定复杂得多。这是因为，由于政府事先不可能准确地预计到推出新制度之后社会经济的变化、居民行为的变化，以及政府不可能把偶然因素都考虑在内，所以政府在实现某项制度创新时总会感到配套措施之不足，这样，制度的变型仍是有可能发生的。

（二）从企业行为方面分析

经济生活中的各种制度创新都与企业的利益变化有关。企业往往针对某项制度创新，采取一定的对策，以便使自己尽可能在该项制度创新中多得利益，少受损失。假定企业是真正自主经营、自负盈亏的商品生产者，那么它们的行为必然受利益原则支配，受自身的预算的约束，它们的对策也将在衡量利益与损失的基础上被决定和付诸实施。在这种情况下，企业的对策即使有可能超出了法律所容许的范围，但由于企业受利益原则的支配，它们必须考虑违法行为所带来的严重后果，因此它们不得不有所顾忌，在企业行为上有所收敛。自主经营、自负盈亏的企业在利益原则的支配之下，很可能在现行法律、法规所容许的范围内采取一定的对策。但一般说来，这样的企业行为不至于导致制度的变型，因为企业的对策是在现行法律、法规所容许的范围内进行的。

现在，从企业尚未摆脱行政附属物地位的情况来分析。由于企业不负盈亏，或者只负盈、不负亏，所以利益原则对企业行为的约束是有限的，甚至是不存在的。这种情况导致了企业行为的短期化，企业完全有可能不顾后果而采取超出法律容许范围的对策，其结果将是促使制度变型，加剧制度变型。换句话说，所推出的制度的变型是与企业运行机制的不完善与企业行为的短期化密切相关的。当然，这并不意味着一切尚未自主经营、自负盈亏的企业都不会采取法律容许范围内的对策。问题是这些企业如果采取了法律容许范围内的对策，那么也同样不至于导致

制度的变型。

在这里还需要说明两个问题：一是，为什么自负盈亏的或不自负盈亏的企业在法律容许范围内所采取的对策不至于引起制度变型？二是，为什么不自负盈亏的企业比自负盈亏的企业较易于超出法律容许的范围来采取对策？

关于第一个问题，可以这样答复：根据前面所给的假设，即“制度变型”专指“制度的走样”，而不包括原来设计的制度创新因不够完善而在实行过程中所作出的必要的修正、补充。如果企业在法律容许的范围内采取了对策，那么这很可能向政府提供了有助于制度创新完善的信息，使政府对制度进行修正、补充。正是从这个意义上说，微观经济单位在法律容许的范围内采取的对策对宏观经济决策部门工作的改进和决策的修正是有利的。这种情况不在我们所讨论的制度变型问题之列。

至于第二个问题，可以这样来考虑，即这个命题之所以能够成立，以政府对一切违法的企业行为有正常的检查、监督、处罚为前提。假定政府对违法的企业行为缺少应有的检查、监督，处理又不严，那么即使是自负盈亏的企业，也会采取超出法律容许范围的对策，促成制度的变型。反之，如果政府对违法的企业行为检查、监督都很得力，处理又严厉，该没收的没收，该惩罚的惩罚，该取消营业执照的就取消营业执照，企业负责人该被判刑的就判刑等等，那么自负盈亏的企业的违法行为就会大大减少，从事违法活动的企业将主要是那些不自负盈亏的、依然处于行政附属物地位的、带有官办性质的企业。制度变型在很大程度上与它们的违法行为有关。

（三）从居民个人行为方面分析

制度的变型基本上不应该归咎于居民。理由是很清楚的，尽管居民个人对任何一项制度创新都会有自己的评价，也都会根据自己的利益与损失而采取趋利避害的对策，但由于单个居民的力量是有限的，居民个人的行为不至于导致制度的变型。与政府自身的行为、企业的行为相比，居民个人的行为在促使制度变型方面所起到的作用要小得多。

然而，这是就一般情况而言的。如果发生了以下两种情况，那么居民个人的行为对制度变型仍能发生较大的影响。

第一，当居民的行为不再以居民个人的单独行为表现出来，而是以居民的群体行为表现出来时，居民行为对制度变型的影响将显著增大。在这种场合，无论居民是作为消费者、生产要素供给者还是作为生活在

一定环境中的住户，他们出于自身的利益的考虑，都有可能联合采取行动，使制度发生变型。

第二，即使是居民个人的行为，但如果居民的预期发生重大的变化，或者居民的预期紊乱、预期极不稳定，那么这也会对制度的变型发生较大的影响。这时，居民个人的预期变化、预期紊乱、预期极不稳定等等或者表现于居民的消费行为上，或者表现于居民的储蓄行为上，并通过消费行为和储蓄行为的异常变动而促成制度的变型。要知道，居民个人的单独行为的作用虽然有限，但个人行为的示范效应却是不可忽视的。在示范效应之下，单个居民的异常的消费变动和储蓄变动所造成的社会影响有可能给经济带来动荡，从而导致制度的变型。

（四）从市场机制方面分析

市场机制的不完善是制度变型的另一个重要原因。要知道商品经济中的制度创新的实现，无论从哪个角度来看，都与市场机制有关。比如说，制度创新主体的利益与损失的调整，总是通过市场活动而表现出来的；制度创新所要求的各种经济关系的调整，实际上也就是不同的市场活动参加者在市场中的关系的调整；通过一定的制度创新而准备实现的资源重新配置，即生产要素的重新组合，在商品经济条件下，离开了市场的作用也就无法成为事实，等等。这一切充分说明：市场机制越完善，制度创新越有可能符合预定的目的，反之，市场机制越不完善，制度变型的可能性也就越大。

但从我国现阶段的实际情况来看，市场机制不完善对于制度的变型的影响尤其值得注意。由于市场机制不完善，市场既不可能正确地反映参加市场活动的各方所需要的经济信息，又不可能把经济信息迅速地、完整地传递给各方，这样，即使政府在推出某项新制度以前已经就制度创新后的利益再分配问题进行了充分研究，并作了相应的部署，但只要参加市场活动的各方得不到准确的经济信息和不能由此作出判断，那么它们必然会采取各种对策，从而打乱了政府在推出新制度时所作出的部署。制度创新过程中之所以发生制度的变型，与市场机制的不完善以及由此带来的后果有着不可分开的联系。

此外，市场机制的不完善也表现于交易活动的非公开化、非契约化、非货币化等方面。交易活动的非公开化、非契约化和非货币化造成两个不利于制度创新的结果。

第一，这些现象使政府作为制度创新主体在进行制度创新之前得不

到有关交易活动的准确的信息，使政府往往只看到一些表面现象，而忽略了对经济生活有重要影响的各种非公开的、非契约的、非货币的交易行为，从而使得所推出的新制度在实行过程中变型。

第二，由于交易活动的非公开化、非契约化和非货币化，参加市场的各方都会感觉到市场的透明度较低，感觉到市场前景有较大的不确定性，从而导致它们往往采取短期行为，采取本来可以不必采取的预防性措施（如超额购买原材料，超额储存现金，提前购买日用消费品等等），这样也对制度的变型发生作用。

从以上关于政府行为、企业行为、居民个人行为和市场机制的分析可以了解到，要消除制度创新中的制度变型，并不是仅仅依靠制度创新主体原先的正确设计就可以做到的。制度变型的减少和消除，有赖于从政府行为、企业行为、居民个人行为、市场机制等方面共同着手，即不仅需要完善政府机构，提高政府工作人员的素质和能力，推出配套措施，以及使企业成为自负盈亏的商品生产者，而且还需要使市场机制趋于完善，使参加市场活动的各方有较稳定的预期。

三、制度创新规范化的可能性

前面已经说明了导致制度变型的主要原因，并从理论上指出，必须从多方面着手才能减少制度变型的发生或防止制度变型的出现，也就是导致制度创新的规范化。接着，让我们考察这样两个问题：

第一，假定在制度创新过程中已经发生了制度的变型，那么这种被推出的新制度在变型之后还有没有可能通过某种调整而恢复原来的模样？制度创新在扭曲之后返回到预定的轨道上被称作制度创新的复归，或称作制度创新由不规范化到规范化的转变。

第二，假定在制度变型之后通过某种调整而实现了制度创新的复归，那么这是不是意味着制度创新又回到了原来预定的轨道之上呢？

这两个问题是值得注意的。它们表明了制度创新过程的研究很有深入的必要。

应当承认，制度创新的复归，即制度创新由不规范化到规范化的可能性是存在的。制度创新的复归依赖于利益的调节作用。在发生制度变型之后，制度创新主体与受制度创新影响的各方的利益都发生一定的变化，正是这种利益的变化使得制度创新的复归成为可能。至于制度创新复归到什么程度，那就需要根据具体情况才能确定。

现在先考察制度变型之后制度创新复归的三种可能性。

1. 假定所推出的新制度是由于政府机构组成的不当、政府工作人员素质和能力的不足、政府的配套措施跟不上而导致变型的，那么在发生制度变型之后，政府作为制度创新主体的预期利益没有实现，这种情况有可能推动政府在改革政府机构、提高政府工作人员素质和能力、推出配套措施等方面采取相应的措施。通过这种方式而导致的制度创新复归，具有一定可能性。制度创新复归并不意味着制度的自行调整，而是意味着在政府起作用的情况下的制度被调整。

2. 假定所推出的新制度是由于企业的违法行为或居民个人的预期紊乱、预期极不稳定等原因而发生变型的，那么在发生制度变型之后，政府作为制度创新主体，会因为利益的未能实现而采取措施：一方面通过法制工作的加强，取缔各种违法行为，并促使居民个人的预期趋于稳定；另一方面，在政府认识到企业尚未摆脱行政附属地位的情况是导致制度变型的重要因素之后，它将着手企业制度的改革，使企业早日成为自主经营、自负盈亏的经济实体。这些都有助于制度创新的复归。再从企业与居民个人这方面来说，不管在新制度推出后他们是否采取了可能导致制度变型的对策，只要所推出的新制度仍有使他们的利益增长的可能性，他们同样会促使这些利益得到实现。特别是在政府采取了相应的措施，制止企业违法行为和稳定居民个人的预期的情况下，企业和居民个人出于利益的考虑，也会逐渐减少可能导致制度变型的对策，从而推动制度创新的复归。

3. 假定制度变型主要是由于市场机制不完善而引起的，那么这种条件下的制度创新复归将取决于市场机制的完善程度。由于商品经济发展过程中参加市场活动的各方的共同利益都要求市场机制趋于完善，从而市场机制的趋于完善成为参加市场活动的各方的共同利益所驱动的必然趋势，因此可以认为，利益关系将导致制度创新在变型之后有可能复归。

在这里还需要指出，制造创新复归是就制度变型而言的。如果说制度变型是对于制度创新的不同程度的偏离，那么制度创新复归就是对制度变型的不同程度的纠正，也就是按不同的程度回到制度创新的预定轨道上去。制度创新复归究竟能够复归到什么程度，这固然取决于政府作为制度创新主体的努力程度以及企业和居民个人根据利益原则对于自己所采取的对策的修正程度，同时也与制度变型的程度密切相关。这就是

说，如果新制度推出以后，虽然发生了制度的变型，但偏离制度创新的程度较小，那么制度创新的复归也就较为容易。反之，制度变型越厉害，即偏离制度创新的程度越大，制度创新的复归也就越难。换言之，并非任何一种制度变型都有可能向制度创新的原来预定的轨道复归。有时，制度变型过大，制度创新复归也就失去了可能性。这种情况下就需要有另一次制度创新，即不再寄希望于制度创新的复归，干脆从头开始，另外推出一种新的制度。

再说，即使制度创新复归了，它也不一定返回到预定的制度创新轨道之上。制度创新的复归只是意味着对制度变型的某种程度的纠正。举一个例子来说，这就好像钟摆一样，当钟摆向某一侧摆动之后，它可以再摆回来，但不一定摆回原地，而只是偏离原地的幅度小些而已。那么，为什么它不一定回到原地呢？为什么制度创新复归不可能把制度变型所造成的偏离完全消除呢？这正说明了市场活动以及企业行为、居民个人行为的特点。

从市场活动来说，要知道，市场机制的不完善是普遍的，我们所遇到的都是不完善程度不同的市场，如果说市场正在趋于完善，那无非是说市场的不完善程度有所减轻。因此，不管制度创新主体与受制度创新影响的各方在制度变型之后如何根据利益关系的变化而调整了各自的行为，制度创新的复归总要受到市场的不完善性的限制，而不可能使制度变型的程度完全消失。制度创新复归的局限性也正反映于此。

从企业行为、居民个人行为来说，这些行为的惯性作用是不可忽视的。当企业和居民个人已经根据自己的利益与损失的考虑而导致制度发生变型之后，企业和居民个人的行为就会产生某种惯性，比如说，企业超额储存原材料的行为、居民个人的消费行为和储蓄行为的变化等等，在一经开始之后，不是很快就能被扭转过来的，而由此对经济生活发生的影响，也会有一个继续存在的阶段，即通常需要一段时间才能使之消失。这些也限定了制度创新的复归程度。

总之，对制度创新复归及其可能性的探讨有助于我们进一步了解制度创新的特点。在研究与商品经济新秩序建立有关的制度创新时，以及在研究若干新制度、新措施在实现过程中变型程度有可能先增大、后缩小之类的现象时，都涉及制度创新复归问题。因此，这些探讨是有意义的。当然，这里的探讨仍然只是初步。如果要想把制度变型与制度创新复归之间的关系讲清楚，那就需要结合每一项具体的新制度、新措施来

进行分析。但总的趋势始终是明确的。这就是：在从产品经济体制向商品经济体制转变的过程中，在政府作为制度创新主体发挥其应有的作用的条件下，既有制度变型，也会有某种程度的制度创新复归，二者并不矛盾。

四、制度创新后的相对稳定

制度创新实现以后，在一定的时期内可以保持制度的相对稳定。这种制度创新后的相对稳定也被称作“制度均衡”。这是指：制度创新主体原来希望通过制度创新而实现的利益关系的调整这一目的已经达到了，如果继续改变这种制度，再推出新的制度，那么利益关系的再调整不可能使得制度创新主体得到追加的利益，从而参加市场活动的各方中的任何一方都认为没有必要去从事制度创新，这样，制度创新以后的相对稳定局面就会来到。

那么，这种制度创新以后的相对稳定局面究竟会保持多久呢？在什么情形之下会打破这种相对稳定局面，又开始新的制度创新呢？这取决于客观条件和主观条件的变化，以及由于这些变化而引起的利益关系再调整的可能性。从客观条件来分析，经济形势的变化、生产技术条件的变化、市场环境的变化等等都可能提供新的制度创新前景，使参加市场活动的某一方在制度创新的新格局中有获得追加利益的机会。从主观条件来分析，参加市场活动的某一方作为制度创新主体，如果已经掌握了客观条件变化的足够的信息，已经了解到进行新的制度创新可能引起的利益关系的调整以及这种调整对于整个经济的有利性和对于制度创新主体自身的有利性，并且已经具有可供操作的制度创新方案了，那么制度创新的主观条件也已成熟。当主客观条件都成熟时，原来的制度创新以后的相对稳定局面便被打破，一轮新的制度创新就开始了。²

从纯理论的角度来看，以上关于“制度创新——制度创新后的相对稳定——新的制度创新”的过程分析是有根据的，而且也符合于制度创新的总的趋势。问题是在从产品经济体制向商品经济体制转变的过程中，客观条件的变化是相当快的。在制度创新实现以后，很难保持一段较长时间的相对稳定局面，有时，一个制度创新刚实现，新的制度创新的要求就被提出来了。另一方面，在从产品经济体制向商品经济体制转变的过程中，为建立商品经济秩序而有待于创新的制度不止一种，同一时间内正在着手的就有好些项（比如说，有企业制度方面的、金融制度方面

的、财政制度方面的、劳动工资制度方面的、社会保障制度方面的，等等)。各个不同领域内的制度创新相互影响。即使在某一时间内实现了某一方面的某项制度创新，但只要其他方面的制度创新仍在继续进行，那就很难使得某一方面制度创新以后出现较长时间的相对稳定局面，或者说，即使形成了这种相对稳定局面，那么它也是很快就会被打破的。道理很简单，所有这些制度创新都是配套的，某一方面的制度创新只不过是整个制度创新体系的一个组成部分，因此不仅难以形成整个制度创新体系实现以后的相对稳定，甚至个别制度创新以后的相对稳定也只能是短暂的。如果我们再把前面已经讨论过的制度变型、制度创新复归等情况考虑在内，那么制度创新以后相对稳定的短暂性就更好理解了。

当然，这并不是否认制度创新以后出现相对稳定局面的可能性，也不是说必须在某一方面不间断地进行制度创新，即刚刚实现了某一方面的某项制度创新，就立即准备推出新一轮新的制度创新。这样做，既没有可能，也没有必要，假定硬要如此，那只能造成更多的制度变型，对制度创新主体和对参加市场活动的各方都没有好处。我们在这里之所以提出制度创新以后相对稳定的短暂性问题，主要是考虑到以下两点：

第一，认识了这种相对稳定的短暂性，对于各个方面的制度创新的协调、配套的意义也将有进一步的认识。不能认为在某一方面已经实行了制度创新，就有可能使这种新的制度长期维持下来。对制度创新的整体性和协调性的认识，有助于了解某一个个别领域内的制度创新是不能脱离其他一系列制度创新而起到其应有的作用的。从产品经济体制向商品经济体制的转变，取决于整个制度创新体系的成就，而并非仅仅依赖于某一项或少数几项制度创新的实现。在建立商品经济秩序的过程中，对制度创新，应当树立动态的观点，而不应当静止地看待这些创新。

第二，了解到这种相对稳定的短暂性，对于每一项具体的制度创新，都应当持有这样的看法，即一方面不能在一开始时就要求其尽善尽美，甚至为了求其尽善尽美而推迟出台的时机，另一方面不能寄希望于一劳永逸，以为只要推出了某项新的制度，就可以使之长期存在而不必再修正、补充、完善了。科学的态度是：在时机已经成熟时就推出某项制度创新，而不必要求新制度是完美无缺的；在新制度被推出后，对于它的短暂的相对稳定性有所认识，从而随着经济改革的进展，根据其他相关的制度创新的实现情况，及时修正它、补充它、完善它。

这样，对于制度创新以后相对稳定的认识就是全面的、有利于商品

经济秩序建立的。

GLOSSARY 专有名词表

板块论	Thesis of infiltration
保值	Maintain value, capital preservation, preserve capital
边际成本	Marginal cost
边际收益	Marginal revenue
不完全竞争	Imperfect competition
不协调	Mismatch
财政支出	Government spending
差别税率	Differential tax rate
差别利率	Differential interest rate
产品经济体制	Product economy, product economic system
产权关系	Property rights
产出决策	Output decision
产业结构调整	Industrial restructuring
产值	Output value, output
超额需求	Excess demand
超额供给	Excess supply
承包制	Subcontracting system
存货	Inventory
单一市场定价机制	Single-market pricing mechanism
地区经济结构	Regional economy structure
动态均衡	Dynamic equilibrium
二元机制	Dual mechanism
房地产市场（房产市场）	Real estate market
非均衡	Disequilibrium
非瓦尔拉均衡	Non-Walrasian equilibrium
福利	Welfare, benefit
个体户	Small business, small business owner
供给不足	Undersupply, supply gap, insufficient supply
供给结构	Supply structure

供求矛盾 Supply and demand mismatch
固定价格 Fixed price
固定资产 Fixed assets
股份制 Shareholding system
过剩 Surplus
合同谈判成本 Contract negotiation cost
合同履行成本 Contract enforcement cost
红利率 Dividend rate
货币市场 Money market
汇率制度 Exchange rate system
机会成本 Opportunity cost
技术结构 Technology structure
价格改革 Price reform
价格刚性 Price rigidity
价格双轨制 Dual-price system
价格弹性 Price elasticity
价格调节 Price adjustment
价格信号 Price signal
价格预期 Price expectation
兼并 Merger
交易成本 Trading cost, transaction cost
交易活动 Trading activity, transactional activity
结构性失衡 Structural imbalance
紧缩 Deflation
警戒线 Security line
经济的不平衡增长 Unbalanced economic growth
经济的平衡增长 Balanced economic growth
经济结构 Economic structure
经济体制改革 Reform of economic system
经济调节 Economic regulation
经济效率 Economic efficiency
经济运行机制 Mechanism of the operation of the economy
经济增长 Economic growth

经济增长主体 Agents of economic growth

经济资源 Economic resources

经济纠纷 Economic dispute

净收益 Net return

纠偏 Rectification

就业结构 Employment structure

绝对价格水平 Absolute price level

决策权 Decision rights

均衡价格 Equilibrium price

均衡利息率 Equilibrium interest rate

亏损 Economic loss, loss

可支配收入 Disposable income

凯恩斯经济学派 Keynesian theorists

控股制 Controlling shareholder system

劳动生产率 Labor productivity

劳务 Labor services

劳务市场 Labor services market

劳务支出 Labor expenditure

累进制个人所得税 Progressive income tax

历史比例原则 Principle of historical ratios, the history principle

利息率预期 Expected interest rate

利益刚性 Rigidity of interests

利益分配 Interest distribution

利益机制 Interest mechanism

利益原则 Profitability principle

利益约束 Constrained by self-interest

利益主体 Master of one's own interests

联产承包责任制 Household responsibility system

零短缺度 No shortage

零失业率 Zero unemployment

零通货膨胀率 Zero inflation

流通 Circulation

垄断 Monopoly

垄断价格 Monopoly price

垄断利润率 Monopoly profit margin

摩擦 Friction

目标机制 Goals mechanism

目标吸引 Lure of goals

目标原则（优先照顾原则） Goal-priority principle (the priority principle)

内部经济 Internal economy

逆效应 Counter effect

农村产业结构 Rural economic structure

农业合作化 Movement of Agricultural Collectivization

农业生产率 Productivity in agriculture

农产品平准基金 Agricultural production stabilization fund

配额均衡 Rationing equilibrium

偏好 Preference

平衡增长 Balanced growth

平均成本 Average cost

平均分配原则 Equal distribution principle

平均国民收入 Per capita national income

平均技术熟练水平 Average skill proficiency/level

平均收益 Average revenue

企业行为 Enterprise behavior

企业体制 Enterprise system

企业运行机制 Enterprise operation mechanism

企业制度的改革 Corporate institutional reform, corporate reform

缺口 Gap

商品比价 Commodity price ratio, the ratio of the prices of comparable merchandise

商品供给缺口 Commodity supply gap

商品市场 Commodity market

商品需求缺口 Commodity demand shortfall

商品经济体制 Commodity economy

商品经济秩序 Commodity economy order

商品生产者 Goods producer

社会购买力 Societal purchasing power, purchasing power

生产成本 Production cost

生产过剩 Overproduction

生产力水平 Productivity

生产能力 Production capacity

生产要素 Production factor

生产要素的流动 Flow of production factors

生产资料 Means of production

渗透论 Penetration theory

剩余 Surplus

市场单一定价制 Sole market price

市场的优先原则、垄断原则 The priority principle, the monopoly principle

市场不完善 Market imperfection, underdeveloped market

市场化 Market orientation, market-oriented

市场结构 Market structure

市场配额 Market quota

市场调节 Market regulation

市场机制 Market mechanism

市场经济体制 Market economy system

市场缺口 Demand shortfall

市场选择 Market selection

市场引导 Market leading

适度规模经营 Optimal scale management

失业 Unemployment

收入分配 Income distribution

收入决策 Income decision

数量配额 Quantity rationing

数量限制 Quantity constraint

双轨价格 Dual-track price system

双轨经济体制 Dual-track economic system

生产规模 Production scale

生产资料 Production materials
数量—价格调节措施 Quantity-price adjustment measures
数量调节 Quantity adjustment
税后利润 After-tax profit
税率 Tax rate
私营户 Private enterprises, small business owners
所有制改革 Ownership reform
所有制体系 Ownership structure
体制改革 Institutional reform
贴现 Discount
贴现率 Discounting factor
通货膨胀 Inflation
投入决策 Input decision
投资主体 Investment principal
土地所有权 Land ownership
瓦尔拉均衡 Walrasian equilibrium
外部经济 External economy
外汇收入 Foreign exchange earnings, foreign exchange proceeds
外汇市场 Foreign exchange market
完全竞争 Perfect competition
微观经济单位 Microeconomic unit
无效供给 Ineffective supply
无效投资 Ineffective investment
物质生产部门 Material production sector
物质生产领域 Material production
物质资源 Material resources
现金持有定额 Cash holding quota
相对价格水平 Relative price level
消费结构 Consumption composition
消费品市场 Consumer goods market
消费信贷 Consumption credit
销售收入 Sales income
销路 Market potential

小生产者 Small-scale producer, small producer

效力递减 Diminishing effectiveness

效率标准 Efficiency criteria

效率判断 Efficiency judgment

效率增长潜力 Potential in efficiency growth

信贷量 Credit amount

信贷支出 Credit expenditure

信贷规模控制 Credit scale control

信贷配额制 Credit rationing

信贷平衡 Credit market equilibrium

信贷条件 Credit condition

信贷制度 Credit system

信息不完备 Incomplete information

信息成本 Information cost

新经济体制 New economic system

行政改革 Administrative reform

行政机构附属物 Affiliation with administrative institution

行为的长期化 Long-term oriented (behavior), long-term orientation

需求价格弹性 Price elasticity in demand

需求约束 Demand constraint

需求主体 Buyer, purchaser

需求不足 Lack of demand

需求结构 Demand structure

预防性措施 Precautionary measures

预期 Expectation

预期纯利益 Expected net interest

预算约束 Budget constraint

运行机制 Operational mechanism

政府调节 Government regulation

再投资 Reinvestment

增值 Appreciation

政府调节 Government regulation

政府计划 Government plans
指标 Indicator
指导性计划 Nonmandatory planning;
滞后 Lag
滞销 Poor sales
滞涨 Stagflation
制度创新理论 Theory of institutional innovation
制度创新主体 Sponsoring entity of institutional innovation
制度创新复归 Institutional innovation restoration
制度均衡 Institutional equilibrium
制度变型 Institutional variation
转让 Transfer
资金市场 Capital market
资金周转 Fund turnover rate
资源存量 Stock of resources
资源短缺 Resource shortage
资源分配比例 Resource distribution ratio
资源利用效率标准 Efficiency principle of resource utilization
资源浪费 Resource waste
资源配置 Resource allocation
资源配置不当 Resource misallocation
资源配置机制 Resource allocation mechanism
资源投入和组合 Resource input and combination
自主权 Right(s)
指令性经济 Mandatory economy
总量失衡 Aggregate imbalance
自负盈亏 Liable/responsible for one's own profits and losses
自行调节功能 Self-regulatory function
自主经营 Make one's own business decisions
自主经营权 Decision-making right(s)
总供给 Aggregate supply
总需求 Aggregate demand
租赁 Lease

自主经营 Independent management, independent operation

侯仁之（1911-2013），历史地理学家，北京大学教授、中国科学院院士。侯仁之是中国现代历史地理学的重要奠基者和开拓者，主要从事城市历史地理、沙漠历史地理、中国古代地理学史、历史地理学方法论方面的研究，在理论与实践方面为中国历史地理学的发展作出了重要贡献。

主要代表作有《历史地理学的理论与实践》、《历史地理学四论》、《侯仁之文集》、《北平历史地理》等，主编《北京历史地图集》、《北京城市历史地理》等。

“博雅双语名家名作”出版说明

1840年鸦片战争以降，在深重的民族危机面前，中华民族精英“放眼世界”，向世界寻求古老中国走向现代、走向世界的灵丹妙药，涌现出一大批中国主题的经典著述。我们今天阅读这些中文著述的时候，仍然深为字里行间所蕴藏的缜密的考据、深刻的学理、世界的视野和济世的情怀所感动，但往往会忽略：这些著述最初是用英文写就，我们耳熟能详的中文文本是原初英文文本的译本，这些英文作品在海外学术界和文化界同样享有崇高的声誉。

比如，林语堂的*My Country and My People*（《吾国与吾民》）以幽默风趣的笔调和睿智流畅的语言，将中国人的道德精神、生活情趣和中国社会文化的方方面面娓娓道来，在美国引起巨大反响——林语堂也以其中国主题系列作品赢得世界文坛的尊重，并获得诺贝尔文学奖的提名。再比如，梁思成在抗战的烽火中写就的英文版《图像中国建筑史》文稿（*A Pictorial History of Chinese Architecture*），经其挚友费慰梅女士（Wilma C. Fairbank）等人多年的奔走和努力，于1984年由麻省理工学院出版社（MIT Press）出版，并获得美国出版联合会颁发的“专业暨学术书籍金奖”。又比如，1939年，费孝通在伦敦政治经济学院的博士论文以*Peasant Life in China—A Field Study of Country Life in the Yangtze Valley*为名在英国劳特利奇书局（Routledge）出版，后以《江村经济》作为中译本书名——《江村经济》使得靠桑蚕为生的“开弦弓村”获得了世界性的声誉，成为国际社会学界研究中国农村的首选之地。

此外，一些中国主题的经典人文社科作品经海外汉学家和中国学者的如椽译笔，在英语世界也深受读者喜爱。比如，艾恺（Guy S. Alitto）将他1980年用中文访问梁漱溟的《这个世界会好吗——梁漱溟晚年口述》一书译成英文（*Has Man a Future? —Dialogues with the Last Confucian*），备受海内外读者关注；此类作品还有徐中约英译的梁启超著作《清代学术概论》（*Intellectual Trends in the Ch'ing Period*）、狄百瑞（W. T. de Bary）英译的黄宗羲著作《明夷待访录》（*Waiting for the Dawn: A Plan for the Prince*），等等。

有鉴于此，外语教学与研究出版社推出“博雅双语名家名作”系列。

博雅，乃是该系列的出版立意。博雅教育（Liberal Education）早在古希腊时代就得以提倡，旨在培养具有广博知识和优雅气质的人，提高人文素质，培养健康人格，中国儒家六艺“礼、乐、射、御、书、数”亦有此功用。

双语，乃是该系列的出版形式。英汉双语对照的形式，既同时满足了英语学习者和汉语学习者通过阅读中国主题博雅读物提高英语和汉语能力的需求，又以中英双语思维、构架和写作的形式予后世学人以启迪——维特根斯坦有云：“语言的边界，乃是世界的边界”，诚哉斯言。

名家，乃是该系列的作者群体。涵盖文学、史学、哲学、政治学、经济学、考古学、人类学、建筑学等领域，皆海内外名家一时之选。

名作，乃是该系列的入选标准。系列中的各部作品都是经过时间的积淀、市场的检验和读者的鉴别而呈现的经典，正如卡尔维诺对“经典”的定义：经典并非你正在读的书，而是你正在重读的书。

胡适在《新思潮的意义》（1919年12月1日，《新青年》第7卷第1号）一文中提出了“研究问题、输入学理、整理国故、再造文明”的范式。秉着“记载人类文明、沟通世界文化”的出版理念，我们推出“博雅双语名家名作”系列，既希望能够在中国人创作的和以中国为主题的博雅英文文献领域“整理国故”，亦希望在和平发展、改革开放的新时代为“再造文明”、为“向世界说明中国”略尽绵薄之力。

① B EIJING: ITS CHARACTERISTICS OF HISTORICAL DEVELOPMENT AND TRANSFORMATION*

Introductory Remarks

Mr. President of the University of British Columbia,

First of all, allow me to express my deep gratitude to you, and to Mr. Chairman and to all members of the Committee of the Cecil H. and Ida Green Visiting Professorships. Thanks to all of you. It's my great honor to visit your beautiful country. And I feel especially happy to be here, for Canada is the fatherland of the great internationalist, Dr. Norman Bethune, of whom we Chinese people will always deeply cherish the memory. Just forty years ago, Dr. Norman Bethune gave his whole life to the cause of the liberation of the Chinese people. He made himself an important bridge linking China and Canada, which has become the symbol of the ever-lasting friendship between our two peoples. The cause to which he had dedicated his own life has turned out to be victorious in China; and the ideal for which he had worked hard has come to be brought to fruition on the land where he had fought bravely. A new China is forging ahead on a new long march towards her modernization, in spite of all the interferences and obstacles from both inside and outside. To attain our goal, we must learn from the West with modesty all their advanced things. Of course, in this respect, there is quite a lot for us to learn from your country. On the other hand, we must also conserve all the valuable and useful items of the cultural legacy left to us by our own ancestors. Thus in the course of forming our new socialist culture, learning from our own past has been found even more significant and complicated.

On this issue, I want to give a simple but concrete example. That is how we are to build up our people's capital in the new socialist era on the basis of the ancient city of Beijing.

Today I am going to deal with my first topic: "The City of Beijing—A Historical Perspective".

Next time I'll come to my second topic: "The New Metropolitan Planning of the City of Beijing".

The City of Beijing—A Historical Perspective

The city of Beijing has been the capital of the People's Republic of China for only thirty years. But her history can be traced back to remote antiquity.

●Part One: The Pioneers Who Opened Up Beijing Area

As early as half a million years ago, in the place now called Zhoukoudian District, which is located in the southwestern suburbs of Beijing, there lived Chinese ape-men, who are now well-known as "Beijing Man".

In the caves inhabited by Beijing Man were excavated fossils of the skulls and bones of primitive ape-men. Simple tools used by the primitive ape-men and animal fossils were also found out there. These discoveries have provided very important scientific basis for the study of the origin and evolution of mankind. They are not only gems of China's ancient cultural legacy, but also rarities in the treasure-house of the world's culture.

Among these discoveries there are traces of fire used by Beijing Man. In that vast and wild world, Beijing Man succeeded in starting a fire and burning it into raging flames, and learned how to keep fire, thus proclaiming the coming of the age when man would be free from darkness and begin his early cultivation.

Beijing Man made its appearance at the initial stage of primitive

society and lived a gregarious life then. With the simplest tools made of sticks and stone, they engaged themselves in fruit-gathering and hunting, so as to keep themselves alive and breed and bring up their offspring. For this purpose, they had to carry on arduous and tenacious struggles against nature.

Hundreds of thousands of years passed and primitive society evolved into its last stage. About 4,000 years ago, it happened that a few tiny dwelling places began to emerge on the plain near the present-day city of Beijing. This is one of the places where those practicing farming and hunting first settled down. They no longer moved round in search of fruit and wild animals as food. Having settled down there, they started to farm and raise livestock as their chief means of life. These earliest settlers were pioneers who opened up the Beijing Area.

With the rise of productivity, the quantitative increase of surplus products, and the division of labour, there appeared private ownership and a few exploiters who lived on other people's labour. Then primitive society began to disintegrate. At the same time slave society which was the first society with class oppression in human history gradually came into being.

The appearance of the earliest cities marked the formation of slave society.

● Part Two: Beijing's Primitive Settlement—Ji & the Geographical Features of the City of Ji

Over 3,000 years ago, when China was still in her early days of slave society, Beijing's primitive settlement came into existence. At that time, China was basically dominated by the emperors of the Shang Dynasty. In that period, written symbols were invented to keep a record of events. The territory under the rule of the Shang Dynasty covered the area which is now the central part of the North China Plain. The great plain was made up of the alluvial soil left mainly by

the Yellow River and some other smaller rivers. So it is also called the Yellow River Alluvial Plain. The central part of the great plain has generally been called "Zhongyuan"(which means "The Central Plain") in history. The Shang rulers founded their capital on the Central Plain, and the primitive settlement in Beijing was located far in a remote place to its north. But the Shang culture which was chiefly characterized by fine bronze wares and was broadly disseminated also found its way to this far-away place.

At the beginning of the eleventh century B.C., the rulers of the Zhou Dynasty which first started in the highland areas of the middle reaches of the Yellow River and later expanded towards the east, eventually conquered the Shang Dynasty on the great plain. As a result, a more developed country with slave-owning system was established. Beijing's primitive settlement was then becoming larger and larger at a high speed, which was to turn into a famous principality called "Ji". And "Ji" is the earliest name of Beijing found in historical records.

Records of the Grand Historian says that Zhouwuwang, the founder of the Zhou Dynasty, for the first time enfeoffed the duke Zhaogong with the "Ji" area, and this realm was known as "Yan Principedom". Soon the realm Yan became one of the most important states in the north under the rule of the Zhou Dynasty. This state continued for more than 800 years.

Here arises a question we must pay special attention to, that is, how the site of the city of Ji was selected. Or, let's put it in more exact words: what geographical features enabled the primitive settlement of Beijing to expand rapidly and remain prosperous for such a long time without declining.

This is a very interesting question, which has long attracted the attention of both Chinese and foreign geographers. There was scholarly guessing as to the reasons why this spot was chosen and all these can be ignored because we are now fortunate enough to have access to new source material unearthed recently.

Here I cannot but refer to a world-famous scholar who is well-known to the older generation of Canadian geographers. He is none other than Professor Griffith Taylor, who was engaged in teaching at Toronto University for some time.

Before he came to Canada, Professor Taylor had taught at Chicago University for a period of time. And he was elected President of the Association of American Geographers in 1941. In his presidential address delivered to the Association of American Geographers, Professor Taylor talked about the selection of the earlier site of the city of Beijing, on the basis of the result of his personal on-the-spot investigations and research in Beijing. The main content of his presidential address made to the Association of American Geographers was included into a book written by him, which was entitled *Urban Geography*, one of his books dealing with the study of site, evolution, pattern and classification in villages, towns and cities. He devoted several pages to the discussion of the geography of Beijing and paid special attention to the study of the origin and evolution of the city.

On page 26 of the book (2nd ed., 5th imp., 1968), he says,

Pekin offers a fair example of a large city which has developed under temperate conditions in a gigantic plain.... It is difficult to point to any environmental factor which has led to Pekin's dominance over most of the towns in the deltaic deposits of the Huang-ho.... One would have expected the chief northern city to have developed either in the centre of the plain, or near the main river, or possibly at a good harbour on the coast. Pekin fulfils none of these conditions.

In the following two pages, he raised his point of view:

It seems clear that a considerable 'human' element is involved in the choice of the site of Pekin. In early days necromancers ascribed to the site a peculiarly fortunate character.... The magical and political factors(briefly referred to earlier) led to the city's birth, perhaps as far back as 723 B.C. At this time 'Chi' was the capital of the Yen kingdom, according to the Encyclopedia Sinica. Given this start, no other city seems to have arisen to compete with it... (pp. 27, 28)

Finally, he came to the conclusion:

It must be admitted that the choice of the site of Pekin is not due to any marked

environmental factors.... We may perhaps grant that Pekin—situated in a vast region of *uniform* environment—is a good example to suggest that the possibility theory does, under such conditions, explain the facts of geographical distribution. (p. 29)

Forty years have since passed. Over this period, especially since the founding of the People's Republic of China, there have frequently been new archaeological finds and new results in scientific research, which are of great help to the study of the original site of the city of Beijing. It is a pity that Professor Taylor, a scholar so enthusiastic about the study of the geography of the city of Beijing had passed away before he could personally read these new materials. It would be unfair if we should make a criticism of some of Professor Taylor's theses by basing ourselves on the newly-discovered materials. What we need to do is to make full use of all the new concerning materials we have so far grasped, and to make further investigations on the origin of the city of Ji and its characteristics.

For this purpose, it is necessary to make some essential explanations about the location of the city of Ji and its geographical features.

Firstly, the grounds of argument found in the special writings about the exact location of the site of Ji City, written either in Chinese or in other languages, were mostly insufficient and even unreliable. On the basis of the new materials hitherto grasped, the original site of Ji City can be located in the southwestern corner of the present-day Beijing city proper, that is, in the vicinity of the present-day Kwang'an Gate (The Gate of Extensive Peace).

Secondly, this original site is also situated in the southwestern corner of a vast stretch of flat land, which is called the Beijing Plain. To the west, north and northeast of the plain, there are continuous encircling mountains, which remind people of a bay. Seeing this topographical feature, people also name this plain "Beijing Bay". This plain was principally washed by two rivers, the Yongding River on the west, the Chaobai River on the east, which had cut through the hills

and found their ways into the bay. Like the Yellow River, these two rivers are wellknown for their carrying large quantities of silt. The sand and mud carried along by the two rivers gradually silted up the ancient bay and turned it into flat land, which extended southward, linking itself with the alluvial plain formed by the Yellow River.

Thirdly, talking about the conditions for communications, we must take note of the relationship between the Beijing Plain and the great North China Plain. Over the last three thousand years, great changes have taken place geographically in this area. If we fail to see this, we won't be able to really understand the reason why the ancient city of Ji should have developed here.

Now, from the viewpoint of the geographical conditions, it is very easy to go from the North China Plain northward to the Beijing Plain, and vice versa. But at the time when the city of Ji first rose over three thousand years ago, it was difficult for access. At that time, to the south and southeast of Ji City, there were lakes, ponds, swamps and marshes spreading all over, which isolated the city from the south. It was only thanks to the careful cultivation of the hard-working peasants from generation to generation that vast reaches of wet low land in this area were turned into fertile cultivated fields. This is one of the greatest geographical changes the last three thousand years have ever witnessed here. It is a pity that I have no time to elaborate on that point in this talk.

Over three thousand years ago, there was only one way leading from the North China Plain to the Beijing Plain. One had to walk northward along a path to the west of the North China Plain and to the east of the Taihang Mountains. The path was gradually trodden along a narrow belt between the plains and the mountains. The Taihang Mountains mark the east edge of the Shanxi Loess Plateau, from which numerous rivers run eastward, and cutting through the Taihang Mountains, surge over into the North China Plain, where they converge into several bigger rivers and flow into the sea. The rivers which ran through the mountains into the plains formed many alluvial

fans, big or small, and then provided many good points of crossing for the long path on the east side of the Taihang Mountains. One could then walk northward along this long road, get over one crossing site after another, and finally come to the most difficult point for crossing which was situated on a large river. This is the exact place of the ancient ferry-place on the Yongding River. Crossing the river at this point, one would set foot into the Beijing Plain. So this point of crossing was actually the gateway to the Beijing Plain. When he reached the north end of the plain, one would encounter a range of mountains lying to the north and northeast of the plain, which hindered him from going further northward into the mountainous regions.

As a Chinese old saying goes, "there is always a way for people in great straits." In the mountains situated to both the northwest and the northeast of the Beijing Plain there were two passes. The one located to the northwest is called the Nankou Pass (South Mouth Pass). If one entered the mountains by way of the Nankou Pass and went through a long valley, he would come to a place called the Badaling Hill, a part of the Great Wall which is near to Beijing and now frequently visited by tourists. If one got over the gently sloping Badaling Hill and went further northwestward, he would pass through a vast basin area among the mountains and finally get to the Inner Mongolian Plateau.

Shanhaiguan Pass 山海关

Lugou Bridge 卢沟桥

Yongding River 永定河

Chaobai River 潮白河

The entrance to the northeastern mountains is called Gubeikou Pass. Starting from Gubeikou Pass and going northeastward in the mountains, one would cross a chain of hills in undulation and finally

reach the Northeast China Plain.

Besides, there is another way leading to Northeast China. If one started from the Beijing Plain and went onward in an eastern direction along the southern edge of the Yan Mountains, he would come to the juncture of the mountain and the sea, which is now well-known as Shanhaiguan Pass (Mountain-Sea Pass). Getting out of Shanhaiguan Pass and walking northeastward along the coastal corridor, one could come to the plain located in the lower reaches of the Liao River.

From the above-mentioned facts, we can see that when one got across the ancient ferry on the Yongding River in the old times, he could take three different ways onward. Then here arises a very interesting question: Where was the actual juncture of this ancient road?

Under normal circumstances, the juncture of this road should be at this crossing site itself. As a ferry-place, the point of crossing was in effect a hub of communications. With the development of social economy and the ever-increasing exchange of commodities, such kind of the crossing site would provide favourable conditions for the growth and expansion of cities. This is not rare in the history concerning the development of cities in the world. One of the typical examples is the growth of the city of London which was built on the basis of an ancient crossing place on the Thames. If such an inference was reasonable, then the ancient city of Beijing should have first risen on the basis of the ancient ferry-place on the Yongding River. But it was not the case. The ancient city of Beijing did not first start there. Instead of a city, a big stone bridge made its appearance there in 1192. In some Western historical documents, this big stone bridge was called "Marco Polo Bridge", for Marco Polo, the famous traveller from Venice was the first well-known guest from the West who had ever crossed the bridge. This eleven-arched bridge is 266.5 metres in length. This bridge is noted for its magnificent structure, graceful ornament and delicate carving. Marco Polo made detailed descriptions of it in his famous travelling notes. As a result, it became known to the

West.

In Chinese, this big stone bridge is called "Lugou Bridge", which was after the original name of the Yongding River. Now the name of the river itself has long been changed, but the bridge across the river as well as its old name has always remained unchanged, and well-preserved. Here I'd like to mention one thing in passing. It is at "Lugou Bridge" that the Japanese imperialists launched their aggressive war against the Chinese people on July 7, 1937. That is the famous "Lugou Bridge Incident".

The ancient ferry-place on the Yongding River, running under the present "Lugou Bridge", provided favourable conditions for the development of a city. However, it had its disadvantages to the growth of a city at this very point as well. That was the threatening floods of the Yongding River. This is the reason why people altered the name of the river into "Yongding", whose literal meaning is "Tranquility Forever", showing the hope that the river would always remain tranquil and never overflow its banks.

The Yongding River, as a big river, had an unsteady rate of flow. In the rainy season, the Yongding River rose higher and higher, swelled by the water running from the mountainous areas which were to the northwest of the Beijing Plain. Such ancient ferry-place as the crossing site where the present Lugou Bridge is situated stood in the way of the seething and rolling waters. The floods formed a constant menace and an incessant danger to the crossing point in the old times. The ancient people decided that they shouldn't build their city in such a place. They should have their city built up in a place which was close to the crossing site and free from the threat of floods. The place they found was the site of the original settlement which later turned into the city of Ji. As it was located at a hub of communications linking the north and the south, this place had more favourable conditions than its neighbouring settlements. That is why it could develop into a city at a greater speed.

Besides, the original settlement of Ji also had its own local and

regional favourable conditions which enabled it to grow up smoothly in its early stage. For instance, it was positioned on a ridge of the alluvial fan formed by the ancient Yongding River. Moreover, it was situated to the east of a belt of overflowing phreatic water near the alluvial fan. In this area, there were rich sources of water underground. To the west of the city of Ji there was a lake formed by the overflowing phreatic water. It was called the West Lake in the past and is now called the Lotus Pond. The lake led to a stream which ran through the southwest part of Ji City. The small river provided a good source of surface water for the early development of the city of Ji.

From the analysis made above, we can see that the rise of Ji City depended not only on the decisive factors for the social and economic development, but also on the favourable geographical conditions of its own. As these geographical conditions existed objectively, their analysis is possible. If we ignored these geographical conditions, we would find it difficult to explain why the original settlement of Ji should have risen up in this very place.

● Part Three: The Moving Away of the Original Site of the City and the Construction of Dadu City in the Yuan Dynasty

In this part, I'll talk about the historical development of the city at its later stages.

During the long years before the third century B.C. a small enfeoffed principedom called Yan had the city of Ji as its political centre. In the later part of the third century B.C. the State of Yan and all the other states which had been enfeoffed by the Zhou Dynasty were conquered successively by the newly-rising Qin. At this time China evolved into the early stage of feudal society. The first emperor of the Qin Dynasty Qinshihuang founded the first centralized and unified feudal empire with many nationalities living together in China's history.

Feudal society in China, starting from the Qin Dynasty, lasted over 2,100 years in which one dynasty was replaced by another. It was not until 1911 that the last feudal dynasty—the Qing Dynasty—was overthrown. Over these long years, China became split up politically from time to time. That is to say, two or more independent empires co-existed on this territory for some time and vied with one another. But for most of the time in this long period, China was in a state of unification, which promoted the economic and cultural development of the country.

The political centre of the whole country altered several times in the long history. Two out of the cities which acted as capitals were much more important. Chang'an which is known as Xi'an now, used to be the major political centre of the country in the earlier period of feudal society. Only much later did Beijing become the major political centre of the whole country.

Though Chang'an served as the major political centre of the country, Beijing also played an important political role for it occupied a key position to link the Central Plain and the remote regions of the Northeast China. During this period, the dynasties which ruled the Central Plain were mostly established by members of the Han Nationality. As they took agriculture as their chief means of production, they came to a rather advanced stage in social economy and culture. In the meantime, the outlying areas of Northeast China were distributed with several national minorities who were still leading a nomadic life. They were under-developed in production, as they were in a developing stage of slave society. So within China there existed simultaneously two social structures which were in different stages of development and thus often in opposition to each other. Such contradictions could by no means be solved under the old social system. The valiant horsemen of the nomadic tribes, led by their militant and bellicose chieftains, often rode southward over to the Central Plain, forming a threat to the inhabitants who engaged in farming in these areas. Their intrusion threatened to overthrow the

rulers of the areas of the Central Plain. Consequently, the rulers of the Central Plain, when powerful, would often send expeditionary forces against the nomadic tribes inhabiting the remote areas in the North. But they would more often act on the defensive rather than take the offensive. Hundreds of thousands of labourers were driven into the mountains in North China and were forced to build a long-distance bulwark in the mountainous areas for the sake of defence. This is the famous Great Wall. In fact the Great Wall is a witness to one of the most important national contradictions that ever existed in history. And this colossal and magnificent Great Wall built by the ancient labouring people with their own hands has turned into a well-known interesting place which is frequently visited by numerous Chinese and foreign tourists with astonishment, admiration and joyfulness.

From the third century B.C. to the ninth century A.D., the rulers of different dynasties from the Central Plain, when they were powerful, would take the city of Ji as their springboard on their punitive expeditions against the nomadic tribes in the north and northeast. But when the imperial empires in the Central Plain were on the decline or in a state of disintegration, the nomadic tribes from the north and northeast would seize the chance to go all the way downward and ride roughshod over the Central Plain, robbing the people there of their property and even capturing many of them as slaves. In such cases, the rulers of the Central Plain would turn the city of Ji into a defence place of strategic importance. But once the chieftains of the nomadic tribes from the north succeeded in capturing the city of Ji, they would certainly, in their turn, make it a base for advancing onward to the south. Of course, for most part of this millennium, people lived in peace without any wars. In the time of peace and settlement, the city of Ji acted as an important trade centre to link the north and the south, and also played an active part in promoting the cultural exchange between the Central Plain and the remote areas in the north and northeast part of China.

From the tenth century A.D. on, the national minorities living in

Northeast China began to rise up one after another and got stronger and stronger. Soon the leaders of the Qidan Nationality (the Khitans) commanded their troops on a southward expedition and occupied the city of Ji. They changed the name of the city into Nanjing (South Capital) or Yanjing and proclaimed it their "accompanying capital" (the second important political centre) and also took it as a military base for their further southward advancement. This took place in a period called the Liao Dynasty (916-1125) in China's history. At the beginning of the twelfth century, another national minority living in the northeast—the Nuzhen Nationality—sprang up. Before long, they defeated the Qidan rulers and conquered the city of Nanjing of the Liao Dynasty. Then the Nuzhen rulers officially moved their capital to the city of Nanjing and changed its name into Zhongdu (Central Capital). This historical period was called the Jin Dynasty (1115-1234).

The city of Zhongdu of the Jin Dynasty was the last and the biggest city which had ever been built on the original site of the city of Ji. The palatial buildings in the city were luxurious and magnificent. But this new city had a history of less than one hundred years only. Meanwhile, the Mongolian Nationality, a national minority living on the northern plateau, got stronger and stronger, with an outstanding brave man called Genghis Khan as their leader. In 1215, a large group of cavalymen under Genghis Khan broke through the natural barrier at Nankou Pass and rode all the way to the city of Zhongdu. After fierce battle with the garrison troops of the Jin Dynasty, they forced their way into the city. The town was thrown into confusion and the huge and splendid palaces were burned down to the ground.

In 1260, Genghis Khan's grandson called Kublai Khan who was the founder of the Yuan Dynasty in China's history, came to the city of Zhongdu and chose to make it the capital of his dynasty. After careful considering, the emperor took the advice of a Han scholar named Liu Bing-zhong and decided not to build his imperial palace here. As a

learned man with rich knowledge of and practical experience in city construction and with a mastery of many other branches of science and technology, Liu Bing-zhong suggested that a new city should be built on a new place selected in the northeastern suburbs of the original site of the city of Zhongdu. Another brilliant scientist called Guo Shou-jing also took an active part in the planning and building of the new city. When Guo Shou-jing was young, he used to be a student of Liu Bingzhong. As a scientist, Guo Shou-jing was not only good at astronomy and the science of calendar, but also specialized in surveying and water conservancy. Guo Shou-jing and his teacher Liu Bing-zhong cooperated very well with each other and formed a core of leadership in the city construction. They also invited many skilled masons whose ancestors had engaged in masonry for generations from the Taihang Mountains to participate in the construction of the new city. Among these stonemasons, there were two noted folk artisans of stonework by the names of Yang Qiong and Yang Hao. Besides, assisting in the building of the city were some foreign craftsmen who were from Middle Asia. The construction of the new city started in 1267. The new city was named Dadu(Grand Capital), out of which the present city of Beijing grew.

 West Mountains 西山
 Yuquan Hills 玉泉山
 Lugu River 卢沟河

Here I'd like to raise the following two questions, whose answers may help us to have a better understanding of the development of the present city of Beijing.

1. What made them decide to give up the old town of Zhongdu and build the new city of Dadu instead?

2. How was the site of the new city of Dadu selected? How was the planning of the new city made?

Let us discuss the first question now.

Obviously, the reason why they gave up the old town was that the original palaces had been burned down to the ground. They would

rather build a new city with new palaces than to rebuild them on the ruins of the old town. But there was an even more important factor which made them build a new city in a new place. That was the need of new water sources.

When the city of Ji was in its early stage of development, its need for the sources of surface water was limited, as its size and population were not big. The West Lake located near the city and the small river running by the city could quite satisfy the city's demand for water. But great changes took place after the Jin Dynasty founded its capital in this place. To keep up China's ancient tradition, the emperors would have imperial gardens built in connection with the building of the imperial palaces in their feudal capitals. An important factor of building imperial gardens was that they must be embellished with streams, lakes, hills and mounds. If there weren't any natural hills or waters, then artificial lakes would be made by digging into the ground and artificial hills would be piled up with the earth dug out from the lakes. So the lakes and ponds in the imperial gardens were given a fixed name: "the Heavenly Water Pond", which meant that the water of the imperial lakes came directly from the Heaven and that this elemental force was the origin of life. To build imperial gardens, large quantities of water were needed. Thus larger and richer sources of surface water were required. Besides, for the construction of canals leading to the capital sources with plenty of surface water were also needed. The man-made rivers were important channels by which grain collected from the peasants and other articles of daily necessity provided for the royal families, the central governmental institutions and the garrison troops were transported to the capital.

When the rulers of the Jin Dynasty expanded their capital of Zhongdu, they enclosed the river running into the lower part of the West Lake within the city. And they also built their imperial gardens in the west of the imperial palaces. The West Lake as a water source could supply enough water to fill in the imperial lakes. However, it was far from being able to provide the canals with sufficient water.

The rulers of the Jin Dynasty did open up a canal linking the city of Zhongdu eastward to a river called the Chaobai River. Their original plan was to direct water from the Yongding River located to the west of the city. Dams and dykes were built to keep back water. Ditches were dug up to direct the controlled water running to the east. But because of the unsteady flow rate of the Yongding River and the limitation of the low-level technology then, they didn't achieve their desired results with these projects. All the attempts they had made to direct water into the canal all turned out to be unsuccessful. This was the most important reason why the Yuan rulers decided to give up the old town and build a new one.

Now let's come to the second question about the selection of the site of the new city and its planning.

Here I'd like to mention something interesting in passing. When Khublai first came to Zhongdu in 1260, he had no place to live in, as the palatial residence had been burned down to the ground. He had to live in a place not far from the ruined city. This fact was definitely recorded then. (Later the fact was recorded again in the "Biography of Khublai" contained in *The History of the Yuan Dynasty*.) But the exact place where he lived was intentionally ignored for the sake of his security. Now over 700 years have since passed. Over this period, people had no idea where Khublai lived when he first came to Zhongdu. Now having made careful investigations, we discovered that he lived in a summer palace originally built for the emperors of the Jin Dynasty and their royal families, which was built on an expanse of waters on the northeastern outskirt of the capital. This palatial residence during the Jin Dynasty was called Taining Palace (Great Tranquility Palace) whose main building stood on an island in the middle of the lake. The building was named the Lunar Hall, which referred to the mythical palace on the moon. This name also suggested the scenery here which was as beautiful as on a fairy land. Fortunately, this temporary palatial residence outside the capital remained untouched when the Mongolian horsemen forced into the

city of Zhongdu and set fire to the imperial palace inside the city in 1215. The construction of the city of Dadu started in 1267. According to the city planning, the lake around Taining Palace was taken as the centre of the plane designing. This lake was given the name of "the Heavenly Water Pond".

Lugou Bridge 卢沟桥

Lugou River 卢沟河

Nankou Pass 南口

West Mountains 西山

From the planning of Dadu City, we can see clearly that on the east bank of the Heavenly Water Pond was built the emperor's palace while on its west bank stood two groups of palatial buildings facing each other, which were respectively inhabited by the empress

dowager and the crown prince. A small round island situated in the middle of the lake served as the link of the three palaces. A wooden bridge was put up to connect the east end of the island and the east bank of the lake, while another wooden bridge was built to link the west end of the island with the west bank of the lake. To the north of the small island, a stone bridge was built to span the water between the small island and the big island on which stood the main building of the old temporary palatial residence—the Lunar Hall. This big island was called "Jade Flower Island", which was suggestive of a place where there were richly decorated jade palaces and beautiful flowers in blossom. The buildings around the lake were well-distributed, around which was put up a square bulwark encircling these imperial palaces. The bulwark actually formed the imperial city wall.

To the north of the imperial city, there was a larger lake then called Jishuitan (the Water Storing Pond), which had previously interlinked with the Heavenly Water Pond in the imperial city. The construction of the imperial city cut the two lakes apart. A new canal was dug up to supply water for the Heavenly Water Pond. This canal was named the Golden Water River in keeping with the ancient tradition.

The water of the Water Storing Pond was originally from a natural river called the Gaoliang River. Its former course in the lower reaches supplying water for the Water Storing Pond was perhaps filled up or turned into an underground river, in the construction of the city of Dadu. So a new canal was opened up, which ran along the east wall of the imperial city and flew out of the city of Dadu. This new canal was the last part of the Grand Canal, through which the ships and boats carrying grain collected from South China sailed into the city of Dadu and anchored in the Water Storing Pond. The ships and boats also transported goods from the south. So the place on the northeastern bank of the Water Storing Pond and its nearby streets became the most busy market-place in the city of Dadu.

Now we can see that superficially, the summer palace of the Jin Dynasty led to the construction of the city of Dadu in this area. But in fact, the new source of water from the Gaoliang River formed the decisive factor of the selection of city site in this very place.

Here is a thing we must pay special attention to, that is, the determination of the central axis of the city which was of the first importance in the plane designing of the city of Dadu. This central axis went along the east bank of the Water Storing Pond. And the centre of the emperor's palace was fixed on the central axis of the whole city and it occupied the most important position. The apex of the central axis was at the northeastern bank of the Water Storing Pond. This point was taken as the geometric centre of the plane designing of the whole city. Here at this very point was erected a designating building which was called "the Central Pavilion". On the right side of the pavilion was set up a stone tablet on which were inscribed four Chinese characters, meaning "the Central Platform". This shows that when the planning and designing of the whole of the new city were made, a precise plane survey was also made.

To the west of the Central Platform was put up the "Drum Tower". And to the north of the "Drum Tower" was built the "Bell Tower". The drum and the bell were instruments to give the standard time in old days. So the two towers became centres telling the time for the whole city. The fact was also clearly recorded in *Marco Polo's Travelling Notes*.

Once the geometric centre of the whole city was determined, the position of the outer walls of the city was also decided. The construction of the city was basically carried out according to the original planning. Only the east wall slightly drew in for the purpose of avoiding some topographical disadvantages.

The east, west and south walls of the city had three gates each. Its north wall had only two gates. Inside each gate there was a straight main road. These roads in the city formed a criss-cross network of communications which resembled a chessboard. The middle gate of

the south wall was fixed on the central axis of the whole city. The gate was on the central trunk line, which led northward to the emperor's palace. Inside the emperor's palace, only the main halls which were symbolic of the imperial power, were arranged on the central axis, while those less important buildings were symmetrically arranged on either side of the central axis.

Outside the imperial city were arranged many horizontal streets and lanes parallel with each other in between meeting these vertical main roads at right angles. These districts were chiefly living quarters of the local inhabitants. These areas were dotted with many central and local government offices and institutions, temples, warehouses and other public buildings. Only two groups of important buildings were laid out in a planned way. The first group of edifices was positioned inside the south gate of the east wall of the big city. This group of edifices was called the Imperial Ancestral Temple, a place where the emperors offered sacrifices to their ancestors. The other group of buildings was situated inside the south gate of the west wall of the big city. It was called the Altar of Land and Grain, a place where the emperors offered sacrifices to the God of Land and the God of Grain.

This plane arrangement of the city of Dadu was similar to a kind of ideal designing of imperial capitals in the ancient time. This ideal designing was first seen in a book entitled "A Study of Engineering" which came out in the fifth century B.C. This book exclusively dealt with engineering and also referred to the designing of imperial capitals. According to *A Study of Engineering*, the imperial city walls in the four directions must form a square. The wall on each side had three gates. Inside each gate there were three main roads parallel to each other. So the main roads and streets in the city formed a criss-cross network of communications. The imperial city was supposed to face the south. In front of the central point of the imperial city (in the south direction) were located the imperial courts. At the back of the imperial city (in the north direction) were concentrated the market-

places. To the left of the imperial courts (in the east direction) was located the Imperial Ancestral Temple. To the right of the imperial city (in the west direction) was situated the Altar of Land and Grain. It is clear that the planning of Dadu City was made on the basis of this ancient ideal designing and also in the light of the specific conditions of the distribution of lakes and waterways on the spot. This plane arrangement was aimed at placing the imperial palaces on the most important position of the whole city. This designing embodied the absolute power of feudal emperors.

Eight years after the construction of the large-scale well-planned city of Dadu started, Marco Polo came here. He was thought highly of by Khublai and appointed as a high official in the imperial courts of the Yuan Dynasty. In his famous travelling notes, he made a detailed description of the city of Dadu. He called it "Khanbaliq", which meant "the city of the great Khan". His book was read by many people in the West. It is well-known that in the fifteenth century, Christopher Columbus himself hadn't made up his mind to make a voyage to China until he read *Marco Polo's Travelling Notes*. Columbus believed that the earth was round, and thought that he would certainly reach China by sailing westward in a ship, since Marco Polo could succeed in getting to China through going eastward by land. Of course he failed to get to China. But the determination of this brave and talented man led to an unexpected discovery—the discovery of the New Continent.

● Part Four: The City of Beijing in the Ming and Qing Dynasties—A Remarkable Example of the Imperial Capitals for Its Excellent Planning and Designing

The domination of the Yuan Dynasty lasted less than one hundred years only. It was replaced by the Ming Dynasty founded by the Han Nationality. The Ming rulers rose up in the lower reaches of the Yangzi River and made Nanjing their first capital. Then they began their northern expedition. In 1368 they captured the city of Dadu, and changed its name into Peiping (North Pacification). When the third emperor of the Ming Dynasty came to the throne, he decided to move his capital northward to Beijing (North Capital). This is the first time to use the name of Beijing. At this time a large-scale reconstruction of the city was carried out. In 1420 the rebuilding of the city was basically completed.

When the Ming troops first conquered Dadu City, they leveled down the Yuan imperial palaces to the ground. For the sake of defence, they built up a new bulwark on the bottle-neck of the Water Storing Pond, which was positioned 2.5 kilometres inside the original northern city wall.

The reconstruction work consisted of the following items:

1. The emperor's palace was rebuilt, with the original central axis as the central line. The new emperor's palace moved a bit southward, which was later called the Purple Forbidden City (which is now well-preserved and opened up as the Palace Museum). In the Forbidden City, the six great halls symbolic of the imperial power ranged from south to north on the central axis of the whole city. The other buildings were as usual arranged on either side of the six great halls in strict symmetry.

2. With the southward moving of the emperor's palace, the south wall of the imperial city and the south wall of the city of Beijing

proper were also moved southward. And as a result, the imperial city and the big city got larger space each. A new Imperial Ancestral Temple and a new Altar of Land and Grain were respectively put up in the increased space on the two sides of the central trunk line in front of the Forbidden City. The two groups of buildings which were erected in keeping with the old tradition, were more closely connected with the emperor's palace. With these two groups of new buildings, the position of the central trunk line became more conspicuous from the viewpoint of the plane arrangement.

Besides, in the very front of the imperial city was opened up a new T-shape court square, out of which the present Tian An Men Square grew. On the two sides of the court square, many central governmental offices and organs were concentrated symmetrically.

3. As a result of the southward moving of the south wall of the imperial city, there appeared an expanse of open land to the south end of the Heavenly Water Pond. So a new artificial lake was dug out in this place, which linked the Heavenly Water Pond and made it much larger. The original parts of the lake were called the Middle Sea and the North Sea while the expanded part of the lake was called the South Sea. Just to the north of the Forbidden City, a new man-made hill was piled up with the earth dug out from the South Sea and from the moat around the Forbidden City. This hill was named the Jing Hill or the Coal Hill. The middle peak of the Jing Hill is 47 metres in height. It formed a remarkable point of the central axis of the whole city and became the new geometric centre of the rebuilt city.

4. On the old site of the geometric centre of the former Dadu City, a new Drum Tower and a new Bell Tower were put up. The two buildings marked the apex of the central axis of the whole of the new city.

5. While the city was reconstructed, two groups of buildings were put up just to the south of the city. The two groups of buildings stood side by side. The one on the east side was called the Temple of Heaven, a place where the emperors offered sacrifices to the Heaven

and prayed for good harvests. The one on the west side was called the Altar of Mountain and River, a place where the emperors offered sacrifices to the God of Mountain and the God of River. Between the two groups of buildings, there was a central trunk line which led northward straight to the middle south gate of the big city. This entrance was called Zhengyang Gate or Front Gate. In 1553, an outer city wall was built to reinforce the defence of the imperial capital. This newly-built outer city enveloped the Temple of Heaven and the Altar of Mountain and River (which was later called the Xiannong Altar). The old city in the north was called "the Inner City" while the newly-built city in the south was called "the Outer City". The combination of the two cities formed an outline which resembles a Chinese character "凸" meaning "protruding".

With the Outer City built, the central axis of the Inner City extended southward to the due south gate of the Outer City. The new central axis was as long as nearly eight kilometres. The new central line became even more outstanding in the plane arrangement of the old city of Beijing.

With the Outer City built, the construction of the old city of Beijing was fundamentally completed. In 1644, the Qing Dynasty—the last feudal dynasty in China's history—was founded.¹ The rulers of the Qing Dynasty also took Beijing as their capital. They didn't make any more changes in the construction of the city. The city remained as it had been until the liberation of Beijing City in 1949. This is now what we call the old city of Beijing.

(From A Brief History of Chinese Architecture, Vol.1, pp.183-184 采自《中国建筑简史》第一册, 页一八三——一八四)

This old city of Beijing which was developed on the basis of Dadu City of the Yuan Dynasty, has been considered an excellent example of the construction of feudal capitals in China's history. It embodied all the better the absolute power of feudal emperors.

But as a Chinese saying goes, "things will develop in the opposite direction when they become extreme." The planning and designing of the old city of Beijing demonstrated that the autocratic feudalism in Chinese history had gone to its extreme. And this extreme autocracy led to its own collapse.

In 1911, the democratic revolution led by Dr. Sun Yat-sen broke out. It put an end to the domination of feudal dynasties which had lasted over two thousand years in China.

In 1919, the May Fourth Movement broke out in the old city of Beijing. It marked the prelude to China's new democratic revolution.

After 30 years' hard and bitter struggles, the Chinese people succeeded in achieving their liberation in 1949. During the most arduous struggles, many people, including the great internationalist Dr. Norman Bethune, sacrificed their lives.

On October 1, 1949, Comrade Mao Tse-tung solemnly proclaimed

the birth of the People's Republic of China, on the rostrum of Tian An Men Gate (Heavenly Peace Gate). The old city of Beijing became the capital of the People's Republic of China.

We were confronted then with a new question: How should we transform the old capital planned and designed in the interest of the feudal emperors into a new capital of the people who live in the new era of socialism?

We know very well that the guiding principle of the planning and designing of the old city of Beijing was to extol the absolute power or autocratic monarch. Now what should be the guiding principle of the overall planning of the new city of Beijing which serves as the people's capital in the new socialist era?

I'll deal with this question in my next talk.

Thank you very much for your attention.

A Discussion on the New City Plan of Beijing

The transformation of the old city of Beijing started as soon as it was made the capital of the People's Republic of China, to meet the needs of a new era. In addition to the establishment of a special city-planning institution, three guiding principles have been formulated: it must serve first, proletarian politics, second, industrial and agricultural production, and third, the labouring people.

To serve proletarian politics means to turn the old city, which was constructed in the past to satisfy the political needs of the feudal emperors, into a new one which will best suit the political demands of a people's capital in the new era of socialism.

To serve industrial and agricultural production means to turn the old city which used to be the largest consumer centre in the country, into a base for modernised industrial production and centre of well-developed suburban agriculture.

To serve the labouring people means to completely reform the slummy districts swarming with working people in the past, and on an overall scale, give preference in our city planning to those projects of

urban construction which will satisfy the immediate needs in their lives. Under guidance of these three principles, great achievements have been made in both the city planning and the construction of Beijing and profound changes have been brought about in its functions and appearance during the last thirty years. There are experiences of success as well as lessons of disappointment in the process. However, to comment on them at length here would be both unnecessary and beyond my power. As a scholar of the historical geography, the question I would like to put forth for discussion is exactly the one which I posed at the conclusion of my last lecture. I shall repeat it here.

How do we transform an imperial capital which was once planned and designed for the benefit of feudal emperors in the past into a people's capital of the socialist new era? Or rather, in contrast with the theme of glorifying the supremacy of feudal monarchs as illustrated in the city planning of the old Beijing, what new theme should we adopt for the city planning of today's Beijing serving as a people's capital and how can such a theme be effectually materialised?

This problem is not merely one of engineering technology, but above all, one of great significance to the development of history and culture. In China today, with the transformation of social system, the values of an age-old tradition are also undergoing unprecedented changes. We could never imagine that a new socialist culture would drop from the sky, nor could it be transplanted from a certain foreign land. It can only grow up out of its native soil. For instance, isn't the Renaissance, which had its root in ancient Greek and Roman culture, and which, in turn, with a completely new mental outlook, created a great new epoch in European culture of the Middle Ages, such a shining precedent?

In China today, people have also been discussing and looking forward to the advent of a great new era of renaissance, sprouting out of its native soil. Consequently, how to regard one's own historical and cultural heritage becomes a problem of considerable importance.

Our basic principle is critical inheritance. During the long period of feudal society, the Chinese people have created a magnificent ancient culture, which, however, also contains some feudal dregs. It is wrong to accept ancient culture without discrimination, and equally wrong to reject it altogether; the only correct attitude, of course, is to assimilate its essence and discard its dregs, to make the past serve the present and weed through the old to bring forth the new, so as to create a new culture characteristic of the epoch, on the basis formed in the course of history. Naturally, during this process of creating a new culture, it is necessary for us to endeavour to absorb all that is advanced from other countries to serve our own purpose, to use a catch-phrase, "to make foreign things serve China".

So far, we have only touched upon abstract principles. But I've already digressed too far from the point in question. So let us return to it now.

In fact, the old city of Beijing which has been kept intact all through is part of China's historical and cultural legacy. The reconstruction of the city shall also be carried on under the guidance of the principle of critical inheritance. First of all, we should keep one thing in mind; that is, as a people's capital of the socialist new era, it must adopt a theme for its city planning in praise of the people, of their strength, their dignity, of the truth: "The people, and the people alone, are the motive force in the creation of the world." It should not only demonstrate the great creations of the people in the past, but also embody the stark reality that the people have become masters of their country. The fulfillment of this new theme shall serve as a thorough criticism of the old theme centred upon the eulogy of the supremacy of the feudal monarchy.

How to bring about the fulfillment of this new theme is a problem of vital importance in the new city planning of Beijing.

It seems to be a very difficult problem, but actually many valuable experiences have been gathered during the transformation of the old city of Beijing since liberation, and need to be summed up and

brought up to a theoretical height so that they may give further guidance to the city planning and construction of Beijing later on. I shall cite only one example here, the reconstruction of the Tian An Men Square for illustration.

Tian An Men Square is closer to the centre of the city now than in the past.

It was decided in the city planning of an earlier stage after liberation that the reconstruction and extension of Beijing should centre around the old city. Today Beijing's new urban districts have broken the bounds of the former city walls and expanded in every direction. The limit of extension was roughly set at the third suburban ring road which is now under construction. Within this limit, the layout of the streets was to retain, on the whole, the traditional pattern. Beyond it, the main lines of communication were to radiate in all directions. The plane design of the city preserved the traditional character of balance and symmetry, thus enhancing the outstanding position of the Tian An Men Square which used to be a court square in front of Tian An Men, the south gate of the old imperial city. It was nominally a "gate", but in reality, an imperial palace built on a purple terrace. The artisans who undertook the construction of Tian An Men have bestowed upon it such majestic beauty as to illustrate fully the characteristic of ancient Chinese architecture. The feudal emperors' aim in building such an enormous structure on this spot was not merely for the sake of fortification, but also to display the dignity of their kingly abode. According to the tradition of feudal dynasties, here was the so-called "outer court" where receptions of distinguished foreign guests and celebrations of grand occasions took place. The last feudal dynasty, the Qing Dynasty, also used this "outer court" to celebrate the issuing of the imperial edict on the coronation day, that is, to publicise the coronation of a new emperor to the subjects of the kingdom. The imperial edict was placed on a tray carved in the shape of cloud and carried to Tian An Men from the Forbidden City in a miniature "Dragon Pavilion". Then, jubilant music was played on Tian An Men, whose square was strewn with prostrate civil and military officials and "elders" chosen and dispatched here to represent the common people. After the edict was read by the Edict Reader on Tian An Men, it was

placed in the beak of a carved golden phoenix and lowered slowly down along the middle of the gate where it was put back into the "Dragon Pavilion" again and carried to the "Ministry of Rites" to the east of the square, where fair copies of it were made in yellow paper and distributed to the whole kingdom. The sole purpose of this ritual performance was to show that the divine rights of monarchs came directly from the Heaven. This is only an illustration of how feudal emperors used this court square to make a display of themselves and fool the people.

The square was somewhat T-shaped and closely confined by red walls all around, leaving only one entrance on every side for passage. These entrances, however, were strictly forbidden to the common people.

But the dialectics of history is relentless. When the Qing Dynasty was overthrown in 1911, it was this square which had been so strictly forbidden to the ordinary people that became the rallying centre of the revolutionary masses for patriotic demonstrations. And it was here, some sixty years ago, that the May Fourth Movement, which set the new democratic revolution ablaze, broke out. Again, it was here that the last mass movement was launched on the eve of the nation's liberation, against Chiang Kai-shek's attempt to unleash a civil war and his persecution of young students.

1-8 The Qing Dynasty's T-shaped imperial square 清乾隆扩建后的天安门宫廷广场

1-9 Tian An Men Square before redevelopment 改建前天安门广场图

Due to this glorious revolutionary tradition, the Tian An Men Square was chosen to be the site for the grand founding ceremony of the People's Republic of China on October 1, 1949. Subsequently Tian An Men, the magnificent structure erected by labouring people in ancient times, was engraved on the national emblem of the republic to symbolize the renaissance of an ancient culture. The square has been transformed from a feudal court square into a people's square in the new socialist epoch. It has now become the centre of the country's political life, cherished by people of all nationalities.

But, at the time when the founding ceremony was being

celebrated, the square was still confined on all sides by walls which seriously hindered popular activities by obstructing their sight and compressing their hilarious atmosphere within the square. As we look at it today, Tian An Men represents the essence of ancient Chinese architecture whereas those walls represent the dregs of feudalism. We must preserve the essence part and, according to the principle of making the past serve the present and weeding through the old to bring forth the new, weave it into the urban life of the present day, so that it may better serve the people. As to the feudal dregs, we must discard them in order to clear the way for our advance towards a new life.

On October 1, 1959, when we celebrated the tenth anniversary of the founding of the republic, the first transformation project of the Tian An Men Square was brought to a successful termination in accordance with the new city planning programme. After the reconstruction, the old walls on the three sides had disappeared and an entirely new square, many folds larger than the old one, presented itself to the public. It remains on the same premises, but has taken on a brand new appearance. Its magnificent, solemn, spacious and shining physiognomy is the embodiment of the ocean-like mind and overwhelming power of the people. The Monument of the People's Heroes towering in the centre of the square, had been completed a year before. With the People's Conference Hall that represents the centre of popular power on its west side and the Museum of Chinese Revolution and the Museum of Chinese History which serve to praise the people as the motive force in history-making, the square has become the heart of the political life of China's various nationalities, whence were spread abroad the aspirations of the Chinese people.

During the reconstruction of the square, its two wings, the East and West Chang An Streets, were extended accordingly. Thus, the great smooth boulevard now forms a new thoroughfare threading the whole city from east to west. By contrast, it has definitely belittled the traditional thoroughfare which runs across the old city from south to

north. This is as good as thoroughly negating the theme in the design of the old city, thus giving prominence to the unique position of the people's square in the plane layout of the whole city. The Forbidden City, which perched imposingly in the centre of the city during the old days, is now but a "backyard" of the people's square where only in spare time do people come and enjoy themselves in appreciation of the magnificent palaces built by the labouring people of ancient times and the gems of art in store there.

When Chairman Mao's Memorial Hall was completed in July 1977, the people's square was further expanded and endowed with new significance, adding to the serenity and tranquility of the south end. The lofty antique building of Qian Men (or Zheng Yang Men) has been preserved as well as the majestic Tian An Men. But these two age-old gates have now lost their former function as vanguards of the Forbidden City. They now serve with their artistic features as boundary marks of the new people's square on its south and north borders respectively. Once the thoroughfare—South Qian Men Street—from Qian Men to Yong Ding Men is expanded, the prominence of the Tian An Men Square as the centre of the whole city of Beijing will be further enhanced.

The square, which is now still undergoing further planning, is only an example to illustrate that if we persist in critical inheritance on the basis formed in the course of history and in accordance with the principles of making the past serve the present and weeding through the old to bring forth the new, a court square whose theme it was to extol feudal emperors can certainly be transformed into a people's square whose theme it is to praise the strength of the people. By analogy, the city of Beijing whose theme it was to extol feudal emperors, can likewise be transformed into a people's capital whose theme it is to praise the strength of the people.

But we must also acknowledge that there did arise controversies in regard to certain measures taken during the transformation of the old city. Although the demolition of the outer red walls enclosing Tian

An Men Square did not give rise to any dissent, it was not the case with that of the old city walls. When the question of removing the old city walls was first taken into consideration in the new city planning, opinions varied. Now that the city walls have already been removed, we have come to realize through the test of practice that whether it was absolutely necessary to get rid of them is indeed a question worth investigation, especially when part of the city moat has been turned into an undercurrent with their removal, thus reducing the water area in the city, which has proved detrimental to the improvement of its environment. It was particularly true with the moat outside Qian Men which runs through the middle of the city from west to east. If it had been preserved, it would not only have added to the natural beauty of the city, but also promoted its climate conditioning and helped to provide the city with fresh air, which would be extremely advantageous to the improvement of the city's environment and would supply its residents with excellent recreation ground.

It ought to be mentioned here that before the Cultural Revolution, there was a certain project in a district planning for the transformation of Tian An Men Square to bring a section of the moat outside Qian Men into the new plan of the Tian An Men Square. As a result, there would appear in the south of the square, a wooded garden abounding in natural views. If this proposal had been adopted, it would have added to the serenity and tranquility in the southern part of Tian An Men Square by setting off the green lawns around Chairman Mao's Memorial Hall with a riverside park outside Qian Men. But all this has proved to be something irremediable now.

(From Journal of Architecture, 1977, No. 4 采自《建筑学报》1977 : 4)

This is an example which illustrates that during the transformation of the old city of Beijing, there did exist setbacks in our experience which need to be summed up for future reference when we revise the city plan of Beijing. Of course, this is only my personal view on the matter which may not be correct after all. The heartening thing is that we are free to carry on liberal discussions on controversial issues now. A correct conclusion is sure to be brought about through practice as to the truth and falsehood of an issue. There was a time in the past when academic discussion was confused with political problems, which impeded free discussion and brought about harmful results. For instance, when the question of preserving or demolishing the city walls of Beijing was being discussed, those who favoured its preservation were inclined to be labelled as "conservative", "retrograde" or even "reactionary", thus forcing people to refrain from speaking their mind. Consequently, many valuable opinions were stifled, which proved detrimental to our work. This state of affairs was allowed to develop to an incredible degree during the ten years when the "Gang of Four" was in power, especially in the sphere of culture and learning where "ten thousand horses stood mute. It is most encouraging to see that during the last two years there has emerged once more the flourishing scene of allowing a hundred flowers to blossom and a hundred schools to contend. Emancipation of the mind and free airing of views are considered to be vital conditions of accelerating the realisation of the modernisation.

As has been proved by experience, as far as critical inheritance of history and culture is concerned, it is not always so easy to distinguish the essence from the dregs. Therefore, it becomes quite necessary to carry on thorough discussion and free debate on all controversial matters. Only by this can we really tell the right from the wrong and distinguish the essence from the dregs, thus achieving the purpose of making the past serve the present and weeding through the old to

bring out the new. This is also true with the city construction of Beijing, as well as the cultural construction of the whole nation, only the problem is even more complicated.

In concluding my lecture, I would like to repeat the point that I brought up at the beginning of my talk, i.e. a new China is forging ahead towards modernisation along the road of the new Long March. For this purpose, we have to learn from the West everything that is advanced. Likewise, we shall also absorb all that is valuable from our historical and cultural heritage, which is more important and more complicated a problem in the construction of our new socialist culture. We are quite sure to greet the advent of a new era in our country, which may well be termed a "renaissance", by solving the above-mentioned problem step by step in the process.

It is a great pleasure for me to have obtained this opportunity to come here on the kind invitation of your university, and give a very inadequate introduction of one of the problems confronting my country and my people to my most amiable Canadian friends and colleagues, with the aim to help in my small way to promote mutual understanding and cultural exchange between our two countries, which has been my greatest wish.

Once more, let me give my heart-felt thanks to the revered President of the University of British Columbia, the honourable Chairman and members of Cecil H. and Ida Green Visiting Professorships and all who have come to my lecture today.

壹 北京城：历史发展的特点及其改造*

我深感荣幸有此机会来到你们美丽的国家，这是我国人民所难以忘怀的伟大的国际主义战士诺尔曼·白求恩的祖国。整整四十年前，白求恩大夫为中国人民的解放事业，献出了自己宝贵的生命。他是把中加两国连接在一起的重要桥梁，是中加两国人民友谊长存的象征。当初他为之献身的事业，在我国已经取得了伟大的胜利；他的理想，在他战斗过的土地上已经开花结实。一个新中国在不断排除来自内部和外部的一切干扰和破坏，正在一个新长征的道路上，向着现代化的目标努力前进。为此我们就需要向西方虚心学习一切先进的科学技术——在这方面，贵国就有许多值得我们很好学习的地方；另一方面，我们还需要从自己的历史文化遗产中吸取一切有价值的部分，而这一点，在我们建设社会主义新文化的过程中，乃是更为重要和更为复杂的一个问题。

对于这个问题，我希望能用一个显而易见的例子，作个简要的说明，这就是如何在古老的北京城的基础上，建设社会主义新时代的人民首都的问题。为了充分说明这个问题，概括地回顾一下北京城历史发展的过程及其特点，还是必要的。

北京城作为中华人民共和国的首都，刚刚度过了三十周年，然而它的历史却可以追溯到悠久的过去。

一、北京地区开发的先驱

远在五十万年前，北京西南郊的周口店地区，已经有中国猿人生活在那里，这就是举世闻名的“北京人”。

在“北京人”住过的山麓洞穴里，发现了埋藏的丰富的原始人类的化石和他们使用过的工具以及动物化石，这些发现为研究人类起源和发展提供了非常重要的科学依据。这不但是中国远古文化遗产的瑰宝，也是世界文化宝库中的奇珍。

在这些发现中，还有“北京人”用火的遗迹。“北京人”在洪荒的世界里，燃起了熊熊的火焰，宣告了人类黎明时代的来临。

“北京人”处在原始社会的初期，过着群居的生活。他们用木棒和石头所制造的最原始的工具，从事采集和狩猎，以维持自己的生存和抚育后代，为此他们不得不和自然界进行着艰苦顽强的斗争。

经过了几十万年的漫长岁月，一直到原始社会末期，也就是大约四千年前，在北京近郊的平原上，开始出现了一些最初形成的小居民点，这是最早的农民和牧民集居的地方；他们已经从迁移不定的采集和狩猎生活过渡到以农牧为主的定居生活。这些最早的农民和牧民，正是开发北京地区的先驱。

随着生产力的发展和剩余产品的增加，以及社会劳动的分工，开始出现了私有制和极少数不劳而食的剥削者。原始社会开始解体，人类历史上第一个阶级压迫的社会即奴隶制社会逐渐形成。

最初城市的出现，正是奴隶社会形成的标志。

二、北京的原始聚落：蓟及其城址的地理条件

还在三千多年以前，也就是中国奴隶社会的前期，北京的原始聚落已经存在。那时中国的主要统治者，是已经发明了文字记事的商朝。商朝统治的地区，集中在华北大平原的中部，历史上泛称“中原”。对于建都在“中原”的商朝统治者来说，北京的原始聚落还远在北方，可是以青铜器为重要标志的商朝文化，已经传布到这里。

公元前十一世纪初，兴起于黄河中游高原地区的周朝，向东发展，终于征服了大平原上的商朝，继而建立了一个更加发展了的奴隶制国家。北京的原始聚落也就在这时迅速成长起来，这就是日后闻名的蓟城。蓟也就是北京最早见于文字记载的名称。

史书称蓟原是周初在北方的重要封国之一，在蓟的西南方不远、傍近太行山东麓，还有另一个重要封国叫做燕。后来燕国吞并了蓟国，并迁都到蓟城。

在这里有一个需要特别注意的问题，那就是：蓟的城址是怎样选择的？或者更确切地说：究竟有哪些地理上的因素，使得蓟城的原始聚落得以发展起来，历久而不衰？

这是一个饶有趣味的问题，早已为中外地理学家所注意，而且到今天还仍然是一个值得深入探索的问题。

为了说明这一点，不能不提到加拿大地理学家所熟知的一位负有国际声望的学者，这就是曾在多伦多大学任教的澳洲人G. 泰勒教授。

泰勒教授在到加拿大之前，曾任教于美国芝加哥大学，并于1941年当选为美国地理学家协会主席。正是在这一次当选时的就职演讲中泰勒教授根据他实地考察和研究的结果，讲到了关于北京早期城址选择的问题。这次讲稿的主要内容又编入了他所写的《城市地理学》一书中。现在我就从他这本书中引用几段，以说明他对于北京城址问题的看法。

在这部书的第26页上他写道：

要指明北京所以凌驾于黄河冲积平原的绝大部分城市之上的任何环境因素，是困难的。本来可以期待北方的主要城市，或者是在大平原的中心、或者是靠近主要的河流、或者是在沿海的一个良好港口上发展起来。但是这样的条件，北京都不具备。

在以下两页中，他提出了自己的一种看法：

看来在北京城址的选择上，显示包含有许多“人”的因素。在古代，巫师们认为这一城址是特别吉利的。

大约早在公元前723年，由于巫术上和政治上的原因，导致了这个城市的诞生。当时蓟是燕国的首都。以此为起点，似乎再没有其他城市相与颉颃。

最后，他的结论是：

必须承认，北京城址的选择，不是由于任何明显的环境上的因素，……我们或许可以认为北京一位于一个具有同一环境的辽阔地区——是一个很好的例子，暗示在这样的情况下，偶然性的理论说明了地理分布的事实。（第29页）

四十年的时间过去了，在这期间——特别是从新中国建立以来，在研究北京城城址起源的问题上，不断有新的考古发现和新的研究成果可供参考。可惜的是泰勒教授未能来得及看到这些新材料就离开了我们。如果根据这些新发现的材料来批评泰勒教授的某些论断，是不公平的。现在极需要做的是利用到目前为止我们所能掌握的新材料，对蓟城的起源和城址的特点，再作些进一步的探讨。

为此，就需要对蓟城的地理位置及其特征，再作些必要的说明。

第一，过去关于蓟城城址的确切地点，无论是在中文或外文的研究著作中，论证多不可靠。到目前为止，根据所掌握的新材料，可以确定蓟城的故址，就在今日北京市区的西南隅，相当于现在广安门附近的一带地方。

第二，这一城址的位置，也正好处于附近一个小平原的西南隅。这个小平原，可以称之为“北京小平原”。从地形的特征来看，也有人叫它做“北京湾”。因为这个小平原的西、北和东北三面，有丛山环抱，其形

势有如海湾。二三百万年前，这里也确曾是一个海湾，海湾的东西两侧，各有一条大河，切开山岭，注入海湾。东边的一条河，现在叫做潮白河，其下游曾是旧日南北大运河的一段。西侧的一条河，现在叫做永定河，也和黄河一样以携带泥沙之多而闻名。这两河所携带的泥沙，逐渐把这个古代的海湾淤为平地，向南与黄河冲积平原连成一片。

第三，这个北京小平原和华北大平原的关系，从交通条件来看，是特别值得注意的一个问题。因为三千年来这里的地理情况，已经发生了巨大的变化。看不到这一点，就不能真正理解古代蓟城之所以在这里发展起来的原因。

根据现在的地理情况来看，从华北大平原北上进入北京小平原，或者从北京小平原南下华北大平原，无处不可通行。但是在三千年前，当蓟城开始兴起的时候，情况就大不一样了。那时蓟城的南面和东南一带，湖泊沼泽，星罗棋布，阻隔了一切南北来往的道路。只是在世代勤劳的农民长期经营之下，大片湖沼低地才被改造为肥沃的良田，这是三千年来地理景观上的一大变化，只是在这里无暇细讲了。

且说在三千年前，假如有人从华北大平原北上进入北京小平原，就只有一条道路可以畅行无阻，那就是沿着华北大平原的西侧和太行山的东麓，步行北上。这条道路是沿着高山与平原之间的一条狭长地带逐渐发展起来的。太行山标志了山西高原的东部边缘，高原上的无数河流，大体都是自西而东，切穿了太行山，奔腾而下，注入大平原，然后汇集入海。河流出山之后，形成了或大或小的冲积扇，为太行山东麓的南北大道，提供了良好的渡口。沿着这条大道北上，越过一个又一个的渡口，最后来到最大河流上的一个最难越过的渡口，这就是永定河上的古代渡口。越过这个渡口之后，就进入了北京小平原。因此这个渡口就等于是小平原的门户。一旦进入小平原之后，如果还要继续前进，越过崛起于小平原北面和东北面的崇山峻岭，以到达遥远的山后地区，那就必须在有天然峡谷提供了南北通道的地方，才有可能。

正如乐观的中国劳动人民一个谚语所说的那样，“天无绝人之路”。在北京小平原的西北隅和东北隅，各有一处山峡缺口。在西北隅的一个叫做南口，从南口入山，穿过一段峡谷，翻过平缓的八达岭——也就是离北京最近的一段“万里长城”所在的地方——转向西北，经过一带宽阔的山间盆地，可以直上内蒙古大高原。

Beijing 北京

Ji City 蓟城

Nankou pass 南口

Gubeikou Pass 古北口

Shanhaiguan Pass 山海关

Lugou Bridge 卢沟桥

Yongding River 永定河

Chaobai River 潮白河

在东北隅的一个叫做古北口，从古北口入山，偏向东北，穿过连绵不断的丘陵山地，就进入了东北大平原。

此外，还有一条大道，从北京小平原一直向东，沿着燕山南麓前

进，直到山与海相接的地方，便是现在有名的山海关。出山海关，沿滨海走廊向东北，直达辽河下游平原。

在说明了上述情况之后，这里就出现了一个饶有趣味的问题，即从华北大平原沿太行山东麓北上的大道，在渡过永定河的古代渡口之后，随即分歧为三，继续前进，那么这个大道的分歧点，应该在哪里？

在一般的情况下，这个大道的分歧点，应该就在渡口上。作为这样的一个渡口，实际上也就是来往交通的枢纽。随着社会经济的发展，交换关系日趋频繁，这样的一个渡口，也就为一个城市的成长，提供了有利的条件。这种情况，在世界城市的发展史上是不乏其例的。例如从泰晤士河的古代渡口上发展起来的伦敦城，就是一个典型的例子。如果这一推断是合理的，那么北京城本来就应该从永定河的古代渡口上成长起来，然而事实并不如此。北京城并没有在这里成长，代替了一个城市而在这里出现的，是公元1192年才在这里建造起来的一座大石桥，去今也已七百多年。这座大石桥在某些西方文献中也叫做“马可·波罗桥”，因为威尼斯的旅行家马可·波罗（1254—1324）是第一个从这座大桥上经过的享有盛名的西方客人。这座长达266.5米、共有十一孔的大石桥，造型壮丽，雕饰精美，马可·波罗在他那部著名的旅行记里，曾有详细的描述，因而传名于西方。

在中国，这座大石桥叫做卢沟桥。“卢沟”乃是建桥时永定河原有的名称，现在河流本身的名称虽然改变了，可是河上的石桥却以其原有名称，十分完好地保存到今天。在这里特别值得一提的，是1937年7月7日，日本帝国主义者，捏造了一个借口，从卢沟桥畔发动了对中国人民的侵略战争，这就是举世周知的“卢沟桥事变”。以此为起点，中国人民在中国共产党的领导下，进行了八年之久的抗日战争，并且取得了最后的胜利。就是在这次战争的初期，白求恩大夫就在离卢沟桥西南只有一百六十多公里的太行山中的一个农村——黄石口村，为中国人民献出了他宝贵的生命。

卢沟桥所代表的永定河上的古代渡口，虽然为一个城市的成长提供了有利的条件，但是也还有一个不利的因素，排斥一个城市在这里成长，这就是永定河的洪水威胁。

永定河虽然是一条大河，但是它的流量极不稳定，每当雨季，特别是遇到暴雨在北京西北山区集中下降的时候，永定河的洪水猛涨，从出山之口，一泻而下，卢沟桥所代表的古代渡口，首当其冲。正是由于这

种不可避免的洪水威胁，就把原来是应该在古代渡口上成长起来的城市，排斥到过河之后去渡口最近而又开始不受洪水威胁的地方，这个地方就是蓟城的原始聚落所在处，而这里也就成为古代南北交通的枢纽。正是因为这个枢纽地位，蓟城才能超越附近其他居民点而迅速地发展起来。

其次，也要看到蓟城的原始聚落，还有一些局部的有利条件，使它在早期的发展中得以顺利成长。例如它不仅位于古代永定河冲积扇的背脊上，而且还靠近冲积扇上一条潜水溢出带的东侧，这里既有丰富的地下水源，便于凿井汲取，同时在西郊还有一个清澈的小湖，古称西湖，现在叫做莲花池。这个小湖就是潜水溢出所形成的，它的下游是一条小河，正好流经蓟城西南侧，又为蓟城的早期发展，提供了良好的地表水源。

根据以上的讨论，可以说明：蓟城的兴起，除去社会经济发展的决定因素外，它还具备了必要的地理条件。这些地理条件，都是客观存在的，因此也是可以分析的。忽略了这些地理条件，就难以说明北京的原始聚落之所以在这里成长的原因。

以上是在讨论北京城的历史发展时所必须交代清楚的一个问题，如果有不妥之处，还希望得到同行们的批评和指教。

三、原始城址的迁移和元朝大都城的兴建

在分析了蓟城——也就是北京原始城址的地理条件之后，我们再来继续探索这个城市的历史发展。

公元前三世纪晚期，以蓟城为统治中心的燕国，和其他一些为周朝所分封的同一性质的侯国，都先后为新兴的秦所征服。这时中国已经进入封建社会的初期。秦朝的统治者秦始皇，在中国历史上创建了第一个中央集权的、多民族的、统一的封建国家。

从秦朝开始，封建王朝相继更迭，一直延续了二千一百多年，到本世纪初，也就是1911年，最后一个封建王朝——清朝才被推翻。在这期间，中国的政局有时陷于分裂，也就是说有两个或两个以上的王朝同时并存、互争雄长。但大部分时间还是统一的。这种统一时期，是中国的社会经济与文化发展的重要时期。

全国统一时期的政治中心，前后也有过几次迁移，但是真正称得上是全国最大、最重要的政治中心的，只有两个，在前期是长安，也就是

现在的西安，在后期就是北京。

当长安作为全国最大的政治中心的时候，北京以其地理位置的关系，在中原与东北的边远地区之间，起着非常重要的作用。特别是因为在这期间统治中原地区的大都是汉族所建立的王朝，农业是主要的生产手段，社会经济和文化都比较先进。东北的边远地区则是以游牧为主的少数民族分布的地方，还处在奴隶社会的发展阶段，生产比较落后。在一个国家内这两种不同发展阶段的社会结构之间，经常处于相互矛盾的对立状态，而这种矛盾在旧的社会制度下，又是无法解决的。停留在奴隶社会发展阶段的游牧部族是剽悍的骑手，在雄杰好战的首领统治下，就会纵马南下，对中原地区的农业居民造成威胁，并且有颠覆中原统治者的危险。因此中原的统治者在势力强大的时候，也常常组织兵力，主动进攻，向北方的游牧部族进行征讨。但更多的时候，是采取防御手段，役使千千万万的劳动人民，沿着北方的高山峻岭，修建万里长城，以事防御。因此，有名的万里长城实际上就是这种矛盾存在的历史见证。而在今天，这个由古代劳动人民用双手所建筑的庞大而雄伟的建筑物，却已成为中外无数旅游者，怀着无限惊讶与赞叹的心情，兴高采烈地攀登和纵情眺望的一处名胜古迹了。

现在，让我们从驰骋于万里长城的遐想中，再回到我们现实的话题上来吧。

简单地说，从公元前三世纪到公元后九世纪的一千多年之间，每当中原统治者势力强大的时候，就常常要以蓟城为前进的基地，对东北游牧部族进行征讨。反之，当中原统治者势力衰微或陷于分裂的时候，东北游牧部族的统治者，又常常乘机南下，掠夺中原地区的财富，甚至俘虏人民充当奴隶，而这时的蓟城又成为中原统治者一个军事防守的重镇。到了防守无效，游牧部族的统治者入侵成功之后，就一定要以蓟城作为进一步南下的据点。自然在这期间，主要的还是和平安定的局面时间最长，在这种局面下，蓟城也就成为一个重要的南北贸易的中心，并促进了中原与东北地区之间的文化交流。

但是，从十世纪开始，东北少数民族的势力，逐渐兴起，首先是契丹族的统治者拥兵南下，占据了蓟城，并以蓟城为陪都（第二政治中心），作为继续向南方推进的据点，并改称蓟城为南京（或叫燕京），这是中国历史上的辽朝（916—1125）。十二世纪初，又一个东北少数民族——女真族，继而兴起，占据了辽朝的南京城后，就正式迁都到这

里，并扩建了南京城，改名中都，这就是金朝（1115—1234）。

金朝的中都城，乃是在蓟城的旧址上发展起来的最后也是最大的一个大城。城中的宫殿建筑尤其豪华。可是这座大城兴建之后不到百年，又一个来自北方高原上的少数民族——蒙古族，在它的杰出领袖成吉思汗的领导下，迅速强大起来。公元1215年，成吉思汗部下的一支骑兵，突破南口一带的天险，直捣中都，经过一场激烈的战斗，杀进城中。在混乱的情况下，城内的豪华宫殿，竟被放火焚烧，化为一片废墟。

此后又过了四十五年，也就是公元1260年，成吉思汗的孙子忽必烈——中国历史上元朝的创建人，来到中都城，并决定在这里建都。经过一番考虑之后，接受了当时对城市建筑和科学技术具有丰富学识和实践经验的汉族学者刘秉忠的建议，决定放弃中都旧城，另在东北郊外，选择新址，建设新城。积极参加新城的规划和建设的，还有一位杰出的科学家郭守敬。郭守敬自幼从学于刘秉忠，精通天文历法，又长于测量，也是一位水利学家。刘、郭师生合作，形成了一个专家领导的核心。他们还招来了太行山中一些世代从事石工而且富有艺术才能的匠人，参加新城的建设，其中最有名的就是民间出身的石雕艺术家杨琼和杨浩。此外，还有来自中亚的外籍工匠，也参加了筑城的工事。人才济济，盛极一时。新城的建设，于1267年开始动工，这就是历史上赫赫有名的大都城，也就是现在北京城的前身。

1-3 Watercourses in the adjacent areas of Zhongdu City of the Jin Dynasty 金中都城近郊河渠水道略图

Zhongdu City 中都
 Taining Palace 太宁宫
 Lugou Bridge 卢沟桥
 West Mountains 西山
 Yuquan Hills 玉泉山
 Lugou River 卢沟河

这里有两个值得注意的问题：

第一，当时为什么要放弃中都旧城，另建大都新城？

第二，大都新城的城址是怎样选择的？又是怎样规划的？

我们必须回答这两个问题，因为这和了解现在的北京城是有直接关系的。

现在分别讨论如下。

关于第一个问题：

当时放弃中都旧城，有一个明显的原因，那就是旧城的宫阙已被焚毁，与其在一片废墟上重行修建，还不如另筑新宫，营造新城。但实际

上，还有一个更为重要的原因，导致了城址的最后迁移，这就是对于开辟新水源的要求。

按蓟城早期的发展，城市性质比较单纯，规模也不很大，因此对于地表水源的要求是有限的。近在城郊的西湖和流经城侧的小河，完全可以满足城市用水的需要。可是，到了金朝在这里正式建都之后，情形就大不相同了。按照中国的传统，作为一个封建王朝的都城，照例要结合宫阙的修建开辟皇家园林。园林之中又照例要有河湖岗阜作为点缀，这是造园的重要因素，即使没有天然山水，也要用人工凿地为湖，堆土成山。因此宫苑中的湖泊，也就取得了一个固定的名称，叫做“太液池”。这个名称象征着宫苑里的湖水，直接来自天上，也含有水是生命本源的意思。为了开辟皇家园林，就要大量用水，从而大大增加了对于地表水源的需求。特别重要的是，为了供应皇家以及庞大的中央官僚机构与驻防军队的需要，每年还必须把大量从民间征收的食粮，通过水上运输，送到都城，在中国封建王朝的历史上，这也形成了一种制度，叫做“漕运”。中国有名的大运河，就是因此而开凿起来的。因此，为了运河的开凿，就需要更加丰沛的地表水源。

金朝扩建中都城时，已经把西湖下游的小河，圈入城中，并在宫城的西侧，开辟了皇家园林。西湖的水源虽然满足了宫苑用水的需要，却远远不足以供应运河的用水。金朝的统治者曾经开凿了一条郊区运河，从中都城下顺自然地势，引水东流，直接潮白河。它的上源主要是从城西永定河上，筑坝拦水，凿渠东下。这本来是个很好的计划，只是由于永定河流量极不稳定，当时的工程技术也有一定限制，未能达到预期的效果。其他引水的尝试，也都未能奏效。这一情况是参加新城规划的郭守敬所十分清楚的。放弃中都旧址，另建新城，郭守敬应该是最有关系的一个人。

那么新城的城址又是怎样选择和怎样规划的呢？这就是必须回答的第二个问题。

在这里顺便提到一个有趣的插话，或许还是必要的。公元1260年，忽必烈初到中都，由于城中宫殿已成废墟，无处可以安身，他只好住到城外一个离城不远的地方，这在当时的记录中是有明确记载的，以后又被转载在重要的《元史》忽必烈的本纪中，但是他所居住的确切地点，都被有意识地避而不记，这大约也是为了他本身的安全而有意保密的缘故吧？现在，七百多年的时间过去了，我们还是经过一番细心的侦察才

弄清楚，原来忽必烈初到中都时所居住的地方，就是金朝统治者在东北郊外一片天然湖泊上所兴建的一座离宫，名叫太宁宫。这座离宫的主要殿宇，就建筑在湖泊当中的一个岛上，名叫广寒殿，取名于中国神话中所构想的月亮上的宫殿，同时也暗示了这里风景幽美，有如仙境。

1-4 Watercourses in the adjacent areas of Khanbaliq of the Yuan Dynasty 元大都城近郊河渠水道略图

Dadu City 大都

Tonghui River 通惠河

Lugou Bridge 卢沟桥

Lugou River 卢沟河

Nankou Pass 南口

West Mountains 西山

需要指出的是：当1215年蒙古骑兵攻占中都城并使城中宫阙化为灰烬的时候，东北郊外这座离宫却幸得保全。相继发生的事实说明：1267年开始营建大都城，正是利用太宁宫的湖泊作为平面设计的中心而进行规划的，从此这片湖泊也就获得了“太液池”的名称。

从大都城的平面图上，可以明显地看到，太液池的东岸建有皇帝的

宫城，西岸建有两组宫殿，南北对峙，分别为皇太子和皇太后所居。三宫之间，乃是以太液池中的一个圆形小岛作为相互联系的中心。小岛的东、西两侧，各架一座木桥，分别与东西两岸相连接。小岛的北侧另建一座石桥，通向旧日离宫的主体建筑广寒殿所在的大岛上。这个大岛叫做琼华岛，意思是说这里是琼楼玉柱百花争艳的地方，如实地反映了这里已成为太液池上的风景中心。环绕太液池的整个平面布局，构成了一幅匀称的图案，在它的周围修筑了近似正方形的宫墙，就是皇城的城墙。

皇城北侧，有更大的一片湖泊，当时叫做积水潭，原与皇城内的太液池相连。由于皇城的修建，就把这两处湖泊截分为二，并为太液池另外开凿了一条供水渠道，也是根据古代的传统，命名为金水河。

积水潭原为一条天然河流——高粱河所灌注。积水潭下游的高粱河故道，在大都城的规划过程中，可能是已被改为暗渠，或被填埋，因此另开一条新渠道，经由皇城的东墙外，流出大都城。后来郭守敬又利用这条改造后的新渠道，作为南北大运河的最北一段，把来自江南的漕船，一直引进大都城，停泊在积水潭里。随漕船北来的还有南方的百货，因此积水潭东北岸及其附近一带，就成了大都城内最繁华的市场所在。

从以上的讨论中可以看出，从表面现象来说，金朝的离宫似乎是导致兴建大都城的原因，但实际上高粱河的新水源，才是选建大都城城址的重要因素。

这里需要特别注意的是在大都城平面设计中具有头等重要意义的全城轴线的确定。这条中轴线恰好选定在积水潭的东岸，而皇帝宫城中的中心点，也就正好布置在这条全城的中轴线上，而且占据了最重要的位置。中轴线的顶点，止于积水潭的东北岸，同时把这一点也就定为全城平面设计的几何中心，并在这里建立了一座指示性的建筑物，就叫做“中心阁”。中心阁的右侧，特意立了一块石碑，刻有“中心之台”四个大字，这就说明在全城进行规划设计的同时，是进行了精密的平面测量的。

中心阁以西建立了鼓楼，鼓楼之北又建钟楼。钟鼓楼是全城报时的中心。这一点在《马可·波罗游记》中是有明确记载的。

全城的几何中心确定之后，大都城最外围四面城墙的位置，也就相应地确定下来。只是在动工过程中，东面城墙可能是为了避开不利的地形，又向内稍有收缩。这一措施对于全城的平面规划，是无关紧要的。

大都城东、西、南三面城墙，各设三门，北面城墙只设二门。各城

门内都有笔直的干道，纵横交错，略成棋盘状。南面城墙的正中一门，也正好设在全城的中轴线上，是中心干道所经，由此北上，直入宫城。宫城之内，也只有代表皇权统治中心的主要大殿，被布置在这条中轴线上，其他次要建筑物，都采取严格对称的形式，排列在中轴线的左右两边。

在皇城以外的南北干道之间，开辟了众多东西平行排列的街巷，主要是居民住宅分布的地区。中央和地方官署以及寺庙、仓库等公用建筑错列其间。只有两组有重要意义的建筑群，是按计划布局的。一组设在大城东墙的南门以内，叫做“太庙”，是皇帝祭祀祖先的地方。一组设在大城西墙的南门以内，叫做“社稷坛”，是皇帝祭祀土地之神与五谷之神的地方。

这里需要指出的是，大都城的这一平面布局，和古代关于帝王都城的一种理想设计，极相近似。这一理想设计，见于大约成书在公元前五世纪时的一部著作，叫做《考工记》，是专门讲工程技术与器物制作的。其中提到帝王都城的设计，四面城墙应作正方形，每面各开三门，门内各有三轨平行的干道，纵横相交。城内中央的前方（南方）是朝廷，后方（北方）是市场，左方（东方）是太庙，右方（西方）是社稷坛。简单地说，就是面朝、后市、左祖、右社。大都城显然是参考了这一古代理想的设计，又结合了地方湖泊水道分布的特点而后进行规划的，它具有特殊的历史意义，就在于此。这一平面布局的主要目的，就是要将帝王的宫殿摆在全城最重要的位置上，它所力求表达的主题思想，就是封建帝王的“唯我独尊”。

这座规模宏伟、规划整齐的大都城开始兴建后八年，马可·波罗就来到这里。他深受忽必烈赏识，并且出仕元朝。后来在他那部游记里，他对大都城作了详细的描述。他称大都城为Khanbaliq，也就是“大汗之城”的意思。这部游记的英译本流传甚广，这里就不引述了。但是应该指明的一点，即到了十五世纪，哥伦布正是在读了《马可·波罗游记》之后，才决定要远航中国，由于他相信地球是圆的，如果马可·波罗从陆路东行可以到达中国，那么他从海路西航，也同样可以到达中国。他的这一天才的判断，导致了一个伟大的“发现”，这也是众所周知的事，这里也就无须饶舌了。

四、明清北京城：规划设计的特征

元朝的统治也不到一百年，就被汉族建立的明朝所代替。明朝的统治者兴起于长江下游，首先建都在南京，然后北伐，于1368年攻下大都城，改称北平。到了它的第三个皇帝即位之后，又决定迁都北平，并把北平改称北京。北京的名称就是从这时开始的。与此同时，还进行了大规模的城市改建工作，到1420年基本完工。

明兵最初攻下大都城时，为了便于防守，曾在原来的北城墙内约2.5公里的地方，跨过积水潭上最窄狭之处，另建新墙。同时还平毁了元朝的宫殿。

决定从南京迁都到这里之后，又进行了下列主要的改建工程。

一、重建宫城：仍在原来中轴线的旧址上，只是稍向南移，建造了新宫城，这就是保留到现在的紫禁城（今为“故宫博物院”）。紫禁城内象征皇权统治中心的六座大殿，自南而北，依次奠基在全城的中轴线上。其他一切建筑，照例是严格对称地排列在六座大殿的东西两侧。

二、由于紫禁城南移的结果，旧日皇城的南墙与大城的南墙，也都依次南移，中间的空间距离也都各有增加。在紫禁城前方中心干道左右两侧扩大了的空间里，新建了太庙和社稷坛，既加强了这两组重要建筑与宫城之间的联系，又仍旧保持着左祖右社的传统，同时在平面布局上还进一步突出了中心干道的位置。

其次，在皇城的正前方，开辟了一个新的“T”字形的宫廷广场，这就是现在天安门广场的前身。当时在广场的东西两侧，还集中布置了中央衙署，同样也是左右对称排列的形式。

三、旧日皇城南墙向南迁移的结果，原来太液池的南端，也出现了大片空地，于是就在这片空地上加凿了一个新的湖泊，从而扩大了太液池的面积，这扩大的部分也叫南海，原有的部分则分别叫做中海与北海。开凿南海时挖起的泥土，再加上开凿紫禁城护城河时挖起的泥土，都用来在紫禁城的正北方，堆筑了一座土山，俗称煤山，后来正式命名为景山。景山中峰高达47米，也恰好标志了全城中轴线所在的地方，同时也是经过改造后的全城几何中心。

四、在原来大都城几何中心的旧址上，新建了鼓楼与钟楼。这两座建筑物又标志了全城中轴线的顶点。

五、在城市改建的同时，又在大城正南方修建了两组大建筑，东西并列。在东边的叫做天坛，是皇帝祭天和祈祷五谷丰登的地方。在西边的叫做山川坛，是皇帝祭祀山河之神的地方。这两大建筑群之间，也有一条中心干道，向北直达大城的正南门，叫做正阳门（俗称前门）。到了1553年，为了加强城防，又在城南加筑了一个外罗城，正好把天坛与山川坛（后改称先农坛）包入城中，从而形成了北京城所特有的凸字形的城市轮廓。北部的旧城，也叫“内城”；新筑的外罗城，也叫“外城”。

由于外罗城的修建，原来内城的中轴线，又向南延伸到外城的正南门，总长近八公里，这在整个北京旧城的平面布局上，显得最为突出。

历史上北京城的建设，到此基本完成。1644年建立的中国历史上最后一个封建王朝——清朝¹，完全继承了明朝的北京城作为都城，没有更多的改变，这就是完整地保留到1949年解放前夕的北京城，现在我们叫它做北京旧城。

(From A Brief History of Chinese Architecture, Vol.1, pp.183-184 采自《中国建筑简史》第一册, 页一八三——一八四)

这个从元朝大都城的基础上发展起来的北京旧城, 被认为是中国封建时代都城建设的最杰出的典型, 它进一步发展了大都城的平面布局, 更加突出地表达了封建帝王“唯我独尊”的主题思想。

但是, 正如中国的谚语所说的那样: “物极必反”——事物发展到极端, 就要转向它的反面。

北京旧城的规划设计, 乃是中国历史上封建专制主义发展到极端的一种表现, 同时这也就导致了它最后的崩溃。

1911年由孙中山先生所领导的资产阶级民主革命, 结束了在中国长达两千多年的封建王朝的统治。

1919年在北京旧城里爆发的五四运动, 又揭开了新民主主义革命的序幕。

经过整整三十年艰苦卓绝的流血牺牲——其中包括以白求恩大夫为代表的伟大的国际主义战士的流血牺牲——中国人民才终于获得了解放。

1949年10月1日中华人民共和国宣告成立。历史悠久的北京旧城, 又被定为新中国的人民首都, 从而迎来了城市建设的一个新起点。

五、改造北京旧城的新起点

中华人民共和国建都北京之后, 为了适应新时代的要求, 立即着手于北京旧城的改造。

三十年来，北京的城市面貌已经发生了巨大的变化。在这一改造过程中，既有成功的经验，也有失败的教训。在这里——加以评述，既非必要，也不是我所能胜任的。我作为一个城市历史地理的学者所愿意提出来讨论的一个问题，就是：我们怎么样才能把一个过去为封建帝王规划设计的城市，改造为一个体现社会主义新时代的人民首都？或者更确切地说：和北京旧城城市规划中所表达的那种歌颂封建帝王“唯我独尊”的主题思想相对比，在今天，作为人民首都的北京城，在它的城市规划中所应该表达的主题思想又是什么？

这个问题不是一个单纯的工程技术问题，而首先是一个涉及历史文化发展的大问题。今天在中国，随着社会制度的变革，具有悠久传统的历史文化，也正在经历着前所未有的大变化。我们绝不能设想一个社会主义的新文化会从天上掉下来，或者是从某一个外国移植进来，它只能从自己固有的土壤里发育成长起来。例如：植根在希腊罗马的古文化里、而又以崭新的精神面貌为欧洲中世纪的文化开创了一个伟大的新时代的“文艺复兴”，不就是这样——一个光辉的先例么？

今天，在中国，人们也在议论着、期待着一个植根在自己土壤里的伟大的社会主义“文艺复兴”新时代的到来。因此，在这一情况下，如何正确对待自己的历史文化遗产，就成了一个极为重要的问题。

我们的基本原则，就是要批判地继承。

在我国长期的封建社会里，曾经创造过灿烂的古代文化，但是其中也还存在着封建的糟粕。对于古代文化无条件地兼收并蓄是错误的；一律予以排斥，也是错误的。唯一正确的态度，就是吸其精华，弃其糟粕，古为今用，推陈出新，从而在历史形成的基础上，创造出一个富有时代特征的新文化来。当然，在这一创造过程中，去努力吸收外国一切先进的东西，为我所用，也是完全必要的。用我们惯用的一个名词来说，这就是“洋为中用”。

以上所讲，还只是一些抽象的原则，或许已经离题太远了。现在急需回到我们所讨论的具体问题上来。

实际上，被完整地保留下来的北京旧城，也就是中国历史文化遗产的一部分。对于这个城市的改造，也必须遵循批判继承的原则。这里首先必须明确的一点，就是今天作为社会主义新时代的人民首都，它在城市规划上的主题思想，就应该是歌颂人民——歌颂人民的力量、人民的尊严，歌颂“人民，只有人民，才是创造世界历史的动力”。它既要显示出

历史上劳动人民的伟大创造，又要体现出当前人民当家做主的现实。如果做到这一点，这也就是对北京旧城的城市规划上所集中表现的那种封建帝王“唯我独尊”的主题思想，进行了彻底的批判。

怎样才能在北京旧城的改造中，具体实现这一新的主题思想，乃是新的城市规划中一个最为重要的问题。

看起来这是一个十分困难的问题，实际上在解放以来改造北京旧城的过程中，已经创造出一些可贵的经验，需要加以总结，并提升到理论的高度上来，以进一步指导今后北京城的城市规划和城市建设的实践。这里只提出一个例子作为说明，这就是天安门广场的改造。

天安门广场现在比过去更加接近于全城的位置了。

(Redrawn according to Urban Traffic Map in *Beijing Tourism Atlas*, simplified version, 2nd edition, 1972 根据地图出版社《北京市游览图》1972年第2版中的《市区交通图》缩简改绘)

早在解放初期的城市规划中，就已决定北京城的改建，应以旧城为中心，在此基础上进行改建和扩建。现在北京城的新市区，已经突破旧日的城圈，向四外扩展。扩展的范围，大体以正在兴建中的郊区环路（即三环路）作为界限。在此界限以内，街道的布局基本上保持着旧城以内的传统格局。在此界限以外，重要交通干线，呈辐射状、通向四面八方。整个城市的平面设计，继续保持着平衡匀称的特点，因而使天安门广场的位置显得更加明显、更加突出。这个广场原是天安门前的一个宫廷广场，天安门也就是旧日皇城的正南门。它名义上是一座门，实际上是建筑在红色台基上的一座殿堂。当初经手建造天安门的工匠，赋予它以如此庄严壮丽的形象，充分体现了我国古代建筑艺术的特色。封建帝王要求在这里建筑这样一座巨大的建筑物，除去为了加强对宫城的保卫外，更重要的还是为了显示帝王之居的尊严与华贵。按照封建王朝的传统，这里就是所谓“外朝”。“外朝”原来是皇帝接见外国宾客的地方，也在这里举行其他盛大节日的庆典。到了最后一个封建王朝——清朝，还利用这个“外朝”，为皇帝的登基，举行“颁诏”大典，也就是用“诏书”把皇帝即位的事，宣告全国。诏书被放在一只像一朵云彩一样的盘子里，然后用“龙亭”从紫禁城里抬到天安门上。这时天安门上奏起了欢庆的乐章，天安门前的广场上则跪满了文武百官和被选派来代表老百姓的“耆老”。宣诏官在天安门城楼上宣读诏书之后，随即用一个雕制的金色凤凰，口衔诏书，从城楼的正中，徐徐系下，放进“龙亭”里，抬送到天安门广场东面的“礼部”衙门，然后用黄纸誊写，传送全国各地。扮演这套仪式的用意，不外是说“君权神授”、“命自天降”。这仅仅是一个例子，用以说明封建皇帝是如何利用这个宫廷广场，来炫耀自己和愚弄人民的。

这个“T”字形的宫廷广场，周围用红墙严格封闭起来，只留有东、西、南三个大门可以行走，但是人民群众是绝对不准涉足的。

然而历史的辩证法是无情的。在清王朝1911年被推翻之后，也正是

这个过去严禁老百姓涉足的广场，却成了革命群众集合起来举行爱国示威游行的中心。整整六十年前点燃了新民主主义革命的熊熊火焰的五四运动，就是从这里开始的。解放前夕最后一次反对蒋介石进行内战和迫害青年学生的群众运动，也是在这里开始的。

1-8 The Qing Dynasty's T-shaped imperial square 清乾隆扩建后的天安门宫廷广场

1-9 Tian An Men Square before redevelopment 改建前天安门广场图

正是由于北京古城里的这一光荣的革命传统，1949年10月1日中华人民共和国的开国大典，也就选择在这里隆重举行。从此，天安门这座古代劳动人民一手创造的庄严壮丽的形象，终于出现在中华人民共和国的国徽上，象征着一个古老的文明，从此获得了新生。这样，天安门广场也就从一个封建时代的宫廷广场，转化成为一个社会主义新时代的人民广场，在我国的政治生活里，它已成为各族人民共同向往的中心。

但是，在开国大典举行的时候，这个广场还被包围在东、西、南三面围墙之内。这三面围墙严重地限制了广大群众的活动，阻碍了他们的视野，封锁了他们在广场上的热烈欢腾的气氛。现在看来，如果说天安门所代表的乃是古代建筑的精华，那么广场上的围墙所代表的却是封建

性的糟粕。精华的部分，我们一定要保留，并且本着古为今用、推陈出新的原则，把它组织到现代的城市生活中来，使它有更好的条件，为人民服务。封建的糟粕，我们一定要排除，从而扫清我们向新生活迈进的道路。

1959年10月1日，在庆祝建国十周年的时候，根据新的城市规划的要求，第一次改建天安门广场的工程，胜利完成。改建之后，不仅是旧日的三面围墙不见了，而且是一个崭新的广场，以数倍于过去的面积，出现在人们面前。它的基础依旧，而面貌一新。它以宏伟、壮丽、广阔、明朗的景象，象征着人民群众海洋般的胸襟，排山倒海的力量。早一年建成的是矗立于广场中央的人民英雄纪念碑。这时又在广场的西侧建成了人民大会堂，在东侧建成了中国革命和中国历史博物馆。随着这两座现代大建筑物的落成，天安门广场已经形成为全国各族人民政治生活的中心，从这里传播出中国人民最强烈的心声。

在广场改造的同时，又把作为广场两翼的东西长安街，加以扩建。于是一条宽阔平直的林荫大道，实际上就形成为从东到西横贯全城的新轴线。对比之下，它使得那条传统的自南而北、纵贯旧城的中轴线，相形见绌，这就等于是彻底否定了北京旧城在规划设计上的主题思想，从而突出了人民广场在全城平面布局中独一无二的重要地位。而旧日雄踞全城中心的紫禁城，如今也只能算是人民广场的一个“后院”了。只有在工作之余，人们才到这里来，欣赏古代劳动人民用自己的双手所创造出来的雄伟瑰丽的建筑物，和收藏在这里的世间罕见的艺术珍品。

1977年7月毛主席纪念堂建成之后，又进一步扩建了人民广场，并赋予它以新的意义，增加了南半部肃穆宁静的气氛。正阳门这座巍峨屹立的古老建筑，和庄严壮丽的天安门，同样被保留下来，但是这两座旧的城门，作为紫禁城前门的功能，不复存在。相反的，它们却以其固有的艺术造型，为新出现的人民广场，标志了它的南北界限。将来从正阳门到永定门的干道——前门南大街——展宽之后，就会更加突出天安门广场在北京全城的中心位置。

目前仍在规划和改建中的天安门广场，只是一个例子，足以说明在历史形成的基础上，坚持批判的继承，根据古为今用、推陈出新的原则，原来一个以歌颂封建帝王为主题思想的宫廷广场，是完全可以改造为一个以歌颂人民力量为主题思想的人民广场的！以此类推，原来一个以歌颂封建帝王为主题思想的北京旧城，也是完全可以改造为一个以歌

颂人民力量为主题思想的人民首都的。

但是，也要看到，在改造北京旧城的过程中，也有一些措施，是存在着争议的。如果说拆除围绕天安门广场的三面红墙，没有引起任何异议，而拆除围绕北京旧城的城墙，却不是这样。在新的城市规划中，最初考虑要拆除旧城城墙的时候，就曾有过不同的争论。现在在拆除城墙之后，经过实践的检验，使我们进一步认识到，旧日城墙的完全拆除，是否绝对必要，这个问题确是值得讨论的。尤其是随着城墙的拆除，部分护城河也被改造为地下暗渠，这样就减少了城市中的水面面积，是不利于环境条件的改善的。特别是正阳门外的护城河，自西而东正好穿过城市的中心地带，如果保留下来，注满清澈的河水，同时沿河两岸进行绿化，既增加了市容的自然景色，又有利于调节城市气候和向城市中心输送新鲜空气，这是大大有利于城市环境的改善的，同时也就为市民提供了良好的游憩场所。

应该提到，在“文化大革命”的十年动乱之前，在改造天安门广场的小区规划中，曾有一种方案，就是要把正阳门外的一段护城河，纳入天安门广场的规划之中。这样，在广场的南部，就出现了一区富有自然风光的园林。如果当初采纳了这一方案，那么1977年修建毛主席纪念堂之后，除去紧傍纪念堂周围的绿地之外，还有正阳门外的滨河公园作为陪衬，那就更会增加天安门广场南部的肃穆宁静的气氛。但这一切都已是不可挽救的事实了。

(From Journal of Architecture, 1977, No. 4 采自《建筑学报》1977:4)

借此一例用以说明，在我们改造北京旧城的工作中，也还有不少经验教训，需要加以总结，以便在修订新的城市规划时，作为借鉴。当然这也只是我个人的一点看法，并不一定完全正确。可喜的是，现在我们在一些有争议的问题上，是可以充分展开自由讨论了。何是何非，通过实践是会得出正确的结论的。过去有一个时期，在讨论问题的时候，确实有把学术问题和政治问题混在一起的情况，这样就会阻挠自由讨论，以致造成不良的后果。例如，过去在讨论北京城墙存废的问题上，主张保留城墙的人，就容易被扣上“保守”、“复旧”等等帽子，这样就不能使人畅所欲言，因此有些好意见就会被埋没，并使工作遭受损失。这种情况，在“四人帮”掌权的十年间（1966—1976），竟然发展到令人难以置信的程度。尤其是在文化学术领域里，更是“万马齐喑”的局面。令人鼓舞的是，近两年来在我国又重新出现了百花齐放、百家争鸣的繁荣景象。解放思想、广开言路，已被认为是加速实现社会主义现代化的重要条件。

事实证明，在历史文化遗产批判继承的问题上，精华与糟粕并不总是黑白分明和一目了然的。因此，在一切有争论的问题上，充分展开讨论，进行自由争辩，乃是十分必要的。只有这样才能真正明辨是非，才能善加区别精华与糟粕，从而真正达到古为今用、推陈出新的目的。在北京城的城市建设上是如此，在全国的文化建设上来说，也是一样，只是问题会更加复杂罢了。

在结束我的讲演之前，我愿意再一次提出在一开始时我所讲到的那个论点：一个新中国，正在一个新长征的道路上，向着社会主义现代化的目标，努力前进。为此我们就需要向你们、向西方学习一切先进的科学技术，同时我们还需要从自己的历史文化遗产中去吸取一切有价值的部分，而这一点，在我们建设社会主义新文化的过程中，乃是更为重要——也是更为复杂的一个问题。我们满怀信心，在不断解决这个问题的实践中，去迎接我国一个也可以称之为社会主义的“文艺复兴”新时代的来临！

② THE TRANSFORMATION OF THE OLD CITY OF BEIJING, CHINA A Concrete Manifestation of New China's Cultural Reconstruction*

In the modern world, China is both a developing nation and a newly emerging socialist state. Coming from an ancient cultural tradition, she now faces a new era of unprecedented social change. While overhauling her backward economy and actively pursuing reconstruction and modernization, she is also rapidly developing a new socialist culture. In the process of modernization and reconstruction, it is necessary for China to adopt the foreign science and technology according to her own needs. But the development of a new socialist culture, however, entails a more important and complex problem: how to identify and preserve the valuable part of China's own traditional culture.

It is impossible, of course, for China's new socialist culture to drop from the sky, or be imported intact from any particular foreign country. It can only grow from China's own native soil. This is not to say that all foreign cultural influence should be rejected, but it can only contribute positively to China's new, modern culture by being first fused with China's unique traditional culture. Taking into account this background of great social change, this essay attempts to describe and explain a concrete example of the issues which must be faced in creating the new socialist culture. In presenting the problem of transforming an old, historical city into a modern, new one, I can only offer the perspective of an historical geographer, not that of a specialist in city planning, but hope this discussion has some value in

that context.

The Relevance of Ancient Chinese Planning Theory

With the growth of world urbanization in recent times, city planning as a specialized science has become more complex and more important each day. But it is not a new science, as it was already flourishing in some of the great civilizations of antiquity. Ancient China was no exception, and Paul Wheatley has drawn particular attention to the symbolic nature of the "ideal" planned layout of ancient China's cities, citing corroborative evidence in the *Book of Artificers* (*Kao Gong Ji*). One of the outstanding features of the ideal layout is the north-south axis of the whole city, and "this axial design is superbly executed in Pei-Ching[Beijing]."¹

The *Book of Artificers* was completed around the fifth century B.C. and deals primarily with manufacturing technology. It also records the plan for the construction of the imperial capital, which is somewhat ambiguous and has been subject to varying interpretations and reconstructions. The main points of the plan include the following. First, the capital should be laid out as a square, surrounded by a city wall; each side should extend nine *li* (Chinese mile, equal to about 1/2 kilometer) and contain three city gates. Second, within the city there should be nine longitudinal and nine latitudinal thoroughfares, or three longitudinal and three latitudinal thoroughfares, each consisting of three chariot lanes. Third, in the center of the capital is the Imperial Palace of the emperor. On the left side of the Imperial Palace is the "Tai Miao," where the emperor pays homage to his ancestors. On the right side is the "Sheji Tan," where he worships the gods of soil and grain. The front part of the Imperial Palace is the emperor's administrative center, and to the rear of the Imperial Palace is the capital's main market and commercial center.

These declarations in the *Book of Artificers* refer to the capital and largest city of the empire; "left," "right," "front," and "back" refer to the four cardinal directions (respectively east, west, south, and north).

The Imperial Palace of the emperor faced true south and was located in the geometric center of the whole city. Tai Miao (the Imperial Ancestral Temple) lay to its east, She-ji Tan (the Altar of Soil and Grain) lay to its west, and the city market to its north. The city was aligned along a north-south axis, facing the south and with its back to the north. This orientation bore a close relationship to the residential traditions of the lower reaches of the Yellow River (Huang Ho), where Chinese civilization originated. The plains of the lower Yellow River, small ones such as the Jing-Wei and Yi-Lo Basins as well as the great North China Plain, have a flat and open topography. They are located in the temperate zone, characterized by strong prevailing monsoons and four distinct seasons, with hot, rainy summers and cold, blustery winters. In order to maximize ventilation in summer, while in winter providing maximum exposure to the sun and shelter from the cold north wind, residential structures in this area were built to open toward the south, with their backs to the north. Over time, these evolved into the *si-heyuan* (house built around a courtyard). The *si-he-yuan* has structures facing the center on all four sides, with the principal one, called the *zhengfang*, on the north.

The *si-he-yuan* is, in fact, the "cell" of traditional Chinese city structure. If the streets and alleys defined by rows of *si-he-yuan* are arranged in a certain pattern and surrounded by a wall, a city is formed. The emperor's palace in the national capital was simply a grand *si-he-yuan*, or a collection of them, surrounded by a palace wall and referred to as the Gong Cheng or Imperial Palace. The Imperial Palace was supposed to have a dominant position, at the center of the city's primary north-south axis, and this central location symbolized the center of the cosmos. Also, according to ancient custom the "Tai Miao" could only be built in the nation's capital.

China is an agrarian nation, and the "She-ji Tan" was an important symbol of the emperor's authority. As for the market, it was a necessity of city life. All these basic elements of the city were clearly set forth in the *Book of Artificers*. Of all the written works concerning

the construction of the capital city which have been passed down from antiquity, this is the earliest and most important, and had the greatest influence on the actual design of the ancient capitals.

Of the several imperial capitals in Chinese history, the last built was Beijing, or more specifically, that part of modern Beijing referred to as the "Old City," and it is the actual design of this city that comes the closest to expressing the ancient principle of "palace in front, market in back, ancestral temple on left, altar of soil and grain on right." After the foundation of New China, the capital was re-established in Beijing, with its center in the Old City, and work commenced to build a "people's capital" for the new socialist era. Thus, the redevelopment of Beijing's Old City plan became an urgent task. In order to fully understand the nature of this task, it is necessary to examine the plan of Beijing's Old City in some detail.

Early Planning and the Rise of Dadu City

Although Beijing is an ancient city with a history spanning three thousand years, it has been in its present location only since the establishment of Dadu City by the Yuan Dynasty (1271-1368) in the thirteenth century. The previous location was in what is now the southwest suburbs of the city. The last and largest city built in this old location was Zhongdu, the capital of the Jin Dynasty(1115-1234). The establishment of Zhongdu marked the beginning of Beijing's emergence as a national political center.

To the northeast of Zhongdu City there was a scenic area with a natural lake, which was utilized by the Jin emperor. The lake was expanded on its southern part and two islands were created and an imperial retreat, called Tai-ning Palace (Palace of Great Tranquility) was built (Fig. 2-1). In the year 1215, the army of the Mongolian leader Genghis Khan swept down from the north, occupying Zhongdu City and razing the Imperial Palace. But Tai-ning Palace outside the city was spared. Forty-five years later, Genghis Khan's grandson, Kublai Khan, in order to consolidate his rule over China, decided to

establish his capital in Zhongdu. But the Imperial Palace there was in ruins and would have been extremely difficult to rebuild. Worse yet, Zhongdu had but a meager water supply from a small lake (West Lake, now called Lotus Lake) just west of the city. The complex problems of providing water for the city, and especially channels for water transport, became more critical day by day.

2-1 Beijing's early urban nuclei: Zhongdu City and Tai-ning Palace 金朝中都城与太宁宫位置略图

- Imperial Palace 宫城
- West Lake 西湖
- Aqueduct from Lu-gou River 从卢沟河引水
- Canal 运河

Main buildings of the Tai-ning Palace on the Qiong-hua Island 太宁宫中心在琼华岛上

Man-made canals were needed, primarily to ensure that the capital could be supplied with the large quantities of grain it required. During the Jin Dynasty, an aqueduct had been constructed to divert the water of the Yongding River (then called Lu-gou River) eastward, following the natural topography, to the north moat of Zhongdu City. From there a canal continued eastward to Tong-zhou (east of present-day Beijing). The plan was to bring together river shipments of grain and other material at Tong-zhou for transshipment to Zhongdu. But when the Yongding River flooded, however, it could not be effectively controlled, and the scheme proved to be unworkable.

Kublai Khan therefore decided to abandon old Zhongdu City and commissioned the Han scholar Liu Bing-zhong, who was acquainted with the ancient classics as well as experienced in city construction, to draw up plans for a new city centered on the lake by Tai-ning Palace. Liu Bing-zhong and his student Guo Shou-jing, an expert astronomer and hydraulic engineer, began directing the construction of the new city and its canal system in 1267, but the work was not completed until 1285. What they created was the historically renowned Dadu City. It was during the construction of Dadu that Marco Polo visited China and became an official of the Yuan Dynasty. Later, after his return to Italy, he recalled the grandeur of Dadu and the splendor of the palace in his account of "Khanbaliq" in *Marco Polo's Journal*.

This account of the founding and initial construction of Dadu City is well enough documented, but the decisions concerning planning and design of the city are more obscure since no official papers or other accounts have been passed down. The only direct evidence for the city's internal organization consists of a restored map of Dadu City and some incomplete historical records. My own reconstruction of the city's plan development is as follows.

First, it was decided that the north-south axis of the city would be located close by the east bank of the northern part of the lake, which

at that time was called Ji-shui Tan (Fig. 2-2). The north end of this axis was set at the northeast bank of Ji-shui Tan. The emperor's palace, surrounded on four sides by a palace wall, was located on the east bank of the southern part of the lake and centered on the city's north-south axis.

Starting point of the main axis 中轴线起点

Location of the Imperial Palace 宫城位置

On the west bank were two palace complexes, the southerly one being the palace of the crown prince and the northerly one the palace of the emperor's mother, or "empress dowager." These two complexes were also surrounded each on four sides by a palace wall, and faced the emperor's palace from afar across the lake. In the middle of the lake, equidistant from the three palaces, was a small island, which remained from the old Tai-ning Palace complex, called Ying-zhou. Bridges extending from Yingzhou Island to the east and west shores of the lake connected the three palaces together. North of Ying-zhou Island was a larger island, called Qiong-hua Island, upon which was the main concentration of buildings of Tai-ning Palace. Surrounding the three palace complexes was a city wall, which defined what was known as the "Royal City." Henceforth the south lake was surrounded by the Royal City, and according to tradition, was given the name "Tai-ye Chi" (Supreme Liquid Lake). Around the shore of Tai-ye Chi an imperial park was planned.

Since the northern part of the lake now lay outside the Royal City, and being separated from the southern part, a canal was constructed to divert its outflow around the east wall of the Royal City and on toward the south suburbs. At the same time, a new source of water was found for the Royal City's Tai-ye Chi; an aqueduct was dug connecting the lake to a spring at the foot of Yu-quan (Pearl Spring) Hill northwest of the city. The outflow from the lake passed along the front of the Royal City, then out to join the canal which drained Ji-shui Tan. (Fig. 2-3)

Canal 水渠 (运河)

A large secular city was constructed around the Royal City. The plan for the large city placed its geometric center at the north end of the axis of the Royal City. At that site a platform was built, and on it

were inscribed the four characters "Zhong Xin Zhi Tai," meaning "Central Platform." This shows clearly the careful measurement that went into the city's layout. From the Central Platform on the east to its western end, Ji-shui Tan is about 3.3 kilometers in east-west extent. The location of the west wall of the enlarged city was set a little farther than this from the city center. Ideally, this should have been the standard distance determining the location of the east wall of the enlarged city. The land at that easterly location, however, was swampy and unsuitable for heavy construction, so the east wall could not be placed that far out. The south wall of the enlarged city was located about 3.75 kilometers from the Central Platform, that being the distance which allowed the Royal City to be included within the enlarged city. It was then decided that the north wall should be placed at the same distance. Consequently, the shape of the enlarged city after the construction of the four walls was that of a slightly elongated rectangle.

The east, west, and south walls of the enlarged city each had three gates, but the north wall only two. Inside the southernmost gate of the east wall was built the Tai Miao, and inside the southernmost gate of the west wall was built the She-ji Tan. Spanning the area between the eleven city gates, which were spaced at approximately equal distances from one another, were wide avenues. Including the "wall streets," which ran along the insides of the city walls, there were nine aligned north-south and nine east-west. Many smaller lanes were laid out running east-west between the primary north-south avenues. Thus, the basic layout of all of Dadu City was accomplished (Fig. 2-4).

T₂ : Altar of Soil and Grain社 稷坛

At this point, it is important to note the special significance of the location of the central gate of the south city wall, at the south end of the city's north-south axis. Along the sides of the "Imperial Road" which connected this city gate to the south gate of the Royal City, a T-shaped square was built. This was equivalent to the so-called "Wai Chao"(Outer Court) of antiquity. Precisely located along the central

axis of the whole city were the chief buildings of the emperor's palace, as well as the emperor's throne. The purpose of this was to demonstrate that the emperor was "number one under heaven," a concept with great symbolic meaning.

The last major project in the construction of Dadu was the tapping of the springs of the mountains to the northwest to provide the city's water supply(Fig. 2-5). All these springs, except for those of Yu-quan Hill which were used exclusively to feed the Royal City's Tai-yue Chi, were brought together into a single channel which flowed into Dadu City's Ji-shui Tan. From there, these waters were channeled southward around the east wall of the Royal City, joining the old Jin Dynasty canal in the southern suburbs which led to Tong-zhou. At Tong-zhou this joined with the historically renowned Grand Canal, which linked the area to China's southern regions. The northern terminus of the Grand Canal system therefore was Ji-shui Tan, which became a bustling port, crowded with boats laden with grain and goods from the lower valley of the Changjiang (Yangtze River). An area on its northeast shore, including the vicinity of the Central Platform and a street along the north side of the lake, became the most prosperous commercial center of the city (Fig. 2-6).

双虚线表示经考古证据显示的街道的位置，空白处表示考古证据缺乏。

The Yuan Dynasty's construction of Dadu City required eighteen years from beginning to end. If the design of Dadu is compared to the elements of ideal city layout set forth in the *Book of Artificers*, such as "palace in front, market in back, temple of ancestors on left, altar of soil and grain on right," and the street plan, it can be seen that these

principles were completely realized in the construction of the city. Thus, the design of Dadu City without question had its origins deep in Chinese culture. But it was not just a machine-like copy of the ancient ideal form; its sides were not built in the form of a perfect square, but rather the ideal was modified to meet the requirements of reality to produce a creative work. By building the city around a wide body of water and extending its north-south dimension, it was possible to create a great city which combined grandeur with beautiful scenery. Moreover, the main elements of the ideal plan were still strongly represented, and this was no mean achievement.

Planning Changes in the Ming and Qing Periods

Less than a century after Dadu City was built, an uprising in the lower reaches of the Changjiang (Yangtze River) resulted in the establishment of the Ming Dynasty (1368-1644), which eventually extended its rule over the whole of China. The Ming Dynasty originally had its capital at Nanjing. After it occupied Dadu, it changed that city's name to Beiping or "North Pacification." During the reign of the third emperor, who intended to rule from Beiping, to begin with the name was changed to Beijing, or "Northern Capital," and then the capital function itself was moved from Nanjing to Beijing. Concurrently, a major reconstruction of the city was begun (Fig. 2-7). First, the north city wall was moved about 2.5 kilometers to the south, leaving the northwest part of Ji-shui Tan outside the city. Then both the south city wall and the emperor's palace were rebuilt a little to the south. This reconstruction produced the new emperor's palace, or the Forbidden City, which has been passed down to the present, and is today's Palace Museum. Within the Ming Dynasty's Forbidden City, the most important buildings were a row of six great palaces, built along the city's main axis, which symbolized the supreme power of the emperor. The geometric center of the whole city was no longer at the Central Platform, but had shifted south to a point just north of the new Forbidden City. In order to clearly mark the new

city center, soil excavated from a new artificial lake at the southern end of the Tai-ye Chi and from a newly constructed moat of the Forbidden City was used to build a hill about forty-seven meters high. This was named Wan-sui Shan (Long Life Mountain) and symbolized the eternal ruling power of the emperor.² In addition, the Tai Miao and She-ji Tan were moved from their old locations inside the east and west walls to new locations just outside the south gate of the Forbidden City. They were still placed on the left and right sides of the meridional axis, respectively, in keeping with the tradition of "Tai Miao to the left and She-ji Tan to the right." At the same time, the south, north, and east walls of the Royal City were extended a bit, so the Tai Miao, She-ji Tan, and the new lake south of Tai-ye Chi were all contained within them.³

2-7 Plan of the capital of the Ming Dynasty 明代北京城平面示意图

More importantly, two major new groups of buildings were constructed in the southern suburbs, one east and one west of the meridional axis. To the east was the Tian Tan (the Temple of Heaven), where the emperor paid homage to the gods of heaven, and to the west was the Shan Chuan Tan (the Altar of Mountain and River), where he paid his respects to the gods of mountain and river.⁴ Up until 1553, this southern part of Beijing was outside the city wall; then an "outer wall" was built to formally incorporate the above-mentioned temple and altar into the city. The middle gate of this new outer wall

was situated on the center axis, between these two groups of buildings. The main north-south road within the gate was built along the axis.

At the northern end of the axis, where the old Central Platform was located, two new buildings were constructed: the Bell Tower to the north and the Drum Tower to the south. The newly extended north-south axis had a full length of almost eight kilometers. The Forbidden City occupied the most important location on the axis; to its north, standing like a picture screen, was Wan-sui Shan; to its south, on the left and right, were the Tai Miao and the She-ji Tan. Between these two temples was the Central Imperial Avenue, which started at the Wu Men (Meridional Gate) at the center of the south side of the Forbidden City and extended to the Tian-an Men (Gate of Heavenly Peace)⁵ at the center of the south side of the Royal City. After passing through the Tian-an Men, the avenue widened into a T-shaped palace square. The square was bounded on three sides by red brick walls. Inside the east and west walls, long corridors called the "Corridor of a Thousand Steps" were built. Outside the south central gate of the square was the south central gate of the inner city wall. This gate was known as the Zheng-yang Men, or Front Gate, and the part of Beijing which lay beyond it was called the outer city. Along the main axis of the city, which had been extended, the fundamental principles of the design of Dadu City were further developed, and a higher aesthetic level was achieved.

The Qing Dynasty (1644-1911), the last imperial dynasty in China's history, also established its capital in Beijing. Besides erecting more palace buildings in the Forbidden City and in the imperial park around Tai-ye Chi, it did not do much to change the layout of the city. Thus Beijing City—or as we now call it, Beijing's Old City—was preserved until the eve of the birth of New China. Starting with the principles set forth in the *Book of Artificers* with adjustments made to accommodate local geographical characteristics, and then having gone through numerous reconstructions, Beijing has finally come down to

us as the ultimate expression of the ideal traditional Chinese city. (Fig. 2-8)

Tian Tan 天坛

It is just this Beijing City that has been the object of high praise from Western urban planners. For example, the renowned Danish architect Steen Eiler Rasmussen, in the preface to his book *Towns and Buildings*, wrote:

There are excellent German and Japanese guide books giving detailed information about every single palace and temple in Peking. But they do not contain a single mention of the fact that the entire city is one of the wonders of the world, in its symmetry and clarity a unique monument, the culmination of a great civilization.⁶

Another example is provided by the distinguished American city planner Edmund Bacon, who was Executive Director of the Philadelphia Planning Commission for twenty years and made an important contribution to historic preservation and restoration in that city. In his book *Design of Cities* he wrote this regarding Beijing's Old City: Possibly the greatest single work of man on the face of the earth is Peking. This Chinese city, designed as the domicile of the Emperor, was intended to mark the center of the universe. The city is deeply enmeshed in ritualistic formulae and religious concepts which do not concern us now. Nevertheless, it is so brilliant in design that it provides a rich storehouse of ideas for the city of today.⁷

Bacon's comment is noteworthy. As a center of imperial rule, he said, it was a great design achievement and should be studied by city planners today. At the same time, he points out that it contains much that does not serve the needs of the present. This clearly reveals the dilemma we face today.

Plan Changes in the New China Era

Following the progress of history and the passage of time, old cities—especially those of intricate design—unavoidably face the necessity of continuous redevelopment. This is especially true in the case of Beijing's Old City, since the single underlying motif of all its splendid architecture and ingenious design—namely, symbolizing the

supremacy of a medieval sovereign—stands in such sharp contrast to the spirit of the present time. The establishment of New China represents the beginning of a new, socialist era. As Beijing is the nation's capital in this new era, the reconstruction of the city should reflect the fact that the people are now the true masters of their country.

How can this reconstruction effectively be carried out? First, it must be seen that this is not simply a matter of engineering and technology, but also a problem concerning our custodianship of a venerable historical and cultural inheritance, as well as the challenge of creating a new socialist civilization.

All of Beijing's Old City is part of China's historical and cultural inheritance. It is a symbol of the magnificent development of China's culture in imperial times. As Rasmussen pointed out, it is a significant monument to the highest achievements of a great civilization. The new Beijing City, as the people's capital and a symbol of the new socialist culture, can only rise from this historical foundation. But as we assume our charge over this historical and cultural legacy, we must adhere to the principle of maintaining a critical perspective. We can neither totally deny the legacy nor totally accept it. It is important to distinguish between the "wheat" and the "chaff"; we must accept and make full use of the wheat, while criticizing and giving up the chaff. In this way we can follow the principles of "making the past serve the present" and "weed through the old to bring forth the new," in order to use our historical foundation to create something new. We must note, however, that the standards for distinguishing the "wheat" from the "chaff" have changed through time. Today, we place a high value on all things which benefit the masses or fully express the people's creative abilities. That which truly embodies this populist spirit should be accepted and developed. That which does not should be criticized and given up. Today, this principle must be applied to the reconstruction of Beijing's Old City.

Some reconstruction work affecting the layout of Beijing's Old

City has already been done since the establishment of New China. The most notable example of this is the reconstruction of Tian-an Men Square. As noted earlier the Tian-an Men was originally fronted by a T-shaped square. This was designed to serve as an imperial square—a place where the emperor performed important ceremonies (Fig. 2-9). On its east, west, and south sides were red walls which totally shut off public access. It was thus a great obstacle to east-west communications within the city. Viewed from the south end of this imperial square, the Tian-an Men loomed to the north as a lofty, ornate palace built upon a red platform. In old times, this sight served to create an impression of grandeur and solemnity. In 1911, after the overthrow of the last dynasty, Tian-an Men Square was opened and people were allowed to pass through, but the red walls were kept as before. On October 1, 1949, the declaration of the establishment of New China took place there. An important reason for this was that Tian-an Men Square was the site of the outbreak of the May 4th Movement of 1919, which set the stage for the New Democratic Revolution. Thus it is one of the places in Beijing's Old City with an honorable revolutionary tradition.

Museum of Chinese History 中国历史博物馆

Monument to the People's Heroes 人民英雄纪念碑

Memorial Hall of Chairman Mao 毛主席纪念堂

The Tian-an Men, which stands above the square, expresses the full talent and intelligence of China's working people in the art of construction. It could be considered a masterpiece among the ancient structures of Beijing. As for the red walls on the east, west, and south sides of the square, they still obstructed the movement of people and were actually a public nuisance. Therefore, on the tenth anniversary of the founding of the nation, the red walls surrounding the square were totally demolished, and a new square appeared which was several times larger than the old one. On the west and east sides of the square, two modern buildings were constructed. On the west arose the Great Hall of the People, and on the east was built the structure containing the Museum of Chinese History and the Museum of Chinese Revolution. In the center of the square stands the Monument to the People's Heroes. On the eve of the 30th anniversary of the revolution, the Memorial Hall of Chairman Mao was built on the south side of square, just inside the Zheng-yang Men. The transformation of Tian-an Men Square to the center of political activity was essentially complete. Although its location remains the same, its nature and function have totally changed, and it has an entirely new appearance (see Fig. 2-9).⁸

At the beginning of the reconstruction of Tian-an Men Square, its left and right wings extending along Chang-an Street (the street's name was derived from the former left and right Chang-an Men on either side of the old square) were widened and extended to become a

broad, tree-lined thoroughfare. This thoroughfare extended to the east and west suburbs and created a major new axis for the whole city (Fig. 2-10). On one hand this reinforced the primacy of Tian-an Men Square's location in the layout of the whole city, and on the other hand it relegated the location of the old Forbidden City to "backyard" status. That ancient symbol of imperial primacy thus lost its exalted position relative to the rest of the city.

2-10 Chang-an Street, Beijing, extending east and west from the Tian-an Men 从天安门广场向东西延伸的林荫大道

Although work remains to be done in the reconstruction of Tian-an Men Square, its position as the center of political activity in the city has been established. The old buildings on the square, such as the Tian-an Men and the Zheng-yang Men, and the modern buildings, such as the Great Hall of the People and the Museum of Chinese

History and the Museum of Chinese Revolution, all go together very well, showing at the same time continuity with the past and the new spirit of the present. The principle of "weed through the old to bring forth the new" has been fully realized. With regard to the improvement of the layout of Beijing's Old City, it cannot be said that this was not a success.

There are still many opportunities for today's city planners to apply their creative talents, in accordance with this principle, to the reconstruction of Beijing's Old City. For instance, one such case is the question of what to do with the old Ji-shui Tan. Should we consider it an obstacle to the city's development and fill it in to create land for buildings? Or should we consider it a place of historical significance in the development of the city and protect and improve it?

The Ji-shui Tan of antiquity, as discussed earlier, had a great influence on the location and layout of Beijing's Old City. The city's main axis was set next to the eastern shore of Ji-shui Tan, and the width of the lake determined the location of the east and west city walls. It could be said that had Ji-shui Tan not existed, Beijing would not exist in anything like its present form. In Dadu City of the Yuan Dynasty, Ji-shui Tan was of great importance as the northern terminus of the Grand Canal. After the early period of the Ming Dynasty, when the north city wall was moved southward 2.5 kilometers, the northwest part of Ji-shui Tan was excluded from the city, and the area of the lake inside the city was greatly reduced. Subsequent reconstruction of Beijing's Old City, while further developing the primary themes of the original city plan, resulted in the filling of the Grand Canal's bed within the city and the elimination of its upper reaches. All that remained was the spring from Yu-quan Hill, which flowed into Ji-shui Tan and thence on to Tai-ye Chi. After this rearrangement of Beijing's water system, Tai-ye Chi, which was inside the Royal City, was again enlarged by the addition of a new lake at its southern end. The trees and structures around it increased in number, and it developed into the most scenic park district in the city. The lake

became known as the "Three Seas"—the "South Sea" (Nan-hai), the "Middle Sea" (Zhong-hai), and the "North Sea" (Bei-hai). The "North Sea" has now been opened to the public; known as the Bei-hai Park, it is renowned for its most beautiful scenery. This was the location of the Jin Dynasty's imperial retreat, Tai-ning Palace.

Ji-shui Tan, which lay outside the Royal City, has a much different fate than the "Three Seas," with their imperial parks and gardens. Throughout the Ming and Qing dynasties and up to the establishment of New China, it never received much attention from the highest rulers. Thus it has not benefited from any definite plan or development, and has quite naturally become a neglected backwater. The lake shrank into three parts, and only the northwesternmost part was still called Ji-shui Tan. A larger part of the lake, to the southeast, was called Shi-cha Hai. The area remained, however, one of the most scenic parts of the city. Especially lovely was the view looking west from the east shore of Shi-cha Hai; the reflected peaks of West Mountains seemed like part of the city landscape. Therefore this region in old times, especially during the Qing Dynasty, attracted some of the imperial nobility. They built great houses near the lake shore and channeled lake water into their private gardens. In addition, a number of large, wealthy temples were established around the lake. But, apart from the nobles' houses and temples, the greatest part of the lake region became a public recreation place for the common people. The southern part, especially, evolved naturally into a real "people's park." Concurrently there arose in that place a common people's market, where prices were low and merchandise was good. Because of a profusion of lotus growing along the lake shore there, this market came to be called the "Lotus Market." Up to the eve of the birth of New China, this region remained a haven for the common people, where they could relax and enjoy life in a rustic setting. This informality contrasted sharply with the detailed planning and arrangement of Tai-ye Chi and its imperial gardens.

Now, inside Beijing's Old City, this overlooked lake is still there,

and along its shores there are still patches of greenery and glimpses of its former beauty.

Further planning and reconstruction of the Ji-shui Tan district has already been scheduled as part of the effort to improve and reconstruct Beijing's Old City, in coordination with the overall plan for greater Beijing(Fig. 2-11). As this process goes forward, we must consider the historical importance and value of this region. We must consider the strong association of the common people with this place and the present necessity of creating more spacious, pleasant and culturally meaningful recreation areas for our citizens. We must consider the potential for improving the natural environment and making the city a more beautiful place. We must also build our plan upon the historical base we have inherited, all the while maintaining a critical attitude and doing our best to realize the principle of "weeding through the old to bring forth the new." Ji-shui Tan is waiting for us to make this effort.

2-11 Land use plan for metropolitan Beijing, 1983 北京市区规划示意图 (1983)

- 2 . Office and residential areas 工作居住

3 . Parks and recreation areas 绿地体育

4 . Streets and roads 道路用地

5 . Railroads 铁路

Conclusion

This essay examines only two examples, from the geographical perspectives of city location and design, in an attempt to assess what attitude we should have and what basic rules we should observe in the process of reconstructing Beijing's Old City.

In July of 1983, the Chinese Communist Party Central Committee and the State Council approved in principle the Master Plan for the City Construction of Metropolitan Beijing. This plan clearly evaluates Beijing's Old City, and while pointing out those strengths and notable traditional characteristics which should be preserved in the process of reconstruction, it also emphasizes the creation of a new style characteristic of the people's capital in the new era.⁹ Thus, we have reason to believe that by the end of this century a new Beijing City will emerge, one which will maintain not only its ancient cultural tradition, but with a new face reflecting a prosperous, new socialist culture. At the same time we also hope that this new culture, which is still developing, can make an important contribution to the civilization of all mankind.

贰 展望首都新风貌：北京旧城城市设计的改造*

—

在当代世界中，中国是一个发展中的国家，同时又是一个新兴的社会主义国家。在经历了具有悠久文化传统的历史发展之后，现在它正面临着一个前所未有的社会变革的新时代，在努力摆脱经济上的落后状态而积极进行现代化建设的同时，一个社会主义的新文化也正在发展中。在进行现代化建设的过程中，结合自己的具体情况，注意吸收外国一切先进的科学技术是必要的。但是在发展社会主义新文化的过程中，如何从自己的历史文化遗产中吸取一切有价值的部分，乃是一个更加重要也更加复杂的问题。绝不能设想一个社会主义的新文化会从天上掉下来或是从某一个外国移植进来，它只能从自己固有的土壤里发育成长。当然这并不排除外来文化的影响，但是这种外来的影响只有在被充分融化于具有自己特色的传统文化之中，它才有可能产生某种真正的社会价值，才能为创造具有时代特征的新文化作出贡献。正是在这一伟大的社会变革的背景下，本文试图以北京旧城城市设计的改造为例，就我们当前所面临的建设社会主义新文化的问题，作一个具体说明。作为一个历史地理工作者，我也只能着重从地理的因素上而不是从城市设计的专门技术上来提出一些个人的观点和看法，或许还可能有些值得城市规划学者参考的地方。

二

随着当代世界性城市化的进展，城市规划作为一项专门的科学，已经变得日益复杂、也日益重要。但是这门科学在一些文明古国里，却已早有萌芽，这在古代中国也不例外。惠特利教授的巨著《四方之极》一书，就充分说明了这一点。他在这部著作中，特别强调了古代中国城市建设在理想化平面设计中的象征意义，引证了《考工记》一书关于都城的平面设计作为一例，进行了饶有趣味的探讨。他还对北京旧城城市设计中象征性的格局，作了高度的评价。¹

在这里，对于《考工记》中的有关记载，再作些进一步的阐述，或许是必要的。

《考工记》大约写成于公元前5世纪左右，主要是讲工艺制作，其中也记载了帝王都城建筑的平面设计，不过文字的描述过于简略，后人也有不同的说明和图解。如果就其主要内容加以阐述，可以包括下列几项：

（1）都城作正方形，四边筑有城墙，每边长4.5公里，各开三个城门。

（2）城内有九条直街，九条横街。也可解释为三条直街、三条横街，每街各有三条并列的车马大道。

（3）全城的中央是帝王的宫城。宫城的左边是太庙，也就是帝王祭祀其祖先的地方；右边是社稷坛，也就是帝王祭祀土地和五谷之神的地方。宫城的前面是朝廷，也就是帝王临朝听政的地方；后面是市场，也就是全城的商业中心。

《考工记》的上述记载，指的是帝王的统治中心，也就是国都，是规模最大的城市。记载中的“左祖”、“右社”、“面朝”、“后市”，都是按照正南正北和正东正西的方向排列的。帝王的宫城面向正南，正处于全城中轴线的中心位置。太庙在其东，社稷坛在其西，全城市场在其北。这种城市布局有一条显然存在的南北中轴线，确定了背北面南的主导方向。这一主导方向，和中国古代文明起源的黄河中下游地区有密切的联系。这里的平原地带，大者如华北平原，小者如泾渭盆地、伊洛盆地，地势平坦开阔，又是季风盛行的北温带。春夏秋冬四季分明，夏季高温多雨，冬季北风凛冽。为了夏季通风和降温以及冬季御寒和采光，住宅建筑中的主要房舍，都是背北面南的，由此而发展成为普遍流行的所谓“四合院”。虽然四合院四面房子都面向当中的庭院，但最主要的住房是北房，也叫正房。实际上这种四合院就是城市建筑在结构上的“细胞”。把这些细胞成条地排列起来就是街巷，把大小街巷有计划地组织起来就是方方正正有城墙包围的城市。作为一国的都城，帝王的宫室就是特大的住宅，或是几组住宅的综合体。周围绕以宫墙，这就是宫城。宫城布置在全城最重要的位置上，这就是全城南北中轴线的中心所在地。同时也是宇宙中心的象征。其次，按照古代的传统来说，只有在一国的都城之内，才有皇家太庙的建筑。至于像中国这样一个以农立国的国家，“社”的建筑、或称“社稷”，又是用来作为帝王统治天下的象征。至

于市场，更是城市生活中所必需的。因此，这些基本要素都已经明确地包括在《考工记》所记载的关于帝王都城理想设计之中了。这是保存到现在的中国古代著作中关于都城规划设计的最早也是最重要的记载，对后来的都城建设是有影响的。但是最为近似也可说是最完整地体现了这一理想设计“面朝”、“后市”、“左祖”、“右社”以及全城街道布局的基本特点的都城，只有一个，那就是历代帝王都城中最后建成的北京城，也就是现在所说的北京旧城。新中国成立后，又决定建都北京，并以北京旧城为中心，开始营建社会主义新时代的人民首都。因此，北京旧城的改造，也就成为当务之急。为了充分说明这一点，就有必要把北京旧城的规划设计，详细介绍如下。

三

北京是一个有三千多年历史的古城，不过她现在的城址是从13世纪中期元朝（1271—1368）大都城的兴建开始的。北京的古城址原在大都城的西南郊。在这个古城址上所建立起来的最后也是最大的一个大城，就是金朝（1115—1234）的中都城。中都城是古代北京城上升为全国政治中心的开始。

中都城的东北郊外，原有一带天然湖泊，金朝的统治者曾利用这一带湖泊上的自然风光，在其南半部的中心一带，开拓湖面，修筑岛屿，营建了一处风景佳丽的离宫，命名为太宁宫（图2-1）。1215年崛起于北方的蒙古族首领成吉思汗的骑兵南下，攻占了中都城，当时中都城中豪华的宫殿惨遭焚毁，可是城外的太宁宫幸得保全。1260年成吉思汗的孙子忽必烈，决定以中都作为他的统治中心，策划统一中国，但是中都宫殿已成废墟，难于重建。更重要的是中都城的地表水源，只是来自城西的一个小湖——西湖（今莲花池），供水有限。随着城市功能的日益复杂，对于地表水源的需要也日益增加，特别是对于水上运输的要求，更为迫切。因为每年都需要有大量的粮食运送到城市，开凿人工运河尤为必要。金朝的统治者曾开凿了一条人工渠道，把城西永定河（当时叫做卢沟河）的河水，顺地形的自然坡度东流，通过中都北护城河，继续向东直达通州，计划把从华北平原上征收的粮食和物资，沿天然河流北运、集中到通州，然后转运中都城下。但是遇到永定河洪水暴涨，难以控制，终未收到预期的运输效果。由于上述原因，忽必烈决定放弃中都旧城，改以太宁宫的湖泊为中心，命令熟悉古代典章制度并且有筑城经

验的汉族学者刘秉忠，进行规划设计，另建新城。刘秉忠和他的一个学生，即长于天文历算和水利工程的郭守敬共同合作，从1267年开始，直到1285年，才把新城连同它的运河系统全部兴建完成。这就是历史上赫赫有名的大都城。正是在大都城修建期间，马可·波罗来到这里，并且出仕元朝。后来他回到意大利，在追忆中对大都城规模的宏伟、宫殿的精美，极口称赞，这就是见于《马可·波罗游记》中的汗八里城。

2-1 Beijing's early urban nuclei: Zhongdu City and Tai-ning Palace 金朝中都城与太宁宫位置略图

Imperial Palace 宫城

West Lake 西湖

Aqueduct from Lu-gou River 从卢沟河引水

Canal 运河

大都城的修建过程略如上述。至于大都城的规划设计，没有任何档案资料保存下来，因此只好根据已经复原的大都城平面图，参考有关的一些历史记载加以分析。根据个人所见，依照可能的设计程序，试作说明如下：

（1）首先是紧傍北部湖泊——当时叫做积水潭的东岸，选定了全城南北中轴线的位置（图2-2）。这条中轴线的北端，确定在积水潭的东北岸上，皇帝的宫殿则确定在南部湖泊的东岸，是为宫城。宫城平面设计的中心，也就正好落在已定的南北中轴线上。

2-2 Set of the axis and location of the emperor's palace 大都城中轴线的选择与宫城位置的确定

Ji-shui Tan 积水潭

Main axis of the city 全城设计的中轴线

Starting point of the main axis 中轴线起点

Location of the Imperial Palace 宫城位置

(2) 其次，在南部湖泊的西岸，又分别兴建了南北两组宫殿。南为皇太子的宫殿，北为皇太后的宫殿。这两组宫殿的四面，也都筑有宫墙，和湖泊东岸的皇帝宫城，遥遥相望。旧日的太宁宫，正好居于这三

者中间，湖中的一个 小岛，原名瀛洲。从瀛洲通向东西两岸，各建一桥，把三组宫殿联系在一起。瀛洲北面另有一个大岛，叫做琼华岛，则是旧日太宁宫主要建筑所集中的地方。三组宫殿的四周又绕以城墙，是为皇城。从此南部湖泊遂被圈入皇城之中。按照传统的惯例，命名为太液池。沿太液池周围开辟为皇家园林。至于北部湖泊因为已经隔在皇城之外，遂另开人工渠道，引水南下，绕经皇城东墙之外，流出南郊。与此同时，又为圈入皇城之内的太液池，另辟新水源，把城西北玉泉山下的泉水，经过人工渠道，直接引入太液池。其下游流经宫城的前方，向东流出皇城，注入积水潭下游的水渠。（图2-3）

Tai-ye Chi 太液池

Ying-zhou Island 瀛洲

Aqueduct from the Yu-quan Hills 玉泉山引水渠

Ji-shui Tan 积水潭

Canal 水渠（运河）

（3）皇城之外又兴建大城。大城设计的几何中心，就定在皇城中轴线的北端，在这里筑台立碑，石碑上刻有四个大字“中心之台”。这就充分说明，全城的平面设计是经过精密测量的。从“中心之台”向西直到积水潭的西端，约3.3公里，这就是整个积水潭的宽度。以此宽度作为标准稍向外延，确定了大城西墙的位置。本来应该以同一标准尺度确定大城东墙的位置，只是在这一位置上原有一块洼地，不宜筑墙，因此大城东墙的位置，只好稍向内移。从“中心之台”向南，选定相去约3.75公里的距离，确定大城南墙的位置，这样就可以把皇城适当地包括在大城之内。然后再以同等的距离，确定大城北墙的位置。结果，四面大城的城墙建成之后，略呈长方形。东、西、南三面城墙，各开三门，北城墙只开两门。在东城墙最南一门之内，兴建了太庙。在西城墙最南一门之内，兴建了社稷坛。在全城11个城门内以及各个城门中间，大约以相等的距离，开辟了基本上相互正交的宽阔街道，连同紧靠四面城墙之内的所谓“顺城街”在内，全城中正南正北和正东正西的大街，各有9条。然后在南北平行的大街之间，又规划了相互平行的东西向“胡同”。这样，整个大都城的平面格局基本完成。（图2-4）这里应该着重说明的是大城南面正中一门，正当南北中轴线的起点，位置特别重要。从大城南门以内，直到皇城南门之间，沿着中心御道的两侧，开辟了一个丁字形的广场，相当于古代所谓“外朝”。从皇城南门进入宫城，恰好是在全城的中轴线上，兴建起皇宫中最主要的宫殿，而宫殿内正中的宝座也就正好落在这条中轴线上。这一设计的主题，即在说明皇帝“普天之下，唯我独尊”的思想，是具有十分浓厚的象征色彩的。

P : Imperial Palace 皇城

M : Market 市场

S : The Palace Square 宫廷广场

T₁ : Imperial Ancestral Temple 太庙

T₂ : Altar of Soil and Grain 社稷坛

(4) 兴建大都城的最后一项工程，就是从西北山下利用泉水为新建的大都城开辟新水源（图2-5）。当时曾把西北沿山一带的泉水，除去玉泉山的泉水专为皇城内的太液池供水之外，都汇聚入一条渠道，流注大都城内的积水潭，然后绕经皇城东墙外南下，流出城外，与金朝所开旧渠相接，直达通州，这就是历史上有名的南北大运河最北的一段。这大运河航行的终点就在积水潭。运河开成之后积水潭上停泊了满载食粮

和南货的江南船只。它的东北岸上“中心之台”周围一带，包括沿湖北岸的一条斜街，就成了全城最繁华的商业中心（图2-6）。

元大都城的兴建，历时近二十年终于落成。如果把它的平面规划和《考工记》的理想设计作一比较，不难看出《考工记》中“左祖”、“右社”、“面朝”、“后市”以及街道布局的几项基本要素，都在大都城内完全体现出来。由此可见在大都城的规划设计中，是有着深厚的文化渊源的。但是它并非机械地照抄古代的理想设计，不拘泥于大城四面均等的

正方形轮廓，而是结合地方上的地理特点和现实要求，进行了创造性的发展，利用一片辽阔的水面为中心，扩大了全城在南北方向上的深度，从而规划出一座规模宏伟而且具有优美自然风光的大城，并强有力地显示了它在设计上的主题思想，这不能不说是一种卓越的成就。

四

大都建成后不到百年，兴起于长江下游的明王朝（1368—1644）夺取了全国的统治权。明朝最初建都南京，攻占大都后先改称大都为北平，其后迁都北平，遂改名北京。北京一名就是从这时开始的。与此同时，又大兴土木，改建了大都城（图2-7）。最初是把北城墙南移2.5公里，因而把积水潭西北一区的水面隔在了城外。其后又把南城墙以及整个宫城的位置稍向南移，因此又重建新宫城，这就是一直保留到现在的紫禁城（即今故宫博物院）。紫禁城内最重要的建筑，也就是象征皇帝至高无上的统治权的前后六座大殿，仍一律建筑在全城的中轴线上，只是全城设计的几何中心，已经不在原来“中心之台”所在的地方，而是相应地南移到新建的紫禁城的正北面。为了充分显示这一新定的全城中心，就以新开凿的太液池南端的湖泊和新挖掘的紫禁城护城河的泥土，在这里堆筑了一个中峰高约47米的土山，命名为“万岁山”，借以象征皇帝的统治权万世长存。²此外，还把原在东城墙以内的太庙和西城墙以内的社稷坛，分别迁建到紫禁城南门之外的左右两侧，仍然保持着“左祖”、“右社”的传统规制。同时又把皇城的南、北、东三面城墙稍向外移，于是太庙、社稷坛以及新开凿的太液池南端的湖泊，都被包入皇城之中。³更重要的是在全城正南方的郊外，分别兴建了东西两组重要的建筑群，在东边的是天坛，在西边的是山川坛，是皇帝分别祭天和祭山川之神的地方。⁴这两组建筑群的正中间，也正是全城中轴线向南郊垂直延伸的地方。到了1553年又在北京大城的南面，修筑外城，遂把上述两坛正好包入城中。外城正南门就建在这两组建筑中间的全城中轴线上。门内的南北大道就是沿着这条中轴线开辟的。至于中轴线的北端，则是旧日的“中心之台”所在的位置，为此又在这里新建了南北两座大建筑，在南边的是鼓楼，在北边的是钟楼。这条新延长的南北中轴线，全长接近8公里。紫禁城占据了这条中轴线上最重要的位置，北面有耸立如画屏的“万岁山”，南面有左右并列的太庙和社稷坛。两者之间的中心御道，从紫禁城正南面的午门开始，向南通过皇城正南面的天安门⁵，便是进一

步发展了的丁字形宫廷广场。广场三面有红墙包围，沿红墙修建了连檐通脊的“千步廊”。出广场的正南一门，就是内城正南面的正阳门。出正阳门，便是外城。这个进一步改造过的北京城，城市轮廓呈凸形，它通过进一步延长的全城中轴线，把大都城平面设计的主题思想，又作了进一步的发挥，从而取得了更高的艺术效果。

2-7 Plan of the capital of the Ming Dynasty 明代北京城平面示意图

清朝（1644—1911）——也就是中国历史上最后的一个封建王朝，继而在北京建都，除去增建宫室和继续辟治以太液池为中心的皇家园林之外，对于整个北京城并没有更大的改变。这个北京城——现在我

们称它为“北京旧城”，一直被完整地保留到新中国诞生的前夕。它正是以《考工记》的理想设计为出发点，结合本地的地理特点进行规划，一再改造，终于达到了中国古典城市在建筑上的最高典型（图2-8）。正是这个北京城，获得了西方城市规划学家的高度评价。例如丹麦著名建筑与城市规划学家罗斯穆森，在其所著《城镇与建筑》一书的序文中，就曾这样写道：

[……] 整个北京城的（平面设计）匀称而明朗，是世界的奇观之一，是一个卓越的纪念物，一个伟大文明的顶峰。⁶

又如在美国，曾主持故都费城城市规划达二十年之久并作出了重要贡献的培根，在他的《城市设计》一书关于北京旧城的一节中也曾写道：

在地球表面上人类最伟大的单项工程，可能就是北京城了。这个中国城市是作为封建帝王的住所而设计的，企图表示出这里乃是宇宙的中心。整个城市深深浸沉在仪礼规范和宗教意识之中，现在这些都和我们无关了。虽然如此，它的（平面）设计是如此之杰出，这就为今天的城市（建设）提供了丰富的思想宝库。⁷

培根的这一评论是很值得重视的。它既肯定了北京旧城在过去作为帝王统治中心进行建造的卓越成就，以及它在今天城市设计上所能提供的参考价值，同时也指出了它包含的某些主要内容，现在已经不合时宜。实际上，他所指出的这种不合时宜的地方，也正是我们目前在计划改造北京旧城时所面临的一个主要问题。

随着历史的发展和时代的前进，古老的城市——特别是经过详细规划设计的城市，必然要面临着不断改造的问题。这个问题在北京旧城的改造上之所以显得特别突出，最根本的原因，就是北京旧城在规划设计上以非凡的艺术手法集中表现的封建皇帝“唯我独尊”的主题思想和当前的时代精神，是完全矛盾的，也是根本不能调和的。新中国的建立，标志着社会主义新时代的开始。北京作为这个新时代人民的首都，人民就有理由要求它在全城的规划上能充分表现出人民的权威、人民的力量、人民已经成为这个国家的真正主人翁的主题思想。怎样才能真正有效地进行这一改造，这首先不是一个单纯的工程技术问题。从本质上来说，这乃是一个如何对待悠久的历史文化遗产的问题，也是直接关系到如何发展社会主义新文化的问题。整个北京旧城正是中国历史文化遗产的一部分，象征着封建时代传统文化的高度发展，正如罗斯穆森所指出的：它乃是一个卓越的纪念物，一个伟大文明的顶峰。而新的北京城，象征着社会主义新文化的先进典型的人民首都，也就只能从历史形成的基础

上脱胎成长。但是对于自己的历史文化遗产，我们必须坚持批判继承的原则，既不能全盘加以否定，也不能毫无区别地兼容并蓄。重要的是能区别其精华和糟粕。凡属精华的部分，必须继承和发扬；凡属糟粕的部分，则必须批判和扬弃。这样就可以达到“古为今用，推陈出新”的目的，就可以在历史形成的基础上获得创新。

但是，区别精华与糟粕的标准，也是因时代的不同而各有差异。在今天，我们认为凡是有益于人民群众的、充分表现出人民群众创造性的，也就是真正具有人民性的东西，就应该继承和发扬。反之，就必须予以批判和扬弃。在今天，这个对于古代文化批判继承的原则，也同样适用于北京旧城的改造。

新中国建立以来，在北京旧城的改造中，仅就原有的城市平面设计这一方面来说，已经取得了一定的经验。突出的一例，就是天安门广场的改造。

如前所述，天安门前原有一个T字形的广场，在当初是专门作为一个宫廷广场来设计的，是皇帝举行重要活动的地方（图2-9）。它的东西南三面有红墙包围，严禁平民百姓进入其中，因此乃成为全城东西交通的一大障碍。从这个宫廷广场的南端，向正北遥望天安门，正是建筑在红色台基上的一座巍峨而华丽的殿堂，在旧日用以显示帝王宫阙的宏伟和庄严。1911年中国历史上最后一个王朝被推翻之后，天安门前的广场开放通行，可是三面红墙保存如旧。1949年10月1日新中国的开国大典，就是选定在这里举行的，一个重要的原因就是在这个广场正是1919年揭开了新民主主义革命序幕的五四运动爆发的地方，因此也是北京古城里最具有光荣革命传统的地方。屹立在广场正面的天安门，充分显示了古代劳动人民在建筑艺术上的智慧和才能，算得上古代建筑的精华。至于包围在它东、西、南三面的红墙，却依然是影响人民参加广场上群众活动的一大障碍。因此在建国十周年的时候，广场上的红墙被全部拆除，一个扩大了数倍的新广场展现在人们面前。新广场的西侧和东侧，分别建立起两座现代大建筑，西边的是人民大会堂，东边的是中国历史博物馆和革命博物馆，中间矗立着巍峨高大的人民英雄纪念碑。到了建国三十周年的前夕，又在广场的南部、正阳门的内侧修建了毛主席纪念堂。作为人民首都政治活动中心的天安门广场，从此基本建成。它的位置虽然依旧，可是它的性质和作用已经完全改变，它的面貌也已经是焕然一新（见图2-9）。⁸

2-9 From imperial square to people's square at the Tian-an Men, Beijing 清朝天安门

Monument to the People's Heroes 人民英雄纪念碑

Memorial Hall of Chairman Mao 毛主席纪念堂

在天安门广场开始扩建的时候，作为它左右两翼的东西长安街——取名于旧日宫廷广场的东长安门和西长安门——也大为加宽和延长，成为一条宽阔平坦的林荫大道，一直伸向东西郊外，从而形成了一条横贯全城的新轴线，它一方面加强了天安门广场在全城平面布局上的中心位置，另一方面也就等于把旧日的紫禁城推到了“后院”的位置（图2-10）。相形之下，旧日那条象征帝王统治中心的南北中轴线，也就失去了它在全城中独一无二的支配地位。现在天安门广场的改建虽然还有发展余地，但是它作为全城政治活动中心的地位，已经完全确定。广场上古老的建筑如天安门、正阳门和现代的建筑如人民大会堂和历史与革命博物馆，十分和谐地联系在一起，既反映了悠久的历史背景，又显示了新时代的精神和面貌，充分体现了“古为今用、推陈出新”的原

则。在改造北京旧城的平面设计上，这不能不说是成功的一例。

2-10 Chang-an Street, Beijing, extending east and west from the Tian-an Men 从天安门广场向东西延伸的林荫大道

根据这同一原则，在旧城的改造中，也还大有余地正等待着当代的城市设计者去发挥他们艺术创造的才能。在这里也可姑举一例，作为说明。这就是北京城内旧日的积水潭，今后应该如何去处理它，是把它视同城市发展的障碍而任意填塞改为建筑用地呢？还是应该看到它在城市发展中的重要作用而加以保留和改造？

如前所述，旧日的积水潭和北京旧城的建址关系至为密切，因为从一开始，全城设计的中轴线，就是紧傍积水潭的东岸确定下来的。同时最初大城东西两面城墙的位置，也是以积水潭的宽度为标准而决定的，因此可以说如果没有积水潭，也就不会有现在的北京旧城。在元朝大都城内，积水潭作为南北大运河的终点，是受到一定的重视的。明初把大都北城墙南移2.5公里之后，竟把积水潭的西北部隔在城外，因此城内湖

泊的面积大为缩小。其后进一步改建北京城，虽然把原有的全城平面设计的主题思想作了进一步的发展，但是城内大运河的故道已被阻绝，上游渠道也遭淤废。只剩下玉泉山下的泉水，这时被全部引入积水潭，然后流注太液池。经过这次水道系统的重新调整之后，由于太液池南端已开凿了一个新湖，因此圈在皇城之内的太液池的水面又有所开拓，沿湖一带的园林建筑也与日俱增，终于发展成为北京城内规模最大、景色最为秀丽的园林区。这时园中的湖泊已有“三海”之称，即南海、中海和北海。现在北海已经开放，这就是以风景名胜著称的北海公园。它的前身也就是金朝的离宫——太宁宫。

和三海的皇家园林命运悬殊的是隔在皇城之外的积水潭。积水潭自明清以来，一直到新中国成立之前，再没有受到最高当权者的重视。因此也从来没有进行过统一的规划和开发，只是听其淤塞湮废。湖面也被收缩为三部分。最西北的部分仍然叫做积水潭，东南的大部分改名为什刹海。但是沿湖一带仍是旧城之内富有自然风光的一带地方，特别是从什刹海东岸掠过浩瀚的水面，遥见西山峰峦，如在眼前。因此这一带湖上风光，在旧日——特别是在清代，曾经吸引了一些皇室贵族，在沿湖一带修建府第，并引湖水辟治私家园林。另外也有一些富有的寺庙，环绕湖泊周围就地兴建起来。但是在这些贵族府第和大小寺庙之外，广阔的湖滨地区却成了城市广大居民群集游憩和进行娱乐活动的场所，特别是在它的南部，自然形成一处真正的民间乐园。同时这里也是一处物美价廉的平民市场。后来由于湖泊西岸广种荷花，因此这处市场也就被叫做荷花市场了。直到新中国成立的前夕，这里仍然不失为平民百姓的游乐场所，这和旧日太液池上精心设计、逐事增华的皇家禁园，形成了鲜明的对照。现在，在北京旧城的腹地，还保留着什刹海这一区残存的湖泊以及滨湖一带若断若续的绿地。考虑到它在历史上的重要作用和价值，考虑到过去它所具有的强烈的人民性、群众性，同时还考虑到它在改善自然环境、美化首都市容上所具有的极大的可能性，以及为广大人民群众创造更广阔、更美好、更富有意义的历史文化风景区的必要性，如何进一步规划和开发这一地区，现在已经提到改造北京旧城的议事日程上来，并已列入北京城市建设的总体规划之中（图2-11）。这也应该是在历史形成的基础上，坚持批判继承的原则，力求能做到古为今用、推陈出新的一个例子，只是还有待我们努力去实现它。

2-11 Land use plan for metropolitan Beijing, 1983 北京市区规划示意图 (1983)

- 1 . Industry and warehouse 工业仓库
- 2 . Office and residential areas 工作居住
- 3 . Parks and recreation areas 绿地体育
- 4 . Streets and roads 道路用地
- 5 . Railroads 铁路

本文只是从城址的地理特点和城市的平面设计这两个方面，举出两个例子，借以说明在改造北京旧城的过程中，我们所应该坚持的基本态度和应该遵循的基本原则。

1983年7月，中共中央和国务院已经原则上批准了《北京城市建设总体规划方案》，这个方案对北京旧城作了明确的评价，指出在旧城的改造中，要注意继承和发扬旧城原有的独特风格和优点，又要体现出作为社会主义新时代人民首都的新面貌、新格局。⁹为此我们有理由相信，到本世纪末，一个足以显示具有悠久文化传统的新北京城，将会以崭新的面貌，出现在我们面前，它象征着一个社会主义的新文化已经在这个古老的国家里，发育成长，欣欣向荣！同时，我们也希望这个正在发展中的新文化，也能为全人类的文化发展，作出应有的新贡献。

③ VIEWS ON THREE MILESTONES IN THE CONSTRUCTION OF BEIJING CITY*

1

'If you do not understand the past of Beijing City, you are unable to know the present of it and of course it is impossible for you to estimate the future of it too. The development of a city is a continuous process in which the past, present and future are situated on the same chain of time'.¹ Beijing is a world-famous city of history and culture, whose planning and construction has deep historical and cultural origins. Especially on the newly selected location through the Yuan and Ming dynasties, the favorable conditions of river and lake water system were fully utilized. The convex contour of closely combined inner and outer cities in spatial structure was finally completed in accordance with the planning principles which come down in one continuous line of the construction of capital city in China since the ancient time and above all with the consecutive renewals and reforms. At the center of it, there goes through a middle axis from north to south, i.e. starting from the Gulou and the Zhonglou (the Drum-tower and the Bell-tower) in the north running down to the Yongdingmen (a city gate) in the due south, the length of which is approximately 8 kilometers. This spatial structure of organic combination of inner and outer cities had been perfectly preserved up to 1949, the year of the establishment of New China.

New China established its capital again in Beijing and according to the needs of time has carried out the city planning and construction in succession, taking the old city as the core. Judging from the spatial

structure of the whole city, the most important thing, and foremost thing too, was the enlargement of the Tian'anmen Square, i.e. to convert the enclosed square of imperial court of old days into a broad and magnificent city square. At the same time, two wings of the Tian'anmen Square, the eastward and westward Chang'an Boulevards, were also broadened and extended, thus making a scene just like a horizontal axis from east to west crossing the vertical axis of old days from north to south at the Tian'anmen Square.

Along with the demolishing of city wall of old days, the construction of the Second, Third and Fourth Ring Roads was carried out one by one. All these ring roads have naturally led to the extension of north-to-south middle axis inside the old city. This had been fully shown in the city planning map of the early stage. The south extension line of middle axis inside the old city had as its basis the road bed stretching from the Yongdingmen Gate down to the Dahongmen Gate at Nanyuan. As for the north extension line of the middle axis, there is no basis available because the area from the Gulou and the Zhonglou to the north Second Ring Road was totally blocked by the dwellings. This was directly related to the practice of breaking the historical tradition of the Jin Zhongdu, the middle capital of the Jin Dynasty, and not establishing the due north gate at the time of founding the Yuan Dadu, grand capital of the Yuan Dynasty. There is also no basis available for the further extension to the due north after crossing the residential areas, and there was the blocking of important buildings in between as well.

Therefore, except the portion inside the old city wall, this north extension line of the middle axis hadn't started being opened up until the eve of the convening of the Eleventh Asian Games in 1990, so that it could be linked with the north Fourth Ring Road under construction for the same purpose at that time. The northern portion of it is Beichen Road now. The location of the then-established main venue of the Asian Games, that is, the National Olympic Sports Center, is on the east side of the intersection of Beichen Road and north Fourth Ring

Road. To the north sits the Beijing International Convention Center constructed at the same time, and the two face each other across the Fourth Ring Road. This place is just situated to the due north of the old city, wide in area, nearer to the capital airport and rather convenient for the international communication. So far as the selection of geographical location thereof is concerned, therefore, it is very suitable too for this grand international activity, with the call for 'Unity, Friendship, Progress', to have this place as the center to take place.

In fact, it is just the successful convening of the Asian Games in Beijing and the decision of constructing the National Olympic Sports Center thereupon that makes me become conscious that in the planning and construction of Beijing City, the concept which can be called 'Three Milestones' is taking form (Fig. 3-1). The study reads as follows:

3-1 Views on Three Milestones in the construction of Beijing City 北京城市规划建

- 1 . Forbidden City (Palace Museum) 紫禁城 (今故宫博物院)
- 2 . Tian'anmen Square 天安门广场
- 3 . National Olympic Sports Center 国家奥林匹克体育中心

The First Milestone is the core construction of the Beijing City in history, the Forbidden City. It has been 570 odd years old since it was built, representing the core of the Beijing City construction under the rule of feudal dynasties and being a masterpiece in China's traditional art of architecture as well. Up to now it still erects at the center of the spatial structure of the whole city, but it is not only the art wealth of the Chinese people but has been classified as the 'World Cultural Heritage' with global reputation also.

The Second Milestone is the Tian'anmen Square which symbolizes outstandingly that a new age has arrived after the founding of New China. It has gifted the middle axis of the whole city of long tradition with wholly new significance, reflecting the characteristics of 'making the past serve the present; weeding through the old to bring forth the new' of the age in city construction and the special meaning of inheriting the past and ushering in the future in cultural tradition.

The Third Milestone, as mentioned above, is that in the beginning it was only due to the convening of the Asian Games and the construction of the National Olympic Sports Center that it started showing the arrival of the age of Beijing marching towards an international metropolis. The first time I openly put forward this idea was May 14, 1991 when I was making a report at the academic discussion in Architectural College, Qinghua University. At that time I only indicated it orally and did not write in the text of speech.²

Now three years have passed. Facing the 21st century and inheriting the fine tradition of various master plans since the 1950s, the latest Master Plan of Beijing City has further put forward the new target of establishing the modern international metropolis under the new situation of reform and opening to the outside world and of establishing socialist economic system. It is also pointed out in the

target 'to protect the famous historical and cultural cities under the consideration of the whole, especially to do this from the view of macroscopic environment of urban layout'.

What was first and foremost to put forward thereon was the 'protection of middle axis of the old city' and the direction that on the north and south extension lines of the middle axis of the old city, the following symbolic planning and design were to be made out respectively: 'the south extension line should embody the image of the South Gate of the city; along the north extension line should be retained the broad green belts, on the two sides and north point of which the public building complex should be the culmination and the termination of the city axis, reflecting outstandingly the new style and features of the capital in the 21st century'.

What should be specially noticed here is that the west and east sides of the north extension line of middle axis are the very sites of the National Olympic Sports Center and the Chinese Nation Garden under construction. As for the north point of it, it is going to be built into the public building complex, and its completion in accordance with the plan in the area will really be considered the Third Milestone in the history of the city's planning and construction (Fig. 3-2).

3-2 The north extension of the middle axis of Beijing City 北京城市中轴线的向北延伸

Public Construction areas 公建用地

Foreign affairs areas 外事用地

Middle axis 中轴线

Rivers and Lakes 河湖用地

Streets and roads 城市道路

(From Beijing Daily, April 1, 1994 摘自《北京日报》, 1994年4月1日)

2

It is necessary to explain further too that the extension towards the due north of this middle axis of the whole city in the planning is actually a new development against historical tradition.

The original middle axis inside the Beijing old city was defined at the time when the Yuan Dadu, the capital city of the Yuan Dynasty, was first constructed, but its historical origins in fact existed very

long. What is more important is that it in a concentrated way embodied the traditional thought in the days of the imperial power: Facing the South to Be Emperor, i.e. the emperor should face the due south to rule the world. This was reflected conspicuously in the beginning of the planning and design of the Yuan Dadu.

The planning and design of the Yuan Dadu can be traced up to the description of 'The Way the Craftsmen Build the City-state' in *Kaogongji* of *Zhou Li* (the book recording the work of craftsmen at the Warring States Period, 475-221 B.C.), but the design of the city walls was in fact totally different from the description of the book. Now it is explained separately as follows:

So far as the layout of the core buildings in 'The Way the Craftsmen Build the City-state' is concerned, it reads like this: the Imperial Ancestral Temple on the left side, the Altar of Land and Grain on the right side, Court facing ahead and Market on the back side (*zuozu youshe, mianchao houshi*).

By comparison, it is analyzed with the help of sketch map of the Yuan Dadu that by the so-said *zuozu* it means in fact the Imperial Ancestral Temple at the foot of the east wall inside the city. By *youshe* it means in fact the Altar of Land and Grain at the foot of the west wall inside the city. By *mianchao* it denotes the place analogous to the 'Grand Inner Portion' on the extension line from the 'Central Terrace towards the due south inside the city, i.e. the predecessor of the Forbidden City. By *houshi* it denotes the bazar area near the 'Central Terrace' on the due north of the 'Imperial Palace' (the Grand Inner Portion) (Fig. 3-3).

3-3 The sketch map of Dadu of the Yuan Dynasty “左祖右社，面朝后市”思想在元大都布局中的体现

- 1 . Imperial Ancestral Temple 太庙
- 2 . Altar of Land and Grain 社稷坛
- 3 . Central Terrace 中心之台
- 4 . Imperial Palace 大内
- 5 . The distribution area of market 市场分布区

(Redrawn according to Hou Renzhi, Historical Atlas of Beijing, Beijing Publishing House, 1988, pp. 27-28. 侯仁之绘制, 《北京历史地图集》, 北京出版社, 1988, 第27—28页)

In accordance with the above mentioned comparison, it explains just as it is in 'The Way the Craftsmen Build the City-state', that the 'left' is the east, the 'right' is the west and the 'back' is the north. Only the site where the royal court was located is specially called

'court facing ahead' not 'in front'. Why? After pondering over it scrupulously, I think if the 'court facing ahead' is understood as 'court in front', it seems not so exact. Because the word 'facing' (*mian*) contains the meaning 'looking forward to', that is to say: if you sit in the middle looking forward to the due south, that will be the court; if you turn back looking towards the north, that will be the site of market. Here it implies the meaning of giving priority to the south.

In fact, in the Chinese history, the main palaces of the capitals of successive dynasties all faced the due south in the planning. After the Yuan Dadu in the Yuan Dynasty, the further developed Beijing Capital City of the Ming and Qing dynasties further embodied this point in concentration, i.e. the well-preserved Forbidden City and two sides thereof, the Imperial Ancestral Temple (now the Working People's Palace of Culture) and the Altar of Land and Grain (now the Zhongshan or Sun Yat-sen Park).

Having been aware of above mentioned points, let us now analyze further the general planning of the Yuan Dadu—why it is totally different from the planning system of 'The Way the Craftsmen Build the Citystate' on the city outline and the installation of city gates.

In accordance with the design of the big city in 'The Way the Craftsmen Build the City-state', it is square, each side being nine li, with three gates on each side (*fang jiuli, pang sanmen*). However, the Yuan Dadu is not a square, but a rectangle slightly longer from north to south. Besides three gates each for the east, west and south sides, there are only two gates, the east and west ones, on the north side with the middle portion totally closed. This kind of difference is utterly not accidental.

The reason why the plane structure of the Yuan Dadu is rectangle is directly related to the full use of the natural lakes and rivers which flow from northwest to the due south inside the city. I have another special article to elaborate this and will not talk too much here.³ As for the fact that there is no gate right in the center of the north city wall is concerned, it is against the traditional regulations of 'The Way

the Craftsmen Build the City-state', hence a very unique issue worth attention.

Actually, it is due to the very fact that the north gate was deliberately omitted that the middle axis running from north to south, which was the basis for the design of the whole city, taking the 'Central Terrace of the whole city as the starting point, only stretched to the south. Just under such circumstances, when the Yuan Dadu was rebuilt at the early years of the Ming Dynasty, it was further extended southward along the original middle axis on the basis of reducing the northern city first, and the Wansui Hill (now the Jing Hill) was piled up in place of the original 'Central Terrace' as the symbol of center for designing the new city. At the same time, on the due south of Wansui Hill, the Imperial Palace, now the Forbidden City, was constructed along the middle axis.

Besides this, the Imperial Ancestral Temple in the east part and the Altar of Land and Grain in the west part of the Yuan Dadu were respectively moved to the east and west sides of the due south part of the Forbidden City, which was still fit for the ancient system of *zuozu youshe*, *mianchao houshi*. Then the newly built six big halls on the middle axis inside the Forbidden City further embodied the traditional system of Facing the South to Be Emperor (Fig. 3-4).⁴

3-4 Surface planes of Beijing City in the middle age of the Ming and Qing dynasties 明中叶北京城空间结构的核心部分最后定型，清代继承不变

1 . The rebuilt and newly built north city wall at the beginning of the Ming

Dynasty 明初改建、新建北墙

2 . Wansui Hill (now Jing Hill) 万岁山 (景山)

3 . Bell Tower (north) and Drum Tower (south) 钟楼 (北)、鼓楼 (南)

4 . Forbidden City 紫禁城

5 . Imperial Ancestral Temple 太庙

6 . Altar of Land and Grain 社稷坛

7 . Temple of Heaven 天坛

8 . Altar of Mountain and River (now Xian Nong Tan) 山川坛 (先农坛)

(Source: Same as Fig. 3-3, pp. 31-32. 来源同图3-3 , 第31—32页。)

After the completion of the Yuan Dadu, the middle axis of the whole city kept extending towards the south suburb again in accordance with the tradition of Praying to the Heaven in the South Suburb (*jitian yu nanjiao*). After crossing a small river which flew from west to east, the axis had two imperial building complexes separately built on the east side and west side, the Temple of Heaven on the east and the Altar of Mountain and River (now the Xian Nong Tan) on the west. After that, the city walls on three sides, east, west and south, were built, enclosing these two important complexes inside the city walls, as a result of which, Beijing started having inner and outer parts.

From that onwards, Beijing City, the combination of inner and outer parts, became the last built capital city in the times of the ruling of imperial power. It further embodied the thought 'Facing the South to Be Emperor' in the traditional ideology, and was preserved intact until the birth of New China in 1949 (see Fig. 3-4).

Now only after having the full knowledge of the theme which is embodied in concentration in the original planning and construction of Beijing City, can we really learn that today the creation of the northern extension line of the middle axis of the whole city and the further construction of public architectural complex at the north point thereof,'reflecting outstandingly the new style and features of the capital in the 21st century', are of epoch-making significance.

Finally, what is to be explained more is that it has been emphasized more than once above that in the palace construction of various dynasties in China, the traditional thought of 'Facing the South to Be Emperor' was embodied from the beginning to the end, and the southward extension of the middle axis of the Beijing City in old days again and again was also influenced by this traditional thought. Then from where did come this kind of traditional thought?

So far as the answer of this question is concerned, the discovery by archaeologists has provided the most important reference materials.

In the early 1970s, the ruins of a palace of no later than the early Shang Dynasty were excavated at Erlitou, Yanshi County, Henan Province. At the middle part of the site, there is an obvious rammed terrace base, about 0.8 meter high above the present ground, 108 meters in length from west to east, 100 meters in width from north to south. At the center of the southern part of the terrace base, there are ruins of doors with eight bays in width. In the middle of the northern part of the terrace base rose the pisé foundation 3.1 meters high, 36 meters from east to west, 25 meters from north to south. In accordance with the arrangement of the pillar holes round it, it can be concluded that this building is eight bays in width and three bays in length. Slightly north of the pisé foundation is the relic of the hall, 30.4 meters from west to east and 11.4 meters from north to south. The whole building structure, with the hall as the principal part, faces southwards as shown in the Fig. 3-5.⁵ In accordance with the restored figure made out of the above mentioned discovery, the characteristic is much more explicit that the whole construction of the palace faces the due south (Fig. 3-6).⁶

3-5 Plan of No. 1 palace base at Erlitou, Yanshi County 偃师二里头早商一号宫殿
基地平面图

(From: Archaeology, No. 4, 1974 《考古》, 第4期, 1974)

3-6 Drawing of the restored palace 偃师二里头早商一号宫殿复原图

(Redrawn according to Ancient Architecture of China, 1983, p. 24 根据《中国古建筑》重制, 1983, 第24页)

Therefore, it can be imagined that the palace hall in the Central Plain Region (comprising the middle and lower reaches of the Yellow River) in China from the ancient time on faced the due south. Thereafter, this rule was inherited in successive dynasties without

exception. Hence, the so-called thought of Facing the South to Be Emperor gradually took shape in the ideology. This speciality of the dynasties established in the China Central Plain is reflected in the capital planning and design.

The forming of this characteristic was closely related to the geographical environment of the Yellow River Valley. The Yellow River Valley is located just at the region where the semi-tropical monsoon climate of the northern hemisphere is most typical. In winter, the high atmospheric pressure in the northwest of Asian continent is formed and the cold and strong north wind attacks the middle and lower parts of Yellow River with the severe cold lingering on for months. In summer, the center of high atmospheric pressure moves towards the southeast Pacific Ocean and the south monsoon bringing rain makes the temperature rise in such a way that summer heat even becomes unbearable. As a result of that, it is most suitable for the facade of the house to face the due south with the closure of the northern side to avoid wind and coldness of winter. The opening of doors and windows towards the southern side is not only convenient to get winter sunshine obliquely coming into rooms, but also for the air circulating in summer time. It can be imagined that in order to adapt to this climatic characteristic, the earliest palace buildings in Yellow River Valley since the ancient time, have adopted the style of facing the south with the back to the north, as it is seen in the archaeological discovery at Erlitou, Yanshi County. Having been existing for a long time, this practice became a custom. When it was recorded in 'The Way the Craftsmen Build the City-state', it was quite enough to make clear upon noticing 'the Imperial Ancestral Temple on the left side, the Altar of Land and Grain on the right side, Court facing ahead and Market on the back side' their relative positions. Here the words 'facing ahead' are of great importance. It denotes fronting the southern direction, as a result of which the tradition of so-called 'Facing the South to Be Emperor' in the ideology finally came into being.

In accordance with the geomancy theory in later times there is also explanation concerning the question of facing the south in construction design. For example, Zhang Ziwei of the Song Dynasty wrote in his book entitled *Yu Sui Zhen Jing* that temples, courts, palaces, and prefecture and county offices all face the south without any exception, the reason of which is to manage in the face of brightness.⁷ There is no record concerning whether in the beginning of the Yuan Dynasty the absence of the gate of due north was owing to the impact of geomancy theory or not. So let us lay it aside for the time being. However, it is very obvious that the geographical conditions of the Yellow River Valley led to the construction of palace facing the south in the beginning.

Translated by Li Guanghui

叁 试论北京城市规划建设中的三个里程碑*

—

“不了解北京城的过去，就无法认清北京城的现在，当然也就不可能预测北京城的未来。城市的发展是一个连续的过程，过去、现在和未来处在同一时间之链上。”¹北京是举世闻名的历史文化名城，它的规划建设有着深厚的历史文化渊源。特别是经过元明两代在新选择的城址上，充分利用河湖水系的有利条件，根据自古以来我国关于都城建设一脉相承的规划特点，又加以不断的更新和改造，终于在空间结构上完成了内外两城紧相毗连的“凸”字形轮廓，中间贯以自北而南的中轴线，北起鼓楼与钟楼，南至全城正南方的永定门，长近8公里。这一内外两城有机结合的空间结构，一直完整地保留到1949年新中国的成立。

新中国重新建都北京，根据时代的要求，相继进行了以旧城为核心的城市规划和建设。从全城的空间结构上来看，最重要的，也是首先进行的就是天安门广场的扩建，把旧日封闭式的宫廷广场，转变为恢宏开阔的城市广场。同时又将广场两翼的东西长安街加以拓宽和延长，有如一条东西横轴线与旧日自北而南的纵轴线交会在天安门广场上。

其后随着旧日城墙的拆除，又开始进行了二环路、三环路和四环路的设计。这些环路从构图上自然导致旧城内南北中轴线向外的延伸，这在早期的城市规划图上已经充分显示出来。旧城中轴的南延长线，已有从永定门通向南苑大红门的路基作为依据。至于旧城中轴的北延长线，则无所依据。因为从钟鼓楼到北二环，完全为民居所阻隔，这与元大都城初建立时就打破历史传统不设正北门有直接关系。越过这一带民居再向正北方延伸，也同样是无所依据的，其间也还有重要建筑的阻隔。所以这条全城中轴的北延长线，除去旧城墙内的一段外，直到为了迎接1990年第11届亚运会的召开，这才开始打通，以与为了同一目的也正在开辟中的北四环路相接，其北段就是现在的北辰路。当时兴建的亚运会主会场，也就是国家奥林匹克体育中心，就选建在北辰路与北四环相交处的东侧，在其北面隔四环路相望的就是同时兴建的国际会议中心。这

里恰处北京旧城的正北方，地域开阔，又去首都机场较近，国际上的来往也比较便捷。因此从地理位置的选择上来说，这次盛大的以“团结、友谊、进步”为号召的国际活动以这里为中心召开，也是很相宜的。实际上也正是由于这次亚运会在北京的胜利召开，以及由此而决定的国家奥林匹克体育中心的建设，才开始使我意识到在北京城的规划建设中，可以称之为“三个里程碑”的设想正在形成中（图3-1）。试论如下：

3-1 Views on Three Milestones in the construction of Beijing City 北京城市规划建设中的三个里程碑的初步设想

- 1 . Forbidden City (Palace Museum) 紫禁城（今故宫博物院）
- 2 . Tian'anmen Square 天安门广场
- 3 . National Olympic Sports Center 国家奥林匹克体育中心

第一个里程碑是历史上北京城的中心建筑紫禁城。它的建成至今已有五百七十余年，代表的是封建王朝统治时期北京城市建设的核心，也是中国传统建筑艺术的一大杰作。到今天它依然屹立在全城空间结构的中心，但已不仅仅是中国人民的艺术财富，而且已被列为“世界文化遗产”，享誉全球。

第二个里程碑就是新中国建立之后，在北京城的空间结构上，突出地标志着一个新时代已经来临的天安门广场。它赋予具有悠久传统的全城轴线以崭新的意义，显示出在城市建设上“古为今用，推陈出新”的时代特征，在文化传统上有着承先启后的特殊含义。

第三个里程碑如上所述，最初是由于亚运会的召开和国家奥林匹克体育中心的兴建，才开始显示出北京走向国际性大城市的时代已经到来。我第一次公开提出这一设想，是1991年5月14日在清华大学建筑学院的一次学术报告会上，当时也只是做了口头上的陈述，并没有写出书面的讲稿。²

而今时过三年，面向21世纪的《北京城市总体规划》，继承了50年代以来历次城市总体规划的优良传统，又在改革开放和建立社会主义市场经济体制的新形势下，进一步提出了建设全方位对外开放的现代化国际城市的新目标。其中也包括了“历史文化名城的保护与发展”的重要项目，并且指出“要从整体上考虑历史文化名城的保护，尤其要从城市格局的宏观环境上保护历史文化名城”。

其中首先提出的就是“保护传统城市的中轴线”，并且决定在旧城中轴线的南北延长线上，分别进行下列象征性的规划设计，即“中轴南延长线要体现城市‘南大门’形象；中轴北延长线要保留宽阔的绿带，在其两侧和北端的公共建筑群作为城市轴线的高潮与终结，突出体现21世纪首都的新风貌”（着重号系作者所加）。

这里应该特别注意的是这中轴北延长线的东西两侧，正是国家奥林匹克体育中心和正在兴建的中华民族园所在之地。至于其“北端”，也就是要作为城市轴线的“高潮”和“终结”的所在处，还要建成“突出体现21世纪首都的新风貌”的公共建筑群。因此，这一区公共建筑群按计划的完成，就真正可以看作是北京城市规划建设中的第三个里程碑了。

总结以上所述，《北京日报》1994年4月1日“图解新闻版”为介绍《北京城市总体规划》所刊载的一幅示意图，正好可供参考，转载如下（图3-2）。

3-2 The north extension of the middle axis of Beijing City 北京城市中轴线的向北延伸

Public Construction areas 公建用地

Foreign affairs areas 外事用地

Parks and Recreation areas 绿化体育用地

Middle axis 中轴线

Rivers and Lakes 河湖用地

Streets and roads 城市道路

(From Beijing Daily, April 1, 1994 摘自《北京日报》, 1994年4月1日)

在这里还可以进一步设想, 上文提出的三个里程碑在建筑设计上还是应该各有其时代特征的。例如紫禁城作为第一个里程碑, 它那巍峨壮丽的宫阙, 就充分显示了皇权时代帝王至上的思想。天安门广场作为第二个里程碑, 它在扩大宫廷广场为城市广场的基础上, 又融合古今建筑为一体, 从而呈现出继往开来的新气象。现在作为第三个里程碑, 又处在整个城市空间结构的顶点上, 其总面积还将超过旧日的紫禁城, 对于这一区公共建筑的总体规划必须早做考虑, 更重要的是如何设计和营建

方能“突出体现21世纪首都的新风貌”，这就为当代建筑学家提出了一个十分重要的新课题。愿拭目以待，早观厥成。

二

还应该进一步说明的一点，就是在北京城总体规划上这条全城轴线向正北方的延伸，乃是一反历史传统的新发展，是具有划时代的意义的。

北京旧城以内原有的中轴线，是元大都初建时所确定的，但是它的历史渊源却由来已久。更重要的是它还集中体现着一种皇权时代的传统思想，即：“面南而王”，也就是说皇帝要面向正南来统治天下。这一点在大都城的规划设计中，从一开始就突出地反映出来。

大都城的规划设计，其核心建筑的布局，可以追溯到《周礼·考工记》中“匠人营国”的描述，这是明显易见的；可是大都城四面城墙的设计，却与“匠人营国”的描述大相径庭。分别说明如下。

“匠人营国”关于其核心建筑的布局是这样写的：“左祖右社，面朝后市。”对比之下，借助于元大都的略图，进行分析，所谓“左祖”，就是大都城内东城墙下的“太庙”；“右社”就是大都城内西城墙下的“社稷坛”；“面朝”所指，相当于大都城内自“中心之台”向正南方延长线上的“大内”，也就是紫禁城的前身；“后市”所指，就是“大内”正北“中心之台”附近一带的市场（图3-3）。

3-3 The sketch map of Dadu of the Yuan Dynasty “左祖右社，面朝后市”思想在元大都布局中的体现

- 1 . Imperial Ancestral Temple 太庙
- 2 . Altar of Land and Grain 社稷坛
- 3 . Central Terrace 中心之台
- 4 . Imperial Palace 大内
- 5 . The distribution area of market 市场分布区

(Redrawn according to Hou Renzhi, Historical Atlas of Beijing, Beijing Publishing House, 1988, pp. 27-28. 侯仁之绘制, 《北京历史地图集》, 北京出版社, 1988, 第27—28页)

根据以上的对比, 恰好说明“匠人营国”中的“左”就是东, “右”就是西, “后”就是北, 只是朝廷所在独称“面朝”, 而不称“前”, 这是为什么? 细加思索, 如果把“面朝”二字只是理解为“前有朝廷”, 似乎还不甚确切。因为这里的“面”字, 含有“前瞻”的意思, 也就是说: 要居中向正

南方望去是朝廷，转身反顾身后的北方，就是市场所在。这里就暗示着以“南”为上的含义。事实上，中国历代都城在规划设计上，其主要宫殿都一律面向正南。继元大都之后，又进一步发展了的明清北京城，更是集中表现了这一点，这就是现在保存完好的紫禁城，以及进一步迁移到紫禁城前方左右两侧的太庙（今劳动人民文化宫）和社稷坛（今中山公园）。

在明确了上述各点之后，再来进一步分析元大都城的总体规划，在城市轮廓和城门设置上，又是如何与“匠人营国”的规制大相径庭的。

按“匠人营国”关于大城的设计是“方九里，旁三门”。而大都城的营建，并非四面等同的正方形，而是南北略长的长方形，而且除去东西南三面各有三门外，北面却只有东西两门，正中间却是完全封闭的。这种差异，绝非偶然。

大都城的平面结构呈长方形，这与充分利用城内从西北转向正南的一带天然湖泊，有直接关系，作者另有专文说明，此不赘言。³至于在北面城墙的正中央不设北门，却有悖于“匠人营国”的传统规制，是十分突出的一个问题，应该引起重视。实际上也正是有意识不设北门，因此自北而南作为全城设计依据的中轴线，也只是以全城的“中心之台”为起点向南延伸。正是在这一情况下，明朝初年改建大都城，在首先减缩北城的基础上，又进一步沿着原有的中轴线，继续向南开拓，重新堆筑了万岁山（今景山）以代替原来的“中心之台”作为新城设计中心的标志。同时又在万岁山的正南方，继续沿着中轴线新建大内，也就是现在的紫禁城。此外，又将大都东城下的太庙和西城下的社稷坛，分别改建到紫禁城正南方的东西两侧，依然符合“左祖右社”的古制。于是紫禁城内中轴线上兴建起来的前后六座大殿，也就更进一步体现了“面南而王”的传统体制（图3-4）。⁴

3-4 Surface planes of Beijing City in the middle age of the Ming and Qing dynasties 明中叶北京城空间结构的核心部分最后定型，清代继承不变

1 . The rebuilt and newly built north city wall at the beginning of the Ming

Dynasty 明初改建、新建北墙

2 . Wansui Hill (now Jing Hill) 万岁山 (景山)

3 . Bell Tower (north) and Drum Tower (south) 钟楼 (北)、鼓楼 (南)

4 . Forbidden City 紫禁城

5 . Imperial Ancestral Temple 太庙

6 . Altar of Land and Grain 社稷坛

7 . Temple of Heaven 天坛

8 . Altar of Mountain and River (now Xian Nong Tan) 山川坛 (先农坛)

(Source: Same as Fig. 3-3, pp. 31-32. 来源同图3-3, 第31—32页。)

就在上述大城之内核心地区的规划建设完之后, 又根据“祭天于南郊”的传统, 将全城的中轴线继续向南郊延伸, 在越过一条自西而东的小河之后, 又分别在东西两侧, 兴建了两组皇家建筑群。在东侧的为天坛, 在西侧的为山川坛 (后改称先农坛)。其后又兴建东、西、南三面城墙, 将这两组重要建筑群圈入城内, 于是北京始有内外城之分。

从此这内外合一的北京城, 就成为皇权统治时代最后建成的一座都城, 它又进一步体现了传统的意识形态中“面南而王”的思想, 并且完整地保存下来, 一直到1949年新中国的诞生 (见图3-4)。

现在只有充分认识到北京这座历史文化名城在其原有的规划建设上所集中体现的主题思想, 才能真正体会到今天开辟全城中轴北延长线以及进一步在其北端兴建“突出体现21世纪首都的新风貌”的公共建筑群, 确实是有着划时代的意义的。

三

最后, 还应该说明的是: 上文一再强调中国历代宫殿建筑, 都始终体现了“面南而王”的传统思想, 而且旧日北京城的中轴线一再向南延伸, 也同样是这一传统思想的影响。那么这种“面南而王”的传统思想又是如何产生的呢?

关于这个问题的答案, 考古学的发现提供了最重要的参考。

70年代初, 在河南省偃师县二里头, 发掘出至少是早商时期的一处宫殿遗址, 其中部, 有一明显的夯土台基, 高出地面约0.8米, 东西长108米, 南北宽100米。台基南侧的中央, 有门址遗迹, 面阔8间。殿堂地居台基中央之北部, 有夯土台, 土层厚3.1米。殿堂东西长36米, 南北宽25米, 根据周围柱洞的排列, 可以断定该建筑面阔8间, 进深3间。

基地中央稍北为殿堂遗址，东西长30.4米，南北宽11.4米。以殿堂为主的整体结构面向南方，如图3-5所示。⁵根据上述发现制为复原图，则整体宫殿建筑面向正南的特点，就更加显明（图3-6）。⁶

3-5 Plan of No. 1 palace base at Erlitou, Yanshi County 偃师二里头早商一号宫殿基地平面图

(From: Archaeology, No. 4, 1974 《考古》，第4期，1974)

3-6 Drawing of the restored palace 偃师二里头早商一号宫殿复原图

(Redrawn according to Ancient Architecture of China, 1983, p. 24 根据《中国古建筑》重制，1983，第24页)

由此可以设想，中国中原地区自古以来的宫殿建筑就是面向正南方，此后历代相承，莫不如此。因此在意识形态里逐渐派生出所谓“面南而王”的思想。这一特点在中国的中原王朝中，正是历代都城在规划设计上的一大特色。这一特色的形成，和黄河流域的地理环境是有密切关系的。黄河流域正处于北半球亚热带季风气候最为显著的地区，冬季在亚洲大陆西北内部形成高压，寒冷强劲的偏北风，袭击着黄河流域中下游，气候严寒，长达数月。夏季高压中心转向东南太平洋上，来自南方致雨的季风，又使温度上升，甚至暑气逼人。于是房屋建筑面向正南最为相宜，北侧封闭以御冬季风寒，南侧开设门窗，既便于冬季阳光斜射室内，又有利于夏季空气流通。可以设想，为了适应这一气候特点，从古代起，黄河流域最早的宫殿建筑，如偃师县二里头的考古发现所见，就采取了背北面南的形式。这一特点长期延续下来，相沿成习。到了《周礼·考工记》“匠人营国”的记载中，只要记述“左祖右社，面朝后市”，就足以说明彼此之间的方向，而“面朝”的“面”字在这里就特别重要，它指明了是面向南方，由此终于衍生出意识形态中所谓“面南而王”的传统。按后世的风水学说，就建筑设计面向南方，也有解说。例如宋人张子微在所著《玉髓真经》一书中就曾写道：“庙朝宫殿府县治廨，无不向南，盖取向明而治之义。”⁷元初规划大都城，不设正北门，是否也有风水学说的影响，未见有明文记载，姑不具论。只是追本溯源，黄河流域的地理条件，导致了最初宫殿建筑取向正南，则是十分明显的。

④ FROM BEIJING TO WASHINGTON A Contemplation on the Concept of Municipal Planning*

I. Recommendation of the Topic

Beijing and Washington are two capital cities of two countries with totally different social systems. The design and planning of the two cities have their unique features respectively. Chronologically, there is a long interval between their initial constructions, yet their design and planning both reflect the depth of their own cultural and historical background. The original plan of old Beijing is a masterpiece of city planning in feudal China, while the plan of Washington inherits the elegance of the sixteenth-century Renaissance tradition and the graceful urban design of Western Europe, and is a marvellous specimen of the achievement in the era of rising capitalism.

China, after the lapse of feudal dynasties, suffered from the oppression of semi-colonialism and semi-feudalism. She is now in the era of socialist construction. America, on the other hand, is a highly developed capitalist nation, still following the capitalist road and even casting her influence abroad. The two capital cities, which are the focal point of expression for their respective national cultures and histories, would be confronted with different problems in city planning and design.

For city planning and design, Beijing and Washington share some similarities in form, but they are fundamentally different. The most prominent feature in common is the decision at the infant stage of city construction to fix a central axis line for the layout of the whole city. Nevertheless, their fundamental difference consists in the respective

themes to be represented owing to the totally different social systems in the very beginning of their planning.

II. The City of Beijing (Peking)

●Changes of Beijing's City Sites and Its Present Location

The origin of the primitive settlement of Beijing could be dated back to over 3,000 years ago. It was located at the southwest part of present Beijing city which had not begun to be built until about 720 years ago(1267 A.D.). The lake district of the ancient Gaoliang River was chosen to be the center for the design and plan of the new city, that is, the Dadu City (the Great Capital) of the Yuan Dynasty (1271-1368). The city underwent some reconstruction in the early days of the Ming Dynasty(1368-1644) and a new name Beijing was given to it. In 1553 A.D., an outer wall was added in the southern part of Beijing city. Thus, we have an inner city and an outer city of Beijing, both encircled by city walls. The two combined took the shape of a Chinese character "凸", occupying an area of 62 sq. km. Hence the surface plan of Beijing city was fixed, and it had been preserved as it was until 1949 A.D., when the New China was born. It is now called the Old City of Beijing.

At the beginning of building old Beijing, the southern half of the lake was enclosed within the city and was designed as the central part of the royal garden in the Imperial City. In accordance with the feudal tradition, it was named "Tai Ye Chi" (the Holy Water Pond). In the early part of the Ming Dynasty a new lake was dug at the southern tip of the Holy Water Pond. This is the present Nan Hai (the South Sea). The upper part of the original lake left out of the Imperial City was called Ji-shui Tan (the Reservoir). It was also in the early years of the Ming Dynasty that the northern city wall of the capital was moved southward, thus excluding the northwestern part of Ji-shui Tan from

the city. The excluded part was called Tai-ping Hu (the Peaceful Lake), which was filled up during the Cultural Revolution. And the other part inside the northern wall of the great city but outside of the Imperial City is the Shicha Hai of today, made up of Qian Hai (the Front Lake), Hou Hai (the Back Lake) and Xi Hai (the West Lake). The southwestern tip of Qian Hai had also been filled up and reclaimed for building sites recently.

In sum, the original lake district furnished essential geographical conditions for the establishment of the Old City of Beijing. Its original appearance had long been altered, but it still occupies an important place. There is a plan to connect the six south and north lakes (that is, Nan Hai, Zhong Hai and Bei Hai in the south and Qian Hai, Hou Hai and Xi Hai in the north), which is part of the general plan for developing the new Beijing. In order to illustrate the theme of the plan of the Old City, it's better to show the changes of watercourses and city sites of old Beijing in the following figure. (Fig. 4-1)

4-1 City sites of old Beijing (from Zhongdu City in the Jin Dynasty to Beijing in the Ming and Qing dynasties) 北京旧城址变迁 (金中都到明清北京)

(Broken line from A to B is a reference line to demonstrate the relative positions of city sites vertically AB间虚线表示城址南北移动的相对位置)

●Theme of City Plan

As shown in Figure 4-1, we see clearly that several changes in the shape of the Old City of Beijing, from rectangular to the ingenious shape of a Chinese character "凸", took place. However, the axis line running through the city from north to south, though extended, had no sideward shift. Actually the axis line was the basis of the surface plan of the capital. This is true of the design of the Inner City as it is of the Outer City. It must be pointed out that even before the building of the outer walls, two groups of architecture had been built in 1420 A.D., that is, the Temple of Heaven and the Altar of Mountain and River (later renamed the Altar of Agriculture). They were located symmetrically on the east and west sides of the prolonged axis line. And with building of the outer walls in 1553 A.D., a newly prolonged central axis line with a total length of 8 km., implicitly linking the Inner City and the Outer City, took shape, which impressed one with the sense of unity so much that it appeared that the two parts of the city had been planned and completed at the same time. And the "凸"-shaped capital, when compared with Dadu of the Yuan Dynasty and Beijing in the early years of the Ming Dynasty, renders a greater sense of stableness and security. It is this feature of the layout of the city that has won enormous appreciations and praise from Western architects and city planners for its aesthetic value. The Danish architect S. E. Rasmussen remarked Beijing as "one of the wonders of the world, in its symmetry and clarity a unique monument, the culmination of a great civilization."¹ The American city planner E. N. Bacon praised highly of it, saying "Possibly the greatest single work of man on the face of the earth is Peking.... [I]t is so brilliant in design that it provides a rich storehouse of ideas for the city of today." He also highlighted central axis line and the lakes adjacent in yellow and blue, which appeared prominent and vivid against the greyish surface plan.²

One should, however, note more the thought underneath the

design of the surface plan. From the architectural perspective, two points should be clarified:

1 . Relationship between building of city walls and city plan

According to Chinese tradition, all ancient cities were built with walls. Hence the Chinese character "城" (cheng) has a dual meaning. It may mean "a city" or "the wall of a city." It can also be used as a verb. For example, in "Cart Driving," one poem from Minor Odes, *Book of Poetry*, one of ancient classics, there is a line, "wall the place in the north." Here the word "wall," used as a verb, means "to build city walls." Building of city walls is most essential in the design and plan of a capital city. For example, *Kaogongji (A Study of Engineering)*, a volume of the ancient classics *Zhou Li or The Rites of Zhou* completed during the Age of Spring and Autumn (770-476 B.C.), had a paragraph "The Way the Craftsmen Build the City," which summarized the experiences in city building since the founding of the Zhou Dynasty, and on its basis established a standard for capital city building as follows:

A capital city should be square in shape, each side being nine *li* long. There should be three gates on each side. Within the city, there are nine thoroughfares running longitudinally and another nine latitudinally, each wide enough for nine chariots driving abreast. On the left side within the city an ancestral temple should be erected. And on the right side there should be an altar of harvest. The court should be built to face the front while the market square should be placed at the rear of the court.

It is self-evident that the imperial court is in the center of the city. For this idea, reference can be made to He Ye-ju's *Research on the System of Capital City Building*, from which some quotation could be cited as follows:

Why was the imperial court located in the middle of the capital? I think this is closely related to the doctrine of "to choose the middle" esteemed by the people of Zhou and it cast great influence on the determination of the location of a capital. To build the capital in the middle of a kingdom is not only convenient for the subjects from different directions to pay tributes to the king, but also easier for the king to reign over the country from the center.³

It should be noted that of all the capital cities built in the feudal dynasties in China, the Dadu City of the Yuan Dynasty is the one built according to the standards closest to those set by "The Way the Craftsmen Build the City." Certainly this was directly related to the main designer of the city Liu Bingzhong (Liu Kan). Liu was a practically minded person and well versed in classics. He had lectured in the Zijin College at the eastern foot of the Taihang Mountains, where the famous astrologist and expert on water conservancy Guo Shoujing studied under him. Before the establishment of the Yuan Dynasty, Liu had been ordered by Kublai Khan to design on the northern shore of the Shandian River on the upper reaches of the present Luan River, Kaiping City (called Shangdu City later), whose remains can still be found today. This achievement won Liu the recognition of Kublai Khan, so the latter bestowed him the name "Bingzhong" (Adherence to Loyalty). In 1260 A.D., Kublai Khan entered and got stationed in Zhongdu, the last big city that developed on the site of the primitive settlement. Seven years later he decided to build a new city around the Taining Palace (an imperial summer retreat in the lake district) to the northeast of Zhongdu City, and he again appointed Liu in charge of the task. Guo Shoujing was also recommended to participate and made great contribution especially to water conservancy and construction of the Grand Canal.

It is necessary to point out that the shape of the Great Capital was rectangular with the north-south walls longer than the east-west walls, rather than square as prescribed in "The Way the Craftsmen Build the City." This was out of necessity to fully utilize the watercourses. Another discrepancy was that residential palaces in the "Grand Inner Portion" (equivalent to the later Forbidden City) did not lie at the geometric center of the capital but slightly south of it, though it was still situated on the axis line in the plan, which also fitted into the doctrine of "to choose the middle."

From the construction of Dadu of the Yuan Dynasty to the supplement of outer walls in the middle ages of the Ming Dynasty, the

surface plan of this city had underwent several alterations, and thus become vastly different from the ideal described in the classics, but the basic concept the city was trying to express was still the same. Moreover, it had been more prominent, especially owing to prolonging the axis line twice. Therefore, the following part will be devoted to the discussion of the design of the axis line and the concept beneath.

2 . Implications of axis line design and its historical and cultural background

The artistic effect that the axis line rendered in the layout of the Old City of Beijing has been highly appreciated by city planners home and abroad, while its implications and historical and cultural background are to be further explored.

In another paper "On the Remolding of the Old Beijing City"⁴ by the author, it is recorded that Kublai Khan decided to build the new capital before the founding of the Yuan Dynasty and the geometric center of the plan of the capital was fixed on the northeastern shore of the lake Jishui Tan. At this spot was erected a stone tablet with four characters "中心之台"(The Central Platform) carved in it. Taking the platform as the starting point, a straight line was drawn closely along the eastern shore of the Jishui Tan as the central axis of the whole city. The imperial palaces were built on the eastern shore of the Holy Water Pond, exactly in the middle of the axis, so that the front court Daming Palace (Palace of Brilliance) and the residential palace Yanchun Ge (Prolonged Spring Palace) occupied the most significant sites of the city. Hence, the idea embodied by the central axis became very clear, that is, the absolute power of the emperor. The Ancestral Temple and the Altar of Harvest, the two complexes of symbolic significance, were placed on the left and right sides of the palaces respectively within the city walls as prescribed by "The Way the Craftsmen Build the City." Later, as the capital was rebuilt by the Ming emperors, the original geometrical center of the Inner City was moved south to the Central Peak of the Jing Hill, which was the original site

of the Prolonged Spring Palace during the Yuan Dynasty. And these two groups of buildings were also moved southward to the two sides in front of the Forbidden City. The result of this is that the concept embodied by the design of the axis becomes more prominent. With the building of the Temple of Heaven and the Altar of Mountain and River in the southern suburb, the axis was further prolonged to the south. Its influence on the planning and design of the Old City of Beijing became even more significant, also making the theme represented thereby more prominent.

Another question to be further clarified is: How is it decided that the axis of the capital as it appeared on the surface plan runs perpendicularly from north to south and extends this way? The question seems simple, but it concerns the issue of orientation in the design and planning of a capital, that is, it must face towards the due south. From it derives the doctrine of "facing the south to be king." There is no direct reference in documents to when this idea applied to city planning originated. However, in "The Way the Craftsmen Build the City" in *Kaogongji*, *Zhouli*, there is an implication that the city should be built towards the south. As for the layout of the capital, there are such prescriptions, "left for the Ancestral Temple and right for the Altar of Harvest"—"left" refers to east and "right" west, and "court in the front(south) and market at the rear (north)." The north-south orientation of city had long been accepted by Chinese as a tradition and passed down. Archaeological discoveries have provided concrete evidence. All the ruins of the foundations of the palaces from the early Shang Dynasty attest to that the original structures above were facing south.⁵ Two foundations found in the Shang ruins indicate that the palaces not only faced southward but also stood on the same north-south line with one in front of the other, which should be the primitive form of the principle—"court in the front and living quarters at the rear."⁶ The foundations of city walls were also excavated in the capital relics of Shang; they appeared almost square, only the palaces were in the northeast of the city.⁷ Most probably the

idea of building the palaces in the middle of the city, i.e. on the central axis, hadn't took shape or established as a rule until the Zhou Dynasty. This is the initial thought from which the traditional principle recorded in the classic of *Zhouli* developed. These became the rules for workmen to follow in the building of a capital in later times. The theory of "to choose the middle" was a reflection of that thought as it appeared in the passage of "Judge the Situation" (*Shenshi*) in *The Book of Spring and Autumn* by Lü Buwei (*Lüshi chunqiu*) in the later part of the Warring States Period (475-221 B.C.) that "All rulers of ancient times did choose the middle place under the Heaven to establish their kingdoms."

The facts mentioned above show that in designing the plan for a capital, the concept was to arrange the building of the city to face southward. This is deeply rooted in historical and cultural background and tradition. This fact is that the central part of China is located in the monsoon land of the northern hemisphere, where strong northwesterly winds blow with fierce coldness in winter. In summer southeasterly winds prevail causing the weather to be hot and humid with heavy rainfall. Thus to keep out the bitterly cold wind and to get the most sunshine and warmth, it was advisable and reasonable to build the houses with windows and doors facing south and the high walls in the back facing north. This requirement of building principle and rule of "facing south" gradually prevailed in the design and planning of municipal construction. And from this principle and rule derived the doctrine of "facing the south to be king." Such a tradition can be traced to the time of slave society. It became a confirmed system during the feudal era. Beijing, a famous historical and cultural city, has preserved these characteristics in the planning and design of its buildings.

●The Essential Task of Transforming Old Beijing and the Achievements

With the birth of New China, the task of transforming Old Beijing into the capital of the People's Republic of China was put on the agenda. This is to say, while preserving the special characteristics of this famous historic city of cultural richness, we must supply new concepts which reflect the spirit of the new era. This is not an easy task. What we have done in the past thirty years showed that we have committed some irretrievable mistakes and damage. Nevertheless, we have had some achievements among which the transformation of Tian An Men Square is one.

Tian An Men Square was once the imperial court of feudal sovereignty. It was surrounded on three sides by red walls, along the inside of which there was a long corridor each made up of rooms whose eaves and ridges were connected successively. It was called "A Thousand Steps Corridor." The court within the red walls was in a "T" shape. It had been the place where royal ceremonies took place showing off the absolute authority of the feudal emperors. The place was out of bounds to the common people. The court was located on the central axis which is symbolic in the sense that it expressed the feudal ideology of "the Emperor is the Almighty Sovereign."

Entering the gate of Tian An Men, one must pass through layers of enclosed space in order to reach the nuclei of the royal buildings. They are the grandest buildings in the Forbidden City—Tai He Dian (the Palace of Prosperity and Peace), Zhong He Dian (the Central Peace Palace), Bao He Dian (the Palace of Preserving Peace), and the royal residential palaces in the rear part of the Forbidden City—Qian Qing Gong (the Palace of Heavenly Purity), Jiao Tai Dian (the Palace of Mutual Prosperity) and Kun Ning Gong (the Palace of Feminine Calmness). (Fig. 4-2)

- 4 . Right Chang An Men 长安右门
- 5 . Da Qing Men of the Qing Dynasty 大清门
- 6 . The Red Walls 红墙
- 7 . A Thousand Steps Corridor 千步廊

In 1911, the revolution led by Dr. Sun Yat-sen ousted the Manchurian imperial reign, thus ending more than two thousand years of feudalism and it was not until then that the imperial court in front of Tian An Men was open to all. It was in 1919 in Tian An Men Square

that the famous May 4th Movement first started and began the overture of the neoDemocratic Revolution. This is one of the most important incidents which took place in the Square in the heart of Beijing. It was the spark that started the prairie fire of a national revolution of the people. Under the leadership of the Chinese Communist Party and after thirty years of struggle, the People's Republic of China was born. The inauguration of the People's Republic of China took place in Beijing in the year 1949, on the first of October in Tian An Men Square. This incident gave a new significance to the Square. This grand and gorgeous old building obtained a new significance which symbolized the rebirth of an ancient civilization. When creating the emblem of the People's Republic of China, Tian An Men was designed in the middle of the emblem. In spite of this, the old red walls were still there hindering the common people from going into the Square for their various social, recreational or political activities. Therefore, it was of practical necessity to transform the Square. In order to celebrate the tenth anniversary of New China, Tian An Men Square underwent massive transformation. The old red walls were completely demolished and the Square itself was thereby expanded. Two grand structures were built. They were, on the east the Museum of Chinese History and the Museum of Chinese Revolution, and on the west the Great Hall of the People, which stands for the power of the Chinese people. In the middle of the Square, a monument in memory of the heroes of the people was erected. Thus on the same old location, Tian An Men Square showed its new face and new significance. Here the old concept of "the Almighty Sovereign" was totally eradicated, and in its place the new concept of "the Almighty People" was expressed. The basic layout of the Square was set, although there was much to be improved. All those who have visited Tian An Men Square could grasp the concept of a new era embodied in the Square that is situated on the original axis of the city. Hence, the transformation should be considered successful (Figs. 4-2, 4-3).

4-3 The enlarged Tian An Men Square after the founding of New China 新中国成立后扩建的天安门广场

- 5 . Museum of Chinese History and Museum of Chinese Revolution 中国历史博物馆与中国革命博物馆
- 6 . Chairman Mao's Memorial Hall 毛主席纪念堂
- 7 . Dong and Xi Jiao Min Xiang 东、西交民巷

In addition to this, the East and West Chang An Streets were broadened and prolonged and so became a major horizontal axis from west to east across the city. This horizontal axis, to a certain extent,

neutralized the dominating effect of the original perpendicular axis from north to south. Meanwhile, it also broadened the field of perception. The Forbidden City, which had always been the focal point of the capital, has now become "the backyard" and support to Tian An Men Square. Its present function as the "Palace Museum" is more appropriately represented. The objective effects mentioned above can clearly be seen on the surface plan of Beijing. Its characteristics as the political centre of China are fully expressed by this transformation of Tian An Men Square (Fig. 4-4).

4-4 Boulevards extending eastward and westward from Tian An Men Square respectively— East and West Chang An Streets 从天安门广场向东西延伸的林荫大道——东、西长安街

So much for the discussion of the plan and design of Old Beijing and its future development and transformation. Let us now turn to an

exploration of the design and plan of the city of Washington. Comparisons will be made between Beijing and Washington in the discussion.

III. The City of Washington

●Choice of the Site and the Original Design of the City

Early in 1791 (the 56th year of the reign of Emperor Qianlong), the site of Washington was decided and the planning began, and it was only eight years after the announcement of Declaration of Independence.⁸ From the very beginning the issue of choosing a permanent seat of government had aroused much controversy and the decision was difficult to make, so it was long delayed. Finally, the Congress authorized President George Washington to decide on the site of the capital. The president surveyed and inspected in person the prospective location and finally decided on the present site of the capital. It is situated in the central part of the Atlantic seacoast, in a triangular area between the Potomac River and its eastern tributary called the Anacostia River or the Eastern Branch. The site is a plain with slightly inclining slopes. There is a hill in the middle of the plain. It looked prominent and was called, at that time, Jenkins Hill. Borderlines of private properties crisscrossed the whole area. Most of the land was covered by wild woods, with marshlands dotted on the plain. It was in fact an area not wholly cultivated. On the northern part of the triangular district, the land rose and several rivers and creeks flowed down the slope. The most well known was Goose Creek which flows along the foot of Jenkins Hill and then turns westward to join the Potomac. Two small settlements were respectively established on the tip of the triangle and at the northwestern corner. Only a few residents lived there, though grid-like streets were shown on the map drawn in the primary survey. Georgetown, located at the northwestern

corner opposite to Rock Creek, was the largest settlement of the time (Fig. 4-5).

- 7 . Borderline of the highland in the north 北部高地边缘

(This chart is a simplified copy of the original chart made in 1792 from a book kept in National Archives of the United States. 根据美国国家档案馆藏1792年旧图书复制品加以简化)

The primary survey of the chosen site had been undertaken by Andrew Ellicott, and Pierre Charles L'Enfant responsible for the design

and plan of the capital. L'Enfant was a French-born American engineer and architect, possessing great brilliance and passion. He was thirtyseven years old at that time. L'Enfant's father had been the imperial artist at Versailles, and there he had lived when he was a boy. Later he obtained his education at the Royal Academy of Painting and Sculpture in Paris, where his father taught. In 1777 L'Enfant and other French volunteers crossed the Atlantic Ocean to go to America and offer help to the people of the British colonies in their struggle against the British rulers for their independence. His achievements in military engineering won him high esteem from the Commander-in-Chief George Washington so that he was promoted to the rank of Major in the army. In 1791 he was assigned the duty of designing the plan of the capital. With enormous energy and amazing efficiency he had completed the task by the end of August of the same year and submitted the plan to Washington immediately. It was at the very beginning that L'Enfant had spotted Jenkins Hill and realized that it was the perfect foundation for the main buildings of the Federal Government. He thought of the site as God-sent. These buildings together with the later additions and improvements comprised the strikingly magnificent and dignified architecture of the present Capitol. As to Jenkins Hill, it has long since been renamed "Capitol Hill."

With Capitol Hill as the centre, L'Enfant designed the central axis in the plan of the capital. The axis was 5.5 kilometers long, starting from the eastern shore of the Potomac in the west to the western shore of the Anacostia in the east. Along the western section of the axis, that is, from the west of Capitol Hill to the east shore of the Potomac of that time, a space was to be reserved as a large green lawn for the recess and recreation of the people. This part, undergoing plans and development, was the famous "Mall" today. The presidential office and residence, that is, the present White House, was designed to be located to the north of the western part of the Mall rather than on the axis—it moved slightly westward to its present site, which commands a

wonderful view of the wide expanse of the lower Potomac when one looks to the south. Linking the White House and Capitol Hill is a broad thoroughfare running in an oblique line, which is the present Pennsylvania Avenue. The west-east axis stands prominently in the surface plan, and the Mall for whom the space was previously saved, also looks outstanding. Besides, there is often a public square at the meeting point of roads intersecting with each other at right angles or diagonally. The lower section of Goose Creek, running through the centre of the city immediately along the northern side of the Mall before it pours itself into the Potomac, was planned to be canalized to connect with the canal at the foot of the Capitol Hill. It was named the Tiber River, after the Roman Tiber.

For the design and plan of the municipality, the two rivers were used as the boundary of the southern part and the borderline of the highland was to be the boundary of the northern part of the capital. And it was on this principle that the city of Washington was built, developed and expanded. We must acknowledge that without the plan and design by L'Enfant, there would not be the magnificent design of the central part of the world famous city of Washington. It is because of this that the central part of Washington proper is referred to by some people as "L'Enfant City" (Fig. 4-6).⁹

（The above diagram is a copy of the Ellicott's survey map from 1793. 根据1793埃利科特测量图绘）

Here let me try to make a comparison between the plans of Old Beijing and Washington, which might help the audience understand the further discussion better.

Two essential points are worth our notice:

One, both cities have a central axis line. For Old Beijing, the axis was from north to south, closely following the eastern shore of the natural lakes. The orientation of the axis, though constrained by natural factors, was greatly influenced by cultural elements deeply rooted in the history, as we have discussed above. For Washington, the central axis was from west to east between the two rivers and it was decided solely by natural conditions. There were no historical or cultural factors involved.

Two, in the plan of the Old City of Beijing, the surrounding walls were an integral part of the whole city, while in Washington, rivers and highlands were utilized as the boundaries of the city for there was neither necessity nor tradition of wall building for a city. Actually no cities in the U.S. are equipped with walls.

The above mentioned differences, though superficial, reflect the differences of the cultural traditions between China and the West. It is even more important that such differences are embodied in the key concepts in the capital plan. As the topic pertinent to Beijing has been explored, we would confine the following part to the discussion of Washington's city plan.

●On the Concepts of Municipal Design and Planning

The concept of the design and plan of Beijing Old City originated in the Shang and Zhou dynasties when slavery still prevailed, and was written down in "The Way the Craftsmen Build the City" in *Kaogongji*, *Zhouli*. As the centralized reign of the feudal dynasties took shape, the concept of building a capital based on the doctrine of "Almighty Sovereignty" had varied in forms of expression. Then came the time

when Dadu of the Yuan Dynasty was built, which not only inherited the standards and system of building a city prescribed in the classic of *Kaogongji*, *Zhouli*, but also utilized the natural distribution of the water sources, thus laying the foundation of Beijing, the capital city of the Ming and Qing dynasties. Hence, we can claim that the design and plan of the Old City of Beijing is an overarching masterpiece in building capital cities during the more than two thousand years of feudalism in China.

The historical background of the building of the city of Washington is totally different from that of Old Beijing. To study the basic concept embodied in the design and planning of Washington, we must first understand characteristics of its historical background.

1 . The characteristics of the period and their reflection on the design and plan of the capital

The construction of the city of Washington was one of the victorious achievements gained by the North American people who fought against the colonization of its suzerain state the Great Britain. The nature of this struggle was fully expressed in the Declaration of Independence approved by the Second Continental Congress convened by delegates from the colonies in North America. The Declaration held "all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness."In the original draft there was a chapter concerning the abolition of slavery, but it was deleted for the opposition from the representatives of the State of South Carolina. Karl Marx highly esteemed the Declaration and he claimed that "[i]t is the first declaration of human rights"¹⁰. It was the time of the rise of capitalism in North America, and the people of all classes reacted enthusiastically to the Declaration, including the most oppressed blacks, who also joined in the struggle against the British oppressors and made significant contributions.

After the War of Independence, the ruling class of the new born country came to realize that their acquired social status and power

must be further confirmed and consolidated. Hence they started the Constitution Movement, in an attempt to defend their acquired privilege by means of the establishment of the American Constitution. Two years before the founding of the United States of America, in Philadelphia, the old capital or temporary capital before the building of the city of Washington, the Constitutional Convention took place¹¹ and created the United States Constitution, which formulated the three divisions of power—the Legislature, the Judiciary, and the Executive, as the principle of governmental organization. Later, when L'Enfant set out to plan the construction of the new capital Washington, this principle was also adopted as the guiding line, which was shown in the layout of the three main structures of the Capitol, the White House and the Supreme Court. It is difficult to identify the exact location of the Supreme Court in today's city plan. The present Supreme Court is built to the northeast of the Capitol, not far away from the latter. Nevertheless, such layout still indicates the idea of the division of power.

The most salient and influential feature of L'Enfant's plan is the determination of main axis line centered on the Capitol Hill, and along the axis he reserved the space for the Mall, which laid the basis for the development of the nuclear area of Washington in the future. This section of the axis resembled that part from the Scenic Hill (Jing Shan) to the Zheng Yang Men on the axis of the Old City of Beijing in its significance to the whole plan of the city. Nevertheless, the concepts represented by the two were totally different for the one in the Old City of Beijing emphasized the doctrine of "Almighty Sovereignty" while its counterpart in Washington tried to demonstrate the importance of human rights. Thus the approaches to municipal design and planning were also different. The former chose the strictly enclosed design, while the latter chose to be "completely open to all". Different concepts gave rise to different forms of expression.

2. Further development of the axis line and the objective effects of the main buildings

L'Enfant's blueprint for the design of Washington and his concept of building the city had not been appropriately noticed and appreciated for the entire century that followed. And the person who made such an outstanding contribution to the construction of Washington hadn't received appropriate acknowledgement in his lifetime either. He was very poor and destitute in the last years of his life. It was only with the financial aid and a piece of land offered by one of his friends that his body could be buried. Not until the beginning of this century were his talent and achievement acknowledged and his remains moved to the National Cemetery of Arlington and buried on top of the hill in 1909. On the headstone was carved the draft plan of the capital as a memorial to his achievement. Looking to the east from the tomb of L'Enfant, one can see the Mall situated on the original axis line as designed by him across the Potomac between the Lincoln Memorial and the United States Capitol. In fact, one can see all the important buildings laid out in the plan. Indeed, there is no better place for L'Enfant to have his permanent rest.

It seems advisable for us to recall some of the incidents that occurred during the one hundred years of the nineteenth century on the Mall to the west of Capitol Hill.

One, L'Enfant's plan to canalize the Tiber River to reach the foot of Capitol Hill had never been taken into serious consideration. As a result, the Tiber became a stinky sewer for litter and rubbish and was filled up and abandoned later. What remained to the date is a small sluice shed not far from the White House, marking the originally designated site of the canal.

Two, the Smithsonian Institution was built in 1847 without reference to L'Enfant's design of the boundary of the Mall, and the Institution went so far as to be situated inside the Mall. A proposal had once been made to tear down the building, but was turned down for the preservation of historical relics and architecture.

Three, the designated location of the White House was moved

further westward to its present site.

Four, the present Washington Monument is not built on the originally planned spot due to the weak foundation there. It is now 40 meters south to the original site, and therefore not on the city's central axis line according to the original design. Nor does it fall on the perpendicular line leading southward from the White House, but is 120 meters east of that line. However, one would have such a visual impression that the Monument is still on the horizontal axis line.

Five, the most important change is that the marshy lowland to the south of the western extreme of the axis on the eastern shore of the Potomac has been reclaimed. Thus the original axis line between the two rivers of the Potomac and the Anacostia was prolonged from 5.5 kilometers to 7.3 kilometers. Meanwhile, the broad riverbed of the Potomac was utilized and a narrow stretch of land reclaimed along the eastern shore from south to north, which is the present Potomac River Park beautifully dotted with lakes (Figs. 4-7, 4-8).

4-8 The original eastern shoreline of the Potomac where the starting spot of the axis line was located 波河东岸中轴线起点的原始河岸线

The last change is most significant in its influence on the development of the capital's central axis line. It was on the reclaimed land on the western extreme of the central axis that the Lincoln Memorial was constructed in 1922. This signified graphically the starting point of the axis line from west to east of the capital. This horizontal axis of Washington from west to east is less than one kilometer shorter than the perpendicular axis of Old Beijing from

north to south. In 1976 the Constitution Gardens on the northern side of the long narrow "Reflecting Pool" in front of the Memorial, were constructed in order to celebrate the 200th anniversary of Independence Day.

It should be highlighted that the construction of the Lincoln Memorial has not only further developed the original central axis designed by L'Enfant, but also furnished the underlying theme embodied by the central axis line with a new implication. The Lincoln Memorial is a structure of white marble, simple and dignified. Mounting the many marble steps in front of the Memorial, one comes to see an immense white marble sculpture of President Lincoln sitting and meditating in the middle of the hall. There is no other thing or decoration around except that in the far end of the hall the two famous speeches by Lincoln were carved on the north and the south sides respectively. One contains the phrase he used to describe a government which has "a new birth of freedom," that is, "of the people, by the people, and for the people." When one comes to pay his/her respect to the Memorial, stands before the statue and looks back eastward beyond the tall Washington Monument and the great span of green lawn of the Mall to the big white dome of the Capitol, he/she would think of the great contribution President Lincoln made to the United States of America.

In spite of all these, we must also see that since the establishment of the Federal Government, the principles of human rights and the ideal that all men are born free and equal as expressed in the Declaration of Independence not only had not been truly realized, but the internal conflicts had become even more serious. Among them the major one was the rivalry between the North as represented by the employers of laborers, and the South as represented by the owners of slaves. When Lincoln was elected President of America in 1860, he declared his strong opposition to slavery, and issued the preliminary Emancipation Proclamation. By that time the Civil War had broken out, and the issue of the Proclamation made the situation even more

tense. Although the North army won the final victory, Lincoln, after being elected President for the second time in November, 1864, was assassinated by a killer sent by Southern slave owners in April, 1865.

Although the struggle led by President Lincoln saved the United States from falling apart, the problem of racial discrimination still existed. In 1866, the year after Lincoln was assassinated, a group of Southern racists established a reactionary organization called the KKK(Ku-Klux-Klan), which brutally attacked and murdered black people. In August, 1963, the well-known anti-racism activist, Rev. Martin Luther King, Jr., delivered his famous speech "I Have a Dream" before over two hundred thousand people in front of the Lincoln Memorial to commemorate the signing of the Emancipation Proclamation. Unfortunately, he got assassinated by racists in April, 1968 when he went to Memphis, Tennessee to support a strike for equal pay for equal work, his "dream" yet realized by a long way.

Symbolically the construction of the Lincoln Memorial at the starting point of the central axis of the capital is a further development of the underlying theme prescribed by L'Enfant in his plan, that is, the idea of human rights. However, this ideal has never been fulfilled. Karl Marx once commented on the revolution led by Lincoln that it was "an earnest of a new epoch to come" and that "it fell to the lot of Abraham Lincoln to lead his country through the matchless struggle for the rescue of an enchained race and the reconstruction of a social world."¹² It is nevertheless an undeniable fact that the "new epoch to come" remains an age the American people have to strive for (Fig. 4-9).

In a warm and sunny morning in the spring of 1980, I visited the Lincoln Memorial for the first time. It impressed me so deeply both emotionally and mentally that the memories never faded away. Later, I visited the United States three times and every time I paid my

respects to the Lincoln Memorial to recapture the feeling that I had got on my first visit, no matter how pressing my schedule was. In the summer of 1984 when I visited there again, I came across a statue of three soldiers on the lawn unexpectedly in front of the Memorial in the west of the Constitution Gardens. When I approached the statue, I realized that it was a monument that honors U.S. service members who fought and died in the Vietnam War after the Second World War. The design of the memorial is an open lawn in a wide V shape which gradually sinks towards the interior angle beneath the ground. Along the two sides are two walls made of black gabbro, that is, the Vietnam Veterans Memorial Wall, on which are etched the names of the more than fifty thousand Americans dead in the Vietnam War with their rankings. As one walked down along the wall and looked at the names, a mournful sense would well up in the heart, so it was also called "America's Wailing Wall." One wing of the V-shaped memorial pointed to the Washington Monument in the southeast, and the other to the Lincoln Memorial in the southwest. This ingenious design was the work of a ChineseAmerican architect Maya Lin.¹³ The implication of this design is also thought-provoking, for the American people had strongly protested sending troops to Vietnam and deemed the war as unjust. The site chosen for the Vietnam Veterans Memorial is on the Mall along the central axis. Looking down the extension of the two walls, one can see the Washington Monument and the Lincoln Memorial in the distance, which would remind one of the vast discrepancy in nature between the ideals embraced by the founding fathers of the United States of America and the unjust Vietnam War. When I, a foreign visitor, stood on the axis of the city of Washington and saw this memorial there, I could not help but think of the difficulties and hardships the common people of America must overcome in order to realize the ideals of their founding fathers.

IV. Other Mountain's Stone May Polish the Jade—

Some Examples Which Can Be Referred to in the Construction of Washington

Right from the very beginning of urban construction, the sister cities of Beijing and Washington both tried their best to express their underlying concepts in the design of the central axis line. In spite of the differences in their historical background, they both aim to reflect the spirit of their ages. At the present time, the urban development of the two cities has far exceeded the original design and plan. Although the city walls of Old Beijing have been torn down and the city expanded rapidly to the areas which used to be outside the city, the Old City is still the nucleus of the overall plan for a new Beijing. The case is the same with Washington which has also exceeded the original limits of the two rivers and the northern highland, but the L'Enfant City still serves as the heart of the plan of the whole city. For Beijing, with the reformation of the social system in China, the problems that it was confronted with in its construction are much different from those for Washington. The most urgent task which should be addressed in its planning and construction is how to preserve the best of tradition and at the same time to add new conceptual elements, in order to reflect the initiation of a new era of socialism. In this respect, the issue of the central axis line is most delicate and important. For example, the transformation of Tian An Men Square is successful in this sense. Furthermore, while considering inheriting the best tradition of China to utilize the old for the benefit of the present, we must also try our best to absorb the best of foreign experience for the benefit of China. We must concede that regarding the issue of urban construction, capitalist countries have a lot of experience worthy of learning, only it is necessary for us to know how to differentiate the truly advanced experience from the bad and to keep away from copying blindly. To learn indiscriminately would bring nothing but harms. Take the plan of Washington for example. Layout of all the buildings along the central axis line and their

functions are properly regulated, on which lessons could be drawn. The Capitol stands on the central point of the axis and all other buildings in the city are not allowed to be built higher than it, which contributes to a special skyline of the city. The space stretching from the Capitol westward to the Mall in front of the Washington Monument is wide and level, commanding a broad view. To the south and north of the Mall, museums and galleries are arranged in order. On the southern side, there are the National Air and Space Museum, the Hirshhorn Museum and Sculpture Garden, the Smithsonian Institution (which contains an exhibition on the history of the capital planning) and others. On the northern side are the National Gallery of Art, the National Museum of Natural History, the National Museum of American History and further north is the National Archives. To the southeast of the Capitol is the world famous Library of Congress with its recently built annex building, standing side by side with the Supreme Court on a north-south line. The heart of the capital here is a concentration of the characteristics of Washington as the national centre of political and cultural activities. The design of the capital in its entirety is of dignity and diversity. All the museums and galleries on either side of the axis, though of the relatively same height, differ from one another in their architectural designs, varying from the classic redbrick-castle style of the Smithsonian Institution to the ultra-modern design of the National Air and Space Museum—they all express the characteristics of their age. And among them the most renowned is the East Wing extension to the National Gallery of Art built recently. This site used to be a piece of triangular land at the northeastern corner of the Mall not far from the Capitol Hill, making it not only the most important but also subtle to deal with in architectural design. Here the world famous Chinese-American architect Ieoh Ming Pei showed his talent and designed a unique building which adds charm to the Mall.

The above discussion reminds me of the construction of the Great Hall of the People and the Museum of Chinese History and the

Museum of Chinese Revolution during the transformation of Tian An Men Square on the occasion of the tenth anniversary of New China, as mentioned earlier, which highlighted the identity of Beijing as the national cultural center besides its position of the national political center. However, at that time the dual role of this capital had not been fully recognized or elaborated. Considering the great significance of construction of the spiritual civilization and the requirements of building Beijing as the national cultural center, the overall design and planning of the city should be drawn on the basis of the historical characteristics of the layout of Beijing. The design of the central part along the axis line of Washington discussed above can serve as one of the examples for us.

Translated by Cheung Hon Cha

July 11th, 1988

肆 从北京到华盛顿——城市设计 主题思想试探*

北京和华盛顿是社会制度完全不同的两个国家的首都，但在城市的规划设计上，却各有千秋。从历史的发展来看，北京和华盛顿尽管在开始营建的年代上相去很远，但是在规划设计上，却各有自己深厚的文化历史渊源。北京城原有的规划设计，可以说是封建社会时期我国都城建设的一个杰出典型。华盛顿城中心部分的规划设计，从建国之初开始，就继承了自16世纪“文艺复兴”盛行以来欧洲城市建设的优良传统，堪称资本主义上升时期西方国家都城规划的一个光辉范例。

我国在封建王朝衰落之后，又经历了灾难深重的半殖民地半封建社会，现在已经进入了建设有中国特色的社会主义的新时代。

美国作为一个高度发达的资本主义国家，还在沿着它原有的道路徘徊前进，甚至伸张其势力于域外。

因此，这两个首都作为两个国家历史文化集中表现的地方，在其规划设计上所面临的问题，也就各不相同了。

在过去的规划设计上，北京和华盛顿既有形式上的类似之处，又有本质上的区别和差异。在形式上的类似之处，最突出的一点，就是两者从建城之始就各自选定了一条中轴线作为全城设计的出发点。在本质上的区别和差异，则在于两个城市在其最初规划设计上，由于社会性质的根本不同，所力图表达的主题思想，也就大不一样了。

一、北京城

（一）今城的建址与城址的演变

北京城原始聚落的起源，距今已有三千多年。早期的城址原在今城的西南部。今城的建设则是七百二十年前（即公元1267年）才开始的。当时选择了古代高粱河上的一带天然湖泊作为中心进行规划设计，建设新城，这就是元朝的大都城。明朝初年又历经改建，始称北京。到了明朝中叶，也就是公元1553年，又在北京城南加筑外罗城，于是又有北京

内城和外城之分，各有城垣环绕，合成凸字形，面积约计62平方公里。全城的平面布局，至此定型，并且一直完整地保留到1949年新中国的诞生，这就是今天所说的北京旧城。

在北京旧城建设的过程中，城内湖泊的南半部，从一开始就圈入皇城之内，作为皇家园林的中心部分进行营建，并按照封建传统，命名为太液池。明初又在太液池南端新凿一湖，遂有南海、中海和北海之称，流传至今。至于被隔在皇城以外的原始湖泊的上游，原名积水潭。明朝初年，缩减北城，竟将积水潭的上游部分隔在城外，这就是在“十年动乱”期间才被填掉的太平湖。保留在城内的部分就是今天的什刹海，习惯上又分别叫做前海、后海和西海。前海的西南隅一部分也已被填为建筑用地。

总之，为北京旧城的建址提供了重要地理条件的原始湖泊，今天虽然已经不是本来的面貌，却仍然占有十分重要的地位，并且已经有贯通南北六海（即南部的南海、中海、北海和北部的前海、后海、西海）的设想，纳入北京城的总体规划之中。为了便于揭示北京旧城城市设计的主题思想，应将北京旧城河湖水系的变迁与城址的演变，作图说明（图4-1）。

4-1 City sites of old Beijing (from Zhongdu City in the Jin Dynasty to Beijing in the Ming and Qing dynasties) 北京旧城址变迁（金中都到明清北京）

(Broken line from A to B is a reference line to demonstrate the relative

(二) 城市设计的主题思想

从插图中可以明显地看到北京旧城的轮廓虽然从长方形到凸字形经过了几次变化,但是自北而南隐然存在的纵贯全城的中轴线,只有延长,并无改变。实际上这条中轴线,也正是全城平面设计的依据。在内城是如此,在外城也不例外。因为外城城垣未建之前,就先已于1420年兴建了天坛和山川坛(后改称先农坛)这两组建筑。其东西并列的位置,显然是由内城中轴线的延长部分所决定的,后来加筑外城(1553年),终于出现了纵贯内外两城长达8公里的新轴线,并且给人一种整体感,好像内外两城是同时设计,一气呵成的。这也显示出凸字形的城垣轮廓,比起任何一种矩形轮廓(如元大都和明初北京城的轮廓),更能给人以一种稳定感。正是这种全城平面布局上的特点,从美学观点上引起了西方建筑学家和城市规划学者的无限赞叹。丹麦的S. E. Rasmussen称道说:“北京城乃是世界的奇观之一,它的布局匀称而明朗,是一个卓越的纪念物,一个伟大文明的顶峰。”¹美国的E. N. Bacon又推崇它“可能是地球表面上人类最伟大的单项工程……它的平面设计是如此之杰出,这就为今天的城市建设提供了丰富的可供参考的实例”。同时他还曾用黄蓝两色把这条中轴线连同和它并列的一带湖泊,突出地显示在全城淡灰色的平面图上,给人以十分突出的印象。²然而更加值得注意的却是隐然支配着这整个平面设计的主题思想,从其建筑上来说有最重要的两点,须分别加以说明如下:

1. 城垣建筑与城市设计的关系

根据我国的历史传统,最初的城市,都有城垣,因此“城”这个字有双重含义,既指城市,又指城垣,有时还可用作动词,如《诗·小雅·出车》:“城彼朔方”,即指在朔方筑城,而城垣的修筑,又与整个城市的规划设计密切联系在一起。例如,成书于春秋时期(公元前770—前476)的《周礼·考工记》在“匠人营国”一节中,总结了周初以来营建国都的经验,又加以规范化,并做了如下的描述:

匠人营国,方九里,旁三门,国中九经九纬,经涂九轨。左祖右社,面朝后市。

这段记载的大意是说:国都的营建,应是一座方城,每边长九里,各有三门。城内纵横大道各九条。左有太庙,右有社稷坛。面向外朝,

后为市场。这里不言而喻的是帝王的朝廷位居全城中央。关于这一点，贺业钜在《考工记营国制度研究》一书中有所说明，摘录如下：

为什么要把宫廷区布置在全城中心，这和周人所崇奉的“择中论”的规划思想是分不开的。“择中论”是我国奴隶社会选择国都位置的规划理论，这种理论认为择天下之中建王“国”（即国都），既便于四方贡献，更有利于控制四方。³

这一说明指出了国都设计的理论根据，值得注意。按中国历代都城的建设，只有元大都城的规划设计和上述“匠人营国”的描述最为近似。这自然与大都城的主要设计人刘秉忠有直接关系。刘秉忠原名侃，是位熟通经史而又务实的学者，曾设坛讲学于太行山中，元代著名天文历算学家、水利学家郭守敬即出其门下。蒙古首领忽必烈入主中原，建立元朝之前，曾命刘侃在今滦河上游闪电河北岸设计兴建开平城（后改称上都，今遗址尚在），深得忽必烈赏识，因赐名秉忠。1260年忽必烈进驻当时金朝中都城，也就是在北京原始聚落上发展起来的最后一座大城，1267年决定在中都城外东北郊一座湖上离宫（太子宫）的周围，另建大都新城，仍然任命刘秉忠为主要负责人。郭守敬也被推荐参与其事，特别是在河湖水系的利用与大运河的修建上，做出了卓越的贡献。

这里需要指出的是大都城垣，南北纵长，而非正方，与“匠人营国”的规划稍有区别，这显然是由于在全城的平面布局上要充分利用河湖水系的结果。其次是“大内”（相当于后日的紫禁城）的寝宫，并不在全城的正中央，也与“匠人营国”所暗示的不尽一致，而是稍向南移，但是仍然处于全城设计的中轴线上，也是合乎“择中论”的规划思想的。

元大都建成之后直到明中叶北京外城的兴建，其平面布局历经改造，与“匠人营国”所描写的原始形制，已经相去甚远，但是它所体现的基本内容，却依然未变。不仅如此，它所传达的主题思想却更加突出、更加明显。这一主题思想就集中表现在两度延长的全城中轴线上。因此这条全城中轴线的设计和它所集中表现的思想内容，正是本文所应该进一步探讨的核心问题。

2. 全城中轴线设计的含义及其历史文化渊源

北京旧城的中轴线在全城平面布局上的艺术效果，虽然屡为中外规划学家所称道，但是它的含义及其发生和演变的历史文化渊源，还有待进一步阐明。

拙作《论北京旧城的改造》⁴一文已经说明在元朝国号未建以前兴建大都城时，首先在积水潭的东北岸上确定了全城布局的几何中心，就地

刻石立碑，命名为“中心之台”，然后以中心台为起点，紧傍积水潭东岸，定下了全城设计的中轴线，从而把宫城“大内”，恰好布置在太液池东岸，也就是中轴线的中间部位上，其结果是大内的前朝大明殿与后宫延春阁，也就占据了全城最重要的位置，这就十分突出地显示了这条中轴线在全城设计上的主题思想，如果用文字来说明，那就是封建帝王的“唯我独尊”。至于宗庙社稷这两组具有象征意义的建筑群，遵照“匠人营国”的原则，相应地布置在大内左右，也就是东西两面城垣的内侧。其后经过明朝的改建，内城的几何中心虽然由原来的中心台南移到景山中峰（也就是元朝延春阁的旧址），宗庙社稷两组建筑也分别移到紫禁城前的左右两侧，结果是全城中轴线在设计上的主题思想，不仅没有减弱，反而加强。特别是随着南郊天坛和山川坛的兴建，中轴线又继续向南延长，终于使得它在全城平面布局上的支配地位更加突出，它所代表的主题思想也就更加显明。

但是在这里必须进一步说明的一个问题，就是在北京旧城平面设计上不断得到发展的中轴线，它的自北而南的垂直走向是怎样确定下来的？这个问题看似简单，实际上却涉及我国都城在规划设计上的一个基本定向的问题，那就是城市布局的主导方向，一定要面向正南。由此而派生出来的一个封建统治者的正统观念，就是所谓“面南而王”。这个“面南而王”的思想，在城市的规划设计上最初体现出来始于何时，没有直接的文献记载可供参考，但至少《周礼·考工记》的“匠人营国”一节，已经间接说明了当时的城市建设计划，其主导方向必是面向正南。因此在文中讲到国都的平面布局时，只用“左祖”与“右社”以代表宗庙在东，社稷坛在西；只用“面朝”与“后市”以代表朝廷在南，市场在北。可以设想，这一既定的主导方向，是早已相沿成习而后遗传下来的。关于这一点，考古发现提供了有力的佐证。迄今所见早商时代的宫殿基址，说明当时的宫殿建筑，都是正面朝南。⁵又商代的宫殿基址中还显示出有两座殿址，不仅坐北朝南，而且前后并列，从规划上判断，应即后代“前朝后寝”的原型。⁶其次，商代都城已发现有略呈方形的四面城垣，但宫殿建筑偏在城内东北部。⁷有计划地把面向正南的宫殿修建在方形城垣的中央——也就是全城的中轴线上，应是到周代才成为定制的，这就是《周礼·考工记》中“匠人营国”所根据的传统原则。其后，到了战国末年，为秦国统一天下提供思想武器的《吕氏春秋·慎势》篇中所谓“古之王者，择天下之中而立国”的“择中论”，就是这一历史事实的反映。

上述事实说明，在都城的规划设计上，以面向正南为主导方向，是有很深厚的历史文化渊源的。追求其原因，很显明的是和地处北温带的季风地区有关，这里冬季西北寒风强烈，气候严酷；夏季转以东南风为主，炎热多雨。为了避寒和采光，居室的设计，背北面南最为合理。因此由个体建筑扩大到城市布局，逐渐发展为面向正南作为整体设计上的主导方向，进而派生出“面南而王”的传统观念，其起源可以上溯至奴隶社会时期，到了封建社会时期，已成定型。从这一点来说，北京作为历史文化名城，它所保存下来的最大的特殊风貌，也正表现在这里。

（三）旧城改造的一项根本任务及其成就

随着新中国的诞生，又重新建都北京，它所面临的一项根本任务，应该是在力求保护这座历史文化名城的特殊风貌的同时，赋予它以新的主题思想，从而反映出新的时代精神。这是极为困难的一件事。在过去三十多年的实践中，虽然出现了一些难以挽救的损失，但是也取得了一定的成就，天安门广场的改造就是一例。

现在天安门广场的前身，原是封建王朝统治时期的一个宫廷广场，三面筑有红墙，沿红墙内侧筑有联檐通脊的千步廊，中间广场呈“T”字形，过去只有炫耀封建帝王无上权威的重大典礼在这里举行，庶民百姓严禁涉足。因此在全城中轴线上所集中表现的封建帝王“唯我独尊”的主题思想，首先在这里显示出来。进入天安门之后，还要穿过层层封闭的空间，才能来到紫禁城内的核心建筑，即雄踞全城之上的前朝三大殿——太和殿、中和殿、保和殿，以及后廷三大宫——乾清宫、交泰殿、坤宁宫。（图4-2）

4-2 Imperial square before Tian An Men in the Qing Dynasty 清代天安门前宫廷广场

- 1 . Tian An Men 天安门
- 2 . Zheng Yang Gate and Archery Tower 正阳门及其箭楼
- 3 . Left Chang An Men 长安左门
- 4 . Right Chang An Men 长安右门
- 5 . Da Qing Men of the Qing Dynasty 大清门
- 6 . The Red Walls 红墙
- 7 . A Thousand Steps Corridor 千步廊

1911年的辛亥革命推翻了历时两千多年的封建王朝的统治，天安门前的宫廷广场才得开放通行，其结果也正是在这里爆发了1919年伟大的五四运动，从而揭开了新民主主义革命的序幕。这是发生在北京城里的具有重大意义的历史事件。以此为起点，经历了整整三十年的革命斗

争，在中国共产党的领导下，终于迎来了新中国的诞生。1949年10月1日万民欢庆的开国大典，选择在天安门前举行，这一事实本身就开始赋予天安门以崭新的意义，从此这座由历史上劳动人民在被迫服役下所兴建起来的庄严壮丽的古建筑，以全新的含义出现在中华人民共和国的国徽上，象征着一个古老文明的新生。但是旧日严防庶民百姓涉足广场的红墙依然存在，这就严重阻碍了日益增多的人民群众进入广场开展各项有意义的活动。广场的改造，势在必行。为了迎接建国十周年的纪念日，开始对天安门广场进行了大规模的改造。旧日的红墙被彻底清除，广场的面积因之大为扩展。又在东西两侧分别兴建起中国历史与中国革命博物馆和代表人民权力中心的人民大会堂。广场中央巍然矗立起人民英雄纪念碑，从此天安门广场开始以崭新的面貌出现在人们面前，其地点依旧而气象一新，它在旧日设计上所力求表达的“帝王至上”的主题思想，已经完全为一个崭新的主题思想所代替，这就是“人民至上”。尽管现在天安门广场尚有若干细节有待改进，但是它的基本格局已定。在旧城原有的中轴线上它所体现出来的新时代的主题思想，是身临广场的任何人都感受到的，因此应该承认它的改造是成功的（图4-2、4-3）。

4-3 The enlarged Tian An Men Square after the founding of New China 新中国成立后扩建的天安门广场

- 1 . Tian An Men天安门
- 2 . Qian Men (Zheng Yang Men) and Archery Tower 前门（正阳门）及其箭楼
- 3 . Monument of the People's Heroes 人民英雄纪念碑
- 4 . Great Hall of the People 人民大会堂
- 5 . Museum of Chinese History and Museum of Chinese Revolution 中国历史博物馆与中国革命博物馆
- 6 . Chairman Mao's Memorial Hall 毛主席纪念堂
- 7 . Dong and Xi Jiao Min Xiang 东、西交民巷

不仅如此，随着天安门广场的左右两翼在东西长安街原有的基础上又扩建和延长，从而形成了一条横贯新北京全城的東西轴线，既抵消了那条自北而南的旧轴线在全城布局上独一无二的支配地位，同时也就产

生了一种宏观效果，即把旧日全城中心的紫禁城，推移到了类似天安门广场“后院”的位置上，这就更加符合它作为“故宫博物院”的作用。上述的客观效果，从城市的平面布局上来看都是明显可见的。北京城作为全国政治中心的城市特点，已经在改造后的天安门广场上充分显示出来（图4-4）。

4-4 Boulevards extending eastward and westward from Tian An Men Square respectively—East and West Chang An Streets 从天安门广场向东西延伸的林荫大道——东、西长安街

关于北京旧城城市设计的主题思想以及它的改造和发展，就先写到这里。以下想就华盛顿城市设计的主题思想，从比较的观点上，再做些探讨。

二、华盛顿城

（一）城址的选择与城市的初步设计

华盛顿城城址的选择和着手规划是从1791年（清乾隆五十六年）初开始的。当时离美利坚合众国的建国（1783）也只有八年。⁸建国之初，定都问题颇有争议，迟迟难以决定。最后国会授权合众国第一任总统华盛顿选址建城。经过他本人的实地考察，终于选定了现在的城址。地当大西洋海岸中部，位于波托马克河（以下简称波河）与其东岸支流（以下简称阿河）之间的三角地带，地形平坦，微有起伏，中央最突出的一个小山丘，当时叫做詹金斯山，周围地界纵横，都属私产。大部分林莽丛生，间有沼泽，尚未完全开垦。两河间三角地带的北部，地形逐渐隆起，有几条小河，顺地形坡度下注，其中主要的一条原名鹅溪，流经詹金斯山下，西转注入波河。三角地的尖端和西北隅，各有一个小居民点，虽有方格状的街道见于最初测量的地图上，但住户寥寥无几。只有西北角上隔着一一条石溪，遥遥相望的乔治镇算是这一地区一个真正的居民点了（图4-5）。

- 3 . Potomac River 波河
- 4 . Anacostia River 阿河
- 5 . Rock Creek 石溪
- 6 . Georgetown 乔治镇
- 7 . Borderline of the highland in the north 北部高地边缘

(This chart is a simplified copy of the original chart made in 1792 from a book kept in National Archives of the United States. 根据美国国家档案馆藏1792年旧图书复制品加以简化)

城址选定之后，经过安德鲁·埃利科特的初步测量，即由皮埃尔·夏尔·朗方负责进行规划设计。朗方是位热情奔放又富有才华的法籍工程师，年方37岁。父亲原是法国凡尔赛的宫廷艺术家，朗方儿时就在那里居住过。年长肄业于他父亲任教的巴黎皇家绘画雕刻学院。1777年朗方和其他的法国志愿人员，远涉重洋来到北美洲，支援英国殖民地人民正在进行的独立战争，在军事工程中，深得当时陆军统帅华盛顿的赏识，并获得少校军衔。1791年初他接受规划首都的任务，以充沛的精力、惊人的速度，在同年8月底完成了他的规划设计，上报华盛顿总统。他在开始工作之初，就一眼看中了詹金斯山，认为这正是联邦政府中心建筑的天然基座，可以称得上是天造地设了。这座中心建筑经过后日的不断营建，就是现在最引人注目的国会大厦，詹金斯山的名称也早已为“国会山”所代替。

以国会山为中心，朗方拟定了全城设计的中轴线，西起波河东岸，东至阿河西岸，全长约5.5公里，沿这条中轴线的西段，也就是从国会山以西至当时波河东岸，保留为一条开阔的绿地，供人民群众游息其间，几经规划发展，这就是现在有名的绿茵广场。至于总统府也就是现在“白宫”的选址，并不在中轴线上，而是在绿茵广场西头的北侧（后来又稍向西移到现在的位置），由此南望，视野开阔，可以遥见波河下游的浩瀚水面。至于国会山与总统府之间，则由一条斜向的大道直接连接起来，这就是现在的宾夕法尼亚大道。自西而东横贯全城的中轴线在全城的平面布局上，显然占有支配地位，预定的绿茵广场，位置尤为突出。至于全城街道系统，纵横交错，或正交，或斜交，交接点上又多布置有大小广场。流经市中心区的鹅溪，其下游注入波河的一段，紧傍预定的绿茵

广场的北侧，计划加以渠化，改为直通国会山下的运河，因仿罗马古城中的小河，改名为台伯河。

全城的规划，南半部以两河为界，北半部以高地边缘为界，现在的华盛顿城，就是在这一规划的基础上不断扩展而逐渐兴建起来的。如果当初没有朗方的设计，也就不会有今天以其中心地区宏伟壮观的空间布局而闻名于世的华盛顿城。因此，现在华盛顿城中心部分，还有人称之为“朗方城”（图4-6）。⁹

在这里，不妨先将北京旧城与华盛顿城在规划设计的轮廓上做一对比，这或许有助于读者更好地了解以下的讨论。

首先值得注意的有两点：

第一，两者各有一条中轴线。北京旧城的中轴线自北而南，紧傍一带天然湖泊的东岸。其主导方向如前所述，虽有自然因素的制约，更有深厚的历史文化渊源。华盛顿城的中轴线，自西而东，正好介于两河之间，纯粹是自然条件所决定，不受任何历史文化传统的制约。

第二，北京旧城的规划设计，四面城垣是其有机的组成部分。华盛顿城的规划设计，则完全以河流与高地边缘为界限，没有必要修筑城垣，也没有修筑城垣的传统。实际上在美国就没有一个城市是建有城垣的。

上述区别，虽然只是表面现象，却也反映了我国和西方文化传统上的一些差异。当然更重要的是这一差异在设计的主题思想上也同样地反映出来。北京城在设计上的主题思想，已如上述，在这里仅就华盛顿城在城市设计上的主题思想，试做一些探讨。

(二) 城市设计主题思想试探

北京旧城城市设计的主题思想，胚胎于我国奴隶社会的商周时期，到了东周，就以《周礼·考工记》中“匠人营国”的文字描述表达出来。中央集权的封建王朝形成之后，在都城的建设上“帝王至上”的主题思想，曾有过不同形式的表现。及至元朝大都城的兴建，在继承《周礼·考工记》所描述的形制的同时，又结合了地方上河湖水系分布的特点，遂为明清北京城奠定了基础。应该说北京旧城的规划设计乃是我国长达两千年封建王朝都城建设的最高典型。

华盛顿城市建设的时代背景，和北京旧城完全不同，在探讨其城市

设计的主题思想时，应该首先从它建都时期的时代特征讲起。

1. 时代特征及其在城市设计上的初步反映

华盛顿城的建设，是北美洲人民团结起来反抗宗主国英国的殖民统治从而取得了胜利的结果之一，这一斗争由北美殖民地代表召开的大陆会议所通过的《独立宣言》充分表达出来。《独立宣言》宣称：人人生而平等，人民享有生存、自由和谋求幸福的天赋权力不可侵犯等等。在宣言的初稿中，原来还有反对奴隶制的一条，只因南卡罗来纳州的代表反对而被删去。马克思曾高度评价这一宣言，认为这是“第一个人权宣言”¹⁰。这时北美正处于资本主义上升时期，《独立宣言》在各阶层的人民群众中得到了强烈的反应，包括最受压迫的黑人在内，都卷入了革命斗争的行列，并做出了重要的贡献。

独立战争结束以后，美国统治阶级逐渐感觉到必须进一步巩固本阶级的阶级地位和权力，从而又发起了制宪运动，企图利用宪法作为手段以维护其既得利益。在美利坚合众国正式建国前两年，在费城（全名费拉德尔菲亚，为华盛顿兴建之前的临时都城，因称故都）召开制宪会议¹¹，制定联邦共和国宪法，以立法、司法、行政三权分立作为国家机构的组织原则。其后，朗方着手于进行新建首都华盛顿的规划，显然也是本着国家机构三权分立的原则设计的，这在国会大厦、总统府和最高法院三大主要建筑的布局上，明显地反映出来。只是最初设计的最高法院的位置，在今图上已难确指。现在的最高法院，正好建筑在国会大厦的东北方，相去甚近，仍然显示出三权分立的布局思想。

但是朗方设计最突出——也是影响最为深远的一点，就是他确定了以国会山为中心的主轴线，并把主轴线上计划作为绿茵广场的位置固定下来，从而为日后华盛顿城核心地区的发展奠定了基础。华盛顿城主轴线上的这一段和北京旧城中轴线上从景山到正阳门的一段，在全城布局上的重要性极为相似。但是彼此所反映的设计上的主题思想，却截然不同。在北京旧城力求突出的是“帝王至上”，在华盛顿城则企图反映的是“人权为主”。因此，两者在空间处理上也就截然不同。前者是严格的封闭型，后者则是完全的开放型。思想内容不同，表达的形式也就因之而异了。

2. 中轴线设计的进一步发展及其主要建筑的客观效果

朗方为华盛顿城的规划所拟定的蓝图以及他所企图表达的主题思想，在相继而来的整整一个世纪中，并没有得到应有的重视，甚至这样

一位为华盛顿城的建设做出了如此卓越贡献的人，在生前也没有得到应有的公正待遇。在他临终之前，生活穷困潦倒，死后靠友人的一片土地和资助才得下葬。直到本世纪初，他的贡献才得到承认，他的遗骸终于在1909年被隆重地迁葬于阿灵顿国家公墓的小山顶上，他所设计的城市蓝图的示意图也被镌刻在他的墓碑上，这是很有意义的一件事。从朗方墓东望，可以隔着波河遥望他所初步规划的中轴线亦即现在的绿茵广场，从林肯纪念堂一直延伸到国会大厦，整个布局上的主要建筑，历历在目，实在没有比这里更好的地方，可以使朗方永远安息了。

在这里，追述一下19世纪的一百年间，发生在国会山以西现在的绿茵广场上的以下几件事，是必要的。

第一，朗方利用台伯河加以渠化，改建为运河直达国会山下的计划，未受重视，结果河道变成了一条藏污纳垢的臭水沟，遂被填废，现在只有一座河边的小闸房在去白宫不远的地方被保留下来，作为当初运河旧址的一个标志。

第二，1847年开始兴建国家博物馆，没有充分考虑朗方最初设计的绿茵广场的边界线，竟然侵入了广场界内。后来虽曾议论拆除，结果还是为了保护古建筑的原因而保留下来。

第三，原定白宫的位置又稍向西移，进行修建，这就是现在白宫所在的地方。

第四，建成了华盛顿纪念塔，只是原定的塔址，基础不够坚实，不得不稍有迁移。新址已不在原设计的全城中轴线上，而是南移了40米，同时也已不在白宫向南垂直延伸的轴线上，而是在其以东120米，但是从视觉上好像它仍然位于中轴线上。

第五，最重要的一个变化，是在全城中轴线西端的南面和波河的东岸，填筑了一片沼泽低地，从而使波河与阿河之间原定全城中轴线的长度，从约5.5公里延伸到7.3公里，同时又利用波河这一段宽阔的河床，沿东岸筑起了一个南北狭长的半岛，这就是现在有湖泊点缀其间的波河公园（图4-7、4-8）。

4-7 Reclamation of the marshland on the east shore and the shallow water area of the Potomac 波河东岸沼泽及浅水区填筑的陆地

○ The site for the Jefferson Memorial built later. The site of the White House on the above diagram was later moved to a site further west on the perpendicular line north of the Jefferson Memorial. 日后修建杰斐逊纪念堂的地方，此图上的白宫位置后来也稍向西移，与杰斐逊纪念堂在一条南北垂直线上

4-8 The original eastern shoreline of the Potomac where the starting spot of the axis line was located 波河东岸中轴线起点的原始河岸线

这最后一个变化，对后来全城中轴线上的发展至为重要。1922年正是在中轴线西端所填筑的河边低地上，兴建了林肯纪念堂，明显地标志了全城自西向东的中轴线的起点。华盛顿这条自西而东的中轴线较之北京旧城自北而南的中轴线短了不到1公里。1976年又在纪念堂前狭长的“映像池”北侧，开辟了“宪法公园”作为建国两百周年的纪念。

这里应该着重说明的是林肯纪念堂的兴建，不只是进一步发展了朗方最初确定的全城中轴线，而且还赋予这条中轴线在设计上所代表的主题思想以新的含义。林肯纪念堂这座白色大理石建筑，造型质朴庄严。从堂前多层白石台阶拾级而上，在殿堂内部广阔的大厅里所能看到的，只有白石雕刻的林肯座像，屹立在中央，环顾厅内，别无一物，仅在大厅尽处南北两壁宽阔的白石墙面上，镌刻了林肯的两个著名的演讲词，其中之一就有他用来描写重新获得自由的一个政府的六字形容词，即“民有、民治、民享”。因此来到这座殿堂的巡礼者，立足在林肯像前，回首东望，越过中央耸立的华盛顿纪念塔和辽阔的绿茵广场，自然就会把一个人的思路，一直引向白色穹顶的国会大厦，这也会促使人们联想到林肯为美利坚合众国的缔造所做出的重大贡献。

然而应该看到，自从美国的联邦政府成立以来，它在《独立宣言》中所标榜的天赋人权、人人自由平等的理想，不仅没有得到真正实现，内部的矛盾反而日益突出。其中最重要的是北方以雇佣劳动为主的资本主义制度和南方以奴役黑人为主的奴隶制，两者之间的冲突，越来越尖锐。林肯于1860年被选为总统以后，坚决反对奴役黑人，并颁布了《解放黑奴宣言》，当时已经爆发的南北战争，因此而更加激烈。结果北部军队虽然取得了这次战争的最后胜利，可是林肯却在第二次当选为总统

(1864年11月)之后,竟于1865年4月遭到了南方奴隶主刽子手的暗杀。

林肯领导的斗争虽然挽救了国家免于分裂,但是种族的歧视继续存在。1866年,也就是林肯被暗杀的第二年,南方的种族主义者还成立了反动的组织“三K党”(Ku-Klux-Klan的简称),对黑人进行残酷的袭击和杀戮。在本世纪内继续为反对种族歧视而奔走的黑人牧师小马丁·路德·金,也曾于1963年8月在林肯纪念堂前有二十万人参加的群众大会上,为纪念《解放黑奴宣言》的签署而发表了他的著名讲演《我有一个梦想》。可是他的“梦想”还远没有实现,而他本人却于1968年4月在田纳西州的孟斐斯城指导黑人工人争取同工同酬的示威中,也同样遭到种族主义者的暗杀!

从象征意义上说,林肯纪念堂兴建在华盛顿全城中轴线的起点上,应该看作是朗方最初所赋予它的天赋人权这一主题思想的一个发展,可是这始终还是一个远未实现的理想。马克思也曾预言说:“林肯来领导自己国家进行解放被奴役种族和改造社会制度的史无前例的战斗,是即将到来的时代的先声。”¹²可是这个“即将到来的时代”,至今还有待美国人民自己去努力争取。这也是无可讳言的事实(图4-9)。

3 . 一个引人进一步思考的问题

1980年春天一个风光明媚的清晨，作者初访华盛顿的林肯纪念堂，印象之深刻以及思想上的感受，至今难忘。其后又曾三次访美，每次途经华盛顿，总要挤出时间前往林肯纪念堂巡礼，重温初访的感受。可是1984年夏再到华盛顿又访林肯纪念堂时，就在纪念堂前宪法公园的西侧，出乎意料地看到有三个军人一组的雕像出现在草地上，走向前去，才知道这里乃是为第二次世界大战以后美国出兵越南阵亡士兵新建成的纪念碑。纪念碑现场的平面设计，是一个开敞式的“V”字形三角绿地。“V”字形两边以内的绿地，由地面开始向下倾斜，呈坦坡式，逐渐没入地面以下，直到尖端的最深处。沿着两边砌成黑色的石壁也就是纪念碑，碑上成排镌刻着侵越战争中五万多名阵亡士兵的姓名和军衔。沿着石碑走下去，阵亡者的名字历历在目，自然引起人们的悼亡之感，因而有“哭墙”之称。这“V”字形的两壁，一个向东南直指华盛顿纪念塔，一个向西南直指林肯纪念堂。从工程设计上来说，堪称独出心裁，是一位华裔女青年林樱的杰作。¹³至于其含义，则更加耐人寻味，因为当年美国出兵越南，曾引起国内广大人民群众的反反对，被认为是一场非正义的战争。这一阵亡士兵的纪念地，选址在全城中轴线的绿茵广场上，沿着其两壁向外的指向看去，华盛顿纪念塔和林肯纪念堂即遥遥在望。这又不能不使人联想到美利坚合众国的缔造者所怀抱的理想与信念，和出

兵越南的非正义战争，这两者在性质上的差异，相去何啻天渊。作为一个异国的观光者，在华盛顿城市设计的中轴线上看到这一纪念地时，不能不想到：美国的人民群众为了最终实现其国家缔造者的伟大理想，正不知道还有多少崎岖不平的道路正等待着去跋涉呢。

三、他山之石，可以攻玉——华盛顿城市建设可供借鉴的几例

北京和华盛顿这两个姊妹城市，从建城之初就力求通过全城中轴线的设计来显示其主题思想，尽管两者的历史背景各不相同，但在力图反映其时代精神这一点上，却是一致的。现在北京和华盛顿的城市建设都已远远超出了最初设计的范围，北京旧城的城垣已被拆除，新市区在旧城郊外迅速扩建起来。但是北京旧城在新的城市建设总体规划中，仍然居于核心地位。华盛顿城的发展也早已超越了东西两河与北部高地边缘的界限向外迅速扩展，但是“朗方城”仍然是全城布局的中心。不过从北京城的建设来说，随着整个社会制度的改革，它所面临的主要问题就和华盛顿大不一样了。当前在北京城的城市规划和建设中，亟须注意的一件事就是如何在继承其优良传统的同时，又能赋予它以新的思想内容，从而反映出一个社会主义新时代的来临。这个问题在全城中轴线的处理上表现得最为敏感，也最为突出。例如天安门广场的改造，在这个意义上来说是成功的；其次，也要考虑到在继承自己优良传统以达到古为今用的目的的同时，还必须积极吸收外国的先进经验，以达到“洋为中用”的目的。应该承认在资本主义国家的城市建设上，确有不少先进的经验，值得我们学习。问题在于区别哪些是真正的先进经验，切忌盲目抄袭，否则有害无益。以华盛顿的城市建设为例，在它的全城中轴线上对所有建筑物的布局及其功能要求，就有可供借鉴的地方。它的国会大厦屹立于中轴线的正中央，城中所有的楼房建筑的高度都不得超过它，它就给整个城市的天际线带来一大特色。从国会大厦向西直到华盛顿纪念塔前的绿茵广场，地势平展，视野辽阔。广场的南北两侧，有博物馆、展览馆等，依次排列，在南侧的有航天空间博物馆、雕刻绘画馆、国家博物馆（内有首都城市规划设计史展览厅）等。在北侧的有美术陈列馆、自然史博物馆、美国历史博物馆等。北侧中间退后一方场地，还有一座国家档案馆。在国会大厦的东南侧与高等法院大楼南北并列的，则

是举世闻名的国会图书馆及其最近扩建的新馆。在这个全城的心脏部位上，集中表现出华盛顿作为全国政治中心和文化中心的特点，整个布局严正而富有变化，两侧的各大博物馆、展览馆，虽然高度大体一致，而建筑形式各不相同，从国家博物馆红砖碉堡式的古典建筑，到航天空间博物馆的现代设计，各有其时代特征，其中最负盛名的是建成不久的美术陈列馆的东厅。这里原是绿茵广场东北角上的一块三角地带而又近在国会山下，地点至为重要，在建筑设计上也最难处理。正是在这里，著名华裔建筑学家贝聿铭显示了他卓越的才能，设计了这座独具一格的建筑物，为广场增辉。

写到这里，又不禁想到上文已经讲过，建国十周年时扩建天安门广场，同时兴建了人民大会堂和中国历史博物馆与中国革命博物馆，使得天安门广场在体现全国政治中心的同时，也兼有文化中心的象征。但是在设计的当时，北京作为全国的政治中心之外也是全国的文化中心这一特点，还没有得到充分的认识和说明，现在考虑到今后精神文明建设的重大意义和建设北京作为全国文化中心的要求，在全城的规划设计上，应该进一步结合城市平面布局的历史特点来加以考虑。上述华盛顿城中轴线上核心地区的建设，只是仅供参考的一例而已。

⑤ OVERSEA COMMUNICATIONS BETWEEN CHINA AND EAST AFRICA BEFORE THE SO-CALLED DISCOVERY OF THE NEW SEA- ROUTE*

At the end of the fifteenth and the beginning of the sixteenth century, a series of long-distance sea voyages started out from Western Europe. The earliest and most widely publicized among them were (1) the trans-Atlantic voyage which in 1492 brought Christopher Columbus to districts now known as Cuba and Haiti; and (2) the voyage undertaken by Vasco da Gama, in the course of which he rounded the Cape of Good Hope, crossed the Indian Ocean and eventually reached the modern Kozhikode (formerly known as Calicut, mentioned in ancient Chinese records as *Kuli*) in South India in 1498. With this tremendous expansion of geographical vista, the Europeans landed in a continent where they had never set foot before and found a passageway hitherto unknown to the East. These events they commemorate under the imposing titles of discovery of the new continent and discovery of the new sea-route respectively. With these began the era of "great geographical discoveries", which looms large in the history of European geographical discovery and standard textbooks on European history.

The subsequent expansion of European colonialism has disseminated these ideas to practically every corner of the world. In reality, however, the achievements of Columbus and da Gama may be considered in a certain sense "discoveries" only if one postulates a

limited view point—that of the Europeans. Any attempt to enlarge the viewpoint to take in other areas or to endow it with a world-wide significance would be seriously mistaken.

This essay purports to deal exclusively with what the Europeans call the discovery of the new sea-route.

To begin with, a brief retrospect of the historical facts is perhaps called for. The search for the new sea-route is commonly thought of as entering its last crucial phase with the effort of Bartholomew Diaz, who by continuing to cruise southward along the western coast of Africa in 1487 (many parts of which had repeatedly been touched by former navigators), finally reached the southernmost point of the African continent, later known as the Cape of Good Hope. It was not until ten years later that da Gama pushed the voyage yet further by sailing northward along the eastern coast of Africa, reaching in April, 1498 Malindi in Kenya (mentioned in Chinese records as *Malin* or *Malinti*). Then, starting out from Malindi, da Gama began the last and most important section of his voyage by crossing the Indian Ocean, ending up in Kozhikode in May of the same year.¹

In this manner was "discovered" the much-vaunted new sea-route to the East. To the Asian and African peoples, however, the route was by no means new, so that any claim to have "discovered" it is out of the question. It can be confidently established that every section of the route had been traversed by Asian and African navigators and explicitly recorded in historical texts.

Let us first take up the route along the African coast. We know from the distinguished Greek historian Herodotus (484-425 B.C.) that the first cruise around the African continent dates back to about 600 B.C. In trying to show that the African continent (then called Libya), except being joined to Asia by a narrow isthmus, was completely surrounded by the ocean, he cited as evidence the following facts. In 600 B.C. or thereabouts, a fleet manned by Phoenicians, who were experienced sailors, left the Red Sea under the orders of the Egyptian Pharaoh Necos, and made its way southward into the open ocean. It

took them two years to return safely to Egypt, having finished the voyage in accordance with Necos' plan which necessitated their entering the Mediterranean Sea via the Strait of Gibraltar.² That was an astonishing feat in the history of navigation.³ We may suppose that in rounding the southernmost point of the African continent and sailing up northward, da Gama was not aware that he was following a route which had already been discovered by Phoenician sailors more than two thousand years ago, the only difference being that he was sailing in a direction opposite to that of his predecessors.

Indeed, besides that remarkable voyage made by the Phoenicians, history knows of other instances that men had sailed southward along the eastern coast of Africa, rounded the cape and entered the Atlantic Ocean. In the 1420s, or about seventy years before da Gamma's eastern voyage, an Arabian navigator had taken exactly that route.⁴ The Arabs had then established extensive oversea trade along the eastern coast of Africa, which penetrated as far southward as Mozambique, and it was from none other than those Arabian traders that da Gama obtained the necessary information which enabled him to continue his voyage in a northward direction.⁵

Another point to be stressed is that while the voyage from the eastern coast of Africa across the Indian Ocean to South India is justly regarded by the Europeans as the last and most important section of their so-called new route, since their final objective of reaching the East virtually hinged upon its successful completion, that very route had not only been opened up by the Asian and African peoples long before but had remained in constant use for a considerable period of time. Special mention should be made of Ibn Madjid, a great Arabian navigator, who came from a family of sailors and whose knowledge and experience about the sea was unrivaled in his day.⁶ It was with his expert guidance that da Gama finally accomplished the last and most important section of his voyage.

Here it is necessary to recall the magnificent contribution made by the Asian and African peoples toward opening up the trade route

across the Indian Ocean.

Trading relations connecting the South China Sea with the Indian Ocean had long existed prior to the end of the fifteenth century. The scale and financial prosperity of these ventures were such that hardly any other areas in the world could offer a contemporary parallel. On this topic, which forms an extremely important chapter in the history of ancient navigation and transportation, many dissertations and books have been written by Chinese and foreign scholars. The scope of this essay permits us merely to cite a few examples from Chinese documents by way of illustration.

The earliest mention in Chinese records of voyages over the South China Sea and the Indian Ocean goes back to the first and second centuries B.C.⁷ Since then a long line of messengers, monks and merchants had used the same sea route, voyages back and forth between China and Ceylon⁸ or India being especially frequent. A well-known example is that of the Chinese monk Fa Hsien, who in 409 sailed from *Tomoliti* (whose ancient site was located on the western bank of the Hooghly River, near the Ganges Delta in modern India) to *Shihtzukuo* (now Ceylon); and in 412 boarded a large merchant vessel which brought him from *Shihtzukuo* back to China.⁹ His contribution to the cultural exchange between China on the one hand and India and Ceylon on the other has become almost proverbial down to the present day.

The earlier seventh century saw the founding of the T'ang Dynasty (A.D. 618-906) in China and the rise of the Arab Empire (A.D. 632-1258) in Southwest Asia.¹⁰ Contacts between the two were numerous, and a new stage began in East-West trade over the South China Sea and the Indian Ocean. The volume of trade in the two-way traffic over the Indian Ocean continued to swell after the eighth century. In China, throughout the long period of the T'ang, Sung (Northern Sung 960-1127, Southern Sung 1127-1279 A.D.), and Yüan (1279-1368 A.D.) dynasties, there were chartered ports along the southeastern seacoast which made oversea trade their special business,

and government officials were specially appointed to take charge of trading affairs. Among these ports, Canton had at first the largest amount of foreign trade.¹¹ Beginning from the middle of the thirteenth century, however, it was eclipsed by Chüan-chow (Zayton). In the latter, we possess lively sketches by a couple of contemporary witnesses, who arrived in China toward the end of the thirteenth century and in the middle of the fourteenth century respectively, namely the renowned Venetian traveller Marco Polo and Ibn Battuta of Tangier, Africa. This is what Marco Polo wrote:

At this city you must know is the Haven of Zayton, frequented by all the ships of India, which bring thither spicery and all other kinds of costly wares... I assure you that for one shipload of pepper that goes to Alexandria and elsewhere, destined for Christendom, there come a hundred such, aye and more too, to this Haven of Zayton; for it is one of the two greatest havens in the world for commerce.¹²

Ibn Battuta was even more emphatic:

I must tell you that the first Chinese city that I reached after crossing the sea was Zayton (now is called Chüan-chou-fu)... The harbour of Zayton is one of the greatest in the world; I am wrong: it is the greatest! I have seen there about one hundred of first-class junks together; as for small ones, they were past counting.¹³

Ships that voyaged over the South China Sea and the Indian Ocean during the T'ang and Sung dynasties included, besides Chinese ships, those of the following nationalities, all mentioned in Chinese records: Persian ships, *Shihtzukuo* ships, ships from the Western Regions, or simply, "foreign" ships. These seagoing vessels had from a very early time made use of the monsoon in their voyages, which accounted for the fact that most vessels sailing from China started out between autumn and winter when the dry monsoon blew from the northeast whereas most ships coming to China chose the summer season when the wet monsoon blew from the southwest.

In periods when China's foreign trade was exceedingly active, for instance, in the Sung Dynasty, the number of foreign traders in China

was so large that special residential quarters were set apart for them in all chartered ports. Some of these traders elected to stay in China, or even assumed important posts in the Chinese government. A case in point is P'u Shou-keng, responsible official for trading affairs in Chüanchow at the end of the Sung Dynasty, whom research showed to be the descendant of an immigrant Arab who settled in China.¹⁴

In the first three decades of the fifteenth century, the government of the Ming Dynasty (1368-1644) in China expended great efforts in developing oversea communications between China and the Indian Ocean. These efforts were crowned by the seven long-distance voyages led by Cheng Ho. As Cheng Ho's expeditions were by all odds the most impressive achievement in the history of navigation prior to the Europeans' sailing for the Orient, which did not begin till the end of the fifteenth century, a short description of those remarkable events may not be out of place here.

The seven voyages of Cheng Ho spanned a period of 29 years (1405-1433).¹⁵ His fleet was composed of more than sixty galleys and a large number of smaller auxiliary vessels, making a total of well over two hundred. On his seventh voyage (1431), he was accompanied by various kinds of nautical technicians, soldiers, interpreters, scribes and medical and service personnel to the number of 27,550.¹⁶ When we recall that sixty-one years later (1492) Columbus had only three ships and eightyseven sailors with him in making his first trans-Atlantic voyage, and that sixty-six years later (1497) da Gama brought only four ships and one hundred and forty-eight (or, according to some authorities, one hundred and seventy) men to the Orient, we may arrive at a truer estimate of the size of Cheng Ho's expeditions.

The farthest points reached by Cheng Ho's fleet in the seven voyages, which headed in somewhat different directions, are: Hormuz (mentioned in Chinese records as *Hulumussu*) on what is now the Iranian Bay, Jeddah (mentioned in Chinese records as *Chihta*) on the eastern coast of the Red Sea, and Mombasa (mentioned in Chinese

records as *Manpasa*) on the eastern coast of Africa. The last of these voyages has bequeathed some very valuable legacies to us of the present day, including a tolerably complete sailing record and a copy of the original sailing chart.¹⁷

Cheng Ho's routes over the Indian Ocean require some attention. Variations were slight among those for east of Ceylon and South India, which may be passed over, but as we follow him further westward, we notice certain interesting features.

It should first be pointed out that the two sea routes leading from the western coast of South India to the Iranian Bay and to the Red Sea had both a long history behind them. However, in early times, oversea communications between those regions were presumably achieved by sailing along the coast. It was only when later navigators learned to make use of the monsoon, which was a familiar phenomenon in that area, that a direct route over the Arabian Sea was opened up.

Who was the first to notice and turn to account the monsoon that blew over the Arabian Sea and thus opened up the above-mentioned route? Some authorities ascribe the discovery of the monsoon to Hippalus, an Alexandrian in the employ of the Roman Empire c. A.D. 40-50. Hence, as one historian puts it, "Hippalus deserves as much honour in Roman annals as does Columbus in modern history." Others contend that before Hippalus the Arabs had already made use of monsoon in sailing over the Arabian Sea. Still others would credit Nearchos, one of the generals who accompanied the Macedonian king Alexander in his Asian expedition in the fourth century B.C. with the so-called "discovery."¹⁸ Be that as it may, the fact remains that navigators over the Arabian Sea had, from a very early time, learned to make use of the monsoon to strike out an oversea route, thus enabling themselves to abandon the tortuous coastal sailing. When Cheng Ho's fleet arrived in the Iranian Bay or entered the Red Sea, these routes were already scenes of busy trafficking.

There is another problem that deserves a far more thorough probing. Among the routes shown in Cheng Ho's chart (Fig. 6-1) is one

that leads from the present Belligamme in the south of Ceylon or from Kozhikode on the western coast of South India to Brava or to Mogadishu on the eastern coast of Africa. When was this direct route first opened up? We know that oversea communications between the equatorial regions on the eastern coast of Africa and India or China also go a long way back. Indeed, descriptions of the sea coast in what is now Somalia and Kenya may be found in Chinese records as early as the eighth and ninth centuries.¹⁹ In 1071 (or the fourth year of Hsining in the Sung Dynasty), ambassadors from *Tsengtan*, a country on the eastern coast of Africa, after 160 days of sailing along the coast, landed in the city of Canton in China. A second embassy came in 1083. The Sung rulers obviously thought very highly of this diplomatic relationship and loaded the ambassadors with rich gifts.²⁰ Now *Tsengtan* is actually a scribal error for *Tsengpa*, which represents a clipped pronunciation of Zanzibar.²¹ The two are, however, not strictly identical, as *Tsengtan* in those days embraced the eastern coast of Africa together with the islands off the coast. From the twelfth century on reference to various countries on the eastern coast of Africa occurred with greater frequency in Chinese geographical works.²² Particularly worthy of notice are the results of recent archaeological excavations on the eastern coast of Africa. These include T'ang and Sung copper coins as well as large quantities of chinawares (fragmentary or otherwise) dating back to the Sung Dynasty, the Yüan Dynasty or a later date. All this is incontrovertible proof that trade relations had long existed between China and the eastern coast of Africa.²³ But the contact (direct or indirect) was exclusively dependent on the route over the Arabian Sea, and remained so up to the middle of the thirteenth century.

It should be recognized that there was a profound difference between the direct route that led from Ceylon or South India across the Indian Ocean to the eastern coast of Africa and the other route over the Arabian Sea. One needed only the monsoon to sail safely along the latter route. In case of the former, however, even with the

help of the monsoon, successful voyaging would be extremely difficult, if not impossible, unless one enlisted the additional aid of the compass. Chinese navigators began using the compass in making their voyages in the eleventh or twelfth century.²⁴ The compass is one of the most significant contributions made by the Chinese labouring people to world civilization. For, with the invention of that instrument, man finally gave up his old way of sailing closely to, or a short distance from, a winding and tortuous seacoast, and launched out boldly for the open ocean. Thus the seemingly unlimited kingdom of billowing waves became another sphere where man could display his power and adventurist spirit.

It has been conjectured that the knowledge and use of the mariner's compass passed from China to Europe via the Arabs.²⁵ At any rate, European seagoing ships only began using the compass at the end of the twelfth or beginning of the thirteenth century. It is conceivable that the direct route across the Indian Ocean joining Ceylon or South India with the eastern coast of Africa could have been discovered before the beginning of the fifteenth century when Cheng Ho made his voyage. But as far as Chinese maps and documents are concerned, the first unmistakable reference to the route occurred at the time of Cheng Ho's expeditions. The appended sailing chart of Cheng Ho shows clearly that there were two direct routes leading from Ceylon and South India, respectively, to the eastern coast of Africa. The routes might pass through *Kuanyuliu* (the Island of Male), but it was not necessary. We know for certain that in the seventh voyage, *Kuanyuliu* was used as a midway station. Cheng Ho's original chart contains the following note:

5-1 Routes of Cheng Ho's voyages 郑和航海路线略图

From *Kuanyuliu*...one arrives at *Mukutushu* (i.e. Mogadishu), following the *Keng-yu* needle.²⁶

We shall find, by checking the route against a modern map, that the sailing direction is wonderfully accurate, as what he called the *Keng-yu* needle represents roughly 262° on the compass.

The geographical work of Fei Hsin²⁷, who accompanied Cheng Ho on four of his voyages, tells us:

Sailing southward from *Peiloli* (Belligamme) in Ceylon...one may arrive at Brava after twenty-one days and nights.

With a favourable wind, it is possible to sail from *Hsiaokelan* (Quilon) to *Mukutushu* in twenty days and nights.

Here are clearly set forth the two direct routes across the Indian Ocean, one leading from Belligamme in Ceylon to Brava on the eastern coast of Africa, and the other from Quilon to Mogadishu, also on the eastern coast of Africa. However, the direction given is incorrect, and Cheng Ho's chart should be regarded as the final authority. The opening up of the sea route was the joint work of the Asian and African peoples who inhabited those districts. As has been pointed out before, it was by following this route, and by enlisting the guidance of the expert Arabian sailor, Ibn Madjid, that da Gama successfully accomplished his voyage at the end of the fifteenth

century.

Cheng Ho's voyages must not be looked on as a fortuitous incident. They were an important extension of the overseas communications and friendly trade relations that had long existed between the Asian and African peoples. Official organization enabled these voyages to be carried out on an unprecedented scale, but it did nothing to change their nature, since there is ample evidence to show that these voyages aimed primarily at enlarging overseas trade. That the Ming court was also eager to hunt down foreign treasures and fancy products need not be denied, but the means adopted remained as always one of peaceful exchange and free bartering. Trade relations built on such a basis naturally fostered diplomatic relations. What is more important, following these voyages, private trade also had considerable development. The immense amount of gold, silver, coins, silken fabrics, chinaware and copper ware with which Cheng Ho's fleet was loaded, was a means to promote private trade, in return for such exotic goods as spices, dyes, pearls, precious stones and rare birds and animals (lions, zebras, ostriches, leopards, giraffes, etc.).²⁸ The fleet also carried foreign messengers and merchants back and forth. All in all, China's private overseas trade greatly expanded during this period.

To sum up, Cheng Ho's voyages were a powerful stimulant to the overseas trade and cultural interflow between China on the one hand and South Asia and East Africa on the other. The direct route connecting China with East Africa marks, in particular, a new stage in overseas communications.

But ever since da Gama "discovered" this route to the Orient, more and more Westerners followed in his wake. Not satisfied with merely reaching India, they kept pushing farther eastward, and it did not take them long to sail through the Strait of Malacca and enter the South China Sea, arriving eventually in 1516 at Canton, which formed the southern entrance to China on the seaboard. In the van were the Portuguese, while many other nations of Western Europe, such as

Spain, Holland, Great Britain and France, showed an equally ardent desire not to be left behind.

Since then a totally different chapter in the history of oversea communications between the East and the West has to be written and here is the proper place for the present study to stop.

伍 在所谓新航路的发现以前中国与东非之间的海上交通*

在15世纪末叶和16世纪初期，从西欧开始了一系列的远洋航行，为众所周知的最初两件大事，就是：一、1492年哥伦布横渡大西洋，到达了现在古巴和海地等处；二、1498年达·伽马在绕过好望角之后，越过印度洋，到达了现在印度南部的卡利卡特（中国古籍作古里）。欧洲人的地理视野从此大为扩大，他们登上了还从来没有登上过的大西洋彼岸的土地，找到了从来还不知道的到东方来的航路。前者他们称为新大陆的发现，后者他们称为新航路的发现。这就是欧洲地理发现史以及一般欧洲历史上所大书而特书的“地理大发现”的开始。

随着欧洲殖民势力的扩张，这种观点几乎被传布到世界各地。其实，无论是哥伦布的成就或是达·伽马的成就，只有从欧洲中心论的观点来看时，才能在某种意义上被认做是一种“发现”。如果把这一观点应用于其他地方，或扩大到世界的范围，那显然是错误的。

本文专就所谓新航路的发现这一问题加以讨论。

这里首先需要回顾一下所谓新航路的发现的简单经过。新航路的探寻被认为是从迪亚士才开始进入了最后的关键性的阶段，他在1487年沿着前人已经屡次到达的非洲西部的大部分海岸继续南航，终于来到了非洲大陆的南端（后称好望角）。十年之后，达·伽马又继续迪亚士的航程前进，沿非洲东海岸北上，于1498年4月到达现在肯尼亚的马林迪（中国古籍作麻林、麻林地）。从马林迪出发，达·伽马开始了在他全部航程中最后的也是最重要的一段，那就是横越印度洋的一段，并在1498年5月到达了他全程的终点——卡利卡特。¹

欧洲一些人所盛加称道的到东方来的新航路就是这样被“发现”的。但是从亚洲和非洲人民看来，这既不能被认为是新航路，自然也就很难说是“发现”了。因为这一航路的每一段，都已经为亚非航海家所航行过，而且已经明确载入史册。

首先，我们来看非洲沿岸的航路。古代希腊大史学家希罗多德（公元前484—前425）告诉我们早在公元前7至前6世纪之间，就已经有环

航非洲大陆的壮举了。当他在说明非洲大陆（当时称Libya）除去和亚洲相连的一处外，其余各方面都为大海所环绕时，曾举出了如下的事实：公元前600年左右，埃及法老尼可派遣了一个由有名的航海者腓尼基人所驾驶的船队，从红海出航，向南驶入大洋。过了两年，他们终于按照尼可的命令，经由直布罗陀海峡进入地中海，安然返航到埃及，²这是古代航海史上令人惊异的事件。³当达·伽马绕过非洲大陆南端转而向北沿岸航行的时候，他大约还不知道这已经是腓尼基航海家在两千多年前所发现过的航路了，所不同的只是他在逆着他的先行者的航行方向而前进罢了。

其实，沿着非洲东岸南航，并且绕过大陆南端而驶入大西洋的，在历史上还不仅仅是腓尼基人那一次。例如15世纪的20年代，也就是达·伽马东来以前的七十多年，一个阿拉伯的航海家也已经那样航行过了。⁴那时阿拉伯人已经沿非洲东岸自北而南，远到莫桑比克沿岸一带（至南回归线以南之伊尼扬巴内），建立了海上贸易，而达·伽马则正是从这些阿拉伯商人那里获得了有关向北继续航行的情报的。⁵其次是从非洲东岸横越印度洋到达印度南部的航路，这在欧洲一些人所谓新航路中应当是最后一段，也是最为重要的一段，因为只有完成这一段航路之后，他们到东方来的最后目的才算实现。然而正是这一段航路，不但久已为亚非人民所开辟，而且已经连续航行了一个很长的时期了。特别值得注意的是，达·伽马在完成这最后一段，也是最重要的一段航路时，正是借助于一位阿拉伯航海家的导航才顺利成功的，这就是出身于世传的海员家庭而又饱有航海经验和学识的伊本·马吉德。⁶

在这里，回顾一下亚非人民在开辟印度洋的航路上所作出来的卓越贡献，是必要的。

15世纪末叶以前，从中国南海一直到印度洋上的来往贸易已经有了长时期的发展，其巨大规模和繁荣程度，在当时说来，也是世界任何地区所难以比拟的。这是古代世界航运史上非常重要的一部分，关于这一部分，中外学者已经写了不少的论文和专著。在这篇短文里，只拟根据中国的文献，举出几个例子，作为说明。

早在公元前2至前1世纪间，中国南海以及印度洋上的通航来往，已经见于中国记载。⁷此后，中国南海与印度洋——特别是从中国到锡兰⁸与印度之间，使者、僧侣和商人泛海来往，络绎不绝。例如著名的中国僧人法显在公元409年从多摩梨帝（故址在今印度恒河三角洲呼格利河

西岸）航行到狮子国（今锡兰），又于公元412年从狮子国乘商人大船经海道返回中国。他在中国与印度以及锡兰之间的文化交流上所作出的贡献，至今传为美谈。⁹

到了7世纪前半叶，在中国有唐朝（618—906）的建立，在亚洲西南部有阿拉伯人大食帝国（632—1258）的兴起¹⁰，两者之间接触频繁，从而开始了中国南海与印度洋上东西通航的新阶段。8世纪初叶以后，印度洋上东西往来的贸易，日趋繁盛。在中国，自唐历宋（960—1279，1127年以前为北宋，以后为南宋）至元（1279—1368）在东南沿海一带，都有指定的港埠经营海外贸易，并设专官管理通商事宜。在这些港埠中，先以广州的外国贸易最为繁盛。¹¹到了13世纪中叶以后，泉州又凌驾广州之上。在13世纪后期和14世纪中叶先后来中国的大旅行家威尼斯人马可·波罗和非洲丹吉尔人伊本·拔都他，都曾亲到泉州，并作了简明生动的描述。马可·波罗记道：

你必须知道，印度所有商船前来泉州港十分频繁，运来的香料和其他贵重物品……我可以肯定地告诉你，如果有满载胡椒的一艘船只驶入亚历山大里亚或其他商港以供应耶稣教诸国，那么就会有一百艘或更多的满载胡椒的船只驶入泉州港，因为泉州乃是世界两个最大贸易港口中的一个。¹²

伊本·拔都他所写更为具体：

我必须告诉你，在我渡过海洋之后所到达的第一个中国城市刺桐（现在叫做泉州府）……泉州的港口乃是世界最大港口之一；我错了，它乃是所有港口中最大的。我看到港口里约有大海船百艘，至于小船那真是不可胜数了。¹³

唐、宋时期来往中国南海和印度洋上的船舶，除中国船外，其以国别或地域名称见于中国记载者有波斯船、狮子国船、西域船或简单称为外国船等，这些海船从很早起利用了季风航行，因此从中国出航的海船，多在秋冬东北季风风发之时，而前来中国的海船，则多在夏季西南季风盛行之时。

中外贸易最繁盛时如在宋代，前来中国的外商，人数众多，中国各通商港埠，都为外商划有一定的居住区。有的外商常住不归，甚至在中国担任了重要的官职。例如宋末元初在泉州负责管理通商事宜的长官蒲寿庚，就是在中国定居的阿拉伯人的后裔。¹⁴

到了15世纪最初的三十年间，中国的明朝（1368—1644）政府用了很大力量来发展中国与印度洋上的海上交通，其代表事件就是由郑和所领导的七次远航。由于这是15世纪末叶欧洲人东来以前最大规模的航

海史上的壮举，因此有稍加介绍的必要。

郑和的七次远航，始于1405年，止于1433年，前后共历二十九年。¹⁵他所领导的船队有大海舶60多艘，连中小船只计算在内，多至200余艘。第七次出航时（1431），随行各种航海技术人员、士兵以及翻译、书记、医生和服务人员，共计27550人。¹⁶如果我们想到六十一年后（1492）哥伦布第一次横渡大西洋时只有船3只、船员87人，或者想到六十六年后（1497）达·伽马前来东方时也只有船4只、船员148人（或作170人），我们就可以体会到郑和的远航是在一种什么样的规模上进行的了。

在七次远航中，郑和的船队在不同方向上所到达的最远之地，是现在的波斯湾上的霍尔木兹（中国古籍作忽鲁谟斯），红海东岸的吉达（中国古籍作秩达），还有非洲东岸的蒙巴萨（中国古籍作慢八撒）。在这七次航行中，最后一次不仅保留了一个比较完整的航海记录到今天，而且还有一幅航海图经过翻刻之后也被保留下来，这是极可珍贵的。¹⁷

现在有必要把郑和在印度洋上的航路，再作些进一步的分析。这些航路自斯里兰卡和南印度以东的变化不大，可以从略，以西的却是值得特别注意的。

首先应该指出，从印度南部的西海岸，无论是通向波斯湾，还是通向红海口的航路，也都是具有悠久历史的两条航路，不过最早期的印度南部海岸与波斯湾及红海之间的海上来往，应该都是沿着海岸进行的。后来航海家由于认识和利用了这一地区盛行的季风，才终于开辟了上述穿越阿拉伯海的直达航路。

究竟是谁最先认识和利用了阿拉伯海上的季风，从而开辟了穿越海上的直达航路的呢？有人说最初发现阿拉伯海上的季风的是约在公元40—50年之间为罗马帝国服役的一个亚历山大里亚人，名字叫做希帕卢，因此认为“希帕卢在罗马编年史上应该享有像哥伦布在近代史上所享有的那么多的荣誉”。随后又有人指出，在希帕卢以前，阿拉伯人早已在阿拉伯海的航行中利用季风了。更有人把这一“发现”归功于公元前4世纪随马其顿的亚历山大远征归来的一位将军尼耳楚。¹⁸总之，无论其最初发现者为谁，阿拉伯海上的航海家利用季风离开沿岸曲折的航程而开辟了穿越海上的航路一事，是为时很早的。到了郑和的船队远航到波斯湾口和进入红海的时候，这些海上航路的来往贸易，已经是非常发达的了。

这里需要提出的是，另外一个远为值得注意的问题，即在表示郑和航路的地图上（图6-1），从锡兰南端的别罗里（今贝里格姆）或从南印度西岸之古里到非洲东岸卜刺哇（今布拉瓦）或木骨都束（今摩加迪沙）之间的直达航路，究竟是什么时候开辟起来的？我们知道，非洲东岸赤道附近地区和印度以及中国之间的海上交通，也是开始得很早的。例如公元8—9世纪时，中国已经有了关于现在索马里和肯尼亚沿岸的记载。¹⁹到1071年（宋熙宁四年）非洲东岸的层檀国还曾派使臣沿海岸航行，经过160天才来到中国的广州登陆，1083年（元丰六年）再使中国。宋王朝很重视这一外交关系，曾向使臣赠送了优厚的礼品。²⁰按“层檀”是“层拔”二字传写之误，即今桑给巴尔之对音²¹，不过当时叫做层檀的地方，主要指今非洲东部沿岸大陆和沿海岛屿，而不是专指今天的桑给巴尔。12世纪以后，中国地理书上有了更多的关于非洲东部国家的记载。²²尤其值得注意的是，近世纪来，非洲东岸一带还曾掘得中国唐代宋代的铜钱以及宋代元代及其以后的大量瓷器、瓷片，更足以作为中国和非洲东岸很早就有通商贸易的证明。²³不过上述中国与东非之间的来往，还都是沿阿拉伯海的航路直接或间接进行的，晚至13世纪前半期，仍然如此。

应该认识到从锡兰或南印度到非洲东岸之间的横越印度洋的直达航路，较之穿行阿拉伯海的航路，是有很大差别的。因为后者凭借季风便可安全航行，而前者虽然仍有季风可以利用，但是如果没有航海罗盘的帮助就非常困难，甚至是不可能的了。中国航海家早在11—12世纪之间，就已经利用罗盘于海上航行了。²⁴这是中国劳动人民对于世界文明所作出的重要贡献之一。人们一旦掌握了这一工具，就终于离开自古以来沿着海岸或离开海岸不远而行驶的迂回曲折的航路，顺利地驶入了大洋，从而有可能使波涛汹涌、茫无涯际的大洋，开始成为被探险和被征服的人类活动的新领域。有人推测中国关于航海罗盘的使用，首先传给阿拉伯人，然后又经过阿拉伯人传往欧洲。²⁵至于欧洲人开始使用罗盘则已是12世纪末到13世纪初叶的事了。可以设想，横越印度洋直接联系锡兰或南印度与非洲东岸的航路，在15世纪初郑和远航之前，是有可能被发现的。但是在中国图籍里关于这条航路的明确记载，则是从郑和远航时开始的。在所附郑和航海路线的地图上，可以看得很清楚：在锡兰与非洲东岸以及南印度与非洲东岸之间，都是直达航线，可以经过官屿溜（今马累岛，Male），也可以不经过它。至于第七次的航行中，官屿

溜则被用作中继站，郑和原图上并有下列文字记注说：

5-1 Routes of Cheng Ho's voyages 郑和航海路线略图

官屿溜用庚酉针.....收木骨都〔束〕。26

所谓“庚酉针”就是罗盘上的262°左右的方位。按之今图，这一行驶方向是完全正确的。

其次，随从郑和四次出航的费信在所著地理书²⁷中也有如下记载：

卜刺哇国.....自锡兰山别罗〔里〕南去二十一昼夜可至。

木骨都束国.....自小葛兰顺风二十昼夜可至。

这里所记，也就是从今天锡兰的贝里格姆和印度南部的奎隆分别到达非洲东岸布拉瓦和摩加迪沙的横越印度洋的直达航路。只是所记方向不确，应以郑和航海图为准。在开辟这一航路上，亚非有关地方的人民都作出了自己的贡献。如前所述，15世纪的末年，达·伽马正是沿着这一航路，再加上伊本·马吉德这位卓越的阿拉伯航海家的领航，这才得以顺利地完成了他的航行。

郑和的远航，不是一个偶然事件，而是长时期以来亚非人民泛海来往和进行友好贸易的重要发展。由于这次远航是官方组织的，因此规模巨大，远远超越前代。但是这并没有改变这次航行的性质，因为事实证明，航行的主要目的就是要开拓海上贸易。无可讳言的是明朝宫廷很想借此猎取海外珍奇，但所采取的手段仍然是和平交易、互通有无。通过这样的贸易关系，也促进了外交关系的发展。值得重视的是随着这种关系所进行的民间贸易。郑和的船队携带大量金银、钱币、丝绸、瓷器、

铜器等作为民间交易的媒介，换取回国的则是各地特产如香料、染料、珍珠宝石以及珍禽异兽（如狮子、斑马、鸵鸟、金钱豹、长颈鹿）等等。²⁸随着郑和的船队还有外国使者和商人来往，也就在这时期，中国民间的海外贸易也有了很大发展。

总之，郑和的航行大大促进了中国和亚洲南部以及非洲东部诸国之间的海上贸易和文化交流，而中国和东非的直接通航，更是海上交通的新发展。

但是，自从达·伽马找到了这条到东方来的航路之后，后继者跟踪而至。他们并不以到达印度为满足，而是向东方继续前进，很快地就通过了马六甲海峡，进入中国南海，1516年终于来到了中国南方的海上门户——广州。走在最前面的是葡萄牙人，其他西欧国家如西班牙、荷兰、英国、法国等也不甘落后，这是一股汹涌而至的殖民主义的逆流，它冲击着非洲大陆，侵袭着印度洋上以及太平洋西部的众多国家，世代相传友好互惠的亚非人民之间的海上往来，从此被打断，代之而起的却是殖民主义者对财富的掠夺、对土地的征服以及对无辜人民的奴役、贩卖和屠杀。

今天，民族解放运动空前高涨，民族解放革命的胜利不可阻挡。在殖民制度的扩张中被广为传布的所谓新航路的发现这一名词，必须予以纠正。因为这个名词不但歪曲了历史的事实，也抹杀了亚非人民在航海事业中的贡献。

⑥ A MODERN INTERPRETATION OF ANCIENT CHINESE GEOGRAPHICAL LITERATURE*

Example I: *A Commentary on the Book of Rivers*

China is now facing a great historical transformation. In order to get rid of the backwardness of her science and technology and to speed up the effort of the realization of her socialist modernization, it is necessary for us, on the one hand, to learn the advanced knowledge and experience of others countries. And, on the other hand, we must also re-estimate the real value of all the things we have inherited from our forefathers: Chinese culture, old traditions and history. We must absorb and utilize all the things that are beneficial to us. It is through such endeavours that we hope to produce a new culture which is typically Chinese and modern. In other words, we need a new culture for the age of socialism. This great historical transformation is in reality a new Renaissance of China.

Since liberation, this Chinese Renaissance has developed rapidly in the different fields of human knowledge. Indeed, there were serious interruptions and damages during the ten years of political turmoil. Nevertheless, all the things that obey the law of historical development will prosper in spite of the will of the reactionary gangs. And this is true to the Chinese Renaissance.

To give a full account of the Renaissance in this short talk is impossible. It is also out of my personal ability to do so. However, it is possible for me to try to use my personal judgment to re-estimate the real value of ancient Chinese culture and traditions from the field of studies with which I am familiar. Let me illustrate my view point by

showing two concrete examples. I sincerely wish that by so doing I may offer some help to my friends who want to know something about New China.

I would like to introduce to you two important books of ancient Chinese geography in order to illustrate how we, the modern Chinese students, make use of ancient Chinese literature and bring to light from them new value and inspiration.

The first book was compiled in the 6th century A.D. It is a voluminous manuscript called *A Commentary on the Book of Rivers*.

The other book was written 340 years ago by an outstanding Chinese traveller. It was written in the form of a diary with detailed descriptions of his observation and fieldwork. The title of the book is *Hsü Xia-Ke's Travels*, which is named after the author.

Both of these books were written in very beautiful and fluent prose. Indeed they had been preserved because of their literary style and beauty. It is only in modern times that their importance in scientific terms was recognized.

We shall discuss *A Commentary on the Book of Rivers* first. I would like to introduce to you the life of the author and a brief summary of the contents of the book.

Li Tao-Yuan, the author of *A Commentary on the Book of Rivers* was a native of Tsor-Hsien of the present Hopei Province which is about a hundred kilometers southwest of Beijing. He was born between 465 and 472 A.D. and died in 527 A.D., which is about 1453 years ago.

During the time of Li Tao-Yuan, China was divided into the South and the North. In the South, there were several kingdoms of Han nationality which governed the district one after the other chronologically. In the North, there were different minority nationalities fighting against one another for the sovereignty of the district. And throughout the whole era of the South and the North Dynasties, political hostility existed between the two parts of China. However, in spite of the existence of such political hostility, Li Tao-

Yuan kept up his studies and research on the geography of China as a united whole. This idea of unity is most important to us modern students of Chinese Geography. We learn from Li Tao-Yuan that political fragmentation does not mean fragmentation of culture. It is this unity within a developing culture that acts as a motivating force which bound the different nationalities in China steadily. Under such controlling force, they influenced and assimilated one another and a new type of culture with Han nationality as the main stem gradually formed and finally yielded a new culture of special Chinese characteristics. But, at the same time, there still existed in the minority nationalities, their own traditions and culture with their special characteristics. Another point to be noted is that in the process of the development of the Chinese culture, there were the continual absorption and assimilation of foreign civilization and influence. It is an undeniable fact that Chinese culture was enriched by foreign influence.

Li Tao-Yuan's father was a civil officer of a local district. He had to travel on duty to different places in different districts and the young boy Tao-Yuan went with his father on such occasions visiting places. This gave Li Tao-Yuan many chances to travel and thus nurtured his interest in studying geography. When Li Tao-Yuan grew up to be an official himself, he had even more chances to travel and so he visited many more places, which broadened his knowledge and experience. And his interest in studying the geography of his motherland increased by leaps and bounds. In addition to his fieldwork observation and practical experience, Li added to his knowledge by reading a lot of books, ancient materials and manuscripts. It must be mentioned that China of that time was a kingdom which had enjoyed a cultural unity for several hundred years through the prosperous dynasties of Qin and Han, and the Chinese culture had developed rapidly. There were many writings concerning national and regional geography, history, folklore and tradition, and some of them were of good quality. According to a study and calculation of the writings of

Li Tao-Yuan, we find that the books and writings he used for reference in his work amount to 437. It is a pity that most of these books have been lost. In addition to these references, he also collected a lot of writings from stone tablets and folklore and folk literature for his own reference. During the time of Li Tao-Yuan, there were some geographical literature and writings circulating among the elite circles. To Li, these were far from being satisfactory, some being too simple, some being too dry and insipid, and others being too confusing with no definite system for reference and research. It must be noted that most of these materials of geographical descriptions were little more than the compilation and gathering of raw materials and rough sketches of all sorts of natural phenomena. And there was no standard system of classification for these geographical records.

Li Tao-Yuan decided to set up a standard and unified system of recording the geographical materials of China. He used the *Book of Rivers*, a book written by some scholar before him, as an outline for his studies. The original *Book of Rivers* was completed in the third century A.D. It had the descriptions and records of 137 rivers in China, with reference to their sources, estuaries, tributaries, etc. It had a definite system of recording of its own. The only defect of the book is that there was little or practically no reference to the geographical condition of the land irrigated by each river. Li Tao-Yuan used this book as an outline for his research; he filled up many vacancies and supplemented a lot of materials. The number of rivers he studied and recorded increased to 1252. More important is the fact that he compiled detailed descriptions of each river including the geographical condition of it, the natural phenomena of the district concerned and their changes, with reference to the historical development and influences. Many of the descriptions were facts collected and recorded by Li himself. The completed works of Li Tao-Yuan amounted to three hundred thousand words which is about twenty times more than that of the original *Book of Rivers*. As to the system of compiling his book, Li decided that all the rivers originally

recorded in the old book (*Book of Rivers*) should be printed in bold type while all the materials supplemented by Li himself should be printed in small type, as references and footnotes. The name of the new book still preserved the name of the old, i.e. *Book of Rivers*, but the only change was by adding the word "Commentary" and thus the full name of the book became *A Commentary on the Book of Rivers*.

In his life time, Li Tao-Yuan had written many books and essays, but only this book got left. This book was preserved to us because of its beauty in writing style, especially its excellence in describing natural scenery. For example, in his records of the Three Gorges of the Yangtze River, the readers would be deeply attracted by his interesting description of lively actions and meditating quietude, its changing colours and poetic sounds of the magnificent pictures of Mother Nature. It is this passage of the Three Gorges of the Yangtze River that students of later times used to recite and memorize as a model of standard prosaic style and literary form.

Recently the Three Gorges of the Yangtze River was opened to all foreign friends and tourists as one of the sight-seeing spots in Central China. Special launch trips are arranged at scheduled time. Our foreign friends are welcome to come to China to enjoy the trip to the Gorges. I regret that I do not have the ability to translate and bring to life the beautiful prose style and literary achievement of Li Tao-Yuan in his descriptions of the magnificent scenery of the Three Gorges. I must confess that his special literary style and accomplishment are very difficult to interpret and translate. Without understanding, it would be difficult for our foreign friends to appreciate the beauty and essence of Chinese literature and prose form.

To consider Li's book from the point of view of a modern scholar, its beautiful literary style is not the only point of attraction and influence. I would like to point out that the scientific value of his observation and research is even more important. This emphasis is also based on my own personal experience. Let me show my point by telling a short story.

In the summer of 1949, after I concluded my studies in the University of Liverpool, England, I returned to Peking which had just been liberated. The next spring, under the direction of the Municipality of Peking (Beijing), a Committee for City Planning was established. Its duty was to make plans for the reform of old Beijing and the construction of a new Beijing city. I was responsible for the research of the historical geography of Beijing. Actually, I had done some research on this subject during my studies at the University of Liverpool under the guidance and tutorship of Prof. H. C. Darby. But this time the aim of the research was much more concrete: I was to make clear the process of the development of the old city of Peking, especially to make clear why the geographical site of the city had experienced many changes. This was not an easy job, because the long history of Beijing is very complicated. Well, from where should I begin? I was inspired by Prof. Darby's theory when I considered this problem. Prof. Darby emphasized that in the long process of the development of geographical environment, we must try to choose from the different periods in the development some historical cross-sections and endeavour to restore them to their original conditions. Then we line up these historical cross-sections chronologically, and study them by means of comparison and discover the process of development of each restored cross-section. Thus we can obtain a deeper understanding of the geographical outlook of the district concerned.

Under the guidance and inspiration of this theory, I looked through Li Tao-Yuan's *A Commentary on the Book of Rivers*, and extracted from its contents the passages concerning the geographical condition of Beijing and its surrounding areas. I succeeded in restoring a map of Beijing and its surrounding districts of more than 1450 years ago. This is the earliest one which is possible to be reconstructed. With the help of this map, we were able to trace out the origin of the city of Beijing. The same map also offered a reliable guide to the study of the changes and development of Beijing and its surrounding areas

in later times. The above story shows that because of the needs of the modernization of China, we revived ancient Chinese classics through the use of modern scientific theory and methods. Considering the above incident from such an angle, we may say that this can be considered as an example of Chinese Renaissance.

Concerning the modern estimation of the value of the book *HsüHsia-Ke's Travels*, I would like to discuss it in the next lecture.

Example II: *Hsü Xia-Ke's Travels*

In my last lecture, I tried to use a specific example to illustrate how we discover the scientific value of Li Tao-Yuan's book: *A Commentary on the Book of Rivers*, which was famous and well-remembered for its beautiful prose form. Today I would like to introduce to you another famous Chinese book which is also well-remembered by the Chinese people for its excellent literary style and prose form. Through the records of the author's geographical observations and investigations in his book, we discovered its scientific value and also the author's achievements and influence in his time. To us modern students of geography, the latter point is more important. The name of the book is *Hsü Xia-Ke's Travels* which I mentioned in my last lecture.

As in Western history, there are also famous travellers in the Chinese history. They also made long and difficult journeys and travels. The records and literature of what they had done broadened our knowledge of geography and also helped to promote the development of human civilization. For instance, in the first half of the second century B.C. (138-126 B.C.) the famous traveller Zhang Qian who by the command of the Central Government of his time, started from Chang-An, the political capital city, travelled westward and crossed the Pamir Plateau and finally reached Central Asia. He made diplomatic contacts with the political sovereignty there. He spent more than ten years in his travels and return journey, conquering numerous difficulties and untold hardship. He became the

pathfinder of the famous "Silk Route". Again, for instance, in the last year of the fourth century (399 A.D.), Fa-Xien, a much respected monk, also travelled from Chang-An. After crossing the Pamir Plateau, he turned down south to India. From India, he travelled by boat to Ceylon, then sailed in a big sea-going boat back to China in 412 A.D. Again, in the first half of the seventh century (627 A.D.-645), another famous monk called Shuen-Zhaung, followed a similar route taken by Fa-Xien some two hundred years before. He started from Chang-An, went westward and arrived in India where he stayed for more than ten years. Then he travelled by land back to Chang-An. Without doubt, the achievements of these travellers are never to be neglected. Their achievements helped to broaden the knowledge of the Chinese people. Also, they brought back the influence of other people from abroad. However, to investigate into the aims of their endeavour, we may obtain the conclusion that their achievements were by-products only. To Zhang Qian, his aim was to carry out a political mission; whereas to Fa-Xien or Shuen-Zhaung, it was religious fervour that motivated them to take the travels and stand all the trials of hardship.

Now, the traveller Hsü Xia-Ke born in the late sixteenth century (1587- 1641) is also well known for his daring journeys. Nevertheless, his travels were completely different from that of the people we mentioned above. More than half of his lifetime was spent in travelling. He travelled with neither political assignment nor any religious motives. He travelled because he wanted to seek knowledge and to explore the secrets of Mother Nature. Hsü Xia-Ke was a native of Jiang-Yin Xien in Jiang-Su Province on the southern bank of the Yangtze River. It was at the age of twenty-two, that is, 1607 A.D., that he left his home at the Yangtze Delta and started his planned trips. His aim was to visit the most famous mountains in China. Usually, he completed one trip within a year. The mountains he travelled to visit in the North included the Tai-Shan in the Province of Shantung, and the Pan-Shan which is near the northeast of Peking. He also journeyed to the northern part of the Province of Shansi where he visited the

WuTai Mountain. Then he went to the Northwest where he explored the magnificent sceneries of Hua-Shan of Shensi Province and the WuDong Shan of Hupei Province. In Central China, he visited the famous mountains of Huang-Shan in the Province of Anhui and the Lu-Shan of the Province of Kiangsi. Then he made a trip down South to the Lo-Fu Shan of Kuangtung Province, and also to the Southeastern coastline where he explored the Yen-Dang Shan of Chekiang Province. In early 1636, he made a long-distance travel to the provinces of Southwest China, reaching the western border of Yunnan Province. It took him nearly four years to complete the trip back and forth. It was the longest journey he had ever made, a distance of about seven thousand kilometers. In all his travels, he made very detailed records and descriptions of his observation, especially that of the provinces of Kuangsi, Kweichow and Yunnan. He wrote down all the geographical phenomena of these places in a detailed way. I would like to point out that if we find in his earlier travels he only enjoyed the beautiful and magnificent sceneries of Nature, then in his latter journeys we find his interest was that of all the natural phenomena. He persisted to walk in all his tours and very seldom he rode or took a boat. Thus, he was able to walk to the farthest corners of the countryside and wilderness and climb to the deepest canyons and the loftiest mountains. He nurtured the habit of writing down immediately everything he had a chance to explore and observe. He made detailed records in the form of a diary of all his trips and activities, with also his own personal opinions and deductions from what he had seen, especially his opinions on natural and geographical phenomena. He had very keen observation power and he was not afraid of the dangers in his journey. Very often, he climbed a high cliff or a deep canyon alone or crept into a deep cave without the company of anybody to explore and investigate. Some writers after him described his activities saying "he climbed high like a monkey and explored caves like a snake. In addition to these, he wrote in an excellent prose style, interesting and attractive, with vivid descriptions of natural sceneries. The way he recorded geographical

phenomena was accurate and concise in effect. It was actually because of these special accurate records of his observation and fieldwork that he was much respected and esteemed by the scholars of his time. His writings were copied and read and were considered as the finest literary accomplishment. After his death, his writings were collected and compiled into a volume with the title *Hsü Xia-Ke's Travels*. It was a collection of more than four hundred thousand words. It is a pity that some of the contents have been lost during the past years. The present volume is not the original edition.

The book was titled "Travels", but actually it is a classic on geographical research with very important scientific contents. It is important because it opened up a new way in the study of geography in China, using a thoroughly empirical method. Its influence and achievement in the development of Chinese sciences are unique. I must confess that it is out of my ability to convey to you the literary value of Hsü's book. However, it is necessary for me to explain briefly what the author had done in opening up a new way of geographical research.

Even before the time of Hsü Xia-Ke, the study of geography had a long development in China. There were many books which may be classified into the field of Chinese Geography. However, most of these earlier writings and books were nothing more than confusing collections of geographical phenomena. Practically none or very few of them referred to the reasons or factors yielding or influencing such phenomena. Furthermore, most of the writers of this kind of books were "indoor scholars" who did not have any fieldwork experience. All they did was to write books which were based on some legends from some miscellaneous documents. Very few of them were books of serious research and systematic compilation. The rare exception probably is the work of Li Tao-Yuan's *A Commentary on the Book of Rivers* published in the sixth century A.D. The fact is that the oppression of feudalism lasted for so long a time that the level of production was very low, and as a result of this, geographical research

and records were also limited. When it came to Hsü's time, he broke away from the old tradition and walked out of the small study of his house and made long outdoor trips with definite purposes and preparations. He made outdoor observations at first hand. With his keen observation he discovered and accumulated the numerous, colourful geographical phenomena and the knowledge of the internal causes of these phenomena. For instance, he looked into the nature and characteristics of rocks, the power of water in erosion, the use and influence of underground water, the shaping and structure of land forms, the changes of temperature and wind on different levels and latitudes and their influences on vegetations, and many other things which he tried to give scientific explanations of their making. More significant was the travels he made in the latter years of his life when he visited the southwestern part of China where he systematically observed the special nature of topography of the great expanse of karstland there, and made classified descriptions of them. His intense interest in the investigation of the caves in the karstland led him to go into more than one hundred deep caves of which he made very minute observations and detailed records. For example, he went twice to the eastern part of Kweilin in the present Autonomous Region of Kuangxi Zhuang, to explore the famous "Seven Stars Cave". He investigated and recorded the outside and inside details of this great cave in a minute way. The "Seven Star Cave" is one of the most mysterious and complicated caves in the karstland of Southwest China. In 1953, some Chinese geographers surveyed and measured the system of the "Seven Stars Cave" by modern methods and equipment. They drafted the ground plan inside and a rough sketch of the outside environment of the cave. When comparing their survey with the descriptions and records of Hsü Xia-Ke, they were very much amazed by its similarity and accuracy. The conclusion is that we can consider and use Hsü's book and his records as reliable references in the research of these caves and the karstland of China. I would like to emphasize that the distribution of limestone in the provinces of

Southwest China is most widespread in areas of limestone topography in the world. And the time Hsü Xia-Ke spent in exploring and investigating this area was also the longest of all his travels. The records of the distribution of limestone topography, the difference of geographical zones, the different types of topography and the causes of their forming were written down by Hsü Xia-Ke in details with also his own explanation. Undoubtedly these records of Hsü's are the earliest documents of its kind concerning such a big area of limestone topography.¹

The facts mentioned above show clearly that by his life-work in the research and investigation outdoor, Hsü Xia-Ke had paved a new way for the studies of geography in China. As a pioneer in the scientific research in geography Hsü is probably comparable to Alexander von Humboldt who laid the foundation of the studies of geography in Germany. Von Humboldt lived about one hundred and fifty years after Hsü Xia-Ke. Von Humboldt also devoted his life in making long-distance travels and investigations. However, von Humboldt lived in a time when the modern industrialization in Europe had already begun and when the studies of natural sciences in the West had also developed rapidly with inventions and making of new scientific equipment and instruments which were of much help to geographical research and fieldwork. These conditions offered necessary facilities to Western geographers for their research which former geographers had been unable to obtain. Alexander von Humboldt was able to use the new equipment and, furthermore, he had also the opportunity to go by sea to the developing South America for his geographical research. Thus, he was able to offer his achievements to the civilization of the whole world. As to Hsü Xia-Ke, although he had the desire and ambition to expand the area of his observation and investigation, and even expressed the wish to go to the countries outside China, owing to the condition of China of his time, he was unable to fulfill his wish. It must be noted also that Chinese society of Hsü Xia-Ke's time had only just began to witness the

spirit of capitalism. But due to the oppression of the feudalistic sovereignty, its development was retarded, and consequently the development of natural sciences was very slow, and thus, having any scientific instruments for fieldwork for Hsü was definitely out of the question. All Hsü Xia-Ke could do was to walk with his two feet in his travels and to work with his empty hands in his research and investigation. Indeed, he collected some rocks or plants as specimens for his studies even they were rare, as he had to carry everything for himself with his two hands and on his bare shoulders. Under such an environment, how could Hsü Xia-Ke's work compare with Alexander von Humboldt who could make use of sea transportation and use big boats to carry his great amount of specimens and manuscripts?

The story of Alexander von Humboldt is very different. He spent five years in South America. When he returned to Europe in 1804, he brought with him in the boat thirty large cases of specimens and records for his studies and references. He was able to live in Paris for twenty years to study and analyse his records and to write his thirty volumes of research on the New World. After that, he went back to Berlin. Then, again, he travelled to Central Asia. He spent the latter part of his life in studying and writing. He died at the old age of 90 in 1859.

Hsü Xia-Ke spent more than three years in the southwest of China exploring (1636-1640). When he returned to his native land, he brought back only a few rocks as reference plus an exhausted body. And within a year after his being back home, he died of poverty and illness, with the research and exploration of Chinese geography unfinished. According to an account of his life, even when he was seriously ill in bed, he still had his few rocks by his bedside and continued to study them and fondle them until the last moment of his life. He was only 56 when he died. Except the few hundred thousand words of fieldwork diary and records of observation and a few essays on his studies, he left no other writings.

The main reasons that I try to compare Hsü Xia-Ke of China of

340 years ago to Alexander von Humboldt of Germany of 130 years ago are not only to show the difference of their fate, but also to convey to you by means of emphasizing their important influences to the development of the sciences in the East and in the West, how the studies of sciences had developed into two different ways from times of these two prominent geographers on.

The scientific activities of von Humboldt had a far-reaching influence in Europe. For instance, it was under his influence that the British government sent a boat "The Beagle" in 1831 to the seacoast around South America for a scientific survey and research. On board the ship, a young man brought along with him von Humboldt's books. He read the books enthusiastically and sent letters home asking for more of von Humboldt's new books. The name of this young man is Charles Darwin. With this expedition as his starting point for his scientific research, he finally established the theory of "The Origin of Species". And with Darwin, sciences in the West had a big leap from the starting point of von Humboldt.

To return to our consideration of Hsü Xia-Ke's contributions to sciences in China, we find that in spite of his hard work, he had very little influence in the intellectual circle of his time. Indeed, there were some people who acknowledged his talent as a literary man; there were also some but fewer people who appreciated Hsü's life as an explorer who faced dangers bravely. However, there was practically none who noticed his achievements in geographical research and, after his death, there was no one to follow his footsteps or continue his studies. Even his book of such a mine of geographical wealth was ignored and it was not until recently that its value in geography was discovered. Isn't it most absurd and unreasonable?

I would like to point out that even before the time of Hsü Xia-Ke, science and technology had developed steadily in China. There had been important inventions by the ancient Chinese, such as the compass for sea travelling, the method of printing in block types, etc. These inventions were first used by the Chinese and then they were

taken up by the world at large. Their influence on world culture and civilization is great and important. And even in Hsü Xia-Ke's time, there were important scientific writings and literature, such as *Ben Cao Gang Mu*(*The Principles and Index of Herbs and Minerals for Medicine*) by Li ShiZhen (1518-1593). Its influence on botany, mineralogy and pharmacology is undeniably great. There was also the book written by Sung Ying-Sing(born ca. 1600) *Tien Gong Kai Wu* (*Exploitation of the Works of Nature*). We know that its first edition dated to 1637 and it was a very important work on agriculture, textile weaving, pottery, foundry and casting and other contents concerning the making of tools and instruments.² These two books and the one written by Hsü Xia-Ke were the forerunners in the scientific research in old China. They opened up new paths for the people after them. Their achievements were undoubtedly among the most advanced in their age and also in the world. Nevertheless, the development of Chinese scientific research after the time of Hsü XiaKe lagged far behind that of the West. Thus, even until recent times, to learn from the advanced science and technology of the West is still our problem which we must acknowledge. How did it happen?

As a student of historical geography I do not have the ability to answer this question in full. However, from the angle of the development of natural sciences, there are some few points which we ought to notice when we look into this problem.

Since we know that as production of social development, natural science and technology also develop accordingly. And as early as the third century B.C. ancient China had already been in the state of feudalism, a feudalistic kingdom of centralisation of states and sovereignty. In China, the authority of the Emperor is supreme and unquestionable. Since then and for a long time of feudalism of more than two thousand years, the society of China had been built on the economy of small-scale farming; then out of this grew the handicraft workshops. In the early part of feudalism in ancient China, such mode of production developed and with it, the field of science and

technology yielded new inventions and discoveries. When it came to the latter part of feudalism, productivity in China continued to develop, but management of individual craftsman workshops gradually changed into that of small workshops with hired labourers. This became the soil for the growth of capitalism.

In Hsü Xia-Ke's time, the districts along the middle reaches and the estuary of the Yangtze River, especially the region of its delta, developed greatly in the capacity of production and with this also grew capitalism. With such social background, the progressive intellectuals of that time naturally paid much attention to the research of natural sciences and technology. Their interest was on the investigation and exploration of Nature and also the summarization and propagation of the techniques of production. Such prominent personalities like Li Shi-Zhen, Sung Ying-Sing and Hsü Xia-Ke were leading representatives of the time. But the reactionary forces and backward influences which supported the feudalistic sovereignty went all out to suppress and shatter this new progress in search of truth. Their tactics were to control the governmental examinations. At that time the means of the Emperor and the bureaucrats to select government officials were to give examinations, the contents and subjects of which emphasised loyalty and fidelity of the persons who took the examinations. Natural sciences were not included in the examinations. All those that worked on scientific studies were considered by society as "Laolies" or manual workers and all manual workers or labourers were looked down upon by "Laohsins" or brainworkers. "Brainworkers are the controllers and manual workers are the controlled." This was the social attitude and public opinion of Hsü's time. Thus, the Chinese society was clearly divided into two categories: those who controlled and those who were controlled. And the Chinese term brainworkers means the social group who knows nothing about the ways of production—all they know is using their ink-brushes to play with words. Thus the few people who devoted their time to the research of sciences were also considered as manual

workers. And in the eyes of the brainworkers, they were lower in social status, or the outcasts of society, and among this lowly group were the medical men. And for them to take and pass the exams was undoubtedly out of the question. For instance, Li Shi-Zhen was among those of this group who had taken the exams several times but failed each time. As to Hsü Xia-Ke, he despised this corrupt and unfair system of examinations. Even when he was a young man, he showed his hatred of the corruption of the bureaucracy. He decided to devote his life to outdoor fieldwork and explorations, making torturous journeys against all hardships in order to find out the secret of Nature. Here, we see a man against the society of his time, a rebel who broke away from the bound of old traditions and society and did become a pioneer of the new era.

Yet, in the age of the supremacy of imperialistic feudalism, Hsü XiaKe was not to live to do what he had wished. Only three years after his death, there began the worst of the feudalistic dynasties in the history of China, that is, the Ching Dynasty, the difficult time under the oppression of the Manchu minority. The intellectuals of the Han society were under strict control of the government. No words or feeling against the Manchus were allowed. Punishment of death was the penalty for all those who wrote anything against the imperial Manchu sovereignty and his relatives. This was called in the Chinese history as the "Criminal Case of the Words", that is, people were put in jail and put to death because of the words they had written. The condition was so bad that many of the intellectuals were driven to hide themselves or to leave their positions. All they could do was to write abstract essays, of no practical use. The beginning or germination of capitalistic thinking and its influence on ideology, that is, the ideas of reacting against the restrictions of feudalism, the efforts to seek freedom and democracy, the new idea of individuality and self-expression, were suppressed and punished. It was the time of the decline of the world of thought in China. There were no more people like Li Shi-Zhen or Sung Ying-Sing or Hsü Xia-Ke in the field of

scientific research for over a century. Nevertheless, in the world of literature, there appeared the book by Cao Xue-Chin called *The Dreams of the Red Chamber*, which reflected and echoed the voice of the time. The writer Cao two hundred years ago used his book as a weapon to attack and expose the corruption of the declining feudalism. From this standpoint we may consider Cao's book as a masterpiece of his time.

In China, the age after feudalism is semi-colonial, semi-feudal. Unlike the West, it was not followed by the age of capitalism. We call it "semicolonialism" because it was the developed capitalist nations that sent troops to China to break down her "closed door policy" and thus put her under the control of the foreign powers. We call it "semi-feudalism" because China still had feudalistic emperors; the only difference was that these feudalistic big heads could no more give orders and be obeyed by the people like former times. Instead, they must rely on the foreign powers to suppress the rebellious people.

In 1911, Dr. Sun Yat-Sen led a revolution successfully against the Manchus and thus ended the imperial dynasties of feudalism which lasted for more than two thousand years. However, it did not end or smash completely the feudalistic forces and their traditional influences. It was in 1919 that the famous "May 4th Movement" broke out; its slogan was: "Anti-imperialism and Anti-feudalism." To us Chinese historians, it means the beginning of the Revolution of Neo-democracy. It was led by the Chinese Communist Party until its final victory in 1949, the liberation of the Chinese People.

In short, from the Opium War in 1840 when the foreign military forces invaded China to the establishment of the People's Republic of China, for a lengthened time of more than one hundred years, the people of China had lived under the yokes of both imperialism and feudalism. They were in most miserable condition, unable to earn their barest living. In such condition, scientist research and technical development were out of the question. The result was the backwardness of China in science and technology.

The birth of New China means the beginning of the age of her

socialist reconstruction, which lasts until now for already thirty years. There have been tremendous changes since then through the efforts of her people in the spirit of self-reliance. Nevertheless, because of the backwardness of our science and technology and the weakness of our social foundation, China is still a poor and developing country, especially after the so-called Cultural Revolution during which we experienced the worst possible damage and interruption, not only in production, but also in practically every field. And it is through the ten years of political turmoil that we begin to realize how the left-over poisonous effects of feudalism and their social influences interfere with our socialist construction, for instance, "The Homologized Court" (that is, everything must be decided by the only one top officer as final); "Tenure System" (that is, once you become the head of a government office, you will always and for the rest time of your life stay as the head of that office); "Personality Cult"; "Isolationist Policy and Self-praising"; "Bureaucracy"; "the social influences and tradition of individual production"; etc. Indeed, these bad points can also be found in capitalist society. However, in China, the destructive effects of such rubbish are much more serious.

Now in New China one of our most important tasks is to restore the spirit of these scientists and scholars, and in geography to rekindle the spirit and method of Hsü Xia-Ke. We have gotten over the bitter experience of the Cultural Revolution. We have brought about greater stability. With the desire to build China into a modern socialist country, we begin the New Long March. But when we raise our heads and look around at the world and the neighbouring countries, we find that their achievements in science and technology have progressed far front before us. We must break away from the former condition of isolation, and learn from our foreign friends their advanced science and technology, so that we can expedite our modernization. Of course, we will still maintain our principle of self-reliance. And by self-reliance we mean that we must also try our very best to discover new value from our ancient civilization. That is to say, we should not

simply take everything for granted from the West without any investigations or analyses. Undoubtedly, we shall absorb and utilize everything that is beneficial to our country. But more important is the effort of us to discover the rich hereditary endowments in our history and culture, and to transform them for the use of the modernization of China.

Three hundred and forty years ago, Hsü Xia-Ke had opened up a new way in the seeking of secrets of Nature. Owing to the feudalistic reactionary forces and influences, he had no successor or follower. And now, we the modern Chinese students are determined to sweep away all the rubbish of feudalism, in order to build our New Culture and Civilization. It is because of this determination that I am sure a new age of Renaissance in China will be at hand. We look forward anxiously to its coming, and I am sure that our Western friends will also welcome its appearance.

I thank you.

陆 古代中国地理文献的现代解释*

例一：《水经注》

中国正在经历着一场伟大的变革，企图摆脱长期落后的局面努力在实现社会主义现代化的宏伟目标下迅速前进。为此我们有必要向外国学习一切先进的东西，这是一个方面，另一方面，我们还必须重新估价自己的历史文化遗产，从中吸取一切有益的东西。只有这样，我们才能创造出真正的、富有自己民族特色和富有生命力的新文化，也就是适应社会主义时代要求的新文化。实际上这也可以称之为一次中国式的“文艺复兴”。

解放以来，这个中国式的“文艺复兴”，在知识领域的各个部门里已在蓬勃发展，这中间虽然遭遇到反动势力历时十年的严重摧残和破坏，可是符合历史发展规律的新生事物，不是任何人的意志所能消灭的。

现在要想把这个正在发展中的中国式的“文艺复兴”作个全面的介绍是不可能的，更不是我所能胜任的。我所能做的，只是从自己比较熟悉的领域里，根据个人感觉到的从旧的文化遗产中去发现新价值这件事，举出两个具体的例子，略作论明。这样做，或许对愿意了解新中国的朋友们，不无一点帮助。如果能做到这一点，也就是我最大的愿望了。

我想以中国古代地理学的两部重要著作为例，来说明：我们在今天是如何从旧的文化遗产中，去发现它们的新价值的。

第一部是写成于公元6世纪的一部巨著：《水经注》。

第二部是三百四十年前一位卓越的旅行家所留下的一部以日记为体裁的野外考察记录，后人就以这位旅行家的名字，命名这部记录，叫做《徐霞客游记》。

这两部书都是用极其优美的散文所写成的，首先是以其文学价值流传后世的，只是到了现代，我们才真正认识到它们所包含的极其重要的科学内容。

现在请让我先把《水经注》这部巨著的作者及其主要内容，作个简要的介绍。

《水经注》的作者酈道元，其故乡在今河北省涿县。涿县在北京城

西南不到一百公里。他出生的年代在公元465与472年之间，死在527年。去今已有1453年。

酈道元的时代，正处在中国的政局南北分裂的时代。当时南方是几个汉族小王朝先后统治的地区，北方则是不同少数民族的统治者互相角逐的场所。同时南北两方又长期处于相互敌对的地位。但是这种分裂的局面，并没有妨碍酈道元对于全国地理作为一个统一的整体来进行研究，这一点是很重要的，足以说明政治上的分裂，并不能破坏文化上的统一。正是这种统一的，而且是在不断发展中的文化，作为一种无形的力量，才把中国的各族人民逐渐维系在一起，互相影响，又互相融合，终于形成了以汉族影响为主的独具特色的中国文化，同时在一些少数民族里也还保存着某种固有的民族文化的特征。其次，在中国文化发展的过程中，也曾不断从外部的文化吸取营养，丰富了自己的内容，这也是无可否认的事实。

酈道元从少年时代起，随着他的父亲离开家乡。他父亲作为一个地方官吏，在任职过程中，到过不少地方，道元随行，从而得到了一个旅游的好机会，并且培养了研究地理的兴趣。他自己年长做官，到过的地方更多了，见闻更广了，研究祖国地理的兴趣也就与日俱增。在实地考察之外，他还涉猎了大量的图书资料。因为当时的中国，已经经历了自秦、汉以来几百年之久的统一时期，文化有了迅速的发展，关于全国以及各地区的地理、历史、风土、传说等各种写作，已经积累有很大的数量，种类也很繁多。据统计，道元在他的著作中直接引过的这类图书，就有437种之多，可惜现在大部分已经失传了。此外，他还搜集了一些碑刻文字，采取了不少的民间传说、故事，以备参考。当时也已经有几种描述全国地理的著作在流传中，可是他看了都不满意，有的太简单，有的太枯燥，有的内容零乱，缺乏系统。应该看到，当时的地理描述，还停在资料堆砌和现象罗列的初步阶段。怎样才能把十分复杂的各种地理现象记录下来，还缺乏很好的办法。

酈道元有志把全国的地理进行统一的描述，他的办法，就是利用前人所写的《水经》一书，作为自己写作的纲领。《水经》一书，大约写成在公元221到279年之间，书中记述了中国的河流共计137条。每条河流都是从上源写到下游，从主流写到支流，脉络相寻，自成体系。可是河流所经各地的地理情况，书中很少叙述。酈道元以这部书为纲领，又大大加以补充，把河流的数目增加到1252条，更重要的是，还把每条河

流所经过的地方都作了详细的描述，从一些自然地理现象，一直到地方变化的情况，历史演替的事实，无不包括在内。（许多描述都源于酈道元搜集和记载的资料。）只就补充的字数来说，就多于原书20倍，约近30万字。在书的写作格式上：凡是原书所记每条河流都用大形字体来写，补充的部分，则用小形字体作注。全书仍用《水经》原名，只是加了一个“注”字，就叫做《水经注》，意译就是A *Commentary on the Book of Rivers*。

酈道元生前的著作不只是一部《水经注》，但是流传到现在的，只有这一种。主要原因是这部书的文笔非常优美，描写的自然景物尤为出色。例如，他描写长江三峡壮丽的风景，有动有静，有声有色，不知不觉就把读者吸引到大自然的怀抱中去。因此，这段描写常被选为描写风景的范文，为人所传诵。

现在长江三峡已被开放为外国友人的游览区，有特备的江轮，定期航行，为来自世界各地的游人服务。可惜的是，酈道元描写三峡的优美文字和它特有的风格，很不容易用译文传达出来，供来这里观光的外国朋友，共赏中国散文的精华。

但是现在看来，《水经注》可贵之处还不仅仅在于它的优美的文字，更重要的还在于它所包含的具有科学价值的内容。这一点对我个人来说，也是深有感触的。这里我只能举一个很小的例子来作个说明。

1949年夏，我结束了在英国利物浦大学的学习，回到了解放后的北京。转年春天，在北京市人民政府的直接领导下，成立了一个城市规划委员会，着手进行改造北京旧城和建设新城的规划工作。在这个委员会里，我分担了北京城市历史地理的研究工作。实际上我在利物浦大学时，在H.C.Darby教授的指导下，已经进行过这方面的初步研究。现在在实际任务的要求下，目的更加明确，就是要弄清楚北京这个古老城市的发展过程，特别是要确切了解它的城址在历史上多次变迁的原因，为现在的规划工作提供必要的参考。这并不是一件轻而易举的事，因为历史久远，变迁复杂，从何入手呢？在这个问题上，Darby教授的一个理论，给我以很大的启发，就是要在地理环境长期演变的过程中，尽可能地选择不同时期的历史剖面进行“复原”，然后按着时代的顺序，把这些“复原”了的“剖面”，进行比较研究，找出其前后演变的过程，这样就可以对现在这一地区的地理面貌，获得更为深刻的理解。

正是在这一理论的指导下，我借助于酈道元的《水经注》一书中有

关当时北京城及附近地区地理情况的描述，“复原”了一千四百五十多年以前北京及其近郊的一幅地图。根据这幅地图，可以上溯北京城的起源，同时也为研究后来北京城及其郊区的变化，提供了一个可靠的起点。这是一个很小的事例，但是也足以说明：新时代建设事业的要求，借助于现代的科学理论，使古代的经典著作，发射出新的光芒。从这个意义上来说，不是也可以算作中国式的“文艺复兴”的一例吗？

关于《徐霞客游记》的现代评价，下次再进行讨论。

例二：《徐霞客游记》

在上一讲里，我试图用一个具体的例子来说明我们如何从酈道元的《水经注》这部过去以优美散文为人所重视的巨著里，去发现它的科学价值。今天我想用另外一部同样以优美散文而得流传于世的著作来说明：我们如何从这部著作的地理描述中不但去发现它的科学价值，而且从它的作者从事地理考察的事实中，去发现他之所以从事这项科学活动的时代意义。在今天看来，这一点是更为重要的。这就是我在上一讲中已经提到过的那部《徐霞客游记》。

在中国历史上和在西方历史上一样，曾经出现过一些长途跋涉从而大大开拓了人们的视野的大旅行家。他们的活动增加了人类的地理知识，促进了人类文化的发展。例如，公元前第2世纪前半（公元前138—前126），张骞从当时中国的政治中心长安出发，奉中央政府之命西行，越过帕米尔高原，直到中亚细亚，与那里的统治者进行外交上的联络，往返途中克服了种种困难，经历了十多年的时间，成为开辟有名的“丝绸之路”的先驱。又如，公元4世纪末，中国僧人法显，也是从长安出发，越过帕米尔高原后，转往印度。最后又从印度渡海到达现在的锡兰，再从锡兰乘大船返回中国，也用了十多年时间（399—412）。到了7世纪前半（627—645），又有一位中国僧人玄奘，大体沿着二百年前法显西行的道路，从长安出发到达印度，在印度各地逗留了十多年，然后仍从陆路返回长安。这些著名的旅行家，虽然对扩大中国人民的地理知识、吸收外来的影响，作出了很大的贡献，但是这只能称是一种副产，而不是他们长途跋涉的目的。他们的旅行，有的是负有政治使命，如张骞，有的是为了求取佛经，是出于宗教上的要求，如法显、玄奘。

出生于16世纪晚期的徐霞客（1587—1641），虽然也是以旅行家

见称，但是他的旅行和上述诸人却完全不同。他几乎有半生的岁月都在旅途中度过，既没有任何政治使命，也没有宗教上的动机，完全是为了寻求知识，探索自然的奥秘。他的家乡在扬子江三角洲上的江阴县，靠近扬子江南岸。他从22岁那一年，也就是公元1607年起，开始离开家乡作有计划的旅行，主要目的是访问名山胜景。一般都是当年外出，当年回来。向北，经过山东的泰山，到达北京附近的盘山和山西北部五台山。向西北到过陕西华山和湖北武当山，中间还访问过安徽的黄山和江西的庐山。向南，直到广东的罗浮山。在东南沿海地区又访问过浙江的雁荡山和福建的武夷山。最重要的是，从1636年起，他更远游西南各省，直到云南西部边境。往返之间，将近四年，路途跋涉约七千公里，这是他一生中旅行路线最长的一次。沿途作了详细的观察和记录，特别是对广西、贵州和云南三省的一些地理现象，描述得最为详尽。如果说他早期的旅行，还是以欣赏大自然的壮丽风景为主，可是到了后来，他的全部注意力，几乎都为自然地理的各种现象所吸引。他在野外一直坚持徒步跋涉，很少骑马和乘船。这样就便于他深入人迹罕至的穷乡僻壤和深山大野，而且他还养成了随时随地进行观察和随手记录描写的好习惯。他的记录都是以日记的体裁写下来的，十分详细地记载了他每日的行程和观察所得，有时也包括了关于一个地区特点的概括性的论述，或是关于某一地理现象的总结式的评论。他有十分锐敏的观察力，更有不怕一切艰险、只身攀登悬崖峭壁或者潜入洞穴深处进行考察的精神。有人描写说他攀援登高时像一只猴子，探索洞穴时像一条蛇。特别是他还写得一手极好的散文，描写自然景物，逼真生动，富有感染力；记述各种地理现象，又有精确、简明、刻画入微的特点。正是因为这个原因，他的这部野外考察的记录，才受到当时一些人的重视，作为文学读物，争相传抄。他去世之后，又有人把这些记录加以搜集整理，编订成册，定名为《徐霞客游记》，共有四十余万字。可惜已有部分散失，后来刻印成书的，已经不是全稿了。

这部书虽以《游记》为名，实际上却是一部地理考察文献，具有重要的科学内容，在中国的科学史上，为研究地理学开创了一条新道路。在这里来介绍这部书的文学价值，不是我所能胜任的，但是简要说明一下它的作者所开创的地理学研究的新道路，却是必要的。

在徐霞客的时代以前，中国的地理学已有长期发展的历史，可以列为地理这一门类的书籍，为数也很多。但是，这些书籍，几乎都是表面

的地理现象的罗列，极少涉及这些地理现象产生的原因和彼此之间的内在联系。而且这些地理书籍的作者，又多半是一些“书斋里的学者”，很少有野外考察的经验。他们只是根据别人的传说，或是把别人一些零散的记录，编写成书。即使这一类的编辑工作，能做到像郦道元写《水经注》那样广收博采，严加考订的，实在也极少。实际上，在长期的封建社会里，由于生产水平的限制，对地理记载的要求，也就是这样。可是到了徐霞客，他却打破了旧传统，走出了小书房，有目的、有计划地到野外作长途旅行，进行实地考察。他热爱大自然，有敏锐的观察力，从丰富多彩的地理现象中，他逐渐认识到造成这些现象的一些内在原因。例如，他对岩石的性质、流水侵蚀的能力、地下水的作用、地形塑造的过程、高山上下温度风力的变化对于植物的影响、不同气候区域之间植物群落的显著差异，如此等等，他都有合乎科学的解释。尤其重要的是，他在晚年的西南之行，使他对广大石灰岩地区的地形特征，有了系统的观察和分门别类的描述。特别是对石灰岩地区特有的溶洞的研究，更引起了极大的兴趣。他深入考察过的洞穴就有一百多处，并作了十分详细的观察和记录。例如，他曾两次考察过桂林东部有名的七星岩洞穴，并且对洞内和洞外都作了十分详细的观察和记录。这是一处十分复杂的洞穴体系。1953年地理学家用科学手段对这个洞穴体系进行了测量，绘制了内部的平面图和外部的素描图。令人惊异的是，用三百四十年前徐霞客对这个洞穴体系所作的描述，与这些图相对比，竟是如此之相似，以至他的这些描述至今仍可作为对照研究这处洞穴的参考。中国的西南诸省，石灰岩分布面积很广，是世界上最广大的石灰岩地貌区域之一，而徐霞客在这一地区考察的时间又最长，对石灰岩地貌的分布、地区的差异、各种类型及其成因，都有详细的论断和记述。这应该是世界上最早的有关大面积内石灰岩地貌的宝贵文献了。¹

上述事实足以说明：徐霞客半生的野外考察，确实是为中国地理学的研究，开创了一条新道路。从这个意义上来说，他和一百五十年以后在欧洲历史上通过野外的长途旅行和考察，从而为现代自然地理学奠定了基础德国地理学家洪堡德是颇有相似之处的。不过洪堡德的时代，西方的自然科学随着近代工业的开始兴起，已经有了很大的发展，特别是各种有助于野外考察的科学仪器，为地理学家提供了前所未有的技术装备。而且，洪堡德还有机会远渡重洋，到正在开发中的南美洲进行考察，因此使他有可能会在科学发展史上为全人类的文明作出重大的贡献。

徐霞客虽然也曾有扩大他的考察范围远到中国以外的遥远地区的强烈愿望，只是由于客观条件的限制，未能如愿。尤其是当时的中国，还停留在封建制度的束缚之下，生产的发展受到很大的限制，各种有关的自然科学还没有相应的发展，更谈不到近代科学仪器在野外考察中的应用。徐霞客只是赤手空拳，徒步跋涉，偶尔也采集岩石和植物标本，但是一切采集品都要靠自己背负携带，哪里能和洪堡德那样利用漂洋过海的轮船作为运载的工具相比呢？

洪堡德在中南美洲进行了五年之久的考察旅行，于1804年回到欧洲的时候，他随船带回来三十大箱的标本资料，随即在巴黎居住下来，开始进行整理研究工作，一直持续了二十年，写成了三十卷的《1797—1804年新大陆热带区域旅行记》。后来他回到柏林，又曾到中亚考察，晚年仍孜孜不息，勤于著述，一直到90岁的高龄（1859年去世）。

徐霞客在中国西南广大地区进行了三年多的野外考察（1636—1640），于1640年回到家乡江阴县的时候，他随身带回来的，是仅有的一些岩石标本，和一个由于过度劳苦而受到严重损害的身体。结果他回家后不到一年，就在病中含着未竟之志与世长辞。有记载说，在他卧病期间，他还把野外带回来的岩石标本放在病床旁边，进行细心观察，直到生命的最后一息。他享年只有56岁。除去几十万字的野外考察日记和几篇专题论文之外，再没有留下其他著作。

在这里，我把三百四十年前中国的徐霞客和一百三十年前欧洲的洪堡德，作个比较，主要目的不仅在于说明他们个人之间命运上的悬殊，更重要的是想以这两位卓越的地理学家的影响为例，来说明东西方科学的发展，从这两位科学家的时代开始，各自走上了完全不同的道路。

洪堡德的科学活动，在欧洲产生了巨大的影响。例如，正是在洪堡德的影响下，英国政府于1831年派遣了The Beagle号船，去南美洲的一些沿海地带，进行考察测量。参加这次考察的一个青年科学工作者，随身携带着洪堡德的一些著作，热情地阅读着，而且寄信给家人，要求把洪堡德新出版的书籍，继续寄给他。这个青年人就是以这次考察的收获为开端，而创立了进化论的达尔文。达尔文的贡献又超过了洪堡德，对西方自然科学的进一步发展，产生了更为深远的影响。

回过头来看看徐霞客一生的科学活动，在中国知识界所产生的影响，真是微乎其微。有人只是欣赏他的卓越的文学才能，有人只是赞叹他探险搜奇、勇于跋涉的精神，而他所开创的地理学研究的新方向，竟

然后继无人，甚至他所遗留下来的唯一的一部著作的科学价值，也只是到了现代才被发现，这不是一个很奇怪的现象吗？

应该看到，在徐霞客的时代以前，中国的科学与技术一直在不断的发展中。有些重要的发明和创造，例如用于海上航行的罗盘、用于传布文化知识的活字版印刷术等，都是首先在中国被广泛应用的，从而为人类文化的发展，作出了重要贡献。就是徐霞客同时代的一些重要科学著作，如李时珍（1518—1593）的《本草纲目》在植物学、矿物学、医药学以及宋应星（生于1587年）的《天工开物》（1637年初版）²在农业、纺织、制陶、冶炼以及其他器物制造的研究和应用上，和徐霞客在地理学的考察上所开创的新道路一样，都达到了当时世界上的先进水平。可是从徐霞客的时代以后，中国科学技术的发展，开始落在西方的后面，而且是越落越远。直到现在，向西方先进的科学技术学习，仍然是我们所面临的一项重要任务，这究竟是什么原因呢？

我作为一个历史地理的学生，没有能力来答复这个问题。但是从自然科学发展史的角度来看，在探讨这个问题上，还是有值得注意的地方的。

我们知道自然科学和技术是随着社会生产的发展而发展的。早在公元前3世纪时起，中国就已经进入封建社会，开始建立了中央集权的封建国家，在这里，皇帝的权力高于一切。此后在长达两千多年的封建社会里，小农经济是主要的社会基础，手工业也是在这个基础上发展起来的。在封建社会前期，随着生产的发展，在科学技术的领域里，也不断有新的发明和创造。到了封建社会后期，生产力进一步发展，又从原来个体手工业的经营方式中，开始出现了以雇佣劳动为主的作坊工业。在作坊工业里又逐渐出现了资本主义的萌芽。

到了徐霞客的时代，扬子江中下游一带——特别是三角洲地区，社会生产力有了迅速的发展，资本主义的萌芽日益成长。当时知识界的先进人物，更加注意到自然科学与技术的研究，他们把注意力转向了自然界的探索以及生产技术的总结和传布。上述李时珍、宋应星以及徐霞客都是这方面的代表人物。但是社会上维护封建统治的落后势力，则是他们前进的严重障碍。当时的封建皇帝利用考试制度来选拔知识分子，补充政府的官僚机构，从而为巩固封建统治服务。因此在考试科目中，主要是以测验应考者是否效忠封建王朝为唯一标准，自然科学技术的考试科目是没有的。而且一切从事科学技术研究的人，都被认为是“劳

力”的，也就是体力劳动者，而体力劳动者在封建社会里是受鄙视的。因而自古以来，在中国的封建社会里，就是以“劳心者治人，劳力者治于人”作为社会分工的唯一信条。所谓“劳心”者，指的就是不事生产而只会玩弄笔杆、舞文弄墨的人，连搞科学技术，都被认为是“劳力”，因此在“劳心”者看来，都是“下贱”的，是永远不能通过国家考试的。连为人治病的医生，也得不到社会上应有的重视。李时珍、宋应星都是屡次参加地方上的国家考试而未被录取的人。至于徐霞客，从少年时代起，就鄙视这种国家考试，不屑一顾，对于腐朽没落的封建统治，尤其是深恶痛绝。他决心献身于旅行考察事业，不畏一切艰险去探索大自然的奥秘。从这一点来看，他称得上是一个封建社会的叛逆者，是冲破旧社会的束缚，走向新时代的先驱。

但是，专制主义发展到极端的封建王朝，是绝不容忍这样的时代的先驱者。徐霞客去世后三年，中国历史上由一个少数民族——满族所建立的封建王朝——清朝，统治了中国。汉族知识分子身上，又增加了一副新的枷锁，那就是，任何不满于异族统治者的情绪，一旦见于文字，不仅本人可能要遭杀戮，就是亲属也要受到连累，这就叫做“文字狱”——因文字得罪而被关入的监狱。清朝前期因“文字狱”而惨遭杀害的，在知识分子中有人在。大批知识分子被迫走向脱离生产、脱离实际的道路。资本主义萌芽及其在意识形态领域里的反映——即孕育着反对封建束缚、努力追求自由民主和个性解放的新思潮，更要受到压制甚至查禁。全国的思想界处于萎靡消沉的状态，在科学技术领域里，再没有出现像李时珍、宋应星和徐霞客那样的卓越人物。文学艺术毕竟还是反映了时代的最强音的，从这个意义上来说，二百多年前伟大作家曹雪芹的《红楼梦》这部小说，在深入揭露处于崩溃中的腐朽没落的封建社会这一点来说，确实是具有划时代意义的杰作。

但是在中国，真正结束了这个封建社会而相继出现的，和西方的历史进程不一样，不是资本主义社会，而是半殖民地半封建社会。说是“半殖民地”，因为是来自西方已经发达了的资本主义国家的军队打开了中国“闭关自守”的门户，把古老的中国，置于它的强权控制之下；说是“半封建”，因为封建统治者（皇帝）依然存在，只是不能像过去那样独裁一切，发号施令，反而必须借助于外来的势力，以压迫中国人民。

1911年以孙中山博士为首的革命运动，虽然推翻了统治中国长达两千多年的封建王朝，但是却没有像西方历史上法国大革命那样彻底摧毁

封建势力。因此，到了1919年，又爆发了有名的“五四运动”，明确提出了反对帝国主义和反对封建主义的双重目标。这也就是在我国所说的新民主主义革命的开始。这场革命在中国共产党的领导下一直继续到1949年解放战争的胜利。

总之，从1840年鸦片战争中西方武装力量入侵中国，一直到1949年中华人民共和国的成立，这一百多年间，中国人民在帝国主义和封建主义的双重压迫下，陷入了极其悲惨的境地，求生存都很困难，科学文化的落后就更不必说了。

新中国诞生之后，开始了社会主义建设的新阶段，到现在已经过了三十个年头了。在这三十年的时间里，经过了全国人民的艰苦奋斗，在自力更生的前提下，国家已经发生了史无前例的变化。但是由于基础薄弱，科学技术落后，我们还是个贫穷的、尚在发展中的国家，特别是经过“文化大革命”前后十年的大动乱，不仅在生产上遭到了极大的破坏，在其他各方面也都受到了极大的摧残。如果说“文化大革命”除去破坏之外还给我们带来了什么值得重视的东西的话，那就是它使我们进一步认识到：残存的封建遗毒还在阻碍着我们在建设社会主义的道路上迅速前进。例如“一言堂”、“终身制”、“个人崇拜”、“固步自封”、“官僚主义”、“小生产的习惯势力”等等，这些弊病有的在资本主义社会里也有，但是在我们这里就显得格外突出。

现在我们在吸取了“文化大革命”的惨痛教训之后，重新收拾残破局面，举国上下团结起来，决心在“新长征”的道路上，奋发前进。但是在现代科学技术突飞猛进的形势下，我们发现自己已经远远落后于西方国家，因此我们必须打破过去那种与世隔绝的局面，向西方学习先进的科学技术，以及先进的管理方法，来促进我们自己的“现代化”的建设。更重要的是我们还必须坚持“自力更生”的原则。在中文里“自力更生”这个词，也包括着使自己古老的文明获得新生的意思。有人说“现代化”是不能用金钱买来的，也就说不是能够简单地从外国搬运过来的。我们一方面要吸收西方一切先进的东西，为我所用。我们更需要从自己宝贵的历史文化遗产中汲取精华，发扬光大。

如果说三四四十年前徐霞客在探索自然界的奥秘中所开创的新道路，由于封建势力的阻挠而后继无人，那么今天，在我们坚决扫荡封建遗毒，在现代化的道路上奋发前进的时候，我们一定会创造出自己的新文化，正是在这个意义上，我想，一个中国式的“文艺复兴”的新时代，

应该到来了吧！我这样殷切地期待着，我相信我们可尊敬的西方朋友们也会是这样期待着的。

谢谢！

北京大学地理系

一九八〇年九月

⑦ THE ANCIENT GREAT WALL IN A NEW ERA*

About one century after the fall of Alexander's empire which extended from Macedonia eastward as far as the Indus River, a great empire began to emerge in the central part of China. It was the Empire of Qin.

The founder of this Qin Empire who came to the throne in 221 B.C., claimed to be the first emperor of China or, in Chinese, Shi Huangdi. It is from the word Qin that the empire was known to the West as China.¹ However, before the Qin Empire China had already had a long period of historical development. The real contribution of Qin Shi Huang is that he was the first ruler in China who created a political system of centralized government by ending the power of the contending feudal states. This marks the beginning of the history of imperial dynasties with absolute power in the hands of a monarch, which lasted for more than 2,000 years until 1911 A.D.

Besides his political achievement, Qin Shi Huang left two material legacies for the present day. One is his tomb with the famous clay army discovered recently. The other is the Great Wall.

Walls were built in China as military fortifications long before Qin Shi Huang's time, but the building of the Great Wall was attributed to Qin Shi Huang. He was the first emperor who mobilized thousands of peasants to connect the walls constructed by three former feudal states along their northern boundaries. In addition, he built new sections both at the east and the west ends. Eventually a great long wall of thousands of miles came into existence; hence the name *Wanli Changcheng* which means a long wall of ten thousand *li*, or simply the Great Wall. Since then the Great Wall was repaired and rebuilt again and again but not entirely along the same line. The last

and most well preserved one was built during the Ming Dynasty (1368-1644). Its length is estimated at 12,000 *li*, or 6,000 kilometers with its east end actually making a sheer descent into the Bohai Gulf, symbolizing the dragon's head dipping into the water. Its west end reaches as far as the north edge of the TibetanQinghai Plateau where the famous pass Jia Yu Guan was situated on the ancient Silk Road. The most majestic parts of this Ming Great Wall north of Beijing have become the best vantage points where modern visitors enjoy a spectacular glimpse of this massive but ingenious engineering achievement made by the sheer hands of man.

I do not intend to give you a full picture of the construction of the Great Wall, which is far beyond my ability. There are quite a number of books in the West devoted to the study of the Great Wall. The most comprehensive and readable English language work is probably that by a colleague, Luo Zhewen and his collaborators, Dick Wilson, Jean-Pierre Drege and Hubert Delahaye.

There is one point I would like to emphasize here. This is the tragic human aspect of the construction of the Great Wall in old China. This tragic nature is fully illustrated by the legend of the girl, Meng Jiang, who lived in the reign of Emperor Qin Shi Huang. Her husband, together with thousands of other peasants, was conscripted to build the wall but few came home healthy or even alive. Meng Jiang, being very anxious to see her husband, trudged hundreds of *li* northward to the foot of the Great Wall, only to find white skeletons piled at the foot of the wall. Her wailing and lamentations shook the heavens, and the newly built wall crumbled.² The legend of Meng Jiang comes down via one of the classical works of ancient China. There may have been no real Meng Jiang. However, there were indeed thousands of young women having the same fate as Meng Jiang. She has touched deeply the hearts of later generations with her pure and sincere love. Even more important, the symbolism of Meng Jiang's spirit of opposition against persecution has always inspired people under oppression.

As we look back in Chinese history, there has been no need for a long time to rebuild the Great Wall to protect the central part of China. Now, with the birth of New China, under the guidance of the socialist principle that the different nationalities both within and beyond the Great Wall together with those in other parts of China are united as one big family, the old dream of "all men are brothers" has begun to be realized. As the Chinese proverb goes, the march of history has "turned arms into silk and gold". It has likewise changed the former battlefield along the Great Wall into the good earth of the new epoch.

The Great Wall itself, constructed with the sweat and blood, toil and effort of innumerable peasants, has been transformed into a monument symbolizing the renaissance of an ancient civilization. Due to this transformation, in recent years the work of restoring and repairing the Great Wall at key points has been started with the enthusiastic support and generous contributions of many Chinese people as well as friends in foreign lands.

At the same time, through recent research, some important features of the Great Wall have been revealed for the first time by using modern techniques of infrared light and remote-sensing.³ For instance, the real length of the Great Wall within the administrative boundary of the Beijing Municipal Government is 629 kilometers, which is far longer than what had been previously known. Furthermore, the wall itself is by no means a single but rather a complex defensive system following various topographical features, dotted with different kinds of terraces, fortresses, passes and observation towers. Wherever it was necessary for a garrison, a detour wall was added to the main body. The intricacy of the design has never before been mentioned in any records or discussion. Now a full and accurate picture, essential for the purpose of historical presentation, is revealed to us. Besides the Ming Wall, the ruined foundations of some earlier walls have also been discovered. We hope it will be possible to extend the same kind of study to the whole line

of Ming Great Wall.

With the growing interest in the Great Wall, an association has been organized in Beijing to sponsor research and promote education about the Great Wall. Members of this association include those who have made substantial contributions either to the study or the preservation of the Great Wall. The most active members, of course, are the sponsors of this organization. Most of them are prominent figures in public affairs. Honorary memberships will also be offered to foreign friends who meet the same requirement for the Chinese members.

Furthermore, for the sake of the increasing number of visitors at Ba Daling, the spot nearest to Beijing where one can get the best view of the Great Wall, a museum is under construction. By means of essential exhibitions and visual aids visitors, especially those who come from abroad, will be able to get a full picture of the history and a better understanding of this great wonder of the world.

In each age, a country, a society, responds to the conditions prevailing in that period. Ancient society in the central part of China, from before the Qin through the Ming Dynasty, responded to the pressing need for secure defence by building this fortification. Now it is no longer needed. Today China is responding to the modern challenge by honoring and preserving its history, symbolized by the Great Wall, when it is steadily going forward to build a new society for the future.

柒 新时代的万里长城*

亚历山大大帝从马其顿一直往东绵延到印度河的帝国倾颓后的大约一个世纪，在中国的中原地区开始崛起了一个伟大的帝国。这就是秦帝国。

秦王朝的创始人于公元前221年登基，成为中国第一个皇帝，史称“始皇帝”。正是因为“秦”这个字，这个帝国在西方以China著称。¹然而，在秦以前中国已经有了悠久的发展历史。秦始皇的真正贡献在于，他是中国历史上第一个结束纷争的封建诸侯国分庭抗礼、建立中央集权的政治制度的统治者。从此开启了国君独掌大权的王朝更迭史，这绵延了两千余年，一直到公元1911年。

除了他在政治上的作为，秦始皇还给后人留下了两件物质遗产，一件是最近发现的埋葬了兵马俑的陵墓，另一件就是长城。

在中国，早在秦始皇之前，就有作为军事工事的防御墙修建，但长城的兴建确是因为秦始皇。作为帝王，他是第一个征用成千上万的农民，将之前三个诸侯国沿北部边界修筑的防御墙连接起来的。此外，他还在东西两端修筑了新墙，最终建成了一条绵延万里的长城，万里长城由此得名，简称长城。此后，长城不断得到修缮和重建，但并不是完全沿原址所建。最新并且保存最完好的长城是明朝（1368—1644）修建的，全长约为12000里（6000公里），东端一头扎进渤海湾，喻示龙头入水，西端直抵青藏高原北缘古丝绸之路上的著名关口嘉峪关。如今，北京城北明长城最雄伟的部分已成为一个绝佳的景点，游人们可以在这里饱览这座人类用双手建成的浩大而精巧的工程。

我无意涵盖长城的整个修建过程，这也远非我力所能及。西方已经有不少专门研究长城的书籍。其中最全面也最易读的英文著作或许就是我的同事罗哲文与迪克·威尔逊、戴仁、德罗绘合著的《长城》。

有一点我想在这里强调一下。这就是，古代中国修建长城有其悲剧的一面。这通过生活在秦始皇统治下的孟姜女的传说得到了充分的体现。孟姜女的丈夫和数以千计的其他农民一道被征召去修长城，但最后健康甚至活着回家的微乎其微。孟姜女因为急于见到丈夫，向北跋涉了几百里来到长城脚下，结果在那里却只看到累累白骨。她悲恸欲绝，哭

声震天，新修的长城也因此倒塌。²孟姜女的传说通过古代中国的一部经典著作流传下来。也许历史上并没有真正的孟姜女，但是有成千上万跟孟姜女同样命运的年轻女子。她纯真的爱情深深触动了后人的心。更为重要的是，孟姜女反抗压迫的精神一直鼓舞着后来受压迫的人民。

当我们回首中国历史，有很长一段时期并没有重修长城以保卫中原地区的需要。现在伴随着新中国的诞生，在长城内外的各族同胞和中国各地的其他民族团结一家亲的社会主义原则指导下，“四海之内皆兄弟”的古老梦想已经开始实现。正如中国一句老话说的，历史的行进已经“化干戈为玉帛”，同样也把过去长城两边的战场变成了新时代的沃土。

长城是数不清的劳动人民的血汗辛劳筑成的，它已变成了象征古老文明复兴的标志。由于这一转变，近年来在一些重要地段的修缮工作得到了广大同胞以及外国友人的热烈支持和慷慨贡献。

与此同时，最近的研究借助红外线和遥感等现代技术，首次发现了长城的一些重要特征。³例如，长城在北京市行政辖区内的实际长度是629公里，远远超过之前的估计。此外，长城本身绝不是一个单一的，而是结合地形特征的复杂系统，有墙台、敌楼、券门和瞭望塔布设其间。只要驻军有需要，主体墙上还会加筑迂回墙。设计的精妙之前从未被记载或谈及。现在，一个完整而精确的画面终于展现在我们面前，这对于重现历史非常必要。除明长城之外，更古老的长城基址残迹也被发现了。我们希望把同样的研究扩展到明长城全线。

随着对长城兴趣的与日俱增，北京成立了一个支持长城研究、促进长城相关教育的协会。协会的成员包括对长城的研究或保护作出过巨大贡献的同志。最活跃的当然是协会的赞助人，他们大部分是参与公共事务的杰出人物。达到同样入会要求的外国友人也可以成为荣誉会员。

同时，由于游客数量的激增，距离北京最近的长城景点八达岭正在兴建一座博物馆。通过必要的展览和视觉辅助，游客，尤其是来自外国的游客，将能全面地把握它的历史，更好地了解这一世界奇迹。

每个时代，国家和社会都回应着当时的情势。中国中原地区的古代社会，从先秦一直到明朝，都因安全防御的迫切需求修建这一防御工事。如今，已经没有这种需要了。今天的中国正通过尊重和保护以长城为象征的历史，来回应现代的挑战，稳步向前建设一个面向未来的新社会。

⑧ A NCIENT CITY RUINS IN THE DESERTS OF THE INNER MONGOLIA AUTONOMOUS REGION OF CHINA*

During the first century B.C. the Chinese built cities along the Hexi Corridor to protect the ancient Silk Road from raids by Huns. A Hun ruler reciprocated by founding his own city and later Chinese dynasties repeated the process. Urban populations were fed by cultivating oases and by harnessing melt-water streams to irrigate and reclaim areas of grassland. Where trees fell and cultivation broke surface layers of alluvium and clay, water and wind began to erode and expose underlying beds of sand. Blowing sand encroached upon the cultivated area and eventually drifted across the ruins of former cities. Sites of cities that once housed tens of thousands of people are now being explored scientifically. Research into the recurrent history of desertification throws light on present-day problems faced by one-sixth of the world's population living in arid regions and by one-third of the earth's land surface covered by deserts. By learning from past events we may be able to halt future advances of deserts.

The scenes of my lecture are extremely dreary places, age-old ruins buried, or partly buried, by blown sand for centuries. Nevertheless, these long-forgotten ancient cities have a prosperous past behind them: some have enjoyed great fame in history; others have been visited by travellers of world renown. Now, in today's New China, my young colleagues and I have penetrated into the deserts to investigate these ruins of ancient cities, not to indulge in nostalgic contemplations of the past, nor to revel in the vanished splendours of bygone days. We look back on the past for one purpose only: to make out why such a region that once flourished in history should have turned into a desert. To clarify this point is a matter of great moment. It is for the purpose of creating a better future that we endeavour to understand the past.¹

Building Cities on the Silk Road

Let us first of all look back on the prosperous stage of this area and start from the world-famous epoch of the Silk Road. As is well known, the historic Silk Road was a most important trade route which spanned the hinterlands of Asia. Its main line started at the east end, from Chang-an, the greatest political centre of ancient China and predecessor of the present Xi-an, and passed in a northwesterly direction through the Gansu (or Hexi) Corridor where it forked into two routes at Dunhuang, the ancient city which is well known to the world for the art treasures in its caves. These two routes stretched along the southern and northern borders of the Taklamakan Desert in the south part of China's Xinjiang Uygur Autonomous Region. They joined together again at the present Meru in Turkmen Soviet Socialist Republic. Then a single road went on westward to the shores of the Mediterranean Sea where finally it reached the dominions of Rome.

The part of the Silk Road in China was first opened up during the reign of Emperor Wu in the Han Dynasty (140-87 B.C.) when Changan was made the capital. Besides being the political centre of the Han Dynasty, Chang-an was also the greatest economic and cultural centre. The Silk Road, with Chang-an as its starting point, was subject to attacks by the Huns from the Mongolian Plateau in the north, at the narrow strip of the Gansu Corridor which was about 1,000 kilometres in length and varying from 10 to 100 kilometres in width. This narrow belt was called the Gansu Corridor because it was situated in Gansu Province; it was also called the Hexi Corridor because it was situated in the westernmost upper reaches of the Yellow River(Fig. 8-1).² It ran along the northern foot of the Qilian Mountains at an average elevation of 1,500 metres. The highlands of Qilian were on the northeastern border of the high Tibetan Plateau, the so-called "roof of the world" with an elevation of 4,000 metres in the eastern part, gradually rising to 5,000 metres and more in the west. The mountain tops were covered with snow all the year round and when snow

melted, small patches of oases were formed at the foot of the mountains; and it was through these oases that the Silk Road was directed. To the north lay the boundless Gobi and the desert. The narrow belt through which the Silk Road passed ran between the mountains and the desert, hence the name "corridor".

Dunhuang 敦煌

This corridor formed part of the arid area in west China, receiving an average annual rainfall below 100 millimetres in most places and lower than 50 millimetres in its western part. Fortunately, patches of oases scattered here and there were richly endowed with water and

grass. The area was then occupied by Huns, a nomadic tribe in the north, who still remained in an uncivilized state and presented a serious threat to the Han Dynasty.

During the reign of Emperor Wu in the Han Dynasty, China, being a powerful country with a flourishing agriculture, industry and commerce as well as increased revenues, was anxious to carry on trade with the world outside. In the decade after 129 B.C. she repeatedly dispatched troops on punitive expeditions against the Huns who fled to the north of the desert. As a result, the Han Dynasty took possession of vast tracts of land in the Hexi Corridor and opened up a trade route leading from Chang-an right to central Asia and Europe, thus bringing an era of prosperity to the Silk Road.

All the while, the Huns who had retreated to the north of the desert were still watching for an opportunity to return south. It was very easy for them to thrust into the middle of the corridor and cut off the Silk Road, for in the central part of the corridor the melted water running down from the north slope of the Qilian Mountains converged into a huge river called the Ruo-shui, now also bearing the name Ejn, which, rising approximately from 40°N latitude, flows north by east and crosses the space between the desert and the Gobi over a span of about 300 kilometres, and finally empties itself by two different channels into Lake Sogo Nor and Lake Gaxun Nor where the elevation drops to 820 metres or so. Thenceforward, the terrain gradually rises again towards the north.

This is the present pattern of surface drainage, but it was not so more than 2,000 years ago when water in the lower reaches of the Ruo-shui emptied itself into a vast lake called Ju-yan situated further to the southeast of the above-mentioned lakes (Fig. 8-2). The climate at that time was also arid enough, but the Ruo-shui River, running by different channels before it emptied itself into the lake, moistened the land along the way and formed a delta area abounding in water and grass, with dense and luxuriant groves of Euphrates poplars covering its banks. On the way southward, the Huns found it very convenient

to assemble at the delta before pushing forward along the Ruo-shui. It provided them with a most ideal route to cross the Gobi and the desert which stretched over hundreds of kilometres from east to west, but it exposed the Silk Road to an extremely serious threat.

8-2 The ancient delta of the Ruo-shui 弱水下游古代三角洲图

Sogo Nor 索果诺尔

Ancient Ju-yan lake 古居延泽

Ruo-shui 弱水

Ju-Yan City 居延城

Ejin Banner 额济纳旗

To protect the Silk Road, the Han Dynasty had to enclose the banks of the Ruo-shui and the delta of Ju-yan Lake within their military defence line. By stationing garrison troops in the delta, they opened up an important area for reclamation and developed agricultural irrigation. At that time, the Ruo-shui settlement area was mainly composed of the middle and lower parts of the delta and in the year 102 B.C. the famous Ju-yan City was built at the centre of the area. But if you go there today, you will see that everything has changed. What meets your eyes is a vast stretch of sand dunes. With the help of a local guide we were able to penetrate into this area five and a half years ago. We saw nothing but ruins of castles, beacon towers, houses, abandoned fields and irrigation ditches, broken earthenware, wells choked with sand, slightly worn millstones, antique coins, arrowheads and many other artefacts. The ancient Ju-yan Lake had shrunk to a small lake. Amidst the deep sand to the south-west of this little lake, we found the ruins of an ancient city bordering dried up river beds both on the east and south sides. Inside the ruined city walls, the surface was scattered with Chinese tamarisks and sand-sage. Judging from the ruins, we conjectured that it was a city of considerable size and tentatively inferred that it was the site of the city of Ju-yan.

The city of Ju-yan, associated with an irrigated agriculture that flourished in the Han Dynasty, is now yielding a harvest of an entirely different kind. During the last few decades, excavation has brought to light great quantities of historical relics, which are called by archaeologists "the Ju-yan slips of the Han Dynasty". The Han slips discovered here were not made of bamboo as in south China but of wood, on which were recorded documents and archives referring to the Ju-yan area during the Han Dynasty. They were strung together with cords and meant for preservation. More than 30,000 Han slips

excavated in this area have been given the name "Ju-yan". Still more are being dug out to add to the growing collection of historical data, rich and detailed in content. It is no exaggeration to call it a bountiful harvest.

Ruins of another ancient city lie some 15 kilometres south by west of the ruins which we have inferred to be the site of the city of Ju-yan. This is the famous Black City, much frequented and more than once excavated by native and foreign investigators. Way back in 1934 when I was a young college student, I read an article in the February issue of the same year's British magazine *The Listener*, written by the distinguished Swedish geographer and explorer Sven Hedin, entitled "The 'Black City' of the Gobi Desert". It immediately attracted my youthful interest, but it was not until 50 years later that I was lucky enough to have a chance to visit the scene and see for myself the ruins of the ancient city. Although quite close to Ju-yan, the Black City, completed in 1035 A.D., was constructed much later than the former. Some 950 years ago, it was a local administrative centre, with the attribute "Black Mountain" preceding the name of the administrative division. Later it was shortened to Black City; in the Mongolian language it is called Chara Choto, which bears the same meaning.

This area and the environs of the Hexi Corridor were under the rule of a local regime established by a national minority, known in Chinese history as the West Xia (1038-1227). The West Xia Dynasty was exterminated by the Mongols in 1227, the year when their illustrious chieftain Genghis Khan breathed his last. It was not until Kublai Khan, Genghis Khan's grandson, had unified China and established the Yuan Dynasty that the Black City resumed its position as administrative centre of the region, with a new name Yijinaï. The Venetian traveller Marco Polo passed through here in 1272, and by a roundabout route through the Mongolian Plateau, he reached first the city of Shangdu, built by Kublai Khan and later the city of Dadu, predecessor of the present Beijing. Yijinaï is now written in Chinese characters as 额济纳 (Ejin), whereas in *Marco Polo's Travels* it is Etsina.

Marco Polo stated that he had to acquire stocks of food for forty days there before continuing his journey, which shows that the neighbourhood of the Black City was still an agricultural area at that time.

To reach the Black City today, one has to cross a desolate and unpopulated desert, only a little easier than to approach the ancient city of Ju-yan. The walls of the Black City still stand lofty and magnificent in the desert today. They look as if they were square, but actually the south wall is 425 metres long, 15 metres longer than the north wall; and the east wall is 405 metres long, 48 metres longer than the west wall. On the city walls, we saw stones that had been used as projectiles in ancient times, still piled there as if the garrison had been preparing for a defensive battle. The strange thing is that historically the city was actually taken after a fierce battle. But the stones have remained undisturbed on the city walls ever since, suggesting that the city may have been abandoned as soon as the battle was over. That decisive battle took place in the late 1360s when the emergent Ming Dynasty, having captured Dadu and exterminated the Yuan Dynasty, dispatched a contingent of troops to take the Black City in their advance westward. They stormed into the city and reduced its buildings to ashes. When the expedition was finished, not only was the Black City abandoned, but the middle and lower reaches of the Ruoshui River were separated from the Hexi Corridor by the newly-built Great Wall. The Ming Dynasty concentrated the energy exclusively on developing the Corridor. The ancient Ju-yan area, protected by an earlier Great Wall, was now given up as "beyond the frontier" and no further effort was spent on its development.

From our investigations, we are of the opinion that the area reclaimed during the Han Dynasty, with the city of Ju-yan at its core, consisted mainly of the middle and lower parts of the ancient Ruoshui delta. Reclamation by the West Xia and Yuan dynasties, with the Black City at its core, shifted to the upper middle part of the same delta. Certain places were reclaimed on the basis of work done in the

Han period; in fact, the Black City itself may have been built upon the ruins of a Han castle. From the Han Dynasty down to the West Xia and Yuan dynasties, the southward shift of the reclamation area was directly related to the drying up of waterways in the delta area. This, however, is a subject undergoing further investigation.

Land Reclamation and Desertification

The ancient Ju-yan area is an outstanding example of desertification occurring in historic times, but many other places in west Inner Mongolia Autonomous Region have suffered a similar fate. During the early years of the Han Dynasty when the Ju-yan area was first reclaimed, another area of importance was also being reclaimed on the south prairie west of the Yin Mountains. Although the average annual rainfall here was higher than in the ancient Ju-yan area, it nevertheless turned into a desert in the end. This area is situated in the north of the present Ulanbuhe Desert. In Mongolian, "ulan" means "red" and "buhe" means "bull", the whole phrase signifying that the scourge of the wind and sand is like an unruly bull. The north part of the Ulanbuhe Desert was originally an alluvial plain formed by the Yellow River, flowing in ancient times north along the west side of the Ordos Plateau, heading straight for the foot of the Yin Mountains(Fig. 8-3). There it turned east and formed the first abrupt turn at the Bend of the Yellow River. As early as the late Pleistocene epoch, the river bed had begun to move eastward long before reaching the Bend. This movement still continues gradually to the present day. During the process of eastward turning, water from the Yellow River frequently overflowed into a lake occupying the deserted old river bed, and occasionally flooded surrounding low-lying country. More than 2,000 years ago, when the Han Dynasty first began to open up this area, a long narrow lake ran from east to west at the foot of the Yin Mountains. It was called Tusheng Lake. During the Han Dynasty land was reclaimed on the alluvial plain to the south of this lake. People were moved here to settle on the land and military fortresses were

established to defend the new settlements against invasion and plunder by Huns from the north. During this period, hordes of settlers moved from the hinterlands to the banks of the Yellow River near the southern edge of the Yin Mountains, including the northern part of the present Ulanbuhe Desert and the Ordos Plateau. In 127 B.C. alone no fewer than 100,000 people moved here. The western part of the Yin Mountains and the plains south of Tusheng Lake were particularly important as areas for new settlements. A broad and smooth mountain path to the north-west of Tusheng Lake passed through the gorge of the Yin Mountains and afforded an important pass leading to Hun territory beyond the mountains. To defend the southern entrance to this pass, a small stone fort was built on the steep slope to its west. This fort, the renowned Cock and Deer Fort, has been preserved to this day.

Yuhun 胤浑

Tongwan 统万

Close to the south-west shore of Tusheng Lake, some 20 kilometres to the south-east of the Cock and Deer Fort, a large city called Yuhun was the city westernmost on the frontier built by the Han Dynasty in this area (Fig. 8-4). It was a place of strategic importance commanding the gorge of the fort, but it was soon reduced to ruins. Remains of city walls are still discernible and sites of blacksmiths' workshops in the city may be identified by fragments of scrap iron, bronze arrowheads and heaps of debris scattered all over the place. Some local shepherds we met told us that there was a huge pit filled with skeletons outside the city, marking the site of an ancient battlefield. Ruins of two other Han cities have been discovered. The first lies some 20 kilometres to the south and the other some 30 kilometres to the south-east of Yuhun. The former was called Sanfeng and the latter Linrong. The space between these two and Yuhun is dotted with groups of Han graves as well as ruins of hamlets and fields, discernible even to this day. As a result of peaceful co-existence between the Han Dynasty and the Huns, the last 50 years B.C. enjoyed an unprecedented spell of quiet and stability. During this period reclamation extended from the neighbourhoods of the three cities to the southern edge of the Yin Mountains. Historical records indicate that population increased, cows and horses flocked in the fields and that cities which had been securely guarded in the past now shut their gates at a very late hour. It really became a scene of prosperity and abundance.

8-4 Sites of ancient cities in the northern Ulanbuhe Desert 乌兰布和沙漠北部汉代遗址与水系分布示意图

Yellow River 黄河

Course of Yellow River in Han 汉黄河

Tusheng Lake 屠申泽

What does it look like now? The Mongolian term "Ulanbuhe" aptly describes the present state of this area, a region devastated by moving sand. The process started long before modern times. In 981 A.D. a traveller named Wang Yan-de crossed the Yellow River at the Ordos Plateau, passed through here and journeyed westward to the Ju-yen area. He took detailed notes of living conditions in this district, recording: "No food crops ever grew here, except a kind of grass called Denshiang, the seeds of which are gathered for food". According to our investigation, Denshiang is what we now call *shami* (sand seeds or *agriophyllum arenarium*), a kind of pioneering plant growing on sand dunes, the first that ever grew on them. The fact that sand seeds could be gathered for food shows that they grew in abundance and yielded large quantities of seeds. It may be inferred that a thousand years ago, this area was still in the early stages of blown sand encroachment and has been entirely desertified in the course of the present millennium.

Near the city of Yuhun, we saw wind-eroded pits of varying sizes, huge pits formed by intense wind erosion. In a natural section at the edge of a wind-eroded pit, we could identify clearly that a horizontally deposited layer of clay, 70 millimetres thick, had under it nothing but fine sand. It is easy to see that when the surface layer was broken, the fine sand underneath was liable to be blown away by fierce north-west winds. This is the chief source of blown sand in this area. The thickness of the surface layer of clay we saw here varied from place to place, thicker in some places, thinner in others. It was not very difficult to reclaim land where the clay was thick, but where it was thin, if the primeval vegetation was removed and the surface exposed to wind erosion, the place was likely to turn into a sandy tract of its own accord. This is exactly what history has taught us.

The Settlement and Abandonment of Tongwan

Finally, please allow me to touch upon another ancient city in the desert. It is the biggest among the relict sites of ancient cities in the desert of western Inner Mongolia and the most remarkable in

architectural engineering I have seen so far. It was built in 413 A.D. as the capital of a short-lived minor Hun kingdom, but its builder, Helianbobo, gave it the extremely pretentious name Tongwan, which means "ruling over all nations". It must be pointed out that the year when the city of Tongwan was founded corresponds to the third year after the West Goths captured Rome and was nearly half a century before Anglo-Saxons entered Britain. It was recorded in history that Helianbobo conscripted 100,000 men to construct this enormous city and that in the operation, thousands of artisans were killed for failing to achieve the desired solidity. Up to the present, this great city, though long abandoned, has preserved a 24-metre high watch-tower standing aloft amidst the rolling sand dunes, reflecting dazzling rays in a scorching sun. It was situated in the south of the Ordos Plateau, close to the north bank of a river called the Red Willow River (Hangliu River) which crossed the south-eastern corner of the Mowusu Desert, carrying vast amounts of sand and clay with it, turning the water turbid. Consequently, it was called the Salawusu River in Mongolian, meaning "yellow water" (Fig. 8-5). The Salawusu River is important in Chinese archaeology because an important late Paleolithic site was discovered here. The people who lived here some 50,000 years ago were called "men of the River Bend", because the site was near the Bend of the Yellow River.

Although deeply buried in the desert, the city of Tongwan has been investigated before, but earlier investigations have been satisfied either with mere descriptions of the ruins or with reporting the discovery of relics. No one appears to have been interested in pursuing inquiries into the relationship between the development of the city and changes in the local environment. In the first instance, was this place a desert when Helianbobo chose the site? How could he have built his capital in a desert? If it was not a desert at the time, when did it turn into one? Where has all that rolling sand come from? As historical geographers, my young colleagues and I visited the historically renowned city of Tongwan with the aim of solving these problems. The visit has left deep impressions on my mind.

It was a summer morning in 1983, the sun had not yet shown its full might. The weather was fine, the sky clear and cloudless. We set out on foot with excitement from our encampment by the Red Willow River towards the city of Tongwan which lay 10 kilometres away. What a splendid tri-coloured picture presented itself to our eyes! Overhead was a spacious, blue sky, arching over the rolling sand which looked like turbulent waves of a vast sea. Suddenly, in the distance between the blue sky and the yellow sand emerged something which looked like an enormous white sail on an ancient seagoing vessel. "Look, the White City!" someone cried out. The White City was the name given to Tongwan by shepherds in the neighbourhood. It is a more appropriate name than the latter, because its lofty walls actually shine with dazzling white rays in the sun. On the instant of seeing it, I was affected with an unforgettable poetic sensation, feeling as if I were facing a huge landscape painting. But what is of greater significance is the clear and unequivocal thread it supplies to our investigation of changes in the environment in this area. If it were not for the tall ancient city towering there, people would be inclined to believe that it had been an unpopulated desert

from time immemorial. But no, that is not the case. The city of Tongwan was certainly not built in a desert in the beginning. This place was not a desert, but a vast prairie, richly endowed with water and grass.

In the days of Helianbobo, China was in a state of chaos, rent into separate little kingdoms by many contending forces. Besides the Jin Dynasty established by the Han nationality, fifteen minor kingdoms had been set up by national minorities, rising to power one after another. Helianbobo rose on the Ordos Plateau and founded a small kingdom called Xia, occupying the whole plateau and surrounding grasslands. He once stormed into Chang-an. His courtiers advised him to make it his capital, but he insisted on returning to the Ordos Plateau and personally chose a site to build his future capital, Tongwan. It was recorded in a chronicle that when the construction of the city was about to begin, he appeared on the scene himself and mounting a high spot nearby, looked about him and declared with pride: "Among the innumerable places I have seen between the north of the Horse Mountain and the south of the Yellow River, there is no country like this, which is surrounded by vast stretches of grassland and a limpid river." Here, "north of the Horse Mountain" refers to an area on the loess plateau north of the present Liupan Mountain, "south of the Yellow River" refers to an area at the southern edge of the Yin Mountains, "the limpid river" refers to today's Red Willow River, noted for its turbid waters, and "vast stretches of grassland" refer to the present Mowusu Desert.

Unlike the delta area where the ancient city of Ju-yan stood and the alluvial plain near the city of Yuhun, both arid regions receiving very little rainfall, the city of Tongwan enjoyed quite good natural conditions, with an average annual rainfall of nearly 400 millimetres and plentiful water sources. Why, then, has it also turned into a desert? The city of Tongwan was the largest among the sites of ancient ruined cities partly buried in the sand of the Ordos Plateau. Around it are many other sand-buried ruins of smaller castles and hamlets. It is

note-worthy that these relics of ancient settlement were distributed in the desert in such a way that they seemed to move from the north-west towards the south-east in accordance with a progressive sequence through time. For example, the ruins of the Han Dynasty, 2,000 years ago, extended to the furthest limit of the north-western frontier. Moving backward a little to the south-east, are ruins mostly of the Tang and Song dynasties, hundreds of or even a thousand years later than the Han Dynasty. Ruins from the Ming and Qing dynasties of the last 300 to 400 years, are distributed mostly along the innermost south-eastern border of the desert area. This distinctive pattern of distribution is not only closely related to the growth and decline of the power of the Chinese dynasties but also is directly connected with the chronological order of desertification in these areas: the inevitable consequence of unreasonable utilization of land, caused primarily by the reclamation of places unfit for agriculture and secondly by excessive firewood cutting and pasturing. Details of that process await further examination and study.

In short, the Ordos Plateau is one of the most remarkable examples of desertification in Chinese history. The main reason for its desertification lies not in changes of climate or other natural elements but in the activities of man. The area of such "desertified land" accounts for only 9.2% of the total area of deserts in north China, which occupies 1,095,000 square kilometres or 11.4% of the total area of China's territory. The percentage is small, but the cause of desertification is highly significant.

Now in the world, especially in developing countries, desertification remains a serious problem. Deserts and desertified land occupy one-third of the earth's surface and nearly one-sixth of the world's population live in such areas. For this reason, ways of preventing and curing desertification, as important measures of environmental protection, have become questions of world-wide and outstanding interest in the sphere of desert studies today. Some of the circumstances concerning desertification which developing countries

are confronting at present, have repeatedly occurred in our history. To sum up this process scientifically is a task, we may say, of definite relevance to our present and future welfare. In our opinion, it is a task all historical geographers should participate in. I believe the historical geographers of my country will strive to make contributions to this cause which calls for international cooperation.

捌 内蒙古自治区西部沙漠中几个重要的古城废墟*

主席先生，

女士们、先生们：

在我访问英属哥伦比亚大学这个著名学府的同时，又很荣幸地有此机会为温哥华学会这个富有学术特色和国际联系的团体，介绍一点我个人和我的青年同伴在我国内蒙古自治区西部荒凉的沙漠中徘徊探索的片断见闻，这对我来说是一种不平常的际遇，是我当初进入沙漠时绝对没有想到过的。我只是担心不要把沙漠中那种荒凉的气氛，带到你们这个十分活跃而且丰富多彩的学会生活中来。

今天我所要讲的，在今天看来确实是一些很荒凉的地方，是多少世纪以来已被流沙湮没的古城废墟。但是，这些地方也有自己繁荣的过去。那些已被人遗忘了的古城，有的也曾在历史上享有盛名，有的还曾为举世闻名的旅行家访问过。现在，在新中国，我和我的青年同伴深入沙漠去考察这些地方——这些古城废墟，不是为了单纯地凭吊过去，更不是为了要陶醉在过去的、已经消失了的荣华之中。我们回顾过去，我们试图弄清楚为什么在历史上繁荣一时的地方，而今竟然沦为沙漠。弄清楚这一点是大有意义的。了解过去，正是为了创造未来。¹这就是这个新时代所赋予我们的使命。

—

为此，还是让我们先回顾一下过去的繁荣时代吧。这样，我就得从享有国际声誉的“丝绸之路”讲起。众所周知，历史上有名的丝绸之路，是古代横贯亚洲腹地的重要商道。它的主要路线，东起当时中国最大的政治中心长安——也就是现在西安的前身，向西北通过“甘肃走廊”，从敦煌这个今天以洞窟中人类所创造的世间罕见的艺术宝藏而闻名于世的古城，分为两路，分别沿着我国境内新疆南部塔克拉玛干大沙漠的南北边缘，越过帕米尔高原，在苏联土库曼境内相会，然后继续西行，直到地中海沿岸，最后到达当时的罗马各地。

按时间上来说，在公元前第二世纪以后的一千多年间，大量的中国丝和丝织品，经由此路西运，因此叫做“丝绸之路”。其他商品以及东西

方的经济文化交流，也多是通过这条道路。它在历史上促进了欧亚非各国和中国的友好往来，因此也可以说是一条和平友好的道路。

在中国境内，最初打开这条道路，是在汉武帝时期（公元前140—前87年）。汉朝建都长安。长安除去作为汉王朝的政治中心之外，它还是当时全国最大的经济中心和文化中心。以长安为起点的丝绸之路，在穿过甘肃走廊的这一条东西长达1000公里，南北宽自10公里到100公里的狭长地带，最容易受到来自北方蒙古高原上的匈奴人的攻击。这一条狭长地带，叫做“甘肃走廊”，因为它在甘肃省境内，也叫“河西走廊”，因为它在黄河上游之西（图8-1）。²这条地带正当祁连山地的北麓，平均海拔1500米。祁连山地，实际上也就是号称“世界屋顶”的西藏大高原的东北边缘，其东部海拔约4000米，向西升高到5000米以上。山上终年积雪，冰雪溶化之后，沿北边山麓地带形成片片绿洲，丝绸之路就是沿着山麓的这些绿洲开辟起来的。从此山麓地区再往北去，尽是一望无际的戈壁与沙漠。丝绸之路所经过的这一条狭长地带，介于高山与沙漠之间，是唯一便于东西来往的通道，所以叫做“走廊”。

Ejin Banner 额济纳旗

Black City 黑城

Yellow River 黄河

Dunhuang 敦煌

这条走廊上的平均年雨量，大部分都在100mm以下，西部则减少到50mm以下，全部属于干旱区。幸而有片片绿洲散布其间。绿洲上水草丰美，在丝绸之路未曾开辟以前，这里为北方的游牧民族匈奴人所占有。当时匈奴族还处在野蛮时期，全部人口除老弱妇孺外都是战士，习惯于掠夺战争，对汉王朝构成了严重的威胁。

汉武帝时，国力强盛，农业和工商业发展，统治阶级财富增加，也渴望与外部世界通商贸易。从公元前129年以后的十年间，屡次出兵征伐匈奴，匈奴远走漠北，汉王朝占有了河西走廊的广大地带，从而打开了从首都长安直通中亚与欧洲的商道，这就是“丝绸之路”上繁荣时代的开始。

但是退走漠北的匈奴，还是经常伺机南下，很容易插入走廊的中部，把丝绸之路从中切断。因为在走廊的中部地区汇集了自祁连山北坡下注的雪水，流成了一条大河叫做弱水，现在也叫额济纳河。这条河流大约从北纬40°的地方起，沿着正北偏东的方向，穿过近300公里的戈壁与沙漠之间，分道注入索果诺尔与嘎顺诺尔两个湖泊之中，这里的海拔高度已下降到820米左右。再往北去，地形又逐渐升高。

以上所叙，是现在的情况，但在两千多年前却不是这样。那时弱水下游注入一个叫做“居延泽”的大湖，其位置还在上述两个湖的东南方（图8-2）。这里的气候虽也十分干燥，但是在弱水入湖之前，河道分流，土地湿润，从而形成了一片水草茂密的三角洲，河边上胡杨成林，十分繁茂。匈奴人从漠北南来，最便于集结在这个三角洲上，然后沿弱水长驱直下，这是东西数百公里之间穿越戈壁与沙漠的最理想的通道，因此也就构成了对丝绸之路的最大威胁。

Ju-Yan City 居延城

Ejin Banner 额济纳旗

汉王朝为了保卫丝绸之路，不得不把弱水两岸和居延泽上的三角洲，包入军事路线之内，并在三角洲上进行军屯，开辟了一个重要的农

垦区，发展了灌溉农业。

当时的垦区，主要在三角洲的中、下部，并于公元前102年在这一垦区的中心，建筑了有名的居延城。

可是现在来到这里，一切都变了。沙丘连绵，一望无际。一年半以前，我们靠了当地的向导，才得深入这一地区。我们所看到的是汉代城堡、烽燧的残迹、居民点的遗址、废弃的田块和渠道，还有房屋的残基、破碎的陶片、被沙填满了的水井、完整的石磨，以及古代的钱币、箭头等等。古居延泽已枯缩成一个小湖了。在小湖西南方的深沙之中，我们找到了一座古城，它的东、南两面都濒临干枯的河床，残破的城墙内部，到处都是柽柳、沙蒿。从残存的遗迹来看，它的规模是相当大的，我们初步推断，这应是居延城的遗址。

如果说居延城的名字在汉代是与繁荣一时的灌溉农业联系在一起的，而现在它却与另外一种完全不同性质的“丰收”联系在一起，这就是近几十年来考古学上所谓“居延汉简”的大量出土。这里的汉简不是写在竹片上而是写在薄木片上的关于汉代居延地区的文书、档案等，木片用绳索穿连着，是有意识地保存起来的，因此是非常珍贵的史料，记事的内容也十分丰富。现在从这一地区发掘出来的汉简，统以“居延”为名，已有三万多枚，而且还在陆续出土，说它是考古学上的“丰收”，并不为过。

在我们所推断的居延城故址以南偏西大约十五公里处，有另外一座古城废墟，这是不止一次为中外考察者所访问和发掘过的地方，这就是有名的黑城。

1934年当我还在大学读书的时候，我以一个偶然的的机会，在同年2月号英国的《听众》杂志上，读到了瑞典著名地理学者和探险家斯文·赫定的一篇文章，题目是《戈壁滩上的黑城》，引起了青年时代的极大兴趣。可是经过了整整45年，我才有机会来到现场，看看我久已向往的这座古城废墟。

黑城虽然至居延不远，但是它的建筑年代却要晚得多。它建成于公元1035年，至今945年，是个地方行政中心，但是在这个政区名称的前面，又冠以“黑山”两个字。后来又叫黑城，可能是从黑山演变而来的。蒙古语叫做Chara Choto，也就是黑城的意思。当时统治这一地区和河西走廊一带的，是一个少数民族所建立的地方政权，这就是中国历史上的西夏王朝（1038—1227）。

公元1227年，西夏为蒙古族所灭。率领蒙古骑兵西征中亚和东欧的著名首领成吉思汗，也就是在这一年去世的。

到了成吉思汗的孙子忽必烈统一了中国并建立了元朝的时候，这个大城又继续成为这一地区的行政管理中心，只是改名叫做亦集乃城。1272年威尼斯的旅行家马可·波罗正是从这里经过，绕道蒙古高原，先到忽必烈初建的上都城，然后再到大都城的。大都城也就是现在北京城的前身。

“亦集乃”现在汉字写作“额济纳”，在马可·波罗的《游记》中，则写作Etsina。马可·波罗在他的《游记》中还提到要在亦集乃城准备好40天的粮食，才能继续前进。这就说明在当时，黑城这一带地方仍然是一个农业区。

现在去黑城，也要穿过荒无人烟的沙漠，只是比进入居延古城要容易一些。现在黑城的城墙依然高大、壮观。看似正方形，实际上南墙长425米，比北墙长出15米；东墙长405米，比西墙长出48米。在城墙上，我们看到还有在古代作为炮弹用的石块，堆积在那里，好像是为了守城的战斗作好了准备的样子。奇怪的是，黑城确实是在一场激烈的战斗中被攻下了，而堆积在城墙上的石头炮弹，却一直未被清理。这大约是在这次战役之后，城市就被放弃了。这次战役发生在14世纪60年代末，当时新兴的明王朝，在出兵攻下大都城和灭亡了元朝之后，又继续西征，分兵一支打进了黑城，城内建筑全部为战火所毁。从此以后，不仅是这座城市被放弃了，就是整个弱水的中下游，也都被隔离在明朝新建的长城以外。明朝的统治者只是集中力量开发河西走廊，古居延地区原是包在汉代长城之内的，这时则被看作是“塞外”，再也没有去经营了。

经过考察，我们认为以居延城为中心的汉代垦区，主要在古代弱水三角洲的中下部。以黑城为中心的西夏和元朝的垦区，则已移至这同一三角洲的中上部，其间也有部分地区是在汉代开垦的基础上，继续开发起来的。黑城本身也可能就是在一处汉代城堡的遗址上建筑起来的。从汉朝到西夏和元朝，前后垦区自北而南的迁移，和三角洲上水道的变迁直接有关，这是还在继续深入研究的问题，这里就不多谈了。

的情况，在内蒙古自治区西部干旱地区的其他地方，也曾出现过。

在汉朝初年开辟居延地区的时候，在阴山西端以南的草原上，也有一个重要的农垦区被开垦起来。这里的平均年雨量，虽然多于古居延地区，但仍然不免变为沙漠，这就是现在叫做乌兰布和沙漠的北部地区。蒙语“乌兰”是红色、“布和”是公牛，全名的含义是说这里风沙为害之烈，有如难驯的红色公牛。

乌兰布和沙漠北部这一带地方，原是黄河的冲积平原。古代的黄河沿着鄂尔多斯高原西侧、从南向北流，直趋阴山之麓（图8-3），然后转而东流，形成了黄河之套的第一个直转弯。从晚更新世以来，这段河道在未转弯之前，就开始向东移动，这种趋势至今还在缓慢地进行中。

Mowusu Desert 毛罗素沙漠

Ulanbuhe Desert 乌兰布和沙漠

Yellow River 黄河

Yuhun 榆浑

Tongwan 统万

在河道东移的过程中，因为河水有时漫溢，就在被遗弃的旧河床及其附近低洼处，积水成湖。两千多年前，当汉王朝最初开辟这一带地方的时候，靠近阴山之麓，还有一个东西狭长的大湖，叫做屠申泽。汉代的农垦区就是在这个大湖以南的冲积平原上开辟出来的。

汉王朝在这里移民开垦，并建立军事要塞，也是为了防御从北方来的匈奴人的侵扰和劫掠，以保护黄河中上游一带的农业居民。当时傍阴山南麓的黄河两岸、包括现在的乌兰布和沙漠北部和鄂尔多斯高原的北部，曾大批移民从内地迁来。例如，公元前127年一次移民，即达十万人。在这一新的移民区中，阴山西端、屠申泽以南的平原地带，特别重要。因为在屠申泽的西北，有一条穿越阴山的谷道，宽阔平坦，是通往山后匈奴地区的重要孔道。为了守卫这条孔道的南口，就在山口西侧的峭壁般的阶地上，修建了一座小石城。这座小石城还一直保留到今天，这就是古代有名的鸡鹿塞。

在鸡鹿塞东南约20公里处，傍近屠申泽的西南岸，有一座大城，名叫窳浑城，这是汉王朝在这一地区所建立的最西头的一座县城（图8-4），是控制鸡鹿塞谷道的军事重镇，现在也已经沦为沙漠中的废墟，但是残存的城墙，还明显可见。城内有大片冶铁遗址，到处可以拣到废铁块、铜箭头，无数的残砖断瓦散布地上。偶然遇到的当地牧民说，这座城外有一处大坑，堆满了尸骨，这是古战场的重要标志。

8-4 Sites of ancient cities in the northern Ulanbuhe Desert 乌兰布和沙漠北部汉代遗址与水系分布示意图

Yellow River 黄河

Course of Yellow River in Han 汉黄河

Tusheng Lake 屠申泽

约在麻浑城以南20公里和东南30公里处，还各有一座汉城废墟。三城之间，有成群的汉墓，散布其间，还有村落、田块的遗址，至今明显可见。在公元前的最后半个多世纪，由于汉王朝与匈奴统治者和平相处的结果，阴山南麓的农垦区，包括上述三城在内的地带，出现了前所未有的和平安定生活，史书描写说这一带人口繁盛，田野里牛马成群，过去防卫森严的城市，现在连城门也都关得很晚了。真是一幅繁饶富庶的景象。

可是现在又是什么情况呢？

“乌兰布和”这一蒙语的意思，说明了这里流沙为害的现状。而这种情况，并不是近代开始的。公元981年，也就是整整一千年前，有一位旅行者叫王延德的，从鄂尔多斯高原渡过黄河，经过这里，西行到居延地区。他详细记录了这一带的情况，说这里已是“沙深三尺，马不能行，皆乘橐驼。”又说沿途“不育五穀，沙中生草曰登相，收之以食。”按登相现在叫做“沙米”，是生长在流动沙丘上的先锋植物，也就是流动沙丘上首先生长的植物。当时能采集沙米籽粒为食，说明沙米生长繁茂，结实量大。可以推想一千年前，这一带地方还是流沙初期的阶段，近一千年来，这里已全部沙漠化了。

这里的流沙是从哪里来的呢？

在麻浑城的附近，我们看到了一些大小不等的风蚀坑——由于强烈的风蚀而形成的大坑。在一个风蚀坑的边缘所显示的天然剖面上，可以明显地看到表面是70mm厚的一层水平沉积的黏土层，下面掩埋的则全是细沙。可见表土层被打破之后，细沙就很容易被强烈的西北风吹扬起来，这就是这一地区流沙的主要来源。这里所看到的地表黏土层的厚度，随地而异，有的地方厚，有的地方薄。厚的地方进行开垦，问题不大。薄的地方，如果原始的植被遭受破坏，并继续暴露在强烈的风蚀之下，那就很容易导致就地起沙。历史的教训就是这样。

三

最后，请允许我再讲一个沙漠中的古城。在我所见到的内蒙古西部沙漠中的古城废墟中，这是最大的一个，也是在筑城工程上最值得注意的一个，这是公元413年所修建的一个匈奴族为时短暂的小王朝的都城，但是它的创建者赫连勃勃却为它起了一个大得极不相称的名字，叫做“统万”，意思就是“统治万邦”。

应该指出，统万城创建的这一年，刚刚在西哥特人攻陷罗马城后的第三年（攻陷罗马城在410年），还在盎格鲁撒克逊人进入不列颠以前不到半个世纪。史书记载说，当时赫连勃勃征调了十万人来修建这座大城。在筑城过程中，由于工程没有达到所要求的坚固程度，就有数以千计的工匠被杀死。至今这座大城虽然已久无人居，但还保留有24米高的敌楼，耸立在滚滚流沙中，在强烈的日照下，放射出耀眼的白色光芒。它的位置在鄂尔多斯高原的南部，靠近一条叫做红柳河的北岸。红柳河穿过毛乌素沙漠的东南一角，携带了大量的泥沙，水色浑浊，因此蒙语叫它做“萨拉乌素河”，也就是“黄水”的意思（图8-5）。

8-5 The site of the ancient city of Tongwan 统万城城址位置图

萨拉乌素河在中国的考古学上是很有名的，因为沿河上游有重要的旧石器时代晚期的遗址在这里被发现，当时住在这里的人被称为“河套人”，至今大约已有五万年。叫他做“河套人”，因为这里也是属于黄河之套以内的地方。

统万城虽然已深陷沙漠之中，但是也早已被人所考察过。奇怪的是过去的考察者只是满足于对古城足迹的描述或古物的发现，都从来没有把它和周围环境的变迁联系起来进行探讨。比如说：当赫连勃勃在这里建城的时候，这里是沙漠么？他怎样能在沙漠中建立他的都城呢？如果当时这里不是沙漠，那么从什么时候起开始变成了沙漠呢？这些滚滚流沙又是从哪里来的呢？

作为一个历史地理工作者，我和几位年青的同行，正是带着这些问题，访问了这座历史上赫赫有名的统万城的。这次访问，给我留下了十

分深刻的印象。

那是夏季的一个早晨，太阳的威力还没有充分显示出来。天晴气朗，万里无云。我们怀着十分兴奋的心情，从红柳河边的驻地出发，步行向着十公里外的统万城前进。举目所见，那是多么壮观的一幅三色的画面呀！蔚蓝如洗的天空，笼罩在有如大海的波浪那样翻滚着的黄沙上。突然间，我们看到了像古代海船上巨大的白帆一样的东西，出现在远方的蓝天黄沙之间，“看！白城子！”有人叫起来了。“白城子”就是附近的牧民给统万城起的名字，它比统万城一名更富于写实的意义，因为它那巍峨的城墙在阳光照耀下，确实是发出了耀眼的白光的。

在这初见的一刹那间，我所感受到的那种诗情画意，是永难忘怀的。但更重要的是白城子在探讨这一地区的环境变迁上所提供的确切无疑的线索。如果眼前不是有这样一座巍峨的古城屹立在那里，人们还会认为这一带地方自古以来就是荒无人烟的沙漠呢。

不，不是这样。

统万城最初绝不是建筑在沙漠里的。

这里原来不是沙漠，而是一片水草丰美的大草原。

赫连勃勃的时代，中国的政局，四分五裂，在汉族建立的晋王朝外，还有十五个少数民族建立的小王朝，先后崛起。赫连勃勃兴起于鄂尔多斯草原上，他所建立的小王朝叫做“夏”，占有整个鄂尔多斯高原及其外围一些地方。他曾领兵打进长安城，当时他的部下劝他建都长安，他却坚持回兵鄂尔多斯，亲自选择了统万城的城址。史书有明文记载说，在建城之前，他曾亲自来到现场，登上附近一处高地，一面瞭望，一面赞叹说：“这里草滩广大，河流清澈，我跑过很多地方了，从马岑以北，黄河以南，没有一处地方，比得上这里那么好！”他所说的“马岑以北”指的是现在黄土高原上的六盘山以北，“黄河以南”指的是现在阴山南麓的黄河以南。清澈的河流就是现在以浑浊著称的红柳河，广大的草滩就是现在的毛乌素沙漠。

这里的自然条件本来是不错的，和前面所讲的古居延城所在的三角洲和临浑城附近的冲积平原不同，那里都是干旱区，降水量都很少，而统万城所在的地方，年平均降水量近400mm，地方上水源丰沛，为什么也会变成了沙漠呢？

统万城是毛乌素沙漠中所淹没的若干古城废墟中最大的一个，此外还有许多较小的城堡和村庄的遗址，也都被沙淹，值得注意的是这些

古代人类活动的遗迹，在沙区内的分布，自西北而东南，有着一定的时代先后的顺序性，例如两千年前汉代的遗址，向西北地区伸展得最远。稍向东南来，则多是比汉代晚了数百年或是上千年的唐、宋时代的遗址。至于近三、四百年明清时代的遗址，大都分布在沙区的东南边缘一带。这一分布的特点，除与中原王朝势力的消长有密切关系外，同时也与沙漠化时期的早晚直接有关。而这一地区的沙漠化，又是不合理的土地利用的必然结果。所谓不合理的土地利用，主要指的是在不宜于农耕的地方进行开垦，其次是过分的樵采和放牧。其具体过程，也有待于更深入的调查和研究。

总之，鄂尔多斯高原是我国历史上沙漠化的发展最显著的地区之一，导致沙漠化的主要原因，是人类本身的活动，而不是气候或其他自然因素的变化。新中国建立以后不久我们注意到这一问题，1963年后才开始从历史地理的角度上进行有计划的考察。可是1966年以后十年间的混乱，中断了这项考察工作的进行。一年半以前，才有可能重新开展这项考察研究工作。我相信，在实现我国社会主义现代化的过程中，这项工作是不可缺少的。

在你们伟大而美丽的国土上，既没有沙漠，也没有遇到沙漠化的问题。但是今天在世界上，特别是在发展中的国家里，沙漠化仍然是个严重的问题。沙漠和沙漠化的土地，占去了地球上陆地面积的1/3，全世界近1/6的人口，生活在这种地方，因此防治沙漠化这一项重要的环境保护的问题，已成为当前国际上关于沙漠研究的一个突出的课题。

第29届联合国大会通过的3337号决议要求采取国家间的联合行动，来同沙漠化进行斗争。贵国的学者，有人在这方面已经作了大量的工作，是值得我们钦佩的。

现在一些发展中国家所遇到的沙漠化的问题，有些情况在我国历史上曾经不止一次地出现过。对这一历史的过程，进行科学的总结，在今天应该说是有一定的参考价值的。我们认为这项研究，也是历史地理工作者所应该积极参加的。我相信，我国的历史地理工作者也将会努力工作，为国际的合作，作出自己应有的贡献。

谢谢大家耐心地听我的发言，现在我准备答复大家所提出的问题，虽然我不一定都能作出令人满意的答复。

⑨ I COME FROM YENCHING UNIVERSITY*

1. Interaction Between the Cultures of East and West and the Trend of the Times

When I came as a first-year freshman to Yenching University, it was the autumn of 1932. At that time almost ten years had passed since construction along a set lay-out had started of the university campus, and it was almost reaching completion.

On the campus the scenery everywhere was very beautiful, overflowing with an ever thriving vitality. This first impression the university had on me when I just arrived, has never left me. Therefore, I will now write down from memory how the very construction of the campus has influenced me. I will discuss this from the following aspects:

1) The campus with its beautiful scenery and classical Chinese architecture.

2) The probe into the campus' history and research on traditional culture.

The recently constructed Yenching University had chosen the northwestern outskirts of Peking as its campus location, an area famous historically for its gardens. The main gate faced west, facing in the distance Xishan, the West Mountains. Inside the main gate one crossed a large marble bridge spanning a pool clear as a mirror, and reached the teaching centre. Large buildings in classical Chinese architectural style stood on three sides, with in the centre a wide space with luscious green grass. From the teaching centre one drifted into the campus' hinterland with its winding hills and dense foliage. The main road rose and fell unobstructed by anything ahead, only small footpaths joining it. But suddenly, after going through a section

of hills, the ripples of a vast lake stretched out in front, exceeding all one's expectations. The glint of the water had the colour of the sky, the field of vision was open and wide: it was the magnificent Lake Without a Name. A small island adorned the centre of the lake, adding to the boundless view. The buildings of the men's dormitories were lined up one by one on the northern shore of the lake. Tucked away behind hills and a dense forest on the southern shore of the lake was the women's dormitories, in the traditional courtyard style. From the first day of entering the university I was captured by the natural scenery of the campus. I came to know only afterwards that here used to be a famous garden called Shuchun Yuan, the "Garden of the Fair Spring, closely connected to the Qing imperial court two hundred years ago. The streams filling the rivers and lakes of the garden came from the adjoining Shaoyuan, a famous garden three hundred years ago in the Ming Dynasty already renowned for its streams. When Yenching University opened up its campus in 1921 however, the structures of these two historic gardens had already disappeared without a trace. Yenching University used exactly the spot of these two famous gardens, and after adopting special designs and using the conditions of the natural environment to the full, a very special university campus was built. Even more important, however, was that for the buildings on the campus classical Chinese architectural forms were used, creating an even closer harmony between historical traditions and modern needs.

Furthermore, it has to be pointed out that the principal lay-out of the campus was carried out under the guidance of the American architect Henry K. Murphy, which proved it was in fact a new creation completed under the influence of the cultural exchange between East and West, representing the trend of the times rather well.¹

At the Yenching University campus there were several other equally picturesque buildings, like a small bell pavilion on a hill under a pine tree, the "Overlooking the Water Cottage" (Linhu Xuan) on the lakeside, the small "Contemplating Merit Pavilion" (Siyi Ting) on the

lake's island, and the "Broad Elegant Pagoda" (Boya Ta) towering over the shore, structures which were all rather spectacular. The expression "glimmering lake reflecting pagoda" became the famed proverbial portrayal of the campus'scenery. The Boya Pagoda and the Siyi Pavilion are well worth talking about in more detail.

The name of the Boya Pagoda had much to do with the American professor at that time at the Philosophy Department of Yenching University, Bo Chenguang or Lucius C. Porter. He was influenced deeply by traditional Chinese culture and had been working at the Peking office of the Harvard-Yenching Institute. More importantly, his elders had done a great deal to develop Tongzhou Union University, one of the predecessors to Yenching University. When Yenching University started constructing a water-pagoda to add to the streams inside the campus, in order to commemorate these historical origins, the shape of the famous pagoda of Tongzhou, the Randeng Pagoda ("Sparkling Lamp Pagoda") was adopted, and the name Boya Pagoda was chosen. "BO" refers to the first character in Porter's Chinese name, and "YA" implicates an "elegant scholar". In English the pagoda is simply called "Porter's Pagoda".

The name of the Siyi Pavilion has an even more commemorative meaning than the Boya Pagoda's. The "SI" in the name is a diminutive form of "Luce", while "YI" has the meaning of "a magnanimous act undertaken for the public good". In English it is called "Luce Pavilion". It is in commemoration of Henry W. Luce, the first vice-president of Yenching University, who did so much to raise funds to set up Yenching University.²

I feel very privileged in arriving at Yenching in the period it had just been completed and being captured by the beauty of its surroundings; I was even more inspired by Professor William Hung's research at that time on the campus' history, which even influenced the direction of my later research.

In the very first beginning, when I had only just enrolled in the university, Professor William Hung's main work on the research of

Shaoyuan, "On the Painting and Records of Shaoyuan", had been published smartly by the Yinde Compilation Office of Yenching University Press (the foreword was written on 29 October, 1932). The photo reprint in this book of the hand-drawn "Friends Gathering at Shaoyuan" by the prominent calligrapher Mi Wanzhong, the owner of the garden, drawn in the 45th year of Wanli of the Ming Dynasty(1617 A.D.), makes the scene of three hundred years ago appear vividly before one's eyes. It is said that when Yenching University was established, Professor William Hung had learned from archives that this scroll was still around somewhere, and after painstaking searches he was finally able to purchase it for the Yenching University Library. After the publication of the photo reprint, Professor Hung obtained a poetry text from the late Ming concerning Mi Wanzhong and a description of the lay-out of Shaoyuan, which enabled him furthermore to verify the ancient site of Shaoyuan and its geographical position. At the end of the scroll was added a map of the rivers, lakes and other waterways of the campus and its surroundings, which was extremely valid for reference. Also included was a record stating that the English envoy Lord George Macartney stayed temporarily at the ancient site of Shaoyuan when coming to the Qing court during the reign of the Qianlong emperor.

Thereafter, Hung wrote in English about his research on the Shuchun Yuan, in which he covered important historical circumstances of most of the places inside the Yenching University campus. Furthermore, he gave his special report in English at the "university lecture", which was very well received by both teachers and students.³

This historical research by Professor Hung led me to start an actual investigation in the area of the historically famous gardens in the western suburbs of Peking, then extending it to the research of the development of the whole Peking area.

When teaching students in class, Professor Hung was original and demanding, which made me benefit even more from his wisdom. For

example, when I was only a second-year student, I attended his class about "Methods on Elementary Historiography". One of the important things was the exercise in writing scientific papers, in which his requirements were very specific. For example, one had to get hold of first-hand material, to annotate the sources of the material, to have new insights or new explanations, and then to write one's paper following a standard form. Only half the time of the term was used for teaching. After that, every student was given a certain topic and asked to go to the library to find material, write everything down on cards divided by subject, and start to sort out the research. The paper for that term made up the academic record. The topic handed out to me at that time was "Who was the most fervent book collector in history?" After browsing through the materials in the library, I found three scholars fit for the description, and I started comparative research on the materials I had found. In class I made oral reports to Professor Hung, and finally I chose one scholar from the Ming Dynasty, and wrote my "term paper": "The most fervent book collector Hu Yinlin". As a result, I was given a remark by Professor Hung in two black characters, written with a calligraphy brush: "Very Fine". This made me feel immensely encouraged, and I kept his calligraphy. Now 62 years have passed, and even though every side of life has changed, I have kept it until today, because it is the first lesson on academic training I had from Yenching University.

Professor Hung's guidance was not only confined to the classroom, he deliberately created some opportunities for me outside the classes, which gave me an even broader job training. This was even more the case when I became his research student. For example, Professor Alice Boring, Dean of the Pre-medical Department of the university, invited me to make a report in English for PAUW on the subject "geographical Peking". The full name of this organisation is Peking Association of University Women, and its members, most of them being graduates of American universities, were naturally good at speaking English. However, as I had never written a lecture in English

before, I was of course a bit shy and tried desperately to refuse. Only then professor Boring told me straight on the spot that she had originally invited Professor Hung to talk on historical Peking, but he had insisted on recommending me to talk on geographical Peking. After this information I went to see Professor Hung immediately to explain my English was not sufficient to give a talk in public, and to ask him to replace me by somebody else. Professor Hung pointed very solemnly to me and said, "Well, this is an excellent opportunity for you to practise, is it not?" He insisted on me writing out the speech and practising it on him beforehand, before going to the association to do the report. This was a deliberate training for me, and I could not but go along.

Professor Hung had noticed at a very early stage that my academic interest had turned from history to historical geography, so he deliberately arranged for me to go abroad for advanced studies, to get an even better training in the theory of the field. One morning in the autumn of 1938, I was summoned to go to Professor Hung's study at his home, and the first thing he said to me was "there is no school exceeding a master, and there is no master exceeding a famous master". He paused for a while, and then explained, "Harvard is a famous university, but they don't have a department of geography there. The University of Liverpool in England is of course not as famous as Harvard, but they have a famous professor in geography who has also a great knowledge of the geography of China, Professor Percy Maude Roxby. After research by our school it has been decided to send you there next autumn to advance on your historical geography." Professor Hung had close ties with the Harvard-Yenching Institute, and had always sent research students from Yenching's graduate school of history to Harvard for further study, but because of my special interest, he recommended me to go to the University of Liverpool to specialise in historical geography. The following year war broke out in Europe, and I couldn't go. When after the great war had ended I was finally able to go to the University of Liverpool, Professor

Roxby had retired, but his successor, Sir Clifford Darby, influenced me deeply. The theories and methods on historical geography initiated by him were introduced by me in China for the first time, and I made my own contribution to the development in the field of Chinese historical geography. When talking now about these matters, I cannot but think of the opportunity Yenching University gave me in the first place.

Just now I have given a few examples of how William Hung guided and trained me, but it was not only Professor Hung who let me share in his knowledge in my years of study at Yenching. There were two other full-time professors at the Department of History: Gu Jiegang and Deng Zhicheng. Both of them were renowned historians, although they were not as good at English as William Hung, who had a thorough knowledge of both Chinese and Western topics. If William Hung's appointment as professor at Yenching had a historical origin, for he was a Christian convert and had close ties to the founding of Yenching, it needs to be pointed out that Gu Jiegang and Deng Zhicheng were not Christian converts nor proficient in English, but because the two of them had made special contributions to the world of Chinese historiography, they were employed by Yenching University. Professor Deng Zhicheng guided me in my research on Chinese historical treatises, and Professor Gu Jiegang deepened my interest in researching Peking's historical geography(I will talk about that later in more detail). Just like Professor Hung, Professor Gu Jiegang had been employed at the Harvard-Yenching Institute's Peking office, where William Hung even had been in charge. I should add that with financial help of the Harvard-Yenching Institute the magazine *Yanjing Xuebao* was edited and published at Yenching, recognised in China and abroad to be one of the leading academic journals on the research of Chinese literature, history and philosophy. Also, there were the publications in volumes of the Yinde collection, about traditional Chinese books and records, esteemed equally in the academic worlds of both China and the West as the *Yanjing Xuebao*. Professor William Hung contributed enormously to the establishing

and printing of the Yinde collection. It has to be added here that although after the merging of Yenching University and Peking University in 1952 the above mentioned publications came to a halt, reprints continued to be in circulation. More significantly, the Alumni of Yenching University in Peking and the Second Campus of Peking University started cooperating in 1993 and established the Yanjing Graduate Institute, in order to continue and expand the spirit and stamina of Yenching. At the same time, the academic efforts of mainly the Alumni of Yenching University were bundled into re-editing and republishing *Yanjing Xuebao*, of which the first "New Issue No.1" was published in August 1995. Moreover, there are plans in progress for continued compilation of the Yinde collection.

It has to be added here that after Yenching University merged with Peking University in 1952 the campus expanded greatly, but the original campus of Yenching University has been fully preserved, the glimmering lake and pagoda reflected thereon are just like in the old days. In 1990, the Municipal Government of Peking decided to have the area around the "Lake Without Name" of the original Yenching campus site put on the municipal cultural heritage list, and had this engraved on a stele to be remembered forever.

2. The Tradition of Patriotism and the Spirit of Devotion

The campus of Yenching University was as pretty as a Chinese landscape painting, but this didn't mean it was a small paradise closed off from the outer world. It was built on the ancient sites of gardens of former times, but the fate of the whole country was still in the midst of restless movement. The first couple of years after the school was set up, the Peking government was controlled continuously by warlords who strived for power by selling out their country, and bureaucracy. The successive national governments in Nanking were facing against Japanese and other foreign aggressions.

It was at this time that the Japanese aggressors staged the "Mukden Incident" of 18 September 1931, to occupy the three provinces in China's Northeast, and the resistance movement against Japan to save the country, initiated by the Chinese people in all kinds of ways, started to develop from this point in time.

The situation as described above was the historical background for my enrollment at Yenching University as a freshman in 1932. At that time, because the Chinese government had moved south, Peking was renamed Beiping, "northern peace", and after Mukden Incident it came day by day closer to the nation's defence front lines.

One day, not long after I became a student, I was strolling on the campus and arrived at the area close to the library full of hills and streams, when suddenly a stone stele, straight as a brush, appeared in front of me, upon which from the top down in large characters one line was inscribed:

"MEMORIAL STELE TO LADY WEI SHIYI"

Followed by an inscription stating lady Wei Shiyi's life story and a short commemorative text. The last three lines, in small characters, stated the persons who erected the stele and the date it had been put up:

Erected in honour by all members of the men's and women's student unions of Yenching University, together with the student union of the Yenching high school for girls, in the 16th Year of the Republic.

So this was the stele erected on the campus to remember the second-year female student Wei Shiyi, who only one year before the erection (1926 in fact) on March 18, as a member of the Peking young student patriotism movement, had been killed by the Warlord Regime. This massacre in Peking where so many people were killed and which shocked the whole nation was known as "the March 18 Massacre". My high school was far from Peking when this massacre took place, but I was deeply influenced by the student movement of that time. After coming to Yenching I hadn't expected to experience the profound lesson of that patriotic student movement once again, a lesson which

was expressed so well in the inscription on the stele, which reads as follows:

In the country there are great parasites, the government is without law.

Foxes and rats infest the capital, they vie with each other in unbridled unruliness.

The gates of the government are awash with blood from the killing of our heroes. They slaughtered little me, but in the end there will be a reckoning!

Whether the Dipper stars do not pour wine, or the Sieve constellation winnows grain (i.e., whether high officials are aloof or they do care)

The prosperity or decay of the country depends on the support of people!

Please let those who have survived never forget this!

When going over this inscription carefully, I cannot but think that such an stele, so strong in attacking the government and denouncing the warlords, at that time was indeed an important patriotic symbol for the young students of Yenching University, and an indisputable illustration of the protection and development of the young students' patriotic ideals by the Yenching University staff. Thinking back of it now, it must have been the first lesson in patriotism I was taught by Yenching University.

In the four years after I enrolled in Yenching University, the Japanese invaders occupied the three provinces of China's Northeast, and advanced even further to the Great Wall Line in the north. Apart from the normal teaching and studying routine, the staff and students on the campus of Yenching were incessantly engaged in anti-Japanese activities. Among the professors circulated a publication about promoting resistance against Japan, with big characters "The Torch" in its cover printed; as I remember correctly the calligraphy was by Rong Geng, professor of Chinese literature. Gu Jiegang, professor of history, got everybody in their spare time together to compile propaganda material for resistance against Japan and saving the country, which was published under the name "Popular Literature Editing House". The students were constantly busy with activities supporting the army

defending the Great Wall Line to resist the Japanese army. Because of the "non-resistance policy" of the central government in Nanking, a patriotic student movement finally broke out on 9 December 1935, which spread gradually to other cities. From the very beginning of the movement the students of Yenching had an important leading role; moreover, they were supported by their teachers, including several foreign teachers. Two of them were quite extraordinary, one was Randolph Sailer, the very popular American professor of psychology, the other one was the American journalist and part-time lecturer at the Department of Journalism at Yenching, Edgar Snow. At that time, the Chinese Communist Party had already established Yan'an as its base to propagate resistance against Japan and form a united front. It was after this student movement of 9 December that Edgar Snow travelled to Yan'an and subsequently wrote his very influential book, *Red Star Over China*. It was also this student movement that increased the admiration of the students for Dr. Sailer, for he showed enormous care and support for students who, though suffering hunger and cold, had walked for miles to join the demonstrations.

Six months after the 9 December demonstrations I graduated from my department at Yenching University. The evening before my graduation Professor Gu Jiegang told me that the university had appointed him as part-time head of the history department from the next term onward, and he hoped I would stay on as his assistant. From September 1936 till June 1937, Professor Gu tried out a new approach with his class "Exercise in Research on Ancient Sites and Ancient Objects". Every fortnight on Saturday afternoon he would take the students to an old building or ancient site which he had chosen beforehand, either inside Peking's city walls or in the surrounding countryside, to make an on-the-spot investigation. He wanted me to make a written report beforehand on the basis of his reference materials and my own inspection results, and hand this out to the students for reference. It was a training very precious for me, which deepened my interest in doing research on Peking's historical

geography.

On 7 July 1937 the Japanese aggressors staged the "Marco Polo Bridge Incident" or "July 7 Incident" in the outskirts of Peking, and they attacked and occupied the city, setting off the widespread War of Resistance Against Japan. Professor Gu Jiegang left Peking quickly for the south, to escape an arrest by the Japanese. Thereafter, I obtained a scholarship by the Harvard-Yenching Institute and became a M.A. research student under the guidance of Professor William Hung. National University had, just as Peking University and Qinghua University, already after the Marco Polo Bridge Incident moved to the south. Although Yenching University was situated in an enemy-occupied area, it could continue to exist because it was run by an American Christian organisation, and Yenching was like a solitary island where the youth in enemy-occupied north China could still pursue their studies. As a research student the first problem I had was what to choose as the field of research and the subject for my thesis. Actually, William Hung had proposed me a subject long ago, when I wrote my graduation paper. Because he knew my interest had moved to historical geography, he hoped I would take the chapter on Shandong province from the work *Tianxia junguo libing shu* (*The Blessings and Ills of All Regions of the Empire*) of the famous late Ming early Qing scholar Gu Yanwu, and then add a compilation from the early Qing to the late Qing and early Republic. The point was to disclose all good and bad aspects of every place inside Shandong province of the past three hundred years, to be of reference when building up the nation, for although we were occupied by the enemy, everyone believed the war would eventually be won, and the nation would be built up again. The choice of Shandong was made because it is my original home, and also because the library of Yenching had the most Local Gazetteers on Shandong province. These Local Gazetteers are characteristic of China, they are books compiled by the authorities on the situation of all districts in all provinces, usually compiled every odd years. Because I had only limited time then, I could not but

choose another subject for my thesis with a rather smaller scope. M.A. research students had enough time to do research. It was very important then that I could get a better understanding of the idea of Gu Yanwu's *Tianxia junguo libing shu*. He was born in the late Ming dynasty, and felt great concern for the deteriorating society and politics which caused the people great suffering. Then he compiled his *Tianxia junguo libing shu*. In the foreword to his work, he wrote the following: "I am moved by the many ills that beset all the corners of our land, and thus am ashamed of the lack of skill of the students of the Classics". Then he started propagating his idea of "Use the Classics", attacking the shallow style of study of his contemporaries, and he recommended openly "everybody has a responsibility to protect the world". Thereupon, he called out loudly in distress, saying:

As of today, it is our responsibility (as scholars) to save our people from their state of utter distress and open up an era of peace for ten thousand generations.

Even when the Qing armies had entered through the passes and snatched away the ruling power of the Ming Dynasty, he kept resisting Qing Dynasty rule, and refrained from being employed. When my country was in imminent danger, I was able to understand the deeds of his life much better, and I was deeply moved. In the period that the country's crisis deepened after the occupation of Peking, it took me three years to finish my sequel to *The Blessings and Ills of All Regions of the Empire* on Shandong province. William Hung was there to recommend it, and he had my M.A. thesis published as a special edition of the 19th issue of *Yanjing Xuebao*. This work, written under the enemy puppet regime, was full of ideals of saving the country and rebuilding the land, which without Yenching University and the guidance of Professor William Hung would have never seen the light.

However, when in the winter of 1941 this book had just been published, the Japanese invasion army that had recently occupied China meeting with the persistent resistance of the Chinese people, suddenly attacked the American naval base at Pearl Harbour from the

air on December 8 (Peking time), setting off the Pacific War. It was very early that day that the Japanese military police surrounded Yenching University quickly and consequently occupied the campus. All students and staff members were expelled from the area, the staff with American nationality were locked up in concentration camps, and a couple of staff and students were arrested and confined in the army barracks of the Japanese military police in Peking, including the university president Leighton Stuart. Eleven people of the staff were arrested in all, among whom I was the youngest. Both my professors, William Hung and Deng Zhicheng, were arrested too.

Here I should go into the reasons of my arrest.

After finishing my M.A. in June 1940, I had decided to stay on at Yenching to teach, and I had already started to prepare classes. Dr. Leighton Stuart the university president, invited me for a talk. He wanted me to be in charge of some student matters part time besides teaching, because there were many problems the students were facing due to the campus' position on occupied territory. Some students had financial problems because of the war, some students couldn't work quietly because of the puppet regime, they all needed to be given care and support. Because I had been a student here for eight years myself, I was rather good in understanding the students. After three meetings, it was decided to set up a Student Welfare Committee, chaired by Professor Sailer who was very popular with the students, to facilitate tackling the Japanese if they would come to the university to stir up trouble. I was vice chairman of this committee and acted as a contact with the students. One committee member was chosen among the young and enthusiastic professors of the Colleges of Arts, Natural Sciences and Public Affairs, and the Dean was invited to be secretary of the Committee, to make it easier to communicate with the whole school's various administrative organisations and the university president. On 21 June 1940 President Stuart signed a memo and sent it to everybody appointed. I have kept my personal copy until today, and added it to this paper. Therefore, before I even entered a

classroom, I walked into the office of the Student Welfare Committee inside the large office building.

The fact that I had accepted this task had to do with the education I was given by Yenching University as well. The Yenching University motto "Freedom Through Truth for Service" was known by heart by all university students. The understanding of this motto by the students might have been profound or superficial, but there was one thing the students themselves could all feel in a minor or major degree: the spirit of helping others, to be found everywhere on the campus. This spirit of helping was most concrete in the relationship between students and staff, and also most obvious there. The establishing of a Student Welfare Committee by the president of the university is a very concrete example of this spirit. Honouring this university motto became my unshirkable duty.

Student life at Yenching University had, apart from compulsory studying, its special characteristics. Especially when the nation's crisis deepened daily and the students' activities outside the classroom became gradually more and more restricted, one characteristic became obvious, and that was the existence of an organisation called Small Christian Fellowship. As a Christian university, Yenching University had established Colleges of Arts, Natural Sciences and Public Affairs, which were officially registered at the central government in Nanking of that time, but there existed also a College of Religion, which didn't enroll students publicly but attracted students majoring in religion. The College of Religion had its own building, in which was built a small worship hall, where believing and non-believing staff and students could freely attend the Sunday service, although not many people did. There was yet another organisation, called the Christian Fellowship of Yenching University, whose office was inside the building of the College of Religion also. The Fellowship was divided into a number of small fellowships, which were led mainly by student believers. Non-believers could join freely, and some fellowships invited Christian professors to join as advisors. Every fellowship had

its own name, some names had to do with religion, like "Friends of Jesus", or "Shining Salt Group", but not all names were like that. For example, there was a fellowship which from the start was organised by six people, and was therefore called the "Group of Six". These fellowships were full of vigour, because they did not only study the Bible and discuss religious doctrine, but touched upon the problems in daily life, most importantly the discussion about current affairs. If it hadn't been under the name of a fellowship meeting, discussions about current affairs wouldn't have been possible, because it was forbidden explicitly by the puppet regime of that time. Later, the fellowship organisations developed into some small groups specialising in discussions about vocational study. I helped organising a small group on vocational study, whereby everybody came together once every weekend to exchange what one had learned when studying vocationally, called the "Saturday Symposium". Actually these student organisations, given the objective situation at that time, really set off the students' self-education, and brought about the spreading of patriotic ideals. Because the same thing had happened to me when I was a student, I was perfectly happy to share some work in caring for the students through an organisation at school.

At the office of the Student Welfare Committee Dr. Sailer and me took shifts, and started our "spare-time" work for the students. I hadn't attended his classes when I was a student, even though his class on "Mental Hygiene" was universally appraised and received enthusiastically by the students. Now I could see with my own eyes how he gave himself totally for his work, and couldn't help thinking about the Yenching motto about "service", a motto which had clearly been manifested in him. He arranged mainly "Self-Help Work" for the students with urgent financial needs, all kinds of odd jobs being paid for by the hour. Because of the war, the amount of students applying for Self-Help Work increased daily. Sailer's work load increased accordingly, but his attitude towards the students and his work spirit were so admirable that I will never forget.

My main work had to do with the students' problems of quite another nature, problems which were linked with the day-by-day development of the War of Resistance Against Japan. The Japanese invaders were getting crazier every day in "mopping up" the occupied area, so there were a minority of students then who insisted on giving up their personal opportunity to study, and plunged into the struggle to defeat the enemy and save the country. Students whom I was familiar with came directly to me, and there were also students who went straightaway to university president Leighton Stuart to discuss their plans. The president wanted me to be in charge of these matters, but he also established one principle, being that as long as the students dropped out to join the work for "the United Front Against Japan", no matter if they wanted to go to the hinterland (being the land under Kuomintang rule) or the liberated area (being the area of the Eighth Route Army of the Communist Party), they would have to receive equal treatment: to be given support, including making contacts for their route and helping out with travel costs. If they asked to change their subject of study or asked to leave to go to work, that was a different matter. I started to help the students to leave school on this principle, but as it was best to go unnoticed, I could only operate in the strictest secrecy. At that time, there was an international friend of China, Rewi Alley, who set up an organisation in Sichuan called "Chinese Industrial Cooperation", which got together mainly scattered labour groups in the inner provinces to expand production and support resistance against Japan. A very good friend of his, the English lecturer at Yenching E. Ralph Lapwood, had as early as 1939 left Yenching, and travelled through mountains in the west and the liberated area of the Eighth Route Army towards Sichuan, where he worked for this Industrial Cooperation. There were several students of the school who, influenced by him, wanted to leave and support the same Cooperation. There were also students who actively sought to join the direct struggle against Japan with the liberated area of the Eighth Route Army. In the position of vicechairman of the Student

Welfare Committee in the period of one year since the autumn of 1940, I helped these students to leave university. For a more detailed record of these affairs please read my account "Reminiscences on the Closing Down of Yenching University" in the volume *Peking under the Japanese Puppet Regime*.⁴ Unfortunately, some messages written by students who had gone south were intercepted, and I was arrested by the Japanese military police. In June 1942 I was sentenced by a Japanese military court to prison for one year with the execution suspended for three years, and was released on bail, but I had no freedom of migration or travel. When my three-year suspension period was just over, the Japanese invasion army lost the war and surrendered. The university president Stuart was released, and he immediately reestablished the university committee, seven people in all, and I was asked to join too, even though I was still quite young.⁵ The new university committee set down one strict rule, being that whoever had worked for the enemy when Yenching was closed off by the Japanese bandits, was not allowed to return to university. This rule again proved that Yenching University stuck firmly to its principles, and the rule was resolutely supported by staff and students alike.

Before I end this paper, I should make some additional remarks, being that when I came out of prison and went through my suspension period, in the field of conducting myself in society and the field of studying I received the unremitting guidance and strict demands of William Hung. The couple of letters he wrote to me by hand then are still treasured by me today. Four of these letters I had even photo reprinted, and they will appear in the second issue of the new edition of *Yanijing Xuebao* (*Yenching Journal of Chinese Studies*). This *Yanijing Xuebao*, the magazine that in the past by spreading the splendid Chinese traditional culture became famous at home and abroad, will now, under the enthusiastic support of the Alumni of Yenching University, continue to be published by the Yenching Graduate Institute, keeping its editorial characteristics. How things will develop

in the next phase, is a problem I feel should also be considered deeply.

Peking University

March, 1996

玖 我从燕京大学来*

一、中西文化交流与时代趋向

我作为一年级新生进入燕京大学，是在1932年的秋天。那时大学校园按着预定的规划设计，经历了前后十年时间，已经基本建设完成。整个校园里，风景佳丽，光彩焕发，洋溢着蓬勃向上的朝气。这是我初入学时的第一个印象，至今难忘。因此在这里先追记一下这座校园建设的本身所给我的影响。先从以下两个方面说起：

1．风景如画的校园与中国古典式的建筑。

2．校园历史的探索与传统文化的研究。

新建成的燕京大学校园，选址在北京城的西北近郊，是历史上有名的园林区。校门西向，遥对西山。校门以内，跨过一个波平如镜的池塘上的一座大石桥，就进入了教学中心。中国古典建筑形式的大楼，三面环列，中间场地开阔，绿草如茵。从教学中心深入校园腹地，岗阜逶迤，林木丛茂。大路起伏，畅通无阻。羊肠曲径，经过其间。出人意料的是穿过这一区岗阜，突然展现在眼前的是一片微波荡漾的湖泊，水光天色，视野开阔，这就是享有盛誉的未名湖。湖中有小岛，点缀其间，平添无限景色。男生的宿舍大楼，一座又一座，并列在湖泊的北岸。深在湖泊南岸岗阜密林之后的则是传统庭院式的女生宿舍。从入学的第一天起，我就为这座校园的自然风光所吸引，只是后来我才了解到，这里原是两百多年前与清朝皇室有密切关系的一座名园，叫做淑春园。园中河流湖泊的上游，来自紧相毗连的勺园。而勺园早在三百多年前的明朝，就已经是一座以水取胜的名园了。可是到了1921年燕京大学在这里开始建校的时候，这两处历史名园的建筑，都已荡然无存。燕京大学正是在这两处名园的旧址上，经过独出心裁的规划设计，充分利用其自然条件，建造起一座独具特色的大学校园。还有更重要的一点，即这座校园的建筑物，一律采用了中国古典的建筑形式，这更是历史传统与现代化要求的相互结合。

还须指出，校园的规划设计，乃是在美国建筑师Henry K. Murphy的主持下进行的，实际上这也正是在中西文化交流的影响下所完成的足

以代表时代趋向的一种新创造。¹

需要补充说明的是在燕京大学校园里，还有一些类似景点的建筑物，如小山上古松下的钟亭、俯视水面的临湖轩、湖中小岛上的思义亭和湖边上凌空而立的博雅塔，都是十分引人注目的，而“湖光塔影”更成为校园风景中颇负盛名的写照。在这里特别值得一提的是博雅塔和思义亭。

博雅塔的命名和当时燕京大学哲学系的美籍教授博晨光有密切关系。他深受中国传统文化的影响，曾兼任哈佛燕京学社在北平办事处的工作。更重要的是他的前辈曾为燕京大学前身之一的通州协和大学的发展作出过贡献。为了纪念这一历史渊源，燕京大学为供给校园内自来水而建成的水塔，就采取了通州有名的古建筑“燃灯塔”的造型而兴建起来，并且取名博雅塔。“博”字是Porter一字第一声的音译，“雅”字有“儒雅学者”的含义。英文就直接叫做Porter's Pagoda了。

比起博雅塔更有纪念意义的是思义亭。在这里“思”字是Luce一字简化的音译，“义”字有“义举”的含义。英文名称就是Luce Pavilion。这是为了纪念燕京大学第一任副校长路思义为燕京大学的筹款兴建所作出的贡献。²

我深感幸运的不仅是燕京大学校园新落成时就来到了这里而深受其幽美环境的感染，更重要的是当时洪煊莲教授对于校园历史的研究，又使我深受启发，一直影响到我日后的研究方向。

最初，还是在我入学不久的时候，洪煊莲教授关于勺园研究的重要著作《勺园图录考》由燕京大学引得编纂处精印出版（序文写于1932年10月29日）。这部书影印了明万历四十五年（1617）勺园主人、著名书法家米万钟手绘的《勺园修禊图》，使三百多年前校园一隅的景象重现于眼前。按早在燕京大学建校之初，洪煊莲教授从记载中获悉这幅画卷尚流传在人间，遂刻意访求，终为燕京大学图书馆所购得。煊莲师在影印之后，又进一步收录了晚明以来有关米万钟家世以及描述勺园景物的诗文记载，并且进行了勺园故址及其地理位置的考证。卷末还附有校园以及附近地区河湖水系的略图，极有参考价值。其中也包括了清朝乾隆年间英国使臣马戛尔尼勋爵来朝时暂住勺园故址的记述。随后，他又用英文写成了关于淑春园的研究，涉及燕京大学校园中大部分地方的重要历史情况，而且他还用英文在“大学讲演”中做了专题报告，深得师生欢迎。³

正是煨莲师关于校园历史的研究，引导我进行对于北京西北郊区历史上著名园林区的实地考察，进而又扩大到对整个北京地区开发过程的研究。

在课堂教学上煨莲师的独出心裁和严格要求，更使我深受教益。例如我还在二年级的时候，从他学习“初级史学方法”一课，主要内容之一，是科学论文写作的训练，他的要求十分具体，例如必须掌握第一手资料，必须在写作中注明资料的来源，必须有新的发现或新的说明，然后按照一定的格式写成论文。课堂讲授时间只用了半个学期。然后分配给每一位学生一个问题，要求学生到图书馆去查阅资料，分门别类写成卡片，进行研究整理，写成学期论文，作为学习成绩。当时我所分配到的问题是“历史上最爱藏书的是谁？”经过查阅图书资料，我认为有三位学者符合要求，根据收集所得，进行比较研究，在课堂上向煨莲师作了口头报告，最后选定其中明朝的学者一人，写成我的“学期论文”：《最爱藏书的胡应麟事迹考略》。结果我得到煨莲师两个字的墨笔评语：“佳甚”。这使我深受鼓舞，就把这篇写作珍藏起来，整整六十二个年头过去了，虽然历经沧桑，仍得一直保存到今天，这是燕京大学所给我的学术训练的第一课。

煨莲师对我的教导，还不仅限于课业指导，他还有意在课外为我创造条件，使我得到更为广泛的业务训练。在我作为他的研究生之后，更是如此。例如有一次，学校医学预科主任Alice Boring教授约我为PAUW用英文作一次报告，题目是Geographical Peking。这个组织的英文全名是Peking Association of University Women，它的会员自然都是长于说英语的，可是我从来还没有用英语作过讲演，心里有些胆怯，极力推辞。于是Boring教授就直截了当地告诉我说，她原来是要请洪煨莲教授去讲Historical Peking，而洪教授却一定要推荐我去讲Geographical Peking。我了解到这一情况后，就立刻去看煨莲师，说明我的英语程度还难以作公开讲演，希望他另外推荐别人。可是煨莲师却十分郑重地指点我说：“这正是你练习的好机会嘛！”他一定要我写好稿先面对他试讲，然后再到会上去作报告。这是有意对我进行训练，我也就只好同意了。

煨莲师早已体会到我的学术兴趣已经从历史学转向地理学，就有意为我安排出国深造的机会，便于从学科理论上得到更好的训练。1938年的秋学期，一天上午，我应命来到煨莲师家中的书房，他开头第一句话

就说：“择校不如投师，投师要投名师。”随后稍一停顿，他又进一步解释说：“美国哈佛大学是有名的大学，可是那里没有地理系。英国的利物浦大学虽然不如哈佛大学那样有名，可是那里却有一位地理学的名师，对中国地理很有研究，他就是Percy Maude Roxby教授。现在经过学校研究，已经决定明年秋学期送你到那里去进修历史地理学。”煨莲师和哈佛燕京学社有密切关系，曾派遣燕京大学历史系的研究生到哈佛大学去进修。可是为了我的学术兴趣，他推荐我到利物浦大学去攻历史地理学。只是转年欧战爆发，我未能成行。一直到大战结束后，我前往利物浦大学的时候，Roxby教授已经退休，而他的继任者Clifford Darby教授正是现代历史地理学奠基人之一，我深受Darby教授的影响，并把他所倡导的历史地理学的理论与方法，第一次介绍到中国来，并对中国历史地理学的发展作出了自己的贡献。现在讲到这一点，我还是不能不想到当初燕京大学给我提供的机遇。

以上我举出洪煨莲教授如何教导和培养我的一些例子，我在燕大学习期间所深受教益的，不仅是洪煨莲教授一人。当时历史系还有其他两位专任教授，即顾颉刚和邓之诚。他们两位都是著名的历史学家，却不像洪煨莲那样长于英语，学贯中西。如果说洪煨莲来燕大做教授是有历史渊源的，他既是基督教徒，又与燕大的创办有密切关系，可是顾颉刚和邓之诚两位既不是基督教徒，又不谙英语，但在中国史学界都有特殊贡献，因而受聘于燕京大学。邓之诚教授曾指导我研究中国史学专著，顾颉刚教授又进一步启发了我研究北京历史地理的兴趣（详见下文）。顾颉刚教授和洪煨莲教授一样，都受聘于哈佛燕京学社北京办事处，洪煨莲还曾兼任该办事处的负责人。在这里应该顺便提到，由哈佛燕京学社资助，由燕京大学编辑出版的《燕京学报》，被认为是研究中国文学、历史和哲学的最重要的学术刊物之一，传播于海内外。与《燕京学报》同样见重于中外学术界的，还有关于中国古代图书典籍的“引得丛刊”的编纂出版。洪煨莲教授对“引得丛刊”的规划设计以及印刷，贡献最大。在这里还应该附带提到的是，1952年燕京大学与北京大学合并后，上述两种出版物都停刊了，可是两者的影印本还继续传播于世。更重要的是1993年在北京的燕京大学校友会与北京大学分校又进行合作，成立了燕京研究院，为继承和发扬燕京大学的办学精神而努力。同时又组织以燕京校友为主的学术力量，重新编辑出版《燕京学报》，首期复刊即“新一期”已于1995年8月出版。

还应该附带提到的是1952年燕京大学合并于北京大学后，校址范围已经大为扩展，可是原来燕京大学校园，保留如昔，湖光塔影，无异当年。1990年，北京市人民政府决定将未名湖周围的原燕京大学校园，列为全市文物保护单位，刻石立碑，永作纪念。

二、爱国主义传统与献身精神

燕京大学校园虽然风景如画，却不是“世外桃源”。它虽然是从旧时代的园林废墟上建设起来，可是整个国家的命运还处在动荡不安之中。学校创办的最初几年间，北京政府一直在争权夺利、卖国求荣的军阀与官僚的控制之下。相继而来的南京中央政府，又面临着外患日疾的情况，也就是在这时候，日本侵略者于1931年阴谋制造了“九一八事变”，入侵东北三省，中国人民以不同方式所进行的抗日救亡运动，也就是从这时候进一步发展起来的。

以上情况，就是我在1932年作为一年级新生进入燕京大学时的时代背景。当时，因为中央政府南迁，北京已改称北平，而“九一八”以后的北平，也日渐接近国防的最前线。

在我入学后不久，有一天，我在校园里散步，来到图书馆附近一处溪流环绕的丘岗之间，忽然看到一座笔直的石碑耸立在面前，碑的正面自上而下刻着一行大字：

魏士毅女士纪念碑

碑座上刻着魏士毅女士的小传和纪念她的铭文。最后三行小字刻的是立碑的时间和立碑人如下：

中华民国十六年燕京大学男女两校及女附中学生会全体会员敬立

原来这是为纪念前一年，也就是1926年3月18日在北京青年学生的爱国运动中，被军阀政府所枪杀的二年级女同学魏士毅而竖立在校园中的。这次在北京被杀学生多人，是震动全国的大惨案，就叫做“三一八惨案”。惨案发生时我所在的中学虽然远离北京，可是也深受这次学生运动的影响。没有料到，我在进入燕京大学之后，竟然又一次感受到这次爱国运动的深刻教育，这一点，从石碑上所刻的铭文中又充分地反映出来，兹将铭文抄录如下：

国有巨蠹政不纲

城狐社鼠争跳梁

公门喋血歼我良

牺牲小己终取偿

北斗无酒南箕扬

民心向背关兴亡

愿后死者长毋忘

细读这篇铭文，我不禁联想到，如此强烈谴责当时的军阀反动政府的石刻，既是燕京大学青年学生爱国主义的重要标志，又是燕京大学领导维护和发扬青年学生爱国主义思想的无可争辩的说明。如今回想，这应该是我在燕京大学所接受的爱国主义教育的第一课。

在我进入燕京大学本科后的四年间，正是日本侵略者入侵东北三省之后，又进一步向华北的万里长城沿线推进的时候。燕京大学的校园里在正常的教学工作之外，师生的抗日活动也在不断地进行中。教师中曾流传着一个宣传抗日的内部刊物，封面上印着“火把”两个大字，记得是中国文学系教授容庚所题。历史系教授顾颉刚组织大家利用业余时间，编写抗日救国的宣传材料，用“通俗读物编刊社”的名义出版发行。学生中不断发起支援长城沿线抗日将士的活动。但是由于南京中央政府的“不抵抗政策”，终于激发了1935年12月9日这一天开始的爱国学生运动，逐渐扩展到其他城市。从运动的一开始，燕京大学的学生就起了重要的领导作用，并且得到教师们支持，还包括了外籍教师在内，最突出的有两位，一位是在教学上深受欢迎的心理系美籍教授夏仁德，另一位是美籍新闻记者同时又是燕京大学新闻系的兼任讲师Edgar Snow。那时主张抗日统一战线的中国共产党已经在延安建立了根据地。就是在这次“一二·九学生运动”之后，Edgar Snow前往延安从而写出了他那部影响广泛的*Red Star Over China*。也是通过这次学生运动，夏仁德进一步获得了学生们的敬佩，因为他对饥寒交迫中长途奔跑去参加游行的学生们，表示了极大的关怀和支持。

“一二·九学生运动”后的半年，我在燕京大学本科毕业。毕业的前夕，顾颉刚教授告诉我说，学校从下学年起聘他兼任历史系的系主任，要我留校做他的助教。从1936年9月到1937年6月，顾颉刚教授别出心裁地开设了一门课，叫做“古迹古物调查实习”，每两个星期的星期六下午，要带学生到他所事先选定的古建筑或重要古遗址所在地，或在北京城内，或在城外近郊，进行实地考察。事先他要我先根据他所提供的参

考资料和我自己的检阅所得，写成书面材料，印发给同学作参考。这对我是个极为难得的训练，也进一步启发了我对研究北京历史地理的兴趣。

1937年7月7日，日本侵略者阴谋制造了北平郊区的“卢沟桥事件”也就是“七七事变”，进而攻占北平城，全民抗日战争从此开始。这时顾颉刚教授为避免日寇的逮捕，仓促离开北平南下。其后，我得到哈佛燕京学社的奖学金，在洪煊莲教授的指导下，做硕士研究生。早自“卢沟桥事件”后，北平的国立大学如北京大学和清华大学都已南迁。燕京大学虽然处在沦陷区，因为是美国教会所创办，得以继续存在，犹如一片孤岛，使华北沦陷区的青年还可以升学进修。我自己作为一个研究生，首先遇到的一个问题，就是研究领域和论文题目的选择。实际上，早在大学本科写作论文时，煊莲师就向我建议过一个题目，因为他知道我的兴趣已经转入历史地理，希望我把明末清初著名学者顾炎武《天下郡国利病书》中的山东一省，加以续修，从清朝初年一直续到清朝末年和民国初期。至于选择山东一省，因为我的故乡在山东，而燕京图书馆所藏山东一省的地方志书又最为丰富。更重要的一点是这时我对顾炎武最初编写《天下郡国利病书》的目的，有了进一步的认识。他生在明朝末年，痛感社会政治腐败，人民生活于困苦患难之中。于是他立志编写《天下郡国利病书》。在全书的序文中，就写下了如下两句话：

感四国之多难，耻经生之乏术。

于是他开始提倡“经世致用”之学，痛斥当时读书人的虚浮学风，进而公开提倡“保天下者，匹夫有责”。并且大声疾呼：

今日者，拯斯人于涂炭，为万世开太平，此吾辈之责也。

及至清兵入关之后，夺取了明朝的统治权，他却始终反抗清朝的统治，不为所用。我在当时国难当头的情况下，进一步了解他一生的事迹，深受感动。我用了三年时间，在北平沦陷后国难深重的时刻，完成了《天下郡国利病书》山东一省的续编。煊莲师又及时推荐，把这篇硕士论文，作为《燕京学报》专号之十九付印出版，这本书在敌伪统治下包含着挽救祖国、重建家园的思想，如果不是在燕京大学和洪煊莲教授的指导下，是不可能问世的。

可是，就在这本书于1941年冬刚刚出版之后，正在入侵中国遭到中国人民坚决抵抗的日本侵略军，又突然于12月8日（北京时间），空中

偷袭美国的珍珠港海军基地，发动了太平洋战争。这天一早，日本宪兵立即包围了燕京大学，继而进侵校园。全体学生与教职员被驱逐出校。美籍教职员被关押到集中营，部分教职员与学生被逮捕，关押在北平日本宪兵队本部，司徒雷登校长也被拘留。被捕的教职员共11人，我也在其中，是最年轻的一个。我的老师洪煊莲和邓之诚两位教授，也同遭逮捕。

这里需要说明一下我被捕的原因。

1940年6月我完成硕士学业后，已决定留校任教，并已开始备课。这时司徒校长忽然约我谈话，要我在教课之外还兼管学生工作，因为当时学校处在沦陷区，学生中所遇到的问题很多，有的学生因军事的影响，经济来源困难；有的学生在敌伪统治下不能安心学习等等，都需要给予关心和帮助。因为我在校做学生，已有八年时间，比较了解学生情况。经过三次商谈，最后决定成立一个“学生辅导委员会”，由深受学生钦佩的夏仁德教授做主席，也便于对付日本人来学校找麻烦。我做副主席，便于和学生联系。从文学院、理学院和法学院的年轻而又热心的教师中各选一人为委员，并特邀教务主任做秘书，便于和全校的教学领导机构，即院长会议进行联系。1940年6月21日司徒校长签字发给任命通知书（我个人收到的这份通知书，保存至今）。因此在我尚未走进课堂之前，就先走进了设在办公大楼的学生辅导委员会的办公室了。

我接受这项任务，也和燕京大学所给予我的教育有关。燕京大学的校训“因真理，得自由，以服务”是每个燕京学生都熟悉的。对于这个校训的理解，或浅或深可能各有不同，但是有一点却是每个学生都能或多或少亲身感受到的，那就是洋溢在校园中的服务精神。这种服务精神体现在师生关系上最为具体，也最为突出。校长所提出的成立学生辅导委员会的设想，也正是这种服务精神的一种具体体现。遵循校训的要求，对我来说也正是“义不容辞”。

从整体来说，燕京大学的学生生活，除去业务学习之外，也自有其特点。特别是国难日深学生的课外活动日益受到限制的时候，这一特点也就格外突出，这就是基督教小团契的组织。燕京大学作为一所由外国教会举办的大学，师生的宗教信仰是自由的。这些小团契主要是由信教的学生带头组织，非教徒的学生可以自由参加，有的小团契还约请教师中的基督徒参加为顾问。小团契各有名称，有的与宗教有关，如“耶稣之友”、“光盐”，但并不是都如此。例如有一个小团契，开始是由六个人组

成的，就叫做“六人团”。这些小团契富有生命力，因为除去研读《圣经》讨论教义之外，还涉及日常生活中的问题，更重要的是时事讨论。如果不是在小团契聚会的名义下，集体的时事讨论是不可能的，因为这在当时的敌伪统治下是被明令禁止的。后来又从小团契的组织形式，发展成一些专门讨论业务学习的小组。我还参加组织过一个与业务学习有关的小组，在每个周末大家聚到一起，互相介绍自己业务学习的心得，就叫做“星期六座谈会”。实际上这些学生中的组织，在当时的客观情况下，真正起到了学生自我教育的效果，而爱国主义的思想也就因之而得到传播。因为我自己在学生时代是这样走过来的，因此在学校组织上分担一些关心学生的工作，也是心甘情愿的。

在学生辅导委员会的办公室里，我和夏仁德轮流值班，开始了我们的“业余”的学生工作。我做学生的时候，没有听过他的课，尽管他的“心理卫生”一课，有口皆碑，是深受学生欢迎的。现在我亲眼看到他在工作中的献身精神，我不由得想到燕京大学校训中所强调的“服务”这一点，在他身上已经具体地体现出来。他主要负责为经济上急需的学生安排各种各样的“自助工作”，因工种的不同，计时付酬。当时由于战火的影响，申请自助工作的学生与日俱增。他工作的负担也就有增无减。可是他对待学生的态度和他的工作精神，却使我永远难忘。

至于我所负责的主要工作，则是学生中所遇到的另一方面的问题，即随着抗日战争的日益发展，日本侵略者在沦陷区的“扫荡”也日益疯狂，这时有少数学生宁愿放弃个人学习的机会，要投身到抗敌救国的斗争中去。其中有我所熟悉的学生直接找到我，也有学生径直去找校长司徒雷登提出他们的设想。校长就要我具体负责这件事，但是他也确定了一个原则，只要是停学去参加“抗日统一战线”的工作，无论是自愿到大后方（即国民党统治区），或是到解放区（即共产党八路军的抗战区），都应一律对待，给予支持，包括联系路线和给予路费补助。至于要求转学或就业的，不在此例。就是根据这一原则，我开始了帮助学生离校的工作，只是不得公开进行，只能在严格守秘密的情况下，予以帮助。当时有一位国际友人艾黎在四川办起了“中国工业合作社”，主要是把内地分散的手工业组织起来，扩大生产，支援抗日。他的一位好朋友、燕京大学的英籍讲师赖朴吾已应约于1939年从燕京大学步行，穿越西山，经过八路军解放区前往四川，支援工业合作社的工作。在他的影响下，有些在校学生自愿前往支援工业合作社。另外也有学生主动要求

就近参加八路军解放区的直接抗日斗争。从1940年秋以后的一年间，我以学生辅导委员会副主席的身份，掩护这些学生分批离校。详细情况见于我所写的《燕京大学被封前后的片断回忆》，收入在公开出版的《日伪统治下的北平》⁴一书中。不幸的是，南下大后方的学生有人走漏了消息，因此我遭日本宪兵逮捕。1942年6月，被日本军事法庭判徒刑一年，缓刑三年，取保开释，但无迁居旅行自由。我的缓刑刚期满，日本侵略军战败投降。校长司徒雷登获释，立即召集成立复校委员会共七人，我虽年轻，也被邀参加。⁵复校委员会做出一项严格规定，即凡是在燕京大学被日寇封闭期间，参加了敌伪工作的，一律不得返校复职。这一规定，再一次显示了燕京大学坚持原则的严正立场，得到了全体师生的坚决拥护。

我在燕京学习、工作、生活了近二十年。燕京的一草一木对我是那样的熟悉，燕京的师长和同学对我是那样的难忘。我如今已是八十多岁的老人了，回顾过去，我写了《我从燕京大学来》。

⑩ I N MEMORY OF PROFESSOR P. M. ROXBY From the School of Geography of the University of Liverpool*

A telegram came this morning informing us of the sad news of Professor Roxby's death yesterday in China.

Thus, Professor Roxby lowered his guiding hand!

His help to China has stopped!

May he rest in peace forever!

A great educator of geography, a real scholar in his field and a true friend of China during the hard time of her suffering!

I sincerely believe that when his death is announced in the newspapers, all Chinese geographers, including my senior fellow workers, and especially those who were his pupils, will mourn his untimely death. All those who knew him will remember with grief the loss of a great personality.

I came to the School of Geography at the University of Liverpool drawn by his academic fame and achievements and hoping to further my training under his guidance, in the school established by him. I still remember my Chinese history teacher, Professor William Hung of Yenching University summoning me to say, "It is better to select a teacher than to select a school. But the most happy coincidence is a superior and accomplished teacher in a better school." Professor Roxby was undoubtedly a teacher of utmost accomplishment in the field of geographical education. Unfortunately, by the time I arrived in England, he had already retired from the university and departed for China as a representative of the British Council. In spite of his

advanced years, he accepted the responsibility of promoting Sino-British cooperation in science and culture.

Professor Roxby has left behind the School he established and nurtured. He never considered the possibility of dying in the far-off country which he sympathized with, and which he helped so much during her days of suffering. He offered his life to work in and friendship with China.

Early this morning I ran to the School amidst heavy snow taking with me the sad news. I raised my head and looked at the newly painted door of the School. There I saw the golden words inscribed above it: "School of Geography. Tears filled my eyes. I meditated mournfully: for several decades, hundreds of students of geography had been taught there by the old beloved professor. Now he lay dead in far-off China, my motherland.

I entered the building to seek my tutor, and Professor Roxby's successor, Professor H. C. Darby, intending to inform him of the sad news. I found him in the library reading room. Even before I opened my mouth I noticed his sadness.

"Professor Roxby is dead," I murmured. "Yes, I know," Professor Darby solemnly replied, "Mr. Smith phoned me early this morning. (Mr. W. Smith is a lecturer in Chinese geography whose own specialty is the economic geography of England.) We are waiting for more details. It is a pity indeed. We were to wait for his return in the summer to offer an open-to-all lecture on China." We left the reading room.

Later, I met Mr. F. J. Monkhouse, a young lecturer who taught me cartography. The first few words he said were "As a 'cultural ambassador' to China, Professor Roxby was the best one." I replied, "Undoubtedly. A cultural ambassador is actually an ambassador of friendship. It is not unusual that cultural ambassadors come before any political ambassadors. Such people are pioneers of their age. They are born not made. As a Chinese student of geography my sorrow is twofold. Personally I have lost a respected teacher in my field; as a

Chinese student, my country has lost a great friend!" I declared this loudly, standing near the staircase, resembling someone who is making a public speech, but actually it was an expression of my uncontrollable sorrow.

I then went upstairs to the top storey of the building, to the Center for the Study of Chinese Geography. The Center was organized and established by Professor Roxby. Another Chinese fellow-student also came, a Mr. Wu Chuen-Chun from Nanking Central University, who was a lecturer of geography there. We exchanged information concerning Professor Roxby's death. At the end, he suddenly blurted out, "You know, immediately after the Japanese started the war, they tried to buy scrap iron and copper here in England. I don't know how Professor Roxby came to know of this, but anyway, he wrote to the newspapers practically daily, disclosing the facts, and denouncing the Japanese until he finally stopped their plan." Thus even before England declared war against Japan, Professor Roxby had already become our comrade in the trench.

Just by chance, I looked back at the wall. There, hanging on it, was a glass frame with Chinese calligraphy by Professor Gu Jie-Gang, who had tutored me in China. It was the full text of "Yu Gong," one of the most ancient classics on Chinese geography, taken from *Shang Shu*, an ancient historical scripture. The frame was a present from two Chinese students of Professor Roxby at the opening of the Center. They are Professor Zhang Yin-Tang of Qinghua University at Peking, and Professor Lin Chao of Central University at Nanking. Looking at the glass frame, I couldn't help but reflect, "Now that Professor Roxby has gone, will this Center continue to function? Will the English geographers keep up their interest in studying China?" True sympathy is rooted in real understanding. Real understanding should be built upon thorough investigation and sound research. Professor Roxby is one person who obtained his real understanding of China through his thorough research. His understanding generated sincere sympathy which he offered whole-heartedly in his help to China. Thus, he was a

true friend to China during her age of suffering. And now, Professor Roxby has left us. May we wish him rest in peace forever.

I recently wrote two essays for the Chinese periodical *History and Geography Weekly*. Both concerned Professor Roxby. The first is a Chinese translation of Professor Darby's Inaugural Lecture at the time he succeeded Professor Roxby as Dean of the School of Geography at Liverpool University. It contains the following passage concerning Professor Roxby:

It is customary in an inaugural lecture to render homage to one's predecessors. It is a good custom. But it would be impertinent of me to praise Professor Roxby's 40 years' work here; his own creation, the School of Geography with its long line of devoted students, speaks for itself. Numbered among his students are not only those who have been fortunate enough to study in Liverpool. Others in other universities in Britain are his pupils, and have gained from his idealism and humanity. Beyond Britain, and particularly in China and Egypt, the same generous influence has been felt. Professor Roxby's work on China has not only enriched our knowledge in the more technical geographic sense, but has deepened our understanding of Chinese civilization.

Professor Roxby has gone, and now it is through words such as those of Professor Darby's that we feel his affection and guidance. I admit that when I translated Professor Darby's words I felt he had spoken what I wanted very much to express from my own heart.

Once again I remember the many people who expressed their affection and respect for Professor Roxby since my arrival in England. Here is a letter from a former English student of Professor Roxby, a mother of two children who graduated from the School of Geography at Liverpool:

I too studied geography at Liverpool many years ago under Professor Roxby, for whom I have great affection and respect. It is a pity that he is not in Liverpool now.

I would like to change the last sentence of her letter to "It is a pity that he is not in this world now." I know she will mourn for him. Her words not only express her own feeling but that of his many friends in England. Professor Roxby was not only a scholar of geography, but a

great teacher in geographical education. As a great teacher he not only offered us his knowledge, but also, in Professor Darby's words, nurtured us with his ideals and personality, which is the most important thing.

As an educator, Professor Roxby leaves behind him such a deep impression and influence that he and his achievements will live after him forever. Truly, the spark of his physical life is no more, but his "ideals and personality" will live and be carried on by those who succeed him.

For me, a student who came from far-off China, hoping to be taught by Professor Roxby personally, this hope will now never be realized. Nevertheless, the moment I arrived at the School, I found myself surrounded by his voice, his image and his influences. This is the place where he had worked for forty years. Every corner reflects his image of warm-heartedness and far-sightedness. Recently, for example, a dance party was organized in honour of Mr. and Mrs. Scott (the leader of the Liberal Party). A few hundred people were invited. I was surprised to also get an invitation and found out that they had done so because Professor Roxby had written from China requesting help for me. Even though I knew nothing about dancing, I nevertheless attended. There I met many of Professor Roxby's friends. All of them talked of him when I was presented to them. I could not help but have the impression that there was an inseparable relationship between every Chinese student here and Professor Roxby. From what these friends told me, I realized what deep affection and consideration the English people have for China, and what influence Professor Roxby has had on his friends. After the party, I wanted to write Professor Roxby a letter, thanking him for his kindness, even though we never got to meet. I have the following draft written in my diary, "Although I had not the opportunity to personally meet you before I left China, I nevertheless still seem to be meeting you everywhere in England." I had intended to write this to him, but later changed my mind, thinking it not so polite to say so, despite its

truthfulness. Thus I delayed mailing the letter and it remained undelivered.

In my second essay for the *History and Geography Weekly* titled "A Review of Wartime English Geographers and Their Present State," I mentioned the three volumes on China edited by Professor Roxby. Although this work was completed in collaboration with others, it is chiefly the fruit of his own research on Chinese geography.

Professor Roxby wrote many scholarly papers and theses, but never published a book (with the exception of a booklet). Yet all recent English texts on Chinese geography, without exception, mention his name. In addition to his writings for periodicals, he wrote the section on Chinese geography for the *Encyclopaedia Britannica*. Because he never published a book on Chinese geography, not many people in China know him. His achievements are rooted in the field of teaching geography rather than as an author. Yet his academic achievements in geography cannot be denied. An editorial published in the first issue of the *History and Geography Weekly* contains the following passage:

Many of us consider history and geography as academic topics only for historians and geographers, but not for common people. Such a comprehension is incomplete. If not corrected, it will hinder the development and influence of the study and research of history and geography. Our periodical is preparing to take up the responsibility of media in the popularization of historical and geographical studies. We hope to establish a normal relationship between the research of history and geography and the education of history and geography.

In the eyes of modern geographers, Professor Roxby was the first colleague to accomplish the task of promoting the desired normal relationship between research and education in geography.

On hearing the sad news of Professor Roxby's passing away, I cannot help leaving my daily work undone and planning this short passage to express my feelings about an unforgettable memory. By sending it to this periodical, I hope Professor Roxby's life and work may be an inspiration to all readers. However, do forgive my

toughness in writing.

Let us remember Professor Roxby as a great teacher of geography in our time! Let us remember him as our true friend, a friend of China when she was suffering. May we wish that his blessings, ideals and personality be with us, forever!

February 18, 1947. A very cold day.

拾 悼罗士培教授——寄自罗教授 手创之利物浦大学地理学院*

今晨电信传来，散布了罗士培教授于昨日在我国首都逝世的噩耗。

罗士培教授放下了他的手！

罗士培教授停止了他对中国的援助！

罗士培教授永远安息了！

一代地理教育的大师，一个真正的学者，一位患难中的中国伟大的良友！

我相信，当这个噩耗在祖国的报纸上传布出来的时候，国内的地理学家——尤其是得以亲炙其教益的诸前辈——一定要为这个不幸的消息流泪。地理学家以外的，其他真正认识罗士培教授的人，也一定要为这个不幸的消息而同声哀悼！

作者今天来到罗士培教授所手创的利物浦大学地理学院继续受益，原是由于先生的吸引。我还记得当初我的老师洪煊莲教授对我说过这样的话：“择校不如投师，投师要投名师。”像罗士培教授这样的学者，也算是地理学界的一位名师了。但是，不幸的很，当我来到英国的时候，罗教授却已经跑到中国去。他这次丢下了他手创的利物浦地理学院，以其退休以后的古稀之年，代表英国的交流协会，来到中国，目的乃是在于促进中英两国科学文化事业的合作。但是没想到他老先生就这样死在了他的工作上，他为他所爱的患难中的友邦，奉献了他自己的生命！

今天早上，我带着这个悲哀的消息，在冰天雪地中跑到学校，抬头看看那所刚刚油漆过的大门，与门额上所写的“利物浦大学地理学院”的两行金字，不禁潸然泪下。“在这里出入了几十年，栽培了成百成千个地理学生的那位老教授，他死在了我的祖国！”我心里默默的哀悼。

我走进大门去，找我的导师德贝教授（罗士培教授的继任者），预备把这不幸的消息告诉他。找他一直到书画室，还没等我开口，他已经是满面愁容了。他知道我这么早跑进来找他是什么事，他也一定看透了
我哭丧的面孔。

“罗士培教授故去了！”我几乎哭出来。

“是的，”他镇静的说，“史密士先生（英国经济地理及中国地理讲师，罗教授的学生与同事）一早就打电话来了，现在我们只在等更详细的消息。真可悲，我还盼望他夏天回来，给我们作关于中国地理的公开讲学呢！”

我从书画室出来，正好遇见教我“制图学”的青年讲师孟先生，他开头一句就说：

“我们没有比罗士培教授更好的人选，作为我们的‘文化使节’到中国去了！”

“不错，”我回答说，“‘文化使节’是真正的友善的使节，‘文化使节’是常常走在‘政治使节’的前面的。这样的人，都是时代的先驱，可遇而不可求！在中国学生的立场上，我的悲哀是双重的。在我个人，我丢了一位素所景仰的地理教授；在我的祖国，我们丧失了一位伟大的良友！”我站在楼梯上，好像是对他作公开演讲，实在是发抒我自己不可抑止的悲哀。

于是，我上楼，爬到四层楼顶上残存下来的“中国地理研究室”，中国同学吴传钧兄（南京中央大学地理系讲师）也来了，我们互道罗士培教授逝世的消息。最后，他跳起来说：

“你知道么？卢沟桥战事爆发之后，日本人在这里设法收买废铜烂铁。这事情不知道如何给罗士培教授知道了，他天天在报纸上写文章，大施攻击，一直到把日本人的收买工作完全破坏为止！”

“这样说起来，在他作‘文化使节’之前，在英日还没有宣战之前，他已经作了我们的‘战友’了！”

这时，我蓦然回头，看见挂在墙上的大玻璃镜中，顾颉刚师所手写的《尚书·禹贡》全文，这是当“中国地理研究室”成立时，罗士培教授的高足张印堂教授（清华大学）与林超教授（中央大学）所共同赠送的纪念。我心里不禁想道：“罗教授去世了，英国研究中国地理的中心，还会在这里继续么？英国的地理学者还会像以前那样对中国研究热心么？”真正的同情，基于真正的了解，真正的了解，基于真正的研究。罗教授是真正由研究而了解，由了解而同情，由同情而援助中国的一位患难中伟大的良友！如今他放下了他的工作，他永久安息了！

在我最近寄给《史地周刊》的两篇文稿中，都会涉及罗士培教授。第一是拙译德贝教授的就任演讲。在那篇演讲中，德贝教授对他的前任

罗士培教授曾经说过这样的话：

在就任演讲中，照例是要对前任表示敬意的。但要本人在这里称赞罗士培教授在本校四十年的工作，未免有些鲁莽。罗教授所手创的地理学院，以及其专诚献身的满门桃李，已自昭彰在人耳目。何况，出身在他门墙之下的，还不仅限于幸能身临利物浦以得亲炙教授的人呢！英国其他大学的好多人，也都是他的小学生，并且因他的理想与人性，而深受陶冶。英国之外，特别是在中国与埃及，也同样沾受了他丰厚的赐惠。罗士培教授关于中国的著作，不但在专门的地理学的意义上，增加了我们的知识，并且使我们更进一步了解了中国的文化。

现在，罗教授已经去世了。在他去世之后，我们再重读德贝教授对他的评语，尤觉无限亲切。当我最初翻译这一段的时候，我立刻觉得德贝教授也说出了我心中所要说的话；同时，我也立刻回想到自从我来到英国之后，有多少人曾当面对我提起了他们对于罗士培教授的亲切爱慕之情。不久之前，我还接到了未曾晤面的一位英国朋友的信，她是早年在利物浦大学地理学院毕业的一位女生，现在已经作了两个孩子的母亲，在她的信里，她曾这样写道：

.....知道你是来研究地理的，尤为高兴。好多年前，我也是在利物浦大学从罗士培教授读地理的，对于他，我心中怀有无限的爱与敬！真可惜，他现时不在利物浦了！

刻下我找出此信，试译在这里的时候，这最后一句，应该改作：“真可惜，他已经不在人世了！”她知道这消息时，一定要痛哭一场！

这位朋友的信，不只代表她个人，在英国，不知道有多少人要对这位老教授说出同样的话来：“对于他，我心中怀有无限的爱与敬！”是的，他不但是位地理学者，他更是一位地理教育的大师。一位大师所能授予人的，不止是他的学问，更重要的乃是他人格的感化，乃是他的“理想与人性”的“陶冶”（德贝教授评语）。世之为人师者，果能予人以如此的影响，果能在人心中留下这样的印象，即遗教在人，虽死犹生！他现在生命的火焰停熄了，但是他的“理想与人性”，却要永远活在后继者的心上！

对罗士培教授，我是一个万里投师而未得亲炙教益的小学生；但是在我来到此处之后，我好像无处不听见他的声音，无处不看见他的容颜。这是他工作了四十年的地方，在这地方的每一个角落，好像都在反映着这一代大师的和煦慈爱深厚博大的音容。比如前本地自由党的领袖司各特夫妇举行社交跳舞大会，被约请的有数百人，承他们的好意也

一定要我去，说是他们的朋友罗士培教授从南京写信给他们，要他们多多关照我。他们认为这是交结社会人士的好机会，所以一定要我去。我虽然不会跳舞，也只好勉强去了。到了那里之后，又遇见了许多罗士培教授的朋友。他们看见我，都谈起罗士培教授，好像每一个中国学生都和罗教授有不可分离的关系似的。从他们的谈话中可以知道，罗士培教授实在代表了英国社会人士对中国最高尚最真实最友爱的关切。而此地的人则又似乎无不传染了罗士培教授的影响。当晚回来之后，我想写一封信，谢谢罗教授，因为他虽然知道我来，却是未曾见面，承他如此惦记，实可感激。当时我曾在手册上写下这样两句话：“离国之前，未能谒见你，可是来到英国之后，却又无处不遇见你！”但又觉得这样的写法，虽出至诚，然而对于一位年长的前辈，似乎不够尊敬，因此竟然搁置。现在，我再想这样写去时，也没人看了！

其次，在我最近寄给《史地周刊》的第二篇文稿，《战时英国地理学界之回顾及其现状》中，我又提到罗士培教授在“地理丛书”中所主编的《中国地理》三大册，这虽非他独立完成，可是他一生对于中国地理研究的结晶，应当都在这里了。罗教授一生写了不少文章，却没有出版一部书（小册子除外），但是近年以来，凡讨论中国地理的西洋著作，几乎没有一册不提到他。除去在各地理杂志上他所发表的论文之外，早年《大英百科全书》中，关于中国地理的一部分，也是由他执笔的。只因他对中国的研究未出专书，所以国内的一般读者，反而不大知道他。至于他最大的贡献，我觉得与其说是在专门学术上的研究，毋宁说是在地理教育上的推动；与其说他是一位地理学专家，毋宁说他是一位地理教育的大师；自然，他在学术上的贡献也是不可泯灭的。

本刊的编者在第一期的发刊辞上，曾向读者诸君宣告说：

一般人提到史地，马上觉得这是史地学专家的专门学问，普通人不敢也不能问津。这种不健全的现象，若不加以纠正，将使史地研究失掉意义和作用。本刊愿意负责介绍人的责任，作些普及化的工作，使史地研究与史地教育发生正常的关系。

在现代地理学家中，罗士培教授可以说是作到了“使地理学的研究与地理学的教育发生正常的关系”的第一人！

作者今日得此噩报，痛悼万端，不得不扔下平日的工作，将痛苦抑郁之情，有所抒发，所以信笔写下了这篇追悼的文字。又因为罗教授一生的工作，正是本刊努力的榜样，所以又大胆把这篇私人追悼的文字，

寄呈本刊的读者。假如语无伦次，亦是情不自禁，望读者诸君原谅。最后让我们纪念这位当代地理教育的大师！

让我们纪念这位患难中的中国的良友！

愿他的遗泽长存人世！

愿他的“理想”与“人性”继续不朽！

一九四七年二月十八日大寒中

⑪ ADDRESS AT THE COMMENCEMENT OF LIVERPOOL UNIVERSITY*

It is a rare honour to speak on behalf of the graduates and honorary graduates to express our gratitude to the University of Liverpool for all we have received from her in training of our minds and increasing our awarenesses.

The young graduates among us will be discovering more and more of this debt as the years pass by.

Others of us must reminisce.

My membership of the University should have begun in 1940 or 1941. In 1939 Yenching University (a private university in Beijing now absorbed into the National Peking University) awarded me the Blue Funnel Scholarship, established by the Alfred Holt Shipping Company. All told the scholarship has been held by six persons working in Physics, Statistics, Economics and Geography.

I remember clearly how one morning in the autumn of 1938, my professor, the distinguished Chinese historian, William Hung, summoned me to his office and said, "Choosing a teacher is more important than choosing a school. The happiest thing is when the good teacher you need is to be found in a good school." While I was wondering what he was talking about, he continued, "We have nominated you for a scholarship for advanced study in the School of Geography of Liverpool University. There you will find a world-renowned teacher of geography in a university of world-wide connections. He is Professor Percy Maude Roxby."

It was not to be, because the Second World War broke out. In 1941, instead of sitting in a Liverpool University lecture hall, I found myself in a Japanese army prison, along with Professor Hung and

other colleagues(including Dr. Lin Chia-Tung, an earlier Blue Funneller who studied Statistics here).

The link between Liverpool University and Yenching University survived the war, and in 1946 my dream of coming to Liverpool University was realized, but seven years late. By this time Professor Roxby had retired after 40 years of service. Ironically, he had gone to China as representative of the British Council. Professor H.C. Darby succeeded him as Head of the School of Geography. His Inaugural Lecture "The Theory and Practice of Geography" made such an impression on me that I translated it into Chinese and it was published in Tientsin in the *History and Geography Weekly*, a supplement of the famous *Yi Shi Newspaper* on March 18, 1947. Alas! that same issue also contained an essay I wrote commemorating Professor Roxby who had just died in China. I have brought a photograph of that issue of the *Weekly* together with an English version of my article, for presentation to the Library of the School of Geography.

The many new ideas on historical geography that Professor Darby developed in his teaching have been influential in China, producing a new school of study that has grown especially fast in the past decade. Just before I came abroad early this year, we established a new Research Centre on Historical Geography along these lines in Peking University.

There is a Chinese proverb 饮水思源: "When drinking water remember the water source." I published a book—a collection of my scientific papers which bear on some aspects of the socialist reconstruction of China. It was natural and proper for me to borrow the title of Professor Darby's Inaugural Lecture, simply adding the word "Historical": "The Theory and Practice of Historical Geography." I am giving a copy of the first edition of this little book to the Harold Cohen Library, which itself is a "water source" so ocean-like that I almost drowned in it nearly 40 years ago.

My key thought for this unforgettable day is pride and gratitude that Liverpool University has been such a bounteous source of the

living water of creative thought that flows from people to people and gives us all hope for the future.

Some 40 years ago, just after the Second World War, Professor Darby said it for his particular discipline, ending his Inaugural Lecture with the following words with which I would like to end mine:

As I stand here amid the devastation of war on Brownlow Hill, and in Liverpool, a city with contacts as world-wide as those of any city, I cannot help but think that the point of view of the geographers both abroad and at home is not without some bearing on the New World we hope will be our future.

Thank you.

拾壹 1984年7月4日在英国利物浦大学毕业典礼上代表应届毕业生及荣誉学位获得者致辞*

能够作为毕业生和荣誉毕业生代表发言，以表达对利物浦大学对我们心灵的训练和智识的提升的感激之情，我倍感荣幸。

随着时间的推移，我们中间的年轻毕业生将会越来越多地体会到这份感激。

其他人将会铭记一生。

我跟利物浦大学的联系应该是从1940或1941年开始的。1939年燕京大学（北京的一所私立大学，现在已经并入国立北京大学）颁给我阿尔弗雷德·霍特航运公司设立的蓝烟囱奖学金。先后有六位从事物理学、统计学、经济学和地理学研究的学者获此殊荣。

我清楚地记得1938年秋的一个早晨，我的老师，著名的中国历史学家洪业教授是怎样把我喊到他的办公室，对我说，“择校不如投师，投师要投名师。”当我还在琢磨他说的是什么时候，他继续说：“我们已经提名你接受去利物浦大学地理学院深造的奖学金了。在这所跟世界广泛联系的大学里，你将会认识一位世界知名的地理学老师。他就是罗士培教授。”

但事情没这么简单。因为第二次世界大战爆发了。1941年，我非但没有坐在利物浦大学的讲堂里，却和洪教授以及其他同事（包括林嘉通博士，之前在利物浦大学攻读统计学的蓝烟囱奖学金得主）一起被关进了日本军队的监狱。

利物浦大学和燕京大学之间的纽带在战火中幸存了下来，1946年我来利物浦大学的梦想终于在七年之后实现。这个时候罗士培教授已经服务四十年退休了。而命运弄人，他却作为英国使馆文化教育处的代表去了中国。德贝教授接替他担任地理学院的院长。他的就任演讲“地理学的理论与实践”给我留下了非常深刻的印象，于是我把它译成中文并于1947年3月18号发表在天津著名的《益世报》的副刊《史地周刊》。同一期还发表了我写的缅怀刚刚在中国去世的罗士培教授的文章。这次我

带来了这一期周刊的翻拍照片以及我文章的英译本，将呈献给地理学院图书馆。

德贝教授在教学中形成的关于历史地理学的很多新观点已经在中国产生了很大的影响，并催生了一个在过去十年间飞速发展的新学派。就在今年我出国之前，北京大学新设立了一个这方面的历史地理学研究中心。

中国有句成语叫饮水思源——喝水的时候要记得水的源泉。我出版了一本有关中国社会主义重建若干问题的科学论文集。我顺理成章地借用了德贝教授就任演讲的标题，仅仅加上了“历史”这个词——《历史地理学的理论与实践》。我将拙著第一版赠送给哈罗德·科恩图书馆，四十年前正是在这座图书馆徜徉时我几乎被浩瀚的知识海洋所淹没。

这难忘的一天中我最深的感受是欢愉和感激，利物浦大学是创造性思想的宽广丰沛的活水源头，这活水在人们之间流淌着，带给我们所有的人对未来的希望。

大约四十年前，就在二战后，德贝教授就他的学科说了如下这番话，以此结束他的演说，而我正想用它来结束我的发言：

当我站在这里，置身布朗洛山的满目疮痍，在利物浦这样一个跟任何其他城市一样与世界紧密联系的城市，我禁不住想到海内外地理学者的观点都不会不涉及一个新的世界，而它正是我们希望的未来。

谢谢。

邵冬冬 译

⑫ HOU RENZHI's ACCEPTANCE ADDRESS FOR THE GEORGE DAVIDSON MEDAL*

When I was informed that the American Geographical Society was going to award me The George Davidson Medal, I had not thought that in these late years of my life I would receive such a high international honor. This happy news has also brought a considerable and important attention on the part of many of my colleagues in the circle of Chinese geography. I wanted very much to come and to accept this prestigious award personally. Yet, because of my poor health, I cannot but request my good friend, Dr. Diane Obenchain, who is a Visiting Professor at Peking University and who is working with me cooperatively on a project, to represent me. However, if Dr. Murphy or any other member of The Honors Committee of The American Geographical Society has the opportunity to come to China, I ardently hope that we can meet each other at Peking University so that I may in person express my heartfelt gratitude for this award.

What I would like to first explain is that George Babcock Cressey, who, in 1952, was the first to receive The George Davidson Medal, had, in fact, great influence upon me from the very start. Sixty-three years ago, in 1936, the year I graduated from Yenching University, I was fortunate enough to read Cressey's book *China's Geographic Foundations*. This drew my profound interest and is one of the main reasons why I was moved to change from strictly historical studies to research in historical geography. However, because of the eight-year Anti-Japanese War, it was not until the summer of 1946 that I was able to go as planned to Liverpool University in England to specialize in the study of historical geography under the expert guidance of Professor H. C. Darby.

In 1949, Professor G. B. Cressey, as the newly-elected President of the International Geographical Union, was invited to Liverpool University to give a guest lecture entitled "China's Prospects." This occasion remains quite distinct in my memory. The day was April 27th, in the afternoon. A great many people came to hear the lecture, which indicated a tremendous interest in China's future. I also was very moved by the lecture. Professor Darby presided over the lecture and at his request I was invited to give a few words in gratitude on behalf of the audience at the end of the lecture. This was the first time that I had occasion to meet Professor Cressey and it has remained an unforgettable memory for the rest of my life.

What should be mentioned especially here is that it was only five months and three days after Professor Cressey's lecture that New China was born on October 1st, 1949. And it was just three days before the birth of New China that I returned to Beijing from England.

When New China established the "Beijing City Planning Committee" for reconstruction of the capital, Beijing, I had the honor to be invited as a member of the committee. For research reference and for the purposes of planning construction, my first responsibility was to make geographical investigation of the newly-designated cultural and educational region of the capital. This important region in the northwest suburbs of Beijing city, called the Haidian, was the famous terrain of the summer palaces of the Qing period, and has become today the location of Peking University, Qinghua University, the Chinese Academy of Sciences, Renmin University, the National Library, the Central University of Nationalities, the Agricultural University and several others.

Since the days of those initial tasks on the "Beijing City Planning Committee", fifty years have passed. During these fifty years, except for the few years that I participated in investigations of China's Northwestern desert areas, most of my research work has concentrated upon the historical geography of Beijing city. My intention has been to make a contribution to the planning and

construction of the capital.

During the past fifty years, China has undergone enormous changes. Particularly during the last twenty years of reform and opening up to the larger world, cultural exchanges between China and other countries have increased daily. Now, as I look back over the past twenty years, during which I have had the opportunity to visit the United States twelve times, I feel greatly honored to have been invited as a Fulbright Scholar in Residence to give lectures at Illinois University during 1981-1982. I will always remember that significant time.

Following this, I received a letter of invitation from Dr. Alison Casarett, Vice Provost and Dean of the Graduate School of Cornell University, requesting that I be their Chinese Scholar in Residence during the years 1983-1984 under the Luce Foundation Program for China Studies. In her letter she said, "I note your recent strong interest in the comparative design and layout of the older city portions of Beijing and Washington, D.C." What she said was exactly true. Therefore, her invitation was indeed a precious opportunity for me. Not only did I spend one semester doing in-house research on the campus of Cornell University, which is full of natural beauty, but I also, while on the "Cornell in Washington Program," was able to carry out on-location investigation of the central part of the city of Washington, D.C. In the end, I was able to complete my piece for Chinese readers entitled, "From Beijing to Washington, D.C.—Explorations into Thematic Design in City Planning."

To look back on the past is at the same time to look ahead to future developments. This year I am eightyeight years old. As I look back to that year when G.B. Cressey gave his lecture "China's Prospects," a new picture now unfolds before my eyes. To have this high honor of receiving The George Davidson Medal is truly a great encouragement to me. I will continue to work hard in carrying out research on the historical geography of Beijing. At the same time I join hands and go forward together with the next generation of excellent

young scholars. I am very grateful to Professor Diane Obenchain who has represented me in reading my address to you today and extended once again my heartfelt respect and gratitude toward the Council of the American Geographical Society for awarding me this most precious honor. Thank you.

拾贰 在美国地理学会荣誉委员会 授奖仪式上的发言*

在我获悉美国地理学会将要授予我乔治·戴维森勋章的时候，我没有想到在我人生的晚年能够获得如此崇高的国际荣誉。这个喜讯，也引起了中国地理界众多好友的高度重视。我极愿意亲自前来接受这一崇高的荣誉，只因健康关系，不能成行，只好拜托在北京大学任教并且和我有合作关系的好朋友欧迪安博士前来代我领奖。但是如果墨菲博士或是美国地理学会荣誉委员会其他负责者，能有机会前来中国，我殷切希望能在北京大学相会，使我得以亲自表示我衷心的感谢。

在这里我愿意首先说明的是，早在1952年第一位乔治·戴维森勋章的获得者葛德石，原是对我很有影响的一位学者。六十三年前的1936年，也就是我在大学毕业的那一年，我有幸阅读了他的《中国地理基础》。这本书深深吸引了我，也是促使我从历史学转向历史地理学研究的原因之一。只是随后发生的连续八年的抗日战争，使我直到1946年夏才得以前往英国利物浦大学地理系，在德贝教授的指导下，专攻历史地理学。1949年，葛德石教授作为新当选的国际地理学会的主席，应邀前来利物浦大学作学术讲演，题目是“中国的前途”，非常引人注目，时间是在4月27日下午，当时到会的听众很多，这表明人们十分关切中国的前途。我自己听了很受鼓舞。德贝教授主持了这次演讲会，并要我在讲演完毕后，代表听众致谢辞。这是我和葛德石教授第一次会面，使我终生难忘。

现在应该特别指出的是当时葛德石教授演讲的时间，距离1949年10月1日新中国的诞生，只有5个月零3天，也正是在新中国诞生的前三天，我从英国回到北京。

新中国重新建都北京，成立了“北京市都市计划委员会”，我有幸应邀作为委员。我所承担的第一项任务，就是为首都新定的文化教育区，进行地理考察，作为规划设计的参考。

现在五十年的时间已经过去，在这五十年间，除去有几年的时间我参加了我国西北地区的沙漠考察之外，主要的研究工作，都集中在北京

城的历史地理研究上，力求为首都的规划建设，作出贡献。

过去的这五十年，中国发生了巨大的变化，特别是近二十年，在改革开放的新形势下，中外文化的交流，日益增加，现在回顾这二十年来，我曾有十二次来美国访问。其中我深感荣幸的是1981—1982年，我曾应邀作为富布莱特驻校学者前往伊利诺伊大学讲学，这是我永远难忘的。

其后，我又接到康奈尔大学副校长兼研究生院院长艾莉森·卡萨特博士的邀请信，约我作为驻校学者受卢斯基金会中国研究计划资助于1983—1984学年访问康奈尔大学。信中还特别有如下几句话：“我注意到您最近对北京城与华盛顿城城市布局设计对比研究的强烈兴趣。”她讲的确是事实。因此，她的邀请，对我来说，实在是一个难得的机会，结果我不仅在康奈尔大学富有自然之美的校园里度过了一个学期的室内研究，而且还得以按照“康奈尔大学华盛顿研究计划”对华盛顿城的中心部分作了实地考察。我终于完成了为中国读者写的论文，题目就是“从北京到华盛顿——城市设计主题思想试探”。

现在回顾过去，正是为了展望未来。今年我已88岁，回顾当年葛德石所用过的讲题“中国的前途”，又有新的景象展现在眼前。我能荣获乔治·戴维森勋章，正是对我极大的鼓励，我将在北京历史地理的研究上继续努力，并和后起之秀携手前进。我非常感谢欧迪安教授代我宣读我的讲话稿，并代替我再一次向美国地理学会理事会表示我的敬意和感激之情。谢谢。

NOTES 注释

①

- * 中文稿在《历史地理》(第二辑)发表时,作者曾在本文开头简短作注,现照录如下:“1980年春,作者应加拿大不列颠哥伦比亚大学的邀请,前往进行短期讲学,曾作公开讲演三次,现在把有关北京历史地理两讲的中文原稿,略加删改合为一篇,重新标题,发表在这里,请国内读者指正。”本版收录的英文即为作者演讲稿原文,由打印稿转录而来。——编者注
- 1 清建国于1616年,初称后金,1636年始改国号为清,1644年入关。同一问题重复出现不另作说明。各篇文章创作、发表年代不同,人名、地名的拼写、译法或有出入,在单篇文章内保持一致。——编者注

②

- * 中文稿刊于《城市问题》1984年第6辑,作者曾在本文开头简短作注,现照录如下:“美国芝加哥大学地理系为该系著名地理学家C. D.哈瑞斯教授(Chauncy D. Harris)的退休编辑出版了纪念性学术论文集《现代城市变化的世界模式》(*World Patterns of Modern Urban Change*, Michael P. Conzen ed., Chicago: University of Chicago, 1986)。世界各大洲(除南极洲外)都有地理学家应邀撰稿。此文即该论文集21篇论文中的一篇,用英文刊出,这是中文原稿。”——编者注

- 2 Later the name was changed to Jing Shan (Scenic Mountain) and also Mei Shan(Coal Hill).
- 2 后来改名景山,俗称煤山。
- 3 During this period, the canal formerly outside the Royal City's east wall was incorporated into the Royal City, and shipping on the Grand Canal was thus unable to reach Ji-shui Tan. The lower part of Ji-shui Tan was connected with Tai-ye Chi to the south, and the aqueduct which had been specifically created to supply water to Tai-ye Chi was abandoned. Altogether, the city's water system regressed under the Ming Dynasty's management.
- 3 这时连同原在皇城东墙之外的运河渠道,也被包入城中,从此大运河的船只,再也不能驶入积水潭,积水潭的下游又恢复了南接太液池的故道,而太液池先前专用的引水渠也就日渐湮废。因此从河渠水道的调整来说,明北京城较前是退步了。

- 4 The name "Shan Chuan Tan" was later changed to "Xian-nong Tan" (Altar of the God of Agriculture).
- 4 山川坛后来又改称先农坛。
- 5 During the Ming Dynasty, the Tian-an Men was called the Cheng-tian Men.
- 5 明曰承天门。

- * 英文稿原发表于*China City Planning Review* (Sept. 1995) , 文前摘要如下："This article has made comments on the three milestones in the construction of Beijing City: the Forbidden City, the Tian'anmen Square and the Public Building Complex outstandingly embodying the new style and features of the capital of the 21st century, along the northern extension line of the middle axis of the whole city. According to this demonstration, the author has further pointed out that the development of the third milestone is in fact the break-through in Beijing's traditional thought of design and demonstrated the origin of this traditional thought of design in accordance with the discovery in archaeology."

④

- * 英文稿前原有关于本研究的背景介绍，现照录如下：Comparison between Chinese and foreign municipalities is one of the most important aspects of scientific urban research. Such research has only begun in China. It will help us to improve the process and development of urban construction, to inherit better the wealth of China's culture, to absorb more appropriately the cultural achievements of foreign countries, and thus, to be able to create the kind of Chinese city and urban culture that will bear the special characteristics of the Age of Socialism. Professor Hou's paper "From Beijing to Washington—A Contemplation on the Concept of Municipal Planning" is a persuasive study based on a comparison between Chinese and foreign municipalities. He discusses the subject in the aspects of historical, cultural and chronological differences. He points out the special features of Beijing and Washington and the development of the basic conceptual theme in their designs and plans. He puts forth a detailed comparison between the two cities and offers ingenious suggestions on the future construction and development of Beijing. Professor Hou made a special study in 1984 at the College of Architecture in Cornell University on the subject of the

comparison between Beijing and Washington, the choice of the sites of the capitals and their design and plan. This is the first article of his research.

- 14 Situzo Kuwabara has made an extensive study on the life of P'u Shou-keng and his scholarly work has been translated into Chinese by Chen Yü-ch'ing entitled *P'u Shou-keng K'ao* (2nd print, Shanghai, 1954).
- 14 日本学者桑原鹭藏：《蒲寿庚的事蹟》，东京，1935年。此书对蒲寿庚身世有详细考证，兼及唐宋时代中国与阿拉伯海上通商的情况。有陈裕菁汉文译本，题《蒲寿庚考》，上海，1954年。

- 15 The dates of the seven voyages of Cheng Ho are as follows:

- 1 . 1405—1407,
- 2 . 1407—1409,
- 3 . 1409—1411,
- 4 . 1413—1415,
- 5 . 1417—1419,
- 6 . 1421—1422,
- 7 . 1430—1433.

During the last ninety years various studies on the life of Cheng Ho have been published by European and American scholars. The French Orientalist P. Pelliot has written a comprehensive dissertation, *Les grands voyages maritimes chinois au début du XVe siècle*, *Toung Pao*, 1933, pp. 237–452. Owing to the lack of indispensable source materials, mistakes in his conclusions on the dates of the last six voyages of Cheng Ho are unavoidable.

- 15 七次航行年代：1405—1407，1407—1409，1409—1411，1413—1415，1417—1419，1421—1422，1430—1433。近百年来，欧美学者研究郑和及其事迹者不乏人，著述亦多。书较晚出、影响较大的是法人P. Pelliot，所著长文：Les grands voyages maritimes chinois au début du XVe siècle，发表于*Toung Pao*, 1933, pp. 237–452。但是由于作者所根据的史料不足，对于郑和后六次航行日期的考订，不免有错误。
- 16 Chu Yün-ming, *Chien Wen Chi*, article on the voyages of Cheng Ho, *Chi Lu Hui Pien* edition, *Chüan* 202, p. 37.
- 16 祝允明：《前闻记》，“下西洋”条，《纪录汇编》卷二〇二，商务印书馆影印明刻本，页三七引。
- 17 *Ibid.*, and *Cheng Ho Hang Hai T'u* (The Sailing Chart of Cheng Ho), edited by Hsiang Ta, Peking, 1961.
- 17 航海记录见祝允明：《前闻记》，“下西洋”条。航海图原题《自宝船厂开船从龙

- 江关出水直抵外国诸番图》，近经北京大学向达教授加以考订和说明，作为专书，题为《郑和航海图》，于1961年由中华书局影印出版。书中还另附郑和远航的略图，图上除去第七次航路外，还表示了前六次所曾经航行过的路线，而且把一些已能确考的现在地名，加注在原地名后面，古今对照，一目了然。这是已发表的有关郑和远航路线图中最好的一幅，本文附图即据此图简化复制。
- 18 For detailed information, see S. A. Huzayyin, *Arabia and the Far East: Their Commercial Cultural Relations in Graeco-Roman and Irano-Arabian Times*, Cairo, 1942, pp. 112–113, and J. N. L. Baker, *op. cit.*, pp. 19–20.
- 19 Tu Huan (in *Ching Hsing Chi*) and Tuan Ch'eng-shih (in *Yu Yang Tsa Tsu*) of the T'ang Dynasty gave the earliest information in Chinese records about Molin Kingdom. Tuan's work is easily available, while Tu's work is now preserved in the form of citations in other works. A collection of these citations with commentaries has been published recently by Chang Yi-ch'un under the title *Ching Hsing Chi Chien Chu*, Peking, 1963.
- 19 唐朝杜环所著《经行记》一书中，有关于摩邻国的记载，见杜环著，张一纯笺注：《经行记笺注》，中华书局，1963年，第20页。按摩邻国有的学者认为即是麻林（或麻林地）国。又段成式所著《酉阳杂俎》一书中，有关于拔拔力国的记载，见汲古阁刻本，卷四，“异境”条，页四上。《新唐书》卷二二一下《大食传》引用其文。按拔拔力即Berbera（今译柏培拉）在中国最早之对音。参考冯承钧《诸蕃志校注》，中华书局，1956年，第55页。
- 20 *Sung Shih* (Dynastic History of Sung), *Chüan* 490, section on *Tsengtan*.
- 20 《宋史》卷四九〇，“层檀”条。
- 21 Feng Ch'eng-chün, *Chu Fan Chih Chiao Chu*, Shanghai, 1956, pp. 54–55. *Chu Fan Chih* was written by Chau Ju-kua in 1225. It has been translated and annotated by F. Hirth and W. W. Rockhill (*Chau Ju-kua: His Work on the Chinese and Arab Trade in the Twelfth and Thirteenth Centuries, entitled Chu-fan-chi*. St. Petersburg, 1911).
- 21 冯承钧：《诸蕃志校注》，第54—55页。此书有F. Hirth和W. W. Rockhill英译本，并加注释，题曰：*Chau Ju-kua: His Work on the Chinese and Arab Trade in the Twelfth and Thirteenth Centuries, Entitled Chu-fan-chi*, St. Petersburg, 1911.本文所根据的冯承钧校注本采用了Hirth与Rockhill的注译，并作了订正和补充。又元代汪大渊在1329—1339年间，乘海舶远游中国南海及印度洋，就所见闻，著《岛夷志略》一书（约写成于1349年），记有层摇罗，即桑给巴尔。
- 22 See Feng Ch'eng-chün, *op. cit.*, and Wang Ta-yüan, *Tao Yi Chih Lueh*, written about 1349.
- 22 例如写成于1225年的赵汝适的《诸蕃志》，就有下列各国的记载：勿斯里国（埃及）、中理国（索马里沿岸，包括Socotra岛，今译索科特拉岛）、弼琶罗国（Berbera）、层拔国等。
- 23 Hsia Nai, *Porcelain Links in Sino-African History*, *Wen Wu Monthly*, Peking,

1963, No. 1, pp. 17-19.

- 23 早在1888年，桑给巴尔就有宋代中国铜钱和瓷器出土，1898年索马里的摩加迪沙，也发现宋代中国铜钱和瓷器。近年以来，在索马里和埃塞俄比亚交界处的三个古城废墟，和在坦噶尼喀（Lake Tanganyika）沿岸40多处古代遗址，以及松哥玛那拉（Songo Mnara）岛上，都有很多中国瓷器瓷片的发现，其中有宋末元初的龙泉窑青瓷片。在肯尼亚的马林迪附近的给地（Gedi）古城中，还有宋代铜钱出土。此外摩加迪沙还曾有唐代铜钱的发现，详见夏鼐：《作为古代中非交通关系证据的瓷器》，载《文物》1963年第1期。按在12世纪时，中国与东非可能已有直接的通商贸易，中国海舶可能已航驶东非。参看张铁生：《从东非史上看中非关系》，载《历史研究》1963年第2期。
- 24 Chu Yü, *P'ing Chou K'ê T'an*, Shou Shan Kê edition, *Chüan* 2, 1922, p. 3. Hsu Ching, *Hsüan Ho Feng Shih Kao Li T'u Ching*, T'ien Lu Lin Lang edition, *Chüan* 34, p. 12, 1931.
- 24 朱或：《萍洲可谈》卷二，博古斋1922年影印守山阁丛书本，页三下；又徐竟：《宣和奉使高丽图经》卷三四，北京故宫博物院1931年影印天禄琳琅丛书本，页十二上。
- 25 Situzo Kuwabara, *A Study of P'u Shou-keng* (in Japanese), Tokyo, 1935, pp. 92-93.
- 25 桑原鹭藏：《蒲寿庚の事蹟》，第92—93页。
- 26 Hsiang Ta, *op. cit.*, p. 57.
- 26 意即从官屿群岛出发，按庚酉方向（约当262度左右）前航到达木骨都束。向达：《郑和航海图》，页五七。
- 27 Feng Ch'eng-chün, *Hsing Ch'a Sheng Lan Chiao Chu*, Shanghai, 1954, pp. 21, 24. *Hsing Ch'a Sheng Lan* written by Fei Hsin is one of the three important geographical works compiled at the time of Cheng Ho's navigations. The other two works are *Ying Ya Sheng Lan* by Ma Huan and *Hsi Yang Fan Kuo Chih* by Kung Chen. Both Ma and Kung also took part in Cheng Ho's voyages and gave an account of the countries they visited in their works.
- 27 费信于郑和远航之第三、四、五、七次随同前往，著《星槎胜览》一书，是从行者所著三部重要的地理著作之一。其余两部是马欢的《瀛涯胜览》和巩珍的《西洋番国志》，后者极为罕见，近来向达教授根据一个抄本加以整理注释，于1959年出版。
- 28 当时交易情况，具见《瀛涯胜览》、《星槎胜览》、《西洋番国志》等书，一般都是在船到之时，先以明王朝的名义向有关地方或国家行政当局赠送礼品，然后由该地方或国家行政当局传谕人民，进行交易。

⑥

- * 1981年2月11日作者根据中加文化交流的协议前往加拿大，2月11日—3月24日在英属哥伦比亚大学（University of British Columbia）讲学。本文英文为1981年2

月13日演讲稿。本版收录的中英文文本均自作者手稿转录而来，原稿约作于1980年。——编者注

- 1 Probably it is interesting to know how Professor J. Needham, the distinguished author of the voluminous work *Science and Civilisation in China*, writes about HsüXia-Ke, "His notes... read more like those of a 20th-century field surveyor than a 17th-century scholar. He had a wonderful power of analysing topographical detail, and made systematic use of special terms which enlarged the ordinary nomenclature... Everything was noted carefully in feet or *li*, without vague stock phrases." (Vol. 3, London: Cambridge University Press, 1959, p. 524) And it is no wonder that the famous Chinese geologist Prof. Ting Wen-Chiang, who made a great contribution on the study of Hsü's life, once said that Hsü "was essentially a geographical explorer. The spirit of inquiry is so startlingly modern, that it alone would have ranked him as the earliest leader of modern geography in China.(Ting, *The New China Review*, III, 5, Oct. 1921, pp. 325-337.)
- 2 For an English-language edition, see *T'ien-kung K'ai-wu: Chinese Technology in the Seventeenth Century* (University Park: Pennsylvania State University Press, 1966).

⑦

- * 英文选自《国际古迹遗址理事会第八届全体大会暨“新世界中的古老文化”国际研讨会论文集》第一部。(*Symposium Papers of 8th General Assembly of International Council on Monuments and Sites, and International Symposium "Old Cultures in New Worlds", October 10-15, 1987*, Vol. 1. Washington D. C.: ICOMOS, 1987. Print.)
——编者注
- 1 对China一词的起源有多种解释。一种说法认为，China是在秦的罗马字拼音Chin后面加上-a表示地域。这一观点在1986年出版的《剑桥中国秦汉史》中被肯定。
——编者注
- 2 There is another version of the legend saying that a section of the wall crumbled, exposing to Meng Jiang the bones of her husband.

- 5 On 19 August 1945, William Hung wrote to inform me that I had been chosen as one of the members of the Yenching University Committee, and urged me to return to Peking to attend the conference. I have added the original letter here, with a translation in English:

Dr. Leighton Stuart has been released on Friday and we talked for days, which was extremely nice. The new university committee has held its first meeting yesterday. Tomorrow (Monday) early in the morning at nine we will have our second meeting. If you, my young friend, would like to be one of the committee members, you will have to return tonight. I tried to phone you several times but couldn't get through, so had no other way than to ask mister Guo to go to Tientsin to invite you. We will talk later. Hastily I remain, wishing you,... Renzhi, good health.

Written on the 19th.

王仲殊 考古学家。1978年以来，历任中国社会科学院考古研究所研究员、副所长、所长、学术委员会主任，兼中国社会科学院研究生院教授、博士生导师，2006年被授予中国社会科学院荣誉学部委员称号。研究领域主要是中国汉唐时代考古学，兼及日本考古学和日本古代史。先后受聘为秘鲁国立库斯科大学名誉教授、德意志考古学研究院通讯院士、日本亚洲史学会评议员（常务理事），1996年获日本福冈亚洲文化奖大奖。著有考古发掘报告和考古学专著多种，考古学和古代史论文一百余篇。

“博雅双语名家名作”出版说明

1840年鸦片战争以降，在深重的民族危机面前，中华民族精英“放眼世界”，向世界寻求古老中国走向现代、走向世界的灵丹妙药，涌现出一大批中国主题的经典著述。我们今天阅读这些中文著述的时候，仍然深为字里行间所蕴藏的缜密的考据、深刻的学理、世界的视野和济世的情怀所感动，但往往会忽略：这些著述最初是用英文写就，我们耳熟能详的中文文本是原初英文文本的译本，这些英文作品在海外学术界和文化界同样享有崇高的声誉。

比如，林语堂的*My Country and My People*（《吾国与吾民》）以幽默风趣的笔调和睿智流畅的语言，将中国人的道德精神、生活情趣和中国社会文化的方方面面娓娓道来，在美国引起巨大反响——林语堂也以其中国主题系列作品赢得世界文坛的尊重，并获得诺贝尔文学奖的提名。再比如，梁思成在抗战的烽火中写就的英文版《图像中国建筑史》文稿（*A Pictorial History of Chinese Architecture*），经其挚友费慰梅女士（Wilma C. Fairbank）等人多年的奔走和努力，于1984年由麻省理工学院出版社（MIT Press）出版，并获得美国出版联合会颁发的“专业暨学术书籍金奖”。又比如，1939年，费孝通在伦敦政治经济学院的博士论文以*Peasant Life in China—A Field Study of Country Life in the Yangtze Valley*为名在英国劳特利奇书局（Routledge）出版，后以《江村经济》作为中译本书名——《江村经济》使得靠桑蚕为生的“开弦弓村”获得了世界性的声誉，成为国际社会学界研究中国农村的首选之地。

此外，一些中国主题的经典人文社科作品经海外汉学家和中国学者的如椽译笔，在英语世界也深受读者喜爱。比如，艾恺（Guy S. Alitto）将他1980年用中文访问梁漱溟的《这个世界会好吗——梁漱溟晚年口述》一书译成英文（*Has Man a Future? —Dialogues with the Last Confucian*），备受海内外读者关注；此类作品还有徐中约英译的梁启超著作《清代学术概论》（*Intellectual Trends in the Ch'ing Period*）、狄百瑞（W. T. de Bary）英译的黄宗羲著作《明夷待访录》（*Waiting for the Dawn: A Plan for the Prince*），等等。

有鉴于此，外语教学与研究出版社推出“博雅双语名家名作”系列。

博雅，乃是该系列的出版立意。博雅教育（Liberal Education）早在古希腊时代就得以提倡，旨在培养具有广博知识和优雅气质的人，提高人文素质，培养健康人格，中国儒家六艺“礼、乐、射、御、书、数”亦有此功用。

双语，乃是该系列的出版形式。英汉双语对照的形式，既同时满足了英语学习者和汉语学习者通过阅读中国主题博雅读物提高英语和汉语能力的需求，又以中英双语思维、构架和写作的形式予后世学人以启迪——维特根斯坦有云：“语言的边界，乃是世界的边界”，诚哉斯言。

名家，乃是该系列的作者群体。涵盖文学、史学、哲学、政治学、经济学、考古学、人类学、建筑学等领域，皆海内外名家一时之选。

名作，乃是该系列的入选标准。系列中的各部作品都是经过时间的积淀、市场的检验和读者的鉴别而呈现的经典，正如卡尔维诺对“经典”的定义：经典并非你正在读的书，而是你正在重读的书。

胡适在《新思潮的意义》（1919年12月1日，《新青年》第7卷第1号）一文中提出了“研究问题、输入学理、整理国故、再造文明”的范式。秉着“记载人类文明、沟通世界文化”的出版理念，我们推出“博雅双语名家名作”系列，既希望能够在中国人创作的和以中国为主题的博雅英文文献领域“整理国故”，亦希望在和平发展、改革开放的新时代为“再造文明”、为“向世界说明中国”略尽绵薄之力。

Map of China showing locations of major Han dynasty sites 汉代重要考古遗迹分布图

1

25-41

- 1 . Remains of city wall of Chang'an of the Han dynasty (southeastern corner) 汉长安城的城墙遗迹 (东南角)
- 2 . City plan of Chang'an of the Han dynasty 汉长安城遗址平面示意图
- 3 . Remains of city wall of the Han Chang'an (stamped earth layers seen on collapsed section) 城墙断面上所见的夯土层次
- 4 . Han Chang'an city wall near the Bachengmen Gate 霸城门附近的城墙
- 5 . Plan of the Han Chang'an's Zhangchengmen Gate and a section of moat outside the gate 章城门及门外城壕平面示意图
- 6 . Remains of the Xuanpingmen Gate 汉长安城宣平门遗迹
- 7 . The southern gateway and remains of carriage tracks at the Bachengmen Gate 霸城门南门道及车辙遗迹
- 8 . Cross-section of street at the Anmen Gate Avenue 安门大街横截面示意图
- 9 . Brick drainhole buried under the Xi'anmen Gate 西安门地下的砖涵洞
- 10 . Ceramic water main pipes buried under the city wall 城墙基部所埋的陶制水管
- 11 . Remains of the Anterior Hall of the Weiyanggong Palace (aerial photo) 未央宫前殿遗址鸟瞰
- 12 . Plan of the Armory site 武库遗址平面示意图
- 13 . Remains of house number 7 of the Armory 武库第七号房址鸟瞰

- 14 . Remains of house number 1 of the Armory and foundation stones of weapons racks 武库第一号房址及其所遗兵器架的础石
- 15 . Iron armor plates unearthed at the Armory 武库出土的铁甲片
- 16 . Iron ji-halberds unearthed at the Armory 武库出土的铁戟
- 17 . Iron sword, knife, and spears unearthed at the Armory 武库出土的铁制的剑、刀和矛
- 18 . Iron and bronze arrowheads unearthed at the Armory 武库出土的铁制和铜制的镞
- 19 . Fish-shaped stone sculpture found at the site of the Lake Taiye 太液池遗址出土的石鱼
- 20 . Burned timber posts at the southern gateway of the Bachengmen Gate 霸城门南门道被烧毁的木柱遗迹
- 21 . Ashes and other deposits at the southern gateway of the Bachengmen Gate 霸城门南门道的灰烬和沉积物
- 22 . Stamped earthen wall rebuilt during the Eastern Han period at the northern gateway of the Xuanpingmen Gate (The carriage tracks were left during the Sui dynasty.) 宣平门北门道东汉补筑的夯土壁 (车辙为隋代遗迹)
- 23 . Brick wall built during the Sixteen States period at the central gateway of the Xuanpingmen Gate 宣平门中门道十六国时期用砖砌筑的墙壁
- 24 . Brick (inscribed with "Cao Chu of Shi An") used for rebuilding during the Sixteen States period at the Xuanpingmen Gate 宣平门遗址出土的后赵砖块 (“石安曹处”)
- 25 . Brick (inscribed with "Song Li of Shi An") used for rebuilding during the Sixteen States period at the Xuanpingmen Gate 宣平门遗址出土的后赵砖块 (“石安宋利”)
- 26 . Inscriptions on bronze vessels in use at the Shanglinyuan royal park unearthed at Sanqiaozhen in Xi'an 西安三桥镇出土，上林苑所用铜器上的铭文
- 27 . Stone statues of the Cow Boy (left) and the Weaving Lady (right) at the site of the Kunming Lake 左牵牛石像，右织女石像
- 28 . Map of the Shanglinyuan royal park and the Kunming Lake 上林

- 29 . Distribution of sites of ritual structures in the southern suburb of the Han Chang'an 汉代长安南郊“礼制建筑”分布图
- 30 . Plan of the site of Pi Yong “辟雍”遗址平面示意图
- 31 . Reconstruction of the main central building of Pi Yong 汉长安南郊礼制建筑复原图
- 32 . Reconstruction of the structure of Pi Yong 汉长安南郊礼制建筑复原图
- 33 . An eaves tile with a Green Dragon design (unearthed at the site of the ritual structures in the southern suburb of the Han Chang'an) 青龙瓦当 (出土于汉代长安南郊“礼制建筑”遗址)
- 34 . An eaves tile with a White Tiger design (unearthed at the same site as fig. 33) 白虎瓦当 (出土地同图33中文物)
- 35 . An eaves tile with a Red Bird design (unearthed at the same site as fig. 33) 朱雀瓦当 (出土地同图33中文物)
- 36 . An eaves tile with a Black Turtle design (unearthed at the same site as fig. 33) 玄武瓦当 (出土地同图33中文物)

2

69-79

- 37 . Plan of the Eastern Han city of Luoyang 东汉雒阳城平面示意图
- 38 . Remains of a section of the northern wall of the Eastern Han Luoyang 东汉雒阳城城墙遗迹
- 39 . Stamped earth layers on a section of the eastern wall of the Eastern Han Luoyang 东汉雒阳城城墙上的夯土层次
- 40 . "Nangong zhong," a zhong-vessel of the South Palace of Luoyang, unearthed at Sanqiaozhen, Xi'an “南宫钟”，西安三桥镇出土
- 41 . Western wall of the Jinyongcheng of Luoyang and a bastion (the so-called "Horse Face") 洛阳金墉城城墙及墩台 (所谓“马面”)
- 42 . Plan of the city of Luoyang during the Northern Wei dynasty (The Jinyongcheng at the northwestern corner was first built during the Cao Wei period.) 北魏洛阳城平面示意图 (西北角的金墉城为曹魏时期首次修建)

- 43 . Remains of the Chengmingmen Gate of Luoyang during the Northern Wei dynasty 北魏洛阳城承明门遗址
- 44 . Structural remains on the east side of the Tongtuo Avenue in the Northern Wei city of Luoyang (possibly a portion of the Zongzheng administrative building or the royal ancestral temple) 铜驼街东侧的建筑遗址 (或为宗正署或宫庙局部)
- 45 . Eaves tiles unearthed at the structural site on the east side of the Tongtuo Avenue in the Northern Wei Luoyang 铜驼街东侧建筑遗址出土的瓦当
- 46 . Brick engraved with animal face unearthed at the structural site on the east side of the Tongtuo Avenue in the Northern Wei Luoyang 铜驼街东侧建筑遗址出土的兽面砖
- 47 . Remains of the base of a pagoda in Yongning Temple in the Northern Wei Luoyang 北魏洛阳城永宁寺塔基遗迹
- 48 . Portion of the inscribed monument commemorating the three visits to Pi Yong by Emperor Wu Di of Jin 晋武帝三临辟雍碑
- 49 . Plan and cross-section of the site of Ling Tai of the Eastern Han Luoyang 东汉雒阳灵台遗址示意图及截面图
- 50 . Main structure of Ling Tai in the Eastern Han Luoyang 东汉雒阳灵台遗迹全景
- 51 . Remains of the stairs on the northern side of the main structure of Ling Tai and of the stone-covered banks of the verandas 灵台北面坡道和“散水”遗迹
- 52 . Brick-paved floor of the "dark room" in the west of the main structure of Ling Tai in the Eastern Han Luoyang 东汉雒阳灵台主体建筑西面暗室的砖铺地面
- 53 . Fragment of the Stone Classics engraved during the Xi Ping reign of Han 汉熹平石经残石
- 54 . Fragment of the Stone Classics engraved during the Zheng Shi reign of Wei 魏正始石经残石

- 55 . Names of agricultural products inscribed on pottery granaries unearthed from Han tombs in Luoyang 洛阳烧沟汉墓出土陶仓上写的农产品名称
- 56 . Ox-drawn plow and millet plants on a pictorial stone unearthed in Mizhi, Shaanxi 陕西米脂出土画像石上的牛耕图和粟
- 57 . Rice ears from a pottery granary unearthed from a Han tomb at Fenghuangshan, Jiangling 江陵凤凰山汉墓出土的陶仓中的稻穗
- 58 . Remains of job's tears from a pottery jar unearthed from a Han tomb in Luoyang 洛阳烧沟汉墓出土的陶壶及薏苡
- 59 . Iron spade with wooden handle unearthed from the Han tomb at Mawangdui in Changsha 长沙马王堆汉墓出土的木柄铁锄
- 60 . Stone human figure holding a spade, unearthed in Pixian, Sichuan 四川郫县出土的手握铲的石像
- 61 . Iron rake with two teeth, unearthed from the Han tomb in Mancheng 满城汉墓出土的双齿铁耙
- 62 . Large iron plowshare unearthed from the Han tomb in Mancheng 满城汉墓出土的巨型铁铧
- 63 . Iron plowshare and its crown, unearthed in Longxian in Shaanxi 陕西陇县出土的铁铧和铧冠
- 64 . Iron plowshare and moldboard unearthed in Chang'anxian, Shaanxi 陕西长安县出土的铁犁铧和犁壁
- 65 . Wooden models of ox and plow unearthed from the Western Han tomb at Mozuizi in Wuwei, Gansu 甘肃武威磨咀子西汉墓出土的木牛和木犁模型
- 66 . Plowing with oxen in the pictorial stone art unearthed at Shuanggou, Suiningxian, Jiangsu 江苏睢宁双沟出土的画像石中的牛耕图
- 67 . Use of a seeder depicted in the wall painting of a Han tomb at Zaoyuancun in Pinglu, Shanxi 山西平陆枣园村汉墓壁画中的耨播图
- 68 . Iron blade of a seeder unearthed in Fuping, Shaanxi 陕西富平出土的铁耨铧
- 69 . A harrowing scene depicted (in the lower part) on a pictorial

brick in a Wei-Jin period tomb at Jiayuguan in Gansu 甘肃嘉峪关魏晋时期壁画中的耙田图 (下)

- 70 . A soil-leveling scene depicted on a pictorial brick in a Wei-Jin period tomb at Jiayuguan in Gansu 甘肃嘉峪关魏晋时期壁画中的耨田图
- 71 . Well canal at the head of the Bai Canal in Jingyangxian, Shaanxi 陕西省泾阳县白渠渠首的井渠
- 72 . Stone statue of Li Bing and its inscription, unearthed at the Dujiang Weir in Guanxian, Sichuan 四川灌县都江堰出土的李冰石像和铭文
- 73 . Pottery models of a well and water trough unearthed from a Han tomb in Luoyang 洛阳烧沟汉墓出土的陶井与水槽模型
- 74 . Pottery model of a pond unearthed from a Han tomb in Hanzhongxian, Shaanxi 陕西汉中汉墓出土的陶陂塘模型
- 75 . Pottery model of a pond unearthed from a Han tomb in Chengdu, Sichuan 四川成都汉墓出土的陶陂塘模型
- 76 . Fishing, hunting, and harvesting depicted in a pictorial brick unearthed from a Han tomb at Yangzishan in Chengdu, Sichuan 四川成都扬子山汉墓出土的画像砖上的弋射收获图
- 77 . Pottery models of winnowing machine and treadle-operated tilt hammer unearthed from Han tomb in Luoyang 洛阳汉墓出土的陶制风车箱模型和践碓
- 78 . Reconstructive drawing of fig. 77 图77的重构图
- 79 . Treadle-operated tilt hammer as depicted in pictorial brick unearthed from the Han tomb in Pengxian, Sichuan 四川彭县汉墓出土的画像砖上的践碓图
- 80 . Pottery model of treadle-operated tilt hammer unearthed from the Han tomb in Shanxian, Henan 河南陕县汉墓出土的陶践碓模型
- 81 . Stone quern unearthed at the site of the Han city of Chang'an 汉长安城遗址出土的石磨
- 82 . Stone quern and bronze receptacle unearthed from the Han tomb in Mancheng 满城汉墓出土的石磨及铜承盘

- 83 . Pottery model of pigsty and privy, unearthed from a Han tomb in Luoyang 洛阳汉墓出土的陶猪圈及厕所模型
- 84 . Taro harvesting depicted on pictorial brick unearthed in Pengxian, Sichuan 四川彭县出土的画像砖上的采芋图
- 85 . Picking mulberry tree leaves depicted on pictorial stone at the Wu Liang Family Shrine in Jiaxiang, Shandong 山东嘉祥武梁祠画像石上的采桑图
- 86 . Picking mulberry bush leaves depicted on pictorial brick unearthed in Chengdu, Sichuan 四川成都出土的画像砖上的采桑图
- 87 . "Granary Records of Zheng Village"-inscribed bamboo slips (partial) unearthed from tomb number 10 at Fenghuangshan in Jiangling 江陵凤凰山十号墓出土的“郑里廩簿”(部分)
- 88 . A manor depicted in a wall painting in the Han tomb at Holingor in Inner Mongolia (copy) 内蒙古和林格尔汉墓壁画中的庄园图(摹本)
- 89 . Grazing horses depicted in wall painting in the Han tomb at Holingor in Inner Mongolia 内蒙古和林格尔汉墓出土的牧马图
- 90 . Grazing cattle depicted in wall painting in the Han tomb at Holingor in Inner Mongolia 内蒙古和林格尔汉墓出土的牧牛图
- 91 . Fortress and watchtower depicted in wall painting in the Han tomb at Holingor in Inner Mongolia 内蒙古和林格尔汉墓壁画中的堡垒和望楼
- 92 . Clay figurine of farmer holding spade and wearing large knife, unearthed from a Han tomb at Tianhuishan in Chengdu, Sichuan 四川成都天迴山汉墓出土的持铲佩刀农夫俑
- 93 . A military barracks in a wall painting in a Wei-Jin period tomb at Jiayuguan, Gansu 甘肃嘉峪关魏晋墓壁画·营垒图
- 94 . A soldiers' farm in a wall painting in a Wei-Jin period tomb at Jiayuguan, Gansu 甘肃嘉峪关魏晋墓壁画·屯垦图

- 95 . Lacquered ding-tripod unearthed from Han tomb number 1 at Mawangdui, Changsha 长沙马王堆汉墓一号墓出土的漆鼎
- 96 . Lacquered box from Mawangdui Han tomb number 1 马王堆汉墓一号墓出土的漆盒
- 97 . Lacquered boxes for toilet articles from Mawangdui Han tomb number 1 马王堆汉墓一号墓出土的漆奩
- 98 . Lacquered tray and plates from Mawangdui Han tomb number 1 马王堆汉墓一号墓出土的漆案和漆盘
- 99 . Lacquered plate with fabric core from Mawangdui Han tomb number 1 马王堆汉墓一号墓出土的夹纆胎漆盘
- 100 . Lacquered ladles with bamboo cores from Mawangdui Han tomb number 1 马王堆汉墓一号墓出土的竹胎漆勺
- 101 . Lacquered hu from Mawangdui Han tomb number 1 马王堆汉墓一号墓出土的漆壶
- 102 . Lacquered fang-vessel from Mawangdui Han tomb number 1 马王堆汉墓一号墓出土的漆钹
- 103 . Designs of silver sheets attached to lacquerware unearthed from a Han tomb in Lianyungang, Jiangsu 江苏连云港汉墓出土漆器的贴银箔花纹
- 104 . Animal designs on lacquerware unearthed from a Han tomb near Pyongyang, Korea 朝鲜平壤出土漆器的动物图案
- 105 . Fish designs on lacquerware unearthed from a Han tomb at Fenghuangshan in Jiangling 江陵凤凰山汉墓出土漆器的鱼纹
- 106 . Lacquerware design depicting human figures in a story, unearthed from Shi Qi Yao's tomb from the Western Han period in Haizhou, Jiangsu 江苏海州侍其繇墓出土漆器的人物故事图
- 107 . Lacquerware design depicting human figures in a story unearthed from Shi Qi Yao's tomb from the Western Han period in Haizhou, Jiangsu 江苏海州侍其繇墓出土漆器的人物故事图
- 108 . Persimmon-butt-shaped bronze decor with inlaid glass beads on a lacquerware unearthed from a Han tomb in Luoyang 洛阳汉墓出土漆器上的柿蒂形铜饰及琉璃珠
- 109 . The inscription "Dai Hou Jia" ("Marquis of Dai's household") on

a lacquerware unearthed from Han tomb number 1 at Mawangdui in Changsha 长沙马王堆汉墓一号墓出土漆器上的“软侯家”字样

110 . The inscription "Shang Lin" on a lacquerware unearthed from a Han tomb at Noin Ula in Mongolia 蒙古诺音乌拉汉墓出土漆器上的“上林”字样

111 . The inscriptions "Jun xing jiu" on lacquerwares unearthed from Han tomb number 1 at Mawangdui in Changsha 长沙马王堆汉墓一号墓出土漆器上的“君幸酒”字样

112 . The inscription "Jun xing shi" on a lacquerware unearthed from Han tomb number 1 at Mawangdui in Changsha 长沙马王堆汉墓一号墓出土漆器上的“君幸食”字样

113 . Inscription on a lacquered tray unearthed from a Han tomb near Pyongyang, Korea 朝鲜平壤汉墓出土漆盘上的铭文

114 . The inscription "Pan yu" fire-branded on a lacquerware unearthed from a Western Han tomb in Guangzhou 广州西汉墓出土漆器上的“蕃禺”烙印

115 . "Ju shi" and other inscriptions fire-branded on lacquerwares unearthed from a Western Han tomb at Yinqueshan in Linyi, Shandong 山东临沂银雀山西汉墓出土漆器上的“莒市”、“市府”烙印

5

174-187

116 . Zhong-vessel inscribed with "Chu da guan zao zhong," unearthed from the Han tomb in Mancheng 满城汉墓出土的楚大官糟钟

117 . Zhong-vessel inscribed with "Changle siguan zhong," unearthed from the Han tomb in Mancheng 满城汉墓出土的长乐宫钟

118 . Hu-vessel decorated with bird-seal-script characters, unearthed from the Han tomb in Mancheng 满城汉墓出土的鸟篆文壶

119 . "Bo shan" incense burner with gold inlays, unearthed from the Han tomb in Mancheng 满城汉墓出土的错金博山炉

120 . The Changxin Palace Lamp unearthed from the Han tomb in Mancheng 满城汉墓出土的“长信宫灯”

- 121 . Bronze jian-basin for use at the Shanglinyuan Park, unearthed at Sanqiaozhen in Xi'an ("Manufactured at Dong Jun in the third year of Chu Yuan") 西安三桥镇出土的上林苑铜鉴（“初元三年东郡造”）
- 122 . Bronze ding-tripod with the inscription "Cheng yu," unearthed in Sanqiaozhen, Xi'an 西安三桥镇出土的“乘舆”铜鼎
- 123 . Bronze zhong-vessel with the inscription "Jiu jiang gong," unearthed in Sanqiaozhen, Xi'an 西安三桥镇出土的上林苑“九江宫”铭文铜钟
- 124 . Bronze fang-vessel unearthed from the Han tomb in Mancheng 满城汉墓出土的铜钆
- 125 . Bronze juan-vessel unearthed from the Han tomb in Mancheng 满城汉墓出土的铜
- 126 . Inscriptions on Shanglinyuan Park bronze vessels unearthed in Sanqiaozhen, Xi'an 西安三桥镇出土上林苑铜器铭文
- 127 . Inscriptions on Shanglinyuan Park bronze vessels unearthed in Sanqiaozhen, Xi'an 西安三桥镇出土上林苑铜器铭文
- 128 . Bronze mou-vessel unearthed from a Han tomb in Pingle, Guangxi 广西平乐汉墓出土的铜罍
- 129 . Square stove of bronze, unearthed in Xi'an ("Manufactured in the second year of Gan Lu") 西安出土的铜方炉（“甘露二年造”）
- 130 . Dripping jar of bronze, unearthed in Yikezhao League in Inner Mongolia 内蒙古伊克昭盟出土的铜漏壶
- 131 . Bronze lamp in the shape of the Red Bird, unearthed from the Han tomb in Mancheng 满城汉墓出土的朱雀灯
- 132 . Bronze lamp in the shape of a ram, unearthed from the Han tomb in Mancheng 满城汉墓出土的羊灯
- 133 . Twelve-branch lamp of bronze, unearthed from the Han tomb at Leitai in Wuwei, Gansu 甘肃武威雷台汉墓出土的十二连枝灯
- 134 . Incised designs on a bronze tray with three legs, unearthed from a Han tomb in Hepu, Guangxi 广西合浦汉墓出土铜盘上的细线镂空花纹
- 135 . Incised designs on a bronze table unearthed from a Han tomb in

Wuzhou, Guangxi 广西梧州汉墓出土铜案上的细线镂刻花纹

- 136 . Gold-gilded wine zun-cup of bronze, unearthed in Youyu, Shanxi 山西右玉出土的镀金铜酒樽
- 137 . Gold-gilded ink-stone box of bronze, unearthed from a Han tomb in Xuzhou, Jiangsu 江苏徐州汉墓出土的镀金铜砚台
- 138 . Gold-gilded wine zun-cup of bronze, unearthed from the Han tomb at Leitai in Wuwei, Gansu 甘肃武威雷台汉墓出土的镀金铜酒樽
- 139 . Bronze model of horsedrawn carriage, unearthed from the Han tomb at Leitai in Wuwei, Gansu 甘肃武威雷台汉墓出土的铜质马车模型
- 140 . Bronze figure of warrior on horseback, unearthed from the Han tomb at Leitai in Wuwei, Gansu 甘肃武威雷台汉墓出土的骑马武士
- 141 . The "Flying Horse," bronze galloping horse stepping on a flying bird, unearthed from the Han tomb at Leitai in Wuwei, Gansu 甘肃武威雷台汉墓出土的足踏飞鸟奔马
- 142 . Bronze mirror with designs of intertwining serpents, unearthed from the Han tomb of Mawangdui, Changsha 长沙马王堆汉墓出土的蟠螭纹铜镜
- 143 . Bronze mirror with grass-leaf designs, unearthed from the Han tomb in Mancheng 满城汉墓出土的草叶纹镜
- 144 . Bronze mirror with designs of stars and clouds, unearthed from the Han tomb in Nanchang, Jiangxi 江西南昌汉墓出土的星云纹镜
- 145 . Bronze zhaoming mirror unearthed from the Han tomb in Xi'an 西安汉墓出土的昭明镜
- 146 . Bronze mirror with designs in the shape of measuring rules ("elbow ruler"), unearthed from the Han tomb in Xi'an 西安汉墓出土的规矩镜
- 147 . Bronze mirror decorated with design of spiritual beasts, unearthed from the Han tomb in Shaoxing, Zhejiang 浙江绍兴汉墓出土的神兽镜

- 148 . Bronze mirror with pictorial designs, unearthed from the Han tomb in Shaoxing, Zhejiang 浙江绍兴出土的画像镜
- 149 . Bronze ingot of the Han dynasty date, unearthed in Xinglong, Hebei 河北兴隆出土的汉代铜锭
- 150 . Gold-gilded bronze wine zun-cup and tray inscribed with manufacturing date (the twenty-first year of Jian Wu), in the collection of the Palace Museum 建武廿一年铭镀金铜酒樽 (故宫博物院藏)
- 151 . Inscription on the bronze juan-vessel unearthed from the Han tomb in Mancheng 满城汉墓出土铜钺上的铭文

6

208-217

- 152 . Han dynasty iron implements unearthed in Luoyang, Gongxian, and other localities in Henan 洛阳、巩县及河南其他地区出土的汉代铁器
- 153 . Han dynasty iron implements unearthed in Luoyang, Hebi, and other localities in Henan 洛阳、鹤壁及河南其他地区出土的汉代铁器
- 154 . Iron armor plates unearthed at the Han city site in Huhhot, Inner Mongolia 内蒙古呼和浩特汉城遗址出土的铁铠甲
- 155 . Reconstruction of the iron armor plates unearthed at the Han city site in Huhhot, Inner Mongolia 内蒙古呼和浩特汉城遗址出土的铁铠甲复原图
- 156 . Barbed iron ball unearthed at the site of the Han city of Chang'an in Xi'an 汉长安城遗址出土的铁蒺藜
- 157 . Iron stove and tray unearthed from a Han tomb in Luoyang 洛阳汉墓出土的铁炉
- 158 . Iron cooking pot unearthed from a Han tomb in Luoyang 洛阳汉墓出土的铁釜
- 159 . Iron lamp with twelve branches, unearthed from a Han tomb in Luoyang 洛阳汉墓出土的铁十二枝灯
- 160 . Iron mirror unearthed from the Han tomb at Leitai in Wuwei,

- 161 . Reconstructed decorative designs on the iron mirror unearthed from the Han tomb at Leitai in Wuwei, Gansu 甘肃武威雷台汉墓出土的铁镜花纹复原图
- 162 . Clay seal impressed with the inscription "Seal of Qi Iron Office," unearthed in Linzi, Shandong 山东临淄出土的刻有“齐铁官印”的封泥
- 163 . Clay seal impressed with the inscription "Qi Iron Officer," unearthed in Linzi, Shandong 山东临淄出土的刻有“齐铁官长”的封泥
- 164 . Clay seal impressed with the inscription "Qi Iron Office Deputy," unearthed in Linzi, Shandong 山东临淄出土的刻有“齐铁官丞”的封泥
- 165 . Clay seal impressed with the inscription "Iron Deputy of Linzi," unearthed in Linzi, Shandong 山东临淄出土的刻有“临淄铁丞”的封泥
- 166 . Inscriptions cast on Han dynasty iron implements unearthed in Shaanxi, Henan, Shandong, and other provinces 陕西、河南、山东等省出土的汉代铁器上的铭文
- 167 . Remains of the smelting furnace at the Han dynasty iron foundry at Tieshenggou in Gongxian, Henan 河南巩县铁生沟汉代冶铁遗址中的熔炉
- 168 . Remains of the mixing pool at the Han dynasty iron foundry site at Tieshenggou in Gongxian, Henan 河南巩县铁生沟汉代冶铁遗址中的配料池
- 169 . Liu Sheng's personal sword and its accessory jade ornaments, unearthed from the Han tomb in Mancheng 满城汉墓中刘胜的佩剑及玉饰
- 170 . Iron knife with gold inlays, unearthed from the Han tomb in Mancheng 满城汉墓出土的错金铁短剑
- 171 . Iron knife and its gold-inlaid inscription, unearthed from a Han tomb in Cangshan, Shandong 山东苍山汉墓出土的铁刀和刀上的错金铭文

172 . Iron founding as depicted in a pictorial stone of the Han dynasty discovered at Hongdaoyuan in Tengxian, Shandong 山东滕县宏道院出土的汉画像石中的冶铁图

7

239-261

173 . Large pottery urn unearthed from a Han tomb in Luoyang (height: 50 cm) 洛阳汉墓出土的陶瓮 (高50cm)

174 . Large pottery urn unearthed from a Han tomb in Luoyang (height: 64 cm) 洛阳汉墓出土的陶瓮 (高64cm)

175 . Pottery kiln of the Han dynasty excavated from the site of the old city of Wuji in Wu'anxian, Hebei 河北武安午汲古城中的汉代陶窑

176 . Pottery kiln of the Han dynasty excavated from the site of the old city of Wuji in Wu'anxian, Hebei 河北武安午汲古城中的汉代陶窑

177 . Pottery kiln of the Han dynasty excavated from the site of the old city of Wuji in Wu'anxian, Hebei 河北武安午汲古城中的汉代陶窑

178 . Gray pottery jar unearthed from a Han tomb in Luoyang 洛阳汉墓出土的灰陶罐

179 . Gray pottery jar unearthed from the Han tomb in Luoyang 洛阳汉墓出土的灰陶罐

180 . Gray pottery ding-tripod unearthed from the Han tomb in Luoyang 洛阳汉墓出土的灰陶鼎

181 . Painted pottery jar unearthed from the Han tomb in Luoyang 洛阳汉墓出土的彩绘陶壶

182 . Painted pottery basin unearthed from the Han tomb in Mancheng 满城汉墓出土的彩绘陶盆

183 . Lacquered pottery jar unearthed from the Han tomb at Yinqueshan in Linyi, Shandong 山东临沂银雀山汉墓出土的涂漆陶壶

184 . Lacquered pottery ding-tripod unearthed from the Han tomb at

Yinqueshan in Linyi, Shandong 山东临沂银雀山汉墓出土的涂漆陶鼎

- 185 . Lacquered pottery box unearthed from the Han tomb at Yinqueshan in Linyi, Shandong 山东临沂银雀山汉墓出土的涂漆陶盒
- 186 . Round-based pottery urn unearthed from the Western Han tomb in Guanghua, Hubei 湖北光化西汉墓出土的圆底陶瓮
- 187 . "Duck-egg jar" unearthed from the Han tomb in Xinxiang, Henan 河南新乡汉墓出土的彩绘“鸭蛋壶”
- 188 . Hard pottery jar with impressed designs, unearthed from the Han tomb in Mawangdui, Changsha 长沙马王堆汉墓出土的印纹硬陶罐
- 189 . Hard pottery jar with impressed designs, unearthed from the Han tomb in Shaoxing, Zhejiang 浙江绍兴汉墓出土的印纹硬陶罐
- 190 . Hard pottery jar with impressed designs, unearthed from the Han tomb in Shaoxing, Zhejiang 浙江绍兴汉墓出土的印纹硬陶罐
- 191 . Hard pottery jar with impressed designs, unearthed from the Han tomb in Shaoxing, Zhejiang 浙江绍兴汉墓出土的印纹硬陶罐
- 192 . Gourd-shaped jar unearthed from the Han tomb in Guangzhou 广州汉墓出土的匏壶
- 193 . Jar with four interconnecting parts, unearthed from the Han tomb in Guangzhou 广州汉墓出土的四联罐
- 194 . Pottery jar with three legs, unearthed from the Han tomb in Guangzhou 广州汉墓出土的三足陶罐
- 195 . Pottery jar with green glaze of the Han dynasty, in the collection of the Palace Museum 汉绿釉陶壶 (故宫博物院藏)

洛阳汉代平民墓

PREFACE

In the beginning of 1979, soon after China and the U.S. established diplomatic relations, five scholars from the Chinese Academy of Social Sciences (CASS) were invited to visit and lecture in the U.S. This was done as a part of an agreement between the China Association for Science and Technology and the Committee on Scholarly Communication with China (CSCC). The five people invited were Sun Yefang and Xu Dixin from the Institute of Economics, Xia Nai and Wang Zhongshu from the Institute of Archaeology, and Luo Ergang from the Institute of Modern History. After some deliberations, CASS sent only Xu Dixin and Wang Zhongshu from their respective institutions. Luo was unable to go due to health reasons.

Although the host institute in the U.S. was CSCC, the person directly responsible for receiving my team was Professor Kwang-Chih Chang of Harvard University. We agreed that I would stay three months in the U.S., spending more than one month at Harvard University in Cambridge, Mass., and then stay at University of Washington in Seattle and University of California at Berkeley for four weeks each. During the trip, aside from sightseeing and research, I would devote most of my energy to lecturing about Chinese archaeology of the Han period at these three universities.

In preparation, beginning in April 1979, I started writing my lecture manuscripts. I chose nine topics for the lectures. They were: "Chang'an: The Capital City of Western Han," "Luoyang: The Capital City of Eastern Han," "Han Dynasty Agriculture," "Lacquerware," "Bronzes," "Iron Implements," "Ceramics," "Tombs—I," and "Tombs—II." Two months before I left for the U.S. in early October of that year, I had finished all lecture preparations (including making hundreds of projector slides), and sent the materials to Professor Chang. He invited Sinologists in the U.S. to translate "Luoyang," "Han Dynasty

Agriculture," "Lacquerware," "Bronzes," "Iron Implements," and "Ceramics" into English. He himself took on the translation of "Chang'an," "Tombs—I" and "Tombs—II." When I was in the U.S., besides lecturing all the nine topics at the three universities mentioned above, I also delivered speeches "Luoyang" at Columbia University and University of California at Los Angeles, and "Tombs—I, II" at the United States National Academy of Sciences and Stanford University.

In the 1960s and 1970s, it was popular for Western scholars in countries like the U.S. and U.K. to publish papers regarding the origin of civilizations. Professor Chang recognized this boom in international academia, and initiated the publication of a series of books on early Chinese civilization. This was a collective effort to popularize the study of ancient China. Chang himself wrote *Shang Civilization*, while professor Cho-yun Hsü at the University of Pittsburgh co-authored *Western Chou Civilization*. Later, Li Xueqin at the Institute of History of CASS published *Eastern Zhou and Qin Civilizations*. The series of the nine lectures was compiled by Chang into a book entitled "Han Civilization," and published in 1982 by Yale University Press. Chang himself contributed the foreword, and Yu Ying-shih of Yale University revised the manuscript.

Xia Nai, who had been in charge of the Institute of Archaeology of CASS for long, was my mentor in my youth. After seeing my lecture manuscripts translated and published in the U.S., he suggested that the original text should also be organized into a book and published in China. I did as he suggested, and brought the nine lectures together to produce the Chinese edition, whose name literally means "A Brief Examination of Han Dynasty Archaeology." This book was published by the Zhonghua Book Company in Beijing in 1984.

By coincidence, Professor Xia was also invited to visit the U.S. in 1981, and gave lectures on "Jade and Silk of Han China." His lecture manuscripts were translated into English and published in book form in the U.S. Some American scholars thought that *Han Civilization* and

Professor Xia's book were coherent in content, calling them "sister works." I find this comparison a great honor, and feel very happy.

Now, Foreign Language Teaching and Research Press plans to include both Professor Xia's *Jade and Silk of Han China* and my *Han Civilization* in the "Bilingual Series of Liberal Arts Masterpieces," so I take this occasion to write this foreword, explaining how these books came into being. I hope readers would like them.

Wang Zhongshu

前言

1979年年初，在中美两国建立外交关系之后不久，按照中国科学技术协会与美中学术交流委员会的协议，美国方面邀请中国社会科学院的五名学者前去访问、讲学，他们是经济研究所的孙冶方、许涤新，考古研究所的夏鼐、王仲殊和近代史研究所的罗尔纲。经商议，社会科学院决定经济所的二人中去许涤新一人，考古所的二人中去王仲殊一人，近代史所的罗尔纲因健康欠佳，不能应邀。

美方的接待单位为美中学术交流委员会，但对我的接待主要是由哈佛大学教授张光直担当的。他与我约定在美国访问的时间为三个月，其中在剑桥城的哈佛大学一个多月，在西雅图的华盛顿大学和加利福尼亚大学伯克利分校各约四个星期。访问期间除参观、考察等活动以外，主要任务是在上述三个大学作学术讲演，主题为中国汉代考古学。

为此，从1979年4月开始，我便着手撰写讲演的文稿。我选了九个专题，作为讲演的题目。它们是：《西汉的都城——长安》、《东汉的都城——雒阳》、《汉代的农业》、《汉代的漆器》、《汉代的铜器》、《汉代的铁器》、《汉代的陶器》、《汉代的墓葬（上）》、《汉代的墓葬（下）》。在同年10月初动身赴美国之前约两个多月，我结束了全部讲演稿的撰写（并制作了数百枚供讲演时放映的幻灯片），将稿件邮送给张光直教授。张光直约请几位美国的汉学家分别用英文翻译《雒阳》、《农业》、《漆器》、《铜器》、《铁器》、《陶器》各专题的讲演稿，他本人则担任《长安》、《墓葬（上）》、《墓葬（下）》三个专题文稿的翻译。到了美国以后，除了在上述三个大学各作九个专题的全部讲演以外，我还分别在哥伦比亚大学和加利福尼亚大学洛杉矶分校讲《雒阳》，在美国国家科学院和斯坦福大学讲《墓葬（上）》和《墓葬（下）》。

在20世纪六七十年代，文明起源为一项时兴的课题，美、英等西方国家的学者们发表了不少相关的论著。张光直教授趁这股国际上的学术热潮，从弘扬中国古代文明的立场出发，筹划了一套中国古代早期文明研究丛书的编撰出版。他自己写了《商文明》，在美国匹兹堡大学任教授的许倬云写了《西周文明》，以后又有中国社会科学院历史研究所的

李学勤写《东周与秦代文明》。我的关于汉代考古学的九个专题讲演稿由张光直编译成一本新书，书名定为“Han Civilization”（《汉代文明》）。他为《汉代文明》写了序言，并请美国耶鲁大学教授余英时审核书稿而于1982年由耶鲁大学出版社出版。

当时，长期任考古研究所所长的夏鼐先生是我青年时代的导师。夏先生看到我在美国的九个专题讲演稿已由张光直及其他美国学者译为英文，并编辑成书在美国出版，他主张我的中文原稿亦应编成一本专书，在中国国内出版。我遵从夏鼐先生的意旨，将九个专题的中文原稿编成一本名为《汉代考古学概说》的书，由北京的中华书局于1984年出版。

事有巧合，夏鼐先生也于1981年应邀访问美国，在美国的大学作题为《汉代的玉器和丝绸》的学术讲演。美国方面将夏鼐先生的原稿译为英文，并编成专书而在美国出版。美国学者称夏先生的《汉代的玉器和丝绸》与我的《汉代文明》（《汉代考古学概说》）属内容连贯、关系密切的姐妹卷，使我深感荣幸，十分欣喜。

最近，外语教学与研究出版社决定要将夏鼐先生的《汉代的玉器和丝绸》和我的《汉代文明》（《汉代考古学概说》）列入其所编“博雅双语名家名作”，我便写了这篇“序言”，以叙明当初的事情、缘由，供读者参考。

王仲殊

2013年2月25日

FOREWORD TO THE ENGLISH EDITION (1982)

Of all the historical dynasties of imperial China, the Han is without question the most archaeologically dependent. On the one hand, because of the Han custom of richly furnishing the brick- and stone-constructed graves, archaeologists have been particularly amply rewarded with Han remains, including many written documents. On the other, because of Han's antiquity, its traditional literary documentation is glaringly incomplete. Therefore, a book on Han archaeology has long been awaited by not only Han scholars but also students interested in Chinese history, art, and archaeology.

The present volume, in which Wang Zhongshu masterfully summarizes the important archaeological data pertaining to the Han civilization, is that long-awaited book. In it the latest data are carefully synthesized and presented by one of China's principal archaeologists of the Han civilization. Wang Zhongshu, research fellow and deputy director of the Institute of Archaeology, Chinese Academy of Social Sciences, has not only participated in many excavations at Han sites, but also was the director of the excavations of the site of Chang'an in the 1950s and early 1960s.

In October 1979 Wang Zhongshu gave a series of nine lectures on Han dynasty archaeology at Harvard University. He came under the auspices of a senior lectureship program arranged between the Committee on Scholarly Communication with China (Washington, D.C.) and the China Association for Science and Technology (Beijing). After speaking at Harvard, Wang delivered some of the same lectures at the University of Washington (Seattle) and the University of California (Berkeley) before returning to China. At Harvard, Wang's visit was sponsored by the American School of Prehistoric Research at

the Peabody Museum of Archaeology and Ethnology, and his lectures were delivered at the departments of Anthropology, East Asian Languages and Civilizations, and Fine Arts.

Soon after their arrival in Cambridge, Wang and his assistant, Xu Pingfang, who is a senior archaeologist best known for his work at Yuan Dadu, raised with me the possibility of publishing his lectures in this country. Having received the Chinese texts of his forthcoming lectures beforehand, I was familiar with their rich content and superb quality, and I reacted enthusiastically to the idea. Soon they decided to entrust me with the task that has resulted in the volume that appears before you.

The book could not have been prepared without two sources of generous support. The first is the National Endowment for the Humanities, which awarded me a grant to help prepare the manuscript for publication. I am grateful to the Endowment, which, of course, will not be held responsible for any of the views expressed herein.

The other source of support comes from my Harvard colleagues who served as interpreters during Wang's lectures, given in Chinese, and generously placed at my disposal the English translations of the various chapters they had prepared. They are Professor Ronald Egan of the Department of East Asian Languages and Civilizations, who translated chapters 2 and 3; Dr. Loh Wai-fong, of the same department, chapters 5 and 6; Mr. Robert Mowry, of the Fogg Museum (now curator of the Asia House Gallery in New York), chapter 7; and Ms. Jenny So, of the Department of Fine Arts, chapter 4. (Chapters 1, 8, and 9 were translated by me.) Mr. Thatcher Deane of the University of Washington provided me with his own translation of chapter 6, a particularly difficult chapter to translate, and I frequently consulted it in preparing the final manuscript. I thank all of them for their excellent work and herein acknowledge their respective contributions. As editor, however, I alone am responsible for any errors of translation. Most of the illustrations in this volume appeared

previously either in publications of the Chinese Academy of Social Sciences or in the journal Wenwu. In each case, the appearance is noted in the endnotes. The author and editor acknowledge their gratitude to the Academy and Wenwu for allowing them to be published here. The footnotes and the captions for illustrations were translated by me, and I prepared the appendix.

Figures 2, 28, 29, 30, 37, and 42, and the frontispiece have been redrawn by Mrs. Nancy Lambert Brown.

1982年英文版序言

在中国的历朝历代中，汉代无疑是最依赖考古研究的一个。一方面，汉代厚葬的风俗使考古学家在砖石结构的墓室中发现了大量包括文字资料在内的汉代遗迹；另一方面，由于汉代年代久远，很多传统文献已残缺不全。因此，无论是汉学家，还是对中国历史、艺术、考古感兴趣的学生都对有关汉代考古研究的著作期待已久。

《汉代考古学概说》正是这样一部让人期待已久的著作。作者娴熟地总结了与汉文明相关的考古资料，将其经过审慎的整合后在书中呈现。王仲殊是中国社会科学院考古研究所的副所长和研究员，曾参与众多汉代遗址的发掘工作，并于19世纪50年代至60年代初期主持了长安城遗址的发掘，是中国汉代考古的主要研究者之一。

1979年10月，在美中学术交流委员会（华盛顿特区）和中国科学技术协会（北京）联合举办的高级讲师项目支持下，王仲殊以汉代考古学为主题在哈佛大学、华盛顿大学（西雅图）和加州大学（伯克利）分别进行了数场讲座。在哈佛，王仲殊的访问得到了皮博迪考古与民族学博物馆美国史前研究院的赞助，讲座分别在人类学系、东亚语言与文明系以及艺术系举办。

到达剑桥后不久，王仲殊和他的助手——以元大都研究而著称的资深考古学家徐苹芳，问我是否有可能在美国出版这一系列讲座内容。讲座之前我就收到了中文讲稿，深知稿件内容丰富，且质量极高，因此，我积极地回应了这一提议。随后他们将此书的出版工作委托于我，成果便是大家眼前的这部著作。

本书的出版有赖于两方面的大力支持。首先，非常感谢美国人文基金会，他们为本书的出版提供了经费。当然，本书观点与基金会无关。

另一方面的支持来自哈佛大学的同事们，他们曾在王仲殊先生讲座期间承担口译工作，又慷慨地将他们准备的各章节的英文译稿提供给我。东亚语言与文明系的艾朗诺教授和陆惠风教授分别翻译了第2、3章和第5、6章；福格艺术博物馆的罗伯特·莫里先生（现纽约亚洲博物馆馆长）翻译了第7章；艺术系的苏芳淑女士翻译了第4章；我翻译了第1、8、9章。华盛顿大学的杜泰池先生向我提供了他自己翻译的第6章，这

一章极难翻译，我在准备终稿时曾多次查阅他的译文。在此，我要对所有人的出色工作致以敬意，对他们的贡献表示感谢。译本中若出现任何错误，我作为编者将承担全部责任。书中大部分插图之前都曾出现在中国社会科学院的出版物或者《文物》杂志上，上述情况都在尾注中作了说明，在此本书作者和编者对社科院及《文物》杂志表示感谢。此外，我翻译了脚注及图说，并编写了附录。（按：不同译者对同一专有名词的译法略有出入，根据作者意见，本版不作改动。）

图2、28、29、30、37、42以及卷首插图由南希·兰伯特·布朗女士重新绘制。

Map of China showing locations of major Han dynasty sites 汉代重要考古遗迹分布图

CHAPTER 1 CHANG'AN: THE CAPITAL CITY OF WESTERN HAN

The ruins of Chang'an, the capital city of Western Han, are located about 3 km northwest of the present Xi'an city, Shaanxi Province, and 2 km south of the Weishui River. Seeing the remnants of its city walls(fig. 1) and the scattered tiles there, one can imagine the magnificent scale and the prosperity of Chang'an in the past. The Qin capital city of Xianyang is north of the Weishui River. Probably the Han dynasty capital was built south of the river because the land here was more level and wider and because the south-of-the-river region had better access to the vast areas east of the Hangu Gate.

The building of the city of Chang'an was accomplished in three stages during the Han dynasty. (1) Under Emperor Gao Zu, the Changleong Palace was an expansion of Xingleong, a Qin dynasty resort palace. In addition, the Weiyangong Palace was constructed to the west of Changleong, and an armory was built between the two palaces. (2) Under Emperor Hui Di, the city wall was constructed. The building of the wall probably began at the northwestern corner: the west wall was the first to be erected, next the south wall, then the east wall, and finally the north wall. (3) Under Emperor Wu Di, the Mingguangong Palace was built north of Changleong; the Guigong and Beigong palaces were built north of Weiyangong; and the Jianzhangong Palace was constructed to the west, outside the city. In addition, the Shanglinyuan Park was expanded and the artificial lake called Kunmingchi was opened. At that point, the capital city was basically complete.

City Wall The plan of the city is basically square, with the city oriented according to the cardinal directions. However, the city wall

was constructed after completion of the Changlegong and Weiyanggong palaces and adjusting its course to the locations of these two palaces caused the south wall to zigzag. The north wall also zigzagged, due to topography and the course of the river. The book *San fu huang tu* (*A Guide to the Three Military Districts of the Capital*) claims that the southern part of the city was shaped like the Southern Dipper and the northern part, like the Big Dipper. It appears that these so-called dipper shapes are a later speculation and were not represented in the original design. Neither Ban Gu nor Zhang Heng, in their famous poems about Chang'an, *Xi du fu* and *Xi jing fu*, used the dipper analogy.

When archaeologists investigated the Chang'an ruins, they found that most of the wall was still exposed above ground. Many wall sections collapsed, but underground the foundations still remained. According to the two surveys of 1957 and 1962, the east wall was 6,000 m long, the south wall 7,600 m, the west wall 4,900 m, and the north wall 7,200 m. The total length of the four walls was 25,700 m, which corresponds to a little over 62 *li** according to the Han system of measurement. This basically conforms to the recorded 63 *li* in *Han jiu yi*. The total area was about 36 km² (fig. 2).¹

The city wall was built of rammed yellow earth. Its height was over 12 m, and the width at base was 12 to 16 m. The description of the wall's dimensions in *San fu huang tu* (3.5 *zhang* tall, 1.5 *zhang* wide at base, and 9 *chi* at top) is not accurate. Despite its construction of earth, without bricks or stones, the wall has proved to be unexpectedly strong (figs. 3, 4). According to *Hanshu* ("Hui Di ji"), the wall was built by conscript labor provided by farmers who lived within a 600-*li* radius of Chang'an and by prisoners sent in by the feudal lords and princes. One wall section required a whole month of work by 145,000 or 146,000 laborers. The completion of all four city walls probably took five years. Outside the city wall was a moat, but 8 m wide and 3 m deep. The excavations in 1962 of the area outside the Zhangchengmen Gate clarified the shape of the moat outside the city

gate and also proved that wooden bridges were built over the moat (fig. 5).²

City Gates There were twelve city gates, three to each wall. The gates along the east wall, from north to south, were known as Xuanpingmen, Qingmingmen, and Bachengmen; the south wall gates, from east to west, were called Fu'angmen, Anmen, and Xi'anmen; the west wall gates, from south to north, were Zhangchengmen, Zhichengmen, and Yongmen, along the north wall, the gates, from west to east, were Hengmen, Chuchengmen and Luochengmen. (See fig. 2) Of these, the Xuanpingmen, Bachengmen, Xi'anmen, and Zhichengmen gates were excavated in 1957.

The city gates followed strict designs. Each gate had three gateways, and each gateway was 6 m wide. The width of the gateway corresponded exactly to four times the width of a carriage (figs. 6, 7). This fact had been clearly stated in *San fu jue lu*, *Xi jing fu*, and the commentary on *Xi jing fu* by Xue Zong.³ The distance between each two gateways was 4 m for the Xuanpingmen Gate and Zhichengmen Gate, but it was 14 m for the Bachengmen Gate and Xi'anmen Gate. The greater the distance between gateways, the wider the whole city gate, of course, and the more majestic it looked. This greater distance in the latter case was possibly because the Bachengmen Gate lay directly opposite the east entrance to the Changlegong Palace and the Xi'anmen Gate lay across the southern entrance to Weiyanggong.⁴

Street Grid The street system within Chang'an was made clear through surveys and excavations in 1961-1962. No large avenues were built inside the four gates that were close to Changlegong and Weiyanggong (i.e., Bachengmen, Fu'angmen, Xi'anmen, and Zhangchengmen). All the other eight gates led into long avenues extending into the city. Therefore, although there were twelve city gates in Chang'an, the city had only eight major avenues within its walls, just as described in *Han jiu yi* and *San fu jiu shi*. These avenues were straight, running north-south or east-west, forming many T-intersections and cross-sections. The longest was the Anmen Gate

Avenue, 5,500 m long, followed by the Xuanpingmen Gate Avenue, 3,800 m long. The shortest was the Luochengmen Gate Avenue, 850 m long. The length of each of the other avenues was about 3,000 m, and each had its own name. For example, the Anmen Gate Avenue was probably called Zhangtai Jie; the Zhichengmen Gate Avenue was probably Gao Jie; the Qingmingmen Gate Avenue was probably Xiangshi Jie; and the Hengmen Gate Avenue probably Huayang Jie.⁵

Although their lengths varied, the eight avenues were of equal width; that is, about 45 m. Their width was obviously the result of uniform planning. It is noteworthy that each avenue was divided into three parallel lanes, which were separated by two drainage ditches, each about 90 cm wide and 45 cm deep. The ditches were semicircular in crosssection. The central lane was the widest, about 20 m, and the two on the outside were each about 12 m wide (fig. 8). According to textual records, the central lane was called "Chi dao" and was meant exclusively for the emperor. Even imperial princes were not permitted to use it, let alone mere commoners and officials. These three-lane avenues are referred to in *Xi du fu* in the following line: "[It is] covered with wide avenues with three lanes." The layout of the avenues also explains why each gate had three gateways. The central one was for use of the emperor, and the two lateral gateways, for commoners' use.⁶

Drainage A drainage system is of obvious importance for a city surrounded by gigantic walls. At Chang'an water was drained mainly through large drainholes buried under the city gates. Finds from beneath the Zhichengmen and Xi'anmen gates indicate that the drainholes were 1.2 and 1.6 m wide, respectively, and 1.4 m deep, built with bricks and rocks, with the top part constructed of brick and forming an arc (fig. 9). Water that accumulated inside the city was carried away through the ditches alongside the avenues and then let out into the moat through the drainholes underneath the gates. *Hanshu* (the "Biography of Liu Qumao") describes a battle in which tens of thousands were killed and blood flowed into the ditches. These

must have been the ditches built alongside the roads. In addition, at some locations, when the wall was built, pottery waterpipes, pentagonal or round in cross-section, were buried under the foundation, to drain water away (fig. 10).⁷

Palaces, Armory, and Market Research was undertaken in the areas of the Changlegong and Weiyanggong palaces in 1961-62. Changlegong was located in the southeastern portion of Chang'an, surrounded itself by an enclosure. Changlegong and Weiyanggong were built before the city wall was constructed, and they themselves were enclosed by ramparts over 20 m wide at the base, for defense. Changlegong was an expansion of a resort palace of the Qin dynasty, not according to a separate plan, and therefore it was of irregular shape. From the foundation remains, it can be seen that the enclosure of Changlegong was in toto 10,000 m long, or over 20 *li* according to the Han system of measurement. The total area of Changlegong was about 6 km², which is about one-sixth of the total area of the city.⁸ According to historical texts, Changlegong had four doors on four sides, the eastern and the western doors being the main ones. Outside the door on the east was a towering monument called *dong que* (East Que), and on the west, one called *xi que* (West Que). *Xi que* was immediately close to the Anmen Gate Avenue.

Located in the southwestern portion of Chang'an, Weiyanggong was not quite in symmetry with Changlegong to its east. Built entirely during the Han dynasty, it had a regular, square shape. The lengths of the enclosures are: 2,150 m for both east wall and west wall, and 2,250 m for south and north walls, with a perimeter of 8,800 m (or 21 *li* according to the Han measurement system) and an area of 5 km², about one-seventh the size of Chang'an. The walls are mostly gone, with only the foundations left, but a small section of the west wall 11 m high still stands. The famous *qian dian*, or Anterior Hall (the Audience Hall), is in fact located at the center of the Weiyanggong Palace, its foundation still standing. Its length north-south is 350 m, its width east-west 200 m, and the highest northern end, located on a

natural hill, is about 15 m above ground (fig. 11). The palace was indeed grandiose. No wonder Emperor Gao Zu accusingly questioned Xiao He, who built the palace: "All under heaven is chaotic, and battles are still raging on after several years, their results uncertain. Why are palaces constructed so much beyond their proper limits?" According to *San fu huang tu*, the palace had doors on all four sides. The main ones were apparently the east and the north doors. Two gate towers (*que*) were built outside these two doors: the East Que and the North Que. When feudal lords came in for an audience, they would use the East Que, but the people would use the North Que for petitions. On the west and south sides, no gate towers were built outside the doors. Actually, the south and west walls of the Weiyanggong Palace were so close to the ramparts of Chang'an that in fact no room was left for *que* to be built.⁹ *Hanshu* ("Gao Di ji") says, "Xiao He build the Weiyanggong, erected the East Que, the North Que, the Anterior Hall, the Armory, and the Grand Storehouse." *San fu huang tu* places the Armory (*wu ku*) at the Weiyanggong, but according to *Shiji* ("Chulizi zhuan") and other records, the Armory was in fact located between the Weiyanggong and the Changlegong. The *Zizhitongjian* commentary quoted *Yuanhe junxian zhi* as saying that the two palaces were one *li* apart. This information has proved through actual surveying at the site to be incorrect. The western wall of Changlegong and the eastern wall of Weiyanggong were separated by a distance of 950 m, which corresponds to over 2 *li* in the Han system. The Armory was located in this area.

Extensive excavations since 1975 have disclosed the areal scope, form, and structure of the Armory. Walls enclosed a rectangular area, 320 m on the east and west and 800 m on the north and south sides. A partition wall separates the Armory into two courtyards. The eastern courtyard had in it four houses and the western courtyard had three houses (fig. 12). Some of these houses provided shelters for the officials, but most served as warehouses for the storage of weapons. The largest of the warehouses was 230 m long, 46 m wide, and

incorporated four storage areas, each about 1,500 m² in area (fig. 13). Within the storage area, weapons racks were densely arranged. The wooden racks have long been rotted, but their stone bases still remain, fully testifying to the description of such weapons racks in the *Xi jing fu* (fig. 14). According to the excavated remains, the Armory, like the other structures within Chang'an, was destroyed during the war at the end of the Wang Mang period. Although most of the weapons that were stored here had been removed, a few remained, including iron armor, *ji*-halberds, spears, swords, knives, and arrowheads as well as bronze arrowheads and *ge*-halberds (figs. 15-18).¹⁰

According to historical records, the Guigong Palace was north of Weiyanggong, and near Jianzhanggong on the other side (to the west) of the city wall. Accordingly, its location should be north of the Zhichengmen Gate Avenue, west of the Hengmen Gate Avenue, and south of the Yongmen Gate Avenue. Test diggings in 1962 in this area indeed disclose the enclosure of Guigong, which was 1,800 m long on the east and west, 880 m long on the north and south, with a total perimeter of 5,300 m, or about 13 *li* in the Han system. The plan of the palace was rectangular, and its area was 1.6 km². As for Beigong and Mingguanggong, we are told by historical records that the former was north of Weiyanggong and east of Guigong and that the latter was north of Changlegong, but these palaces have not yet been located on the ground. Finally, Jianzhanggong outside the western ramparts was identified through test diggings in 1962, but only further excavations will disclose additional details.¹¹ North of Jianzhanggong was Taiyechi, or the Lake Taiye; its remains are vaguely recognizable. In 1973, a massive fish-shaped stone sculpture, almost 5 m long, was found to the north of the lake site (fig. 19), substantiating various records about stone fishes on the north shore of the Lake Taiye at the time.¹²

According to historical records, there were nine markets within Chang'an, three of them "to the east of the avenue" and six "to the west." These were collectively referred to as Dong Shi (the Eastern

Markets) and Xi Shi (the Western Markets). Because the southern and the central portions of Chang'an were all palace areas, the nine markets could only be located in the northern part of the city area. According to *San fu jiu shi* the nine markets were located near the Tumen Gate (also called the Yongmen Gate) and on both sides of the Heng Bridge Avenue (also called the Hengmen Gate Avenue), and we can further narrow the location of the markets down to the northwestern portion of the city. On the surface in this area archaeologists have collected many pottery figurines and molds for coins, suggesting that this northwestern area had handicraft workshops, which may be regarded as a corroboration of the above judgment.¹³ According to *Hanshu* ("Hui Di ji"), "the Western Markets of Chang'an were built in the sixth year [or 189 B.C.]," suggesting that the location of the market was chosen even prior to the building of the city wall. *Zhouli kaogongji* describes the ideal city plan of the Zhou dynasty as follows: "Its area is 9 *li* square; it has three gates on each side; within the city are nine longitudinal lines and nine latitudinal lines; the longitudinal avenues each are nine carriage tracks wide; the ancestral temple is located on the left and the earth altar on the right; the audience hall faces south; and the market is in the north." In actuality, practical considerations have to enter into the planning of a city; and, as the imperial capital, Chang'an was of a scope far greater than the prototype of the *Kaogongji*. But it is evident that Chang'an's planning does conform with the *Kaogongji* ideal. The enclosure was basically square; there were twelve gates, three to each side; each gate had three openings, which were measured according to carriage tracks; all avenues leading from the gates were each divided into three lanes; the principal palaces were located in the south; the markets were in the north. In short, the city of Chang'an built at the beginning of Western Han, like other early Western Han institutions, still retained the supposed Zhou tradition.

The palaces probably occupied more than half the area of the southern and central parts of the city. A few mansions of the nobility

were located near the North Que of Weiyanggong, referred to as the "Bei Que Jia Di." Otherwise, the ordinary people, including most officials, resided in the northern part of the city, especially in the northeastern part, the area near the Xuanpingmen Gate. Yu Xin's *Ai jiang nan fu* has the following lines: "Perform rituals at Changle, in the sight of the noble residences at Xuanping." These lines suggest that the Xuanpingmen Gate area was indeed a residential district. In the central and southern parts of the city, because of their extensive occupation by palaces, most of the gates were used exclusively for access to the palaces, and consequently the Hengmen Gate in the northwest and the Xuanpingmen Gate in the northeast were the gates that were used the most often. The Hengmen Gate in fact controlled the communication in the northwestern direction. Not far outside the gate was the famous bridge Zhong Wei Qiao, also called Heng Qiao or Hengmen Qiao, which spanned the Weishui River, with Xianyang on the other bank of the river. The Xuanpingmen Gate, on the other hand, controlled the communication in the southeastern direction. Coming out of this gateway, one traveled along the southern bank of the Weishui River to Hanguguan. Therefore, the Xuanpingmen Gate (also known as the Dongdumen Gate or Dumen Gate) was the most important of the Chang'an gateways and the one most mentioned in *Hanshu* and *Hou Hanshu*.

History of the Xuanpingmen Gate Archaeological excavations have shown that many structures in Chang'an—including the Bachengmen Gate, Xi'anmen Gate, and Zhichengmen Gate—were destroyed during the warfare at the end of the Wang Mang period (fig. 20). The Xuanpingmen Gate suffered the same fate. The two walls of the gateways had been burned to a red color, and parts had collapsed. From the debris under the gateways were found coins of the Western Han dynasty and the Wang Mang period, especially the *huo bu* and the *huo quan* of the latter period, which accurately date the burning of the gateway.¹⁴ Evidence at the Bachengmen Gate and Xi'anmen Gate shows that after they were destroyed the debris was never cleared

away, indicating that these gateways were no longer in use during the Eastern Han, Wei, Jin, and the Six Dynasties periods (fig. 21). At a few other gates, such as Zhichengmen, we find that one of the openings was cleared of debris for reuse on a reduced scale. On the other hand, although the Xuanpingmen Gate was destroyed at the same time, it was subsequently cleared of debris and repaired.

There have been at least two repairs of the Xuanpingmen Gate since Eastern Han. The first took place during the early part of Eastern Han, involving rebuilding of new walls of rammed earth at the northern and the southern openings (fig. 22). *Hou Hanshu* ("Du Du zhuan") states that in the nineteenth year of Jian Wu (A.D. 43) the Dongduchengmen (the Eastern Capital City Gate) was repaired in Chang'an. This historical evidence not only confirms judgments formed in the course of archaeological excavations, it also precisely dates the repair. Thenceforth, the Xuanpingmen Gate continued to be used until the end of Eastern Han. From the later years of the dynasty we have many records pertaining to this gate.¹⁵ They indicate that the gate was still in use when Emperor Xian Di was at Chang'an at the end of the dynasty and that it was complete with a gate tower. In the debris under the gateways we have found Eastern Han *wu zhu* coins and some small and poorly manufactured coins possibly of the Dong Zhuo period.¹⁶

The second repair of the Xuanpingmen Gate consisted of the construction of new wall surfaces in the central and the southern openings, using fired and sundried bricks (fig. 23). Some of the bricks bear the inscription "Shi An" (figs. 24, 25). According to *Weishu* ("Dixingzhi"), Shi An was the name of a county under the Xianyang Prefecture, established by Shi Le of the Later Zhao. This evidence suggests that the new repair took place in the middle of the fourth century. Several texts mention that during the Later Zhao reign of Shi Hu, the city of Chang'an was rebuilt on a rather large scale, and the repair of the Xuanpingmen Gate was probably part of the rebuilding.¹⁷

As shown from the excavated remains, no major rebuilding occurred after the Later Zhao, but throughout the Sixteen States period and the Northern Dynasties (fourth through sixth centuries), it continued to be used as a principal gateway. Its name, however, had been changed to Qingmen, as we see in the text *Han gongdian ming*. When Liu Yu of Eastern Jin was attacking Chang'an, Yao Hong of Later Qin had planned to come out of Qingmen to surrender himself. During the Northern Zhou dynasty, Qingmen was still an important gate; the *wu xing da bu* coins of the Northern Zhou have been found in later debris under the gateway. The gateway continued into Sui: wheel tracks have been found under it, and *wu zhu* coins of the Sui dynasty suggest that the gateway was in use then.¹⁸ During the Tang dynasty, the three gateways were finally blocked forever.

In short, although Chang'an was badly damaged by war during the final years of the Wang Mang period, it continued to be an important city throughout the Eastern Han, Wei, Jin, Sixteen States, Western Wei, Northern Zhou, and early Sui dynasties, and many of these dynasties even used it as their capital. The Xuanpingmen Gate excavations have, thus, disclosed a cross-section of the whole history of Chang'an.

Royal Parks The Shanglinyuan royal parks were built by the Qin dynasty within its capital city in Xianyang, and they were abandoned at the beginning of the Han dynasty. Emperor Wu Di incorporated Shanglinyuan into the palace parks and expanded them. The vast area southeast to southwest of Chang'an, more than 200 *li* in perimeter, was roped in as a result. In the parks were placed birds and animals for the imperial hunt, and several dozen resort palaces were built. A great number of eaves tiles impressed with the name Shanglin are the most conspicuous remains of these palaces. In 1961, at Gaoyaocun in Sanqiaozhen about 2 km southwest of Chang'an, an architectural site was found consisting of several house floors, the largest being about 340 m long by 65 m wide, probably the remains of an important palatial building within the Shanglinyuan parks.¹⁹ A storage pit was

discovered near the house floor, containing more than twenty bronze vessels such as basins, *ding*-tripods, *fang*-jars, and cooking pots. Inscriptions incised on the vessels (fig. 26) indicate that these were used within the Shanglinyuan parks; likely they were intentionally buried during the fighting at the end of the Wang Mang period.²⁰

In the third year of Emperor Wu Di's reign period Yuan Shou (120 B.C.), the artificial lake called Kunmingchi was excavated between the rivers Feng and Jue to the southwest of Chang'an, for the purpose of training a water-bound fighting force (in preparation for war with the state of Kunming) and to help alleviate the water shortage in the capital. After two thousand years the remains of the lake are still vaguely recognizable. The lake site now is a depression more than 10 km² in area. An elevated ground in the northern part appears to have been an island within the lake, possibly the site of the Yuzhang Hall described in the *Xi jing fu*. In describing the Kunming Lake, both *Xi du fu* and *Xi jing fu* refer to "the Niu Lang [or Cow Boy] on the left and the Zhi Nü [or Weaving Lady] on the right." A pair of sculptured stone human figures still stand today near Doumenzhen; their style is highly archaistic, apparently dating from the Western Han period.²¹ The stone sculpture on the eastern side of the lake is that of a male, presumably the Cow Boy (fig. 27, left), and the one on the western side that of a female, presumably the Weaving Lady (fig. 27, right), completely conforming with their descriptions in the two poems by Ban Gu and Zhang Heng.²² The floors of many houses were brought to light around the ancient lake site, yielding a few stone foundations and a large number of tiles. These could be the remains that are described in ancient texts of the Xuanqugong, Baiyanggong, and Xiliugong palaces within the Shanglinyuan parks (fig. 28).²³

Ritual Structures Emperor Wu Di paid great attention to Confucian rituals, and some of his Confucian officials had proposed to him that a new Ming Tang (a ritual hall where the emperor pronounced the new year, officiated at festivities, performed rituals, and received the feudal lords) be built. However, it was not. (It should be mentioned

that there was a Ming Tang at that time, located on the Taishan Mountains). Under the reign of Emperor Cheng Di, officials suggested that a "Pi Yong" (a place where the emperor performed rituals and music and promulgated virtuous principles) be built in the south of Chang'an, but again it was not done at that time. At the end of Western Han, when Wang Mang became regent, he had Ming Tang, Pi Yong, Ling Tai (the spiritual terrace), and Tai Xue (the imperial academy) built in Chang'an. After he enthroned himself, Wang Mang went even further, building his Jiu Miao, or "Nine Temples." These "mysterious" buildings, full of religious color, were designed in accordance with both traditional Confucian regulations and Taoist *yin yang* and *wu xing* (Five Elements) principles; they were of large scale and quite complex. The sites of these buildings, which the archaeologists refer to as ritual structures, were first excavated in 1956, and since then more than ten such structures have come to light (fig. 29).²⁴

A ritual structure excavated in 1956, located south-southeast of the Anmen Gate, consisted of a square building surrounded by a square composed of four walls, each 235 m long. Through each of the four walls was a door. At each corner, within the enclosure and close to the wall, were built elbow-shaped houses (fig. 30). At the center of the courtyard was a square hall (with side rooms on four sides) built on a round platform 60 m across (fig. 31). Outside the courtyard was a large circle 360 m long, formed by a ditch 2 m wide. In short, a peculiar architectural plan characterized this building: a square was placed within a circle, and within the square was another circle. These principles are consistent with the textual characterizations of Ming Tang and Pi Yong, such as "circular above and square below," or "circular outside and square inside." What is more, the records all characterize the Pi Yong as a structure surrounded by water on all sides, and as circular as a jade ring. It looks as if the excavated structure was indeed the Pi Yong (fig. 32).²⁵

All the other ritual structures are clustered in the area

southsouthwest of the Anmen Gate. Their shapes are similar to the Pi Yong above, but they were not surrounded by ditches, and their central halls were not built on round platforms. Thus, they were probably neither the Ming Tang nor the Pi Yong. Artifactual remains found here date from the Wang Mang period, and consequently most archaeologists believe them to be the Nine Temples. It is noteworthy that the eaves tiles used above the four doors of the temple were decorated with designs representing the Four Deities: eaves tiles with Green Dragon designs, over the east gate; White Tiger eaves tiles, over the west gate; Red Bird tiles, over the south gate; and Black Turtle tiles, over the north gate. This usage is consistent with the principle that "the Four Deities were in charge of the Four Directions" (figs. 33-36).²⁶ All of these ritual structures were destroyed at the end of the Wang Mang period, too, and they were never rebuilt.

壹 西汉的都城——长安

西汉的首都长安城遗址，在今陕西省西安市西北约三公里，北距渭水南岸约二公里。在遗址上，但见残存的城墙绵亘起伏，重重叠叠的瓦片遍地皆是，昔日宏大的规模和繁华的景象于此可以想见（图1）。秦代首都咸阳城，在渭水北岸。汉代将都城建在渭水之南，可能是出于地形方面的选择。特别是从加强首都与函谷关以东广大地区的联系来考虑，这里的交通条件要比渭北便利得多。

长安城的建设，大体上可以分为三个阶段。汉高祖时，将秦代的离宫兴乐宫改建为长乐宫，在长乐宫的西面兴建未央宫，又在长乐、未央两宫之间建武库。汉惠帝时筑城墙（其进程大概是从城的西北方起，先筑西墙，再筑南墙，又筑东墙，最后筑北墙），并建东市和西市。汉武帝时，在长乐宫的北面建明光宫，在未央宫的北面建桂宫、修北宫，在西面城外建建章宫，并扩建上林苑，开凿昆明池，都城的规模至此大备。

长安城的平面形状，基本上呈方形，正方向，经纬相等。但是，由于城墙的建筑是在长乐宫和未央宫已经建成之后，必须迁就两宫的位置，所以南面城墙有多处曲折。北面城墙因地势的关系，主要是由于河道的限制，更有许多曲折、偏斜之处。《三辅黄图》说：“城南为南斗形，城北为北斗形。”其实，所谓南斗形和北斗形是出于后世的附会，并非筑城时有意模仿。班固《西都赋》和张衡《西京赋》在叙述长安城的形制时都没有提到南斗形和北斗形，也足以说明这一问题。考古工作者在长安城遗址勘察时，大部分城墙犹高出地面，虽然有不少断缺之处，但仍有墙基遗留于地下。经1957年和1962年两次实测，东面城墙长约6000米，南面城墙长约7600米，西面城墙长约4900米，北面城墙长约7200米；四面城墙总长约25700米，合汉代六十二里强，基本上与《史记·吕后本纪》索引及《续汉书·郡国志》注引《汉旧仪》长安城周围六十三里的记载相符。全城总面积约36平方公里（图2）。¹

城墙全部用黄土夯筑而成。其高度在12米以上，下部宽度为12—16米。《三辅黄图》说“城高三丈五尺，下阔一丈五尺，上阔九尺”，与实际不符。虽然是土筑的城墙，没有使用砖和石料，但其坚固的程度超出

了人们的想象（图3、4）。据《汉书·惠帝纪》记载，当时是征调长安六百里内的农民和各地诸侯王、列侯的徒隶来筑城墙的。十四万五六千人，劳动一个月，只能建成一面城墙。四面城墙的建成，大概经历了五年的时间。在城墙的外侧，有壕沟围绕。经勘探、发掘，壕沟宽约8米，深约3米，与《三辅黄图》“广三丈，深二丈”的记载近似。1962年在章城门外发掘，究明了城门前面壕沟的形制，可以判断当时在壕沟上架有木桥，以便出入（图5）。²

全城共有十二个城门，平均分布在东南西北四面，每面各三个城门。东面的城门自北而南为宣平门、清明门、霸城门，南面的城门自东而西为复盎门、安门，西安门，西面的城门自南而北为章城门、直城门、雍门，北面的城门自西而东为横门、厨城门、洛城门。（见图2）其中，宣平门、霸城门、西安门、直城门于1957年经过发掘。

城门的设计，按照严格的规制。每个城门都有三个门道，每个门道的实际宽度都为6米，恰好相当于四个车轨（图6、7）。这就是《三辅决录》的所谓“三涂洞开”和《西京赋》的所谓“三途夷庭，方轨十二”。三国时薛综注《西京赋》说：“一面三门，门三道，故云三途，途容四轨，故方十二轨。”³这是对长安城城门形制最具体的说明。宣平门和直城门，门道之间的间隔为4米；霸城门和西安门，门道之间的间隔为14米。门道之间的间隔愈大，整个城门也就显得愈为广阔、雄伟。这可能是由于霸城门和西安门分别对着长乐宫的东门和未央宫的南门之故。⁴

1961年至1962年的钻探和发掘工作，究明了长安城内街道的形制。除了霸城门、复盎门、西安门、章城门因入门不远便是长乐宫和未央宫而外，其余八个城门都各有一条大街通入城内，延伸甚长。这就是说，长安城虽有十二个城门，但城内主要的大街是八条，正与《汉旧仪》、《三辅旧事》等的记载相符。这些大街，或作南北向，或作东西向，全街成一直线，毫无曲折。它们互相交错、接合，形成了许多“丁字路口”和“十字路口”。最长的是安门大街，计5500米；其次是宣平门大街，计3800米；最短的是洛城门大街，计850米。其余的大街，长度多为3000米左右。在当时，各条大街都有专门的名称。从文献记载结合实际勘察的情况来看，安门大街可能是章台街，直城门大街可能是稷街，清明门大街可能是香室街，横门大街可能是华阳街。⁵

八条大街的长度虽各有差别，但它们的宽度却完全相同，都在45米左右。这显然是出于统一的规划。值得注意的是，每一大街都分成三条

并行的道路，其间有两条宽约90厘米、深约45厘米的排水沟。这两条排水沟，形状很规整，断面成半圆形，它们固然是为了排除雨水而设，但也起了使大街一分为三的作用。中间的一条道路宽度较大，计20米；两侧的两条道路宽度较小，各为12米左右（图8）。据文献记载，中间的一条道路称“驰道”，是专供皇帝行走的；平民和官吏都不得行“驰道”，皇太子亦不例外。《西都赋》所说“披三条之广路”，就是指长安城内的大街都分为三条并行的道路而言的。这也说明了每个城门为什么都要有三个门道（中间的一个门道为皇帝所专用，一般吏民的出入是经左右的两个门道）。⁶

对于四周筑有高大城墙的都市来说，排水设施是十分重要的。长安城的排水设施，主要是在城门的地下埋筑宽大的涵洞。据在直城门和西安门发掘所见，涵洞的宽度各约1.2米和1.6米，高约1.4米左右，系用砖和石块砌筑，顶部都用砖发券（图9）。城内的积水，通过大街两旁的水沟，从城门地下的涵洞排入城外的壕沟。《汉书·刘屈氂传》说：“太子驱四市人，凡数万众，至长乐西阙下，逢丞相军，合战数日，死者数万人，血流入沟中。”此处所说的沟，就是指安门大街两旁的排水沟。此外，在建筑城墙时，还预先有计划地将一些断面成五角形或圆形的陶制水管埋入墙基，也起了排水的作用（图10）。⁷城内许多重要建筑物的地下排水系统，也是普遍使用这种陶制的水管来敷设的。

1961年至1962年，对长乐宫和未央宫的范围进行了勘探。长乐宫在城的东南部，所以又称东宫。宫的周围筑有围墙。由于兴建长乐宫和未央宫时，长安城还没有城墙，为了防卫，两宫的围墙都很宽阔，基部宽在二十米以上。可能是因为长乐宫系由秦代的离宫改建而成，缺乏系统的规划，所以全宫的平面形状不很规整。从埋存在地下的断断续续的墙基看来，长乐宫的围墙全长在10,000米左右，合汉代二十余里；宫的全部面积约6平方公里，占长安城总面积约六分之一。⁸据文献记载，长乐宫四面各有一门，称“司马门”。其中东面和西面的司马门是主要的，门外有阙，称东阙和西阙，后者紧临安门大街。

未央宫在长安城的西南部，当时也称西宫。但是，经勘察，它的位置和东面的长乐宫不很对称。因为完全是汉代新建的，所以和长乐宫相反，它的规划十分整齐，全宫平面为一规整的方形。四周围墙的长度，东墙和西墙各为2150米，南墙和北墙各为2250米，周围全长8800米，合汉代二十一里；全宫面积约5平方公里，占长安城总面积约七分之

一。围墙虽已夷平，仅存地下的墙基，但西墙尚有一小段遗留在地面上，其高度竟达11米。有名的未央宫前殿，基本上居全宫的正中，其基址至今犹高耸在地面上，南北长约350米，东西宽约200米，北端最高处高在15米以上，是利用龙首山的丘陵造成的（图11）。萧何营建未央宫，其规模如此宏伟，无怪汉高祖要责问：“天下匈匈，苦战数岁，成败未可知，是何治宫室过度也？”据记载，未央宫四面各有一“司马门”，而以东面和北面的“司马门”为重要，门外有阙，称为“东阙”和“北阙”。诸侯来朝，入自东阙；士民上书，则诣北阙。至于西南两面，则有门无阙。从实际情况看来，未央宫的南墙和西墙距长安城的城墙都很近，亦无立阙的余地。⁹

《汉书·高帝纪》说：“萧何治未央宫，立东阙、北阙、前殿、武库、太仓。”《三辅黄图》说：“武库在未央宫。”但是，从《史记·樗里子传》和其他许多有关的记载来看，武库不在未央宫内，而在未央宫与长乐宫之间。《资治通鉴》注引《元和郡县志》谓未央宫与长乐宫相隔一里，其实不然。根据实际的勘探，长乐宫的西墙与未央宫的东墙相距为950米，合汉代二里有余，武库的位置便在这一地段上。

1975年以来，对武库进行了全面的发掘，究明了它的范围、形制和结构。它的四周都筑有围墙，整个平面成一规整的长方形，东墙和西墙各长320米，南墙和北墙各长约800米。在内部有一道隔墙，将整个武库划分为两个院落。东院有四个仓库，西院有三个仓库，共计七个仓库（图12）。其中最大的一个仓库，长约230米，宽约46米，包含着四个库房，每一库房的面积在1500平方米以上（图13）。在库房中，紧密地排列着放置各种兵器的木架。木架本身虽已朽坏无存，而木架的础石犹一一可数，充分显示了《西京赋》所说“武库禁兵，设在兰橈”的情形（图14）。发掘工作说明，和长安城中其他许多建筑物一样，武库毁于新莽末年的战火。所藏武器虽然多已被取走，但仍有一些残余，其种类包括铁制的甲、戟、矛、剑、刀、镞和铜制的戈和镞等，完全足以说明它是武库（图15—18）。¹⁰

据文献记载，桂宫在未央宫之北，西面隔城与建章宫相近。因此，它的位置应在直城门大街之北，横门大街之西，雍门大街之南。1962年，通过钻探，在这一范围内发现了桂宫的围墙，计东墙和西墙各长约1800米，南墙和北墙各长约880米，四面围墙总长约5300米，约合汉代十三里；全宫平面呈长方形，面积约1.6平方公里。至于北宫和明光宫，

迄今尚未究明它们的范围，只是根据文献记载，认为前者的位置应在未央宫之北、桂宫之东，后者的位置应在长乐宫之北而已。西面城外的建章宫，经1962年的勘探，大致究明了它的位置和范围，但还待进一步考察才能确定。¹¹建章宫北有太液池，其遗迹尚大致可寻。1973年在池址的北侧发现了一件巨型的鱼形石雕，长近5米，证实了各种文献关于太液池北岸当时置有石鱼的记载（图19）。¹²

综合各种文献记载，可以肯定长安城内有九市。三市在街道之东，称东市；六市在街道之西，称西市。由于长安城的南部和中部都属宫殿区，九市只能是在城的北部。《三辅旧事》记述九市的位置在突门（雍门）附近、横桥大道（应即横门大街）的两侧，因而可以进一步判断它们是在城的西北部。在城的西北部一带，有的地方曾发现地面上散布着许多陶俑和钱范，说明这里是手工业作坊的所在，也可以作为上述判断的一种依据。¹³《汉书·惠帝纪》说：“（惠帝）六年（公元前189年），起长安西市。”由此可见，市的位置早在筑城之初已经选定。

《考工记》说：“匠人营国，方九里，旁三门，国中九经九纬，经涂九轨，左祖右社，面朝后市，市朝一夫。”这是中国古代都城的一种理想化的规划。据考证，《考工记》为东周时所作，但就调查发掘所知，东周列国都城的形制多与《考工记》不符。然而，综上所述，长安城的规划却的确有与《考工记》符合之处。这主要表现在：城的平面形状虽然不很规整，但基本上呈方形，经纬相等；十二个城门平均分布在四面，每面三个城门；每个城门各有三个门道，其宽度按车轨计算；经由城门的主要大街，都各分为并行的三条道路；长乐宫和未央宫在城的南部，东市和西市在城的北部。这可能是由于《考工记》在汉初受到重视，因而在设计长安城时被充分参照，相反，也可能是由于汉儒从长安城的实际情况出发，增改了《考工记》的“匠人营国”部分的关系。

长安城内的宫殿，仅长乐、未央两宫就占了全城总面积的三分之一，再加上桂宫、北宫和明光宫，宫殿所占的面积可能在全城总面积的二分之一以上。由于宫殿集中在城的南部和中部，所以，除了少数权贵人物的邸宅在未央宫北阙附近，即所谓“北阙甲第”而外，一般的居民，包括官吏在内，就只能居住在城的北部，特别是在城的东北部，靠近宣平门的地区。庾信《哀江南赋》有“践长乐之神皋，望宣平之贵里”之句，也说明了宣平门附近一带是汉代的重要住宅区。由于长乐宫和未央宫等宫殿的存在，霸城门、复盎门、安门、西安门、章城门、直城门等

城门实际上成为宫廷所专用。因此，西北面的横门和东北面的宣平门就成了长安城中吏民出入最频繁的城门。横门主要是管西北方的交通，门外不远，便是有名的中渭桥，又称横桥或横门桥，横跨渭水，过桥即至咸阳。与此相反，宣平门主要是管东南方面的交通，出门沿渭水南岸东行，出函谷关而达关东广大地区，其重要性更在横门之上。根据各种文献记载，宣平门又称东都门，或称都门，由于位置重要，出入频繁，《汉书》、《后汉书》中有关此门的记载也最多。

发掘工作证明，长安城的许多建筑物，其中包括霸城门、西安门、直城门等城门，都是在新莽末年的战火中被焚毁的（图20）。宣平门亦不例外，门道的两壁都被烧得发赤，并大量崩塌。在门道的堆积层中，发现了西汉和新莽的铜钱，尤以新莽的货布和货泉为多，这就具体地说明了城门焚毁的确实年代。¹⁴霸城门和西安门，被毁以后，一任崩塌的乱土、碎瓦和灰烬等堆塞在门道中而未加清除，说明了它们在此后的东汉、魏晋、五胡十六国时期和西魏、北周是废弃不用的（图21）；有的城门如直城门，则只修理了三个门道中的一个，以供出入。与此相反，宣平门虽然也在同一时期被焚毁，但堆塞在门道中的乱土和灰烬完全被清除，门道两壁有着显著的修补遗迹。可以断定，自东汉以来，宣平门至少重建过两次。

第一次重建是在东汉初期，重建的遗迹是在北门道和南门道的旧壁上另用夯土补筑，形成了新壁（图22）。《后汉书·杜笃传》说：“（建武十九年，即公元43年）于长安修理东都城门。”这不仅证实了发掘工作中的判断，而且进一步说明重建的具体年份。重建后的宣平门，一直使用到东汉末年，所以东汉末年有着许多关于宣平门的记载。¹⁵《后汉书·献帝纪》说：“（初平二年，即公元191年）三月，宣平门外屋无故自坏。”《三国志·董卓传》说：“司徒王允挟天子上宣平城门避兵。”《后汉书·董卓传》说：“王允奉天子保宣平城门楼上。”这些记载都说明直到东汉末年献帝居长安时，宣平门仍然存在，而且是一个筑有门楼的完整的城门。在门道的堆积层中发现的一些东汉的五铢钱和可能是董卓时所铸的粗制滥造的小铜钱，都是很好的物证。¹⁶

宣平门的第二次重建的遗迹，主要是在中门道和南门道用砖和土坯砌筑新壁（图23）。值得注意的是，所用的砖往往印有“石安”字样（图24、25）。据《魏书·地形志》记载，咸阳县的石安县为后赵石勒所置，这就说明了这次改建的年代是在后赵（公元4世纪中叶）。《晋书·石季

龙载记》说：“（石虎）以石苞代镇长安，发雍、洛、秦、并州十六万人城长安未央宫。”《十六国春秋·后赵录》也说：“（后赵石虎建武）十一年（公元345年），发雍、梁十六万人城长安未央宫。”由此可见，后赵石虎时曾大规模地修建过长安城，其中也包括了宣平门。¹⁷

从发掘出来的遗迹来看，自后赵以后，宣平门未有重大的改建，但在整个五胡十六国时期和北朝（公元4世纪至6世纪），它一直作为一个重要的城门被使用着。当时宣平门已改名为青门，这可以从《后汉书·逢萌传》注引《汉宫殿名》的记载中得到证明。东晋刘裕攻长安，后秦姚泓曾打算从青门出降。到了北周，青门仍然是一个重要的城门。《周书·宣帝纪》说“（大象元年，公元579年）帝亲擐甲冑，入自青门”，便是最好的说明。在门道的晚期堆积层中发现了北周的“五行大布”铜钱，证明了文献记载的正确。发掘工作还证明，这个城门甚至在隋代还继续被使用着，在门道地面上清楚地遗留着隋代的车辙，而所发现的隋代五铢钱则有力地说明了它们的年代。¹⁸到了唐代，城门的三个门道才被用夯土全部填塞。

总之，长安城虽然在新莽末年的战火中受到严重的破坏，但它在此后的东汉、魏、晋、五胡十六国时期、西魏、北周以迄隋初，一直是一个重要的城市，不少朝代仍在此建都。从宣平门遗址的发掘工作中，可以看出自西汉直到隋初的长安城全部历史的一个缩影。

上林苑为秦都咸阳时所置，汉初荒废。汉武帝时收上林苑为宫苑，并大事扩充，长安城东南面至西南面的广大地区都在它的范围之内，周围至二百多里。苑内放养禽兽，供皇帝射猎，并筑离宫别馆数十处，许多印有“上林”字样的瓦当便是它们最明显的遗物。1961年在长安城址西南面约二公里的三桥镇高窑村发现了一处建筑遗址，由好几座房基组成，较大的一座房基长约340米，宽约65米，当为上林苑中重要宫观的遗址。¹⁹在房基附近发现了一个窑穴，内有铜鉴、铜鼎、铜钺和铜铎共二十余件，器上所刻铭文（图26）表明它们是上林苑中所用之物，大概是因新莽末年的战乱而被有意埋藏起来的。²⁰

元狩三年（公元前120年），为了准备与昆明国作战而训练水军，并解决首都水源不足的问题，在长安城西南面泮水和漓水之间开凿昆明池。两千多年后的今日，昆明池的遗迹犹依稀可辨。它是一片面积约十多平方公里的洼地，北部的一处高地像是当时池中的岛屿，应该便是《西京赋》所说的“揭焉中峙”的豫章馆的所在。《西都赋》在叙述昆明

池及豫章馆时说“左牵牛而右织女”，《西京赋》说“牵牛立其左，织女处其右”。今斗门镇附近尚遗存石雕人像一对，一东一西，遥遥相对，它们的作风古朴，显然是西汉的作品。²¹东面的石雕是男像，应系牵牛（图27，左），西面的石雕是女像，当为织女（图27，右），前者位于豫章馆所在岛屿的东部，后者位于昆明池址的西侧，与班张两赋的记述完全相符。²²在池址的周围，发现许多建筑物的基址，遗留着一些石础和大量的瓦片，对照有关文献的记载，它们可能便是上林苑中的宣曲宫、白杨宫、细柳宫等的遗迹（图28）。²³

汉武帝崇尚儒术，儒臣们向他建议在长安城南立“明堂”，但未能付诸实施（当时的“明堂”在泰山）。成帝时，大臣们议立“辟雍”于长安城南，亦未成事实。到了西汉末年，王莽执政，才在长安建立“明堂”、“辟雍”，同时兴建“灵台”和“太学”。当了皇帝以后，王莽又大兴土木，建造他的宗庙，即所谓“九庙”。这些神秘的、充满宗教色彩的建筑物，是按照儒家的传统礼制和当时流行的阴阳五行学说设计的，规模宏大，结构复杂。它们的遗址，自1956年以来，在汉长安城安门和西安门外的南郊陆续被发现，达十余座之多，有的已经过发掘。考古学家们统称之为“礼制建筑”（图29）。²⁴

1956年发掘的一座“礼制建筑”，位置在安门南面偏东处。它是一个平面呈正方形的大庭院，四面的围墙各长235米，每面设一门，四面共四门。在院内的四隅，紧靠着围墙，都筑有平面成曲尺形的房屋（图30）。院内的中央，则是这个建筑物的主体所在，它是一个在直径为60米的圆形台基上建立起来的厅堂，平面呈正方形，四面附有配室，互相对称（图31）。在庭院的外面，由宽约2米的水沟围绕成一个直径达360米的大圆圈。总之，这个建筑物的特点，表现在它的整个平面图上，是圆形之中有方形，方形之中又有圆形，正与“明堂”、“辟雍”的所谓“上圆下方”或“外圆内方”的形制相符。由于各种记载中都说“辟雍”是“四面周水，圜如璧”，所以它很可能便是“辟雍”的遗迹（图32）。²⁵

其余的许多“礼制建筑”，都集中在安门的南面偏西处。它们的形制虽与上述的“辟雍”有相似之处，但周围没有水沟环绕，中央的厅堂也不是建筑在圆形的台基之上，所以不像是“辟雍”或“明堂”。由于出土的遗物明确地表明它们是新莽时所建，所以考古学家们多认为它们可能便是王莽的九庙。值得注意的是，庙的四门所用瓦当的图纹多属“四神”（图33—36），而青龙瓦当用于东门，白虎瓦当用于西门，朱雀瓦当用于南

门，玄武瓦当用于北门，正与“四神分司四方”的说法相符。²⁶发掘工作证明，所有这些“礼制建筑”，包括“辟雍”和“九庙”，都和长安城的城门、宫殿一样，是在新莽末年的战火中被毁的，此后一直未曾经过重建。

CHAPTER 2 LUOYANG: THE CAPITAL CITY OF EASTERN HAN

The remains of the capital of the Eastern Han dynasty, Luoyang, are situated approximately 15 km east of the present-day city of Luoyang in Henan. Since the site is bordered on the north by the Mangshan Mountains and overlooks the Luo River to the south, it has protective natural barriers and is also at an important junction for transportation and communication (fig. 37). For these reasons, as early as the Western Zhou dynasty a major city, Chengzhou, was constructed there. Chengzhou lasted through the Eastern Zhou times. Subsequently, the Western Han city of Luoyang was built on the same site. In other words, the Eastern Han capital of Luoyang was located not only on the site of the Western Han Luoyang but also on that of the Zhou city of Chengzhou.

Architectural traces of Chengzhou are difficult to find now. However, a cluster of Zhou dynasty tombs, which were originally north of the Zhou city, still exists today. The famous Jincun tombs discovered in 1928 are part of this cluster.¹ From the location of these tombs we can speculate that the area within the boundaries of Chengzhou was much smaller than that of the Eastern Han Luoyang. The Zhou city was closer to the present course of the Luo River and farther removed from the Mangshan Mountains on the north. As for the location and boundaries of the Western Han Luoyang, we can estimate that they must have been roughly the same as those of the earlier Zhou dynasty city. Among the Western Han city's palaces, Nangong, or the South Palace, was the most important. When Emperor Guang Wu Di, the founder of Eastern Han, decided to establish his capital at Luoyang in the first year of his reign period Jian Wu (A.D. 25), he first took up residence in the South Palace.

Then he embarked on a project to build a new city wall, expanding the boundaries of the old city and enclosing the site of the Zhou dynasty graveyard within the northern section of the new city. Remains that can still be seen today thus confirm the statement from *Diwang shiji* quoted in the commentary on the "Treatise on Commanderies and Kingdoms" in *Xu Hanshu* that in the northeastern part of Luoyang of Eastern Han there was a graveyard from the Yin (Shang) dynasty as well as the tomb of King Jing of the Zhou dynasty.

City Wall Today, above ground we still find remains of the eastern, western, and northern walls of the Eastern Han city of Luoyang. When archaeologists went to inspect the site in 1962, there were still walls that stood over 7 m high (fig. 38). As for the southern wall of the city, it was destroyed by water long ago when the Luo River changed its course, so that today no traces of it remain. Fortunately remains of Ming Tang and Ling Tai, which were located in the southern suburb of the Eastern Han Luoyang, can still be seen. According to *Han guanyi* and *Luoyang ji*, the distance from these two structures to the southern city wall was approximately 2 or 3 *li*. Therefore, we can conclude that the southern wall was located in what is now the middle of the Luo River. As in Chang'an, the Western Han capital, in Luoyang the city wall was constructed out of rammed yellow earth and was extremely sturdy (fig. 39). The thickness of the wall at the base was determined by our test diggings to be about 14 m for the eastern wall, about 20 m for the western wall, and about 25 m for the northern wall—all different. The thickness of the western and northern walls may have been increased for defense purposes during the subsequent Wei and Jin dynasties. Measurements show that the remains of the eastern wall are 3,900 m long, those of the western wall 3,400 m long, and those of the northern wall 2,700 m long. Though the southern wall no longer exists, if we calculate the distance between the southern tips of the eastern and western walls, we can determine that it must have been 2,460 m long.² Since the southern wall was in the middle of what is today the Luo River, we must add approximately 300 m to the

length of both the eastern and western walls to determine their full length. Once we do this, then we can calculate that the total length of the four city walls of the Eastern Han Luoyang must have been approximately 13,000 m, or about 31 Han dynasty *li*. *Diwang shiji*, as quoted by the commentary on the "Treatise on Commanderies and Kingdoms" in *Xu Hanshu*, says "From east to west the city is 6 *li* and 10 *bu*; from north to south it is 9 *li* and 100 *bu*." Also, *Jin Yuankang didao ji* notes that "From north to south the city is 9 *li* and 70 *bu*, while from east to west it is 6 *li* and 10 *bu*." All these figures coincide with our own measurements. Although none of the existing walls is perfectly straight and both the eastern and northern walls have substantial sections that are curved, the basic shape of the city was rectangular (See fig. 37). Since its length, measured north to south, was approximately 9 *li* and its width, measured east to west, was approximately 6 *li*, it was known as the "nine-six city." The layout of the Western Han capital of Chang'an was square, while the layout of the Eastern Han capital of Luoyang was rectangular; this was but one of many differences between the two capitals.

City Gates According to *Luoyang ji*, *Luoyang qielan ji*, and other documentary sources, Luoyang of Eastern Han had twelve city gates. Although the number of gates was thus the same as in the Western Han capital of Chang'an, there was an important difference in their location: the Luoyang gates were not equally distributed along the four sides of the city. Instead, the eastern and western sides each had three gates, while there were four gates in the south and only two in the north. The three city gates on the east, from north to south, were the Shangdongmen Gate, Zhongdongmen Gate, and Maomen Gate. The three western gates, from south to north, were the Guangyangmen Gate, Yongmen Gate, and Shangximen Gate. The two northern gates, from west to east, were the Xiamen Gate and Gumen Gate. And the four southern gates, from east to west, were the Kaiyangmen Gate, Pingchengmen Gate, Xiaoyuanmen Gate, and Jinmen Gate. During the 1962 survey, clear traces were found of all

eight gates on the east, west, and north.³ Even though the four southern gates have been washed away by the Luo River so that no traces can be found, we can still determine their location from the four large avenues that run north to south through the city, which were found during the same survey. From the city plan, as determined by actual measurements, we can see that the Shangdongmen Gate and Maomen Gate on the east were directly opposite the Shangximen Gate and Guangyangmen Gate on the west. Moreover, the Kaiyangmen Gate, Pingchengmen Gate, Xiaoyuanmen Gate, and Jinmen Gate were more or less equidistantly spaced. This arrangement shows a high degree of planning when the city was constructed. Since we have not done excavation, we are not certain about the precise shape and structure of the gates. But the Xiamen Gate at the western part of the northern wall is unusually well preserved. From what can be seen we can conclude that, just as in the case of the gates of Chang'an, this gate had three separate openings,⁴ a fact corroborated by entries found in *Luoyang ji* and other historical records.

City Streets During our survey, traces of many streets were also found. Most of these streets date from the Northern Wei dynasty.⁵ However, we can infer that the layout of streets in the Eastern Han capital was basically the same as that of the Northern Wei city. In other words, the streets of the Northern Wei city followed those of the Eastern Han capital, the only changes being those made to accommodate the relocation of certain palaces and city gates. Therefore, using the remains of the streets found during our survey as a basis, and taking into account what we know about the location of the city gates and the palaces in the Eastern Han city, we can derive the following description of the layout of streets and avenues in the Eastern Han Luoyang.

There were five avenues that ran north to south. The first, which we could call the Kaiyangmen Gate Avenue, ran north from the Kaiyangmen Gate and was 2,800 m long. The second, which we could call the Pingchengmen Gate Avenue, ran north from the

Pingchengmen Gate and stopped at the southern gate of the South Palace, a distance of 700 m. The third, which we could call Xiaoyuanmen Gate Avenue, ran north from the Xiaoyuanmen Gate and stopped at the southern gate of the North Palace, a distance of 2,000 m. The fourth, which we could call the Jinmen Gate Avenue, ran north from the Jinmen Gate and was approximately 2,800 m long. The fifth, which we could call the Gumen Gate Avenue, ran south from the Gumen Gate, turned eastward when it met the northern wall of the North Palace, then turned southward again, covering 2,400 m. The street that ran south from the Xiamen Gate stopped 100 m inside the city wall where it met the northern wall of the North Palace, hence we cannot consider it an avenue. There were also five avenues that ran east to west. The first one, which we could call the Shangdongmen Gate Avenue, ran west from the Shangdongmen Gate and stopped at the eastern wall of the North Palace, a distance of 600 m. The second, which we could call the Zhongdongmen Gate Avenue, ran west from the Zhongdongmen Gate, passing between the South Palace and the North Palace, covering approximately 2,200 m. The third, which we could call the Shangximen Gate Avenue, ran east from the Shangximen Gate and stopped at the western wall of the North Palace, a distance of 500 m. The fourth, which we could call the Yongmen Gate Avenue, ran east from the Yongmen Gate and stopped at the Jinmen Gate Avenue, a distance of about 500 m. The fifth, which we could call Maomen-Gate-to-Guangyangmen-Gate Avenue, crossed the entire width of the city between those two gates, a distance of 2,460 m. These various avenues formed a network of crossroads and T-shaped intersections. If we count the number of avenue segments marked off by the intersections we come up with a total of twenty-four segments. *Hanyi*, as quoted by the commentary on the "Treatise on the Bureaucracy" in *Xu Hanshu*, says that Luoyang had twenty-four "streets" (*jie*); it is probably these avenue segments that the statement refers to. Except for some of the smaller avenues that were 20 m wide, most of the avenues measured 40 m across. Without

excavations we cannot have a complete understanding of how they were constructed. But according to *Luoyang ji*: "The large avenues within the city and those running through the palace gates all have three lanes. The middle lane is the imperial byway and is bordered on either side by a mud wall that stands over 4 *chi* high. Only the noblemen and high officials are allowed to use this middle lane. Pedestrians must use the side lanes, the left-hand one for entering and the right-hand one for exiting." This passage indicates that the avenues of Luoyang, with their three parallel lanes, were just like those of the Western Han capital of Chang'an.⁶

Palaces Among the palaces of Luoyang, the most important were Nangong, or the South Palace, and Beigong, or the North Palace. They already existed during the Western Han dynasty, but then they were much smaller than during Eastern Han. Nevertheless, the South Palace was already famous during Western Han and is often referred to in the historical records. The "Annals of Emperor Gao Zu" in *Hanshu* says that in the fifth year of that emperor's reign (202 B.C.), "The emperor held a banquet in Luoyang's South Palace." Again, the "Biography of Wang Mang" in *Hanshu* records that in A.D. 22, "The chancellor, Wang Xun, led more than ten thousand troops to camp at Luoyang; he occupied the South Palace." We can thus deduce that from the beginning to the end of the Western Han dynasty, the South Palace was the major palace in Luoyang. In 1961, a bronze *zhong*-jar was found in the ruins of the Western Han Chang'an with the words "South Palace *zhong*" ⁷ inscribed on it. It must have come from the South Palace of Luoyang of Western Han (fig. 40).⁸ In the first year of the reign period Jian Wu of Eastern Han (A.D. 25), Emperor Guang Wu Di decided to establish his capital at Luoyang and took up residence in the Quefei Hall of the South Palace. The Quefei Hall must have been part of the legacy of the Western Han Luoyang. Subsequently, with continuous construction, the South Palace grew steadily until A.D. 38, when its most important structure, the Anterior Hall, was completed.

Since there has not been thorough excavation, remains of the

South Palace have not yet been uncovered. But, as mentioned above, we already have some knowledge of the layout of Luoyang's gates and avenues. Based on this, we can make certain general statements about the location of the South Palace and its boundaries. From a map based on our measurements, we can tell that in the southern section of Luoyang—that is, south of the Zhongdongmen Gate Avenue, north of the Maomen Gate-to-Guangyangmen Gate Avenue, west of the Kaiyangmen Gate Avenue, and east of the Xiaoyuanmen Gate Avenue—there was a large rectangular space, which was approximately 1,300 m north to south and 1,000 m east to west. This must have been the location of the South Palace. According to the "Treatise on the Five Phases" in *Xu Hanshu*, the Pingchengmen Gate was the city gate that faced directly south and also the one that provided access to the South Palace. When the suburban sacrifices were held, the emperor's carriage came out from this gate; it was the most important of the city gates. During our test diggings, we found that the Pingchengmen Gate Avenue led directly from the southern suburb into the city and continued on into the space we described above, which according to our estimate must have been the location of the South Palace. The path of this avenue confirms the accuracy of our estimate.⁹

The South Palace was the most important construction project undertaken by Emperor Guang Wu Di. Under the next emperor (Emperor Ming Di), the North Palace was rebuilt; this rebuilding lasted from A.D. 60 to A.D. 65. Within the North Palace, the Deyang Hall was the most important palace building. It held ten thousand people and stood atop a twenty- *chi*-high flight of steps, and the Zhuque Que in front of the hall was high into the clouds, allegedly visible 40 *li* away. During our survey, we could not definitely determine the boundaries of the North Palace. But from the layout of the avenues, we could determine that the North Palace must have been situated north of the Zhongdongmen Gate Avenue, east of the Jinmen Gate Avenue, and west of the Gumen Gate Avenue. This last avenue, the Gumen Gate, which ran south from that gate, turned

eastward after a short distance; this bend must have been made in order to circumvent the northern wall of the North Palace. If this is so, then we could conclude that the northern wall of the North Palace was very close to the northern city wall. The North Palace was probably even larger than the South Palace, and its location was not only north but also slightly to the west. According to textual records, the distance between the South Palace and North Palace was 7 *li*; this figure, however, could not be confirmed by our survey work. Possibly the correct figure was 1 *li*, which later became corrupted into 7 *li*. Between the two palaces there were covered passageways, built to provide security for the emperor as he moved back and forth.

In the Western Han capital of Chang'an, the two major palaces, Changlegong and Weiyanggong, were both located in the southern part of the city, side by side. In the Eastern Han capital of Luoyang, however, the two major palaces were located in the northern and the southern parts of the city, respectively, and had connecting passageways between them. This is another distinct difference in the design of the two Han capitals. Yet from another point of view, the capitals were similar in the respect that their palaces, wherever they were located, occupied over half the entire area of each city. In addition to the South Palace and North Palace, Luoyang also had the Yong'angong Palace, situated northeast of the North Palace, near the Shangdongmen Gate. Furthermore, in the northwestern part of the capital there was Zhuolongyuan, an imperial park. Southeast of the South Palace, near the Maomen Gate and Kaiyangmen Gate, stood the ministries of the grand commandant (*taiwei*), the imperial secretary (*sikong*), and the chancellor (*situ*). These were the highest administrative bodies of the empire. Northeast of the North Palace, right next to the northeastern corner of the city wall, stood the Grand Storehouse (*taicang*) and the Armory (*wuku*). The residential districts of the high officials and aristocrats, such as the Buguang and Yonghe precincts, were mostly located near the Shangdongmen Gate. The residence of Dong Zhuo, for example, was in the Yonghe Precinct.¹⁰ As

for the common people, they lived outside the city, just beyond the city gates. The residential areas of the commoners were mostly outside the city wall immediately by the gates, similar to those of the Western Han Chang'an. As for industrial and commercial centers, there were three markets: Nanshi (the South Market), Mashi (the Horse Market), and Jinshi (the Gold Market). The South Market and Horse Market were both located outside the city, the former in the southern suburb and the latter in the eastern suburb. The Gold Market was located inside the city, northeast of the Yongmen Gate, southwest of the North Palace and northwest of the South Palace.

In A.D. 25, Emperor Guang Wu Di established his capital at Luoyang. One hundred and sixty-five years later, in 190, the rebel Dong Zhuo forced Emperor Xian Di to flee from the city and seek refuge in Chang'an. We read that Dong Zhuo "burned the palaces, temples, and houses of Luoyang," and "the fire lasted more than three days, until the city of Luoyang was reduced to ruins." In this way, the prosperous Luoyang was totally destroyed. In 196, when Emperor Xian Di returned to Luoyang, we read "the palaces were completely burned, and the officials had to clear away brambles and seek shelter between tumbled walls." There was no building left in which Emperor Xian Di could reside; he had no choice but to bow to Cao Cao's wish and move his capital to Xuxian.

Luoyang in Wei and Jin Dynasties Nevertheless, because of Luoyang's strategic location the capital was reestablished there during the succeeding Wei dynasty, ruled by the Cao clan. Emperor Wen Di of the Wei (Cao Pi) rebuilt parts of the North Palace. Then, in the year 235, under the direction of Emperor Ming Di (Cao Rui), a major reconstruction was undertaken. The Taiji Hall, Zhaoyang Hall, and other buildings were constructed on top of the old foundations of the Chongde Hall in the South Palace of Eastern Han. At the same time, several parks, including Fanglinyuan, were restored and expanded. Since the destruction at the end of Eastern Han had been so severe, it was an enormous feat to rebuild the capital on top of the ruins.

According to the "Biography of Gao Tanglong" in *Weizhi*: "There were tens of thousands involved in the labor. Everybody from ministers of state to students joined in the task. The emperor himself led the others, taking part in the digging." It is safe to assume that the size of Luoyang during the Wei dynasty did not exceed that of the Eastern Han Luoyang. The Western Jin dynasty, which followed Wei, continued to construct new buildings, but did not make any major changes in the design of the city.

However, it should be mentioned that Emperor Ming Di (Cao Rui) of the Wei dynasty built the Jinyongcheng Fortress at the northwestern corner of the city. (He was following the example of his grandfather, Cao Cao, who had built three defense towers, Tongquetai, Bingjingtai, and Jinhutai, at the northwestern corner of his stronghold, Yecheng.) The Jinyongcheng Fortress was built for military purposes. Its walls and ramparts were particularly strong. And because it stood against the Mangshan Mountains and was situated on high ground that commanded a view of all of Luoyang, it was of critical military importance. In the final years of the Western Jin dynasty, that is, during the rebellions of the Yong Jia period (307-313), this fortress was fought over intensely by those who were contending for control of Luoyang. At that time, it was known as the Luoyang Rampart. In the survey done in 1962, it was determined that the Jinyongcheng Fortress measured 1,080 m from north to south and 250 m from east to west. The fortress consisted of three separate fortifications, whose walls were 13 m thick. The northern fortification and the middle one were outside the Luoyang city wall; the southern fortification was just inside it. These fortifications had connecting doors and ramps.¹¹ It is also noteworthy that along the walls of the Jinyongcheng Fortress there were projecting bastions at intervals of 60 or 70 m. These bastions were about 15 m long and 8 m wide (fig. 41). Similar bastions were found on the northern and western city walls of Luoyang, where they were about 18 m long and 8 m wide, and they were constructed at about 120 m intervals. These bastions,

like the Jinyongcheng Fortress itself, were apparently constructed during the Wei or possibly the Western Jin dynasty.¹² No other examples of such bastions built on the outer edges of city walls have been found from any remains dating from the Han to the Sui-Tang period, except for those on the fortress walls built in border regions. Such bastions were used again in the Northern Song dynasty capital of Bianliang. In the Song dynasty, they were called "Horse Faces" and were used to supplement the city's defenses, ensuring that enemy forces who approached or scaled the city wall would be attacked from three sides. The appearance of these bastions on the city walls of Luoyang during the Wei and Jin dynasties is indicative of constant fighting during that period. They were an innovation made in response to special military needs.

During the year 311, the Xiongnu chieftain, Liu Cong, led his army to invade Luoyang. In the intense battle that ensued, most of its palaces, temples, government offices, and houses were burned down. The Luoyang which had been slowly rebuilt over a seventy-year period during the Wei and Jin dynasties was again reduced to ashes.

Luoyang in the Northern Wei Dynasty One hundred eighty years later, in 493, the Northern Wei dynasty established its capital at Luoyang, the last dynasty to do so. Emperor Xiao Wen Di of Northern Wei decided to shift his capital from Pingcheng to Luoyang that year. Subsequently, after many years of development and reconstruction, Luoyang not only became a prosperous city once again, but also was given a new layout that made it, as the Northern Wei capital, different in many respects from the Luoyang of earlier dynasties. Since Northern Wei was the last dynasty to make Luoyang its capital and afterward the site was abandoned, the remains are quite well preserved. After our survey, we were able to make a relatively accurate and reliable plan of the city (fig. 42).

The most important change in the Northern Wei Luoyang was the abolition of the custom of having two palaces, the South and the North palaces, which had existed since Eastern Han. Instead, a single,

walled palace was built. This palace was in the northern part of the city, slightly off to the west, built on the foundation of the North Palace of the Han and Wei dynasties. It had a neat rectangular plan, enclosed by four walls. The eastern and western walls each measured 1,400 m, and the northern and southern walls were 660 m. The palace occupied approximately onetenth of the area of the entire city. Near the west end of the southern wall of the palace, the remains of an enormous gate have been found. This was the Changhemen Gate, the main palace gate.¹³

The names of the twelve city gates of the Eastern Han Luoyang were all changed by now, with the exception of the Kaiyangmen Gate at the east end of the southern city wall. Actually, some of the gate names had already been changed during the Wei and Jin dynasties, some were not changed until Northern Wei, while still others were changed twice. The former Shangdongmen Gate was now the Jianchunmen Gate, the Zhongdongmen Gate was now the Dongyangmen Gate, the Maomen Gate was now the Qingyangmen Gate, the Pingchengmen Gate was now the Pingchangmen Gate, the Xiaoyuanmen Gate was now the Xuanyangmen Gate, the Jinmen Gate was now the Jinyangmen Gate, the Guangyangmen Gate was now the Ximingmen Gate, the Yongmen Gate was now the Xiyangmen Gate, the Shangximen Gate was now the Changhemen Gate, the Xiamen Gate was now the Daxiamen Gate, and the Gumen Gate was now the Guangmomen Gate. All twelve gates were rebuilt, eleven of them on their former Han and Wei dynasty sites. But the Xiyangmen Gate on the western wall was moved from the old site of the Yongmen Gate 500 m to the north, so that it was now directly opposite the Dongyangmen Gate on the eastern wall. Furthermore, when Emperor Xiao Wen Di first arrived at Luoyang, the palaces were not ready, and so he resided temporarily in the Jinyongcheng Fortress. While there, he created a new city gate near the fortress at the north side of the west wall of the city. This new gate was called the Chengmingmen Gate (fig. 43), thus now Luoyang had thirteen city gates.¹⁴

Since the boundaries of the palaces and the location of some of the city gates had been changed, the streets within the city also underwent changes. For example, because the South Palace had been totally demolished, it now became possible for an avenue to span the length of the entire city, north to south, from the Guangmomen Gate to the Pingchangmen Gate. Since the Yongmen Gate of Eastern Han no longer existed, the Yongmen Gate Avenue was probably also done away with. Due to the opening of the Chengmingmen Gate, there was now a new avenue leading from that gate eastward into the city. It should be pointed out that now there was also an avenue that cut across the city in an eastwest direction from the Jianchunmen Gate to the Changhemmen Gate. This avenue cut across the walled palace, running through the palace's own east and west gates, dividing it in two halves, north and south. The southern half was used for palace audiences, while the northern half was the site of the imperial residence. More important, since the newly constructed Xiyangmen Gate was directly opposite the Dongyangmen Gate, the Zhongdongmen Gate Avenue of Eastern Han was extended to cross the entire city. This was thus a second avenue that cut across the entire city, east to west. This avenue passed by the southern wall of the walled palace and formed a kind of interior boundary within the city. North were the imperial palaces and parks; south were the government offices, temples, and houses of the aristocrats. Last, we should note that since the walled palace was in the north of the city, slightly west of center, and its southern gate, the Changhemmen Palace Gate, directly faced the Xuanyangmen Gate on the southern city wall, the avenue that connected the two gates, the Tongtuo (Bronze Camel) Avenue, became a kind of major artery, just as the Pingchengmen Gate Avenue had been during Eastern Han.¹⁵ All the high officials' offices, all the temples and ancestral halls, as well as the other important buildings were arrayed along the two sides of the Tongtuo Avenue (figs. 44-46).¹⁶ The famous Yongning Temple was on the west side of the avenue, where its remains are still preserved today and

have recently undergone excavation (fig. 47).¹⁷ So it was that the Xuanyangmen Gate became the most important city gate in the Northern Wei Luoyang, as the Pingchengmen Gate had been during Eastern Han.

As mentioned above, when Northern Wei rebuilt the Eastern Han city of Luoyang, it gave the city a new appearance and design. But this new Luoyang we have been describing so far was actually only the inner city of the Northern Wei Luoyang. Far beyond the old city wall, another wall was erected, known as the outer city wall, enclosing a much larger area. According to *Luoyang qielan ji*, the outer city wall was 20 *li* long from east to west and 15 *li* long from north to south—very long indeed. The city within was divided into 320 wards, each of which was square and enclosed by walls. These ward walls were 300 *bu* on a side, about one *li* by contemporary reckoning. The city had a very exact and neat layout. According to the "Annals of Emperor Shi Zong" in *Weishu*, the construction of this outer city began in 501, during the reign of Emperor Xuan Wu Di, eight years after Emperor Xiao Wen Di moved to Luoyang and made it the site of his new capital, and the actual construction required tens of thousands of laborers. The wards outside the inner city were occupied by the common people, who were kept under strict control and regulation. The markets—that is, the centers of industry and commerce—were also located in the outer city. Dashi (the Big Market) was in the western part of the city, west of the inner city. Xiaoshi (the Small Market) was east of the inner city. Sitongshi (the Four-Way Access Market) was south of the inner city, just outside the Xuanyangmen Gate. Jinshi (the Gold Market), which had been inside the Luoyang of the Han and Jin dynasties, was demolished and a Buddhist temple was constructed on its former site. These changes thus ended the Eastern Han tradition of having a market just north of the main palace.¹⁸ In summary, we can say that the structure and layout of the Northern Wei Luoyang, when compared to that of the two Han capitals, shows epoch-making changes, and established a precedent later adopted for

the Sui capital of Daxing and the two Tang capitals of Chang'an and Luoyang.

Ritual Structures According to the "Annals of Emperor Guang Wu Di" in *Hou Hanshu*, the Pi Yong (Hall of Learning), Ming Tang (Ritual Hall), and Ling Tai (Spirit Terrace) were all built in A.D. 56. All documentary references indicate that the three structures were located just south of the Eastern Han Luoyang, outside the Kaiyangmen Gate and Pingchengmen Gate. This location has been confirmed by archaeological excavations.¹⁹

The Pi Yong was situated on the eastern side of the large road outside the Kaiyangmen Gate. The remains show that the ground plan was square and that it was surrounded by a wall that was 170 m on each side. Within this large square enclosure there were four clusters of buildings evenly spaced apart. Each cluster consisted of three structures.²⁰ According to *Han guanyi*, the Pi Yong was surrounded on all sides by a moat, over which there were bridges. However, archaeological excavation has not yet turned up any remnants of such of a moat. During the Wei dynasty and the Western Jin dynasty, the Pi Yong was rebuilt, probably on the site of the Eastern Han Pi Yong. In 1930, a stele was discovered on the site commemorating three visits to the Pi Yong by Emperor Wu Di of the Jin dynasty (reigning from A.D. 265 to 290) (fig. 48), and in recent years the base of this stele has likewise been found. This discovery proves beyond a doubt that the ruins on this site are those of the Pi Yong of the Han and Wei dynasties.²¹ During the Northern Wei dynasty, reconstruction of the Pi Yong was undertaken, but it was never completed.

The Ming Tang was located on the western side of the large road outside the Kaiyangmen Gate, and was 150 m west of the Pi Yong. The remains show that the ground plan was square and that the building was surrounded on all sides by a wall which was 400 m on a side. Within this large square enclosure there was a round terrace, 62 m in diameter, that was the site of the main structure. Thus, the remains have some correspondence with the description in

Shuijingzhu, which states that the design of the Ming Tang was circular at the top and square at the bottom.²² During both the Western Jin and the Northern Wei dynasties, the Ming Tang was reconstructed on the same site.

The Ling Tai was on the western side of the large road outside the Pingchengmen Gate, 80 m west of the Ming Tang. The remains indicate that the Ling Tai also had a square ground plan and a wall around it. The walls on the east and west sides were each 220 m long, while those on the north and south were 200 m long. Within this large square enclosure there was a high terrace that had a square ground plan. Its base was approximately 50 m on a side, and it was the site of the main structure (fig. 49). What remains today of this terrace stands 8 m high. The top has been destroyed. According to historical records, the terrace was flat and had no superstructure on top (fig. 50). Other buildings or structures flanked the terrace on all sides, mainly on two levels. The upper level was 1.86 m higher than the lower level and was approachable by ramps. The structures on the lower level in reality were verandas, whose banks or aprons were covered with oval river stones (fig. 51). The structures on the higher level on each side of the central terrace consisted of five rooms. The floors of these rooms were lined with rectangular tiles and the walls were painted various colors. The eastern rooms were painted green, the western ones white, the southern ones red, and the northern ones black. Obviously, these colors were related to the Four Deities that the structures represented (i.e., the Green Dragon, the White Tiger, the Red Bird, and the Black Turtle). It is noteworthy that the five rooms on the western side had dark inner chambers that were sunk below the central terrace. In these dark inner chambers the door was lined with square tiles (fig. 52). According to the "Treatise on Astronomy" in *Jinshu*, Zhang Pingzi (Zhang Heng, A.D. 78-139) constructed a bronze armillary sphere in a sealed room; it is perhaps these chambers that the text refers to. During the Wei and Western Jin dynasties, the Eastern Han Ling Tai continued to be used. But since it suffered severe

damage during the fighting of the last years of Western Jin, it was abandoned during Northern Wei and a Buddhist pagoda was built on top of the terrace. The Buddhist images carved on bricks which were found during our excavation date from Northern Wei.²³

Academies The Tai Xue (Imperial Academy) occupied a very large area. Because of the pilfering of stone classics from the Tai Xue site before the founding of the People's Republic of China, the remains have been severely damaged. But our reconnaissance and excavations showed that it consisted of two distinct sections. The first section was north of the Pi Yong. Its ground plan was rectangular, the eastern and western sides being approximately 200 m long, and the northern and southern sides 100 m long. In the past, fragments of stone classics were mostly dug up just north of this section. Hence, we can assume that this was the most important part of the Eastern Han Tai Xue. The second section was approximately 100 m northeast of the first section, and its remains are very well preserved. Its ground plan was also rectangular. The northern and southern sides were approximately 200 m long; the eastern and western sides 150 m long. It was surrounded by a wall.²⁴ The construction of the Tai Xue began in A.D. 29. Later, the Tai Xue was expanded several times and it did not reach its completed form until A.D. 132. At that time, the number of students enrolled in the Tai Xue occasionally exceeded 30,000. In 175, Emperor Ling Di had the Confucian classics cut on stone at the Tai Xue; hence, these works are referred to as the "Xi Ping Stone Classics," taking their name from Emperor Ling Di's reign period (fig. 53). So many people were eager to look at and copy from the stone classics that more than a thousand carriages arrived at the Tai Xue every day, jamming the streets nearby. At the end of Eastern Han, when Dong Zhuo burned the palaces and temples of Luoyang, the Tai Xue was also damaged. In 224, Emperor Wen Di of the Wei dynasty rebuilt the Tai Xue on its former site. Sometime between 240 and 249, another set of stone classics was cut in three calligraphic styles (fig. 54). At the beginning of the Western Jin dynasty, the Tai Xue was established in

accordance with the Han and Wei precedents. In 276, the Guo Zi Xue (National Academy) was established to exist side by side with the Tai Xue. Therefore, in his "Xianju fu," Pan Yue says, "The two academies stand side by side, identical in appearance. The right-hand one is for the descendants of the imperial clan, and the left-hand one for talented common people." Moreover, according to *Shuzhengji*, the Tai Xue stood 200 *bu* east of the Guo Zi Xue. Therefore, we can deduce that the Tai Xue of Western Jin occupied the northeastern part of the grounds occupied by the Tai Xue during the Han and Wei dynasties. And the southwestern part of the Han and Wei Tai Xue was converted into the Guo Zi Xue.

贰 东汉的都城——雒阳

东汉首都雒阳城的遗址，在今河南省洛阳市以东约十五公里。这里北靠邙山，南临洛河，不仅有天然的屏障，而且是交通的要冲（图37）。所以，早在西周时，便选择在这里建立成周城，一直延续到东周。因在洛河之北，战国时改称雒阳。西汉时的雒阳城，基本上是成周城的旧址，东汉的雒阳城是在西汉的雒阳城的基础上扩建的，新的城墙和城门大约建成于光武帝建武十四年（公元38年）前后。

成周城的建筑遗迹，已经很难找到了。但是，城址北面的周代墓群却遗留至今，1928年发现的著名的金村大墓便是其中的一部分。¹西汉雒阳城的位置和范围，估计大概与成周城差不多，其中的南宫是当时雒阳城中的主要宫殿。东汉光武帝于建武元年（公元25年）定都雒阳，先居住在南宫，以后全面建筑城墙，扩大城的范围，把成周城北面的周代墓地也包括在都城之内。《续汉书·郡国志》注引《帝王世纪》说，东汉雒阳城内的东北部有“殷之墓地”及“周景王塚”，总的说来，是与实际情况相符的。

东汉雒阳城的东面、西面和北面的城墙，至今犹残留在地面上，1962年考古工作者前往勘察时，有的地段上的城墙犹高达7米多（图38）。至于南面的城墙，则早因洛河改道而被冲毁，已无遗迹可寻。幸好当时在城的南郊所建的“明堂”和“灵台”的遗迹仍然存在，据《后汉书·光武帝纪》注引《汉官仪》和《文选·闲居赋》注引《洛阳记》记载，它们与雒阳城的南面城墙相距为二里或三里，可以由此判定南面城墙的位置大约在今洛河河道的中央。与西汉的长安城一样，这里的城墙亦系用黄土夯筑而成，十分坚固（图39）。经钻探了解，城墙的基部厚度，东墙约为14米，西墙约为20米，北墙约为25米，各不相等。这可能是由于魏晋时为了加强防御，增加了西墙和北墙的厚度的缘故。经实测，东面城墙残长约3900米，西面城墙残长约3400米，北面城墙全长约2700米；南面城墙已不存在，其长度若按现存东墙和西墙在南端的距离计算，应约为2460米。²假定南面城墙的位置在今洛河河道的中央，则东墙和西墙的长度应在现存的长度之上各增加约300米。这样，四面城墙的总长度应约为13000米，合汉代约三十一里。《续汉书·郡国志》注引

《帝王世纪》说“城东西六里一十步，南北九里一百步”，又引《晋元康地道记》说“城内南北九里七十步，东西六里十步”，是符合实际情况的。虽然现存的三面城墙都不成直线，特别是东面城墙和北面城墙各有一处较大的曲折，但全城的平面形状基本上呈长方形（见图37）。由于自南至北的长度约九里，自东至西的宽度约六里，所以这个都城被称为“九六城”。西汉长安城平面形状基本上呈正方形，东汉雒阳城平面形状基本上呈长方形，这是两汉都城形制的许多相异处之一。

据文献记载，东汉雒阳城有十二个城门。城门的数目虽与西汉长安城相等，但与长安城不同的是，它们不是平均分布在城的四面，而是东面和西面各三个城门，南面四个城门，北面二个城门。东面的三个城门，自北而南为“上东门”、“中东门”、“旄门”；西面的三个城门，自南而北为“广阳门”、“雍门”、“上西门”；北面的二个城门，自西而东为“夏门”、“谷门”；南面的四个城门，自东而西为“开阳门”、“平城门”、“小苑门”、“津门”。在1962年的勘探工作中，发现了东面、西面和北面的八个城门，它们都有很明显的遗迹存在。³南面的四个城门，虽然都被洛河冲毁，无遗迹可寻，但可以根据勘察工作中所发现的城内的四条南北向的大街分别确定它们的位置。从实测的城的平面图上可以看出，东面的上东门和旄门分别与西面的上西门和广阳门对直，而南面的开阳门、平城门、小苑门和津门的位置也相当均称，这说明了筑城时的计划性较强。由于没有经过发掘，城门的形制和结构不甚清楚。但是，北面西头的夏门，遗迹保存得特别好，可以根据钻探所得的情况，判断它和西汉长安城的城门一样，有三个门道。⁴这与文献的记载是相符的。

在钻探工作中，发现了许多街道的遗迹，它们主要是属于以后的北魏时期的。⁵但是，可以认为，东汉时的街道分布情况，基本上与北魏时的街道分布情况相似；换言之，北魏时的街道，主要是沿用东汉以来的街道，只是因宫殿和个别城门位置的改变而有所增筑或改修而已。因此，可以以钻探出来的街道遗迹为主要根据，并参照东汉时期的宫殿范围和城门的位置，来判断东汉雒阳城内街道的分布情形。

南北纵行的大街，共有五条：第一条可称“开阳门大街”，自开阳门往北，全长约2800米。第二条可称“平城门大街”，自平城门往北，遇南宫的南门而止，长约700米。第三条可称“小苑门大街”，自小苑门往北，至北宫的南门而止，全长约2000米。第四条可称“津门大街”，自津门往北，全长约2800米。第五条可称“谷门大街”，自谷门往南，遇北宫

的北墙而东折，然后再折而向南，全长约2400米。至于自夏门南行的街道，因入城不到100米即遇北宫的北墙而止，所以实际上算不了一条大街。东西向横行的大街，亦有五条：第一条可称“上东门大街”，自上东门往西，遇北宫的东墙而止，长约600米。第二条可称“中东门大街”，自中东门往西，穿南宫与北宫之间而过，全长约2200米。第三条称“上西门大街”，自上西门往东，遇北宫的西墙而止，长约500米。第四条称“雍门大街”，自雍门往东，遇“津门大街”而止，长约500米。第五条可称“旄门——广阳门大街”，自旄门至广阳门，横贯全城，全长2460米。以上各条大街，互相交叉结合，形成许多十字路口和丁字路口，若以每二个路口之间为一段，则共有二十四段。《续汉书·百官志》注引《汉仪》说“洛阳二十四街，每街一亭”，可能是指此而言的。除个别大街宽约20米以外，一般的大街宽在40米左右。由于没有经过发掘，街道的形制不能得到明确的了解。但是，《太平御览》引《洛阳记》说：“宫门及城中大道皆分作三，中央御道，两边筑土墙高四尺余外分之，唯公卿、尚书章服从中道，凡行人皆行左右。”这说明了雒阳城内的大街也是由三条并行的道路组成，与西汉长安城的街道相似。⁶

东汉雒阳城内的宫殿，主要是南宫和北宫。它们在西汉时即已存在，但规模不如东汉。西汉时的南宫是很有名的，常在文献记载中被提到。《汉书·高帝纪》说，“（高帝五年，公元前202年）帝置酒雒阳南宫”，《汉书·王莽传》说，“（地皇三年，公元22年）司徒王寻将十余万屯雒阳，填南宫”，可见从西汉初年到西汉末年，南宫一直是雒阳城中主要的宫殿。1961年在西安西汉长安城外上林苑遗址发现的一件铜钟，刻有“南宫钟”字样，⁷应系当时雒阳南宫中所用之物，后来才被征调到长安的（图40）。⁸建武元年（公元25年），光武帝定都雒阳，居住在南宫的却非殿，它可能是西汉遗留的旧建筑。以后，由于不断进行扩建，南宫的规模日益增大，建武十四年（公元38年）终于在南宫中建成最重要的“前殿”。

由于还没有经过全面的发掘，南宫的遗迹迄今未被揭露出来。但是，如前所述，东汉雒阳城的城门和街道的分布情形已经究明，所以对于南宫的位置和范围也就可以据此作大概的判断。从实测图中可以看出，在雒阳城的南部，“中东门大街”之南，“旄门——广阳门大街”之北，“开阳门大街”之西，“小苑门大街”之东，有一片范围广大的长方形的区域，南北长约1300米，东西宽约1000米，应该便是南宫之所在。

《续汉书·五行志》说，平城门是“正阳之门”，与南宫相连，举行郊祀的典礼时，皇帝的车驾从此门而出，是最重要的城门。在钻探工作中发现的“平城门大街”，由南郊向北通入城内，直达上述南宫所在的范围，这就证明了以上的判断是正确的。⁹

光武帝在位时，主要是修建南宫。到了明帝时，又营建北宫，自永平三年（公元60年）开始，历时五年，至永平八年（公元65年）才全部建成。北宫中的“德阳殿”，是最重要的宫殿，“周旋容万人，陛高二丈”，殿前的朱雀阙高耸入云，据说从四十多里以外就可以望见。在勘察工作中，尚未明确究明北宫的遗迹。但是，可以根据街道分布的情形，判断北宫应在“中东门大街”之北，“津门大街”之东，“谷门大街”之西；由于“谷门大街”入城后南行不远便折而向东，这显然是由于遇到了北宫的北墙，从而可以认为北宫的北墙离雒阳城的北面城墙很近。和南宫比较起来，北宫的范围可能更大，它的位置在南宫之北，而略为偏西。据文献记载，南北两宫相去七里，但从上述实际的勘察工作看来，七里恐系一里之讹。两宫之间有复道相连，以保证皇帝往来时的安全。

西汉长安城中的长乐宫未央宫，都在城的南部，左右并列；东汉雒阳城中的南宫和北宫则各在城的南部和北部，前后相接。这是两汉都城在形制和布局上的又一重大的不同之处。但是，从另一方面来看，都城中将近一半的面积都为宫殿所占，则是长安城和雒阳城所共同的。除了南宫和北宫之外，雒阳城中还有永安宫，其位置在北宫的东北，靠近上东门处。在城的西北部，则有濯龙园，也是皇家的宫苑。在南宫的东南，靠近旄门和开阳门，则有太尉府、司空府和司徒府，是全国最高的行政机构。在北宫的东北方，紧靠城的东北角，则是太仓和武库之所在。达官贵族的居住区，如步广里、永和里，多在上东门内，董卓的住宅即在永和里。¹⁰至于一般的人民，则多居住在城外，尤其是靠近城门的地区，与西汉长安城的情况相似。工商业区有南市、马市和金市。南市和马市都在城外，前者在南郊，后者在东郊。金市在城内，其位置在北宫的西南，南宫的西北。

从建武元年汉光武帝定都雒阳以来，经历了一百六十五年，到初平元年（公元190年），董卓胁迫汉献帝迁都长安，“焚洛阳宫庙及人家”，“火三日不绝，京都为丘墟矣”。繁华的雒阳城，遭到了彻底的破坏。建安元年（公元196年），汉献帝自长安回到雒阳时，这个都城已是“宫室烧尽，百官披荆棘，依墙壁间”，连可供居住的地方都没有了，

所以只好在曹操的挟持下，迁都于许县。

但是，由于洛阳在地理上的重要性，曹魏继东汉之后，仍然选择在这里建都。魏文帝曹丕时，主要是修复了北宫的一部分建筑物。到魏明帝曹叡青龙三年（公元235年），才大兴土木，在东汉南宫崇德殿的旧基上建太极、昭阳诸殿，同时又增饰芳林园等。由于东汉末年的破坏太严重了，在废墟上重建都城，工程艰巨。据《魏志·高堂隆传》记载，当时的情形是“百役繁兴，作者万数，公卿以下，至于学生，莫不展力，帝乃躬自掘土以率之”。看来曹魏时洛阳城中的建设，不会超过东汉的规模。西晋都洛阳，继续有所兴建，但在城的形制和布局上也并没有什么大的变化。

但是，应该特别提出来的，是魏明帝曹叡，仿效他祖父曹操在邺城的西北角筑铜雀台、冰井台和金虎台等“三台”的经验，在洛阳城的西北角也建筑了金墉城。它实际上是一种军事性的城堡，壁垒坚固，由于紧靠邙山，地势高亢，可以由此俯瞰洛阳全城，在军事上具有制高点的作用，在西晋末年“永嘉之乱”的洛阳争夺战中是交战双方的必争之地，当时称为“洛阳垒”。1962年的勘查工作，究明了金墉城南北长约1080米，东西宽约250米，系由三个城堡组成，墙垣厚达13米。北面的一个城堡和中间的一个城堡筑在洛阳城的城墙之外，南面的一个城堡筑在城墙之内，三者互相连接，有门道相通。¹¹值得注意的是，在金墉城的城壁上，每隔六七十米，就设有一个墩台，长约15米，宽约8米（图41）。同样的墩台，还见于洛阳城的西面和北面的城墙上，长约18米，宽约8米，相互之间的距离约120米，它们和金墉城一样，显然是魏晋时所增设的。¹²这种设在城墙外壁的墩台，除了边塞的城郭以外，在从两汉以迄隋唐的城墙上是没有类例的，直到北宋建汴梁城时才开始被普遍采用，当时称为“马面”，其作用在于加强防守，使攻城者在接近或扳登城墙时三面受敌，攻势受阻。它们在魏晋洛阳城的城墙上出现，充分说明了当时战乱频仍，出于军事上的需要，乃有这种特殊的发明。

西晋永嘉五年（公元311年），匈奴族的刘聪率军攻入洛阳，在激烈的战争中，城内的宫庙、官署和住宅多被焚毁。在东汉末年的废墟上经魏晋两朝七十余年的经营才重建起来的洛阳城，再一次化为灰烬。

从这以后，过了一百八十余年，最后在这里建都的朝代是北魏。北魏的孝文帝于太和十七年（公元493年）自平城迁都到此，经过多年的经营，不仅使洛阳重新成为繁华的城市，而且在都城的形制和布局上改

变了汉和魏晋的旧制，出现了许多新的变革，由于北魏的洛阳城年代最晚，废弃以后，不再有别的朝代在这里建都，所以它的遗迹保存较好，经过勘察以后，能够绘制出一幅比较明确可靠的城的平面图（图42）。

和前代比较起来，北魏洛阳城最重要的改变，是在宫殿方面废除了东汉以来分为南北两宫的制度，建立了单一的宫城。宫城的位置在全城的北部而略为偏西，是在汉和魏晋的北宫的基础上兴建的。它的平面成一规整的长方形，四面筑围墙，计东墙和西墙各长约1400米，南墙和北墙各长约660米，其面积约占全城的十分之一。在宫城的南墙近西端处，发现了一处巨大的门址，它便是宫城的正门——阊阖门。¹³

东汉以来的十二个城门，除南面东头的开阳门以外，都改变了名称。有的是魏晋时就改名的，有的是北魏时才改名的，也有的是魏晋改名以后，北魏又改名。上东门改称建春门，中东门改称东阳门，旄门改称青阳门，平城门改称平昌门，小苑门改称宣阳门，津门改称津阳门，广阳门改称西门，雍门改称西阳门，上西门改称阊阖门，夏门改称大夏门，谷门改称广莫门。十二个城门，都经过重建，其中十一个城门仍然建立在汉和魏晋的旧址上，但西面的西阳门却从汉代的雍门旧址北移约500米，使得它恰好与东面的东阳门对直。此外，孝文帝初到洛阳时，因宫室未就，暂居金墉城，为了出入方便，在西面北头紧靠金墉城处新开了一个城门，称为承明门（图43），使得洛阳城有了十三个城门。¹⁴

由于宫城的范围和个别城门位置的改变，城内的街道也在东汉以来的基础上有许多变更。例如：南宫已经被彻底废弃，所以在广莫门和平昌门之间有了一条纵贯全城的南北向大街。东汉的雍门已经废绝，所以东汉以来的“雍门大街”可能已不再存在。由于新辟了承明门，所以增添了由承明门往东通入城内的大街，其北即为华林园。值得注意的是，建春门和阊阖门之间有了一条横贯全城的东西向大街，它从宫城的东门和西门穿过，将宫城分为南北两半，南半部是朝会之处，北半部为寝宫所在。更重要的是，由于新建的西阳门正好与东阳门对直，所以东汉以来的中东门大街被延长而贯通于西阳门和东阳门之间，成为又一条横贯全城的东西向大街，它在宫城南墙外通过，是全城的一条分界线。它的北面主要是皇家的宫殿和园囿，它的南面则分布着官署、佛寺和贵族的邸宅。最后，特别要提出来的，是由于宫城的位置在全城的北部而略为偏西，它的南门——阊阖门与南面城墙上的宣阳门对直，所以自阊阖门至

宣阳门的南北向大街——铜驼街就成了全城的中轴线，代替了东汉时的平城门大街。¹⁵当时的司徒府、太尉府等高级官署和宗庙、社稷等重要建筑物，就分布在铜驼街的两侧（图44—46）。¹⁶有名的永宁寺在街的西侧，其塔基遗迹至今犹保留在地面上，最近已经过发掘（图47）。¹⁷这样一来，宣阳门也就代替了东汉时的平城门，成为北魏洛阳城的最重要的城门。

如上所述，东汉以来的洛阳旧城，经过重建，面貌一新。但是，随着都市建设的进一步发展，它在北魏的整个洛阳城中，只是作为内城而存在，在它的外围还筑有郭城，即外城。据《洛阳伽蓝记》记载，外郭城“东西二十里，南北十五里”，范围极其广大，在全城的范围内，划分为三百二十坊，每个坊都呈正方形，四周筑围墙，每边长三百步，即当时的一里，规划十分严密而整齐。据《魏书·世宗纪》记载，它们都是在宣武帝景明二年（公元501年），即孝文帝迁都洛阳以后的第九年，发动数万人夫兴建起来的。在内城以外的各个坊内，居住着一般的人民，他们受到严格的管理和控制。作为工商业区的“市”，也设置在内城之外的郭城中。其中的“大市”在内城以西的西郭，“小市”在内城以东的东郭，“四通市”在内城以南、宣阳门外的南郭，三市的方位都在宫城以南，而汉和魏晋以来建在城内的金市则废为佛寺，从而完全改变了西汉以来在宫城北面设市的所谓“面朝后市”的老传统。¹⁸总之，北魏洛阳城的形制和布局，和两汉以来的都城相比，出现了划时代的变革，而为此后隋代的大兴城、唐代的长安城和隋唐的洛阳城开创了先例。

据《后汉书·光武帝纪》记载，东汉的辟雍、明堂和灵台都建于建武中元元年（公元56年）。各种记载都说明它们的位置在雒阳城南，在开阳门和平城门外，这已得到了考古发掘工作的证实。¹⁹

辟雍在开阳门外大路的东侧。遗址平面呈正方形，四面筑有围墙，每面长约170米。在这正方形的大院内，均称地配置着四组建筑物，每组各由三座房屋组成。²⁰据《后汉书·光武帝纪》注引《汉官仪》记载，辟雍四面都设沟堑，其上架桥，东、南、西三面堑中有水。曹魏和西晋时重建辟雍，应系在东汉的旧址上。1930年曾出土晋武帝三临辟雍的纪念碑（图48），近年又发现了它的碑座，可证此遗址为汉和魏晋的辟雍无疑。²¹北魏虽曾修辟雍，但未完成。

明堂在开阳门外大路的西侧，平城门外大路的东侧，东距辟雍约150米，遗址平面呈正方形，四面筑有围墙，每面长约400米。在这正方

形的大院的正中，有一直径为62米的圆形台基，即系主体建筑之所在，与《水经注》所说“寻其基构，上圆下方”的情形不无相符之处。²²西晋和北魏时，都曾重建明堂，当系在东汉明堂的旧址上。

灵台在平城门外大路的西侧，东距明堂约80米。遗址的总平面基本上亦呈正方形，四面筑有围墙，东墙和西墙各长220米，南墙和北墙各长200米。在这正方形的大院的正中，有一座平面成正方形的高台，其基部约为50米见方，是主体建筑之所在。（图49）高台残存高度约8米，顶部已塌毁，据记载，当时是“上平无屋”（图50）。房屋筑在高台的四周，可分上下两层，上层比下层高出1.86米，有坡道可以攀登。下层的房屋实际上是回廊，廊外有用河卵石铺成的“散水”（图51）。上层房屋每面各五间，屋内地面用长方砖铺砌，墙壁上涂有色彩。东面房屋所涂为青色，西面房屋所涂为白色，南面房屋所涂为红色，北面房屋所涂为黑色，显然是按照“四神”——青龙、白虎、朱雀、玄武分别代表四方的学说设计的。值得注意的是，西面的五间房屋，都设有深入于土台之中的暗室，室内用正方砖铺地（图52）。《晋书·天文志》说“张平子（张衡）既作铜浑天仪于密室中”，也许就是指此而言的。曹魏和西晋，都沿用东汉的灵台。由于在西晋末年的战乱中灵台受到严重的毁坏，所以北魏时就废弃不用，而在台上筑佛塔。在发掘工作中发现的一些砖雕的佛像，便是北魏的遗物。²³

太学的范围很大。由于新中国成立前在这里盗掘石经，遗址遭到严重的破坏。经过勘探和试掘，可以确认其主要遗迹可分为两部分。一部分在辟雍之北，其范围略呈长方形，东西长约200米，南北宽约100米，过去许多石经碎片大多是在这里的北面附近出土的，从而可以认为是东汉太学的主要部分之所在。另一部分在它的东北约100米处，遗迹保存较好，其范围亦成长方形，南北长约200米，东西宽约150米，四周筑有围墙。²⁴东汉的太学始建于光武帝建武五年（公元29年），以后屡经扩建，至顺帝阳嘉元年（公元132年）才全部完竣，当时太学生多达三万余人。灵帝熹平四年（公元175年）立石经于太学，称“熹平石经”（图53），观摹者“车乘日千余辆，填塞街陌”。汉末董卓烧洛阳宫庙，太学亦遭殃及。魏文帝黄初五年（公元224年）在东汉的旧址上重建太学，正始（公元240至249年）中又立三体石经（图54）。西晋初年，依汉魏之制兴太学，而咸宁二年（公元276年）又另立国子学，与太学并存。所以，潘岳《闲居赋》有“两学齐列，双宇如一，右延国胄，左纳良

逸”之句。据《述征记》记载，“太学在国子学东二百步”。因此，推测西晋的太学在汉魏太学的东北部分，而将汉魏太学的西南部分改设国子学。

CHAPTER 3 HAN DYNASTY

AGRICULTURE

Agricultural Products We begin our discussion of Han dynasty agriculture by talking about the agricultural products of the period evidenced by archaeological finds.

Remains of agricultural products have been discovered in many tombs dating from Western Han and Eastern Han, including tombs found in Xianyang in Shaanxi, Luoyang in Henan, Jiangling and Guanghua in Hubei, Changsha in Hunan, Xuzhou and Haizhou in Jiangsu, Guixian in Guangxi, and Guangzhou in Guangdong.¹ The tombs that contain the largest variety of agricultural products and the most well preserved products are the Mawangdui tombs in Changsha. Moreover, the pottery models of granaries found in the Shaogou tombs in Luoyang and the bamboo slips contained in the Mawangdui tomb have the names of various agricultural products written on them (fig. 55). To summarize, the most important food products of the Han dynasty were grains such as foxtail millet, rice, wheat, barley, panic millet, and beans. The rices included short-grain, long-grain, and glutinous rice. The beans included soybeans and red beans. In the Yellow River region of the North, the primary products were foxtail millet and wheat. A scene of a farmer tilling the soil with an ox-drawn plow found on a pictorial stone in the Mizhi district of Shaanxi has engraved on it a picture of full-grown foxtail millet, which must have been an important grain in that area (fig. 56).² We have also found remains of foxtail millet in the tombs in Xianyang, Luoyang, Jiangling, Guanghua, Changsha, Xuzhou, and Guangdong. These finds indicate that the cultivation of foxtail millet was very widespread. Wheat and barley were also cultivated in the Yangtze River region as well as in the Yellow River region. Remains of these were found in the Han

Mawangdui tomb. Similarly, rice was cultivated in the Yellow River region (in addition to the South); a grain found in a Han Luoyang tomb has been identified as short-grain rice.³ Furthermore, the word *shudao* written on the pottery found in that tomb must stand for glutinous rice.⁴ In the Yangtze River region and other southern areas, rice was of course the most important grain. It has been determined that, the rice found in the Han tomb excavated at Guangzhou was long-grain rice, whereas the rice found in the Mawangdui tomb in Changsha included all three varieties, short-grain, long-grain, and glutinous; references on the bamboo slips of the same tomb corroborate the physical reclaim.⁵ In a Fenghuangshan tomb of Jiangling, we found four very well preserved sheaves of rice in a pottery granary. The ears measured 18.5 cm, and every ear had on the average fifty-one grains of rice. They have been identified as a kind of short-grain rice (fig. 57).⁶ In addition, it has been reported that remains of sorghum have been unearthed from Han tombs in Xianyang, Luoyang and Guangzhou as well as from a Han village site at Sandaohao in Liaoyang,⁷ but they have not been scientifically examined. Besides these grains, there were of course other agricultural food products, including job's tears, taro, mallow, mustard green, sweet melon, bottle gourd, bamboo shoot, lotus root, and ginger (fig. 58). Among the fruits were the chestnut, Chinese jujube, pear, peach, plum, apricot, Chinese plum, red bayberry and olive. For weaving cloth, there was hemp, already quite common. In the Shaogou tombs in Henan, a pottery granary had the words "ten thousand piculs of hemp" written on it; and actual remains of hemp seeds have been found in the Han tombs at Changsha Mawangdui and at Luobowan in Guixian.

Agricultural Implements One of the distinguishing characteristics of Han agriculture was the widespread use of iron agricultural implements. They have been found throughout the nation; that is, not only in the Central Plains area but also on the frontiers. Archaeological excavations have turned up a variety of types of iron

agricultural implements, from such distant places as Inner Mongolia and Liaoning in the northeast to Yunnan and Guizhou in the southwest; from Guangdong and Fujian in the southeast to Gansu in the northwest.⁸ The types of implements include the spade, shovel, pick, and plow, all used for tillage; the hoe, used for weeding; and the sickle, used for harvesting (figs. 59, 60). Furthermore, two- and three-toothed rakes, used for loosening the soil (fig. 61), have been found in Liaoyang in Liaoning, Mancheng and Baoding in Hebei, and Xuzhou in Jiangsu.⁹

The plowshares attached to Han plows were commonly made entirely of iron. They were a vast improvement over the wooden plowshares dating from the Warring States period, whose only iron part was the blade. The Han plowshares varied according to the soil type. Some were small and light, suitable for cultivated soil. Some were sharp and heavy, as would be needed to open uncultivated land. There was also a kind of giant plowshare, found in Sandaohao in Liaoyang, Liaoning, as well as in the village of Changcheng in Tengxian, Shandong, and the village of Donggangtou of Shijiazhuang, Hebei. Their length and width exceed 40 cm.¹⁰ The famous Han tomb at Mancheng also contained one of these giant plowshares (fig. 62).¹¹ Because it was so heavy an enormous amount of power must have been required to move it and it would not have been suitable for normal land conditions. Therefore, some people have speculated that these giant plowshares were used in irrigation projects, in other words, used to dig ditches. However, the "Treatise on Irrigation" in *Hanshu* says that the *cha* serves to produce "clouds," and that ditches serve to produce "rain." In Yan Shigu's commentary he states, "the *cha* is a spade, to open irrigation ditches"; thus the plow does not seem to have been an important implement in irrigation projects. In excavations in Pucheng, Liquan, Xi'an, and Longxian, all in modern Shaanxi, we have found evidence of a technique of using a plowshare crown—that is, of attaching a crown at the leading end of the plowshare to prevent damage to the plowshare itself (fig. 63).¹² Since

this crown was narrow and fit only onto the blade part of the plowshare, it must have been relatively inexpensive to make and readily replaceable once worn down.

The use of the moldboard had already begun in the Han dynasty. Moldboards of the Han dynasty date have been found in Anqiu of Shandong, Zhongmu and Hebi of Henan, and in Chang'an, Liquan, Xi'an, Xianyang, and Longxian in Shaanxi.¹³ Moldboards (*libi*, also called *lijing*) were attached on top of the plowshare and used in combination with the plowshare to turn the soil (fig. 64). Among the moldboards found in Shaanxi Province were ones with only a single leaf, used to turn the earth on a single side, as well as ones with double leaves, forming a saddle shape, which were used to turn the soil on both sides. From this evidence we can see that the design of moldboards during that period had already reached a high degree of sophistication.¹⁴

In the Han dynasty, the use of oxen as draft animals was also widespread. The wooden model of ox and plow dating from the last years of Western Han, found in Mozuizi in Wuwei, Gansu (fig. 65); that depicted in the mural of the Wang Mang period found in the Shanxi village of Zaoyuancun in Pinglu; that on the engraved stone of Eastern Han found at Shuanggou in Suining, Jiangsu (fig. 66); that on the engraved stone of Eastern Han found at Hongdaoyuan in Tengxian, Shandong; that on the engraved stone of Eastern Han found in Mizhi, Shaanxi; and that in the mural depicting soil tillage of Eastern Han found in Holingor, Inner Mongolia—all these are valuable sources for the study of the use of oxen as draft animals.¹⁵ In the pictures on the stamped bricks and in the murals, we usually see two oxen pulling a plow. The oxen bear a yoke that draws a plow with a long shaft, which a single farmer holds as he drives the oxen. This is the most common way oxen were used during the Han dynasty. The passage in *Hanshu's* "Treatise on Food and Money" which says, "in the use of the double harness plow, there are two oxen and three men," has been interpreted in several different ways. Yet the archaeological

material now available to us leaves no doubt that the so-called "double harness plow" refers to a plow drawn by two oxen. At the end of Eastern Han, and especially during the Wei and Jin dynasties, technology involving the use of oxen in plowing improved. In Gansu's Jiayuguan, a mural has been found that shows a single ox pulling a plow.¹⁶

Another noteworthy matter is the use during the Han dynasty of the seed plow for seeding. In the Wang Mang period mural mentioned above, found in Pinglu, Shanxi, in addition to the scenes of tillage there are also scenes showing the use of a seeder (fig. 67).¹⁷ Since the mural has become faint, the depictions are unclear. The seeder seems to have three legs, but the body is not clearly shown. There is, however, no question that the implement pictured is a seeder. The mural confirms references to such an implement found in entries about sowing in the "Treatise on Food and Money" in *Hanshu* and in Cui Shi's *Zhenglun*. Although this is our only archaeological evidence of the use of the seeder during the Han dynasty, there is a feeling among archaeologists that what had seemed to be a small version of an iron plowshare found in the Han sites at Sandaohao, Liaoyang, and in the town of Qinghe, Beijing, and in Fuping, Shaanxi, might actually have been the legs for seeders; if so, these implements could be called "seeder-shares" (fig. 68).¹⁸ In contrast to plows drawn by two oxen, the seeder depicted in the Han mural is drawn by a single ox. Obviously, the power needed to draw a seeder was far less than that required to draw a plow. With a three-legged seeder, three rows of seeds could be planted simultaneously. This method was of course much more efficient than sowing seeds by hand, and the results were also superior.

In the Wei and Jin period murals found in Jiayuguan, Gansu, there were also scenes of harrowing and leveling. Both the harrow and the leveler were drawn by oxen. The farmer stood on the implements as they moved, to increase the downward pressure (figs. 69, 70).¹⁹ These murals supply us with our earliest pictorial information

concerning the two implements. After the earth was tilled by a plow, the resultant lumps of earth had to be broken up by big harrows with teeth on them. After sowing, the seeds had to be covered; the leveler used in this stage of the process helped to make the soil even more fine while it also pressed and leveled the ground, protecting the soil against erosion. The use of the leveler was confined to the dry fields of the North. The harrow was used not only in the dry northern fields but also in the wet fields of the South. We find this fact attested by the pottery models of plowed and harrowed fields in the Western Jin tombs excavated at Lianxian, Guangdong.²⁰ In historical records, the use of harrows and levelers is first mentioned in *Qimin yaoshu*, a text dating from Northern Wei of the sixth century; the implements are not referred to in Han or Jin writings. But since archaeological evidence shows that their use was already extensive during the Wei and Jin (they have been found even on the distant frontiers), it does not seem impossible that they were first used as early as Eastern Han.

Irrigation The widespread use of iron implements also permitted developments in irrigation. Large-scale irrigation projects were sponsored and managed by the government. One early example is the Zhengguo Canal built during the Qin dynasty in the Guanzhong area. During Western Han this canal was renovated and maintained, and a branch canal, the Bai Canal, was added to it. In 1973, archaeologists found remains of the Zhengguo Canal and the Bai Canal in Jingyangxian, Shaanxi. At the head of the Bai Canal, they discovered a "well canal" section, over 300 m long. The well canal was a new development in canal technology during Han (fig. 71).²¹ The Dujiang Weir built during the Qin dynasty in Guanxian of modern Sichuan was also renovated and maintained during Han. In 1974, a stone statue of Li Bing, sculpted by an Eastern Han official in charge of local irrigation in A.D. 168, was found at the bottom of the Dujiang Weir. The statue stands almost 3 m high. It was placed in the middle of the water not only to commemorate Li Bing's deeds but also to serve as a gauge of the water level (fig. 72).²²

The use of a crossbar and ropes to pull water out of river or well to irrigate farming fields was a common practice during Han, and it is depicted in engraved stones in tombs.²³ Use of wells for irrigation was extensive in the Yellow River valley and other northern areas. Pottery models showing wells have been found in many places, and in some of them it is clear that the wells were for irrigation. For example, a pottery well excavated from a Han tomb at Luoyang has a well frame complete with winches; two buckets were used alternatively to draw water. Alongside the well there is a long water trough. This model seems to indicate that after water was drawn from the well it flowed through the trough into canals to irrigate the fields (fig. 73). In the Yangtze River valley and other parts of southern China, in addition to the extensive use of river water, artificial ponds with embankments were also built to hold water for irrigating rice fields. In the tombs of the Han and the Wei and Jin periods located at Shaanxi's Hanzhong, and Sichuan's Chengdu and Pengshan, Yunnan's Chenggong, and Guangdong's Lianxian, we have found pottery models of ponds with embankments which are connected to rice paddies.²⁴ Such ponds were artificial reservoirs, which were equipped with sluice-gates in order to regulate the amount of water needed to irrigate the nearby fields (figs. 74, 75). The Shao Embankment built in Lujiangjun (modern Lujiang, Anhui) in the early years of Western Han was renovated during Eastern Han. It was a largescale irrigation project. The Anfeng Pond in Shouxian, Anhui, is the old site of this Shao Embankment. In 1959, archaeologists also found a weir on that location dating from Eastern Han. Iron implements used in the construction of the weir were found nearby; among them was an iron hammer incised with the words *Dushuiguan* ("Water Conservancy Official"), indicating that the irrigation project was carried out under government supervision.²⁵

Harvesting and Food Processing To harvest grains, iron sickles were widely used. A pictorial brick of the Eastern Han period excavated from Yangzishan of Chengdu, Sichuan, depicts a rice-harvesting scene. The picture shows very clearly how rice was

harvested.²⁶ First the ears were cut off, then a long-handle, hooked scythe was used to cut the straw (fig. 76).

After grains were harvested, threshing and winnowing had to be done; these are also featured on certain pictorial bricks and murals. It is noteworthy that in the Han tombs in Luoyang and Jiyuan of Henan we have also found pottery models of winnowing machines (figs. 77, 78).²⁷ Generally speaking, millet and wheat were planted in the North, and the threshing process was necessary to separate out the chaff; whereas in the South, where rice was cultivated, the winnowing machine was needed to separate out the husks. However, from the Han tombs excavated at Luoyang and Jiyuan, we see that some winnowing machines were also used in the northern Central Plains area.

To process grains, a *jiandui* (treadle-operated tilt hammer) was commonly used. It was a simple machine operated by foot whose purpose was to pound grain. Pictures of this machine appear on pictorial stones and bricks as well as in pottery models found in many places (figs. 79, 80). From historical records we know that during the Wei and Jin dynasties there was also widespread use of water-powered tilt hammers. Mills, consisting of two rotating stone slabs, were also common during Han. Actual mills as well as pottery models of them have been discovered at many Han archaeological sites and tombs (fig. 81). The earliest stone mill was found in a Han tomb in Mancheng. Underneath the mill there was a large bronze bowl, used to catch the flour ground out by the mill (fig. 82).²⁸ A pottery model of a similar mill has been found in a Han tomb in Yinqueshan in Linyi, Shandong, which is even older than the actual mill found in Mancheng and probably predates the reign of Emperor Wu Di of Han.²⁹ The widespread use and manufacture of such large, rotary stone mills must have been closely tied to the development of iron implements. In the pottery models found in various Eastern Han tombs, we often see the treadle-operated tilt hammer and the mill placed together in a single room to facilitate grain processing.

Domestication of Animals and Silkworms During the Han dynasty, there were also many other, supplementary kinds of food production. The most common was raising domestic fowl and animals. From archaeological evidence we know that the types of domestic fowl that were kept included chickens, ducks, and geese; among domestic animals there were horses, cows, sheep, pigs, and dogs. In pottery models found in Han tombs, pigpens are often connected to the privies, the arrangement indicating that pig excrement was used to fertilize the fields (fig. 83). In addition to these domestic animals, camels were also domesticated in the North to help in transportation. The archaeological evidence for the camel includes, in addition to the camel-shaped handles of some seals, a funerary statue of a man riding a camel, found in 1969 in Dingxian, Hebei, in the tomb of Prince Mu of Zhongshan (Liu Chang), who lived at the end of Eastern Han, and also images of camels on Eastern Han pictorial bricks found in 1978 in Xinduxian of Sichuan Province.³⁰ At that time hunting also served to supplement agriculture. Wild rabbit and sika deer were among the food found in the Mawangdui Han tomb of Changsha; the fowls found there included turtledove, wild goose, owl, bamboo partridge, magpie, ringed pheasant, and crane.³¹ Hunting scenes have been found on pictorial stones and bricks recovered from many sites, and a pictorial brick from Yangzishan in Chengdu, Sichuan, shows hunting of birds;³² this is the kind of material that throws much light on contemporary practices. In addition to the fish and other water animals caught from rivers and lakes, fish and turtles were also obtained from artificial ponds. This practice is evidenced by pottery models of ponds found in Hanzhong, Shaanxi.³³ Archaeological evidence has also been found of the consumption of various kinds of aquatic plants such as lotus root and water chestnut (fig. 84).

The cultivation of mulberries and silkworms was also an important supplementary industry in agricultural villages. As early as the Warring States period, two kinds of mulberry trees are found depicted on bronze vessels. The taller kind we could call "mulberry

trees," and the shorter kind we could call "mulberry bushes." The latter were not only easier to pick but also juicier and more tender, hence more suitable for feeding the silkworm. These two different types of mulberries have also been found on pictorial stones and bricks of the Han period (figs. 85, 86). According to the section on methods for improving the mulberry in *Fan Shengzhi shu*, mulberry bushes were artificially developed.³⁴ During the Han dynasty, the cultivation of mulberries and silkworms spread from the Yellow River region to the frontiers. Needless to say, there was abundant production of silk in the area of modern Sichuan. According to the "Treatise on Geography" in *Hanshu*, the region of modern Guangxi and Guangdong also had a silk industry as early as Western Han. From the "Biography of Wei Sa" in *Hou Hanshu*, we can see that there was mulberry and silkworm cultivation in the Guiyang Prefecture of modern Hunan in the early part of Eastern Han. The mural in the Holingor Han tomb shows that toward the end of Eastern Han at the latest Dingxiang Prefecture (with its seat in the north of modern Shanxi, transferred there from Inner Mongolia) also had mulberry cultivation.³⁵

Population and Economy Tomb number 10 excavated in 1973 at Fenghuangshan in Jiangling, Hubei, was occupied by a certain Zhang Yan, who was buried in A.D. 153. He was a landowner and a local official in his hometown of Jianglingxian. His duty was to collect government taxes from the farmers. His tomb contained many bamboo and wooden slips which were the official records of the local government administration. Among them was a group of bamboo slips called "Granary Records of Zheng Village," which were local government receipts for grain seeds loaned to twenty-five families of farmers of Zheng village. These receipts record the amount of farmed land and the population of Zheng village (fig. 87).³⁶ According to these records, the twenty-five families of Zheng village consisted of 105 persons; sixty-nine of them were capable of agricultural labor. The village had a total of 617 *mu* of land. Thus, there was on the average 24.6 *mu* per family, or less than 6 *mu* per person (with each

mu equivalent to 456 m²).³⁷ From these figures we can see that even in the first part of the Western Han period, the average independent farmer was quite limited in the amount of land he farmed. The "Zhushuxun" chapter of *Huainanzi* says that for middle-quality fields, the grain produced in a year did not exceed four *dan* (piculs) per *mu*. According to the "Biography of Zhong Changtong" in *Hou Hanshu*: "The harvest from the highest quality fields is about three *hu* per *mu* [a *hu* being equivalent to a *dan*(picul)]." We can determine, therefore, that the average farmland during the Han dynasty produced three to four piculs per *mu*. Therefore, 6 *mu* of land (the average per person) could only produce about 20 piculs (each picul being equivalent to approximately 20 liters). If we estimate that a person's daily food requirement is about 5 *sheng* (or roughly one liter), then the annual requirement should be 18 piculs. We can thus see that the harvest realized from a whole year of the farmer's hard labor left him with little surplus in addition to what was needed to fill his stomach. According to the receipts, there was a certain farmer named Ye whose family consisted of eight people, and yet he only had 15 *mu* of land. This averages out to less than 2 *mu* per person, which would have made living conditions harsh indeed.

Furthermore, the farmers were responsible for taxes and corvée labor. According to the records found in tomb number 10 at Fenghuangshan, these taxes and corvée labor requirements were quite heavy. Under such circumstances, some farmers were forced into bankruptcy. Then, the big landowners would take advantage of the opportunity to buy up the farmland of the bankrupt farmers. In order to live, the bankrupt farmers had to become tenant farmers or hired laborers of the landowners; some even had to sell themselves as slaves. In time, these conditions became more and more severe. Because of this process of land aggrandizement, we read that toward the end of Western Han, "the wealthy families owned huge numbers of formerly independent farms." Therefore, there is the emergence at this time of many privately owned manors.

In Eastern Han, due to the lenient policies of the court, the land aggrandizement problem became more severe and the influence of the powerful landowners increased; manors became both more numerous and larger. Agricultural production on the manors was carried out by the landowners' slaves and others who were personally dependent upon them, that is, the so-called bond-servants. The salient point about the economy of the manors was diversification. Agriculture was still primary, but it was supplemented by related activities and various crafts. The manors became self-sufficient. And one step beyond self-sufficiency was the landowners' involvement in commercial enterprises, that is, the marketing of a portion of their manors' products.

As mentioned several times before, a tomb in Holingor, Inner Mongolia, was excavated in 1972, the occupant of which had risen to the post of colonel of the Wuhuan army. He was an important official and landowner. Many murals were found in this tomb, among which, on the south wall of the posterior room, was one that depicts in a lively and concrete fashion the activities of the tomb occupant's manor (fig. 88).³⁸ In the center of the mural are the manor's houses. Far in the northeast corner there is a large field. Farmers hold plows and drive oxen, tilling the land. Closer to the dwellings there are vegetable gardens where two farmers are working intently with hoes. Walls surround the vegetable garden to prevent the fowl and other animals from straying in. Near the dwellings there are stables and pens for oxen and sheep. The presence of young as well as full-grown animals gives evidence of continuous breeding. Outside the pens, there are scattered groups of chickens and pigs. Nearby the dwellings there is a mulberry grove where four women appear, holding ropes, hooks, and nets, picking mulberry leaves. Close by, there are bamboo baskets and screens used in silkworm cultivation. On the far west side, there are three pools in which bundles of hemp are placed. Workers stand beside the pools, netting the hemp. Nearby, there is also a structure to house vehicles. In addition to this mural on the south wall, murals in

the front room of the tomb likewise depict piles of harvested foods, ox carts used in transporting the food, grain bins for storing the food, and people in the process of hulling the grain with tilt hammers. On the mural found in the middle room, brewing is also shown. This indicates that not only was food processed on the manor, wine and vinegar were also made there. There are also several murals in the front room depicting the pasturing of horses, cattle, and sheep. These show that aside from agriculture the manors engaged in animal husbandry. This tomb is located in the northern grasslands, where animal husbandry must have been especially widespread (figs. 89, 90).³⁹

It is noteworthy that in the center of the mural on the south wall in the rear room of the Han tomb at Holingor there is a watchtower situated beside the dwellings. Similarly, in the upper corner of the mural that depicts sheepherding in the front room there is a walled fort. At the rear of the fort is a tall watchtower at a corner (fig. 91). Hence we can see that the manor's buildings included those used for military or defensive purposes. The farmers who worked on the estate were not only the wards of the powerful landlord, they were also members of his private militia. Many of the historical records corroborate this fact, indicating that especially in the last years of Eastern Han the men who were attached to powerful landlords had military as well as agricultural duties. From a late Eastern Han tomb at Tianhuishan in Chengdu, Sichuan, archaeologists found clay figures of farmers and soldiers; they not only are wearing the same kind of clothes, the farmers are also shown wearing large battle knives. This evidence further corroborates the military roles of the farmers at that time (fig. 92).⁴⁰

At the end of Eastern Han when Cao Cao seized control of the government he curbed the power of the landlords, prohibited land aggrandizement, and established the *tuntian* ("agriculture colony") system. There were two kinds of *tuntian*, the commoners' and the soldiers'. In the first, common farmers who did not have their own

land or oxen were recruited to farm government land under the direction of various agriculture officials. Fifty to sixty percent of their harvest had to be turned over to the government. In the second kind of *tuntian*, soldiers were organized to engage in agricultural production and the harvest was used by the military. In the tomb mentioned above dating from the Wei and Jin periods found in the Jiayuguan district of Gansu, there are two extremely precious wall murals depicting a military *tuntian* colony.⁴¹ The first mural shows the military camp. In the middle there is a large tent occupied by a military official, which has guards stationed outside. The guard on the right holds a banner and seems to be the runner. On the right of the tent there are six serrated banners implanted in the ground in two rows. They evidently mark the entrance to the headquarters tent. On the remaining three sides many smaller tents are arrayed in rows. In front of each tent, *ji*-halberds and shields stand in the ground (fig. 93). The second mural depicts the cultivation of land by the military. In the center a military officer gallops about on horseback; on each side there is a platoon of foot soldiers marching with *ji*-halberds and shields. Beside each platoon there are two men driving oxen and tilling the land. One of them wears a hat and looks like a member of the Han race. The other, with untied hair, wears the clothes of one of the minority ethnic groups (fig. 94). These two murals, viewed together, provide us with a realistic picture of the military cultivation of land west of the Yellow River during the Wei and Jin dynasties. During the Wei dynasty, military cultivation of land was also widely practiced in the Central Plains area. However, we have not yet uncovered archaeological evidence of it.

叁 汉代的农业

在谈到汉代的农业时，首先要根据考古工作中的发现，说一说当时有哪些农产品。

在陕西省的咸阳，河南省的洛阳，湖北省的江陵、光化，湖南省的长沙，江苏省的徐州、海州，广西壮族自治区的贵县，广东省的广州等地的西汉和东汉的墓中，都发现了当时农产品的遗留¹，其中以长沙马王堆汉墓出土的种类最多，保存最好。洛阳烧沟汉墓的陶仓和长沙马王堆汉墓的竹简上，还书写着各种农产品的名称（图55）。归纳起来，在汉代作为食物的农产品中，粟（小米）、稻、小麦、大麦、黍（黄米）、豆等谷物是最重要的。稻有粳、籼、糯等品种，豆有大豆和赤豆等。在黄河流域和北方地区，以种植粟和小麦为主。陕西米脂画像石的牛耕图中，刻绘着成熟的粟，可见它是当地主要的谷物（图56）。²由于在咸阳、洛阳、江陵、光化、长沙、徐州、广东等地也发现了粟，可见它的种植是很普遍的。除了黄河流域以外，长江流域也种小麦和大麦，马王堆汉墓中即发现了它们的遗品。黄河流域也种稻，洛阳汉墓出土的稻谷经鉴定为粳稻³，而墓中陶器上所书的“秣稻”则应系糯稻⁴。长江流域和南方地区，稻是主要的谷物。经鉴定，广州汉墓出土的稻谷为籼稻；长沙马王堆汉墓出土的稻谷，从竹简上的文字，并从实物的鉴定看来，有籼稻，也有粳稻和糯稻。⁵江陵凤凰山汉墓发现有稻穗四束，放在一个陶仓中，保存得很好，稻穗长约18.5厘米，每穗平均有51粒，经鉴定，是一种粳稻（图57）。⁶此外，据报道，咸阳、洛阳、广州等地的汉墓和辽阳三道壕的汉代村落遗址中都曾发现高粱的残迹⁷，只是还没有经过正式的鉴定。除了上述的谷物以外，作为食物的农产品还有薏苡、芋、葵（冬苋菜）、芥菜、甜瓜、葫芦、笋、藕、生姜等类（图58），果品方面则有栗、枣、梨、桃、李、杏、梅、杨梅、橄榄，等等。作为主要纺织材料的大麻，已普遍种植，洛阳烧沟汉墓中有写着“麻万石”字样的陶仓，长沙马王堆和贵县罗泊湾汉墓更发现了大麻子的实物。

汉代农业生产的特点之一，是铁农具的普遍使用。当时的铁农具，不仅在中原一带，而且在边远地区广泛使用，普及全国。在考古调查发掘工作中，从东北的辽宁、内蒙古到西南的云南、贵州，从东南的广

东、福建到西北的甘肃，都发现了汉代的各种铁农具。⁸它们的种类，包括翻土用的锸、铲、犁，除草用的锄，收割用的镰，等等（图59、60）。在辽宁省的辽阳、河北省的保定和满城、江苏省的徐州等地，还发现了一种三齿耙和双齿耙，用于耙地松土（图61）。⁹

安在犁上的铧，一般都系“全铁制”，比之战国时代套在木铧上的“铁口铧”显然要进步得多。铁铧因耕作对象的不同而有各种类型。有的小而轻巧，适用于翻耕熟地。有的锐利而厚重，适用于开垦生地。也有一种巨型铧，如在辽宁辽阳三道壕、山东滕县长城村、河北石家庄东岗头村等处出土的，长度和宽度都在四十厘米以上¹⁰；在有名的满城汉墓中，也发现了这种巨型的铁铧（图62）¹¹。由于形制特别厚重，牵引极费力，不适于翻耕一般的农田，所以颇有人认为这种巨型铧大概是适应水利工程的需要，用于开沟作渠的。但是，《汉书·沟洫志》说“举锸为云，决渠为雨”，颜师古注“锸，锹也，所以开渠者也”，可见汉代开渠主要还是用锸而不用犁。如在陕西省的蒲城、礼泉、西安、陇县等地的发掘工作中所见，为了防止铁铧的口刃部分被磨损，往往采取在铧的前端套接“铧冠”的方法（图63）。¹²“铧冠”也系铁制，甚锐利，但它实际上只相当于铧的口刃部分，形体较狭，所以铸造比较节省，损坏后易于更换。

在汉代，犁壁的使用也已经开始了。在山东的安丘，河南的中牟、鹤壁，陕西的长安、礼泉、西安、咸阳、陇县等地，都发现了汉代的犁壁。¹³犁壁又称犁镜，它安装在犁铧的上边，是铧的一种复合装置，其效用在于翻土起垄（图64）。在陕西省各地发现的犁壁，有向一侧翻土的单叶壁，有向左右两侧翻土的马鞍形双叶壁，说明当时对于犁壁的设计和使用已经达到相当的水平。¹⁴

在汉代，牛耕已经相当普遍。甘肃武威磨咀子西汉末年的木牛和木犁模型（图65）、山西平陆枣园村新莽时期的壁画、江苏睢宁双沟的东汉画像石（图66）、山东滕县宏道院的东汉画像石、陕西米脂的东汉画像石及内蒙古和林格尔的东汉壁画中的牛耕图，都是研究当时牛耕的珍贵资料。¹⁵画像石和壁画中的牛耕图，大多数是所谓“二牛抬杠”。两头牛抬着犁衡，牵引着一张长辕的犁，一人扶犁并驱牛，这是汉代牛耕的最通常的形式。对于《汉书·食货志》“用耦犁，二牛三人”的记载，迄今有许多不同的解释。但是，从上述的考古资料看来，所谓“耦犁”，是指二牛牵引一犁，大概是没有疑问的。到了东汉后期，特别是魏晋时期，

犁耕的技术有了改进。甘肃嘉峪关魏晋时期壁画中的牛耕图有只用一牛牵犁的，便是例证。¹⁶

一个值得注意的问题是，汉代已经开始用耒车播种。在前面提到的山西平陆枣园村的新莽时期的壁画中，除了牛耕图以外，还有耒播图（图67）。¹⁷壁画已经漫漶，不甚清晰。耒车似为三足，耒斗表现得不清楚。但是，壁画所绘系耒车，则是没有疑问的，从而证明了《汉书·食货志》和崔寔《政论》关于耒播的记载。关于汉代的耒车，在考古资料方面虽然只有上述的一个孤例，但考古学家们认为，在辽阳三道壕、北京清河镇、陕西的富平等地的汉代遗址里发现的一种小型铁铧可能便是安装在耒车的足上的，可称之为耒铧（图68）。¹⁸1930年在内蒙古居延西汉遗址中发现的一件木制的农具，它的尖端应附有小型的铁铧，应该便是耒车的足。与耕犁用二牛牵引不同，壁画中的耒车只用一牛牵引，这显然是由于牵引耒车所需的力远比牵引耕犁所需的力为小之故。用三足的耒车播种，一耒可播三行，比之人工撒播，效率大大提高，效果也较好。

在甘肃嘉峪关魏晋时期的壁画中，还有耙田图和耨田图，耙和耨都用牛牵引，农夫站在它们的上面，以增加重量（图69、70）。¹⁹这是迄今发现的关于操作这两种农具的最早的形象资料。田地经耕犁翻起后，用带有排齿的大耙将土块切碎，使田地平整，播种以后，用土覆盖，又用不带齿的耨进一步将土块压碎、压平，以达到保墒的效果。耨的使用，限于北方的旱地。耙则不仅限于北方的旱田，而且也适用于南方的水田。广东连县西晋墓出土的犁田和耙田的陶制模型，便是例证。²⁰关于耙和耨的使用，始见于北魏时的《齐民要术》（公元6世纪），汉和魏晋文献上并没有这方面的记载。但是，由于魏晋时使用得相当普遍，而且已普及到边远地区，所以认为东汉时已经开始有了这种耕作技术，这也并不是完全没有可能的。

铁工具的广泛使用，使水利建设具备了优越的条件。大规模的水利工程，是由当时的政府主持的。例如，秦代在关中地区兴建的郑国渠，西汉时又经维修和改建，并增设了一条支渠，称为白渠。1973年，考古工作者在陕西省泾阳县调查了郑国渠和白渠的渠首遗址，发现白渠的渠首长约三百余米的一段是“井渠”，这是汉代开凿水渠的一种新技术（图71）。²¹秦代在四川灌县修建的都江堰水利工程，汉代也继续维修和改进。1974年，在都江堰的江底发现了东汉建宁元年（公元168年）当地

主管水利的官吏所建的李冰石像，高近三米，它被置立在江水中，不仅表示对李冰的纪念，而且实际上起了测量水位的作用（图72）。²²

利用桔槔汲取河水或井水以灌溉农田，在汉代是相当普遍的，它们的具体形状可以在画像石中见到。²³在黄河流域和北方地区，大量利用水井灌溉。水井的陶制模型，在各地汉墓中被发现，有的显然是灌溉用井。例如，洛阳汉墓出土的陶井，设有轱辘井架，用两个汲水桶交替汲水，井旁附设长条状的水槽，表示从井中汲出的水经水槽流入沟渠，灌溉农田（图73）。在长江流域和华南地区，除了充分利用河流以外，还多筑陂塘，塘中蓄水，灌溉稻田。在陕西的汉中、四川的成都和彭山、云南的呈贡、广东的连县等处的汉和魏晋时期的墓中，发现了陶制的陂塘模型，往往与水田相连。²⁴这是一种人工开凿的蓄水池，设有闸门，表示可以调节水流，灌溉附近的稻田（图74、75）。西汉初年在庐江郡（今安徽庐江）开凿的芍陂，东汉时加以修复，是一项大规模的水利工程。安徽省寿县的安丰塘，便是当时芍陂的旧址，1959年考古工作者在这里发现了东汉时期的水堰。在附近发现的修筑堰坝的铁工具中，有一件刻有“都水官”铭文的铁锤，说明了这一水利工程是由官府主管的。²⁵

收割成熟的谷物，已经普遍使用了铁镰。四川成都扬子山出土的东汉画像砖上，有一幅水稻收割图，形象、生动地说明水稻的收割情形。²⁶从这画像上可以看出，当时收割水稻，是先割取稻穗，然后再用长柄的钩形镰刀刈割稻草（图76）。

谷物收获后，要经过打场、扬场，其情形可以在画像石和壁画中看到。值得注意的是，河南省洛阳和济源的汉墓中，发现了陶制的风车箱模型（图77、78）。²⁷一般说来，北方多种粟和小麦，所以往往在场地上用扬弃的方法去除草秕。南方多种稻谷，需要用风车箱扇去秕糠。洛阳和济源汉墓中的发现，说明了风车箱不仅在南方，而且在中原地区也被使用。

谷物的加工，已普遍使用“践碓”。这是一种简单的机械装置，用人力践踏，以舂捣谷物。它们的具体形象，可以在各地发现的画像石、画像砖和陶质模型中看到（图79、80）。据文献记载，到了魏晋时期，还普遍应用了利用水力的水碓。石制的转盘式的双扇磨盘，在汉代也已普遍使用。它们的实物和陶质模型，在汉代的遗址和坟墓中多有发现（图81）。年代最早的石磨实物，是在满城汉墓中发现的，石磨下面置一大铜盘，以承受磨出来的粉（图82）。²⁸山东临沂银雀山汉墓出土的，是

上述石磨的陶质模型，其年代比满城汉墓还要早一些，可能在汉武帝时期之前。²⁹这种转盘式的大型石磨的普遍制作与使用，显然是与铁工具的发达分不开的。在各地东汉墓中出土的陶质模型中，往往可以看到碓与磨盘同时装置在一个碓房中，以进行谷物的加工。

汉代的农副业是多种多样的，豢养家禽与家畜是其中最普遍的一项。从各种考古资料来看，家禽是鸡、鸭和鹅，家畜则有马、牛、羊、猪、狗等。汉墓中出土的陶制猪圈，往往与厕所相连，说明了当时已经注意养猪积肥，以粪肥田（图83）。在北方和西北地区，还饲养骆驼，以供运输之用。在河北省定县发掘的东汉后期中山穆王刘畅的墓中曾发现骑骆驼的陶俑，在四川省新都县发现的东汉画像砖上也有骆驼的图像。³⁰射猎也是一种农副业。长沙马王堆汉墓随葬的肉食品中，走兽有野兔、梅花鹿等，飞禽有斑鸠、雁、鸱、竹鸡、喜鹊、雉、鹤等。³¹各地画像石和画像砖中有狩猎图，四川成都扬子山画像砖上还有弋射图³²，都是很能说明问题的资料。除了在河流、湖泊中捕捞鱼类和其他水产动物以外，在人工开凿的陂池中也养殖鱼、鳖之类，以供食用，陕西汉中出土的陶制陂池模型很生动地说明了这种情形。³³利用各种水面，种植莲藕、菱角之类，采取以供食用的情形，也可以在有关的考古资料中看到（图84）。

植桑养蚕，也是农村的一项重要副业。至少在战国时代，据铜器上的图纹所见，桑树已有两种。一种可称为“树桑”，甚高大；一种可称为“地桑”，较低矮。后者不仅便于采摘，而且叶多而嫩润，比前者更宜于饲蚕。汉代的桑树，据在画像石和画像砖上所见，亦有“树桑”与“地桑”两种（图85、86），而《汜胜之书》有关改进栽桑方法的记载则说明了低矮的“地桑”正是用改进了的方法培植出来的。³⁴在汉代，植桑养蚕已从黄河流域推广到边远地区。四川省境内，盛产丝绸，自不待言。据《汉书·地理志》记载，广东、广西一带，早在西汉时便有蚕桑之业。《后汉书·卫飒传》则记载东汉初期，湖南省南部的桂阳郡一带亦已开始种桑养蚕。据和林格尔汉墓壁画所见，至迟在东汉后期，山西北部 and 内蒙古境内的定襄郡（其治所西汉时在今内蒙古和林格尔，东汉时在山西省右玉）也有了蚕桑。³⁵

1973年发掘的湖北省江陵凤凰山十号墓，墓主人名为张偃，葬于西汉景帝四年（公元前153年）。他是一个地主，在当时江陵县他的家乡任乡吏，替政府向农民征收赋税。在他的墓里，随葬着许多竹简和木

牒，是乡里行政机构的文书和簿册。其中有一组竹简称为“郑里廩簿”，是乡里行政机构向“郑里”这个农村的二十五户农民放贷种子的账簿，记录了农户的人口和土地数量（图87）。³⁶据这本账簿的记录，郑里农民25户，105人，能从事生产劳动的69人，共有土地617亩，平均每户24.6亩，每人不到6亩（每亩合今约456平方米）。³⁷由此可见，即使在西汉前期，一般的自耕农也只能有少量的土地。《淮南子·主术训》说“中田之获，卒岁之收，不过亩四石”，《后汉书·仲长统传》说“今通肥饶之率，计稼穡之入，令亩收三斛”。由此可见，汉代一般农田的产量大约为每亩三石至四石，六亩田只能产粮二十石左右（每石合今约20公升）。每人每天的食量以五升（合今1公升）计算，一年就需粮十八石，这就是说，农民们辛勤劳动一年的收获，除了勉强糊口之外，就没有什么剩余。至于账簿里所记一个名叫“野”的农民，全家八口，只有十五亩土地，平均每人不到二亩，那就更难于生活了。

而且，农民们还必须负担国家的赋税和徭役。从凤凰山十号墓出土的文书和簿册的记录也可以看出，当时的赋税和徭役是相当繁重的。在这种情况下，有的农民就不免破产。于是，大地主们就趁机收买破产农民的土地，而破产农民为了维持生活，就不得不成为大地主的雇农和佃户，有的甚至卖身为奴。随着时代的推移，这种情况愈来愈严重。到了西汉后期，由于土地兼并，结果，“富者田连阡陌”，就出现了许多私人占有的大庄园。

到了东汉，由于朝廷的纵容，土地兼并愈益激烈，豪强地主的势力愈益强大，庄园也愈来愈多，愈来愈大。豪强地主们使用他们的奴婢和与他们有人身依附关系的农民，即所谓“徒附”，在庄园中进行各种生产活动。庄园经济的特点，是从事多种经营，以农业生产为主，同时也包括各种农副业和手工业，从而能够做到“自给自足”。自足有余，庄园主也搞商业活动，将一部分产品出售。

如前面已经多次提到过的，1972年在内蒙古和林格尔发掘了一座东汉后期的墓，墓主人官至“护乌丸校尉”，是一个大官僚兼大地主。墓中有大量的壁画，其中后室南壁的一大幅壁画是庄园图，生动而形象地描绘了当时庄园的各种情形（图88）。³⁸在画面的中部，是庄园的房舍。在它的东北方远处，是大片的原野，农夫们扶着犁，驱赶着牛，正在耕地。在房舍的附近，则另有园圃，以种植蔬菜之类，两个农夫手执锄头，正在精耕细作；为了防止家禽、家畜的侵扰，园圃四周还筑有围

墙。房舍附近还有马厩、牛圈和羊圈，其中既有壮畜，也有幼畜，表示牲畜不断繁殖。在圈栏之外，还有一些散放着的鸡群和猪群。在房舍的周围，有一片桑林，四个女子拿着绳索、长钩和网子，正在采桑，旁边还有一些筐箔之类，以表明庄园中有蚕桑之业。在西面较远处，则有三个方形的池坑，里面堆放着麻，有人正在池坑旁边进行着沤麻的操作。在附近，还有一个车库，存放着一些备用的车辆。除了南壁这一大幅庄园图以外，在墓的前室壁画中还可以看到收获下来的成堆的粮食、运粮的牛车、存贮粮食的囤困，以及人们正在利用“践碓”舂捣谷物。在中室的壁画中，则有酿造图，表示庄园中自行加工谷物，而且还自制酒、醋之类。在前室的另几幅壁画中，则又有牧马、牧牛、牧羊图，表示庄园中除了农业以外，还从事畜牧业，特别是因为这里是北方草原地带，所以牧畜业尤其兴盛（图89、90）。³⁹

值得注意的是，在和林格尔汉墓后室南壁庄园图中部的房屋旁边有一座望楼。在前室牧羊图的上方，则有四面筑有围墙的堡垒，在堡垒后部的一角也建有一座高大的望楼（图91）。这些都显示了庄园中的建筑物是带有军事防御性质的。在庄园中从事生产劳动的农夫，也就成了豪强地主的部曲，即他们的私人武装部队。在许多文献记载中，也都说明在东汉，特别是在东汉的后期，豪强地主的部曲是具有亦农亦兵的性质的。四川成都天迴山东汉晚期墓出土的农夫俑和武士俑，衣著完全相同，而且前者和后者一样，也佩有作战用的大刀，正生动而形象地说明了这一问题（图92）。⁴⁰

东汉末年曹操掌握政权后，抑制豪强地主，严禁土地兼并，实行屯田制。屯田制分民屯与军屯两种。前者是招募无地或无牛的农民，在各级典农官统率下耕种官田，将收获的五成或六成交纳给官府；后者则是组织士兵从事农业生产，以其所获供军用。在前面多次提到的甘肃嘉峪关魏晋时期的墓中，有两幅关于当时军屯的壁画，是十分珍贵的材料。

⁴¹一幅可称为“营垒图”，正中绘一大军帐，帐中坐一军官，帐外左右两侧各立一军士，右立者手执一旗，似为传令官。大军帐的右方，树牙旗六面，分为两列，似为营门之所在；其余三方则排列着许多较小的军帐，重重叠叠，帐前立戟与盾牌（图93）。另一幅可称为“屯垦图”，其中部画着一个骑马驰驱的武将，两侧各有一队荷戟持盾的步兵在行进。在兵队的旁边，则有二人正在驱牛耕地，一人戴帽似汉人模样，一人披发作少数民族装束（图94）。“营垒图”和“屯垦图”结合起来，正是当时

河西地区军队屯田的真实写照。曹魏的屯田制，在中原地区也广泛推行，只是有关的考古资料迄今还付之阙如。

55 . Names of agricultural products inscribed on pottery granaries unearthed from Han tombs in Luoyang 洛阳烧沟汉墓出土陶仓上写的农产品名称

56 . Ox-drawn plow and millet plants on a pictorial stone unearthed in Mizhi, Shaanxi 陕西米脂出土画像石上的牛耕图和粟

57 . Rice ears from a pottery granary unearthed from a Han tomb at Fenghuangshan, Jiangling 江陵凤凰山汉墓出土的陶仓中的稻穗

58 . Remains of job's tears from a pottery jar unearthed from a Han tomb in Luoyang 洛阳烧沟汉墓出土的陶壶及薏苡

59 . Iron spade with wooden handle unearthed from the Han tomb at Mawangdui in Changsha 长沙马王堆汉墓出土的木柄铁锛

60 . Stone human figure holding a spade, unearthed in Pixian, Sichuan 四川郫县出土的手握铲的石像

61 . Iron rake with two teeth, unearthed from the Han tomb in Mancheng 满城汉墓出土的双齿铁耙

62 . Large iron plowshare unearthed from the Han tomb in Mancheng 满城汉墓出土的巨型铁铧

63 . Iron plowshare and its crown, unearthed in Longxian in Shaanxi 陕西陇县出土的铁铧和铧冠

64 . Iron plowshare and moldboard unearthed in Chang'anxian, Shaanxi 陕西长安县出土的铁犁铧和犁壁

65 . Wooden models of ox and plow unearthed from the Western Han tomb at Mozuizi in Wuwei, Gansu 甘肃武威磨咀子西汉墓出土的木牛和木犁模型

66 . Plowing with oxen in the pictorial stone art unearthed at Shuanggou, Suiningxian, Jiangsu 江苏睢宁双沟出土的画像石中的牛耕图

67 . Use of a seeder depicted in the wall painting of a Han tomb at Zaoyuancun in

68 . Iron blade of a seeder unearthed in Fuping, Shaanxi 陕西富平出土的铁耒铎

94 . A soldiers' farm in a wall painting in a Wei-Jin period tomb at Jiayuguan,
Gansu 甘肃嘉峪关魏晋墓壁画·屯垦图

CHAPTER 4 LACQUERWARE

Lacquerware Before the Han Dynasty Archaeology tells us that lacquered wares existed in China probably as early as the Neolithic period. In 1978, many wooden objects were found at the site of Hemudu, Yuyaoxian, Zhejiang Province. One of the wooden bowls is covered both inside and out with a bright red pigment that appears to be a lacquerlike substance.¹ The Hemudu site has been dated by radiocarbon to about 7,000 B.P. If the pigment on the bowl proves to be lacquer, then it will be the earliest known lacquered vessel in China.

By the Shang period, the decoration on lacquered vessels was already quite accomplished. Many fragments of lacquered vessels, which included types like basins and boxes, were found in 1973 at a middle Shang site at Taixicun, in Gaochengxian, Hebei Province. The designs were in black against a red background, and included *taotie*, leaf, thunder-cloud, and dragon motifs, all closely comparable to bronze motifs. Some fragments were even decorated with turquoise inlays or gold sheets. Fragments of lacquered vessels have also been frequently found at Yinxu at Xiaotun in Anyang, Henan, the site of the late Shang dynasty capital, but they are so poorly preserved that neither the vessel shape nor the decoration can be distinguished clearly.²

It is, in any event, certain that the production of lacquer wares was quite advanced in the Shang period. As a result of the far-ranging influence of Shang civilization, lacquered vessels were also found in distant regions. For example, a burial belonging to the Lower Xiajiadian culture excavated in 1977 at Dadianzi, Aohan Banner, in Liaoning Province, yielded two well preserved red lacquered vessels, somewhat like the Shang bronze *gu* in shape.³ Radiocarbon dates place the site at Dadianzi at about 3,500 B.P. These two *gu*-shaped

lacquered vessels may be regarded as the earliest well preserved examples of lacquered vessels.

Lacquer vessels are also known from excavated sites of the Western Zhou period. For example, they have been found in the early Western Zhou tombs at Pangjiagou, at Luoyang, Henan, excavated in 1964, and at the late Western Zhou to early Eastern Zhou burials of the Guo state at Shangcunling in western Henan, excavated in 1956. The vessels from both sites are decorated with inlaid shell discs. The early Western Zhou burials excavated in 1953 at Puducun, Chang'anxian, in Shaanxi Province, also contained lacquered fragments with what appears to be shell disc inlays.⁴

Rapid and astounding advances in the development of the lacquer industry were made only with the beginning of the Warring States period. Large numbers of well preserved lacquered vessels were found before the founding of the P.R.C. in sites in Changsha, Hunan, and in Luoyang, Henan; and, after the founding of the P.R.C., in Changsha, Hunan, in Jiangling and Suixian, Hubei, in Xinyang, Henan, and in Chengdu, Sichuan.⁵ In addition to lacquered vessels, these finds included various types of lacquered home furnishings, grave goods, musical instruments, and weapon accessories, indicating that lacquered items were widely used for various aspects of social life. Considering only lacquered vessels, for example, most early Warring States vessels have wood cores, which tend to make them heavy and bulky.

From the mid-Warring States period on, vessel cores made with thin wooden sheets or fabric began to appear. By the late Warring States period, inlaid bronze discs (gold or silver gilded) were added to thincored lacquered vessels, making them sturdier as well as more elaborate and beautiful. The painted designs on these are also very rich and elegant. In short, Warring States lacquerware had reached very high standards in every respect. Han period lacquerware represents a further development from the foundations laid in the Warring States period.

Han Lacquer Wares Han lacquerware has been discovered at many localities; only the most notable finds will be mentioned here. Finds before 1949 include the large numbers of well preserved vessels from Pyongyang in Korea and Noin Ula in Mongolia.⁶ Many of these are dated by inscription and are extremely valuable for research. Since the establishment of New China, lacquer vessels in various states of preservation have come from Han burial sites in Luoyang in Henan; Wendeng in Shandong; Yancheng and Lianyungang in Jiangsu; Ningbo in Zhejiang; Changsha in Hunan; Guangzhou in Guangdong; Qingzhen in Guizhou; and Wuwei in Gansu.⁷ The lacquer vessels from Qingzhen and Wuwei also carry detailed inscriptions with dates like those from Pyongyang. In the past ten years or so, finds of Han lacquerwork have been virtually innumerable: at Hepu and Guixian in Guangxi, Haizhou in Jiangsu, Linyi in Shandong, Mancheng in Hebei, and Fuyang in Anhui, to name only a few.⁸ Particularly notable are the rich finds from the Han tombs at Mawangdui in Changsha, Fenghuangshan in Jiangling, and Dafentou in Yunmeng, which yielded large numbers and varieties of lacquered vessels in pristine condition, all of which are valuable new material for the study of Han lacquerware (figs. 95-98).⁹

The core materials used in Han lacquerware are mainly wood and fabric (fig. 99); bamboo cores were also used, but only rarely (fig. 100). The method of constructing the cores has been learned by both observing the excavated examples and experimenting.¹⁰ Wood cores were made in three ways. (1) For circular-shaped objects, a round shape would first be carved with the help of a turntable and then the interior would be hollowed out. This method is generally used to make *ding* (tripods), boxes, *hu* (wine vessels), and *yu* (basins) (fig. 101). (2) For more regularly shaped vessels, the core would still be carved from a single piece of wood, but without using a turntable. Ear-cups (that is, cups with earlike handles), spouted *yi* vessels, and square wine vessels (*fang*), low tables, and other noncircular objects would be made by this method (fig. 102). (3) The core would be

formed with thin pieces of wood, curved and fitted to each other with wooden nails to form a thin cylinder, with the bottom of the vessel attached as a separate sheet. Cylindrical vessels with straight walls like *zun* or *lian* were made in this way. This method requires a covering of hemp cloth to be spread over the thin wood core before lacquering to cover the seams. In fabric-cored vessels, numerous layers of hemp or silk cloth would be built over a model of the vessel constructed of wood or clay. After the layers of fabric had dried and hardened, the inner wood or mud core would be removed, leaving only the fabric armature. This is known traditionally as *tuotai*. Generally speaking, the majority of lacquer vessels of the early Western Han period were wood-cored. Among the twenty-odd lacquered vessels from the Han tombs at Fuyang, Anhui, almost half had fabric cores, but among the over 180 lacquer vessels from the early Western Han tomb number one at Mawangdui, Changsha, only a few vessels like *zhi* and *lian* had fabric cores.

From mid-Western Han on, in the lacquered remains from sites such as Changsha, Mancheng, Qingzhen, and Pyongyang, for example, fabric cores were increasingly used for vessels like ear-cups, trays, *zhi*, boxes, and *lian*, although wood-cored lacquer vessels were still common.

Decoration was applied on lacquerware in the following ways. (1) Painting with lacquer: the most common method, which involves the mixing of pigments with the semitranslucent lacquer and applying this mixture to the lacquered surface of the vessel. The colors thus applied are brilliant and durable. (2) Painting with oil: here, pigments were mixed with oil (possibly tung oil) and applied to the lacquered surface of the vessel. The oil and pigment mixture deteriorates with age, and the decoration painted in this way is not very durable and rubs off easily.¹¹ (3) Incising: decoration is incised into the lacquered surface of the vessel with a pointed needlelike instrument. Bamboo slips from tomb number 3 at Mawangdui, Changsha, record that this method was known as *zhuihua*.¹² On two lacquered *zhi*-vessels unearthed at a Han

tomb at Guanghai in Hubei, the incised tiger, hare, bird, and other animals and cloud-scroll designs were filled in with gold so that they resembled the gold- and silver-inlaid decorations on bronzes.¹³ (4) Finally, individual motifs were cut out from thin sheets of gold or silver and attached to the lacquered surface of the vessel, resembling what was later known as *pingtuo* (fig. 103).¹⁴ The most common designs found on Han lacquerware include conventionalized dragon, bird, "scrolling cloud" (*juanyun*), floral, and geometric motifs, as well as more realistic animal, bird, and fish motifs (figs. 104, 105). In general, these designs are all delicate and flowing. The designs on early Western Han lacquer vessels are rich and complex; those on Eastern Han vessels appear simpler. The isolated finds of vessels from Pyongyang decorated with scenes from mythology and stories of filial piety are unusual themes,¹⁵ but they nevertheless are representative of a new trend, or a trend which had existed as early as the middle and late Western Han period as shown by the finds from the tomb of Shi Qi Yao in Haizhou, Jiangsu (figs. 106, 107).¹⁶ Gold and silver sheet motifs on lacquerware from places such as Changsha, Hepu, and Lianyungang include a colorful variety of birds, animals, horses and carriages, human figures, and various geometric patterns.¹⁷

From the late Warring States period on, and especially since mid-Western Han, gilt or silvered bronze mountings were often added to the rims of lacquered *pan*-basins, *zun*-vessels, boxes, and cosmetic boxes; also, gilded buttons were inlaid onto the handles of lacquered cups. These are the so-called "silver rims and yellow handles" referred to in *Yan tie lun* (*Discourses on Salt and Iron*) or the "button objects" referred to in the "Biography of He Xi Empress Deng" in *Hou Hanshu*. In the Eastern Han period, lacquered cosmetic boxes from Luoyang and Pyongyang carried quatrefoil decorations in bronze, and were even inlaid with crystal or glass beads (fig. 108).¹⁸

The durability of lacquered wares is illustrated by the discovery of Western Han lacquered vessels in the Eastern Han tombs at Qingzhen in Guizhou Province. In the Western Han tombs at Shiyanli

at Pyongyang, lacquered ear-cups dated 85 B.C. and A.D. 3 were found together,¹⁹ clearly indicating that such vessels can last for at least eighty years or more.

In other words, the high level of workmanship, beautiful colors, exquisite designs, and durability of Han lacquer vessels made them the most valuable vessels of the period, and needless to say, the price of Han lacquerware was accordingly high. Hence it was recorded in the *Yan tie lun* that the price of one lacquered cup equaled that of ten bronze ones, and that it required a hundred workmen to make one lacquered cup and the effort of a thousand workmen to make one lacquered screen.

Because lacquer goods were so valuable, Han nobles and highranking officials often inscribed them with their clan names or official titles as signs of ownership. For example, the lacquer cups from tombs of Wang Xu and Wang Guang at Pyongyang are inscribed with the characters "Li Wang" and "Wang Shi Lao."²⁰ The lacquered cup in the tomb of Geng Ying in Yanggao, Shanxi Province, was inscribed with the character "Geng."²¹ The characters "Yang zhu jia pan" were inscribed on the lacquered *pan* found in the tomb of Liu Jiao in Changsha, Hunan.²² The lacquered *pan* found from a tomb at Yangjiashan in Changsha, traditionally alleged to be the grave of a queen, was inscribed with the following phrase: "Yang zhu jia pan, jin Changsha Wang hou jia pan."²³ Lacquer pieces from the tombs of the Marquis of Dai, his wife and son, buried in tombs number 1, 2, and 3 at Mawangdui, Changsha, are inscribed with "Dai Hou Jia," etc. (fig. 109).²⁴ Some lacquer items are inscribed with the characters "Shang Lin" (fig. 110), signifying that they were used in the Shang Lin Palace.²⁵ Some are inscribed "Da Guan" or "Tang Guan," indicating that they were used in the royal kitchens.²⁶ Some lacquer vessels carry inscriptions dealing with their actual functions. For example, many ear-cups and *pan* basins from Mawangdui are inscribed with such auspicious phrases as "Jun xing jiu" ("Auspicious Drinking") and "Jun xing shi" ("Auspicious Banqueting") (figs. 111, 112), and lacquered

ear-cups from Han tombs in Ningbo carry "Yi jiu" ("Desirable Wine") inscriptions.

The eating and drinking vessels of the Han ruling class were often decorated with gold and silver mounts. A passage in the "Biography of Gong Yu" in *Hanshu* says: "I once followed His Majesty to the Eastern Palace [Changlegong] and was given cups and tables, all adorned with gold and silver." A passage in the "San bu zu" section of *Yan tie lun* notes: "The wealthy today possess *shu* cups with silver rims, gold handles, and inlays of gold." Another in *Han jiu yi* says, "Gold-mounted wares are used by the highest officials, and silver-mounted wares by the middle level and the imperial household officials." These texts indicate that not only were lacquer vessels widely used in royal and noble households, they were also exquisitely beautiful. Two lacquered *pan* dating to the Wang Mang interregnum (beginning of first century A.D.) from Pyongyang are inscribed, stating that they belonged with *pan* Nos. 1,450-4,000²⁷ and 2,173-3,000²⁸ respectively. Hence there must have been thousands of *pan*-vessels alone in use in the royal kitchens in the Changlegong, not to mention other vessel types (fig. 113). The astounding number of lacquered vessels in the royal household illustrates the extravagance and luxury of the lives of the Han ruling elite, as well as the advanced state of the lacquermanufacturing industry in the Han period.

Lacquerware Industry in the Han Dynasty In the Han period, lacquer articles were manufactured in many regions. It is important to note that many of these lacquer workshops were government managed. Lacquer wares found in an early Western Han tomb at Shitougang in Xicun, Guangzhou, were fire-branded with the characters "Pan yu" (fig. 114).²⁹ Fire-branded characters "Bu shan" and "Shi fu" were found on lacquer wares from the early Western Han tomb at Luobowan in Guixian, Guangxi.³⁰ Lacquer wares from the early Western Han tomb at Yinqueshan in Linyi, Shandong, were fire-branded with the names "Ju shi" and "Shi fu" (fig. 115).³¹ Fire-branded characters "Cheng shi" and "Shi fu" appear on lacquer items from the

early Western Han tombs at Mawangdui, Changsha and Fenghuangshan, Jiangling.³² These characters indicate that these lacquer wares were manufactured at Panyu in what was then Nanhai Prefecture (now Guangzhou), at Bushan in Yulin Prefecture (now Guiping in Guangxi), in Juxian in Chengyang Principality (now Juxian, Shandong), and in Chengdu in Shu Prefecture (now Chengdu). These were all administrative seats of prefectures or principalities. They also indicate that these early Western Han lacquer goods were manufactured under the supervision of the Shi Fu, that is, the local department of commerce and handicraft. As the lacquer industry of Sichuan was especially prosperous, large numbers of lacquer goods from Chengdu were sold as far away as Changsha and Jiangling.

Among the numerous lacquer wares unearthed in 1977 from the early Western Han tomb of the Marquis of Ruyin at Shuanggudui in Fuyangxian, Anhui Province, many carry incised inscriptions.³³ For example, a lacquered *zhi* is inscribed "Zhi belonging to the Marquis of Ruyin, capacity 5 *sheng*; made in the third year by the Ku official of Ruyin, named Ji, and the workman Nian." An inscription on a lacquered *pan* says, "Flat, fabric-cored *pan* belonging to the Marquis of Ruyin, diameter one [Chinese] foot three inches; made in the seventh year by the officer Hui and the workman Su." Some vessels are branded with "Ruyin" shopmarks, clearly indicating that they were made locally. References to the same officials and workshops on an inscribed bronze lamp from the same tomb at Fuyang indicate that as early as the beginning of Western Han, local lords often established their own workshops for the production of lacquered and other wares. Since their power extended over rather limited territories one workshop often served to produce all types of wares, and the same officials were put in charge of the production of different types of wares.

According to the "Treatise on Geography" in *Hanshu*, handicraft officials were established in modern-day Luoyang, Wuzhi, Yuxian, and Nanyang in Henan Province, in Zhangqiu and Tai'an in Shandong, in

Chengdu and Zitong in Sichuan, and these were directly controlled by the central government. Government-controlled industries were probably founded during the reign of Emperor Jing Di and the early part of Emperor Wu Di's reign. *Hanshu* ("Biography of Gong Yu") also records that the workshops in Shu and Guanghan prefectures of Sichuan manufactured both lacquered and gold and silver vessels. Most of the mid-Western Han to early Eastern Han lacquer goods found in Pyongyang, Noin Ula, and Qingzhen are inscribed with the names of the Shu and Guanghan workshops of Sichuan, confirming the textual records. Many of these also carry gilt or silvered bronze mounts, clearly illustrating what was maintained by *Hanshu*. The workshop of the prefecture of Shu was located in Chengdu and that of Guanghan was in Zitong, which was renamed Zitong during the Wang Mang Interregnum. Hence, lacquer goods made in these two workshops during the inter regnum were inscribed with "Chengdu Jun" and "Zitong Jun."³⁴

As previously mentioned, the burials in Mawangdui (Changsha) and in Fenghuangshan (Jiangling) date from the early Western Han period, and many of the lacquer wares from these burials carry Chengdu workshop marks such as "Cheng shi" and "Shi fu." This evidence suggests that the locally controlled workshops at Chengdu had, by the mid-Western Han period, already passed under the direct control of the central government. These government-controlled workshops at Shu and Guanghan in Sichuan were mainly responsible for the supply of lacquer goods to the royal court and high officials' households; those lacquer goods inscribed with "Cheng yu" were used specifically by the emperor. The discovery of these lacquer wares as far away as Qingzhen, Pyongyang, and Noin Ula probably indicates they were imperial gifts to officials guarding the frontiers, to the leaders of minority groups, or to foreigners.

The lacquer wares from Qingzhen, Noin Ula, and Pyongyang all carry detailed and dated inscriptions. The earliest is dated 85 B.C., the latest, A.D. 102. These inscriptions mention the year of manufacture,

the name of the workshop, the type of vessel and its capacity, and the names of officials and workmen involved; thus, they provide detailed information on the organization of the two largest lacquer workshops at Shu and Guanghan and on the actual processes of production. The inscription on a lacquered cup unearthed in Qingzhen in Guizhou may be given as an example:

In the third year of reign period Yuan Shi [of Emperor Ping Di, A.D. 3], the Guanghan Prefecture official workshop manufactured this Cheng yu lacquered, incised, painted, wood-cored, yellow ear-cup, with a capacity of one *sheng*, sixteen yue. It was manufactured by Sugong Chang, Xiugong Li, Shanggong Jie, Tong'erhuangtugong Chang, Huagong Fang, Diaogong Ping, Qinggong Kuang, Zaogong Zhong, under the supervision of Hugongzushi Yun, Shou Chang Yin, Cheng Feng, Yuan Lin, Shoulingshi Tan.

From the list of craftsmen named, we can see that there was detailed division of labor between the various workmen and the different stages of lacquer production. First comes the "Sugong," who made the wood core (he would not be mentioned if a fabric core was used); then the "Xiugong" who applied the lacquer. He is followed by the "Shanggong," who was also responsible for the application of lacquer, but in contrast to the "Xiugong," he applied the final layers. It has been argued that the Shanggong attached bronze parts, but since his name also appeared on lacquer items without bronze parts, this interpretation cannot stand. The Shanggong is followed by the workman responsible for gilding the bronze handles of the plate or pot, the "Tong'erhuangtugong"; then the workman who painted the decoration, called the "Huagong." The job of the "Diaogong" has been greatly disputed, and he has been thought to have been responsible for carving decoration and inscriptions on the lacquers. However, although many lacquer wares from Dafentou in Yunmeng, Hubei, did not have carved inscriptions, the word "diao," was still mentioned in

the inventory tablet found in the grave.³⁵ Hence, it seems likely that his job involved not the carving of decorations or inscriptions but the final polishing and buffing of the lacquered surface to make it shine. He is followed by the "Qinggong" who makes sure it is cleaned—i.e., a kind of product inspector—and, finally, the "Zaogong," the general supervising foreman of the entire workshop. The order presented above suggests that the processes involved were as follows: (1) making of the core; (2) application of the base layers of lacquer; (3) application of top layers of lacquer; (4) attachment of metal parts; (5) painting the surface designs; (6) buffing; (7) final cleaning and inspection. In the earlier lacquer vessels dated to 85 B.C., the only stages named by the inscriptions were, lacquering, painting and buffing, but inscriptions dating from the reign of Cheng Di (late first century B.C.) included also the second lacquering process, the attachment of metal parts, and the final cleaning and inspection. This evidence suggests that the manufacturing process became increasingly more refined.

Among the lacquer wares from Pyongyang and Qingzhen with more complete inscriptions, two were made in A.D. 3 and two in A.D. 4 by the Guanghan workshop, and three were made in A.D. 3 and seven in A.D. 4 by the Shu workshop, as can be seen in table 1 and table 2. Looking at the seven lacquer vessels made by the Shu workshop in the year A.D. 4 alone, we notice that the names of the various workmen are different. Evidently, not only were there different workmen responsible for different stages of lacquer production, but there were also many different workmen trained in a given skill. In general, the largest numbers of workmen were employed in the application of lacquer, followed in number by those in charge of adding bronze parts, painting the designs, and applying the final layers of lacquer. Polishers occupy a relatively small number, probably because the job is relatively simple. There must have been only a few inspectors and foremen, for the same inspector's name, Ping, appeared on all seven lacquers, while the same foreman's name,

Zong, appeared on five of the seven lacquer pieces. This evidence supports our interpretation of their responsibilities (tables 1, 2).

We should note, however, that although there was a clear division of labor among the workmen, many workmen were capable of different jobs. For instance, workman Tan applied the top layers of lacquer as well as painted in designs; the workman Feng carved wood cores, made bronze mounts, painted designs, and polished; the foreman Zong occasionally also helped with lacquer application. And based on information derived from known dated lacquers, each workman functioned over a considerable length of time. For example, the foreman Zong was in charge for eighteen years from 4 B.C. to A.D. 14; and the workman Feng, responsible for wood-core carving, painting, and polishing, worked for as long as twelve years, from 4 B.C. to A.D. 8.³⁶

表二：元始三年至四年蜀郡西工工人、官员名字表

[illegible]

In Han handicraft workshops, the workmen involved in actual production were often from one of three groups. The same division also occurred in the Shu and Guanghan lacquer workshops. They consisted of (1) exiled peasant laborers, (2) convicts, and (3) skilled workmen, discussed in detail above. The first two groups were primarily responsible for all the odd jobs and the dirty work around the workshop. Although the workmen of the third group were distinguished by their special skills, they were nevertheless still slave-laborers, with no personal freedom, and hence were hardly different from the other two groups.

Lacquer inscriptions also tell us that there were five

administrative posts attached to the lacquer workshops at Shu and Guanghan. They are: (1) the Zhang, the chief administrator, and (2) the Cheng, his assistant, with positions and salaries comparable to those of district magistrates and assistant magistrates respectively; (3) the Yuan, their subordinate, whose job was to see that orders were carried out properly (i.e., a type of executive officer); (4) the Ling Shi, in charge of paperwork; and (5) the Hugong Zushi, or head supervisor. This last rank was generally used for rather ordinary supervisory posts throughout the Han administrative system, but since he was sent directly by the prefectural government, and answerable only to it, he possessed authority and power even above the chief administrator (Zhang), and his name was therefore usually placed first in the inscriptions.³⁷ In the inscription dated to 85 B.C., the name of the head supervisor (Hugong Zushi) was listed after those of the chief and assistant administrators; only in inscriptions dated 23 B.C. and later did his name appear at the head of the list, and this order of listing became the rule thereafter. This development suggests that the central government had tightened its grip over the workshops at Shu and Guanghan from the time of Cheng Di on (late first century B.C.).

As shown in the tables, four lacquer items from Pyongyang and Qingzhen were produced by the Guanghan workshop and ten were produced by the Shu work shop between A.D. 3 and 4. We can also see that the names of the five administrators continue to show up, clearly indicating that there was only one person attached to each administrative post. But on lacquer wares made in more widely separated years, different names usually appear, suggesting that, in contrast to the workmen, who worked in the shops for long years, there was higher turnover in the administrative posts. One Zhang is known to have been in office from A.D. 3 to 8—even so, no more than six years—while other administrators were often transferred after one or two years.

Besides the Shu and Guanghan workshops, lacquer wares were also made at the official workshops at the Western Han capital of

Chang'an(modern Xi'an). Some of the lacquers found in Wuwei, Gansu, and in Pyongyang, Korea, have inscriptions stating they were made by "Kaogong," "Yougong," or "Gonggong." Kaogong and Yougong were workshops under the Department of Imperial Household Supplies; Gonggong is believed by some to be another name for Kaogong, or it may be another workshop under the same department. These Chang'an workshops manufactured both bronze and lacquer vessels. These lacquer inscriptions contain terms for various workmen specializing in painting, polishing, and gilding, but usually only a single workman's name is given—the name of the workman comparable to the foreman in the Shu and Guanghan workshops. Among the officials at the workshop were "Ling," "You Cheng," "Yuan," "Ling Shi," and "Se Fu." Some of these titles refer to responsible officials, but only You Cheng were in charge of lacquer working. The relatively few finds from Chang'an workshops suggest that they might have not been as productive as the Shu and Guanghan workshops.

A passage in the "Biography of He Xi Empress Deng" in *Hou Hanshu*, relates: "In A.D. 105, the metal-mounted vessels of Shu and Guanghan and the long swords with silken sashes are no longer available." This may indicate that these two famous Sichuan workshops had stopped supplying lacquer wares to the court. As mentioned earlier, the latest inscription on the lacquers found at Pyongyang is dated A.D. 102. This date corresponds well to the *Hou Hanshu* comment. From these data, we may assume that the government-controlled lacquer industry was already in decline from mid-Eastern Han on, its place taken by the privately owned workshops controlled by the local warlords and wealthy landowners.

To summarize, the lacquer industry that began its rapid development only in the Warring States period reached its height in Han. As with all things that have reached their zenith, the lacquer industry's decline was inevitable. There were many different types of lacquered wares, and the superb quality and beauty of the lacquered food and wine vessels had made them more desirable than bronze

vessels. But from the time of the late Eastern Han, Wei, and Jin dynasties, celadon wares became increasingly popular and in many instances came to replace lacquer wares. However, lacquer techniques still continued to develop and advance throughout the post-Han periods.

肆 汉代的漆器

考古发掘工作说明，早在新石器时代，中国可能已经有了漆器。

1978年，在浙江省余姚县的河姆渡遗址中发现了许多木器。其中有一件木碗，里外施朱红色涂料，色泽鲜艳，其物理性能与漆相同。¹经放射性碳素测定，河姆渡遗址的年代距今约七千年。上述的木碗，其涂料如果的确是漆，那末它便是中国迄今发现的最早的漆器。

到了商代，漆器上的花纹和装饰已经相当精致。1973年，在河北省藁城县台西村的商代中期遗址里，发现了许多漆器的残片，可以辨认的器形有盘、盒之类，它们是朱红色地，黑色花纹，纹样有饕餮纹、焦叶纹、云雷纹、夔纹等，与铜器上的花纹相似，有的还镶嵌着绿松石，有的则贴金箔，作为装饰。在商代后期都城遗址——河南省安阳市小屯村的殷墟，也常常发现漆器的残迹，可惜由于保存情况不好，器形和纹饰已不清楚。²总之，可以肯定的是，商代的漆器已经相当发达。在商文化的影响下，边远地区也出现了漆器。例如，1977年在辽宁省敖汉旗大甸子的夏家店下层文化的墓葬中也发现了二件朱红色的漆器，外形保存得比较完好，有些像商代的觚。³经放射性碳素测定，大甸子遗址的年代距今约三千五百年。上述的二件觚形的漆器，可以说是迄今发现的年代最早的器形保持比较完整的漆器。

属于西周时代的漆器，在考古发掘工作中也有发现。例如，1964年在河南省洛阳庞家沟发掘的西周早期墓和1956年在同省陕县上村岭发掘的西周晚期或东周早期的虢国墓里，都发现了漆器。它们的共同的特点是用蚌壳制成的圆泡镶嵌，作为装饰。1953年在陕西省长安县普渡村发掘的西周早期墓中，也发现过类似的镶有蚌泡的漆器的残迹。⁴

漆器制造业的进一步迅速发展，突飞猛进，是在战国时代。新中国成立前在湖南省的长沙和河南省的洛阳，新中国成立后在湖南省的长沙、湖北省的江陵和随县、河南省的信阳、四川省的成都等地的战国墓中都发现了大量的漆器，保存情况良好。⁵它们的种类，除了器皿以外，还包括各种家具、丧葬用具、乐器以及兵器上的附件等等，说明了漆器已被广泛应用于社会生活的各个方面。就器皿来说，战国初期的漆器多系木胎，厚重有余，轻巧不足。从战国中期以后，漆器的胎壁有系用薄

木片制成的，而且开始有了夹纻胎。到了战国晚期，有时在薄胎的漆器上镶铜扣，其上镀金银，不仅加强了器物的牢固，而且增进了它们的精致和美观。漆器上的花纹，也绘描得十分富丽和精美。总之，无论从哪一方面来说，战国时代的漆器已经达到了很高的水平。汉代的漆器，便是在战国时代的基础上进一步发展起来的。

汉代的漆器，发现地点甚多。举其主要者而言，新中国成立前在朝鲜的平壤、蒙古的诺音乌拉发现的漆器，数量多，保存好，且多有纪年的铭文，研究价值很高。⁶新中国成立以后，在河南省的洛阳、山东省的文登、江苏省的盐城和连云港、浙江省的宁波、湖南省的长沙、广东省的广州、贵州省的清镇、甘肃省的武威等地的汉墓中，都有漆器出土，有的已经朽坏，有的保存尚好，⁷而清镇和武威的漆器有详细的纪年铭文，可以与朝鲜境内发现的漆器相比较。最近十多年来，各地汉墓出土漆器，更是不胜枚举；广西壮族自治区的合浦和贵县、江苏省的海州、山东省的临沂、河北省的满城、安徽省的阜阳等地的汉墓中都发现了许多漆器。⁸特别要提出来的，是长沙马王堆、江陵凤凰山、云梦大坟头汉墓中随葬的漆器，数量大，种类多，保存极好，往往完美如新，为研究汉代漆器提供了新的珍贵的材料（图95—98）。⁹

汉代漆器的胎质，主要有木胎与夹纻胎二种（图99）。另外也有竹胎的，但很少（图100）。根据对出土实物的观察，并作了一些模拟试验，了解了器胎的制作方法。¹⁰木胎的制法大概有三种：一种是用轮旋刮削的方法制成器物的外壁，然后再剝空其内部，鼎、盒、壶、盂等圆形器物多用此法（图101）。一种是用割削、剝凿的方法制成，而未经轮旋，杯、匜、钗、案等非圆形器物用此法（图102）。另一种是用几块薄木片卷曲成弧形的器壁，用木钉拼接成一个圆筒，另接器底；有些直壁的圆筒状器如樽、奩等即用此法。用后一种方法制成的木胎，要用麻布裱起来，然后再涂漆，使得不露接缝。夹纻胎是先用木头或泥土制成器型，作为内模，然后用多层麻布或缁帛附于内模上，干实以后，去掉内模，便剩下麻布或缁帛的夹纻胎，这便是所谓“脱胎”。一般说来，西汉前期以木胎漆器为多。安徽阜阳双古堆汉墓中的二十余件漆器，夹纻胎的虽然将近半数，但长沙马王堆一号汉墓中共有一百八十多件漆器，夹纻胎的仅有少数卮、奩等器而已。西汉中期以后，如长沙、满城、清镇、平壤等处的遗品所见，木胎漆器虽然仍不少，但杯、盘、卮、盒、奩等器物用夹纻胎的颇有增多。

在漆器上施花纹，有下列几种方法：一种是漆绘，用生漆制成半透明的漆液，加上各种颜料，绘描于已经涂漆的器物上，色泽光亮，不易脱落，大多数漆器的花纹都用此法绘描。一种是油彩，用油汁（可能是桐油）调颜料，绘描于已经涂漆的器物上，所绘花纹往往因油脂年久老化，易于脱落。¹¹一种是针刻，用针尖在已经涂漆的器物上刺刻花纹，长沙马王堆三号墓出土的竹简记录着这种技法在当时称为“锥画”。¹²值得注意的是，湖北省光化汉墓中的二件漆卮有针刻的虎、兔、鸟等动物纹及流云纹的纹样，在刺刻出来的线条内填入金彩，产生了类似铜器上金银错的花纹的效果。¹³此外，还有一种方法是用金、银箔制成各种图纹，贴在器物的漆面上，呈现了类似“金银平脱”的效果（图103）。¹⁴

汉代漆器上所描花纹的纹样，最常见的有图案化的龙凤纹、云气纹、花草纹，也有各种几何形纹，以及许多近于写实的兽类、鸟类和鱼类的图纹（图104、105）。总的说来，纹样的特点是细致而流利。西汉前期的漆器，花纹富丽而复杂；东汉的漆器，其花纹则显得比较简单。朝鲜平壤附近出土的个别东汉的漆器有神仙及孝子等人物故事画¹⁵，虽系很少见的特殊的例子，却代表了一种新的作风，而江苏海州侍其繇墓的发现则又说明这种以人物故事为题材的漆器图纹早在西汉中晚期即已存在（图106、107）。¹⁶金银箔贴的纹样，如长沙、合浦、连云港等处的遗品所见，有飞禽、走兽、车马、人物及各种几何图案，可以说是丰富多彩。¹⁷

从战国晚期以来，特别是西汉中期以后，在盘、樽、盒、奩等漆器的口沿上镶有镀金或镀银的铜箍，在漆杯的双耳上镶有镀金的铜壳。这就是《盐铁论》中的所谓“银口黄耳”，也就是《后汉书·和熹邓皇后纪》中的所谓“扣器”。东汉时，有些漆器如盒和奩的盖上附有柿蒂形铜饰，同时镶嵌水晶或琉璃珠，在洛阳和平壤曾发现过这样的遗物（图108）。¹⁸

漆器的耐用程度相当高。在贵州省的清镇，西汉时制作的漆器在东汉的墓中出土，便说明了这一问题。在平壤石岩里的一座西汉墓中，始元二年（公元前85年）的漆杯与元始三年（公元3年）的漆杯共存¹⁹，说明了前者至少被保存达八十余年之久。

总之，汉代的漆器制作精巧，色彩鲜艳，花纹优美，装饰精致，而又相当耐用，是当时最珍贵的日用器物，而其价值之高昂也就不言而喻。所以，《盐铁论》说“一文杯得铜杯十”，又说“一杯棬用百人之力，

一屏风就万人之功”。

由于漆器珍贵，所以当时的贵族和官僚们往往在漆器上书写姓氏或官爵之类的文字，作为所有权的标志。例如：朝鲜平壤王盱墓和王光墓中的漆杯有“利王”和“王氏牢”字样²⁰，山西省阳高耿婴墓中的漆杯有“耿”字²¹，湖南省长沙刘骄墓中的漆盘有“杨主家般”字样²²，长沙杨家山传“王后冢”出土的漆盘有“杨主家般、今长沙王后家般”字样²³，长沙马王堆轪侯利苍家属墓中的许多漆器都有“轪侯家”字样（图109）²⁴，等等。有些漆器书写“上林”字样（图110），说明它们曾是上林苑宫观中所用之物²⁵；有的漆器则刻有“大官”、“汤官”字样，说明它们本是少府属官中主管皇家膳食的官署所藏之器²⁶。有些漆器上还书写着有关器物的用途的文字，如马王堆汉墓出土的许多杯、盘等器都书有“君幸酒”、“君幸食”（图111、112），宁波汉墓中的漆杯也有“宜酒”的字样，它们都兼有祝福吉祥的意思。

汉代统治阶级日常所用的饮食器皿，往往是带有金银装饰的漆器。

《汉书·贡禹传》说：“尝从之东宫（长乐宫），见赐杯案，尽文画金银饰。”《盐铁论·散不足》说：“今富者银口黄耳，金错蜀杯。”《汉旧仪》说：“大官令尚食，用黄金扣器；中官长、私官长尚食，用白银扣器。”以上说明，当时宫廷和贵族所用的器皿，主要是漆器，而漆器的制作又是如何的精致。朝鲜平壤附近出土的二件新莽时期的漆盘，在底部分别刻有“常乐大官，始建国元年正月受，第千四百五十至四千”²⁷和“常乐大官，始建国元年正月受，第二千一百七十三至三千”²⁸字样，说明在当时的长乐宫（新莽时改称“常乐室”）中主管皇家膳食的官署中所用的漆器，仅漆盘一种，即达数千件，其数量之多到了惊人的程度（图113）。这说明了统治阶级的奢侈和铺张，同时也说明漆器制造业的发达。

在汉代，许多地方都出产漆器。值得注意的是，制造漆器的手工业作坊有很多是官营的。广州西村石头冈西汉初年墓中的漆器有“番禺”的烙印（图114）²⁹，广西贵县罗泊湾西汉初期墓中的漆器有“布山”、“市府”的烙印³⁰，山东临沂银雀山西汉前期墓中的漆器有“莒市”、“市府”等烙印（图115）³¹，长沙马王堆和江陵凤凰山西汉前期墓中的漆器有“成市”、“市府”等烙印³²。这说明了这些漆器是分别在南海郡的番禺（今广州）、郁林郡的布山（今广西桂平）、城阳国的莒县（今山东莒县）和蜀郡的成都（今成都）制造的，它们都是郡国的治所在地；同时也说

明了在西汉前期，漆器是由这些城市中主管商业和手工业的官府——“市府”经管的。由于四川的漆器制造业特别兴盛，所以成都的产品大量地远销到长沙和江陵。

1977年在安徽省阜阳县双古堆发掘的西汉初年的汝阴侯墓中出土了许多漆器，其中有不少器物刻有铭文。³³例如：有一件漆卮，其铭文为“女（汝）阴侯卮容五升，三年女阴库己、工年造”。又有一件漆盘，其铭文为“女阴侯布平盘，径尺三寸，七年吏讳、工速造”。铭文中的“库己”、“吏讳”是汝阴侯国中掌管财务和器材的官吏，“己”、“讳”是他们的名字；“工年”、“工速”是制器的工人，“年”、“速”是他们的名字。有些器物还烙有“女阴”字样的戳记，表明它们的制作地点便在汝阴（今安徽阜阳）。汝阴侯墓中还出土许多铜器，其中的一件铜灯有铭文，表明它也是“库己”和“工年”所造。由此可见，在西汉初期，分封在各地的诸侯王和列侯也有自设手工业作坊以制造各种器物的，其中包括漆器。侯国规模不大，所以它的手工业作坊是综合性的，有关的官员同时管理着漆器和铜等其他器物的制造。

据《汉书·地理志》记载，汉朝在河南郡（治所在今洛阳）、河内郡的怀县（今河南武陟）、颍川郡的阳翟县（今河南禹县）、南阳郡的宛县（今河南南阳）、济南郡的东平陵县（今山东章丘）、泰山郡及其属县奉高（今山东泰安）、蜀郡的成都县（今成都），广汉郡（治所在今四川梓潼）及其所属雒县（今四川广汉）设有工官，由中央政府直接控制。这些工官的设置，大概是在景帝至武帝的前期。《汉书·贡禹传》说：“蜀、广汉主金银器，岁各用五百万。”如淳注：“地理志，河内怀、蜀郡成都、广汉皆有工官，工官主作漆器物者也。”可见蜀郡和广汉郡的工官制造金银器，同时也制造漆器。在平壤、诺音乌拉、清镇发现的西汉中期至东汉前期的大多数漆器，都在铭文中记明它们是蜀郡和广汉郡工官的产品，从而证实了上述史书的记载。漆器上多镶有镀金或镀银的铜扣，正说明蜀郡、广汉郡的工官也制作金银器。蜀郡的治所在成都，广汉郡的治所在梓潼（新莽时改为子同），所以在新莽时期的漆器铭文中称蜀郡工官为“成都郡工官”、称广汉郡工官为“子同郡工官”。³⁴

前面曾经说过，长沙马王堆汉墓和江陵凤凰山汉墓的年代属西汉前期，墓中随葬的漆器有许多烙有“成市”、“市府”的戳记，说明它们是成都县市府所属作坊的产品。因此，可以认为，西汉前期由成都市府经管的漆器制造业，到了西汉中期已经归中央政府直接控制了。蜀郡和广汉

郡工官所制的漆器，主要是供宫廷中使用；有的漆器在铭文中“乘舆”字样，正说明它们是皇帝的御用品。这些漆器在清镇、平壤、诺音乌拉等地出土，大概是由于当时的朝廷用它们来赏赐边郡的官吏和少数民族的首领，或赠送给外国。

平壤、诺音乌拉、清镇出土的漆器，有详细的纪年铭文，年代最早的为西汉昭帝始元二年（公元前85年），最晚为东汉和帝永元十四年（公元102年）。铭文中记录着制作的年份、工官的名称、器物的名称和容量、制器工人和各级官员的名字，由此可以了解蜀郡和广汉郡工官的组织体制和制作漆器的工序。兹举贵州省清镇出土的一件漆杯的铭文为例：

元始三年，广汉郡工官造乘舆髹画木黄耳杯，容一升十六龠；素工昌、休工立、上工阶、铜耳黄涂工常、画工方、泅工平、清工匡、造工忠造，护工卒史恽、守长音、丞冯、掾林、守令史谭主。

从铭文中可以看出，工人按工作性质不同，分为“素工”、“髹工”、“上工”、“铜耳黄涂工”、“画工”、“泅工”、“清工”、“造工”。“素工”是制木胎的工人；如系夹纆器，则不用“素工”。“髹工”是漆工。“上工”有时作“汜工”，可见也是漆工，它与“髹工”的区别可能在于“髹工”是初步涂漆，“上工”是进一步涂漆。有人认为“上工”是镶嵌铜扣的工人，但不镶铜扣的漆器在铭文中也有“上工”，可见此说不可信。“铜耳黄涂工”的任务是在漆杯所镶的铜耳上镀金；如系镶有铜箍的漆盘和漆壶等，则铭文中称“铜扣黄涂工”。“画工”是在器物上画花纹的。“泅工”的性质曾引起许多争论，但看来以系“雕工”的可能性为大，其任务或认为在于雕刻花纹和铭文。但是，有些漆器并无雕刻的花纹，而铭文中仍有“泅工”的名字；湖北省云梦大坟头汉墓中的许多漆器没有雕刻的铭文，但该墓的“赠方”中仍称它们的“髹泅画盂”等等³⁵，可见“泅”字的意义不在于雕刻花纹或铭文，可能是指在漆器上精心刮摩，使其发生光泽。“清工”是将制成的漆器加以修整、洗净，实际上负有检验产品的责任，也可以说是检验工。“造工”则是工场中的工人主任。各种不同工种的工人名字在铭文中的排列次序，说明了制造漆器的工序先后是制木胎，初步涂漆，进一步涂漆，镶铜耳或铜扣，绘描花纹，刮摩使发光泽，最后加以修整、洗净，经过检验，全部制作过程乃告结束。在年代较早的始元二年（公元前85年）的漆器铭文中，工人只有“髹工”、“画工”和“泅工”，只

是在成帝以后的漆器铭文中才增加了“上工”、“黄涂工”与“清工”。这可能是说明起初分工较简单，到后来才越分越细。

在平壤和清镇出土的铭文较完整的漆器中，属于元始三年（公元3年）广汉郡工官制造的共有二件，元始四年（公元4年）广汉郡工官制造的共有二件，元始三年蜀郡西工制造的共有三件，元始四年蜀郡西工制造的共有七件。以同属元始四年蜀郡西工所造的七件漆器为例，各器的髹工、上工、黄涂工、画工的名字各不相同，可见在工场中不仅有着许多不同工种的工人，而且同一工种的工人也各有多人。总的说来，髹工人数最多，这是由于髹漆的任务最为繁重。上工、黄涂工、画工人数亦较多，但次于髹工。沔工人数较少，可能是由于刮摩漆器比较容易之故。值得注意的是，七件漆器的清工都是“平”，其中五件的造工都是“宗”，说明了清工和造工的人数最少，从而也进一步说明了清工是检验工，造工是工人主任（见表一、表二）。

值得注意的是，工场中虽有明确的分工，但工人们却往往兼有各种技能。例如工人谭既能任上工，又能做画工；工人丰既是素工，又兼任黄涂工、画工和沔工；造工宗有时也兼任髹工。从全部有纪年的漆器铭文看来，工人們的任期相当长。例如：造工宗自建平三年（公元前4年）至天凤元年（公元14年），任职达十八年；素工兼画工和沔工丰自建平三年（公元前4年）至居摄三年（公元8年），任职达十二年之久。

36

据铭文所见，蜀郡和广汉郡工官中的官吏职称有“护工卒史”、“长”、“丞”、“掾”、“令史”等。“长”是工官中主要的行政负责官员，“丞”是他的副职，他们的地位和待遇相当于县长和县丞。“掾”是“长”、“丞”之下的办事官吏，“令史”则是掌管文书的官吏。汉代在官营手工业作坊中从事生产劳动的人，往往有卒、徒、工匠三种，蜀郡和广汉郡工官的作坊当亦不在例外。卒是被迫服徭役的民夫，徒是罪犯，他们在工场中都担任粗杂工；工匠即上述的素工、髹工、上工、黄涂工、沔工、清工和造工，他们有专门的技术，但也没有人身自由。“护工卒史”是监督工官的官员，其监视的对象自然也包括人数众多的卒、徒和工匠。但是，就“护工卒史”这一职称来说，“卒史”是一种官吏的名称，“护工”则是他的具体任务。汉代九卿及郡太守的属吏都有“卒史”。被派到工官中担任监督职务的卒史，则称“护工卒史”。一般卒史的秩位不高，但“护工卒史”为少府所派，在工官中居监视、督察的职位，

权力很大，所以在漆器铭文中列名于长、丞之前而居于首位。³⁷在始元二年（公元前85年）的漆器铭文中，护工卒史名在长、丞之后，只是在阳朔二年（公元前23年）的漆器铭文中才开始将护工卒史之名列于首位，以后乃成为定制。这说明了大概从成帝以后，中央政府对蜀郡和广汉郡工官的控制进一步加强了。

如前所述，平壤和清镇出土的元始三年和四年广汉郡工官所造的漆器共四件，元始三年和四年蜀郡西工所造的漆器共十件。值得注意的是，各器铭文中所见“护工卒史”、“长”、“丞”、“掾”、“令史”的名字几乎完全相同，这就说明了工官中的各种官吏每职只有一人。但是，在不同年份的漆器铭文中所见的官员名字则往往不相同，从而说明了与工匠们的任期甚长相反，各种官吏是常常更换的，任期很短，任免频繁。任职年限较长的护工卒史章，自元始三年（公元3年）至居摄三年（公元8年），前后亦不过六年。其他的官员，往往有任职才一二年即被更替的。

除了蜀郡和广汉郡的工官以外，设在首都长安的工官亦制作漆器；甘肃武威和朝鲜平壤出土的一部分漆器在铭文中记明系“考工”、“右工”、“供工”所制，即是例证。“考工”和“右工”都系少府属下的工官；“供工”可能即系“考工”，也可能是另一工官，但亦应系属少府管辖。这些设在长安的工官，既制造铜器，亦制造漆器。所制漆器的铭文表明，作坊中的工人亦有画工、涓工、涂工等分工，但在铭文中却往往只举一人之名，作为代表，此人即相当于蜀郡和广汉郡工官中的造工。工官中的官员有“令”、“右丞”、“掾”、“令史”、“啬夫”等，“令”和“左丞”、“右丞”是负责的官员，但主管漆器制造的是“右丞”。从考古发现的情形看来，长安工官的产品可能不如蜀郡和广汉郡工官的产品多。

《后汉书·和熹邓皇后纪》：“元兴元年（公元105年）……，其蜀汉扣器、九带佩刀，并不复调。”这可能说明，蜀郡和广汉郡工官从此不再为宫廷制造漆器了。前面已经说过，在朝鲜平壤地区发现的大量有纪年铭文的漆器中，年代最晚的为永元十四年（公元102年），这一事实正与上述《后汉书·和熹邓皇后纪》的记载相符。因此，可以推测，到了东汉中期以后，官营的漆器制造业可能已经衰落，代之而起的则是由各地豪强地主经营的私营手工业。

总之，从战国时代开始突飞猛进的漆器制造业，在汉代度过了它的黄金时代。但是，与任何事物一样，漆器制造业也是盛极而衰。漆器种

类很多，其中属于饮食器皿的一类漆器曾因它具有一定的优越性而取代了青铜器。但是，到了东汉以后的魏晋时代，青瓷器兴起，漆制的器皿有相当一部分逐渐被瓷器所取代。当然，就制作技术而言，在汉以后的各个时期中，各类漆器仍然不断在发展，不断在进步。

CHAPTER 5 BRONZES

In 1968, in Mancheng, Hebei Province, a large number of valuable bronze vessels were excavated from the tombs of the prince Liu Sheng and his wife Dou Wan of the Western Han period.¹ Among them was a *zhong* inscribed "Chu da guan zao zhong" and gilded with shining gold and silver, with four golden dragons coiled around it and clouds in the background (fig. 116). Another item was the "Changle culinary officer's *zhong*" (*Changle siguan zhong*). On it golden or silver stripes dotted with silver beads formed diamond or triangular shapes in which pieces of green glass were inlaid. It is an extremely colorful and pretty work of art (fig. 117). There were also a pair of *hu* covered with characters in seal script, each character decorated with bird or insect motifs. The characters are decorative, but they also form a literary composition of mysterious content (fig. 118).² Another item was a "Bo shan" *lu*, an incense burner. The burner and its lid were made in the form of layers of mountains with trees, animals, and hunters on them. These decorations were patterned with gold threads, some of which were as thin as fine hair. The details of animals, human figures, trees, and hills were delicately depicted with these golden lines (fig. 119). The best-known item among them in the Mancheng find was the Changxin Palace Lamp, gilded with bright gold, in the form of a kneeling palace maid holding the lamp in her hands. Not only was the palace maid beautifully sculptured, the lamp and its cover were cleverly designed so that both the lamp's illuminating power and the direction of its rays were (and still are) adjustable. Since the smoke was absorbed into the body of the maid through her arms, it was in fact an antipollution design (fig. 120). In short, it can be said that the bronzes in the tombs of Liu Sheng and his wife represent the epitome of Han bronze craftsmanship.

The Spring and Autumn-Warring States era was a transitional

period for Chinese bronzes. The Warring States bronzes had changed from the solemn, heavy, solid, and archaic style of the Shang and Western Zhou periods to a new style, which was delicate, lively, and full of variation. The new techniques of gold- and silver-gilding and inlaying with gold, silver, and precious stones made bronzes more colorful and attractive. In the light of the treasures found in the Mancheng Han tombs, we can conclude that the Western Han bronze craft represents a step forward from that of the Warring States period. Forms became more suitable to the needs of real life and decorations became richer and more handsome.

It should be pointed out that the bronzes found in the tombs of Liu Sheng and Dou Wan were objects available only in palaces or residences of princes. For example, the *Chu da guan zao zhong* was originally owned by the household of the Yuan Prince of Chu, Liu Jiao. In 154 B.C., the grandson of Liu Jiao participated in the rebellion of the seven feudatories and was killed. This *zhong* was confiscated and later given to Liu Sheng by the central court. The same is true for the Changxin Palace Lamp. It originally belonged to the Marquis of Xinyang, Liu Jie. Confiscated in 151 B.C. together with his other property and his title, the lamp was turned over to the Changxin Palace due to an offense committed by the marquis' son. Later the lamp was probably given to Dou Wan by her relative the Empress Dowager Dou.³ As for the two *hu* vessels with birdseal inscriptions, although they contained no inscriptions about their owner or the craftsman who made them, because the bird-pattern seal characters were popular in the South during the Spring and Autumn/Warring States periods, it was likely that they were in the collection of the Prince of Wu or that of the Prince of Chu. They were perhaps given to Liu Sheng after being confiscated from their previous owners as a consequence of the latter's participation in the rebellion of the seven feudatories. The bronze known as the Changle culinary officer's *zhong* was originally an item in the imperial palace, and it must have been given to Liu Sheng by the empress dowager. The changing of hands of

these items tends to indicate that even in the imperial palace or in the palaces of princes, these beautifully made bronzes were rare, highly valued items. Probably because most of these bronzes were made during or before the reign of Han Wen Di, they preserve a certain likeness in decorative technique to the Warring States bronzes on the one hand, and, on the other, they indicate that new techniques were developed. The similarity in form, pattern, and decorations between the Changle culinary officer's *zhong* and a bronze *hu* found in 1928 in Jincun, Luoyang, in a Warring States tomb is obvious evidence of this transition.⁴

Generally speaking, after mid-Western Han, sophisticated patterns and rich decorations on bronzes gradually became rare; instead, plain bronzes became popular—even the imperial utensils of the palace were no exception. In 1961, twenty-two bronze pieces were found buried in Sanqiaozhen, in the city of Xi'an in Shaanxi Province. They included ten basins, five *ding*- tripods, five *zhong*, one *fang*, and one *juan* (fig. 121).⁵ With only one exception, all have rather detailed inscriptions. They were imperial utensils of the Shanglinyuan imperial park located near the capital city of Chang'an. The characters "Cheng yu" inscribed on one of the five tripods make it clear that it was an imperial vessel (fig. 122). They were made in the middle to late Western Han period (i.e., 97-18 B.C.). Most of them were made in Chang'an, some were from Taishan Prefecture (today's Tai'an district in Shandong), some were from Dong Jun (today's Puyang in Henan) or from the palaces in Luoyang. Some were tributes from the provincial officials of Dong Jun, Yingchuan(today's Yuxian, Henan), or Jiujiang (today's Shouxian, Anhui) (fig. 123).⁶ We notice that despite their being used in the palace, they were all plain bronzes, with little pattern or decoration. In fact, except for the very special treasures made in the earlier period, those *zhong* and *fang* that were made during the later years of Liu Sheng's life and those *fang* and *juan* acquired by his palace officials from Hedong (today's Xiaoxian, Shanxi) and Luoyang were plain bronzes similar to the ones excavated in

Sanqiaozhen in Xi'an (figs. 124, 125). The popular plain Han bronzes have often been considered an indication of a decline in bronze craftsmanship. This plainness, however, may be due to the fact that as the delicate and handsome lacquer wares became more efficient utensils for daily use than bronze vessels, the ruling class began to prefer lacquerware to bronzes. On the other hand, the plain and simple patterns of the bronzes might have been a new fashion of the time.

Despite the simplification of the patterns and decorations of the bronzes, the scale of the Han bronze industry was by no means reduced. On the contrary, it was further developed. The items found in Sanqiaozhen provide very good evidence of this development. According to the inscriptions on the eight basins made by the craftsmen who produced for the Shanglinyuan Palace, we know that during the ninth month in the first year of Yang Shuo (24 B.C.), craftsman Yang Zheng had made ten pieces; as of the fifth month in the fourth year of Yang Shuo (21 B.C.), craftsmen Li Jun and Zhou Bo had made 240 pieces each; as of the sixth month in the second year of the Hong Jia reign (19 B.C.) craftsmen Yang Fang and Zhou Ba had made 300 pieces each; as of the fourth month in the third year of Hong Jia (18 B.C.) craftsmen Huang Tong and Zhou Bo had made 84 pieces each. Within the seven years from 24 to 18 B.C., 1,258 bronze basins were made, certainly an amazing number (figs. 126, 127). Regarding *ding*- tripods, in 51 B.C., craftsman Wang Yi made 116 pieces, and as of the sixth month in 19 B.C., craftsman Zuo Yun made 200.⁷ Needless to say, the numbers of other utensils made were also large. Bronzes were used not only in the palaces; they were popular among the nobility, bureaucrats, and even middle and small landowners. Their popularity has been substantiated by the excavation of many Han tombs. It is fair to say that precisely because of the simplification of bronze patterns it was possible to produce large quantities of bronzes, thus making them widely popular during Han.

Compared with bronzes of the previous period, Han bronzes had

undergone many changes. The food vessels *fu*, *gui*, *dui*, and *dou*, popular in the Zhou dynasty, had already disappeared by Han. Instead, *ding*, *zhong*, *hu*, and *fang* were the main vessels used at the time. They inherited the form and style of those of the previous period, with some variation. *Fang* was popular during only Western Han, and had disappeared in Eastern Han. Among other vessels, *juan*, *xi*, *mou*, *zun*, *pan*, *zhi*, *bei*, *jiao dou*, *fu*, and *zeng* were the most frequently seen vessels, apart from the four main ones mentioned above. All types bear Han characteristics, and some were first introduced during Han (fig. 128). Lamps, incense burners, tables, irons, stoves, and dripping jars became popular during Han, but had not yet appeared or were rare during the pre-Han period (figs. 129, 130). This evidence indicates that, apart from being used for the serving of drink and food, storage, and cooking, bronzes had also been put to use in other areas of daily life. Among them, in particular, were lamps and incense burners, often elegantly made. In addition to the Changxin Palace Lamp mentioned above, from the Han tombs in Mancheng came the "red bird lamp" (fig. 131), the "sheep lamp" (fig. 132), and the "*danghu* lamp." There were also the "phoenix lamp" found in the Han tomb in Hepu in Guangxi and the "twelve-branch lamp" found in the Leitai Han tomb in Wuwei in Gansu Province (fig. 133).⁸ Of clever and innovative design, these were at the same time very efficient utensils. Although bronze lamps existed during the Warring States period, Han lamps greatly exceeded those of the Warring States in variety, quantity, and popularity.

Although plain bronzes became prevalent after mid-Western Han, gilded bronzes were also quite popular, and some bronzes had patterns composed of thin engraved lines. A *zun* wine jar excavated in a late Western Han tomb in Changsha is covered with an elegantly engraved cloud pattern. Its detail and flowing style resemble lacquerware.⁹ A *hu* with loop handle, a *pan* with three legs, and other bronzes discovered in the late Western Han tomb in Hepu in Guangxi are all decorated with various types of geometric patterns, as well as

phoenixes, deer, or other animals (fig. 134). All patterns were compositions in which thin, engraved lines depict details.¹⁰ A bronze table from an Eastern Han tomb in Wuzhou, Guangxi, is decorated with a similar pattern (fig. 135).¹¹ This kind of pattern engraved on bronze vessels had first appeared in the Warring States period, it was further developed during Han and was popular mainly in the South. In addition, it should be especially mentioned that in 1962 two gilded bronze goblets were found in Youyuxian in Shanxi Province, both bearing inscriptions testifying that they were made in Western Han in 26 B.C. On the goblets, lively patterns of monkey, camel, ox, rabbit, sheep, deer, tiger, fox, bear, wild goose, crow, goose, duck, and other animals and birds were cast in relief instead of being engraved. This relief casting has not been found among pre-Han bronzes (fig. 136).¹² In short, although the Han bronzes showed signs of decline in pattern and decoration, they nevertheless displayed certain innovations. Nor was the technique of inlaying with gold, silver, and precious stones lost during Han. In recent years, in an Eastern Han tomb in Xuzhou in Jiangsu, we have found an ink-stone box which was inlaid with corals, turquoise, and blue gems (fig. 137).¹³ A gilded bronze goblet found in an Eastern Han tomb in Leitai in Wuwei, Gansu, had on it pictures of strange birds and animals with clouds and mist, composed of inlaid silver threads (fig. 138).¹⁴ However, there is no denying that these are extremely rare finds for that period.

Apart from the utensils that were intended for practical use, many bronze models of carriages, horses, and mounted horsemen—which were made particularly for funeral purposes—have been found in Leitai in Wuwei, Gansu, in 1969. The casting technique reached a highly advanced level (figs. 139, 140). This sophistication is fully demonstrated in the "Flying Horse," now known throughout the world, a running horse with a bird underneath one of its hooves (fig. 141). The date of the Leitai tomb was late Eastern Han. Utilitarian bronzes found in the same tomb include *hu*, *pan*, *wan*, *jian*, *xi*, *jiao dou*, iron, as well as the aforementioned lamp and wine goblet; the

abundance and diversity of types indicate that bronzes were popular throughout the Han dynasty.¹⁵ It is evident, however, that bronzes declined after the Wei-Jin period. This decline could have been caused by the flourishing of porcelain, which took the place of bronze in daily life.

China is one of the first civilizations to invent the bronze mirror. According to recent excavations, we are now certain that bronze mirrors already existed during the Shang dynasty. By the Warring States period the technique for making mirrors was developing rapidly, and Han mirrors, which had proceeded a step further from those of the Warring States period, became quite widespread. As opposed to ancient Japan, where in Yayoi culture and Tomb culture imported mirrors were considered sacred treasures, in China mirrors have always been mainly utilitarian objects. Because the form and decorations of mirrors changed continuously from one period to another, providing significant chronological data, bronze mirrors have become important objects for archaeological study.

The form and decoration of mirrors of the Warring States period were preserved in those of the early Western Han period. The most common mirror is the type with a *panchi* ("intertwining serpents") design on a ground pattern and with a belt-like knob. The mirrors found in the Han tombs at Mawangdui, Changsha, are of this type (fig. 142).¹⁶ Unlike the mirrors of the Warring States period, mirrors after the beginning of early Western Han began to bear inscriptions. The early Han mirrors, strictly speaking, still belong to the Warring States style. The "Han style" mirror began to appear in mid-Western Han during Wu Di's reign. The earliest type is the so-called grass-leaf pattern mirror, such as those found in the Mancheng tomb (fig. 143).¹⁷ A later style is the so-called star-cloud pattern mirror, also called the "hundred nipple" mirror. The design on this mirror was probably developed from the early Western Han *panchi*-pattern mirror, but the ground pattern had disappeared, as it had in the grass-leaf pattern mirrors (fig. 144). The mirrors most typical of late Western Han were

the "*riguang*" mirror and the "*zhaoming*" mirror. They were so named because of their inscriptions. Their designs are characterized by regularity and simplicity. The handle now becomes a hemispheric knob (fig. 145). During the Wang Mang interregnum the Taoist ideology of the *yin yang wu xing* school was reflected in the design of bronze mirrors. A large number of mirrors have as their pattern the Four Deities (Green Dragon, White Tiger, Red Bird, and Black Turtle) and also the duodenary cyclical characters. This type is known as the "*guiju*," or "elbow ruler," mirror (in the West it is sometimes called the TLV mirror). The designs of these mirrors were relatively complicated. They were popular up to the mid-Eastern Han period (fig. 146). Mirrors with dated inscriptions began to appear during the Wang Mang interregnum and became more and more popular in the course of the Eastern Han dynasty. A new style appeared after mid-Eastern Han. The decorative designs of these mirrors were in relief, and they depict either deities and spiritual beasts or human figures and horses and carriages. The former mirrors are referred to as "immortal and animal" mirrors and the latter, as "pictorial" mirrors. Their designs were becoming increasingly lively at the same time that the hemispheric knobs on them were becoming larger and larger (figs. 147, 148). It should be noted that at least since mid-Western Han, the style of bronze mirrors was uniform throughout the empire, but the "immortal and animal" and the "pictorial" mirrors that appeared after mid-Eastern Han were first developed in the Zhejiang area, to the south of the Yangtze River. Thus, in the late Eastern Han and the Three Kingdoms periods, there was a certain degree of difference between the northern and southern mirrors. According to the inscriptions on mirrors excavated in Japan, the craftsmen of Luoyang enjoyed the highest reputation, but those of Kuaiji Jun (modern Shaoxing in Zhejiang) were almost comparable. These inscriptions thus indicate that without question by the late Eastern Han Kuaiji had become a mirror production center.¹⁸

The inscriptions on mirrors made around the time of Wang Mang

often contain a line reading, "good copper produced from Danyang." Danyang Prefecture, with its capital located in today's Xuancheng, Anhui Province, was thus the location of the most famous copper mine during Han. According to the "Treatise on Geography" in *Hanshu*, the Han government had established the post of copper official in Danyang Prefecture. A mirror of the Wei-Jin period unearthed in Liaoyang of Liaoning and many mirrors excavated in Japan bear a different line reading "copper produced in Xuzhou."¹⁹ Xuzhou was located in presentday southern Shandong and northern Jiangsu, with its capital in modern Xuzhou, Jiangsu, and these inscriptions furnish evidence that it was a well-known copper production center during the Wei-Jin period. However, in point of fact, no copper mines are actually known in this area and the problem is yet to be solved. To be sure, many copper mines were actually explored during Han; and according to historical records, Sichuan and Yunnan also had rich copper mines.

In 1953 an investigation of a Western Han copper-mine site in Xinglong, Hebei Province, disclosed shafts, ore-selection ground, and smelting workshops. The mine shafts were more than 100 m below the ground surface, and led to spacious mining areas. Iron hammers and pegs found near the shafts were the mining tools. Tunnels were dug around the mining area. Ores were selected near the exits of the tunnels and then taken to four nearby smelting workshops. The furnaces seem to have been round brick structures, according to what is left of them. The finished product was in the form of large disc-shaped ingots, each weighing from 5 to 15 kg. The characters meaning "East 60" or "West 53" were incised on the ingots. "East" and "West" could refer to the location of the workshop, and the numbers might indicate serials. Some ingots bear the characters "Second Year," perhaps indicating that the ingots were made before the reign title system was established by Han Wu Di (fig. 149).²⁰ In 1955, ten rectangular copper ingots were found at a site near the Han capital Chang'an, each weighing 34 kg, containing 99 percent copper, and all

inscribed with weight and serial number. One has a line reading, "Sold by Tian Rong of Wanli in Fubo district in Runan Prefecture." The inscription indicates that the government not only ran copper mines itself but also made purchases from private miners in order to satisfy its demand for bronze manufacturing and cash minting.²¹

The scale of the production of bronze objects under Han-government management was quite large. Government-managed production supplied mainly the palace and other government offices. Two subordinate officials of the Shaofu (Lesser Treasury Ministry) in the central government, the Shangfang *ling* (Shangfang Office) and the Kaogong *ling* (Kaogong Office), were in charge of bronze production for imperial and governmental uses at the capital. The Shangfang Office, according to inscriptions, was by the time of Wu Di's reign already divided into the three offices of Left, Right, and Center, and this division continued into Eastern Han. The Central Shangfang Office had the largest capacity in terms of variety of products. The bronzes it produced included *ding*- tripods, *zhong*, *hu*, *jiao dou*, lamps, and so on. The crossbow was an item produced by all three offices. The Kaogong Office which by Eastern Han became subordinate to the Taipu Qing (The Grand Servant) produced more or less the same items as produced by the Central Shangfang Office with the exception of mirrors, which were made only by the Shangfang Office. Another subordinate office of the Lesser Treasury Ministry called the Yougongshi also produced some bronzes. Both the Kaogongshi and the Yougongshi also produced lacquerware.

Bronzes were also produced by some of the workshops run by the prefectural manufacturing offices of the Han central government. For example, the manufacturing offices in Shu and Guanghan prefectures, apart from making lacquerware, were also famous for the bronzes they produced. According to the "Biography of Gong Yu" in *Hanshu*, "Shu and Guanghan produce mainly golden and silver wares." However, archaeological excavations have shown that the manufacturing of golden and silver wares was not that popular in

Han. We therefore suspect that what are here referred to as "golden and silver wares" in fact were bronze vessels and utensils gilded with gold or silver. The Palace Museum in Beijing has in its collection a bronze goblet with a saucer. The set was made in A.D. 45 by the Western Manufacturing Office of Shu Jun. Both the goblet and its saucer were gilded with gold. Turquoise and crystal were inlaid on the goblet and on the three bear-shaped legs of the saucer (fig. 150).²² There is a detailed inscription on the saucer that reads: "In the twenty-first year of the Jian Wu reign, the Western Manufacturing Office of Shu Jun made an imperial goblet with saucer. The saucer is decorated with carved bear-shaped legs. [Both] were inlaid with turquoise. The diameter of the bronze saucer is 2 *chi* 2 *cun*. [The set] was made by these craftsmen: Chong, coppersmith; Ye, carver; Kang, metalsmith; and Ye, artisan; [they were] under the supervision of [the following manufacturing officials]: Yun, craftsman supervisor; Fan, superintendent; Meng, assistant director; Xun, secretary; and Yun, director." The format and the titles of craftsmen and craft officials in this inscription were similar to those on lacquerware. This similarity indicates that the same manufacturing office produced both lacquerware and bronzes.

In 1925, a lacquer cup made in A.D. 52 by the same manufacturing office was excavated in Wang Xu's tomb in Pyongyang in Korea. The inscription on it reads: "In the twenty-eighth year of the Jian Wu reign, the Western Manufacturing Office of Shu Jun made an imperial soup cup, with a capacity of 2 *sheng* 2 *he*. It was made by craftsmen: Hui, molder; Wu, lacquerman; Wen, polisher; Ting, lacquerman; and Zhong, artisan; [they were] under the supervision of the following manufacturing officials: Han, craftsman supervisor; Fan, superintendent; Geng, assistant director; Xi, secretary; and Mao, director."²³ Comparing the two inscriptions, we find that the lacquer cup was made seven years later than the bronze; thus, names of many of the manufacturing officials were different. However, the name of the superintendent, Fan, was still found in the later inscription. This evidence indicates that Fan served for quite a long time, at least seven

years, and that the same manufacturing officials were in charge of both bronze and lacquerware production.

Private bronze-making workshops were also quite numerous. Inscriptions on some privately produced bronzes mark their prices. Eight hundred and forty copper cash was the price of a bronze *juan* bought from Hedong Prefecture by officials of the Prince of Zhongshan, whose tomb was excavated in Mancheng (fig. 151). Another bronze *fang* produced in Luoyang was also bought by officials of the Prince of Zhongshan. Both are believed to be products of private manufactories.²⁴ Private mirror producers often made use of mirror inscriptions to advertise the superior quality and elegant design of the mirrors they made. The contents of the inscriptions often claimed that the user of the mirrors "will live long, will continue to enjoy wealth and prestige." To cite some examples: "The substance of this mirror is pure and bright; the rays it radiates could be compared to those of the sun and the moon"; "The mirrors made by the Ye family are handsome and great. They are as bright as the sun and the moon; indeed, they are rare to find!"; "I record here the mirrors I made; they will make the user live longer, likewise his sons and grandsons." It is evident that these mirrors were produced for the market. Many of them, nevertheless, although produced by privately owned workshops, bear inscriptions reading "Made by [the imperial workshop] Shangfang Office," in order to heighten their value. This was probably a customary practice among the private producers.

伍 汉代的铜器

1968年在河北省满城发掘了西汉中山靖王刘胜及其妻窦绾的墓，墓中有着许多珍贵的青铜器。¹其中如“楚大官糟钟”，通体镀金银，光彩夺目，主要的花纹是四条金龙，上下蟠绕，其间配置一些云朵，表示龙在云中（图116）。又如“长乐宫钟”，器身由镀金银的平行的横带和交叉的斜带构成许多菱形和三角形的空格，其中满嵌碧琉璃，在镀金的斜带上又点缀着许多半球状的银珠，彩色缤纷，绮丽异常（图117）。又有“鸟篆文壶”一对，从壶盖到壶身，全部都用金丝和银丝镶嵌出许多图案化的美术字，这种美术字是在篆体文字上装饰着象征性的鸟，有时也有虫的形象，所以称为“鸟篆文”或“鸟虫书”，它们不仅是壶上的花纹，而且构成了一篇奇妙的文章（图118）。²还有一件“错金博山炉”，炉身和炉盖的形状铸成层层起伏的山峦，其间有树木、野兽和猎人，花纹用金丝镶嵌，金丝有粗有细，细的有如毫发，用以刻划人物、动物、树木，山峰的细部，制作得极其精致（图119）。最有名的是一件称为“长信宫灯”的铜灯，通体镀金，灿然发光，它的全体形状是一个跪坐着的宫女用双手执灯，不仅宫女的形象塑造得十分优美，而且灯盘和灯罩的设计也非常巧妙，既可以调节灯光的亮度和照射的方向，又可使蜡烛燃烧时的烟烬通过宫女的手臂纳入其体内（宫女体内是空的），以保持清洁（图120）。总之，上述刘胜夫妇墓中的铜器，可以说是集中了汉代青铜器工艺的精华。

中国古代的青铜器，发展到春秋战国之际，风格为之一变。战国时代的青铜器，在器形和花纹方面，已经摆脱了商代、西周以来那种庄严、厚重、古拙的旧作风，代之而起的则是比较轻巧、生动和多样化的新风貌，而镀金、镀银以及用金银、宝石之类镶嵌花纹的新技术则使得青铜器更加绚丽、美观。从满城汉墓中的珍贵遗品看来，西汉的青铜工艺可以说是在战国的基础上又向前发展了一步，不仅器物的造型越来越适应现实生活的需要，而且在装饰方面也显得更加丰富多彩。

应该指出的是，刘胜夫妇墓中的这些青铜器，是当时宫廷、王府的专用品。例如，“楚大官糟钟”原是楚元王刘交家里的器物，景帝前元三年（公元前154年）刘交的孙子参与“七国之乱”败死，此器乃被朝廷抄

没，以后转赐刘胜。又如“长信宫灯”，原是信阳侯刘揭家里的器具，景帝前元六年（公元前151年）他的儿子有罪，被削除封爵，撤消封地，此灯亦被朝廷没收，归长信宫中使用，以后可能是由居住在长信宫中的窦太后将它赠送给她的亲族女窦绾的。³两件“鸟篆文壶”，虽然没有有关它们的制作和所有主的铭文，但鸟篆文是春秋战国以来流行于南方的美术字，所以它们也很可能本是吴王或楚王府中的藏品，“七国之乱”以后被朝廷没收而转赐刘胜的。至于“长乐宫钟”，则本是长乐宫中的御用器物，应该也是由居住在长乐宫中的皇太后赐给刘胜的。以上都说明满城汉墓中的那些青铜器，即使在当时的宫廷、王府之中，也是不可多得的珍品，所以制作得特别精美。另外，可能是由于这些青铜器多系文帝时或文帝以前所制，年代较早，所以在装饰方面保留着战国以来的工艺技术，而且有所发展。“长乐宫钟”的形制、花纹和装饰，与1928年在洛阳金村的战国墓中发现的铜壶极相似，便是最明显的例证。⁴

但是，一般说来，从西汉中期以后，铜器上复杂的花纹和富丽的装饰已经越来越少见了，素面的青铜器则普遍流行，即使是宫廷中的御用品亦不例外。1961年在陕西省西安市三桥镇发现了一批窖藏的铜器，包括铜鉴十件、铜鼎五件、铜钟五件、铜钫和铜铎各一件，共二十二件（图121）。⁵除一件铜钟以外，所有的器物都有详细的铭文，说明它们都是首都长安城郊区上林苑的皇家宫馆中所用之物；其中的一件铜鼎，在铭文中还有“乘舆”字样，表明它是皇帝的御用品（图122）。它们的制作年代，自汉武帝天汉四年（公元前97年）至成帝鸿嘉三年（公元前18年），属西汉的中晚期。除大部分系在长安铸造之外，有的是从泰山郡（今山东泰安）、东郡（今河南濮阳）和雒阳的宫观中征调来的，有的则为东郡、颍川郡（今河南禹县）和九江郡（今安徽寿县）的地方官所贡献（图123）。⁶值得注意的是，这批铜器虽然都是宫廷所用的器物，但却都是素面的，没有什么花纹和装饰。其实，即使就满城汉墓来说，除了那些年代较早的特殊的珍品之外，在刘胜在位的晚期，应中山王府的需要而铸造的铜钟、铜钫以及王府派官员到河东（今山西夏县）、雒阳等地购置的铜钫和铜铎等，正与西安市三桥镇出土的铜钟、铜钫和铜铎一样，也都是素面的（图124、125）。人们往往将汉代素面青铜器的普遍流行看作是当时青铜工艺的衰落。这可能是由于精巧、美观的漆器，作为日常生活中所用的容器，有时要比青铜容器更具有优越性，从而使统治阶级的爱好从青铜器转向漆器的缘故。但是，从另一方

面来说，铜器纹饰的简素，也可能是当时的一种新风尚。

虽然铜器的花纹和装饰变得简素了，但汉代铜器制造业的规模不仅没有衰退，反而有所发展。上述西安市三桥镇出土的铜器，在这一问题上提供了很好的说明。例如，根据三桥镇的八件铜鉴的铭文，就可以知道，仅就上林苑宫馆中所用的铜鉴来说，阳朔元年（公元前24年）九月工匠杨政造十件，阳朔四年（公元前21年）五月工匠李骏、周博各造二百四十件，鸿嘉二年（公元前19年）六月工匠杨放、周霸各造三百件，鸿嘉三年（公元前18年）四月工匠黄通、周博又各造八十四件，从阳朔元年到鸿嘉三年的短短七年内共造铜鉴一千二百五十八件，数量之多达到了惊人的程度（图126、127）。又如铜鼎，甘露三年（公元前51年）工匠王意造一百十六件，鸿嘉二年六月工匠左恽造二百件，铸造数量也甚大。其他各种器物，也有相似的铸造量，当然是无待于言的。除了宫廷中大量使用以外，各地的贵族、官僚，以及一般的中小地主阶级，都相当普遍地使用青铜器，这可以从大量汉墓的发掘工作中得到说明。可以认为，正是因为青铜器的纹饰简素，所以才能得到大量的制作和普遍的使用。

和前代比较起来，汉代铜器在种类和器形上有许多变化。周代流行的簠、簋、敦、豆等食器，到汉代已经不见了。鼎、钟、壶、钫是当时最主要的容器，它们继承了前代的形制而略有改变，其中钫仅流行于西汉，到东汉也就绝迹了。其他的容器，以铜洗、釜、樽、盘、卮、杯、觥、斗、釜和甗等饮食器皿和炊事用具为最常见，它们在形制上具有汉代的特点，有的是汉代才有的（图128）。另一方面，汉代又出现了许多新兴的铜器，如灯、博山炉、案、熨斗、炉、漏壶之类，都是前代所未见或少见的（图129、130），这说明除了供饮食、贮藏、烹饪用的容器以外，青铜器已被推广到日常生活的其他各个方面。在这些新兴的铜器之中，灯和博山炉往往制作得很精致。就铜灯而言，仅以近年来的出土品为例，满城汉墓中除前面说过的“长信宫灯”外，还有“朱雀灯”（图131）、“羊灯”（图132）、“当户灯”，广西合浦汉墓有“凤鸟灯”，甘肃武威雷台汉墓有“十二连枝灯”（图133）⁸，它们都是设计精巧，式样新颖，实用效果也好。战国时代虽然已经有了铜灯，但汉代铜灯种类之多，制作数量之大，使用之普遍，又大大超过了战国时代。

虽然从西汉中期以后，素面无纹的青铜器已成为主流，但镀金的铜器却相当流行。此外，也还有一些铜器施有花纹，纹样是由镂刻的细线

构成的。例如，湖南长沙西汉后期墓中的一件镀金的铜酒樽，自器身到器盖，全部镂刻着细线流云纹，纹样细致、流畅，很像漆器上的花纹。⁹广西合浦西汉后期墓中的提梁壶和三足盘等多件铜器，都装饰着由镂刻的细线构成的各种几何图案和凤、鹿等动物的纹样，相当精致（图134）。¹⁰广西梧州东汉墓出土的一件铜案，也有类似的花纹（图135）。¹¹这种在铜器上镂刻花纹的工艺，在战国时代已经出现，到汉代又得到进一步的发展，但主要流行在南方地区。此外，特别值得提出来的，是1962年在山西省右玉县发现的二件镀金的铜酒樽（所刻铭文说明它们的制作年代为西汉河平三年，即公元前26年），它们的花纹是铸出来的，纹样有猿、骆驼、牛、兔、羊、鹿、虎、狐狸、熊、雁、鸦、鹅、鸭等各种兽类和禽类，都作浮雕式，形态生动，这在汉以前的铜器花纹中是甚少类例的（图136）。¹²总之，汉代的青铜器工艺，虽然在纹饰方面显得衰退，但也不是完全没有创新。而且，在铜器上用金银、宝石之类镶嵌的技术也并没有失传；就近年来的发现为例，江苏徐州东汉墓里的一件镀金的铜砚盒镶嵌着红色的珊瑚、蓝色的绿松石和青金石（图137）¹³，甘肃武威雷台东汉墓里的一件镀金的铜酒樽用银丝镶嵌出细致的云气纹和各种奇禽异兽的纹样（图138），便是例证。¹⁴但是，像这样的青铜器，当时确实是极少见了，这也是不可否认的事实。

除了实用的器物以外，应该提到的是，1969年发掘的甘肃武威雷台汉墓出土了许多专为随葬而作的铜质的车辆模型、马匹及骑马武士等人物的偶像，它们的铸造技术达到了高度的水平（图139、140）。特别是其中的一匹足踏飞鸟的奔马，形象逼真，姿态生动，已成为世界闻名的优秀艺术作品（图141）。雷台汉墓的年代属东汉晚期，而墓中出土的实用的青铜器除上述的灯和酒樽外，还有壶、盘、碗、鉴、洗、鏃斗和熨斗等等，种类和数量都相当多，说明了青铜器在汉代一直是流行的。¹⁵但是，到了魏晋以后，青铜器制造业显然是衰落了。这可能是由于瓷器兴起了，它取代了青铜器在日常生活中的地位。

中国是世界上最早发明铜镜的国家之一。根据近年来的考古发掘，可以肯定在殷代已经出现了铜镜。到了战国时代，铜镜的铸造发展得很快，而汉代的铜镜又在战国以来的基础上进一步得到普及。中国的铜镜，始终只是一种日常的生活用具，并不像日本的弥生时代和古坟时代那样把从中国输入的铜镜当作珍宝或神器。只是由于铜镜的形制和花纹随着时代的推移而不断演变，在考古年代学上有较大的意义，所以就成

为一种比较重要的研究对象。

在西汉前期，铜镜的形制和花纹保留着战国时代的作风。最常见的一种带有“地纹”的“蟠螭纹镜”，镜钮呈带状，长沙马王堆汉墓出土的铜镜即属此类（图142）。¹⁶与战国铜镜不同的是，从西汉前期开始，有的铜镜上已经有了铭文。由于西汉前期的铜镜保留着战国铜镜的作风，所以严格地说来，它是属于“战国式”的，而不是“汉式”的。到了西汉中叶的汉武帝时期，才出现了真正的“汉式镜”。最初出现的是所谓“草叶纹镜”，满城汉墓中即曾发现过（图143）。¹⁷比“草叶纹镜”稍晚，又出现了一种“星云纹镜”（或称“百乳鉴”），它的花纹可能是由西汉前期的“蟠螭纹镜”演变而来，但和“草叶纹镜”一样，完全取消了“地纹”（图144）。西汉后期的铜镜，最典型的是“日光镜”和“昭明镜”，它们都是因铭文的内容而定名的，其花纹的特点是规整而简洁，而镜钮则普遍成为半球状（图145）。到了新莽时期，阴阳五行的思想反映到铜镜上，就大量出现一种带有“四神”（青龙、白虎、朱雀、玄武）纹样和“十二辰”（子、丑、寅、卯、辰、巳、午、未、申、酉、戌、亥）文字的所谓“规矩镜”，镜面上的图纹显得比较繁复，这种铜镜一直到东汉后期中仍然流行（图146）。从新莽时期开始，有的铜镜在铭文中有了纪年，东汉时纪年的铜镜越来越多。东汉前期的铜镜，是继承西汉后期和新莽时期的铜镜而有所演变。到了东汉中期以后，铜镜中出现了一种新的型式，它们的花纹是浮雕式的，其题材有的是神仙和灵兽，有的是人物和车马，前者称为“神兽镜”，后者称为“画像镜”，图纹显得很热闹，而半球状的镜钮则变得越来越大（图147、148）。值得注意的是，至少自西汉中期以来，汉代铜镜的样式是全国统一的，但东汉中期以后的“神兽镜”和“画像镜”却首先是在长江流域开始兴起。因此，在东汉后期和此后的三国时期，南方和北方的铜镜存在着一定的区别。根据日本出土的许多铜镜的铭文，当时洛阳的制镜技师是最有名的，但会稽郡（今浙江省绍兴）的技师也可以与洛阳的技师相比。总之，在东汉的中后期，江南的会稽郡无疑也已成为制作铜镜的一个重要的中心了。¹⁸

新莽时期及其前后的许多铜镜，常常有“善铜出丹阳”的铭文，可见丹阳（今安徽省当涂）是汉代最有名的铜矿所在。据《汉书·地理志》记载，汉朝政府在丹阳郡（其治所在今安徽省宣城）设有铜官。辽宁省辽阳出土的一件魏晋时期的铜镜和日本出土的许多相当于魏晋时期的铜镜，则有“铜出徐州”的铭文。¹⁹从镜铭来看，到了魏晋时期，徐州（今

山东省东南部和江苏省北部，其治所在江苏省徐州市）继丹阳之后成为全国有名的铜矿所在地。但是，从实际情况来说，今徐州市及其附近一带自古未闻有铜矿。因此，这便成了一个十分费解的问题，有待进一步探讨。当然，汉代开发的铜矿是比较多的；据文献记载，四川、云南一带的铜矿也相当丰富。

1953年在河北承德地区调查了一处西汉的铜矿遗址，其中包括矿井、选矿场和冶炼工场等。矿井深达一百多米，有宽广的采矿场。矿井附近发现的铁锤和铁钎，便是当时的采矿工具。采矿场四周有坑道，从坑道运出来的矿石就在井口的附近进行挑选。冶炼工场共发现四处，都在附近不远处。从遗留的炉砖形状来看，炼炉是圆形的。冶炼出来的成品是圆饼状的铸锭，每锭重约五公斤至十五公斤不等。铸锭上面刻有“东六十”、“西五三”等字样，数字是它们的编号，“东”和“西”则可能是指炼铜工场的位置。有的铸锭还刻有“二年”字样，表明它们的制作年代可能在汉武帝建立年号之前（图149）。²⁰1955年，在西安汉代首都长安城遗址附近发现了当时的铜锭十块，都作长方形，重各三十四公斤，纯铜率为99%。铜锭都刻有重量和编号，其中一块刻“汝南（郡）富波（县）宛里田戎卖”的字样，说明当时政府为了铸造铜器和铜钱，除了控制采矿业以外，有时还收购民间的铜材。²¹

汉代官营的铜器制造业，规模很大，其产品主要供宫廷和官府使用。中央政府中少府的属官尚方令和考工令（东汉时属太仆），在首都负责制造御用和官用的铜器。根据铜器上的铭文，在西汉武帝时，尚方已分为左、右、中三部分，至东汉仍然。中尚方所制器物有鼎、钟、壶、釜、斗、灯等，种类最多。弩机则为左、右、中三尚方所共制。考工室所制铜器有鼎、钟、釜、灯、弩机等，其种类与中尚方所制似无多大区别。但是，铜镜则为尚方所制，不由考工制作。曹魏时，制作铜镜的是右尚方。此外，少府属官右工室亦制作铜器。

汉朝政府还在各地设工官，其所属作坊亦有制造铜器的。蜀郡和广汉郡的工官，除制造漆器以外，还以制造铜器而闻名。《汉书·贡禹传》说：“蜀、广汉主金银器。”从考古发掘的实际情况来看，汉代的金银器并不发达。所谓“蜀、广汉主金银器”，主要应系指制造镀金或镀银的铜器而言。北京故宫博物院收藏的东汉建武二十一年（公元45年）蜀郡西工所造的一件铜酒樽，附有托盘，通体镀金，并在樽和托盘的三个熊形的足上镶嵌绿松石和水晶，制作极其精致（图150）。²²值得注意的是，

托盘上有详细的铭文：“建武廿一年蜀郡西工造乘輿一斛承旋，雕蹲熊足，青碧閔瑰饰，铜承旋径二尺二寸，铜涂工崇、雕工业、冻工康、造工业造，护工卒史恽、长汜、丞萌、掾巡、令史郢主”。铭文的格式及其所记工官的体制与漆器的铭文完全相同，可见在同一工官中既制造漆器，也制造铜器。

1925年在朝鲜平壤发掘的王盱墓中，有一件建武廿八年（公元52年）蜀郡西工所造的漆杯，其铭文如下：“建武廿八年蜀郡西工造乘輿侠纁量二升二合羹杯，素工回、髹工吴、汭工文、泚工廷、造工忠，护工卒史早、长汜、丞庚、掾翕、令史茂主”。²³与上述铜酒樽铭文中的各职官吏的名字相比，这件漆杯由于制作的时间晚了七年，所以护工卒史、丞、掾、令史等官吏的名字都不相同，但长的名字却没有改变，仍然是“汜”。这不仅说明了“汜”的任期甚长，至少达七年之久，而且也说明了在蜀郡的工官中各职官吏既管漆器的生产，也经管铜器的生产。

私营的铜器作坊也很多，其产品有时在铭文中标明价格。满城汉墓出土的中山王府派官员从雒阳买来的一件铜钫和从河东买来的一件铜镜，大概也是私营作坊的产品，铜镜的买价为八百四十钱（图151）。²⁴许多铜镜，往往在铭文中自夸铜质的优良、制作的精致，使用者可以长寿富贵，如云“内清质以昭明，光辉象夫日月”，“叶氏作竟佳且好，明如日月世少有”，“吾作明竟自有纪，令人长命宜子孙”等等，充分说明了它们作为商品而生产的。也有许多铜镜，虽系私营作坊的产品，但也在铭文中套用“尚方作镜”的字句，这可能已成了一种习惯，其目的是为了提

CHAPTER 6 IRON IMPLEMENTS

According to archaeological excavations, Chinese iron metallurgy began in the late Spring and Autumn period. By the Han dynasty, the use and manufacture of iron implements had become common and widespread. It can be said that iron tools became indispensable for every aspect of daily life and production. As we have mentioned earlier, farm tools like the plow, the pickax, the spade, the shovel, the hoe, and the sickle were widely used in all parts of China, and their use caused a noticeable increase in agricultural productivity (fig. 152). According to a historian's estimate, at the end of the Warring States period the total population of the seven major states was about twenty million.¹ It increased drastically after mid-Western Han. According to the "Treatise on Geography" in *Hanshu*, the population reached almost sixty million by the end of the Western Han dynasty. This population growth would have been inconceivable had it not been for the widespread use of iron tools both in farming and in waterworks, the latter having greatly increased productivity of food crops and other farm products.

Craftsman's tools—such as the ax, the adz, the hammer, the chisel, the knife, the saw, the awl, nails, and so on—increasingly raised the efficiency of carpenters, bamboo craftsmen, stonemasons, and earth builders, making possible completion of large-scale construction projects (fig. 153). Concurrent with increasing water transport during the Han dynasty, the shipbuilding industry developed rapidly. In 1975, a shipyard of the late Qin or early Han period was excavated in Guangzhou. The yard comprised three building platforms.² These are estimated to have been capable of building large wooden ships 30 m long, 8 m wide, with a weight capacity of 60

metric tons.³ The discovery offers us a glimpse of the scope of the Han shipbuilding industry, which cannot be separated from the use of iron tools. The rotary quern, a small hand mill for grinding grain, was an important tool that concerned the daily life of everyone. Without iron tools, the widespread use of this particular device would have been impossible. Masterpieces of stone, such as the carved pictorial stones and the gate towers and stone animals often found erected in front of Eastern Han tombs, were also the result of skillful application of fine quality iron tools by artists.

The superior quality of iron became all the more evident when it was used in weapons. By the early Western Han period, long iron swords had completely replaced the short bronze swords of the Warring States period. The length of the Warring States bronze sword was in general less than half a meter, whereas the length of the Han iron sword often measured about one meter. The superiority of steel was able to lengthen the sword blade by a hundred percent. In Western Han, a large iron knife with a ring at the end of its handle appeared. Its length was also one meter. This new weapon, unknown to previous periods, became one of the major weapons of the Eastern Han period. Fighting soldiers holding a shield in one hand and this kind of knife in the other are often depicted on pictorial stones. Although the form of bronze *ge*-halberd of the Shang and Zhou periods changed in the course of time, they were still being made and used in Western Han; but before long, they also were completely replaced by iron spears and *ji*-halberds. The length alone of the iron spearheads and *ji*-halberd heads was about half a meter, and the total length of these weapons, including their wooden shafts, could reach more than 2.5 m.⁴ While arrowheads were still made of bronze in the Han dynasty, the stem of the arrowhead was made mostly of iron. However, gradually arrowheads made wholly of iron became popular, and finally they came to replace bronze ones. Due to the advancement in iron technology, the quality of armor improved noticeably. Archaeologists have excavated quite a number of specimens of Han

iron armor. Among the best-preserved specimens are one excavated at the site of a frontier town in Dingxiang Prefecture (its capital located in present Holingor, Inner Mongolia) (figs. 154, 155) and another found in the tomb of Liu Sheng, the Han Prince Jing of Zhongshan, in Mancheng, Hebei.⁵ The latter was an example of so-called fish-scale armor; it was made of more than 2,800 small iron plates. As a defensive device, large numbers of barbed iron balls were made to be placed on the ground outside the city walls. The thorny iron balls were so devised that no matter how each piece was placed, there was always one sharp thorn pointing upward. Their function was to deter marching soldiers and horses (fig. 156).⁶ It was precisely these sorts of superior iron weapons that made it possible to deal with the powerful horsemen from the northern tribes. When Chao Cuo analyzed the military situation between the Han and the Xiong Nu during the reign of Emperor Jing Di of Western Han, he pointed out that one of the advantages the Han had over the Xiong Nu was superior weaponry. The fact that the Han dynasty, following Qin, was able to establish a united empire over such a vast area was, in addition to social, economic, and other factors, also closely related to the application of superior iron weaponry in military affairs.

Let us now turn to household utensils. Iron also played an important role in everyday life. Iron provided material for making *ding*-tripods, stoves, cooking pots, belt buckles, tweezers, fire tongs, scissors, kitchen knives, fishhooks, and needles (figs. 157, 158). The widespread use of iron cooking pots greatly facilitated household cooking. A huge iron pot, with a diameter measuring about 2 m, was found in Wafangzhuang, Nanyang, Henan Province; it was possibly used for boiling salt.⁷ The kitchen knife—especially made to meet culinary needs—became differentiated from other knives. The Han scissors, like primitive scissors of other civilizations, were made of a bent iron rod with its two sharpened ends facing each other. The resilient nature of steel makes them operable. The convenience offered by scissors in cutting cloth and hair cannot be overemphasized. The

iron needle was an indispensable item in the daily life of the Han people. Unfortunately, due to their small size and propensity to rust, needles are difficult to find. Up until today, the needle found in tomb number 167 at Fenghuangshan in Jiangling, Hubei Province, is the only example we have of Han needles. It was this kind of iron needle that was used in sewing and embroidering.⁸ Rulers for measuring also were often made of iron. The marks and decorative patterns on an iron ruler found in the Mancheng Han tomb were inlaid with gold threads.⁹ In Eastern Han, iron lamps were as popular as bronze lamps. An iron "twelve-branch lamp" found in a Han tomb in Luoyang exhibits the clever and elegant style of the artisan(fig. 159).¹⁰ Even iron mirrors are often found in late Eastern Han tombs. Unfortunately, because of their tendency to rust, they have received much less attention than bronze mirrors. In fact, some of their decorative patterns are quite attractive. For example, through X rays we found that the decoration on the iron mirror discovered in the Han tomb at Leitai in Wuwei, Gansu, was elegantly inlaid with gold and silver threads in a phoenix design (figs. 160, 161).¹¹ It should not surprise us that when Cao Cao presented gifts to the emperor, he preferred iron mirrors to bronze.

In short, during the Han dynasty iron implements were closely related to national defense, on the one hand, and to economic life of the country, on the other. Therefore, the iron-manufacturing industry came to be an increasingly important sector of the economy, over which the ruling class found it essential to have control. According to the records in the "History of the Southern Yue" in *Shiji* and in the "Biography of the King of South Yue" in *Hanshu*, in early Western Han when the prince Zhao Tuo of the Southern Yue advocated separatism and independence, Empress Dowager Lü Hou ordered that shipment of iron implements to that area be banned. The court's punitive move brought on a drastic reaction from Zhao Tuo: he led an army and marched toward Changsha, threatening the central government. This incident demonstrates the importance of iron at that time. In early

Western Han, the iron industry was sometimes controlled by the central government and sometimes by provincial lords and principalities. Each lord or prince installed his own iron officials to control iron manufacturing. For example, in the Linzi area of Shandong Province, seals have been found with such inscriptions as "Seal of Qi Iron Office," "Qi Iron Officer," "Qi Iron Office Deputy," and "Iron Deputy of Linzi" (figs. 162-65).¹² In addition, rich merchants, in an attempt to increase their wealth, ran privately owned iron manufactories. Thus, strong competition for control over the iron industry existed between the central government, the principalities, and the wealthy merchants. The strength of the central government greatly increased after the rebellion of the seven states in the Wu and Chu area was crushed by Emperor Jing Di. Eventually, in Wu Di's reign, the central government was able to monopolize the iron industry completely. Like salt, iron implements were manufactured and distributed by government offices.

According to the "Treatise on Geography" in *Hanshu*, more than forty iron offices were established, and they were located as far as Shandong and Jiangsu in the east, Gansu in the west, Liaoning in the northeast, and Sichuan and Yunnan in the southwest, covering a vast area. Inscriptions sometimes can be found on the objects made by the official manufactories. To mention some examples from the excavated finds, those made in the manufactories of the Henan Prefecture (present Luoyang) have the inscriptions "He 1," "He 2," "He 3"; those from the Nanyang Prefecture bear the characters "Yang 1," "Yang 2"; those from the Hedong Prefecture (present Xiaoxian, Shanxi Province) have "Dong 2," "Dong 3." The characters "He," "Yang," and "Dong" represent names of prefectures, while the numbers "1," "2," and "3" designate the particular manufactory or workshop of that prefecture (fig. 166).¹³

Extensive investigations carried out since the founding of New China have uncovered many iron foundry sites in Qinghezhen in Beijing, Tengxian in Shandong, and Liguoyi in Xuzhou in Jiangsu.¹⁴

Especially in Henan Province in the Central Plains area, more than a dozen such workshops and foundries have been found. Of these, large-scale excavations were carried out in the site located at Tieshenggou in Gongxian and the one at Wafangzhuang in Nanyang.¹⁵ The former is dated from mid-Western Han to the Wang Mang period, the latter, from mid-Western Han to Eastern Han.

Tieshenggou iron foundry is located in a basin at the foot of Mount Song. There were workshops for smelting, casting, and forging. Only a few kilometers away in the mountains was a rich iron mine from which ore was obtained. Thus, this manufactory in fact encompassed facilities for the whole process from mining and smelting to manufacturing. Within the 2,000 m² already excavated, we have found an ore-dressing yard, eighteen smelting furnaces, one crucible furnace, and one forging furnace, as well as mixing pools, storage pits, and other auxiliary facilities (figs. 167, 168). From the excavated remains and objects, we can see that the ore was first delivered to the dressing yard, where it was crushed by hammers and screened so that the ore pieces were more or less the same size. After that, a certain proportion of limestone as a flux was mixed with the ore in the mixing pool. The mixture was then put in the smelting furnace, together with the fuel. The eighteen smelting furnaces can be divided into several types according to their different structures and functions. Some could be called "solid reduction furnaces." In this type of furnace the iron ore was reduced at low temperatures into spongelike bloom iron pieces. Others could be called "blast furnaces," where liquid cast iron was produced at high temperatures. There is another type that could be called a "steel puddling furnace." Smelted cast iron was put in this type of furnace. When it melted, the liquid was constantly stirred by the founder. Steel or wrought iron could be produced by this process. Most of the smelting furnaces were semisubterranean with walls made of refractory bricks, and both the bricks and the bottom of the furnace were covered with refractory clay. The smelted iron blooms produced were stored in the storage pit. The function of the "crucible furnace"

was to melt cast iron. Various clay molds were found near it. They were used for casting various tools and utensils. Near the "forge furnace," used in tempering bloom iron and making implements, an iron anvil and a quenching pool were found. Three types of fuel were used: wood, coal, and coal cakes. The coal cakes were made of coal powder mixed with clay and quartz.¹⁶ We found at this site many smelting furnaces, but only a few forging and crucible furnaces and casting molds, so we concluded that the main function of this foundry was smelting, and that forging and casting were secondary.¹⁷

The iron foundry at Wafangzhuang in Nanyang was located in Wanxian, the administrative seat of Nanyang Prefecture.¹⁸ The iron office of Nanyang Prefecture was the most famous of its time. The Wafangzhuang site is probably one of the many foundries under the Nanyang iron office. Because the remnants of the ancient city walls of Wanxian still stand, we know that this foundry was located in the central part of the walled city. Because its location was far from the mines, its main function was to cast and forge, using cast-iron ingots smelted elsewhere or recycling old and worn-out iron utensils. Its main function was to manufacture various implements and utensils, just the opposite of the Tieshenggou foundry. Within the 3,000 m² already excavated, seventeen furnaces have been found. Some were crucible furnaces to melt cast iron for casting. At the site a large number of clay molds were found, including molds for vessels, such as *ding*-tripods, pots, and basins; agricultural implements and tools, such as pickaxes, spades, shovels, plowshares, axes, adzes, hammers, and chisels; and such carriage parts as axle-pins and bearings. It is evident that this foundry had a remarkable capacity, casting large numbers of a variety of items. Some furnaces were steel stirring furnaces, in which cast iron was melted and stirred into steel or wrought iron and was then forged into various tools and utensils. A large number of hammers and anvils for forging as well as many finished products like knives, sickles, and spearheads were also found. Unlike the Tieshenggou foundry, the sole fuel used here was wood.¹⁹

In recent years, excellent results have been achieved by the combined research efforts of archaeologists and metallurgists, especially of metallurgists in analyzing archaeologically excavated iron implements.²⁰ It has been shown that by the Spring and Autumn period at the latest (late sixth century B.C.) China had already employed the method of reducing iron ore with charcoal at relatively low temperatures (800-1,000°C) to a relatively pure but spongelike iron bloom. This method is called the "low temperature-solid reduction," or "bloom smelting" method. The product is called bloom-smelted iron (commonly known as wrought iron) and it can be forged into implements. A short piece of iron bar found in 1974 in a tomb of the late Spring and Autumn period in Liuhexian in Jiangsu was forged from this type of bloom-smelted iron.²¹ By the late Warring States period, ironsmiths already knew how to produce steel out of wrought iron by the method of solid state carburization of the wrought iron. The technique was to heat pure iron in charcoal for an extended period of time at a temperature above 900°C, or to keep heating the iron in charcoal while forging. As a result, when enough carbon was absorbed by the iron, it turned into steel. A late Warring States sword excavated in 1973 in Yanxiadu in Yixian, Hebei, was made of steel produced by this method.²²

In the two centuries following the late Warring States period, along with accumulated experience, forging technique also improved. The main technique was repeated forging. By means of repeated beating of the heated metal, the carbon content was evenly alloyed with the metal and impurities were reduced, thus greatly improving the quality of the steel. This early technology was known as "hundred-time forged steel." The sword worn by Liu Sheng and later found in his tomb was a product of this technology during its early stage (fig. 169). The new technology of mid-Western Han was developed from the old technique known as the "solid state carburization method" of the late Warring States period. The cast iron and the carbon infiltration method of the Han period were similar to the material and technique

of the late Warring States, the difference being that the Han method extended the hammering and heating process. The hammering process not only forged the metal into the desired shape; it also reduced the number and size of impurities and alloyed the carbon evenly with the metal, thus raising the quality of the steel produced. If we compare the Yanxiadu sword from the Warring States period mentioned above and the Han sword found in Liu Sheng's tomb, we find that the raw materials were both solid-state carboninfiltrated steel, but the former has an unevenly alloyed carbon content and a high content of larger-sized impurities, whereas the latter has an evenly distributed carbon content with fewer and smaller impurities. The main reason for the difference was that the latter had been produced by a repeated hammering and heating process. This is considered a major development in the history of metallurgy occurring between the late Warring States period and mid-Western Han.

In order to increase its sharpness, Liu Sheng's sword had also undergone the processes of "surface carbonization" and blade-edge quenching. Quenching was a technique of dipping heated steel in cold water in order to increase the strength and hardness of the metal. Only the edge of the blade of Liu Sheng's sword was treated with the quenching process. The result is that only the blade edges are hard and sharp while the body of the sword (the middle thicker part) remains relatively elastic and non-brittle. The same idea was applied in the surface carbonization process so that only the outside of the sword was hardened.

Other weapons such as the knife, the *ji*-halberd, and the short sword excavated from the Han tomb in Mancheng also indicate a higher quality(fig. 170). A beautifully made desk knife inlaid with gold thread was also found there. Its forging process was similar to that of Liu Sheng's sword, only the body of the blade was made of a steel with lower carbon content and thus of lesser hardness. By reducing its hardness, the craftsman was able to carve the knife and inlay it with gold thread. However, since the blade edge had been

infiltrated with carbon and quenched, the knife was hardened and the edge could easily be sharpened.²³

On the other hand, as early as the early Warring States period in the fifth century B.C., shortly after the bloom smelting technique was developed, the Chinese founder invented a technique which produced cast iron that had more than 2 percent carbon content. An early Warring States iron adz excavated in Luoyang in 1975 was determined to be the earliest tool made of this kind of cast iron.²⁴ This is 1,800 years earlier than the development of similar techniques in other civilizations. The main factor in founding cast iron is high temperature. Because of the long history of bronze technology and improvements made in the bellows systems, it became possible to bring temperatures up to 1,100-1,200°C or more. At this high temperature the charcoal-reduced iron would rapidly absorb carbon, thus greatly lowering its melting point. When the temperature exceeds 1,146°C the iron with more than 2 percent carbon content begins to melt and its speed of carbon absorption increases. When the process accelerates, the result is completely melted cast iron. This kind of cast iron has a lower content of silicon, and no graphite. It is called white iron because its fracture appears white. It is hard but brittle in character.

In order to improve the quality of white iron, the early Warring States artisans treated it with an extended heating process, causing graphite to separate from the carbonized iron. The resulting cast iron, called elastic cast iron, was not brittle. This kind of iron was widely used for farm tools and weapons in the middle and late Warring States period. A great number of these were found in Warring States period sites and tombs in Changsha of Hunan, Daye of Hubei, and Yanxiadu in Yixian of Hebei. Many iron tools found in the Mancheng Han tomb of mid-Western Han were also made of this elastic cast iron.²⁵

It is noteworthy that gray iron pieces were also found in the Mancheng Han tombs. These are the earliest gray iron items ever found in China. The gray iron was produced by raising the heating

temperature and speeding up the cooling process. During the treatment, the carbon content in excess of 2 percent would be separated from the cast iron in the form of thin graphite pieces. Gray iron is so named because the color of its fracture is gray. Its hardness is lower than white iron, but it is not as brittle. It stands up to wear and its surface can be smoothened. The pickax in the Han tomb of Mancheng was made of elastic cast iron, while the carriage bearings were made of gray iron, indicating that the characteristics of various kinds of cast iron were understood and utilized accordingly.²⁶

The agricultural implements, tools, utensils, and weapons that were described initially can be divided into forged and cast items. Until mid-Western Han, forged items and cast items were invariably made of "bloomery iron" and cast iron, respectively. Cast items became more and more popular as the size of the furnace became larger and the bellowing system improved. However, the brittleness of cast iron greatly limited its use. On the other hand, the carburization method involved a great deal of labor in forging and both productivity and efficiency were low. In this situation, a new technique was invented to induce decarbonization of cast iron in solid state to become steel. An iron chisel excavated from Wafangzhuang in Nanyang has the appearance of a cast item. However, the structure of surface metal of the chisel, according to metallographic analysis, was clearly steel. Another chisel shows a carbon content of 0.6 to 1 percent. At the current technological level, a temperature above 1,500°C could not have been achieved. Moreover, there was no refractory material which could withstand such heat. Therefore this steel could not have been liquid. Hence we concluded that this type of steel must have been produced by decarburization in the solid state by some kind of heat treatment.²⁷ Because an arrowhead excavated from the Mancheng Han tomb was also made of this type of cast steel, we are quite sure this new technique had been developed by mid-Western Han.²⁸

A more important new technique developed in late Western Han

was the "puddling" steel method. Cast iron was heated into a semiliquid state. By constant agitation in an oxidizing atmosphere the hot metal could be decarburized. Wrought iron or steel, depending on the level of carbon content, could be produced by this process. Using cast iron, which could be easily produced in large quantities, as material for producing steel was a revolution in metallurgical history. Thus "hundred-time forged steel" could be obtained either by puddling cast iron into wrought iron and then carbonizing and forging it into steel, or by puddling cast iron until the desired carbon content was reached and then forging it into steel implements. A large iron knife excavated in a Han tomb at Cangshan in Shandong in 1974 has a gold-inlaid inscription which reads "thirty-time forged large knife" and is dated the sixth year of Yong Chu (A.D. 112) (fig. 171).²⁹ Metallurgists who made analyses of this knife concluded that it was made of puddled steel.³⁰

From Emperor Wu Di to the end of Western Han, the iron industry was a monopoly of the state. Among those who worked in the government-run industrial mines and foundries, apart from the specialized artisans, were convicted criminals and corvée laborers. The large scale of the Han iron industry is shown by the fact that, according to the records in the "Biography of Gong Yu" in *Hanshu*, more than a hundred thousand miners were mobilized every year to mine copper and iron ores for the purpose of minting coins and smelting iron. In the late Western Han period, ironworkers in Yingchuan Prefecture (with its capital in modern Yuxian, Henan) and Shanyang Prefecture (its seat in today's Jinxiangxian, Shandong) rebelled in protest of repressive measures against them. In the early Eastern Han period, following the Western Han system, the government still monopolized the iron industry. But influential local power-holders often operated private foundries. The government was unable to enforce the law. Finally, in A.D. 88, Emperor He Di gave in and lifted the ban on private iron and salt production. From then on, both the iron and salt industries were gradually further controlled by

local powers.

The Shandong Provincial Museum in its collection has a carved pictorial stone that depicts an iron foundry.³¹ Among the twelve artisans shown working, four are bellowing the furnace with leather bellows, the rest are hammering and forging (fig. 172).³² The stone was excavated at Hongdaoyuan in Tengxian, Shangdong, in 1930. Its date indicates it was made after the ban was lifted. It appears that the tomb's occupant, a powerful landlord, was engaged in the iron industry and for that reason had the manufacturing scene carved on the wall of his tomb. This stone not only provides us with a vivid depiction of iron manufacture, it also may furnish evidence that iron industry was then controlled by privately owned enterprises. However, it is also possible that this scene was carved on the walls of the tomb of a former iron official of the state.

陆 汉代的铁器

根据考古发掘，中国炼铁的历史开始于春秋晚期。到了汉代，铁器的制造和使用已经很普遍。可以说，在社会生产和生活的各个方面，都离不开铁器。首先，如前面已经讲过的，在农具方面，有犁、耨、锄、铲、锄、镰等，它们在全国范围内被广泛使用，使得当时的农业生产有显著的提高（图152）。历史学家估计，战国末年，燕、赵、韩、魏、齐、楚、秦七国人口总共二千万左右。¹西汉中期以来，人口激增，据《汉书·地理志》记载，到西汉末年全国已将近六千万人。如果不是普遍使用铁农具耕作，以及使用铁工具来兴修水利工程，使粮食和其他农作物的产量提高，那是不能想象的。

在工具方面，有斧、锛、锤、凿、刀、锯、锥、钉等，它们使得各种木工、竹工、石工、土工等的效率不断提高，并使大规模的建筑工程得以顺利完成（图153）。汉代水上交通频繁，造船业突飞猛进。1975年在广州发掘了一处秦汉之际的造船工场，发现了三个造船台²，据估计，可以造长约30米、宽约8米、载重量可达60吨的大木船。³汉代造船业的规模于此可见一斑，而这正是与铁工具的使用分不开的。谷物加工用的转盘式的双扇石磨盘，关系着全国人民的最基本的日常生活，如果不是用铁工具来制作，就不可能得到迅速的普及。东汉大墓里常见的石刻画像，以及墓前所立的石阙和石兽之类，正是由于使用了优质的铁工具，才能成为雕刻家们的优秀的艺术作品。

在兵器方面，铁器的优越性更为突出。铁制的长剑在西汉前期就完全取代了战国以来的青铜短剑。战国时代的青铜剑，长度多不足半米，而汉代的铁剑则往往长达一米左右，钢铁的优越性使剑的长度增加了一倍。柄首成环状的大铁刀，在西汉时就出现，长度亦多达一米；它完全是一种新兴的武器，为前代所未见，到了东汉就成为最主要的武器之一，在石刻画像上常可见到士兵们一手执盾，一手持刀，正在进行战斗的情形。殷周以来的铜戈，其形制随着时代而改变，直到西汉时还有被制作、使用的，但不久也被铁制的矛和戟所完全代替。汉代的铁戟和铁矛，仅戟头和矛头就有长近半米的，加上它们的木柄，全长可达两米半以上。⁴汉代的矢鏃，虽然仍有不少是铜质的，但其鏃部已多改为铁制，

而铁镞也开始盛行，到后来终于代替了铜镞。由于制铁技术的发展，铠甲的质量和性能有了显著的提高。在考古发掘工作中，已经发现了不少汉代铁甲的实物，其中以内蒙古呼和浩特附近汉定襄郡（治所在今内蒙古和林格尔）的边境城镇遗址出土的一件（图154、155）和河北满城中山靖王刘胜墓内出土的一件为最完整⁵，它们的制作都很完备，特别是后者，是由二千八百多片细小的铁片编成的鱼鳞甲，尤为精致、完善。为了防止敌兵来袭，大量的铁蒺藜被散布在城墙以外的广大地段上，它们的设计很巧妙，系由四个方位均称的锐刺组成，无论怎样放置，总有一个尖刺是向上的，从而可使人足和马足受创（图156）。⁶正是由于掌握了各种先进的铁兵器，所以才能对付北方民族强大的骑兵。西汉景帝时，晁错分析汉朝与匈奴作战的军事形势，就指出汉朝优越的武器是克敌制胜的有利条件之一。继秦代之后，汉代建立统一的大帝国，它的版图达到了空前的规模，除了政治、经济等多方面的原因而外，这也是与军事装备上充分利用铁器的优越性分不开的。

在生活用具方面，铁器也占重要的地位，从鼎、炉、釜等容器、炊具到带钩、镊子、火钳、剪刀、厨刀，以及钓鱼钩和缝衣针之类，无不应有尽有（图157、158）。铁釜的广泛使用，为炊事提供了方便；河南省南阳瓦房庄发现的一件大铁锅，直径达二米左右，可能是煮盐用的。⁷厨刀从别的各种刀类中分化出来，专门按庖厨的需要而制造。汉代的剪刀，虽然和世界各地的初期剪刀一样，是用一根两端具有锋刃的铁条弯曲而成，利用钢铁的弹性而操作，但它在裁剪布帛乃至剪除须发等生活方面所提供的方便也是不可低估的。在汉代，铁制的缝衣针是日常生活中不可或缺的，但由于极其细小，锈蚀之余，难于发现，因而湖北江陵凤凰山一六七号墓出土的缝衣针就成为迄今唯一保存完好的遗品；当时缝制各种衣物以及在丝织品上刺绣美丽的花纹，用的就是这种铁针。

⁸1975年在陕西省咸阳市发掘的一座西汉后期墓中，发现了一件漆盒，内有铁针七八枚，放在针筒里，但多已锈蚀断缺。度量用的尺子，也有许多是铁制的；满城汉墓出土的铁尺，其刻度和花纹系用金丝镶嵌。⁹汉代虽盛行铜灯，但东汉时铁灯也很流行，洛阳等地汉墓中出土的“十二枝灯”等（图159），制作得相当精巧。¹⁰甚至是镜子，也有不少是铁制的，往往在东汉后期的墓中被发现，只是由于已经锈蚀，有时不被人们所重视，其实它们的花纹是相当优美的。例如，甘肃武威雷台汉墓中的一枚铁镜，经X光透视，可以看出是用金丝和银丝镶嵌成夔凤纹，十分

精致（图160、161）。¹¹这就无怪汉末的曹操要用许多铁镜，而不是铜镜，来赠送给皇帝。

总之，当时的铁器，关系到军备国防，关系到国计民生，所以制铁业就越来越成为特别重要的经济部门，统治阶级必须加以控制。据《史记·南越列传》和《汉书·南粤王传》记载，西汉初年，南越赵佗搞分裂割据，闹独立，吕后就下令实行铁器禁运，以作为制裁，引起赵佗的强烈反应，甚至出兵进犯长沙，威胁朝廷，从这里也可以看出铁器的重要性。西汉初年，冶铁业有的控制在中央政府手里，有的却被控制在各地的诸侯王手里。诸侯王自设铁官，经营冶铁业，在山东临淄一带就有“齐铁官印”、“齐铁官长”、“齐铁官丞”和“临淄铁丞”等封泥流传下来，便是例证（图162—165）。¹²也有一些大商人，为了谋求巨富，私自经营冶铁业。因此，中央政府和各地诸侯王及富商大贾们互相争夺对冶铁业的控制权，相当激烈。汉景帝击败了吴楚七国的叛乱以后，中央政府的权力大大增强，终于在汉武帝时完全垄断了全国的冶铁业。铁器和食盐一样，由政府设铁官经营，实行官卖政策。

据《汉书·地理志》记载，汉代全国设铁官四十余处，其分布东起山东、江苏，西到甘肃，东北到辽宁，西南到四川、云南之间，范围十分广大。铁官所制的铁器，有时有铭文，作为它的标志。例如，根据出土的遗物，河南郡（今洛阳）所制的有“河一”、“河二”、“河三”字样，南阳郡（今河南南阳）所制的有“阳一”、“阳二”字样，河东郡（今山西夏县）所制有“东二”、“东三”字样；“河”、“阳”、“东”等字是郡名的简称，“一”、“二”、“三”等数字则是各郡铁官所属作坊和工场的编号（图166）。¹³

新中国成立以来，经过广泛调查，在北京清河镇、山东滕县、江苏徐州利国驿等许多地点发现了制铁工场的遗址。¹⁴特别是中原地区的河南省，迄今已发现的制铁工场和作坊的遗址已达十余处之多，其中巩县铁生沟和南阳瓦房庄两处已经过大规模的发掘。¹⁵前者的年代约自西汉中期至新莽时期，后者的年代则自西汉中期至东汉。

巩县铁生沟制铁作坊，坐落在嵩山脚下的一个盆地。作坊中有冶炼工场，也有铸造和锻造工场。附近相距仅数公里的山中有丰富的铁矿，所用矿石便是从那里开采的。因此，这个作坊实际上包括了从开矿、冶炼到制造成品的全部生产过程。在已经发掘的两千平方米的范围内，发现了矿石加工场一处、各种炼炉十八座、熔炉和锻炉各一座，并有配料

池、储铁坑等附属设施（图167、168）。从发掘出来的遗迹和遗物可以看出，矿石运到矿石加工场，用铁锤击碎，筛子筛过，使其成为大小均匀的颗粒，并配以一定比例的石灰石作为熔剂，在配料池中搅拌后，与燃料一起放入炼炉。十八座炼炉的型式、结构和功效各有不同。有的可称“固态还原炉”，是用低温将铁矿石还原，炼成海绵状的“块炼铁”。有的可称“高炉”，用高温炼出液态的生铁。还有一种可称“炒钢炉”，是将已经炼好的生铁放在炉内，加热熔化时，不断进行搅拌，使生铁“炒”炼成钢或熟铁。各种炼炉多作半地穴式，用耐火砖砌成炉壁，壁上又涂耐火泥，炉底铺耐火土。炼出来的铁块，放在储铁坑内。熔炉一座，是熔化生铁用的，附近有一些泥范，用以铸造各种器物。锻炉一座，用于锻炼块炼铁并将它制作成器，在附近发现了锤打器物用的铁砧和淬火池。作坊中所用的燃料，据说有木柴、煤和煤饼三种，后者是用煤末掺以粘土和石英制成的。¹⁶由于发现的炼炉很多，而锻炉、熔炉和铸范却都较少，因而可以认为这个制铁作坊以冶炼铁料为主，锻铸器物为次。¹⁷

南阳瓦房庄制铁作坊，在汉南阳郡的治所宛县城内。¹⁸南阳郡的铁官是当时最有名的，瓦房庄作坊当为南阳郡铁官所属的许多作坊之一。宛县的古城墙至今还有不少遗留在地面上，从而可以判断这个制铁作坊的位置是在城内的中部。由于作坊设在大城市中，远离矿区，所以它的主要业务是利用从别处运来的已经炼好的生铁锭和废旧铁器作原料，在这里进行熔炼，重点在于制造各种器物，这与上述巩县铁生沟的情况恰好相反。在已经发掘的三千平方米的范围内，发现了十七座炉子。其中一部分炉子是熔炉，将生铁熔化，以供铸造。在遗址中发现了大量的泥范，其种类包括鼎、罐、盆等容器，钁、锤、铲、铍、斧、镑、锤、凿等农具和工具，以及害和轴承等车具，可见所铸器物种类和数量之多。另外一些炉子则为“炒钢炉”，将生铁炒炼成钢或熟铁，以锻制各种器物。锻制时所使用的铁锤和铁砧，以及已经锻制成的刀、镰、矛头等器物，在遗址中都有多量的发现。与巩县铁生沟不同，这里所用的燃料只是木柴。¹⁹

最近几年来，考古研究与冶金史研究相结合，主要是冶金学家们对考古发掘所得的铁器进行分析、研究，取得了很好的成绩。²⁰研究工作证明：至迟在春秋晚期（公元前6世纪末），中国已经使用在较低温度（800℃—1000℃）中用木炭还原铁矿石的方法得到比较纯净但质地疏松的铁块。这种炼铁的方法，称为“低温固体还原法”，或称“块炼法”，

其产品称“块炼铁”（一般也称熟铁），可以锻造成器。1974年江苏省六合县春秋晚期墓中出土的小铁条，便是用这种“块炼铁”锻制的。²¹到了战国晚期，冶铁工匠们已掌握了把上述的“块炼铁”用固态渗碳的方法制钢，将纯铁于木炭中以900℃以上的温度长时间加热，或锻造时将铁在木炭中反复加热，使碳渗入铁内而成为钢。1973年河北易县燕下都出土的战国晚期的铁剑，就是用“块炼铁”渗碳成为低碳钢制成的。²²

从战国晚期以后的一二百年中，随着经验的积累，技术的提高，主要是采取越来越多的反复锻打的方法，使钢内碳的均匀性不断改善，夹杂物的含量不断下降，从而使钢的质量有较大的提高，形成了早期“百炼钢”的工艺。满城汉墓中的刘胜佩剑，便是属于当时正在形成的“百炼钢”工艺的早期产品（图169）。西汉中期的这种处于初级阶段的“百炼钢”，是在上述战国晚期的“块炼渗碳钢”的基础上直接发展而来的。所用的铁料和渗碳的方法都和战国晚期的相同，但增加了反复加热锻打的次数。锻打不仅起着器物加工成型的作用，而且更重要的是使钢铁中的夹杂物减少、减小，使碳分布均匀化，使钢的质量提高。拿上述燕下都的剑和刘胜佩剑相比，它们的原料同属“块炼渗碳钢”，但前者钢里含碳不均匀，杂质较多、较大，而后者则相反，钢内碳的分布均匀，杂质少而小，这主要便是由于后者大大增加了反复折叠锻打的次数。要之，从战国晚期的“块炼渗碳钢”到西汉中期的反复锻炼成钢，这是冶炼技术史上的一个大进展。

为了提高剑的锋利程度，刘胜佩剑还经过表面渗碳和刃部淬火。淬火是一种热处理技术，即将加热的钢放入水中，迅速冷却，以提高其强度和硬度。刘胜佩剑只在刃部淬火，所以剑刃坚硬、锋利，而脊部仍保持较好的韧性。表面渗碳，也是为了使作为剑的外层的刃部因渗碳而提高坚硬的程度。

满城汉墓出土的铁器，除上述佩剑而外，还有其他的兵器如刀、戟、短剑等，它们也都具有较高的质量（图170）。另外还有一把错金的“书刀”，其制作工艺尤为精湛。它的冶炼过程和佩剑相似，只是刀身用含碳较低的钢锻成，硬度较低，便于刻槽镶嵌金丝，而刃部则渗碳、淬火，使其坚硬、锋利。²³

另一方面，早在战国初年（公元前5世纪），即在开始掌握用“块炼法”炼铁之后不久，我国还发明了炼制含碳量在2%以上的生铁，用以铸成器具。1975年洛阳出土的战国早期铁铸，便是经过鉴定的最早的用生

铁铸成的工具。²⁴这比世界各国要早出一千八百年。冶炼生铁，主要是依靠高温。由于长期以来青铜冶铸技术的高度发展，鼓风的进一步加强，使冶炼时的温度能达 1100°C — 1200°C 以上。在这样的高温之下，被木炭还原而成的固态铁就迅速吸收碳，因而使它的熔点比纯铁大大降低。当冶炼温度超过 1146°C 时，含碳量达到2%以上的铁就开始局部熔为液体，而它吸收碳的速度也就进一步提高，含碳量越来越高，熔化越来越快，终于全部熔化为生铁。这种生铁，含硅量低，不含石墨，由于断口光亮，故称“白口铁”，其性质脆而且硬。

为了改善生铁的性能，在战国初期也就已经掌握了将“白口铁”长时间加热，使碳化铁分解为铁和石墨，克服了“白口铁”性脆的缺点。经过这种柔化处理的生铁，称展性铸铁。这种展性铸铁，在战国中晚期已被广泛应用于制造农具和兵器等，在湖南长沙、湖北大冶和河北易县燕下都等战国遗址和墓葬中都有发现。到了西汉中期，以满城汉墓为例，亦有不少铁器是展性铸铁的制品。²⁵

值得注意的是，在满城汉墓中还发现了一批“灰口铁”的铸件。这是迄今已发现的我国最早的“灰口铁”制品。所谓“灰口铁”，就是通过提高冶炼温度和降低冷却速度，使生铁中超过2%的那一部分碳成为片状石墨在凝固时析出，铁的断口呈灰色，所以称“灰口铁”。它具有硬度比“白口铁”低、脆性较小、耐磨、滑润性能良好等特点。满城汉墓出土的铁是展性铸铁的制品，而车轴承则为“灰口铁”铸件，这说明了当时已经掌握了不同种类的铸铁的性能特点，而加以具体的应用。²⁶

我在讲演开始时就列举汉代在农具、工具、兵器、生活用具等方面的各种各样的铁器，它们有的是锻件，有的是铸件。直到西汉中期以前，锻件和铸件总是分别用块炼铁和生铁作为原料的。随着炼炉的加大，鼓风设施的改进，生铁冶炼技术不断发展，生铁铸件得到了越来越广泛的应用。但是，由于生铁质脆，其用途又不能不受到限制。块炼铁虽然可用以制成渗碳钢，但必须经过反复锤炼，要花费很大工夫，产量和效率是很低的。在这种情况下，遂又发明了一种新的工艺，使铸铁在固体状态下脱碳成钢。例如，南阳瓦房庄出土的一件铁凿，从外形看来无疑是铸件，但表面的金相分析证明它是钢的组织。有的铁凿经分析，其含碳量为约0.6%或约1%。在当时的条件下，不可能有高于 1500°C 的高温和与此相应的耐火材料，所以不可能是液态铸钢。因此，可以肯定，汉代的这种钢件，是利用热处理使铸铁在固态下脱碳成钢的。²⁷由

于满城汉墓出土的铁锄也是属于这种固态脱碳成钢的铸件，可以肯定这种工艺早在西汉中期即已存在。²⁸

更为重要的是，到了西汉后期，随着冶炼技术的进一步发展，终于出现了将生铁“炒”炼成钢的新方法。所谓生铁“炒”钢，就是将生铁加热成为半液体状态，加以不断地搅拌，利用空气中的氧使其脱碳，以获得不同含碳量的钢或熟铁。用生产效率很高的生铁作为制钢的原料，这是炼钢史上的一次革命。这样一来，“百炼钢”既可用生铁“炒”成的熟铁为原料，经过渗碳锻打成钢，又可把生铁“炒”到所需要的含碳量，成为“炒钢”，然后反复加热锻打成为钢制品。1974年在山东苍山汉墓出土一件大铁刀，刀上的错金铭文称此刀为“三十炼大刀”，并记明其制作年代为永初六年（公元112年）（图171）。²⁹冶金学家将此刀进行分析、研究，认为它就是用“炒钢”为原料而制成的。³⁰

自汉武帝时由国家垄断冶铁业以来，一直到西汉末年，仍然如此。在官营的工矿作坊中，参加劳动的除一些专门的工匠以外，有许多是被判罪的刑徒和被迫定期服徭役的民工。据《汉书·贡禹传》记载，为了铸钱及冶铁，到矿山开采铜铁所动用的劳动力每年在十万人以上，可见其规模之大。西汉晚年，颍川郡（其治所在今河南省禹县）和山阳郡（其治所在今山东省金乡县）的铁官徒因不堪压迫，曾先后起义。东汉初期，承袭西汉的制度，冶铁业仍由国家专营。但是，当时的豪强地主势力强大，他们往往私设工场，自造铁器，官府不能禁止。章和二年（公元88年），和帝即位，东汉中央政府终于不得不作出让步，宣布盐铁开禁。于是，冶铁业和制盐业一样，就被逐渐进一步控制在各地豪强地主的手中。山东省博物馆珍藏着一块画像石，上面刻绘着一幅冶铁图。³¹图中有十二个工匠正在工场中操作，其中四人在用皮囊为炼炉鼓风，其余的人则在持锤锻制器物（图172）。³²这块画像石是1930年在山东省滕县宏道院出土的，其年代当在东汉盐铁开禁之后。正是由于豪强地主生前经营冶铁业，所以才将冶铁图刻绘在自己的墓壁上。画像不仅描绘了工场中的冶炼的情形，而且说明了制铁业已转入私人手中。当然，就这块画像石来说，也不能排除另一种可能性：一个生前曾任铁官的官僚，为了纪念其生平事迹，所以在墓内刻绘了一幅冶铁图。

CHAPTER 7 CERAMICS

Gray Pottery In the realm of gray pottery, which already had a history stretching back to the Shang and Zhou periods, the Han potters attained an unsurpassed level of quality, basing their work on the achievements of the Warring States period. It is no exaggeration to say that in succeeding periods the techniques of gray pottery manufacture did not advance beyond the level attained by the Han potters. Their improvements in techniques of gray pottery firing are manifest in the pottery's color, which is gray; the firing, which was even and uniform; the firing temperature, which was above 1,000°C; the clay ware, which is hard; as well as in the increase in the number of large vessels. As to the last named—that is, large vessels—this statement is borne out by pottery *weng* from Han tombs in the vicinity of Luoyang, which often stand more than 50 cm in height (figs. 173, 174), and *jiugang* from the Han tombs at Mancheng, which often reach more than 70 cm in height.¹ Such aspects as hardness of ware and greater numbers of large vessels cannot be explained apart from improvements in the kilns. In 1956, more than twenty kilns from the Warring States, Western Han, and Eastern Han periods were excavated at the site of the old city of Wuji in Wu'anxian, Hebei Province; a comparison of these kilns reveals that the Han kiln chambers are larger, their fire tunnels longer, and their chimneys much improved in design (figs. 175-77).²

The bodies of all of the rounded Han dynasty gray pottery vessels were turned on the potter's wheel. Vessel shapes are regular and their surfaces are relatively smooth. In general, with the exception of occasional parallel bowstring lines incised on the wheel and some localized incised geometric designs and stamped patterns, the vessels lack decoration and can be called "plain" (figs. 178-80). In the early Western Han period a few vessel types, such as the *weng* and the *guan*,

were still occasionally decorated with faint cord patterns;³ but from the middle Western Han period onward, few vessels have cord marks. Popular for more than three thousand years—from Neolithic times down to early Han—the cord pattern finally died out (except in pottery roof tiles). The decline of the cord pattern must be considered one of the important characteristics of Han ceramics.

In Han tombs of all areas, pottery vessels with decoration painted in colors can be found. These wares also belong to the gray pottery family, the painted decoration having been applied after firing. Several pottery *hu* vessels have been discovered in Han tombs in Luoyang and a number of pottery *hu* and *pen* vessels have been recovered from the Han tombs at Mancheng.⁴ The colors are bright and the painting refined; all are handsome works of art (figs. 181, 182). Since the decoration was applied only after the vessels were fired, however, the pigments tend to flake readily. These painted wares have been found only in tombs; not a single one has been recovered from a residential area. Thus, we can surmise that they were made for funerary use only. In addition to the painted wares, there are also gray pottery vessels of the Han period whose surfaces were coated with lacquer, in imitation of (true) lacquerware vessels. A number of gray pottery vessels coated with thick black or brown lacquer have been discovered in Han tombs in Yinqueshan in Linyi, Shandong Province; in Shuanggudui in Fuyang, Anhui Province; and in Dafentou in Yunmeng, Hubei Province.⁵ All of these closely resemble lacquerware (figs. 183-85). A lacquer-coated pottery *hu* from the Han tomb at Dafentou is called a *xiuhua waweng*, or "lacquer-painted pottery vessel," in the inventory tablet of that tomb.

In terms of shape, among the few early Western Han vessels with cord-marked decoration, such as the *weng* and *guan* mentioned above, are ones which have rounded bases (fig. 186).⁶ From the middle Western Han period on, however, almost all of the pottery vessels have flat bottoms, with the exception of three-legged and ring-footed vessels. Already at some time before the advent of the Han dynasty,

the pottery *li*—current from the Neolithic through the Shang and Western Zhou periods—had disappeared. The pottery *dou*, which was popular in the Warring States period, was still frequently seen in early Western Han, but not long thereafter it too disappeared. The pottery *fang* did not appear until in the late Warring States period; it was most popular in the Western Han period but is very seldom seen in Eastern Han. In both Western and Eastern Han, the pottery *ding* and *zhong* are the most commonly encountered bronze-derived shapes. Even these, however, were seldom seen from the Wei and Jin periods onward, subsequent to the decline of bronze vessels. In addition to these, there is the *yadanhu*, or "duck-egg jar," a vessel of unusual shape which appeared in the closing years of the Warring States period. It continued to be an important and popular shape in the Qin and early Western Han periods but then disappeared in middle Western Han (fig. 187). The forms of the various other members of the gray pottery family—such as the *weng*, *guan*, *he*, *zun*, *pen*, and *wan*—also changed through time, never ceasing to evolve. In short, in Han dynasty gray ceramic wares, the types are numerous and the functions varied; their popularity was not restricted to the Yellow River valley or even to the North in general, but spread to all parts of the country. They were the mainstay of Han ceramics.

Hard Pottery At the same time, however, to the south of the Yangtze River, in that vast area including Guangdong, Guangxi, Hunan, Jiangxi, Fujian, Zhejiang, and southern Jiangsu, there was another common type of ceramic ware called *ying tao*, or "hard pottery," coexisting with the gray pottery described above. These hard pottery pieces were made from a dense and strongly adhesive clay native to the South. In contrast to gray pottery, hard pottery vessels were fired at a higher temperature and the ceramic paste was much harder. On the surface of the vessels there is often a stamp-impressed checkerboard pattern, or there may be an incised wave or sawtooth pattern, in marked distinction to the plain, undecorated gray pottery vessels discussed above (figs. 188-91). Vessel types include the *weng*,

guan, *hu*, *he*, and *wan*. But, in comparison with the various types of the gray pottery family, the hard pottery pieces have their distinctive style. In the Guangzhou area, for example, there is a type of *hu*, called the *pao hu*, or "gourd-shaped jar," whose shape resembles a gourd (*pao-gua*)(fig. 192). And in Guangzhou and Changsha there are the *silianguan*, or "four-linked *guan*," and *wulianguan*, or "five-linked *guan*," in which four or five small *guan* vessels are connected (fig. 193). A number of vessels have loop handles at their shoulders or waists for tying cords. And there are also a few small *he* and *guan* with three short legs attached at their bases (fig. 194).⁷ In short, the ceramic paste, the firing, the decoration, and the shapes of the vessels all reveal that this hard pottery from the Jiangnan ("South of the Yangtze") area inherited the traditions of the so-called "hard pottery with impressed geometric patterns" which had been developing in that area since late Neolithic times. In the Han dynasty it established itself as a separate tradition.

Glazed Pottery A new invention of the Han dynasty potters was a ceramic ware with a thick brown or green glaze. This ware began to appear in the late middle Western Han period, especially around Guanzhong in Shaanxi Province and Luoyang in Henan Province.⁸ Afterward it developed rapidly, and by the late Western Han period it was already common, being used throughout a larger area. By Eastern Han not only had it spread throughout the entire Yellow River valley and the North of China in general, it was often seen in the Yangtze River valley as well. Generally speaking, the brown glazed ware appeared earlier, the green glazed ware later. However, the green glazed ware enjoyed great popularity during Eastern Han and became much more widespread than the brown glazed ware. Its glaze contains a large amount of oxidized lead and its firing temperature was relatively low—no more than about 800°C—so it is often called "lead glazed" or "soft glazed" ware. And since it was popular mainly in the Yellow River valley and in the North of China, it can also be termed "Northern glazed ware." The types include the *ding* and *zhong* and a

few other bronzederived shapes. In addition, there are models of granaries, stoves, water wells, and towers, as well as images of such animals as the chicken and dog (figs. 195-97). For several reasons these are considered to have been made for funerary purposes only, not for actual use: first, the red core of this ware is not too hard; second, the glaze readily flakes or deteriorates; and, especially, they were buried in tombs, almost never being found in residential areas.

Although China has had glazed ceramics ever since the Shang and Western Zhou periods, the glazes of those early wares are all light green ones fired at high temperatures, unrelated to the low-fired brown or green lead glazes discussed above. Thus, it was once assumed that the sudden appearance of lead glazes in the late middle Western Han period might be attributable to the influence of glazed wares from Western Asia that were transmitted to China at the time of Han Wu Di, who sent envoys to the West to establish relations and trade. It is widely known that, as early as the Assyrian empire and the Achaemenid empire of Persia, numerous types of glazed ceramic wares had appeared in the area of such modern West Asian countries as Iran and Iraq. By the time of the Parthians, who were contemporaneous with the Han dynasty, vessels with monochrome glazes in green or brown had gained currency; green glazes especially were often used for ceramic coffins. This Parthian glazed ceramic ware was also low-fired, and in appearance it bears a strong resemblance to that of the Han dynasty wares. The "Xiyu Section" of the *Hanshu* relates that after the Han envoys crossed Central Asia and established ties with Parthia, Parthian articles of various types flowed into China. Thus, the appearance of lead glazes in the late middle Western Han period might be the result of influence from Parthian glazed wares. However, another school of thought believes that the Chinese must have invented lead glazes first, without reference to West Asian glazed wares, even though the latter and the Han dynasty lead wares are both lowfired; this is because the components of the glazes are not identical and the appearance of Chinese lead glazes

might date as early as the Warring States period.⁹ But, from a great number of Warring States and Western Han period tombs excavated since the founding of New China, we know that lead glazed vessels may not necessarily have appeared so early as the Warring States period. An answer to the question of whether or not West Asian glazed ceramics and Han dynasty lead glazed wares are physically identical will have to await further research and analysis. Archaeological excavations have revealed that, although lead glazes continued to be used through the Wei, Jin, and succeeding periods, their quality declined significantly. The art of lead glazing was revived in the Tang dynasty, whereupon great progress was made and glorious achievements attained.

Hard pottery pieces coated with a thin layer of glaze have been discovered in many places in the South, but this glaze is quite different from the lead glazes of the Northern glazed wares. Whether yellow or green, the color is always light. The pieces are always very high-fired, and they belong to the family of celadon (or light green) glazed wares. Moreover, *ping*, or bottles with two ears or handles, have been found in late Western Han tombs in such places as Changsha in Hunan Province and Haizhou in Jiangsu Province.¹⁰ The clay body of these is purplish brown in color and extremely hard. The green glaze on the neck and shoulder portions of this *ping* tends to be relatively thick. These pieces also belong to the Southern group of glazed wares (fig. 198). In addition, several identical glazed bottles, perhaps imported from the South, have been discovered in late Western Han tombs in Luoyang (fig. 199).¹¹ These hard-bodied glazed potteries, which were popular mainly in the South, are most certainly related to celadon glazed stonewares of the Wei and Jin periods. All characteristics considered, however, there is still a great distance between the glazed hard potteries of the South and the celadon glazed stonewares.

Celadon It was formerly believed that true celadon, or green-glazed stoneware, first appeared in the state of Wu during the Three

Kingdoms period and that the various types of green-glazed stoneware vessels unearthed from tombs in the area of Wuchang and Nanjing, the capital area of the state of Wu—dating to A.D. 227, 251, and 265 are standard examples of that ware.¹² From recent investigation, excavation, and research, however, we now believe that green-glazed stoneware vessels had already appeared as early as the late Eastern Han period, first in Zhejiang Province in the region of Shaoxing and Shangyu. Archaeologists have investigated many old kiln sites in the Shangyu area, among which are a number that belong to Eastern Han; their shape and structure are those of the so-called dragon kilns. In this type of kiln, which was built on the side of a small hill, the kiln chamber is low and narrow, but quite long, a shape advantageous in circulating the air, and thus, in elevating the temperature. In the shreds unearthed at the kiln sites, the glaze is light green in color, and after careful scrutiny it shows all the characteristics of standard stoneware. A complete *sixiguan*—that is, a *guan* with four loops for tying a cord—from the late Eastern Han period was obtained near one of the kiln sites, and it is typical of the green-glazed stoneware of the period.¹³ Similar *sixiguan* have also been recovered from late Eastern Han tombs in Luoyang, Henan Province, and in Boxian, Anhui Province;¹⁴ their shape implies that they also belong to the Southern group. Preserved in tombs of relatives of Cao Cao discovered in 1977 in Yuanbaokengcun and Dongyuancun, Boxian, are a large number of greenglazed stoneware vessels characterized by the *sixiguan*. Their shiny glaze and the absence of impurities in their bodies indicate that by late Eastern Han the technique of manufacturing green-glazed stoneware vessels was already quite advanced.¹⁵ In summary, the development of green-glazed stoneware must be considered another important mark of the creativity of the Han dynasty potters.

Pottery Types Another distinguishing characteristic of Han dynasty ceramics is the extreme variety of articles produced. In general, pottery containers of the Han dynasty can be divided into two categories. The first category—vessels derived from bronze shapes—

includes the *ding*, *dou*, *zhong*, *fang*, and other such vessels; in general these shapes gradually declined in importance during the course of the Han dynasty. The second category—articles for daily use—includes the *weng*, *guan*, *ping*, *he*, *pen*, *wan*, and other such vessels; the types are varied and the shapes complex. In addition to these, there are a number of pottery articles generally for daily use, but not for food or drink and not for storage, articles such as tables, lamps, censers, and money jars (figs. 200-02). From the middle Western Han period onward, one of the most important characteristics of the potter's art was the prevalence of various types of pottery *mingqi*, or burial articles, for funerary use—a reflection of changes in burial customs. The variety of types and the quantity of objects were staggering. The first to appear were models of granaries and stoves. They were already present in tombs of the early Western Han period, but they gained widespread popularity after middle Western Han. Other models were also made—water wells, millstones, pigsties, towers, buildings for grinding grain, paddy fields, and fish ponds—as well as images of such animals as pigs, sheep, horses, dogs, chickens, and ducks. In short, almost any object that could be named was likely to have been crafted in clay. As time progressed, the types became more numerous, especially after Eastern Han. Pottery figurines were also buried in great numbers. These pottery burial articles were often exquisitely crafted; for example, a number of lively, painted pottery figures on horseback have been unearthed from a Western Han tomb in Yangjiawan in Xianyang, Shaanxi Province.(fig. 203).¹⁶ And pottery dogs and sheep (from an Eastern Han tomb in Baiquancun, Huixian, Henan Province) were sculpted with such verisimilitude that they must be called masterworks of the sculptor's art(figs. 204, 205).¹⁷

Ceramic Industry The most widely used articles of daily life were pottery. They are comparatively easy to make and most must have been made by small, privately operated workshops. But, during the Han dynasty, many local governments also owned their own workshops and pottery articles from them often have stamped marks.

To give some examples: vessels stamped "He ting" and "He shi," unearthed from the site of the Han city of Henanxian in Luoyang (fig. 206); vessels stamped "Shan ting" and "Shan shi," unearthed from Han tombs in Shanxian, Henan Province (figs. 207, 208); vessels marked "Han ting," recovered from Han dynasty sites in Handan, Hebei Province (fig. 209); and vessels stamped "An ting," unearthed from the site of the Han city at Anyi in Xiaxian, Shanxi Province (fig. 210).¹⁸ From excavations at the site of the Han city of Henanxian we have learned that those vessels marked "He ting" are earlier and belong to early Western Han, while those marked "He shi" are later, belonging to late Western Han.¹⁹ The characters "ting" and "shi" in the marks refer respectively to the craft and commercial districts of the cities, which in Han times were under the supervision of the local governments. The marks just discussed indicate that these ceramic vessels were made by workshops belonging to the government agencies which supervised crafts and commerce.²⁰

A piece of clay with an impressed seal reading "An cheng tao wei" provides the best insight into the government-controlled workshops (fig. 211).²¹ The characters on the seal indicate that at that time Anchengxian in Runan Jun (modern Zhengyang, Henan Province) had an official solely responsible for supervising the ceramic industry.²² It is important to note that the last character in the seal, "wei," is a military title. That a military official was supervising the ceramic workshops most probably indicates that in the government-operated kilns many workers were convicted criminals who had been organized for work along military lines.

Bricks The manufacture of bricks and pottery roof tiles was an important aspect of the Han dynasty ceramic industry. In ancient China, the earliest bricks were exceptionally large, most of them measuring more than a meter in length. The interior of these bricks is hollow, so they are called *kongxinzhuan*, that is, "hollow core bricks," or simply "hollow bricks" (fig. 212). They began to appear in the late Warring States period and were limited in area of use to the Central

Plains. They were not used in building houses, but rather in constructing tombs. Hollow bricks were most commonly used in the Western Han period. More than half of the many Western Han tombs excavated in such areas as Baisha in Yuxian and Shaogou in Luoyang (both in Henan Province) were constructed with these hollow bricks.²³ Throughout the Western Han, hollow bricks were used in tombs only, their use not being further extended. And the area in which they were commonly used was also still limited to the region including present-day Henan, central Shaanxi, and southern Shanxi. Although the great majority are rectangular, a few of the Western Han hollow bricks are triangular or long and strip-like, convenient shapes for constructing tomb entrances. The decorative motifs on the bricks were designed to enhance the tomb interiors, and they were impressed one by one with a stamp. In addition to geometric patterns, the motifs include numerous varieties of plants and animals as well as human figures, horses and carriages, and buildings.²⁴ With the coming of Eastern Han, the use of hollow bricks suddenly declined and eventually died out.

True bricks appeared in early Western Han. They were one of the Han dynasty's great contributions to architecture. In contrast to the hollow bricks discussed above, they were all small, solid, and rectangular or square, the length usually ranging between 20 and 30 cm. We call them "small bricks" to distinguish them from the large, hollow bricks discussed above (fig. 213). They were used in all types of buildings, the rectangular bricks predominating over the square ones. Square bricks were used only for paving floors (fig. 214). In order to meet architectural needs, the size of the bricks had to be regularized. The length, width, and thickness of the rectangular bricks followed a standard formula, the width being one-half the length and the thickness one-fourth the width. Once the small bricks appeared, they were used extensively, quickly spreading to all parts of the country. As the findings from excavations at the Han city site at Henanxian in Luoyang reveal, small, rectangular bricks were used in constructing all types of dwellings and granaries and were also used in

lining the walls of water wells (fig. 215).²⁵ At the Han site of Chang'an in Xi'an, they were used in constructing underground water drain holes.²⁶ In the Han dynasty, they were not, however, used for building city walls. In the Yellow River valley, small bricks were widely used in constructing tomb chambers as early as middle and late Western Han period. And by Eastern Han, their use in constructing tomb chambers had already spread to all parts of the country. With the introduction of small bricks, arch-building technique also became extensively used. Most rectangular bricks can be used in making arches. But in order to reinforce the top of the arch, Han builders used *xiexingzhuan*, that is, "wedge-shaped bricks" or voussoirs, and *zimuzhuan*, or bricks with mortise and tenon arrangements, both of which were used only in constructing arches (figs. 216, 217).²⁷ Most of the rectangular bricks are undecorated, but there are some which have decorative motifs stamped on their sides. The patterns are usually geometric, though other patterns do occur. Most of the square bricks used in paving floors have stamped geometric patterns on their tops. In addition, in Eastern Han pictorial bricks, called *huaxiang zhuan*, were also in use. Both square and rectangular bricks sometimes exhibit figural motifs showing scenes of Han social life and daily work. These were mainly used in constructing and decorating tomb chambers, and, in general, their use was limited to Sichuan Province (fig. 218).²⁸

Tiles In China, pottery roof tiles, or *wa*, were in use long before bricks. Archaeological excavations have shown that pottery roof tiles had already appeared as early as the early Western Zhou period. A great many were recovered at the site of Kexingzhuang in the vicinity of Xi'an.²⁹ In the Spring and Autumn and Warring States periods the production and use of roof tiles spread rapidly; furthermore, the tiles were distinguished according to function into flattened ones and cylindrical ones. The flattened ones were placed on the lower level and the cylindrical ones overlapped them on top. In the Warring States period, the faces of the cylindrical tiles (also called eaves tiles, or *wadang*) usually were semicircular. Some of the faces were left

plain, but others were decorated. Each of the seven states of that period had its own distinctive style of decorating eaves tiles.

By the Han dynasty, the manufacture and use of pottery roof tiles had progressed greatly and technical improvements had occurred. Both flattened and cylindrical tiles were becoming regularized in shape as well as in stamped, cord-pattern decor. Finds from the excavations at the Han city site at Henanxian reveal that in early Western Han many eaves tiles were semicircular, but from the middle Western Han period onward semicircular tiles were gradually replaced by ones with full, circular faces.³⁰ During the Han dynasty, decoration on the faces of eaves tiles became uniform throughout China. From the great metropolitan cities of Chang'an and Luoyang to the small towns on the distant frontiers, the geometric patterns on the roof tiles all came to follow the *juanyun* or "scrolling cloud" motif, almost without exception (figs. 219-22). Moreover, from the Western Han period onward auspicious phrases such as "Chang le wei yang" ("Profound happiness without end"), "Chang sheng wu ji" ("Long life without limit"), "Qian qiu wan sui" ("A thousand autumns, ten thousand years" or "Everlasting life"), and "Yi nian wu jiang" ("A hundred million years without limit") were impressed on tiles as decoration (figs. 223-26). On eaves tiles found in the towns near the northern frontier other phrases such as "Chanyu tian jiang" ("Heavendescended khan") and "Chanyu he qin" ("The khan in quest of marriage with Han") were applied (figs. 227, 228).³¹ In Xihai Jun (a commandery established by Wang Mang of the Xin dynasty) in the vicinity of Qinghai Lake, eaves tiles have been found with impressed characters reading "Xihai an ding" ("Pacified Xihai") (fig. 229).³² During the reign of Wang Mang, designs of the so-called *sishen* or Four Deities—the Green Dragon, the White Tiger, the Red Bird, and the Black Turtle—appeared on eaves tiles intended for buildings of a ceremonial nature.³³

It is important to note that in the Han dynasty eaves tiles with impressed character decoration were used for palaces and government

buildings in the capital Chang'an, and in the *san fu*—the three military districts contiguous with and immediately surrounding the capital (namely, Jingzhao, Fengyi, and Fufeng). The characters used in the decoration indicate the names of the buildings. Many examples have been found. In the Shanglinyuan garden complex in the suburbs of Chang'an, for example, eaves tiles were stamped with characters reading "Shang lin" (fig. 230). In the Yidang Hall and Zhefeng Tower of the Jianzhang Palace west to Chang'an, eaves tiles were stamped with characters reading "Yidang wan nian" ("Yidang ten thousand years") and "Zhefengque dang" ("Eaves tile of Zhefengque") respectively (figs. 231, 232). In the Huangshan Palace in Huailixian, You Fufeng, eaves tiles were stamped "Huangshan" (fig. 233). In the Lanchi Palace in Weichengxian, You Fufeng, eaves tiles were stamped "Lanchigong dang" ("Eaves of Lanchigong") (fig. 234). And in the Zongzheng government building, within the city of Chang'an, eaves tiles were stamped with "Zongzhengguan dang" ("Tile of the Zongzheng official [building]") (fig. 235).³⁴ The examples cited above indicate that at that time the government had established special ceramic workshops to supply bricks and roof tiles for use in palaces and government buildings. In the excavations of the Han capital at Chang'an, there were found a number of eaves tiles impressed with characters reading "Dusikong wa" ("Tile of Dusikong") (fig. 236), as well as tiles impressed with characters reading "Dusikong," "Baocheng Dusikong," "Youkong," and "Du Jian Ping sannian" (a date equivalent to 4 B.C.), "Du Yuan Shou ernian" (equivalent to 1 B.C.), and "Du Yuan Shi wunian" (equivalent to A.D. 5) (figs. 237-39). Here, the character *du* is an abbreviation of Dusikong, the name of a government bureau which was changed to "Baocheng dusikong" for a brief period during the reign of Wang Mang. It can be concluded, therefore, that the manufacture of these tiles was supervised by officials from the Dusikong bureau of the Zongzhengqing and by officials from the Zuosikong and Yousikong of the Shaofuqing.³⁵ According to the *Hanshu*, the Dusikong, Zuosikong, and Yousikong were bureaus in

charge of both construction and convicted criminals. Since these bureaus supervised the manufacture of bricks and tiles, the evidence from the *Hanshu* reveals that, in the Han dynasty, numerous prisoners were employed in the government-operated ceramic workshops.

柒 汉代的陶器

在讲述汉代的制陶业时，首先要提到的是，自商周以来的泥质灰陶系统的陶器，在战国时代的基础上，又向前发展了一步，达到了很高的水平。如果说此后历代的灰陶制作技术基本上是停留在汉代已经达到的水平上，这也并不是过于夸张之辞。汉代灰陶烧制技术的提高，表现在器物都呈青灰色，火候均匀，烧成温度约在摄氏1000度以上，质地坚实，同时也表现在大型器物的普遍增多。关于后者，洛阳等地汉墓中的陶瓮往往高达五十余厘米（图173、174），满城汉墓中的陶酒缸高达七十余厘米，便是明显的例证。¹陶质的坚硬和大型器物的增多，是与陶窑的改进分不开的。1956年在河北省武安县的午汲古城遗址中发掘了二十余座战国、西汉和东汉的陶窑，可以看出，汉代的窑与战国的窑相比，窑室的体积增大，火道加长，烟道的设计改善，就说明了以上的问题（图175—177）。²

在制坯方面，汉代凡属圆形的灰陶器，无不采用轮制的方法。器物的形状规整，表面比较光滑，除了随着陶轮的旋转而刻划的少许平行的弦纹以及一些局部的几何形划纹和印纹以外，一般都没有什么花纹，基本上可以说是素面的（图178—180）。西汉前期有少数器物如瓮、罐之类偶而还带有一些不甚明显的绳纹³，但到了西汉中期以后，带有绳纹的陶器几乎可以说是不复存在了。自新石器时代以来流行达三千余年之久的绳纹终于绝迹（除瓦以外），这不能不说是汉代陶器的重要特点之一。

在各地汉墓中，往往可以发现一些绘有彩色花纹的陶器。这些陶器也属灰陶，彩色的花纹是在陶器烧成以后才绘描的。例如，洛阳汉墓中发现的一些陶壶和满城汉墓中发现的许多陶壶和陶盆⁴，色彩鲜艳，绘描精致，都是优美的艺术品（图181、182）。但是，由于花纹是器物烧成以后才绘描的，所以易于脱落，而且除了在坟墓中发现的以外，在居住址里没有发现过这种彩绘的陶器，因而可以肯定它们是专为随葬而作的。此外，汉代还有在灰陶的表面涂漆，以模仿漆器的。山东临沂银雀山汉墓、安徽阜阳双古堆汉墓和湖北云梦大坟头汉墓中的许多灰陶器，涂有浓厚的黑色或褐色漆，很像漆器（图183—185）。⁵大坟头汉墓的

一件涂漆陶壶在该墓的“赠方”中被称为“髹画瓦瓮”，便是例证。

在器形方面，上述西汉前期的少数瓮、罐等带有绳纹的器物有时还有系圆底的（图186）⁶，从西汉中期以后，除了三足器和圈足器以外，几乎所有的陶器都是平底的。从新石器时代到商代和西周一直流行的陶鬲，在汉代之前早已绝迹。战国时代流行的陶豆，在西汉初期还偶有所见，但不久就消失了。陶钫是战国晚期才开始出现的，西汉时很流行，但到东汉也就极少见了。无论是西汉或东汉，陶鼎和陶锺都是最常见的仿铜的陶器，但到了魏晋以后，随着青铜器的衰落，终于近于绝迹了。此外，战国末年出现的一种造型奇特的“鸭蛋壶”，主要流行于秦代和西汉前期，西汉中后期以后也就消失了（图187）。其他各种属于泥质灰陶系统的器物，如瓮、罐、盒、樽、盆、碗之类，其形态也随着年代的推移而不断演变。总之，汉代的灰陶，种类繁多，用途各异，它们不仅流行于黄河流域和北方地区，而且普及于全国，可以说是当时陶器的主流。

但是，另一方面，必须指出的是，在长江以南，包括广东、广西、湖南、江西、福建、浙江及江苏南部等广大地区，除了上述的灰陶以外，还普遍存在着另一类陶器，称为硬陶。这种硬陶，是用当地的一种密度较大、粘性较强的粘土制成，与灰陶相比，烧制火候更高，陶质更坚硬。器物的表面往往拍印着细密的方格纹，或刻划有水波形纹、锯齿形纹等等，与上述基本上是素面无纹的灰陶迥然相异（图188—191）。器物的种类有瓮、罐、壶、盒、碗等，与灰陶系统的各种陶器相比，它们的器形也别具风格。例如，广州地区有一种壶，称为匏壶，其形状有如匏瓜（图192）；广州、长沙等地有一种“四联罐”或“五联罐”，系由四个或五个小罐互相接合而成（图193）。有许多器物，在肩部或腹部附有系绳用的钮；也有一些小型的盒和罐，在底部附有低矮的三足（图194）。⁷总之，从陶质、火候、纹饰和器形等各个方面看来，可以认为，长江以南广大地区的这种硬陶是继承了当地自新石器时代晚期以来的所谓“几何印纹硬陶”的余绪，在汉代陶器中自成一个系统。

汉代制陶业的一项新的发明，是一种浓厚的棕黄色和绿色的釉陶。它们的开始出现，是在西汉的中后期，地区主要是在陕西省的关中和河南省的洛阳一带⁸，但以后发展很快，到西汉后期即已相当盛行，流行的地区也有所扩大。东汉时，这种釉陶不仅已普及到整个黄河流域和北方地区，甚至在长江流域也颇有所见。一般说来，棕黄色的釉陶出现较

早，绿色的釉陶出现较晚，但后者在东汉时大量流行，又远较前者为普遍。这种浓厚的棕黄色和绿色的釉陶，所用釉药中含有大量的氧化铅，烧制的火候并不高，仅约摄氏800度左右，所以被称为“铅釉”或“软釉”，由于主要流行于黄河流域和北方地区，因而在这里也可称为“北方釉陶”。它们在器形上的种类，有鼎、锺等仿铜的容器，也有仓、灶、井、楼阁等模型及鸡、犬等动物偶像（图195—197）。由于这种釉陶的内胎（一般呈砖红色）并不很坚实，釉也易于脱落或变质，特别是由于它们只是作为随葬品而存在于坟墓中，在居住址里极少发现，所以使人怀疑它们可能是专为随葬而作，不是真正的实用器。

应该指出的是，虽然中国自商代和西周以来即有釉陶，但所施的釉都属浅色的青釉，烧成温度甚高，与上述棕黄色和绿色的低温的铅釉并不相同。因此，曾经有一种看法认为，铅釉在西汉中后期的突然出现可能与汉武帝时通西域，加强了中国与西亚的交通和贸易，从而受到西亚地区釉陶的影响有关。如所周知，在西亚的伊朗、伊拉克等地，早在亚述帝国和波斯的阿契美尼德王朝时期，就盛行各种釉陶制品。到了与汉代同时的安息王朝时，则流行绿、褐等单色的釉陶器，甚至在陶制的棺材上也多施绿色釉。安息的这种釉陶，亦系低温烧成，从外表看来，与汉代的铅釉很相似。据《汉书·西域传》记载，汉通西域以后，与安息的交往频繁，安息的各种事物颇有传入中国的。因此，可以认为，铅釉在西汉中后期的出现，正是由于受到安息釉陶影响的结果。但是，也有不同的意见认为，西亚的釉陶与汉代的铅釉虽然同属低温烧成，但釉的成分有所不同，而中国铅釉出现的年代则又可以上溯到战国，从而认为铅釉为中国所首创，与西亚的釉陶无关。⁹其实，从新中国成立以来对大量的战国和西汉墓葬的发掘来看，铅釉陶器的出现未必能早到战国时代。至于西亚的釉陶与汉代铅釉的性质是否相同，则需要进一步作分析研究。考古发掘工作表明，到了魏晋以后，陶器上施铅釉的工艺虽然继续存在，但和汉代相比，显然是衰落了。

与“北方釉陶”所施的“铅釉”不同，在南方各地发现的各种硬陶上往往有一层薄薄的釉，或黄或绿，颜色都很浅，烧成温度甚高，属于青釉的系统。此外，在湖南长沙、江苏海州等地的西汉后期墓中有一种附有双耳的陶瓶，胎壁呈紫褐色，甚坚硬，颈部和肩部施较厚的绿色釉，亦属南方系统的釉陶（图198）。¹⁰在洛阳的西汉晚期墓中也发现了同样的釉陶瓶（图199），估计可能是从南方传来的。¹¹这些主要流行于南方地

区的硬质釉陶，与魏晋时期的青瓷有一定的渊源关系，但从各方面的条件看来，它们与青瓷器之间还存在着很大的差距。

以往认为，真正的青瓷器是在三国时代的吴地开始出现的，在吴的首都武昌和南京附近发现的有黄武六年（公元227年）、赤乌十四年（公元251年）、甘露元年（公元265年）等纪年的墓中所出土的各种青瓷器便是典型的代表。¹²但是，经过近年来的调查、发掘和研究，可以认为，早在东汉的后期，首先是在浙江省的绍兴、上虞一带，已经出现了青瓷器。考古工作者在上虞地区调查了许多古窑址，其中有不少是属于东汉时期的，它们的形制和结构属于所谓“龙窑”。这种窑是利用山坡的斜面筑成，窑室较狭、较低，但却很长，有利于通风，从而使温度提高。窑址中出土的瓷片，釉呈淡青色，经鉴定，各方面都符合瓷器的标准。在窑址附近采集的一件东汉晚期的完整的“四系罐”，便是当时典型的青瓷器。¹³类似的“四系罐”，在河南洛阳和安徽亳县的东汉后期的墓中也有发现¹⁴，从它们的器形看来，似乎也属南方的产品。特别是1977年在亳县元宝坑村和董园村发现的曹操的宗族墓中，存在着以四系罐为代表的大量青瓷器，釉色光亮，质地纯净，说明了东汉晚年制造青瓷的技术已经相当成熟。¹⁵总之，青瓷器的开始出现，是汉代制陶业的又一重要的创造。

汉代制陶业的特点，还表现在器物种类的极其多样化。汉代作为容器的陶器，大体上可分两类。一类是鼎、豆、锺、钫等模仿铜器的器物，总的说来，它们在汉代是在逐渐趋向衰落。另一类是瓮、罐、瓶、盒、盆、碗等日常用器，种类繁多，器形复杂。除此以外，还有不少陶器，如案、灯、熏炉以及扑满之类，既非饮食器，亦非贮藏器，而是一般的生活用具（图200—202）。在制陶工艺上最富特色的是，随着丧葬习俗的改变，在西汉中期以后，还盛行制作各种专为随葬用的陶质明器，种类之多，数量之大，达到了惊人的程度。最初出现的是仓和灶，它们在秦和西汉前期的墓中即有所见，但普遍流行则在西汉中期以后。其他诸如井、磨、猪圈、楼阁、碓房、农田和陂塘等模型，以及猪、羊、马、狗、鸡、鸭等动物偶像，应有尽有，不一而足，时代越晚，特别是东汉以后，种类越多。有些地区的汉墓中有一种小型的陶瓶，外形像泉，过去曾被误认为“三代器”，其实是汉代特有的一种随葬陶器。各式各样的陶俑，亦被大量制作以随葬。这些陶质的明器，有时制作得很精致。例如：陕西咸阳杨家湾西汉墓中的大量骑马陶俑，造型生动，并

施彩绘（图203）。¹⁶河南辉县百泉村东汉墓中的陶狗和陶羊，塑造得十分逼真，堪称塑像艺术中的杰作（图204、205）。¹⁷

陶器是日常生活中最普遍的用品，制作又比较容易，所以应该多为私营的小规模的手工业作坊所制造。但是，在汉代，各地的官府也普遍经营陶器制造业。由各地官府经营的手工业作坊，所制陶器往往印有戳记。例如：洛阳汉河南县城遗址出土的陶器印有“河亭”、“河市”字样（图206），河南陕县汉墓中出土的陶器印有“陕亭”、“陕市”字样（图207、208），河北邯郸汉代遗址出土的陶器印有“邯亭”字样（图209），山西夏县安邑汉城遗址出土的陶器印有“安亭”字样（图210），等等。¹⁸根据汉河南县城遗址的发掘，可以认为，印有“河亭”字样的陶器年代较早，属西汉前期，印有“河市”字样的陶器年代较晚，属西汉晚期。¹⁹戳印中的“亭”和“市”的意义是相同的，是指汉代各地城市中的手工业和商业区，它们是由官府来管理的。上述的各种戳印，说明了这些陶器是由各地官府中主管手工业和商业的机构所属的作坊制作的。²⁰

最能说明汉代各地存在着官营的制陶手工业的，是一块传世的“安城陶尉”的封泥（图211）。²¹它说明了当时汝南郡的安城县（今河南省正阳）设有专门管理制陶业的官吏。²²值得注意的是，“尉”是一种武官的职称。由武职的官吏来主管制陶业，可能是由于在官营的制陶手工业作坊中从事劳动的主要是许多被判刑的刑徒，他们大概是按照军事性的编制被组织起来的。

制砖和造瓦，是汉代陶业的一个重要的方面。在中国古代，最初的砖是一种体积庞大的特殊的砖，长度一般都在一米以上，内部是空的，所以称为空心砖（图212）。它开始出现于战国晚期，地区限在中原，其用途主要不在于建筑房屋，而在于造墓。西汉是空心砖的极盛时期，在河南禹县白沙和洛阳烧沟等地发掘的大量的西汉墓，几乎有半数是用这种空心砖建筑的。²³但是，在汉代，除了筑墓以外，空心砖的用途并未被推广，它的流行地区亦仍限于河南省及陕西省的中部、山西省的南部一带。除了大多数是长方形的以外，西汉的空心砖也有少数是三角形或长条状的，以便砌造墓门。砖面上的花纹是作为墓室的装饰而设计的，系用戳印逐个打印，纹样除几何图案以外，还有各种动物、植物，以及人物、车马和房屋，等等。²⁴到了东汉，空心砖突然衰落，乃至绝迹。

在西汉前期，真正的砖出现了。这是汉代在建筑方面的一大发明。

与上述的空心砖相比，它们都系小型、实心，长方形或正方形，长度一般从二十多厘米到三十多厘米不等，这里称之为“小型砖”（图213），以区别于上述庞大的空心砖。小型砖用于各种建筑物，大量使用的是长方砖，正方砖只用于铺地（图214）。为了符合建筑上的要求，砖的尺寸必须整齐划一。长方砖的长、宽、厚，都按一定的比例，一般说来，长与宽是二比一，宽与厚多为四比一。小型砖一经出现，就被广泛使用，迅速普及到全国各地。以洛阳的汉河南县城遗址的发掘所见为例，小型长方砖用于建筑各种住房和粮仓，也被用来砌筑水井（图215）。²⁵在西安的汉长安城遗址，则可以看到它们被用以砌筑排水的涵洞。²⁶但是，在汉代，它们还没有被用来建筑城墙。在黄河流域，早在西汉中后期，就盛行用小型砖建筑墓室。到了东汉，用它们来筑造的砖室墓已普及到全国各地。随着小型砖的出现，发券的技术也就被广泛使用。一般的长方砖都可以用以发券，但为了增加券顶的强度，也有专门用于发券的“楔形砖”和“子母砖”（图216、217）。²⁷长方砖以素面的为多，但也有不少在侧面印有花纹，纹样以几何图案为主，有时也有其他各种图纹。铺地用的正方砖，则多在正面印几何图案。此外，东汉时还有一种“画像砖”，或为正方形，或为长方形，砖面上印着各种有关社会生活和生产活动的图纹，主要是用于构筑并装饰墓室，流行的地区主要限于四川（图218）。²⁸

在中国，瓦的使用比砖早。根据考古发掘，早在西周初期就有了瓦，在西安附近的客省庄遗址中就有大量的发现。²⁹到了春秋战国时期，瓦的制作和使用迅速推广，并已按其用途分为板瓦和筒瓦，前者铺在下面，后者覆在上面。在战国时代，筒瓦前端的瓦当多为半圆形的，有的为素面，有的有花纹。当时的七个主要国家，瓦当上的花纹各有特点，互不相同。

到了汉代，瓦的制作和使用又进一步得到了发展，制瓦的方法也有所改进。无论是筒瓦或板瓦，形状都比较规整，表面上拍印的绳纹也显得比较整齐。根据洛阳汉河南县城的发掘，在西汉前期，除了圆形的瓦当以外，仍有不少瓦当是半圆形的；到了西汉中期以后，半圆形的瓦当才逐渐消失。³⁰在汉代，瓦当上的花纹也统一了。从长安、雒阳等大城市到边远地区的小城镇，瓦当上的几何图案几乎都是属于所谓卷云纹，绝少例外（图219—222）。用“长乐未央”、“长生无极”、“千秋万岁”、“亿年无疆”等吉祥文字作为瓦当上的装饰，也是从西汉开始的（图

223—226)。北方边境城镇所用的瓦当有“单于天降”、“单于和亲”的文字(图227、228)。³¹青海湖附近的西海郡(新莽时所置)所用的瓦当则有“西海安定”的字样(图229)。³²在新莽时期,还流行用“青龙”、“白虎”、“朱雀”、“玄武”的所谓“四神”的图纹作为瓦当上的装饰,这种瓦当主要用于礼仪性的建筑物上。³³

值得注意的是,在西汉首都长安城及三辅地区的宫殿、官署所用的瓦当,往往用文字作为装饰,而这些文字正是宫殿和官署的名称。例如:长安郊区上林苑中的各宫观用“上林”瓦当(图230),长安城西建章宫中的骀荡殿和折风阙分别用“骀汤万年”、“折风阙当”瓦当(图231、232),右扶风槐里县的黄山宫用“黄山”瓦当(图233),右扶风渭城县的兰池宫用“兰池宫当”瓦当(图234),长安城内的宗正署用“宗正官当”瓦当(图235),等等。³⁴这说明了当时的政府设有专门的制陶作坊,制造专供宫廷和官署使用的砖瓦。在长安城遗址的发掘工作中,发现了许多印有“都司空瓦”文字的瓦当(图236),并发现在大量的瓦片上印着有“都司空”、“保城都司空”、“右空”及“都建平三年”、“都元寿二年”、“都元始五年”等字样(图237—239) (“都”是都司空的简略)的戳记,充分说明了这些瓦的制作是由宗正的属官“都司空令”(新莽时改称“保城都司空”)和少府的属官“左司空令”、“右司空令”所主管。

³⁵《汉书·百官公卿表》说“(宗正)属官有都司空令丞”。颜师古注引如淳曰:“律,司空主水及罪人。贾谊曰,输之司空,编之徒官。”可见“都司空”、“左司空”和“右司空”等管理工程的机构同时也是管理刑徒的机构,由它们主管砖瓦的制造正说明了汉代官营的制陶手工业作坊中使用大量的刑徒作为劳动力。

CHAPTER 8 TOMBS—I

Han dynasty tombs have been encountered in the course of industrial or agricultural construction as well as during archaeological investigations and excavations with great frequency. This stems from several factors. First, the Western and Eastern Han dynasties lasted for more than four hundred years. During that time China was a unified empire, its political situation relatively stable, its economy relatively prosperous, and its population dense. Han landowners and officials were fond of furnishing their graves richly; consequently, in their graves there are large numbers of many kinds of objects. Burial chambers, furthermore, were often built of brick and stone, which helped to preserve the remains. We estimate that since the founding of New China, at least ten thousand Han dynasty tombs have been found as a result of archaeological work throughout the country. These discoveries have made possible a relatively good understanding of the mortuary institutions and customs of the Han dynasty.

Characteristics of Han Tomb Construction Compared with tombs of previous periods, Han dynasty tombs have many distinctive features. Prior to the Han, during the Neolithic, Shang, and Zhou periods, tombs were mostly placed in rectangular earthen pits. Of varying sizes and depths, these pits were excavated from the ground downward and are referred to as "vertical pits." Beginning in middle Western Han in the Yellow River valley, the custom originated of digging the burial chamber laterally or horizontally underground, resulting in "horizontal pits." In the Western Han period, large hollow bricks were used to build the burial chamber, mainly in the Central Plains area. In Eastern Han, throughout China, in the Central Plains and in the northern and the southern border regions, small bricks were universally used to build a burial chamber with arches and a

domed top. Tombs of stone began in late Western Han. In addition, during both Western and Eastern Han, horizontal burial chambers were excavated into mountain cliffs in some regions. In short, the principal formal and structural features of Han dynasty tombs that distinguish them from those of earlier periods are, first, the use of horizontal pits for burial and, second, the use of bricks and stones for the construction of the tomb chamber. These features came from an effort to imitate the houses of the living.

It should be noted that such changes in tombs began in the middle Western Han period, starting in the Yellow River valley and then spreading throughout the country. Previously, in early Western Han, members of the ruling class were still entombed in the vertical pit graves with wooden encasements that continued from the Warring States period. In fact, this older style of tomb, known as the "vertical pit-wooden chamber grave," continued to be built into late Western Han or even early Eastern Han in the Yangtze River valley and in the southern and northern border regions.

Examples of these vertical pit-wooden chamber graves of early and middle Western Han are the tombs found at Mawangdui (Changsha), Fenghuangshan (Jiangling), and Dabaotai (Beijing). Construction of the coffins and wooden chambers in these graves still followed the older customs of the Zhou dynasty. Both *Zhuangzi* ("Tianxiapian") and *Xunzi* ("Lilunpian") describe burial caskets of varying degrees of elaborateness, as follows: "The caskets of the emperor are of seven layers; of the feudal lords, five layers; of the Da Fu class, three layers; and of the Shi class, two layers." Han tomb number one of Mawangdui was the tomb of the wife of Li Cang, Marquis of Dai, and her caskets consisted of four coffins and one wooden encasement, the prescribed number for a feudal lord (fig. 240). In Han tomb number 168 at Fenghuangshan in Jiangling was buried a certain Sui Shaoyan, a Da Fu of the fifth rank. His rank was the ninth grade on a scale of twenty, corresponding to that of a county magistrate, and his grave contained two coffins and one wooden

encasement (fig. 241). Tomb number 1 of Dabaotai in Beijing was probably the tomb of the Prince of Yan. What survives of his caskets appears to be the remains of five coffins and two outer encasements, a burial which corresponds to the grade of emperor, a full grade higher than a feudal lord (fig. 242). It goes without saying that rules for burial according to rank could not have been strictly followed at all times. Li Cang, the Marquis of Dai, who was buried in tomb number 2 of Mawang dui, was himself buried within two coffins and one outer encasement.¹ In the tombs of Dabaotai in Beijing and Xianjiahu in Changsha, a wooden structure named "Huang chang ti cou" was built outside the chamber.²

Good examples of the new horizontal pit graves that appeared in the middle Western Han dynasty are the tombs of Prince Jing of Zhongshan, found in Mancheng, Hebei, and of Prince Lu of Qufu in Shandong.³ In both cases the tomb chambers were caves dug into cliffs, and the caves were divided into several compartments, such as side chambers, frontal hall, and rear hall. In the tomb of Liu Sheng, Prince Jing of Zhongshan, the southern side chamber was for horses and carriages (fig. 243). The northern side chamber was for storage, and large numbers of pottery vessels were placed there (fig. 244). The front hall is of large dimensions, and in it were placed drapes and the principal grave goods (fig. 245). The rear hall was an interior room where the coffin was placed. Within the front hall and the side chambers, houses made of timber had been erected, with tiles on the roofs. In the rear hall, stone slabs had been used to build another house which had two stone doors. In short, the form and the structure of the tomb imitated residential architectures above ground: thus the term, "underground palaces" *dixia gongdian* (fig. 246).⁴ In this new kind of tomb, the coffins also assumed new settings. In fact, the wooden outer encasements in the tomb of Liu Sheng were basically different from those of Zhou tombs, for they were no longer linings of pits and became in fact outer caskets. It follows also that the number of casket layers is no longer an indication of the status of the master of

the grave. Since this new burial custom adopted by Liu Sheng and other nobles is evidently different from the older burial customs continued from the Zhou dynasty as adopted by Li Cang and other nobles, some scholars have maintained that Liu Sheng represented the Legalists, who were progressive and innovative, and that Li Cang represented the Confucians, who were conservative. Actually, tomb customs cannot be related to the Legalist-Confucian struggles; Liu Sheng was not a Legalist, and Li Cang was not necessarily a Confucian.

Another manifestation of the new burial customs of the Han dynasty is the emergence of hollow-brick tombs in the Central Plains area (fig. 247). The Han dynasty hollow-brick tombs differed from the hollowbrick tombs of the Warring States period in that the Han tombs were generally built within horizontal pit caves. These tombs were usually of moderate scale and possibly belonged to members of the middle and small landowner class. In early Western Han, the burial chamber of the hollow-brick tomb was rectangular, shaped like the wooden chamber that it replaced. In middle and late Western Han, the typical hollowbrick tomb was shaped more like a house, with gabled roof and doorshaped front wall (fig. 248).⁵ The hollow bricks were often stamped with designs and scenes which constituted the interior decoration of the burial chamber. Polychromic murals begin to appear in some of the tombs. A hollow-brick tomb found in Luoyang has murals with images of sun and moon, of Green Dragon, White Tiger, and Red Bird, and of Fu Xi and NüWa (figs. 249-51).⁶ Another tomb found in Luoyang not only has sun, moon, and stars depicted in its murals, some of its pictures even depict historical stories such as "Using two peaches to kill three gentlemen," and "The banquet at Hongmen" (figs. 252-54).⁷ The mural scenes and stone engravings in tombs of the Eastern Han dynasty developed even further these sky charts and representations of the Four Deities, myths, and historical stories.

Sometime after middle Western Han, tombs with chambers built

of small bricks began to appear in the Central Plains and in central Shaanxi; these we refer to as "brick chamber tombs" to distinguish them from the hollow-brick tombs. As soon as it appeared on the scene, the brick chamber tomb became rapidly adopted everywhere, replacing the hollow-brick tombs in the Central Plains and replacing the vertical pitwooden chamber graves in the Yangtze River valley and the southern and northern border regions. By the Eastern Han dynasty, brick chamber tombs were the prevailing form of burial throughout the country (figs. 255, 256). The brick chamber tombs of high nobles—such as the tomb of the Prince Jing of Pengcheng in Xuzhou, Jiangsu, and the tomb of Prince Jian of Zhongshan, in Dingxian, and the tomb of Taiyuan Taishou in Wangdu, Hebei—are of large scale and complex construction with a layout similar to the mansions these princes inhabited during their lifetimes.⁸ Some of the brick chamber tombs also were decorated with frescoes, the well-known ones including those found in the family tomb of the Marquis of Fuyang, in Wangdu, Hebei, and in the family tomb of Hongnong Taishou in Mixian, Henan. The Wangdu tomb has murals depicting the various officials and attendants of the tomb master (fig. 257), causing the chamber to look like his official quarters.⁹ The Mixian tomb has murals depicting processions of horses and carriages and scenes of banquets and entertainments, fully attesting to the luxurious life of the tomb master (fig. 258).¹⁰

A huge brick chamber tomb was excavated in 1972 at Holingor in Inner Mongolia. The master of the grave was a military colonel of the Wuhuan district, and the murals in the tomb mainly illustrate the history of his official career through scenes of horse and carriage processions. From the inscriptions that accompany the various segments of the murals, we know that he was a native of Dingxiang Jun, where he qualified for officialdom by being selected as a Xiaolian candidate. Then he was assigned various administrative positions until he finally reached the military colonelcy of the Wuhuan district. The murals show scenes of the various towns in which he had worked—

their streets, official buildings, warehouses, and markets—and various activities in which he had engaged in during his career (figs. 259-61). At the time, high officials also were owners of large manors. In the murals is a scene of a manor, depicting such productive activities as cultivating fields, preparing tree nurseries, raising cattle, feeding animals and picking mulberry leaves. Possibly the occupant-to-be of the tomb had retired to his manor, but in any event the manor was in all likelihood his home. The Holingor murals were indeed an unprecedented discovery, fully exemplifying such murals and their objectives and significance.¹¹

Beginning in early Eastern Han, a new kind of tomb known as the "stone chamber grave" came upon the scene, and it became even more popular after middle Eastern Han. The burial chamber was constructed with neatly dressed stones on which were engraved designs and scenes—thus the name, the "tomb with pictorial stones" (*hua xiang shi mu*)(fig. 262). Seen mostly in Shan dong, northern Jiangsu, Henan, and northern Hubei, these tombs also occur in middle Sichuan, northern Shaanxi and western Shanxi. During the past centuries, many of them were destroyed and the stone reliefs scattered about. Since the founding of New China, a few have been archaeologically excavated. Some of these, such as the Han tombs in Tanghe (Henan) and in Anqiu, Cangshan, and Yi'nan (Shandong), are preserved well enough to show that again the layout of the burial chamber imitated the house of the tomb master in his real life (fig. 263).¹² The most obvious case is the Han tomb in Yi'nan, excavated in 1954. A scene in the tomb depicts the courtyard house in which the master lived during his lifetime, and the layout of the tomb is identical with the layout of the house (fig. 264). Many scenes are depicted in the engravings, all pertaining to scenes of his life and his career history. The master of the Yi'nan tomb was probably a military general. Above the tomb entrance, in a most prominent location, a battle scene was engraved in fine detail. In it a squad of Han dynasty foot soldiers is in the act of defeating mounted and foot soldiers from

a northern nomadic group. The occupant of the tomb, standing in a carriage, is seen behind the soldiers supervising the battle. Obviously this must have been the most memorable scene in his career (figs. 265-67).¹³ The Yi'nan tomb with stone reliefs and the fresco tomb of Holingor may be called the two best examples of the tomb art of Eastern Han.

During the Eastern Han period, many of the brick chamber tombs in the Sichuan region had a kind of pictorial brick fitted onto the walls of the burial chamber. The pictorial bricks are square or rectangular; the square ones are found mostly near Chengdu, but the rectangular ones are widely seen. The designs were stamped on the bricks before they were dried and some were also painted after the bricks were fired. They depict such life scenes as lectures, banquets, musicales and dances, and carriage processions. Such productive activities as harvesting, hunting, mulberry-leaf picking, taro digging, pestling of rice, wine making, and salt making are also shown—the latter scenes full of local flavor (figs. 268-72). These pictorial bricks were mass-produced, and identical scenes are often seen at tombs in different places. For this reason, it is clear that the scenes shown on these bricks were not directly related to the individual occupants of tombs.¹⁴ In addition, in various places in Sichuan there were many cliff burials during the Eastern Han period. Excavated into high mountain cliffs, these were of varying scales and sizes. Sometimes several tens of tombs have been found clustered together, forming a large cemetery.¹⁵

Burial Mounds All that has been described above pertains to the underground portion of the burial chamber. The portion of the tomb above ground in Han tombs also has distinctive features. During the Shang and Western Zhou periods, even large tombs were not covered with an earthen mound above ground. As *Li ji* ("Tan gong") states, "In the past the tombs were without mounds." Earthen mounds began to be built in the Warring States period, such as the mounds over some of the Chu tombs in Jiangling in Hubei,¹⁶ but they were not yet widely distributed. But during the Han dynasty, earthen mounds became

universal. The tombs of the emperors and the upper nobility were, *Yan tie lun* records, covered with accumulated earth as tall as a hill. To build them required a vast outlay of manpower and much time.

Funerary Shrines In the Warring States period funerary shrines were built atop the tombs of some feudal lords. The Wei tomb at Guweicun in Huixian, Henan, and the tomb of the king of Zhongshan in Pingshanxian, Hebei, are examples.¹⁷ In the Han dynasty, funerary shrines and monumental towers became very popular, especially in Eastern Han. In his *Shuijingzhu*, Li Daoyuan makes mention of many Han funerary shrines and monumental towers. Since most of these were built of masonry, some survive to this day. The better-known ones are the Guo lineage shrine at Xiaotangshan in Feicheng, Shandong; the Wu lineage shrine and monumental tower in Jiexiangxian (now Jining); and the funerary tower at Wang Zhizi's tomb in Xinduxian and that at Gao Yi's tomb in Ya'anxian, both in Sichuan (fig. 273).¹⁸ In front of some of these tombs were erected stone sculptures. Stone animal sculptures occur in front of the Wu family tomb and the Gao Yi tomb mentioned above, and additional finds have been made in recent years.¹⁹

Steles Beginning in Eastern Han, a stone stele was sometimes erected in front of the tomb, with inscriptions describing the birth and death dates of the persons buried and their life histories.²⁰ Tomb inscriptions, the preparation of which became popular in the Wei and Jin dynasties, were a further development of the Han dynasty tomb steles. The earliest tomb inscriptions, such as the inscribed bricks of 287 and the inscribed stone of 297, both found in Luoyang, were very similar to Han tomb steles in shape.²¹ The difference was that the Han tomb steles were large and placed on the ground, whereas tomb inscriptions were written on small tablets placed inside the tomb.

Caskets In ancient China, *guan* and *guo*, or inner and outer caskets, were both used, and this practice continued into early Western Han in the vertical pit-wooden chamber graves of that time. However, as stated earlier, in the horizontal pit graves (after the middle of Western

Han), and especially in the brick chamber and the stone chamber tombs (of Eastern Han), the burial chamber itself functioned as an outer casket. It may be referred to as the brick *guo* or the stone *guo* (as against the wooden *guo*), and within the chamber there was only an inner casket but no *guo* or outer casket. The coffins themselves are of wood and are mostly wider and higher in the front than in the rear—except for the coffins found in wooden chambers, which are of equal width and height from front to rear. In the Western Han dynasty, the wooden coffins were put together with tenons and mortises, and the lid was secured onto the coffin by means of hourglass-shaped wooden wedges placed into notches on both lid and coffin, but in the Eastern Han iron nails were universally used. Liu Xi of Eastern Han said, in his *Shiming*("Shi sang zhi"): "In the past the coffins were not nailed." The coffins for the nobility were beautifully and elaborately made, as illustrated by the two lacquered coffins in tomb number 1 at Mawangdui. *Qianfulun* ("Fuchipian") states that "to make a coffin required the labor of thousands and tens of thousands." This has indeed been borne out (figs. 274, 275).²²

Funerary Banners Han practice continued the Zhou custom of using a funerary banner in funerary processions. At the time of burial the banner would be placed over the coffin. The typical banner is over 2 m long, identical with the length of the coffin. These banners have been found at tomb number 1 of Mawangdui, Changsha, Hunan, number 3 of Mawangdui, and number 9 at Jinqueshan in Linyi, Shan dong(fig. 276).²³ The Mawangdui banners are slightly wider at the top, forming a T shape, and the Jinqueshan banner is rectangular, with the top and bottom of equal width. They are all of silk and are painted with fine colored pictures. The picture is divided into three sections, depicting, from top to bottom, heaven, man's world, and the underworld. Both heaven and the underworld are represented by mythological images; the heaven picture has sun, moon, and sometimes stars, and the sun has a golden crow and the moon has a toad and a white rabbit, and sometimes a picture of Chang'e, the

goddess of the moon (fig. 277). The underworld picture shows various aquatic animals, representing an aquatic palace at the bottom of the sea. As for man's world, the picture depicts scenes from daily life and also a portrait of the master of the tomb (fig. 278). The three banners from Mawangdui and Jinqueshan have elaborate pictures and are valued as art objects. Similar, but much coarser, banners have been found in the Han tombs at Mozuizi in Wuwei, Gansu; some were made of silk, others hemp. All were covering coffins. Some of them have no pictures, others were painted only with the sun and the moon, but all bear inscriptions containing the names and the homeplaces of the masters of the tombs (fig. 279), the inscriptions substituting for the portraits of the silk paintings.²⁴ Presumably the funerary banners were widely used in Han dynasty funerary rituals, but few of them have survived because they were made of perishable materials such as silk and hemp. They did survive at Mawangdui and Mozuizi because the former tombs had special preservation conditions and the latter tombs were in an especially dry region.

Jade Shrouds The emperor and nobles of Han were buried wearing jade shrouds. Made from small square jade plates, these shrouds had small holes at the corners, through which gold, silver, or copper threads were strung in order to piece them together to form shrouds with gold, silver, or copper threads.²⁵ Since 1949, more than ten jade shrouds have been discovered from Han dynasty tombs, and five have been completely restored. Of the five, two were found at Mancheng, Hebei; one was worn by Liu Sheng, the Prince Jing of Zhongshan of Western Han, and one by his wife Dou Wan (fig. 280). One was worn by Liu Xing, the Prince Xiao of Zhongshan of Western Han; it was found in Dingxian, Hebei (fig. 281). One was worn by Liu Gong, the Prince Jing of Pengcheng, of Eastern Han; it was found in Xuzhou, Jiangsu (fig. 282). The last was worn by a Mr. Cao of late Eastern Han, a lineage relative of Cao Cao; it was found in Boxian, Anhui.²⁶

The two Mancheng shrouds are excellent examples. The Liu Sheng shroud consisted of 2,498 jade plates and used 1,100 grams of golden

threads, and the Dou Wan shroud used 2,160 jade plates and 700 grams of golden threads. The man power and wealth represented by these figures are astonishing. Combining evidence from archaeological finds and historical records, we believe that Western Han jade shrouds used golden threads, and Eastern Han jade shrouds used golden, silver, or copper threads. According to *Xu Hanshu* ("Li Yi zhi"), for the emperor golden threads were used, for imperial princes and first-generation feudal lords, silver threads, and for others, copper threads. The Dingxian shroud used copper threads gilded in gold,²⁷ which probably corresponded to silver in quality. So far the earliest complete jade shrouds to be discovered are the two from Mancheng, but shroud fragments have occurred in tomb number 5 at Yangjiawan, in Xianyang, Shaanxi, which dates from Wen Di or Jing Di.²⁸ It appears that jade shrouds began to be used in early Western Han, and their use continued until the end of Eastern Han. The latest shroud is the one found in Boxian, worn by Mr. Cao. It is recorded in *Sanguozhi* ("Wei zhi") that Cao Pi, Emperor Wen Di of Wei, banned the use of jade shrouds in A.D. 222. Archaeological excavations have failed to uncover any shroud remains from Wei or Jin sites. The use of the jade shroud seems clearly confined to the Han dynasty. The Eastern Han court occasionally presented jade shrouds as gifts to the chiefs of minority groups. It is stated in "Biography of Fu Yu" in "Wei Zhi" of *Sanguozhi* that the king of Fu Yu was buried in a jade shroud and that the Han court stored a jade shroud at Xuantu Jun, where it would be picked up when the king of Fu Yu died. When Sima Yi exterminated Gongsun Yuan of Liaodong, a jade shroud was found in the warehouse at Xuantu Jun. This incident happened after the ban by Cao Pi. Perhaps this was an exceptional situation involving policy toward minority groups. The purpose of using jade for funerary shrouds was to preserve the body. *Hou Hanshu* (the "Biography of Liu Penzi") claimed that the bodies in jade shrouds in the imperial mausoleums of the Western Han were all so well preserved that they looked like living people. This is, of course, not true. Cao Pi was perhaps more on

the mark when he said, in banning the practice, that the use of jade shrouds was a "stupid and vulgar act."

Inventories of Grave Goods Many early Western Han tombs, such as the Han tombs at Mawangdui in Changsha and at Fenghuangshan in Jiangling, have yielded books of bamboo slips that give an inventory of the grave goods—their names and quantities.

These are called *qian ce*, or inventory slips, from the phrase, "inscribe the grave goods on slips," in *Yi li* ("Ji xi li") (fig. 283).²⁹ Within some other Han tombs, such as the ones at Dafentou in Yunmeng, Hubei, and the tombs of Huo He and Shi Qi Yao in Haizhou, Jiangsu, rectangular wooden tablets were found, on which are inscribed the names and quantities of the grave goods.³⁰ These were called *feng fang*, or inventory tablets, following the statement, "inscribe grave goods on tablets" in *Yi li* ("Ji xi li") (fig. 284). By consulting these inventories, archaeologists may be able to achieve an understanding of the names and uses of a variety of objects from the Han era.

捌 汉代的墓葬（上）

在工农业基本建设的施工动土的过程中，或是在考古学家们的调查发掘工作中，汉墓是最容易遇到的。这是由于西汉和东汉两朝共达四百余年之久，年代很长；也是由于当时中国是统一的大帝国，政治局面比较安定，经济比较发达，因而人口兴旺。此外，汉代地主官僚阶级讲求厚葬，墓中随葬器物种类多，数量大，易于被人发现，而墓室又往往采用砖石结构，不易毁坏，这些也都是重要的原因。新中国成立以来，全国各地考古工作中所发现的汉墓，估计已达万座之多。这使得对于汉代的丧葬制度和习俗能够有比较充分的了解。

和前代比较起来，汉代的墓葬可以说是最富有时代的特色的。汉以前的墓，包括从新石器时代、商代、西周以迄春秋、战国时代的墓，其墓圻主要是长方形的土坑，不论大小深浅如何，都是由地面一直往下掘，所以称为“竖穴”。西汉中期，在黄河流域开始流行在地下横掏土洞，作为墓圻，所以称为“横穴”。西汉时，主要是在中原地区，盛行用庞大的空心砖堆砌墓室。到了东汉，无论是在中原还是在南方和北方的边远地区，都普遍用小型砖来券筑墓室。从西汉末年开开始，还流行石室墓。此外，从西汉到东汉，在有些地区，还有一种“崖墓”，其墓圻亦属横穴式。总起来说，用横穴式的洞穴作墓圻，用砖和石料构筑墓室，是汉墓与汉以前的墓在形制和构造上的主要区别，其特点在于模仿现实生活中的房屋。

但是，如上面所指出的，汉代墓制的这种变化，从时代上说，主要是在西汉中期才开始的，从地区上说，首先发生于黄河流域，然后逐渐普及到各地。在西汉前期，统治阶级仍然习惯于沿用战国以来的竖穴式土坑墓，墓中筑木椁。在长江流域以及南方和北方的边远地区，这种竖穴式木椁墓一直延续到西汉晚期，甚至到东汉。

长沙马王堆汉墓、江陵凤凰山汉墓、北京大葆台汉墓，可以作为西汉前期和中期的土坑木椁墓的代表。墓中的棺椁，沿袭着周代以来的礼制。《庄子·天子篇》和《荀子·礼论篇》都说：“天子棺槨七重，诸侯五重，大夫三重，士再重。”长沙马王堆一号汉墓所葬为轪侯利苍的夫人，其棺槨按诸侯的规格，是四棺一椁（图240）。江陵凤凰山一六八号汉

墓所葬为“五大夫”遂少言，他的爵位在汉代二十等爵中属九等，略高于八等“公乘”以下的所谓“民爵”，身份相当于县令，所以是二棺一椁（图241）。北京大葆台一号墓所葬可能为燕王，墓中棺椁保存不大好，但仍可看出是五棺二椁，比列侯又高了一等，而与天子的“棺椁七重”之制相同（图242）。当然，有的时候也并不严格按礼制的规定办事，如长沙马王堆二号墓所葬为轪侯利苍本人，但却只有二棺一椁。¹在北京大葆台汉墓和长沙咸家湖汉墓中，还使用了所谓“黄肠题凑”。²

在贵族的大墓中，河北满城的中山靖王墓和山东曲阜的鲁王墓可以作为西汉中期新兴的横穴式墓的代表。³它们都是在山崖中穿凿巨大的洞穴，作为墓室，所以称为“崖墓”。全墓可分为耳室、前室和后室等部分。以中山靖王刘胜墓为例，墓中的南耳室为车马房，放置车辆和驾车的马匹（图243），北耳室为仓库，贮存大量盛有食物的陶器（图244），前室是宽大的厅堂，陈列着帷帐和各种主要的随葬器物（图245），后室是内室，放置棺材。前室和两个耳室，都用木材搭成房屋，屋顶铺瓦；后室也用石板搭成房屋形，并在前方设两扇石门，门上装有铜质镀金的铺首。总之，墓的形制和结构完全模仿地面上的居住建筑，所以称为“地下宫殿”（图246）。⁴在这种新式的墓中，棺椁也就摆脱了旧的礼制。实际上，刘胜墓中的木椁也与周代以来的木椁不同，它只不过是一种套棺而已。在这里，棺椁的层数多少已经不是衡量墓主人身份的标准了。刘胜等人采用这种新的墓制，与利苍等人沿袭周代以来的旧墓制迥然不同。因此，曾有人从墓制的新旧出发，认为刘胜是代表革新势力的法家，利苍是代表保守势力的儒家。其实，墓制与儒家斗争并没有什么关系。刘胜不是什么法家，利苍也未必是儒家。

汉代的新的墓制，还表现在中原一带盛行“空心砖墓”（图247）。与战国晚期的空心砖墓不同的是，汉代的空心砖墓往往是在横穴式的土洞内砌筑墓室。空心砖墓的规模，一般并不很大，大概是属于当时的中小地主阶级的。在西汉前期，空心砖墓的墓室呈长方形，形状像木椁，到了西汉中晚期，它的顶部往往搭成两面坡的屋顶状，并将前壁搭成门的样子，更显得像房屋（图248）。⁵砖面上所印的花纹和图像，成了墓室内的装饰，有的墓里还开始有了彩色的壁画。在洛阳发现的一座空心砖墓，所绘壁画有日、月、青龙、白虎、朱雀及伏羲、女娲的形象（图249—251）。⁶同地发现的另一座墓，其壁画除了日、月、星辰的天象图以外，还有以“二桃杀三士”、“鸿门宴”等历史故事为题材的（图252

—254)。7这种“天象图”、“四神图”、神话传说和历史故事图，在以后的东汉墓的壁画和石刻画像中得到了进一步的发展。

大约在西汉中期以后，在中原和关中一带开始出现了用小型砖建筑的墓，这里称为“砖室墓”，以区别于上述的空心砖墓。砖室墓一经出现，便迅速普及，它在中原地区逐渐取代空心砖墓，在长江流域以及南方和北方的边远地区则代替了当时尚在延续的土坑木椁墓。到了东汉，砖室墓在全国各地流行，成为最常见的一种墓（图255、256），大贵族、大官僚的砖室墓，如河北定县的中山简王墓、望都的太原太守墓，规模宏大，结构复杂，其布局有如他们的府第。8有的砖室墓里，有彩色的壁画。比较有名的壁画墓，如河北望都的浮阳侯墓和河南密县的弘农太守家族墓，前者所绘主要是墓主人的属吏和侍从等人物（图257），把墓室布置得像他的官署一样。9后者所绘有车马出行图和宴会百戏图等，表现了墓主人生前的豪奢的生活（图258）。10

1972年在内蒙古和林格尔发掘的一座庞大的砖室墓，墓主人官至护乌丸校尉。墓内壁画的内容十分丰富，主要是以车马出行图的形式描绘了墓主人生前的全部仕途经历，这可以从壁画上所书的文字得到说明：首先是在他的家乡定襄郡（其治所西汉时在内蒙古和林格尔，东汉时在山西省右玉）被选拔为“孝廉”，取得了做官的资格，不久便按照常例被分配到首都雒阳担任“郎”官。他首次出任地方官是担任西河郡的“长史”，郡的治所在离石（今山西省离石县）；以后又被提升为上郡属国都尉，其治所在土军（今山西省石楼县）。他曾一度被调到中原地区的魏郡繁阳县（今河南省内黄县）任县令，在这里曾受到皇帝的褒奖。最后，他又迅速被提拔，到边境地区的上谷郡宁城（今河北省万全县，或以为在张家口附近）担任护乌丸校尉的大官。结合着上述车马出行图中的仕途经历，还有许多画面绘描着离石城、土军城、繁阳城和宁城的城郭、官府、仓库、市场等等（图259—261），以及墓主人在任职期间的各种活动场面。当时的大官僚，同时也是大庄园地主，所以壁画中还有一大幅庄园图，描绘着庄园中的耕种、作圃、放牧、饲养、采桑等各种生产活动。不论墓主人晚年是否有一段退職还乡的生活，壁画中的庄园应该是在他的家乡。总之，和林格尔汉墓中的壁画，是一项空前的大发现，它明确地说明了壁画的内容及在墓中绘描壁画的意义和目的。11

从西汉末年开，还新兴一种石室墓，到东汉更为盛行。墓室由许多整齐的石块筑成，石块上雕刻着各种画像，所以称为“画像石墓”（图

262)。它们的分布，以山东省到江苏省的北部、河南省到湖北省的北部为最多，四川省的中部、陕西省的北部和山西省的西部一带也颇不少。长久以来，许多墓都被破坏，只剩下大量的画像石，分散在各处。新中国成立以来，在考古发掘工作中发现了一些画像石墓，其中如河南省的唐河汉墓、山东省的安丘汉墓、苍山汉墓、沂南汉墓等，保存甚好，结构完整，可以看出墓室的布局也是仿照现实生活中的住宅（图263）。¹²最明显的是1954年发掘的沂南汉墓，墓内有一幅画像是刻绘墓主人生前居住的宅院，而墓室的布局正和画像中的宅院一致（图264）。画像的题材十分广泛，但主要也是表现地主官僚阶级的生活和事迹。沂南汉墓的主人，生前大概是一位将军，所以在墓门的上方以最显著的位置雕刻着一幅精致的攻战图：一队占优势的汉朝步兵，正在战胜北方游牧民族的骑兵和步兵，而墓主则乘车在阵后督战，以表示这是他生前最值得纪念和宣扬的重要事迹（图265—267）。¹³沂南画像石墓与和林格尔壁画墓，可以并称为东汉画像石墓和壁画墓中的双绝。

东汉时，四川省境内的砖室墓，往往在墓室的砖壁上另嵌一种“画像砖”，作为装饰，故称“画像砖墓”。画像砖有正方形和长方形两种，砖上的画像都是趁泥坯未干时用模子印成，烧成后还有施加彩色的。画像的题材很广泛，既有讲经、宴饮、乐舞、车骑等地主官僚阶级的生活场面，也有收获、射猎、采桑、采芋、舂米、酿酒、煮盐等各种社会生产活动的情景，而后者具有浓厚的地方色彩（图268—272）。这种画像砖是成批制作的，所以常常可以在几个不同地方的墓中发现完全相同的砖。因此，画像的内容并不是直接与墓主人有关的。¹⁴此外，在四川各地，东汉时还普遍流行崖墓。它们系在山崖中开凿，规模大小各有不同，往往几十座墓聚集在一处，形成一片很大的墓地。¹⁵

以上所说，都是关于地下的墓室。在地面上，和前代比较起来，汉墓也有许多新的特点。在殷代和西周，即使是规模很大的墓，地面上也没有坟丘，这就是《礼记·檀弓》所谓的“古者墓而不坟”。春秋晚期和战国时代，有些地区的大墓，已经在地面上筑有坟丘¹⁶，但从全国来说，还不很普遍。到了汉代，坟丘普遍流行。皇帝、贵族和官僚墓上的坟丘，如《盐铁论》所说，“积土如山”，要集中大量的人力，费很多的时间，才能筑成。坟丘的形状，多为截尖方锥状。据《汉书·卫青霍去病传》记载，卫青墓的坟丘像庐山，霍去病墓的坟丘像祁连山，则是特殊的例子。

战国时代，在诸侯陵墓的地面上，已有建“享堂”的，河南辉县固围村魏王墓和河北平山县中山国王墓便是例证。¹⁷到了汉代，地主官僚们则盛行在墓前设祠堂，并在墓域的前方立墓阙。酈道元的《水经注》中，有很多关于汉代祠堂和墓阙的记述。东汉墓前的祠堂和墓阙多用石材建成，所以有—直保留到今天的，山东肥城孝堂山的“郭巨祠”、嘉祥县（今济宁）的武氏祠和阙，四川新都县的王稚子墓阙和雅安县的高颐墓阙，是其中最有名的（图273）。¹⁸有的墓前还置立动物的立体石雕像，除上述武氏墓和高颐墓前的石兽外，近年来在各地还颇有新的发现。¹⁹墓前置石雕立体人像的，亦颇不乏例。

从东汉开始，还流行在墓前立石碑，碑文记述墓主人的死亡日期和平生的主要事迹，加以宣扬，这就是所谓“树碑立传”。²⁰从魏晋时期开始流行的墓志，就是从汉代的墓碑演变而来的。初期的墓志，如在洛阳发现的西晋太康八年（公元287年）的砖质墓志和元康七年（公元297年）的石质墓志，在形式上就和汉代的墓碑相似。²¹所不同的是，墓碑甚大，立在地面上，墓志较小，放在地下的墓室里。

中国古代，一般是棺槨并称，两者都属葬具。西汉前期的竖穴式木槨墓，仍然如此。但是，如同前面已经说过的那样，西汉中期以后的横穴式墓，特别是东汉的砖室墓和石室墓，墓室本身就起了槨的作用，可称为“砖槨”和“石槨”，而墓室内的葬具则有棺无槨。一般说来，除有的木槨墓里的棺材形状与战国时代的一样，前后两端的宽度、高度相等而外，汉代的木棺多是前端较宽较高，后端较狭较低。西汉时的木棺多用榫卯相接，“细腰”合盖，东汉则普遍使用铁钉，所以东汉刘熙在《释名·释丧制》中说“古者棺不钉也”。贵族们的木棺，采用上好木料，制作得十分精致、美观，极其奢侈。只要看过长沙马王堆—号汉墓的三具彩绘的漆棺，就可以知道《潜夫论·浮侈篇》所说“计—棺之成功将千万夫”之语不虚（图274、275）。²²满城窦绾墓的漆棺，在棺盖和棺的外壁嵌饰圆形的玉璧二十余块，在棺的内壁更满镶长方形或方形的玉版近二百块，简直像是一具玉棺，其设计可能是出于对玉的迷信，以为可使棺内的尸体不朽。

按照周代以来的丧礼，汉代出殡时张举着的一种旌幡，入葬时被覆盖在棺材上；旌幡长二米余，正与棺材的长度相等。在湖南长沙马王堆—号墓、三号墓和山东临沂金雀山九号墓中，都发现了这种旌幡（图276）。²³长沙马王堆的二幅，上部较宽，全体呈T字形；临沂金雀山的

一幅，上下等宽，全体成长方条状。它们都系由绢帛制成，绘有精致的彩色图画。图画的内容，自上而下分三段，分别表示天上、人间、地下。天上和地下，都是根据各种神话传说绘描的，前者主要是绘太阳和月亮，有时也有星辰，太阳中有金乌，月亮中有蟾蜍和玉兔，有时还有奔月的嫦娥（图277）。后者则绘各种怪异的水族动物，实际上是表示海底的“水府”。至于人间，则绘墓主人日常生活的情景，并突出地绘有他本人的肖像（图278）。上述长沙马王堆和临沂金雀山的三幅旌幡，由于有着细致、精美的彩色图画，所以称为“帛画”，被作为珍贵的艺术品而受到重视。类似的旌幡，在甘肃武威县磨咀子汉墓中也有发现，有的为丝织品，有的为麻织品，都系覆盖在棺上，它们或者完全没有图画，或者只简单地绘太阳和月亮，但都书写着墓主人的姓名和籍贯等，代替了上述帛画中的墓主人肖像，这便是所谓“铭旌”（图279）。²⁴可以认为，在汉代的丧礼中，使用这种旌幡，是相当普遍的，只是由于它们都系丝麻织物，易于腐朽，所以没有被保留下来。长沙马王堆汉墓和临沂金雀山汉墓由于有特殊的防腐设施，武威磨咀子汉墓由于当地气候干燥，所以独能得到保存。

尸体在棺内的放置，一般都采取仰身伸直的方式。战国时代在黄河流域各地流行的屈肢葬，到汉代已经绝迹。大概是为了企图使尸骨不朽，有时使用各种小玉具遮盖或充塞死者的七窍。塞在口中的称“琰”，往往被制成蝉的形状。《汉书·杨王孙传》说，“口含玉石，欲化不得，郁为枯腊”，这当然是不可信的。

汉代皇帝和贵族，死时穿“玉衣”（又称“玉匣”）入葬，它们是用许多四角穿有小孔的玉片，用金丝、银丝或铜丝编缀起来的，分别称为“金缕玉衣”、“银缕玉衣”、“铜缕玉衣”。²⁵新中国成立以来，汉墓中所发现的玉衣已在十件以上，其中河北省满城西汉中山靖王刘胜及其妻窦绾的二件（图280）、定县西汉中山孝王刘兴的一件（图281）、江苏省徐州东汉彭城靖王刘恭的一件（图282）、安徽省亳县东汉末年曹操的宗族曹某的一件，共五件，已经完全复原。²⁶以满城汉墓的二件为例，刘胜的玉衣共用玉片2498片，金丝重1100克，窦绾的玉衣共用玉片2160片，金丝重700克，其制作所费的人力和物力是十分惊人的。从出土的实物，并结合文献的记载来看，西汉的玉衣似乎多属金缕，东汉的玉衣则有金缕、银缕、铜缕之分。据《续汉书·礼仪志》记载，皇帝用金缕，诸侯王和始封的列侯用银缕，其他多用铜缕，估计袭爵的列侯也在用铜

缕之列。河北定县东汉中山简王刘焉的玉衣是鎏金的铜缕²⁷，其等级可能与银缕的相当。迄今发现的完整的玉衣，以满城汉墓（武帝时期）的二件为最早。由于在陕西咸阳杨家湾五号墓（其年代在文帝或景帝时）中也发现了玉衣上的玉片²⁸，可见西汉前期即已开始使用玉衣，以后一直沿袭到东汉。亳县董园村东汉末年曹氏墓中出土的玉衣，应该是年代最晚的。据《三国志·魏志》记载，魏文帝曹丕于黄初三年（公元222年）下令禁止用玉衣，而在实际的考古发掘工作中也没有发现过魏晋以后的玉衣，可见它的使用限于汉代。东汉的政府还以玉衣赠送给少数民族的首领。据《魏志·扶余传》记载，扶余国王葬时用玉衣，汉朝政府将玉衣存放在玄菟郡（其治所在今辽宁省沈阳附近），等扶余王死时派人前来领取。司马懿消灭割据辽东的公孙渊时，玄菟郡库房中尚存留玉衣一件。这时已在曹丕下禁令之后，但大概由于事关对少数民族的政策，所以是一种例外。以玉衣为葬服，其目的是企图保存尸骨不朽。《后汉书·刘盆子传》说，西汉诸帝陵墓内凡穿有玉衣的尸体都完好如生人，这当然是无稽之谈，不足为信。曹丕在下禁令时就说，用玉衣之类随葬是“愚俗之所为”。

长沙马王堆汉墓、江陵凤凰山汉墓等许多西汉前期的墓，和战国时代的许多墓一样，墓中存放着用竹简编成的簿册，记录着各种随葬品的名称和数量，根据《仪礼·既夕礼》“书遣于册”的记载，可以称之为“遣策”（图283）。²⁹考古学家们按照“遣策”中的记录，可以了解当时各种器物的名称和用途。湖北云梦大坟头汉墓、江苏海川霍贺墓和侍其繇墓中则有长方形的木版，书写着随葬器物的名称和数量³⁰，根据《仪礼·既夕礼》“书赠于方”的记载，可称之为“赠方”，其性质与“遣策”相似。发掘工作证明，直到三国和晋代仍然流行这种“赠方”。

CHAPTER 9 TOMBS—II

Grave Goods One of the central ideas of the funerary rites prevailing among the landowners and bureaucrats of the Han dynasty was that the dead should be treated in the same way as the living. As stated in "Bo zang pian," *Lun heng*, "treat death as life." Consequently, not only did the form and the structure of the burial chamber imitate a real-life house, the grave was also provided with as complete a complement of furnishings and provisions as possible. No utensils and objects that were used by the living were barred from the tomb.

First off, in order that the dead person be able to continue a comfortable life in the other world, foods of various sorts were supplied as the principal grave goods (figs. 285-86). Take tomb number 1 of Mawangdui as an example. The following food items were discovered in the tomb: cereals and legumes including rice, wheat, barley, panic millet, foxtail millet, soybeans, and red beans; fruits and vegetables including melons, jujubes (Chinese dates), pears, plums, Chinese strawberries, malva, mustard greens, lotus roots, and bamboo shoots; animals including pigs, cattle, sheep, dogs, deer, and rabbits; birds including chickens, ducks, cranes, turtledoves, owls, wild geese, magpies, sparrows, mandarin ducks, bamboo pheasants, and ringed pheasants; fish including carp, crucian carp, two other kinds of carp, perch, and bream.¹ These foodstuffs were prepared into cooked cereals, cakes, and various other dishes, with the addition of condiments such as sweetener, honey, soy sauce, salt, and several kinds of wine. The names of the dishes were listed on *qian ce*, or inventory slips in the tomb; the classes were complex and the names numerous.² Liu Sheng, the Prince Jing of Zhongshan, buried in the Han dynasty tomb of Mancheng, was famous for his fondness of drinking. In the tombs in which he and his wife were buried there were more than thirty large pottery urns, each 70 cm tall. Some of the

urns were inscribed in red on the outside: "15 piculs of Grade A panic millet wine"; "15 piculs of sweet liqueur"; "11 piculs of rice wine"; and the like. Traces of wine were still visible inside the urns at the time of excavation. It is estimated that more than 5,000 kg of wine—a remarkable amount—were contained in these urns (fig. 287).³

Another major part of the grave goods of that time consisted of various garments and fabrics. The clothing from tomb number 1 of Mawangdui included padded robes, double-layered robes, single-layered robes, single-layered skirts, shoes, socks, and mittens—most of them made of silk (figs. 288, 289). In addition, many silk fabrics were placed in large bamboo-matted suitcases, including warp-patterned fabric and embroidery, common silk, damask and brocade, the leno (or gauze) weave—their quality excellent, their colors bright, and their designs beautiful (figs. 290, 291).⁴ Presumably clothing and fabrics were placed in many other Han dynasty tombs, but elsewhere the conditions for preservation have not been as favorable and they have not survived. But inventory tablets (*feng fang*) in some of these tombs, such as the tombs of Huo He and Shi Qi Yao, in Haizhou, Jiangsu, listed names and quantities of clothing, although very little of the clothing itself has survived.

Bronze, lacquer, and pottery items were the most common Han grave goods. Most of these were containers in which food and drink were originally placed. Utensils such as lamps, incense burners, irons (for ironing clothes), toilet article boxes, mirrors, as well as weapons such as knives and swords, were also commonly found in tombs. Ornaments were found also: various beads and pendants of such materials as jade, opal, amber, quartz, gold, and silver. In short, so numerous were the grave goods that they cannot be exhaustively listed. They varied in quality and quantity from grave to grave, depending upon the status and wealth of the grave's occupant; on the other hand, their characteristics changed along with changes in social conditions and manners and customs. In general, in early and middle Western Han, what the nobility and the bureaucrats would place in

tombs were the real thing—various valuable objects that they would use in real life. But after middle Western Han fashions changed, and mortuary pottery made specifically for burial purposes increased in quantity. The earliest to appear were pottery granaries and pottery stoves; they had appeared in early Western Han and became popular in middle Western Han (figs. 292, 293). After that, pottery models of wells, querns, pigsties, multistoried buildings, pestling shops, and farm fields, along with pottery images of domestic animals and fowl such as pigs, dogs, sheep, chickens, and ducks, made a gradual appearance. The later the grave (especially after Eastern Han), the more numerous were these pottery models. In Eastern Han tombs, the grave goods consisted mostly of pottery vessels and such pottery mortuary models as described above. There was a decrease in the more valuable utilitarian vessels of bronze and lacquerware. Even the large graves of bureaucrats and nobility are no exception. What is indicated is that, with the development of the manorial economy, the ideology pertaining to grave goods among the members of the landowning class underwent a significant change. They may have felt that, rather than placing valuable objects of limited quantity underground, it might be better to make symbolic pottery models of everything in the manor and to place them in the tomb.

What is amply reflected in the grave goods is that landowners of the Han dynasty paid special attention to the possession of land. In tomb number 167 at Fenghuangshan in Jiangling, which is dated to early Western Han, was found a piece of hardened clay wrapped in dark red silk. This was referred to as *bu tu* on the *qian ce* found in the same grave, meaning that it was a legally owned piece of land that had been officially registered. This piece of clay is rectangular, 20 by 14 by 12 cm. Placed in the tomb, it probably symbolized the continued possession of this piece of land by the master of the tomb.⁵ The use of pottery models of farm fields in Eastern Han probably carried the same implication (fig. 294).

During the Shang, Western Zhou, and Eastern Zhou dynasties,

graves of rulers were often accompanied by nearby pit burials of horses and chariots or of carriages. Real carriages and horses were still used in some tombs of the nobility in middle Western Han, examples being the tombs of the Prince Jing of Zhongshan in Mancheng and the Prince Lu in Qufu.⁶ Special pits containing chariot and horses were placed in front of the burial chamber of the tomb of the Prince of Yan at Dabaotai in Beijing, a continuation of the traditional Shang and Zhou custom (fig. 295).⁷ But in late Western Han and Eastern Han, wooden and pottery models of carriages and horses replaced real ones. The burial of human victims as part of grave furnishings was by then legally banned, as recorded in *Hanshu* ("Biography of the Prince Jingsu of Zhao") and other texts. Therefore, with a few exceptions, human victims no longer are found in Han tombs, and wooden or pottery figurines take the place of servants and maids (fig. 296).

Tombs number 4 and 5 found at Yangjiawan, in Xianyang city of Shaanxi, are dated to emperors Wen Di and Jing Di of Western Han; their occupants probably were important military generals. Some archaeologists speculate that these were the tombs of Zhou Bo and his son Zhou Yafu, based on the descriptions of their tombs in *Shuijingzhu*, but this hypothesis is by no means a certainty. Ten pits to the south of the graves contain a large number of pottery figurines. Altogether there are more than 1,800 figurines of foot soldiers and more than 580 figurines of mounted soldiers. The soldiers are holding weapons in their hands and wearing armor and are arranged in neat formations.⁸ It is recorded that in the Han dynasty when important military officials died the imperial court would give them elaborate funerals and use military formations in the funerary processions. The large group of pottery figurines at Yangjiawan could be a model of such a funeral formation (fig. 297).

Although most of the models of carriages, people, and horses were wooden or ceramic in Han dynasty tombs, there are exceptions. A remarkable example of bronze models of carriages, horses, soldiers, and servants has been found in the Han tombs at Leitai in Wuwei,

Gansu(figs. 298-300).⁹ As I described in a previous chapter, processions of carriages and horses constituted an important motif in Eastern Han murals found in brick chamber tombs. The Han tomb of Leitai does not have such murals, but instead used bronze models. In the front of the procession were soldiers mounted on horses and holding spears and *ji*- halberds. The rear of the procession was made up of various carriages and attendants who were either handling the carriages and the horses or were simply in attendance. Altogether in the procession were seventeen soldiers, twenty-eight servants and attendants, thirty-nine horses, and fourteen carriages, forming a remarkable and unique sight. To acquire such furnishings obviously required vast sums of manpower and money. In late Eastern Han, officials and generals in border regions very often were wealthy and powerful and were capable of indulging in anything they wanted. The Han tomb of Leitai is a true indication of this fact.

Perhaps because money was becoming increasingly important in the Han dynasty, the use of coins in graves became quite fashionable. Even in the large graves of nobility and bureaucrats, where there were already many valuable goods, some coins would be included to symbolize their wealth. In Western Han, although coins were used in tombs, the number used was often small. It increased in Eastern Han. In the Han tomb of Leitai, mentioned earlier, which dates from late Eastern Han, there were more than 28,000 coins.¹⁰ In some regions, such as Changsha of Hunan, clay (mortuary) coins were used in addition to bronze coins. These are not a reflection of the frugality of the tomb master but of prevailing custom. In the Han tomb of Mawangdui, for example, with its quantities of valuable grave goods, clay coins were still used instead of bronze coins(fig. 301).¹¹

The nobles, bureaucrats, and landowners of the Han dynasty were fond of burying books as grave goods. Books at the time were often on silk or on slips of bamboo or wood. Such written materials have been unearthed in large quantities from Han tombs since 1949. At the Western Han tomb at Mawangdui were found silk books of *Laozi*, *Yi*

jing, *Zhan guo ce* (figs. 302, 303) and in the Western Han tomb at Shuanggudui were found bamboo books of *Shi jing* and *Cang Jie pian*.¹² From a Western Han tomb at Yinqueshan in Linyi, Shandong, came *Sunzi bing fa*, *Sun Bin bing fa*, *Yanzi chun qiu* and other bamboo books (fig. 304).¹³ A wooden slip book of *Yi li* was found in an early Eastern Han tomb at Mozuizi, Wuwei, in Gansu (fig. 305), and wooden slips of medicinal texts were found from an early Eastern Han tomb at Hantanpo in Wuwei.¹⁴ These books have been preserved because either special, effective preservation measures were taken, or the tombs were submerged in water, or they were preserved by extremely dry conditions. Presumably books were a common grave furnishing in Han dynasty tombs, but in most cases they have not survived.

Seals were another object that was used by landowners and bureau crats of the Han dynasty for burial. Some of the seals were private seals, others official seals. Almost a hundred have been found in the Han tombs in the Changsha area alone in the last two decades or so.¹⁵ From tomb number 2 at Mawangdui came three seals, the inscriptions being "Seal of Marquis Dai," "The Chengxiang [Chancellor] of Changsha," and "Li Cang." The first two are of gilded bronze, and the third is of jade. They helped determine the name and identity of the master of the tomb (fig. 306).¹⁶ Most of the seals of the Han dynasty belonged to men, but there were exceptions. Tomb number 2 of Mancheng was the tomb of Dou Wan, the wife of Liu Sheng, the Prince Jing of Zhongshan. From her tomb came seals inscribed with the characters "Dou Wan" and "Dou Jun Xu" (fig. 307).¹⁷

In Eastern Han tombs were sometimes found sales contracts for the purchase of the tomb plot, in the form of elongated lead plates called *mai di quan*.¹⁸ They were probably symbolic contracts, placed in the tomb for the security of the deceased, testifying to his right of possession. Sometimes the inscription included the admonition that all persons who were buried within the plot area should become his servants. Although such sales contracts were for the use in the

afterlife, they also reflect the fierceness of the struggles for land in real life and some of the situations which led peasants to become bond servants.

Tombs of the middle and, especially, the late Eastern Han period often contained what are called "tomb security jars." These bottles were inscribed in red on the outside; the inscriptions often began with a notation on the year, month, and date, and always end with the phrase *ru lü ling* ("as ordered by the spell") (fig. 308).¹⁹ As suggested by the red inscriptions, the function of these jars was to assure the tranquility of the remaining members of the family, to assure the security of the tomb of the dead, and in the name of "the angels of the god" to eliminate the guilt of the living and seek blessing for the dead. In late Eastern Han Taoism became quite popular, and these bottles were probably indicative of Taoist concepts. Their use was by this time quite common and they even found their way into the tombs of famous upper-class people among the bureaucrats and landowners, such as those of the Yang lineage at Hongnong in Huayin, Shaanxi.²⁰

Family and Lineage Graves There were literary records pertaining to the burial of husband and wife in the same tomb before Han, but such burials have not yet been found in the archaeological record at such an early date. Excavations have shown that the husband-and-wife burials of the Warring States period were in fact two separate burials in two grave pits next to each other. The same custom was followed even in early and middle Western Han. After middle Western Han, however, husband-and-wife burials in the same pit became popular; in late Western Han and throughout Eastern Han such burials were the rule (figs. 309, 310).

The manorial economy of the Han dynasty caused the family members among the landowning class to be very close, especially in Eastern Han. This intimacy was reflected in mortuary practices in long-continuing family tombs. Members of the same family of several generations were often buried together. Persons who died away from home, no matter how far away, had to be brought back home to be

interred in the family tomb, the so-called "return to the old cemetery." An example is the Yang lineage cemetery at Hongnong in Huayin, Shaanxi. The Hongnong Yang lineage was a famous lineage during Han, and their cemetery in Huayin was the center of much attention. The monuments erected at the cemetery have often been mentioned in books since the Tang and Song dynasties. Archaeological excavations in 1959 disclosed seven tombs in orderly arrangement; namely, the bodies were buried from east to west according to generation. Those who were buried here were Yang Zhen, Yang Mu, Yang Rang, Yang Tong, Yang Zhuo, Yang Fu, and Yang Biao. They belonged to four generations and succeeded each other over a period of a whole century.²¹

Imperial Mausoleums The tombs of the highest rank among all noble burials were, of course, those of the emperors. The scale of the imperial mausoleums was not to be compared to the tombs of mere nobles and officials. Aside from Ba Ling, the tomb of Wen Di, and Du Ling, the tomb of Xuan Di, which are located in the southeastern suburbs of Chang'an, all the other imperial tombs of Western Han, nine mausoleums in all, were constructed on the high ground northwest of Chang'an and north of the Weishui River.²² The imperial tombs of Eastern Han, other than the Yuan Ling of Guang Wu Di, which is at Mengjin north of Luoyang, are all thought to be situated on Mang Shan north and west of Luoyang.²³ In general, Western Han imperial tombs were modeled on the Qin Shi Huang tomb, and Eastern Han imperial tombs followed the Western Han tradition. No archaeological excavations have yet taken place at any of the Han imperial mausoleums, and our understanding of them is confined to the structures above ground. The Ba Ling of the Western Han emperor Wen Di was built on a natural hill, but all the others had large mounds of rammed earth built over them; the mounds were mostly rectangular, similar to the Egyptian pyramids. Each of the mounds was then surrounded by a large, square enclosure, with a door on each of the four sides. Sleeping and working halls were built inside the

enclosure, and temples were built for ritual purposes. Mao Ling, Emperor Wu Di's tomb, is the largest example. According to investigations in 1962, the enclosure was 430 m east to west and 414 m north to south, about one *li* square according to the Han system. The walls of the enclosure were about 6 m thick. The earthen mound at the center of the enclosure was 67,600 m² and 46 m tall, truly a majestic sight (fig. 311).²⁴ In the neighborhood of imperial mausoleums, there were often satellite graves in which were buried meritorious officials and imperial relatives. Near Mao Ling are the graves of Wei Qing and Huo Qubing nearby, and of Huo Guang, a little farther away.²⁵ To the northeast of Chang Ling, the tomb of Han Gao Zu, more than seventy satellite tombs have been located. The two tombs at Yangjiawan mentioned earlier are among them and are the only ones that have been excavated.²⁶ In the Han dynasty, as soon as an emperor was enthroned he began to build his own grave, calling it his Shou Ling, or "longevity grave." It is said that probably a third of all national income in taxes and tributes was spent on the construction of this longevity grave and its furnishings. In addition, under the Internal Revenue Department there was an office called the Dong Yuan Jiang; it along with the Kao Gong Shi and the You Gong Shi were known as the Three Construction Offices. The Dong Yuan Jiang specialized in the preparation of imperial funerary articles such as caskets, jade shrouds with gold threads, and various mortuary objects. These treasures, collectively called the Dong Yuan Mi Qi, cost in the tens of millions annually.

Graves of Prisoner-Laborers and of the Poor Exploited by the ruling class, Han dynasty peasants often became bankrupt and turned into bond servants, or they were found guilty of crimes and turned into prisoner-laborers. Prisoner-laborers engaged in heavy work in handicraft shops managed by the state. They were also sent into the labor force for construction projects, such as road and bridge construction, opening of mountain passes, irrigation and canal work, building of city walls, and construction of palaces and imperial

mausoleums. The imperial mausoleums, like the Qin Shi Huang tomb, were often built using prisoner-laborers in the tens of thousands brought in from all over the country. In 1972, in an area about 1.5 km northwest of Yang Ling (the imperial tomb of the Han emperor Jing Di) in Xianyang of Shaanxi, a satellite cemetery was excavated, in which, in an area of about 80,000 m², were buried an estimated number of ten thousand plus prisoner-laborers.²⁷ The tomb pits were irregularly arranged, some rectangular, some amorphous. In each pit was buried either a single person or many persons. Some of the skeletons had iron shackles on their necks and some on their feet, indicating that these mausoleum builders were the category of prisoner-laborers called *kun qian*, those who labored with their shackles on. *Shiji* ("Jing Di ben ji") states that "those prisonerlaborers who participated in the construction of Yang Ling were given an amnesty." *Hanshu* ("Jing Di ji") also states that "prisoner-laborers who constructed Yang Ling were pardoned from the death penalty." These passages suggest that the construction of Yang Ling was mainly done by prisoner-laborers, a hypothesis that has been confirmed by archaeological excavations. The magnificent imperial mausoleums were built on top of the bodies of thousands of slaves!

Another cemetery of prisoner-laborers was found in Xidajiaocun, in Yanshixian, Henan, at a spot about 2.5 km from the Eastern Han capital city of Luoyang. For a long time farmers in that area have turned up skeletons during farm work, and they call that area the "Ditch of the Skeletons." In the early years of the twentieth century, many inscribed bricks were found here. Referred to as "prisoner-laborer bricks," they have been noted in scholarly works, bringing this area to the attention of archaeologists. The whole area of the cemetery was over 50,000 m². In 1964, about 2,000 m² of this cemetery were excavated, bringing to light in excess of five hundred graves of prisoner-laborers (fig. 312).²⁸ The graves were rectangular pits, about 2 m long and half a meter wide, less than 1 m deep. The pits were placed one alongside another, with little room in between (figs. 313,

314). Among the skeletons that were found, 96 percent were men and 4 percent were women. Most of them were in their youth and early adulthood and many showed signs of wear on their bones. A few graves contained one or two coins, but the overwhelming majority of the graves were empty of any furnishings. One or two broken bricks were found in each grave, with incised inscriptions on them recording the name of the supervising unit, the skill if any of the prisoner, the presence of shackles, the original prison, the organizational unit to which the prisoner belonged, and the date of death and the name of the penalty. On the last point, there are such terms as "Kun qian", "Wan cheng dan," "Gui xin," "Si kou," and so forth, with the first two the most common (figs. 315-18). From studies of these inscriptions it is clear that the overwhelming majority of the prisoners were laboring people; very few of them were nobles or officials. They came to Luoyang from prisons all over the country to engage in forced labor. The 500-plus graves date from A.D. 107 to 121, namely, a brief interval of less than fourteen years. Obviously the prisoner-laborers died continually, probably from heavy labor and extremely poor living conditions, and when they died they were buried in shallow, small graves. Sometimes, after only a few years their graves would be turned over to make room for new dead prisoners.

Other aspects of Han tombs also illustrate the opposition between rich and poor during the Han dynasty. In 1955 a group of poor people's graves were excavated in Luoyang, Henan; they date from late Western Han to late Eastern Han. The cemetery was quite far from the Henanxian seat of the time and was located in a low, depressed area. The caskets were extremely simple: some bodies were buried in pottery, some pits were lined with brick fragments, some pits were covered with tiles, and other pits were bare. The grave furnishings were also extremely simple, usually consisting of a few coarse pottery vessels or a few coins (figs. 319, 320).²⁹ These stand in sharp contrast to the large graves described earlier of the emperors, nobility, bureaucrats, and landowners.

玖 汉代的墓葬（下）

在汉代地主官僚阶级中流行的丧礼和葬俗，其中心思想之一，是把死人当作生人看待，即《论衡·薄葬篇》所说的“谓死如生”。所以，不仅在墓室的形制和结构上模仿现实生活中的房屋，而且在随葬品方面也尽量做到应有尽有，凡是生人所用的器具、物品，无不可以纳入墓中。

《盐铁论·散不足》所谓“厚资多藏，器用如生人”，也正说明了这一事实。

首先，为了使死者能在另一世界继续过着美好的生活，各种各样的食物就成为主要的随葬品（图285、286）。以长沙马王堆一号汉墓为例，墓中发现的食物，包括稻米、小麦、大麦、黍、粟、大豆、赤豆等粮食，甜瓜、枣、梨、梅、杨梅、葵（冬苋菜）、芥菜、藕、笋等瓜果和蔬菜，猪、牛、羊、狗、鹿、兔等兽类，鸡、鸭、鹤、斑鸠、鸱、雁、喜鹊、麻雀、鸳鸯、竹鸡、雉等禽类，鲤鱼、鲫鱼、鳊鱼、银鲌、鳊鱼等鱼类¹，它们多被制成饭、饼，烹调成各种羹肴，加上糖、蜜、酱、盐等调味品和各种酒类，其名称见于墓中的“遣策”，品类之繁，名目之多，举不胜举。²满城汉墓所葬中山靖王刘胜是以嗜酒出名的，在他和他的妻子窦绡的墓中有着三十余个高达七十厘米的大陶缸，有的缸上写着朱红色的文字，如云“黍上尊酒十五石”、“甘醪十五石”、“黍酒十一石”、“稻酒十一石”、“甘醪十石”等，出土时缸内都清楚地遗留着酒的痕迹，估计当时所装的酒共达五千多公斤，达到了惊人的程度（图287）。³《论衡·死伪篇》说，汉元帝傅后墓内多藏食物，腐朽猥发，改葬时发棺，臭气熏天，以致身临现场的洛阳丞闻臭而死，这是对当时统治阶级厚葬的莫大讽刺。

各种衣物和衣料，也是当时主要的随葬品。马王堆一号汉墓中的衣物，计有棉袍、夹袍、单衣、单裙、鞋、袜和手套等类，多系用丝绸制成（图288、289），并有大量成幅的丝绸放置在大型的竹筥中，其种类包括绢、纱、罗、绮、锦和刺绣，质地精致，颜色鲜艳，花纹美丽（图290、291）。⁴可以认为，各地许多汉墓中都有不少衣物和衣料随葬，只是由于缺乏保存的条件，年久朽坏，没有能够遗留下来而已。有些汉墓，如江苏省海州的霍贺墓和侍其繇墓，虽然没有发现较多的衣物，但

在它们的“随葬”中却记录着各种衣物的名称和数量，便是例证。

各种铜器、漆器和陶器，是汉墓中最常见的随葬品，它们主要是容器，当时应该是装有食物和饮料的。灯、熏炉、熨斗、奩、镜等生活用具及刀、剑等武器，也在墓中普遍地存在。装饰品方面，则有各种珠佩等类，其质料包括玉石、玛瑙、琥珀、水晶及金银等。总之，墓中随葬品的种类极多，不胜枚举。它们往往视墓主人的身份和财富的不同而有厚薄、多寡之分。但是，另一方面，随着时代的推移，社会情况和风俗的改变，随葬品的种类和性质也有所变化。总的说来，西汉前期和中期，贵族、官僚们往往主要是将生前实用的各种珍贵器物纳入墓中。值得注意的是，西汉中期以后，风气为之一变，专为随葬而作的陶质明器开始显著地增多。最初出现的是陶仓和陶灶，它们在秦和西汉前期即已存在，但普遍流行则在西汉的中期（图292、293）。以后，诸如井、磨、猪圈、楼阁、碓房、田地等模型，以及猪、狗、羊、鸡、鸭等家畜和家禽的偶像，陆续出现，应有尽有，时代愈晚，特别是东汉以后，种类和数量愈多。在东汉的墓中，大量的随葬品主要是各种陶制容器和上述的各种陶质明器，而比较贵重的实用品如铜器和漆器等则反而逐渐减少，即使是官僚、贵族们的大墓亦不在例外。这说明随着庄园经济的发展，地主阶级对随葬品的观念已经有了改变。他们可能觉得，与其将一些有限的珍贵器物带到地下，还不如将庄园中的全部动产和不动产都制作成象征性的陶质明器，纳入墓中。

汉代的地主阶级，对土地的占有特别重视，这在随葬品方面也得到充分的反映。在属于西汉前期的江陵凤凰山一六七号墓中，发现了一块用绛红色绢布包裹着的土块，对照该墓的遣策，可知它的名称为“簿土”，意即在官府的簿册中经过登记的合法的土地；土块呈长方形，长二十、宽十四、厚十二厘米，它被放在墓中随葬，象征着墓主人对土地的占有权。⁵凤凰山八号墓和一六八号墓，据遣策的记录，也有同样的簿土；八号墓的竹筥中有泥土一堆，应该便是它的实物。到了东汉，则又盛行用陶质的田地模型随葬，其含意正与上述用“簿土”随葬相同（图294）。

自商代、西周以来，直至战国时代，在统治阶级的陵墓附近，往往另设坑穴，埋置车马。在西汉中期的贵族墓中，仍然有用真车、真马随葬的，满城的中山靖王墓、曲阜的鲁王墓⁶和北京大葆台的燕王墓（图295）⁷便是例证。但是，到了西汉晚期，特别是东汉，一般也都用木制

或陶制的车的模型和马的偶像来代替了。杀人殉葬在法律上已被禁止，这可以从《汉书·赵敬肃王传》等记载得到说明。所以，除了个别例外，汉墓中已没有人殉的现象，一般也是用木俑或陶俑随葬，作为奴婢的替身（图296）。

陕西省咸阳市杨家湾四号墓和五号墓，年代相当于西汉的文帝和景帝时期，墓主人可能是当时重要的将领。有人根据《水经注》的记述，认为它们也许是周勃、周亚夫父子二人的墓，但不能肯定。在墓的南面附近，附设有十个坑穴，埋藏着大量的陶俑，其中步兵俑共一千八百余，骑兵俑共五百八十余，士兵们手执武器，身被铠甲，行列整齐有序。⁸在汉代，重要的将领死后，朝廷给以隆重的礼遇，用军阵送葬。杨家湾汉墓的庞大的陶俑群，正是这种军阵的模拟（图297）。

虽然在大多数汉墓里用以随葬的车的模型和人、马的偶像是木制或陶制的，但也不无例外。在甘肃省武威县雷台汉墓中，随葬着一批铜质的车马模型和兵士、奴婢的铸像，便是最突出的一例（图298—300）。⁹如前所述，在东汉砖室墓的壁画中，常有车马出行图。雷台汉墓中没有这种壁画，却用铜质的车的模型和人、马的偶像来模拟出行时的行列，前面是手执矛、戟的骑马武士，后面则是各种车辆以及御车、牵马和随从的奴婢，共计武士十七人、奴婢二十八人、马三十九匹、车十四辆，排列起来，颇为壮观，可以说是别出心裁。当然，这要耗费很大的人力和物力。东汉后期，边郡的大吏和将领们往往拥有很大的财富和权力，可以在当地为所欲为，雷台汉墓正反映了这种情形。

在长江流域和南方地区，水上交通发达，所以除了车马之外，船的模型也成为墓中的随葬品。在江陵的西汉前期墓、长沙和广州的西汉后期墓中，都曾发现木船模型，在广州的东汉墓中还曾发现陶船模型。这些木船和陶船模型，都制作得相当细致，形状和结构逼真。有的模型显示了是用于运输的船，它们在墓中随葬，可能与墓主人从事商业活动有关。

大概是由于对货币的重视在汉代已日益加深，所以在墓中用铜钱随葬已成为风气。即使是贵族、官僚们的大墓，墓中有着各种各样贵重的随葬品，也免不了要再添上一些铜钱，作为财富的象征。西汉时，虽然已盛行用铜钱随葬，但所用铜钱的数量往往并不很多，到了东汉，才逐渐增多。上述东汉后期的雷台汉墓，随葬铜钱竟达二万八千余枚之多。

¹⁰有的地区，例如在湖南省的长沙一带，除了铜钱以外，还盛行用泥质

的冥钱随葬。必须指出，这并不是出于墓主人的节约，而是一种风俗。马王堆汉墓随葬着大量珍贵的器物，但却用泥钱来代替铜钱，便是最好的说明（图301）。¹¹

汉代的贵族、官僚和地主们，往往喜欢用书籍随葬。当时的书籍，有的是书写在丝织品上，称为帛书，有的书写在竹简和木牍上，可称之为竹书和木书。新中国成立以来，在汉墓中发现的帛书、竹书和木书，已经达到相当大的数量。例如，湖南长沙马王堆西汉墓中发现了《老子》、《易经》、《战国策》等帛书（图302、303），安徽阜阳双古堆西汉墓中发现了《诗经》、《苍颉篇》等竹书¹²，山东临沂银雀山西汉墓中发现了《孙子兵法》、《孙臆兵法》、《晏子春秋》等竹书（图304）¹³，甘肃武威磨咀子东汉初期墓中发现了《仪礼》的木书（图305），武威旱滩坡东汉初期墓中发现了有关医药的木书¹⁴，它们都是十分珍贵的文物。上述这些西汉和东汉的墓，有的由于有特殊的防腐设施，有的由于墓穴较深而使棺槨被长期浸泡在地下水中，有的则由于当地气候干燥，所以墓中的书籍能够得到保存，可以认为，汉代用书籍随葬的风气是相当普遍的，只是由于大多数的墓不具备保存书籍的条件，所以没有能够遗留下来而已。

汉代的地主官僚阶级，还流行用印章随葬，有的为私印，有的为官印。仅就湖南省长沙一地而言，近二十余年来，汉墓中出土的各种印章已有近百枚之多，可见当时用印章随葬的风气之盛。¹⁵在长沙马王堆二号汉墓中，发现了三枚印章，印文分别为“轅侯之印”、“长沙丞相”和“利苍”，前二者为铜质鎏金，后者为玉质，它们的发现确定了墓主人的姓名和身份（图306）。¹⁶在汉代，使用印章的虽多为男子，但亦颇有例外。满城二号汉墓所葬为中山靖王刘胜之妻，墓中出土的铜印刻有“窦绾”、“窦君须”字样，便是一例（图307）。¹⁷

在东汉的墓中，有时还随葬着一种买卖墓地的契约，多数是刻在长条状的铅板上，称为“买地券”。¹⁸它是作为一种象征性的证券，放在墓里，使得死者有所凭持，以保证对墓地的所有权不被侵犯，券上所刻文字还往往强调要墓地范围内所埋葬的其他死者都成为他的奴婢。这种买地券虽专供“阴间”使用，但也反映了现实生活中土地兼并的激烈，以及广大农民因破产而沦为奴婢的情况。

此外，在墓中随葬的还有一种所谓“镇墓瓶”，流行于东汉中期，特别是东汉的后期。陶瓶上的文字多为朱书，有的冠以年月日，最后都

以“如律令”的字样结束（图308）。¹⁹如朱书文字本身所表明的那样，“镇墓瓶”的作用在于使生人的家宅安宁，使死者的冢墓稳定，以“天帝使者”之类的名义为生人解罪，为死者求福，安慰并约束亡灵，使其认识死生有别，勿事纠缠。东汉后期，巫道流行。从“镇墓瓶”上的文字看来，当与巫术有关。应该指出的是，“镇墓瓶”的用意虽十分荒诞，但它的使用却相当普遍，即使是官僚地主阶级中极有名望的士大夫亦不能免俗，陕西华阴的弘农杨氏墓中也有这种“镇墓瓶”的存在，便是证明。²⁰

汉代以前，文献上虽有关于夫妇合葬的记载，但在考古发掘工作中迄今极少发现有同墓合葬的情形。发掘工作证明，汉以前的合葬，一般是夫妇分别葬于两个并排紧靠的墓坑中，可称为“异穴合葬”。直到西汉前期和中期，夫妇合葬仍然多采用这种方式，长沙马王堆汉墓和满城汉墓即如此。西汉中期以后，制度为之一变，除帝陵以外，逐渐流行夫妇同墓合葬，从此以迄东汉，遂成为定制，绝少例外（图309、310）。横六式的、砖石结构的墓室，为同墓合葬提了方便。

汉代的庄园经济，使地主阶级的家族关系十分紧密，东汉时尤其如此。表现在丧葬制度上，家族的墓地往往被长期延续，一家数世，父子兄弟并葬。死在异乡的人，即使是千里迢迢，也必须归葬于故乡的家族墓地，即所谓“归旧茔”。在这方面，陕西华阴的弘农杨氏家族墓地是一个典型的例子。汉代弘农杨氏是一个有名的家族，其在华阴的墓地也长期受到世人的重视，墓地上树立的石碑还曾经在唐宋以来的书籍中被著录。1959年的发掘工作证明，杨氏墓地中共有七座墓，排列整齐，自东而西按辈分定次序，分别埋葬着杨震、杨牧、杨让、杨统、杨著、杨馥和杨彪，祖孙四代，前后相继，竟达百年之久。²¹

汉代统治阶级的坟墓，以帝陵为最高级，其规模之大则又远非一般贵族、官僚的坟墓所能比。西汉的帝陵，除文帝的“霸陵”和宣帝的“杜陵”在长安城的东南郊，其余九陵都在长安西北方渭水北岸的高原上。²²东汉的帝陵，除光武帝的“原陵”多认为是在洛阳北面的孟津以外，其余诸陵的位置尚难确定，但估计有不少是在洛阳北面和西面的邙山。²³大概西汉帝陵的形制系模仿秦始皇陵，而东汉的帝陵则又系承袭西汉的制度。由于未经发掘，所以对汉代帝陵的了解只限于地面上的建筑。除西汉文帝的“霸陵”系依山为陵以外，其余的帝陵都有用夯土筑成的截尖方锥状的巨大坟丘，有些像埃及的“金字塔”。陵园的范围很大，平面呈正方形，以坟丘为中心，四面筑围墙，每面围墙的正中设一门，四面共四

门。陵园建寝殿和便殿，陵旁立庙，以供奉、祭祀。以规模最大的汉武帝的“茂陵”为例，据1962年的勘察所知，陵园东西长430米，南北宽414米，大约为当时的一里见方，围墙厚约6米；陵园正中的坟丘，每边长260米，高46米，可称宏伟之极（图311）。²⁴在皇帝陵园的附近，往往有许多功臣、贵戚陪葬，称为陪陵。汉武帝“茂陵”的附近有卫青、霍去病墓，稍远处则有霍光的墓，它们都系陪葬墓。²⁵在汉高祖“长陵”的东北方，已发现的陪葬墓达七十余座之多，前面说过的杨家湾四号墓和五号墓便是其中已经发掘的两座。²⁶汉代皇帝即位之后，就开始经营自己的陵墓，称为寿陵。为了建筑寿陵和筹备各种珍贵的随葬器物，据说要耗费全国贡赋收入的三分之一，达到了惊人的程度。少府属官中有东园匠，它与考工室、右工室并称为三工官；东园匠专门为皇帝制作丧葬用品，诸如棺槨、金缕玉衣及各种明器之类，称为“东园秘器”，每年所费达数千万。

在统治阶级的残酷剥削和压迫下，汉代的农民往往因破产而沦为奴婢，或被判罪而成为刑徒。刑徒们被强迫从事各种繁重的体力劳动，除了在官营的手工业作坊中充当各种粗杂工以外，还被大批地投入诸如修路架桥、开凿栈道、治水挖河、筑城、建宫殿和造陵墓等工程中。两汉的帝陵，和秦始皇陵一样，往往是从全国各地集中数以万计的刑徒来营建的。1972年，在陕西省咸阳市汉景帝“阳陵”西北约一公里半处，发现了一片丛葬的墓地，经勘探，面积达八万平方米，埋葬着筑陵的刑徒，估计人数在万人以上。²⁷墓坑排列无序，有的呈长方形，有的不成形状，坑内或埋一人，或埋多人。发掘出来的尸骨，有在颈上带铁钳的，有在脚上带铁钐的，证明他们是刑徒无疑，刑罚的性质属于所谓“髡钳”。可以肯定，这些刑徒是带着刑具参加劳动的。《史记·景帝本纪》说“免徒隶作阳陵者”，《汉书·景帝纪》说“赦徒作阳陵者死罪”，都说明了在“阳陵”的营建工程中所用的劳动力主要是刑徒。考古发掘工作的结果，正与文献的记载相合。规模宏伟的帝陵，正是建筑在成千上万的奴隶们的尸骨之上，生动而形象地说明了统治阶级的残酷！

在河南省偃师县西大郊村，离东汉的首都雒阳城遗址约2.5公里处，存在着另一处属于东汉中期的埋葬刑徒的墓地。长期以来，附近的农民们在掘地翻土时，常常发现尸骨，因而称其地为“骷髅沟”。早在20世纪初期，这里出土的一些称为“刑徒砖”的刻有文字的砖块已被作为一种古物，著录在有关的书籍中，引起研究者的注意。墓地的面积，在五万平

方米以上。1964年，发掘了其中约二千平方米，发现了刑徒墓五百余座（图312）。²⁸刑徒们的墓是一个长方形的土坑，长约二米，宽约半米，深不足一米，仅能容身。它们被紧紧地排列在一起，相互之间没有什么余地（图313、314）。刑徒们的性别，男的占96%，女的占4%，绝大多数是青壮年，尸骨上往往有明显的劳损痕迹。除少数墓内有一二枚铜钱之外，绝大多数的墓没有任何随葬品。墓中放置一二块残缺的砖，砖面上刻文字，记明刑徒所属的监管机构、有无技能、是否戴刑具、来自何处监狱、编制组织、死亡日期，刑罚的名称有“髡钳”、“完城旦”、“鬼薪”、“司寇”等，而以前二者为绝大多数（图315—318）。对砖文的研究说明，刑徒中绝大多数是劳动人民，贵族、官吏被判罪而成为刑徒的极少。他们从全国各地的监狱被押送到雒阳，被强制从事各种劳役。发掘出来的五百余座墓，年代自东汉安帝永初元年（公元107年）至永宁二年（公元121年），前后不到十四年。这说明了繁重的劳动、极端低劣的生活条件，使刑徒们不断死亡，而被草率埋葬在一个仅能容身的浅坑中。过不了几年，他们的尸骨往往又从墓坑中被掘了出来，以便另葬新死的刑徒。

除了上述的刑徒墓以外，汉代贫富悬殊、阶级对立的情形也可以在其他的墓葬方面得到生动的说明。例如，1955年在河南省洛阳市发掘了一批西汉后期至东汉后期的贫民墓。墓地离当时的河南县城甚远，处在低洼地带。死者的葬具都很简陋，有的使用陶棺，有的用砖块稍加垒砌，有的则用瓦片覆盖，甚至也有根本没葬具，以身亲土的。随葬品极为贫乏，往往仅有几件粗陋的陶器或几枚铜钱（图319、320），²⁹这与以上所说的皇帝、贵族、官僚、地主们的陵墓形成了鲜明的对比。

Watt, J. C. Y. 1970. *A Han Tomb in Lei Cheng UK*. Hong Kong: City Museum and Art Gallery.

White, W. C. 1939. *Tomb Tile Pictures of Ancient China*. Toronto: University of Toronto Press.

Yang, Lien-sheng. 1947. "A Note on the So-called TLV Mirrors and the Game Liupo." *Harvard Journal of Asiatic Studies* 9: 202–06.

汉唐时代是中国封建社会最昌盛的时代，国家统一，国力强大，经济发达，文化、艺术繁荣。汉唐时代中国文化的许多方面在当时世界上居领先地位。通过陆路和海路的交通，中国与整个亚洲甚至欧洲的个别国家，尤其是日本、朝鲜及中亚、西亚各国，进行频繁的交往，国际影响深远。因此，汉唐考古学不仅在中国考古学上占有重要的地位，在世界考古学的领域内也是十分受重视的。由于汉唐时代史书、典籍丰富，所以考古调查发掘工作必须与历史文献记载相结合，又由于与外国的交往频繁，所以中国考古学研究应该与世界考古学接轨。

——王仲殊

Beyond Market and Government

—Influence of Moral Factors on Economy

目 录

CONTENTS

“博雅双语名家名作”出版说明

PREFACE TO THE REVISED EDITION

修订版前言

CHAPTER 1 THE ISSUE OF REGULATION BY CUSTOM AND MORALITY

第一章 习惯与道德调节问题的提出

1.1 Historical Review

壹 历史的回顾

1.2 Non-traded Sector

贰 非交易领域

1.3 Between the "Visible Hand" and the "Invisible Hand"

叁 介于“无形之手”与“有形之手”之间的调节

1.4 Moral Standards and the All-round Development of the Person

肆 道德规范与人的全面发展

CHAPTER 2 EFFICIENCY AND COORDINATION

第二章 效率与协调

2.1 The True Source of Efficiency

壹 效率的真正源泉

2.2 Coordination and Adaptation

贰 协调与适应

2.3 Mutual Relief and Efficiency Improvement

叁 互助共济与效率增长

2.4. The Moral Basis of Efficiency

肆 效率的道德基础

CHAPTER 3 FAIRNESS AND IDENTIFICATION

第三章 公平与认同

3.1 A Deeper Understanding of Fairness

壹 对公平的深层次理解

3.2 Meaning of Identification

贰 认同的含义

3.3 The Relationship Between Fairness and Identification

叁 公平与认同的关系

3.4 Identification and Mutual Understanding and Accommodation

肆 认同与互谅互让

CHAPTER 4 LAW AND SELF-DISCIPLINE

第四章 法律与自律

4.1 Market, Government and Law

壹 市场、政府与法律

4.2 Custom, Morality and Law

贰 习惯、道德与法律

4.3 Further Discussion on Self-discipline

叁 自律问题的进一步探讨

4.4 Moral Inspiration

肆 道德激励

CHAPTER 5 THE THIRD DISTRIBUTION

第五章 第三次分配

5.1 Overview of the Third Distribution

壹 第三次分配概述

5.2. The Role of the Third Distribution in Coordinated Social Development

贰 第三次分配在社会协调发展中的作用

5.3 The Third Distribution and the Relation Between Generations

叁 第三次分配与代际关系

5.4 Trend of the Third Distribution

肆 第三次分配的趋势

CHAPTER 6 MORAL CHECKS AND BALANCES IN SOCIO-ECONOMIC OPERATION

第六章 社会经济运行中的道德制衡

6.1 Restriction and Oversight Mechanism

壹 约束与监督机制

6.2 Selection and Competition

贰 选择与竞争

6.3 Belief and Social Check and Balance

叁 信仰与社会制衡

6.4. Safety Valves in Social and Economic Operation

肆 社会经济运行中的安全阀

CHAPTER 7 MORAL RENEWAL AND SOCIO-ECONOMIC DEVELOPMENT

第七章 道德重整与社会经济发展

7.1 Introducing Max Weber's Thesis

壹 韦伯理论引起的思考

7.2 The Urgency of Moral Renewal

贰 道德重整的迫切性

7.3 The Long-term Nature of Moral Renewal

叁 道德重整的长期性

7.4 Rule of Law, Democracy and Moral Renewal

肆 法治、民主与道德重整

7.5 Rebuilding Social Trust

伍 社会信任的重建

CONCLUSION

结束语

NOTES 注释

厉以宁 祖籍江苏仪征，生于南京，北京大学教授、博士生导师。历任北京大学经济管理系系主任、光华管理学院院长，现任北京大学社会科学学部主任、光华管理学院名誉院长。

1988年至2002年任七届、八届、九届全国人大常委，七届全国人大财经委员会委员，八届全国人大法律委员会副主任委员，九届全国人大财经委员会副主任委员。2003年至2007年任十届全国政协常委、全国政协经济委员会副主任。2008年至2012年任十一届全国政协常委、全国政协经济委员会副主任。2013年起任十二届全国政协常委。

我国首倡股份制改革的学者之一，因在经济学以及其他学术领域中的杰出贡献而获得“孙冶方经济科学奖”等多项荣誉。他的经济理论对我国三十多年来的经济改革与发展产生了深远影响。

“博雅双语名家名作”出版说明

1840年鸦片战争以降，在深重的民族危机面前，中华民族精英“放眼世界”，向世界寻求古老中国走向现代、走向世界的灵丹妙药，涌现出一大批中国主题的经典著述。我们今天阅读这些中文著述的时候，仍然深为字里行间所蕴藏的缜密的考据、深刻的学理、世界的视野和济世的情怀所感动，但往往会忽略：这些著述最初是用英文写就，我们耳熟能详的中文文本是原初英文文本的译本，这些英文作品在海外学术界和文化界同样享有崇高的声誉。

比如，林语堂的*My Country and My People*（《吾国与吾民》）以幽默风趣的笔调和睿智流畅的语言，将中国人的道德精神、生活情趣和中国社会文化的方方面面娓娓道来，在美国引起巨大反响——林语堂也以其中国主题系列作品赢得世界文坛的尊重，并获得诺贝尔文学奖的提名。再比如，梁思成在抗战的烽火中写就的英文版《图像中国建筑史》文稿（*A Pictorial History of Chinese Architecture*），经其挚友费慰梅女士（*Wilma C. Fairbank*）等人多年的奔走和努力，于1984年由麻省理工学院出版社（*MIT Press*）出版，并获得美国出版联合会颁发的“专业暨学术书籍金奖”。又比如，1939年，费孝通在伦敦政治经济学院的博士论文以*Peasant Life in China—A Field Study of Country Life in the Yangtze Valley*为名在英国劳特利奇书局（*Routledge*）出版，后以《江村经济》作为中译本书名——《江村经济》使得靠桑蚕为生的“开弦弓村”获得了世界性的声誉，成为国际社会学界研究中国农村的首选之地。

此外，一些中国主题的经典人文社科作品经海外汉学家和中国学者的如椽译笔，在英语世界也深受读者喜爱。比如，艾恺（*Guy S. Alitto*）将他1980年用中文访问梁漱溟的《这个世界会好吗——梁漱溟晚年口述》一书译成英文（*Has Man a Future? —Dialogues with the Last Confucian*），备受海内外读者关注；此类作品还有徐中约英译的梁启超著作《清代学术概论》（*Intellectual Trends in the Ch'ing Period*）、狄百瑞（*W. T. de Bary*）英译的黄宗羲著作《明夷待访录》（*Waiting for the Dawn: A Plan for the Prince*），等等。

有鉴于此，外语教学与研究出版社推出“博雅双语名家名作”系列。

博雅，乃是该系列的出版立意。博雅教育（*Liberal Education*）早在古希腊时代就得以提倡，旨在培养具有广博知识和优雅气质的人，提高人文素质，培养健康人格，中国儒家六艺“礼、乐、射、御、书、数”亦有此功用。

双语，乃是该系列的出版形式。英汉双语对照的形式，既同时满足了英语学习者和汉语学习者通过阅读中国主题博雅读物提高英语和汉语能力的需求，又以中英双语思维、构架和写作的形式予后世学人以启迪——维特根斯坦有云：“语言的边界，乃是世界的边界”，诚哉斯言。

名家，乃是该系列的作者群体。涵盖文学、史学、哲学、政治学、经济学、考古学、人类学、建筑学等领域，皆海内外名家一时之选。

名作，乃是该系列入选标准。系列中的各部作品都是经过时间的积淀、市场的检验和读者的鉴别而呈现的经典，正如卡尔维诺对“经典”的定义：经典并非你正在读的书，而是你正在重读的书。

胡适在《新思潮的意义》（1919年12月1日，《新青年》第7卷第1号）一文中提出了“研究问题、输入学理、整理国故、再造文明”的范式。秉着“记载人类文明、沟通世界文化”的出版理念，我们推出“博雅双语名家名作”系列，既希望能够在中国人创作的和以中国为主题的博雅英文文献领域“整理国故”，亦希望在和平发展、改革开放的新时代为“再造文明”、为“向世界说明中国”略尽绵薄之力。

PREFACE TO THE REVISED EDITION

This book explores how moral factors exert influence on economy.

Not long ago, some students asked me, "Of your published writings, which three books do you believe best reflect your academic standpoint?" I recommended the following: *Chinese Economy in Disequilibrium*(Economic Daily Press, 1990; Guangdong Economy Publishing House, 1998; Encyclopedia of China Publishing House, 2009), which was reviewed as one of the "Top Ten Economic Works Influencing the Economic Development of New China"); *Beyond Market and Government*(Economic Science Press, 1999, nominated for the Fifth National Book Award 2003) ; and, *Origin of Capitalism* (The Commercial Press, 2003, nominated for the National Publication Award 2007 and Prize of Honor winner in the China Publishing Group Book Award 2007). The second of these, first published in 1999, had the subtitle "Influence of Moral Factors on Economy." This revised edition published in 2009 contains modifications and extra material to reflect the changes occurring during the 10-year interval.

Four reasons account for the choice of title—*Beyond Market and Government*. Firstly, as the book says, in the long period before the emergence and establishment of market and government, custom and morality were the only modes of regulation. This is not only true of remote antiquity: even in modern times, there have been isolated tribes, remote mountain villages, small islands, or migrant communities cultivating virgin land, where the only things working to regulate social and economic activities are custom and morality—not market or government. Therefore, we are justified in calling custom and morality a kind of regulation beyond market and government.

Secondly, in places where regulation by market or government does work, there are still some gaps that the two modes of regulation cannot reach owing to the limitations of their influence. Each does compensate for the other's limitations, but only up to a point. For example, human beings as "social men" do not necessarily think or act only for economic benefit, nor will they always be passively subject to regulation by government. The gap can only be filled by custom and morality. In this sense, regulation by custom and morality can be viewed as a regulatory mode beyond market and government.

Thirdly, social life includes a wide range of activities, one part of which is trading activity and another is non-trading activity. In the former, the market plays the role of regulator at a basic level and government at a higher level. But the same cannot be said of non-trading activity, which is not restricted by market rules and mechanisms nor is subject to government intervention. Government is only responsible for defining its scope and ensuring that such activity does not overstep the boundary. Thus, non-trading activity has to be regulated by factors beyond market and government; namely, moral force.

Fourthly, once markets and governments do emerge, a variety of causes can give rise to market failure or government paralysis, rendering regulation by market or government ineffective or extremely limited. But even in such circumstances, custom and morality still exist and continue working as normal. This is another reason that custom and morality can be regarded as a mode of regulation beyond market and government.

For the above reasons, this book is titled *Beyond Market and Government*. It must be explained that regulation by custom and morality lies between regulation by market and regulation by government. Regulation by market is called the "invisible hand" and regulation by government the "visible hand." Regulation by custom and morality is closer to the "visible hand" when its power to restrict is relatively strong and closer to the "invisible hand" when it is

weaker.

But when is such power stronger or weaker? There are two main deciding factors. One factor is whether or not regulation by custom and morality has become a convention or a rule universally accepted by all members of the group. If so, its restricting power will be stronger; if not, it will be weaker. For example, a village rule is an agreement among all villagers and they are obliged to follow it. In this situation, the restricting power of regulation by custom and morality embodied in the village rule is stronger. The second factor is the degree to which each member identifies with the group. If the degree is high, the restricting power is stronger; if not, it will be weaker. For example, if villagers have a high degree of self-identification with their group, they will be more self-disciplined in following village rules. That is to say, the rules have more restricting power on the villagers.

Of course, in some situations, the restricting power of regulation by custom and morality is relatively weak, but this does not imply that it has no effect at all. Moreover, stronger does not always mean better where such power is concerned, since regulation by custom and morality takes many different forms. The above-mentioned village rules generally have stronger restricting power, whereas some regulation by custom and morality formed through self-discipline, despite involving no restricting power, can often play a role and influence individual behaviors.

In terms of social development trends, we note a continual increase in non-trading activities, in which regulation by custom and morality plays a major part. In the past when productivity was very low, trading activities barely existed, whereas non-trading activities covered almost all social and economic life. Later, with the increase in productivity, the traded sector gradually increased and expanded and the non-traded sector shrank correspondingly. When productivity increased to a high level, the share of the non-traded sector in socio-economic life would gradually rise again. In other words, once the

economy is highly developed, with income per capita increasing, people's values and attitudes will change accordingly, as regards benefits, occupation, life style and life itself, family and children, interpersonal relations, material wealth and spiritual enjoyment, etc. When national revenue and disposable personal income rise to a certain level, non-trading activities will increase and various relations within the non-traded sector will develop. This is an inevitable trend of social and economic development. Consequently, as the major mode of regulation in the non-traded sector, regulation by custom and morality will play an ever more important role in social and economic life.

In the past, regulation by morality has been an issue of interest to and exploration by specialists in philosophy, economics and sociology, but I hope in the future more non-professionals will join us and think earnestly how regulation by morality plays a role beyond market and government.

This book devotes seven chapters to the role of moral factors in economy. At present, discussion on this topic in academic circles is far from enough, as is our awareness of its importance in social and economic life (including the traded and non-traded sectors). That said, I believe this situation will change in the future: More people will join us in this study and the role of regulation by custom and morality will be fully deployed. In this sense, my effort in writing this book will be worthwhile.

October, 2009

修订版前言

这是一部讨论道德力量在经济中的作用的著作。

不久以前，曾经有一些学生问我：“在您已经出版的若干部著作中，能告诉我们哪三本书是您认为最能反映自己学术观点的代表作吗？”我的回答是这样三本书：《非均衡的中国经济》（经济日报出版社1990年版，广东经济出版社1998年版，中国大百科全书出版社2009年版，被评为“影响新中国中国经济建设的10本经济学著作”之一）；《超越市场与超越政府》（经济科学出版社1999年版，获得2003年第五届国家图书奖提名奖）；《资本主义的起源》（商务印书馆2003年版，获得2007年中国出版政府奖图书奖提名奖、2007年中国出版集团图书奖荣誉奖）。

《超越市场与超越政府》一书有一个副标题：论道德力量在经济中的作用，初版于1999年，距今已经10年。我作了一些修改、补充，现在准备出修订版。

为什么这本书以《超越市场与超越政府》命名？当时主要是考虑到以下四个方面：

第一，书中提出，在市场尚未形成与政府尚未出现的漫长岁月里，那时既没有市场调节，也没有政府调节，习惯与道德调节是这一漫长时间内唯一起作用的调节方式。不仅远古时期的情况是如此，即使在近代社会，在某些未同外界接触或同外界接触不多的部落里，在边远的山村、孤岛上，甚至在开拓荒芜地带的移民团体中，市场调节不起作用，政府调节也不起作用，唯有习惯与道德调节才是在社会经济生活中起作用的调节方式。因此，完全有理由把习惯与道德调节称做超越市场与超越政府的一种调节。

第二，书中提出，在市场调节与政府调节都能起作用的范围内，由于市场力量与政府力量全都有局限性，所以这两种调节之外会留下一些空白。当然，在某些情况下，政府调节可以弥补市场调节的局限性；在另一些情况下，市场调节也可以弥补政府调节的局限性。但政府调节是不可能完全弥补市场调节的局限性的，正如市场调节不可能完全弥补政府调节的局限性一样。一个明显的例子就是：由于人是“社会的人”，人不一定只从经济利益的角度来考虑问题和选择行为方式，人也不一定只

是被动地接受政府的调节，所以市场调节与政府调节都难以进入到人作为“社会的人”这个深层次来发挥作用。市场调节与政府调节留下的空白只有依靠习惯与道德调节来弥补。从这个意义上说，习惯与道德调节是超越市场与超越政府的一种调节。

第三，书中提出，社会生活是一个广泛的领域，其中一部分是交易活动，另一部分是非交易活动。在交易活动中，市场调节起着基础性调节的作用，政府调节起着高层次调节的作用。

而在非交易活动中，情况便大不一样了。由于这些活动是非交易性质的，所以不受市场规则的制约，市场机制在非交易活动中是不起作用的。至于政府调节，则只是划定了非交易活动的范围，使它们不至于越过边界，而并不进入非交易活动范围之内进行干预。这样，非交易活动就要由市场调节与政府调节之外的道德力量来进行调节。

第四，书中提出，在市场出现与政府形成之后，由于种种原因，市场可能失灵，政府可能瘫痪，市场调节与政府调节都有可能不发生作用或只发生十分有限的作用。但即使在这些情况之下，习惯与道德调节也依然存在，并照常发生作用。这又是可以把习惯与道德调节称做超越市场与超越政府的调节的理由之一。

以上就是本书以《超越市场与超越政府》为书名的依据。

接着需要说明的是，习惯与道德调节是介于市场调节与政府调节之间的。市场调节被称做“无形之手”，政府调节被称做“有形之手”，习惯与道德调节介于“无形之手”与“有形之手”之间。在习惯与道德调节的约束力较强时，它接近于政府调节；而在其约束力较弱时，又接近于市场调节。那么，为什么习惯与道德调节的约束力有时较强，有时却较弱呢？这主要取决于两个因素：

一是习惯与道德调节是否已经成为一种被群体内的各个成员认同的约定或守则。如果它已经成为各个成员认同的约定或守则，约束力就较强；否则就较弱。比如说，乡规民约是一个群体的所有成员共同约定的，成员们就有遵守的义务，这时，体现于乡规民约中的习惯与道德调节就会有较强的约束力。

二是群体的各个成员对群体的认同程度的高低。如果成员对群体的认同程度较高，习惯与道德调节的约束力就较强；否则就较弱。不妨仍以乡规民约为例。乡规民约是某一群体的成员所制定的，如果该群体的成员对群体的认同程度较高，他们遵守乡规民约的自觉性较高，从而乡

规民约对成员行为的约束力也就较强。

当然，即使习惯与道德调节在某些场合的约束力较小，这并不意味着习惯与道德调节不起作用，而且，也不是任何情况下习惯与道德调节的约束力越强越好。这是因为，习惯与道德调节的形式多种多样，乡规民约这种形式下的习惯与道德调节一般会有较强的约束力，而自律这种形式下的习惯与道德调节虽然没有什么约束力，但却经常发挥作用，对个人的行为产生影响。

从社会发展的趋势来看，由习惯与道德调节起主要作用的非交易领域内的活动有可能不断增多。这是一个值得注意的现象。历史上，在生产力的发展水平极低的时候，交易领域几乎不存在，那时非交易领域几乎覆盖全部社会经济生活。以后，随着生产力的发展，交易领域逐渐扩大，非交易领域则相应地逐渐缩小。而在生产力发展水平大大提高以后，非交易领域在社会经济生活中所占的比例又会逐渐增加。也就是说，在经济高度发展之后，随着人均收入的增长，人们的需要也将随之发生由较低层次向较高层次的转变，人们的价值观念必然相应地发生变化，包括对利益的看法、对职业的看法、对生活方式和生活本身看法、对家庭和子女的看法、对人与人之间关系的看法、对物质财富和精神享受的看法等，都处于不断变化之中。于是非交易领域的活动也将随着国民收入和个人可支配收入上升到一个新阶段之后而增多，非交易领域内的各种关系也会因此而得到发展。这是社会经济发展的必然趋势。习惯与道德调节既然在非交易领域内起着主要作用，那么显而易见，随着非交易领域的不断扩大，习惯与道德调节在社会经济生活中的作用也将越来越突出。

过去，如果说超越市场和超越政府的道德调节还只是哲学界、经济学界、社会学界的专业人士感兴趣和不断探讨的问题，我希望今后更多的非专业人士能认真思考道德调节超越市场和超越政府的作用。

关于道德力量在经济中的作用，本书将分七章对其加以论述。虽然迄今为止，学术界对习惯与道德调节的探讨远远不够，而且在社会经济生活中（包括交易领域和非交易领域），人们对习惯与道德调节的重视程度也远远不够，但我深信，这种情况以后是会改变的。我撰写这本著作的主要目的，就是希望我的论述能够引起社会各界的重视，大家一起来加强这方面的研究工作，并让习惯与道德调节的作用发挥得更加充分。

后以宁

CHAPTER 1 THE ISSUE OF REGULATION BY CUSTOM AND MORALITY

第一章 习惯与道德调节问题的提出

1.1 Historical Review

1.1.1 The Meaning of Regulation by Custom and Morality

To discuss the meaning of regulation by custom and morality and its past and present roles, one must start with the question of resource allocation.

People often ask what it is that economics studies, and why we should study economics. Different schools may supply different answers, but none can get away from this thought: Economics is about allocation of resources and the study of economics is the study of how to use limited resources in the most rational and efficient ways, so as to increase the overall wealth of society and make it increasingly affluent. Some scholars would go further: The study of economics is in order to use resources rationally and allocate them efficiently, so as to increase the wealth of society and make income or wealth distribution fairer and fairer. In short, economics is a science of resource allocation and its mechanisms.

In the discipline of economics two standpoints on resource allocation have formed. The first holds: Resources can be allocated rationally and efficiently by means of market mechanism, and

resource allocation theory is no more than a theory of spontaneous regulation by market on economy. The second considers: The market mechanism has many limitations in resource allocation, such as low utilization rate, irrational allocation, unbalanced income distribution, etc., and therefore the market mechanism should be replaced or at least rectified through regulation by government (or regulation by plan). Between these two attitudes, many other different viewpoints exist, such as: Equal importance should be attached to the two means of regulation; either regulation by market should play the major role and regulation by government the auxiliary role; or vice versa. In general, current study on resource allocation mechanism shows the existence of the two means is universally accepted and the only disagreement is on their relative weighting in resource allocation.

Regulation by market and regulation by government are two distinct modes of resource allocation. But in fact, ever since the appearance of markets and governments, neither of the two modes has been the only one at work in social and economic life. In a market economy, a more realistic view is: Market plays a basic role in resource allocation and regulation by government a high-level role. Both modes exert influence on social and economic activities. Wherever there are trading activities, the market mechanism is at work. Wherever there is government, there is government supervision or guidance, be it direct or indirect, on trading activities so that they remain in line with government aims and within the boundaries it defines. In this sense, regulation by market as a basic mode can be called "primary regulation" and government regulation, as a high-level mode, "secondary regulation."

Now we want to ask: Are there only the two means of regulation in social and economic life? Is there another, a third type of regulation? And if so, what is it?

As previously stated, the terms regulation by market and regulation by government both indicate the mechanism by which resources are allocated, namely, the resource allocation rules by which

social and economic life operates. Without a market there could be no regulation by market and without government, no regulation by government. However, human beings have been on Earth for hundreds of thousands of years whereas market appeared only several millennia ago and government even later, so how did human society and its economy run and how were resources allocated in the long period before regulation by market and by government were established? Is it possible that another means of regulation was there to allocate resources? If not, how could human society have survived till today?

Barter, a type of transaction, first appeared among tribes, and can be regarded as an embryonic form of spontaneous regulation by market. At that time, predating both states and governments, there were no concepts of government management or regulation of resource allocation. Then we may enquire: In the long period before the appearance of barter or within tribes after inter-tribal dealing emerged, given that there was no market force or government force, what was it that controlled resource allocation between people or between tribes? It could only be force of custom or morality. Factors of custom and morality constitute a cultural tradition that is universally accepted and followed by people and through which they handle and adjust their interpersonal relations. Under the influence of this cultural tradition, people's behavior becomes more orderly and conforming. Even in remote antiquity this was the case. For example, the way of tribal members conducting their production activities, the division of labor, the obligations and rights of the members, etc., were and could only be regulated by custom and morality. It is the same with the way they distribute the means of subsistence among tribal members and the way they distribute food, especially when it was in shortage. If the members violated the tradition, if their behaviors were not normalized or if resource allocation was in disorder, it would be a disaster for the tribe, causing its inner instability and ruining its conventions.

In light of this, regulation that relies on the force of custom or morality—a regulation beyond market and government—can be called "the third regulation." Since production factors are provided and employed according to custom, and production outputs are distributed on this basis too, it can undoubtedly be called "regulation by custom." Custom comes from tradition and group identification, the foundation of which is moral belief and principle. Since custom is supported by morality, regulation by custom is inseparable from regulation by morality. Hence, they can be compounded under the term regulation by custom and morality.

In his work *A Theory of Economic History*, the British economist John Hicks used the term "customary economy" and considered it the earliest model of non-market economy. He pointed out that "the economy of a neolithic or early mediaeval village, as well as of the tribal communities which have survived until lately in many parts of the world, was not organized by its Ruler (if such existed); it was based upon a corpus of tradition. By that tradition individual function was prescribed, and continued to be prescribed."¹

According to Hicks, in "customary economy," people are "not much disturbed in their ancient ways by external pressures. Their economy can function, with every member performing his allotted task, including the decision-making which is left to him within his allotted circle; overriding decisions from the 'centre' will scarcely ever have to be made."² Such "customary economy" is self-adjusting for maintaining a balanced state. As Hicks wrote, "once such a system has attained an equilibrium, it can continue for long ages without the need for reorganization—without the need for new decisions of an organizational character. The ordinary emergencies, such as harvest failures or attacks by the 'usual' enemies would not require new decisions; ways of dealing with them could be incorporated within the traditional rules. So long as this equilibrium persisted, there might even be no need for an organ by which ultimate authority could be exercised."³ Without doubt, the "customary economy" described by

Hicks was an economy regulated by force of custom and morality only.

But does it follow that, with the emergence of markets and governments and regulation by them, regulation by custom and morality disappeared? Far from it: Actually, the later emerged market and government regulations are a partial substitute for the long existing custom and morality regulation, and a restricting power on the influencing scope of the latter as well. The diminished importance and influence of regulation by custom and morality does not imply its total disappearance. Indeed, in areas where regulation by market and government cannot reach, it still plays a major role. For example, there are places outside the reach of government—remote mountain villages, isolated islands, wilderness areas—but there are people living, working and multiplying there. It is regulation by custom and morality that enables them to continue living and producing there.

We come to a preliminary conclusion: Before the appearance of regulation by market and government and in places where market and government factors cannot reach, regulation by custom and morality is the only form of regulation that works.

1.1.2 Co-existence of the Three Modes of Regulation

Since the appearance of markets and governments, there have been occasions when regulation by custom and morality comes into play together with the other two modes, thereby creating a situation of the three types of regulation co-existing and co-functioning.

A typical example is the social and economic life of medieval cities in Western Europe.

In Western Europe, since the 10th century or so, some old cities in decline experienced a revival. New houses were built on the ruins of the old city, forming new neighborhoods, or industrial and

commercial districts emerged along the old city boundaries and gradually became an integral part of the city. More importantly, a group of new cities appeared. Different from the ancient cities in Western Europe both in political and economic terms, these revived or new medieval cities came into being and developed as something different from serfdom and as places of refuge and resettlement for escaped serfs. Many of those serfs became craftsmen and their organizations were called guilds. Members of a guild, or guild-masters, were owners of manual workshops. They sold their products and bought raw materials in the market, so their behaviors were regulated by the market. The administration of the city, or the municipal government, formulated a series of rules for the market and the production and operation of the workshops in terms of product price, operating hours, borrowing and lending rates, etc. This was regulation by government in action.

The guilds also had their own rules. For example, they set a ceiling on the number of journeymen and apprentices in each workshop. And each workshop had very limited number of journeymen and apprentices and the ceiling was not allowed to be broken. In some cities, guilds even made it a rule that each guild-master could have only one workshop. In some cities, guilds also set restrictions on production equipment in each workshop, such as the number of ovens in bakeries, the number of looms in textile workshops and so on. Some guilds forbade opening underground workshops, or covertly producing on equipment hidden in other people's houses. All facilities should be for self-use only and hiring was not allowed. Some guilds set limits on family members involved in production. For example, only sons, brothers and nephews of an owner were allowed to participate in production and no further relatives could be included. To do otherwise was considered covert hiring and an obvious violation of the rules. All rules and restrictions were set by the guilds to safeguard the stability of their trade at a period when the cities of medieval Western Europe were in their

initial stage of development. By this means, no manual workshop would expand to a size large enough to threaten other workshops. The rules set by the guilds were based on traditions accepted by all members, and therefore they belong neither to regulation by market nor to regulation by government, but to regulation based on the power of custom and morality. In those medieval cities, regulation by custom and morality co-existed with regulation by market and government, all of them playing a role.

Another example of such co-existence is found in the activities of some farming communities in modern Western countries. With the maturity of the market, farmers likewise subjected their producing activities to regulation by market, such as what crops to plant, what livestock to raise and at what price to sell their products, etc. Any fluctuation in market price would influence the production and operation of farming households. Price changes, surplus and shortage of farm products are matters of concern to government; when necessary it takes different measures to regulate the market so as to ensure a certain amount of income for each farming household and that the prices of agricultural products are kept at a certain level. Besides regulation by market and government, farmers also set up their own organizations, with the aim of protecting their own interests, minimizing losses caused by market fluctuation or resisting government measures injurious to their development, etc. Once joined in such organizations, farmers should obey relevant rules and the organizations should protect the rights of all members whilst restricting their behaviors. This can be classified as regulation by custom and morality. Therefore, farmers' social and economic activities in modern Western countries exist in the context of the three types of regulation.

On those occasions when the three co-exist and function together, the relative strength of the role played by regulation by custom and morality is not necessarily determined by that of regulation by market or regulation by government. Actually, their relationship is too

complicated to be summed up with the formula "A is stronger and B weaker or vice versa." Of course, we do often see occasions when regulation by market and government appears weak, regulation by custom and morality becomes stronger to compensate. Here are two illustrative examples.

One: In history, in areas newly developed by immigrant communities, since regulation by market or government did not then function, resource allocation had to depend on regulation by custom and morality. In the early period of the Protestant migrants developing North America, it was regulation by custom and morality that filled the gap caused by the absence of regulation by market and government. The former element was strong and the latter weak.

China's history affords many similar examples. In the period of the Southern and Northern Dynasties, in the last years of the Tang and in the Five Dynasties and Ten Kingdoms period, waves of people living in the Central Plains area migrated south and congregated in areas such as Fujian and Guangdong, where families settled down, establishing new villages, preserving their old cultural traditions while starting up new undertakings. In such places, no adequate regulation by market or by government existed, so regulation by custom and morality dominated the social and economic life of the migrants. From this we can see how great the vitality is of cultural tradition formed under the influence of custom and morality. Thanks to the power beyond market and government, namely the power of custom and morality, those immigrants managed to overcome a multitude of difficulties in the turmoil of war, migrating with their families and establishing a new homeland in the remote South.

Two: After the appearance of markets and governments, there were many occasions of great unrest, such as invasion by ethnic peoples, peasant uprisings, feudal separatist rule, wars between warlords, etc. A folk adage goes, "take shelter in the towns at times of minor unrest and in the villages during major upheaval." In the former case, country folks were likely to take refuge in towns, since these

were guarded by soldiers and people were safer there, a proof that regulation by government still worked in towns and that social and economic order was maintained. At times of major upheaval, townspeople were likely to flee to the countryside, to remote villages or mountain areas in particular, since towns, usually being places of military and strategic importance and therefore fiercely contested, faced the risk of siege and running out of water and food. Even government forces could not maintain normal order, so people had to flee to the countryside, putting as much distance as possible between themselves and the towns. At such times of great upheaval, trade was suspended, and regulation by market could not function. With government paralyzed, regulation by government failed too. However, in remote villages or mountain areas far from the towns, there were still residents living and working. So how did such communities and economy run? How were resources allocated? All these depended on a regulating force beyond market or government; namely, the force of custom and morality, which, in times of great upheaval, helped to keep social and economic order and enable people to live, survive and multiply. This illustrates the increase in strength of regulation by custom and morality with the weakening of regulation by market and government.

Nevertheless, as previously stated, the three types of regulation relate with each other in a complicated way. There are situations where A is strong and B weak or where A is weak and B strong. But there are also situations where both are strong or weak. For example, in situations where the market is immature and the market mechanism imperfect, the role of regulation by market in resource allocation will be restricted; at the same time, if the government fails to set certain rules or fails to enforce them seriously or allows rule-infringement to go unchecked, it means regulation by government in resource allocation is weak. When regulation by market and government are both weak, one cannot generalize on whether the role of regulation by custom and morality is weak or strong. The answer

requires analysis of the specific situation.

One should point out that a custom is something that most people accept and follow, and a moral is a belief, a principle for treating oneself and others and conducting oneself in society. For regulation by custom and morality to play an important role in social and economic life, a precondition would be the majority's endorsing and following the custom and their belief in and support of certain morals and principles. In situations where regulation by market and government are both weak, if the majority in society do not accept a custom formed by tradition or do not totally endorse it, they cannot be said to follow it; if the majority in society lack a certain moral belief or do not adhere to a certain moral principle, then the role of regulation by custom and morality will be insignificant. Here we have a situation where all three types of regulation are weak, social and economic life is bound to fall into chaos, resource allocation will be disorderly and inefficient. On the contrary, in occasions when both market and government regulations are weak, as long as people accept and follow their traditional habit, embrace and stick to certain moral belief and principles, the role of custom and morality regulation will be significant and fill the gap caused by the weakness of the other two regulations. An example of this is the experience of migrant societies in Chinese history.

This shows that the strength or weakness of regulation by custom and morality is not necessarily directly linked to that of regulation by market or government: it very much depends on the degree of people's subjective effort, on how important they deem such regulation and how actively they exercise it in their life.

Similarly, at times when regulation by market can fully play its role, when government seriously exercises its responsibility for high-level regulation, the strength of regulation by custom and morality will depend on specific situations. With the emergence of markets and governments, once their regulating functions began to come into effect, the scope of regulation by custom and morality shrank, and

regulation by market and government replaced it in many areas. Importantly, however, the shrinking of scope is not the same thing as a diminution in strength. In the larger context where regulation by market and government fully play their due roles, provided people regard regulation by custom and morality as important and ensure that it plays its role, its influence will be both striking and beneficial. In short, human effort is a decisive factor. This will be discussed in detail in the following chapters.

壹 历史的回顾

一、习惯与道德调节的含义

在讨论习惯与道德调节的含义及其在历史与现实生活中的作用时，有必要先从资源配置问题谈起。

人们常常问道：经济学究竟是研究什么的？为什么要研究经济学？不同的学派会有不同的回答。但无论怎样回答，学者们总离不开这样一种思路：经济学是研究资源配置的，研究经济学是为了使有限的资源被用于最合理、最有效的方面，以便增加社会总的财富，使社会日益富裕。有些学者再深入一步，作出这样的解释：研究经济学，是为了寻找一种令人满意的机制，以便合理利用资源，有效配置资源，既能增加社会财富，又能使财富或收入的分配趋于公平，因此，经济学是研究资源配置及其机制的科学。

在经济学中，历来有关资源配置机制的研究有两种趋向。一种趋向是：认为市场机制能够合理地、有效地配置资源，资源配置学说无非是一种通过市场对经济自发进行调节的学说。另一种趋向是：认为市场机制在资源配置方面具有相当大的局限性，如资源利用率低、资源配置不合理、收入分配失调等，因此要以政府调节（或计划调节）来取代市场机制，至少应用政府调节来纠正市场机制的局限性。上述两种趋向是基本的趋向，介于两者之间的是这样一些观点：或者认为市场调节与政府调节应当并重；或者认为市场调节应当为主、政府调节应当为辅；或者认为政府调节应当为主、市场调节应当为辅。总之，从经济学中有关资

源配置机制的研究状况可以看出，社会经济生活中两种调节（市场调节和政府调节）的存在是被公认的、没有引起疑问的。问题只是在于各派对市场机制在资源配置中的作用估计程度的分歧，以及对政府调节在资源配置中的作用估计程度的分歧。

市场调节与政府调节是两种不同的资源配置方式。实际上，自从有了市场和政府以后，社会经济生活中就不存在唯一依靠市场调节或唯一依靠政府调节的问题。在市场经济条件下，比较符合实际的说法是：市场对资源配置的调节是基础性调节，政府对资源配置的调节是高层次的调节。无论是市场调节还是政府调节，都对整个社会经济活动发生影响，即只要存在交易活动，市场机制就会时时处处起作用；只要存在着政府，政府也会对这些交易活动进行直接或间接的管理，或进行指导，使之既符合政府预定的目标，又不至于越过政府规定的范围。正由于在市场经济中市场调节是一种基础性调节，所以可以把市场调节称做第一次调节；由于政府调节是一种高层次调节，所以可以把政府调节称做第二次调节。

现在我们准备探讨的是：难道社会经济生活中只有市场调节与政府调节这两种调节？在市场调节与政府调节这两种调节之外，还有没有另外的调节，或称之为第三种调节？如果社会经济生活中存在着第三种调节，那么它究竟是什么？

正如前面已经谈过的，无论是市场调节还是政府调节，都是指资源按照什么样的机制在进行配置，也就是说，社会经济生活遵循什么样的资源配置原则在运行。我们不妨设想一下，人类社会的产生已经有多少万年了，市场的出现大概是几千年前的事情，政府的形成要晚于市场的出现，至多也不过几千年。没有市场，就不会有市场调节；没有政府，也不会有政府调节。既然人类社会的历史悠久，市场的出现要晚得多，政府的形成更晚，那就要问一句：在市场调节与政府调节出现之前的漫长岁月里，人类社会经济是如何运行的？资源是如何配置的？在远古时代，既没有市场调节（因为那时还没有市场），又没有政府调节（因为那时还没有政府），在资源配置方面是不是还存在着市场调节与政府调节之外的另一种调节？否则人类社会如何能存在并延续下来？

具体地说，物物交换最初出现于部落与部落之间，这也许可以被称为萌芽状态中的市场自发调节，那时，国家还没有形成，政府也还没有成立，所以也就谈不上什么政府对资源配置的管理或调节。试问，在交

换出现以前的长时间内，以及在部落与部落之间的交换出现之后的一个部落内部，支配着人与人之间或部落内部的资源配置的，既不可能是市场力量，也不可能是政府力量，那又是什么呢？只能是一种习惯力量或道德力量。习惯力量或道德力量形成一种文化传统，被人们普遍认同并且共同遵守，人们依靠这种文化传统来调整彼此之间的关系，处理彼此之间的关系。人们的行为在习惯力量或道德力量形成的文化传统影响下，逐渐有序，逐渐规范化，哪怕在远古时期，也是如此。比如说，远古时期，一个部落内部的成员是如何进行生产活动的？各人担负什么样的工作，应当尽哪些义务，享有哪些权利？这只能以习惯力量或道德力量为依据。又如，在一个部落内部，在人与人之间，生活资料是怎样分配的？特别是在食物十分短缺的情况下，部落内部如何进行食物分配？这也只能按照习惯与道德原则来调节。当时，假定人们违背已经形成的传统，人们的行为不规范，资源的配置紊乱无序，那只会引起部落内部的不稳定，破坏人们所接受的秩序，结果将造成一场灾难。

由此可见，按习惯力量或道德力量进行的调节，就是超越市场调节与政府调节的另一种调节，可以称之为第三种调节。由于生产要素是按照习惯方式提供的，生产要素的使用是按照习惯方式进行的，生产的成果也按照习惯方式分配，所以理所当然地称做习惯调节。习惯来自传统，来自群体的认同，而群体认同的基础是道德信念、道德原则，道德支持了习惯的存在与延续，因此，习惯力量的调节与道德力量的调节是不可分的。可以把两者结合在一起，合称为习惯与道德调节。

已故英国著名经济学家约翰·希克斯（John Hicks）在所著《经济史理论》一书中，使用了“习俗经济”一词，他认为这是最早的非市场经济模型。他指出，“新石器时代的或中古初期村社的经济以及直到最近在世界许多地区仍残存的部落共同体的经济，都不是由它的统治者（如果有的话）组织的，而是建立在传统主体上的。个人的作用是由传统规定的，而且一直如此。”¹根据希克斯的论述，在“习俗经济”中，“人们的许多古老方式不大受外来压力的干扰。他们的经济可以运行，因为每一个成员都在完成指定给他的任务，包括由他在指定的范围内作出决定；几乎从来不必从‘中心’作出凌驾一切的决定”。²这种“习俗经济”是能够自我调整，以维持均衡状态的。希克斯写道：“一旦这种系统达到了均衡状态，它就能长期持续，无需改组——无需作出组织方面的新决定。普通的紧急情况，比如作物歉收或‘平常的’敌人来犯，都不需要新的决定；

可以把应付这些情况的办法并入传统的章程之中。只要这种均衡状态持续下去，说不定连行使最高权力的机构都不需要。”³可以肯定地说，希克斯笔下的“习俗经济”，就是唯一依靠习惯与道德力量来进行调节的经济。

后来，市场出现了，政府也形成并发挥作用了，习惯与道德调节是否因市场调节、政府调节的出现而消失了呢？事实并非如此。已经出现的市场调节与政府调节，既是对久已存在的习惯与道德调节的某种程度的替代，也是对习惯与道德调节发挥作用的范围的一种限制。即使如此，习惯与道德调节在社会经济生活中的作用只是缩小了范围，降低了在调节方面的重要程度，但从未消失过。在市场力量与政府力量都调节不到的领域内，习惯力量、道德力量的调节依然起着主要作用。例如，在偏僻的小山村、在孤岛上、在荒原上，那里还有人们居住、生活、劳动。市场力量达不到那里，政府力量也达不到那里，而人们不仅在那里生存了下来，而且繁衍了后代。正是习惯与道德力量的调节使当地的生产和生活持续进行着。

可以得出一个初步的结论：习惯与道德调节是在市场调节与政府调节出现以前唯一起调节作用的调节方式，也是在市场力量与政府力量达不到的领域内唯一起调节作用的调节方式。

二、市场调节、政府调节、习惯与道德调节的并存

市场和政府出现以后，在市场调节与政府调节都起着作用的场合，习惯与道德调节也可能同时发挥自己的作用，于是就形成了市场调节、政府调节、习惯与道德调节三者并存，共同发挥调节作用的格局。

西欧中世纪城市的社会经济生活是一个典型的例子。

在西欧，大约从公元10世纪起，原来衰落不堪的一些古代城市开始复兴，旧城市的废墟上又盖起了新的房屋，形成新的居民区，或者沿着旧城市的边缘，兴起了新的工商业区，它们渐渐同旧城市连成一片。更重要的是，出现了一批新的中世纪城市。无论是复兴了的旧城市还是新出现的城市，它们在政治意义和经济意义上都不同于西欧古代的城市，它们是作为农奴制度的对立物而产生和发展的，它们成为逃亡农奴的避难所和安身立命之地。来到城市的农奴，不少人成了手工业者。这些城市手工业者的组织是行会，参加行会的是各个手工作坊的主人，又称行

东或师傅。当时，手工作坊的产品在市场上销售，它们的原材料来自市场，原材料的购进和产品的销售都受到市场的调节。城市的管理部门即市政当局，对市场和手工作坊的生产经营活动，有一系列规定，包括产品价格、营业时间、借贷利率等，这是政府调节行为的表现。但行会自身也有不少规定。例如，有的城市中的行会规定了每个手工作坊的帮工和学徒的最高限额，通常是少数帮工和少数学徒，超过限额要取缔。有的城市中的行会规定，一个行东只准拥有一个作坊。还有的城市中的行会连作坊内生产设备的数目也作了限制，如烘面包业规定作坊内烘炉的数目，织布业规定作坊内织布机的数目等。有的行会还禁止开设地下作坊，不准把生产设备藏在别人家里偷偷地生产，生产设备只准自己使用而不得出租。此外，有的行会规定，手工作坊家庭成员参加生产的范围应有所限制，比如家庭成员仅限于行东的儿子、兄弟和侄子，不得把更多的亲戚包括在内，否则就等于变相雇工了。行会所作出的上述规定或限制，都是为了在西欧中世纪城市发展初期维护行业自身的稳定，不让任何一家手工作坊的规模扩大到足以挤垮其他作坊的程度。从性质上说，行会的规定是以成员所认同的传统为基础的，这既不属于市场调节，也不属于政府调节，而是一种习惯与道德力量的调节。习惯与道德调节在这些西欧中世纪城市中是同市场调节、政府调节并存且共同起作用的。

近代西方国家中的一些农民团体的活动，可以被看成是市场调节、政府调节、习惯与道德调节三者并存的又一例证。在一些西方国家，由于市场的发展日益完善，农户们是为市场而进行生产的，农户种植什么作物、饲养什么禽畜、按什么价格销售，都接受市场的调节。市场价格的波动关系到每一个农户的生产和经营。政府对于农产品的价格变化和农产品过剩或短缺的程度是关心的，政府在必要时采取不同的手段来调节农产品市场，以保证农户的一定收入或维持农产品价格的一定水平。政府调节的作用是不容忽视的。但在市场调节与政府调节起作用的同时，农户自己也建立了各种团体，这些团体的宗旨在于保障农户的利益，减少因市场情况的变化而可能造成的损失。此外，对于政府的某些被认为对农户的发展不利的措施进行抗争，等等。农户参加这类团体之后，要遵守团体的有关规定，团体也为保护成员的权益进行工作。农户对团体有关规定的遵守，团体对参加者的行为的约束，就属于习惯与道德调节。近代西方国家农户们的社会经济活动，正是在市场调节、政府

调节、习惯与道德调节三者共同起作用的环境中的进行的。

在市场调节、政府调节、习惯与道德调节共同起作用的场合，习惯与道德调节作用的强弱并不一定取决于市场调节、政府调节的作用的强弱。三者之间的关系是复杂的，很难用“此强则彼弱，此弱则彼强”的模式来概括。当然，不排除下述情况的一再出现，即在市场调节与政府调节所起的作用较弱的场合，习惯与道德调节的作用会增强，以填补市场调节与政府调节的不足。这里可以举两个例子来说明。

一个例子是，历史上，在新开发地区的移民社会中，由于市场调节与政府调节都还没有发挥应有的作用，这时主要依靠移民们的传统，即习惯与道德力量来进行资源配置的调节。新教徒在北美的早期开发活动中，习惯与道德力量所起的调节作用恰恰填补了当时因缺少市场调节或政府调节而留下的空缺。这是“市场调节弱或政府调节弱而习惯与道德调节强”的例证。类似的例证在中国历史上也可以发现很多。南北朝时期、唐朝末年和五代十国时期，中原居民一批批南下福建、广东，家族聚居，自成村落，南下的中原居民保存了自己的文化传统，在新的地区开始了新的事业。市场调节与政府调节在这些地区都是不充分的，习惯与道德调节起着支配南下移民们的社会经济生活的作用，也反映了一种由习惯与道德力量所形成的文化传统及其顽强的生命力。移民们之所以能在战乱中不顾艰难险阻，举族南迁，并重振家园，开拓进取，有赖于一种超越市场与超越政府的力量，即习惯与道德力量。

另一个例子是，历史上，自从市场出现和政府形成之后，有过许多次大动乱，如外族入侵、农民起义、诸侯割据、军阀混战等。中国民间流传着两句话，叫做“小乱居城，大乱居乡”。小乱时，乡下的人不少跑到城里去避难。这是为什么？因为城里一般有兵把守，治安比较好，说明政府的管理与调节在城里仍然起着作用，城里的社会经济秩序得以维持。大乱时，城里的人为什么纷纷到乡下去避难呢？而且往往到很偏僻的乡村或大山沟里去避难？这是因为，城市通常是兵家必争之地，战火激烈，甚至会被包围，断粮断水，住在城里难逃一劫，这说明政府的力量连城里的正常秩序都维持不下去了，人们只好往乡下躲，逃离城市越远越好。在这样的大动乱年代，市场交换停顿了，市场调节起不了什么作用；至于政府，这时已瘫痪了，政府调节已失灵了。但在远离城市的偏僻的山沟里、小村寨里，仍有人居住、生产、生活，这里的社会经济是如何运行的呢？资源是如何配置的呢？靠的正是市场调节与政府调节

以外的力量，即习惯与道德力量。习惯与道德调节在大动乱的年代维持着社会经济的秩序，使人们得以生存和繁衍。这也可以说明习惯与道德调节的作用是在市场调节与政府调节的作用减弱之后增强的。

然而正如前面所说，市场调节、政府调节、习惯与道德调节三者之间的关系是复杂的。不仅存在着“此强彼弱，此弱彼强”的情况，而且还存在着“此弱彼也弱，此强彼也强”的情况。比如说，在某些场合，如果市场发育不良，市场机制不完善，市场调节在资源配置中的作用是受限制的，这表明市场调节的作用弱；与此同时，如果政府对于社会经济秩序的维持，或者缺乏一定的规则，或者不认真执行这些规则，或者对于违背这些规则的行为不闻不问、听之任之，从而政府调节在资源配置中的作用是有限的，这表明政府调节的作用弱。但是，在市场调节作用和政府调节作用都弱的情况下，习惯与道德调节作用究竟是弱还是强，不可一概而论，要根据具体情况才能作出分析。

应当指出，习惯是大多数人认同并遵循的，道德是一种信念，是一种待己、待人、处世的原则。要让习惯与道德调节在社会经济生活中起重要作用，应以大多数人对习惯的认同和遵循、对一定的道德信念和原则的信奉与坚持为前提。在市场调节作用和政府调节作用都弱的条件下，如果社会上大多数人不以某种传统所形成的习惯为然，即对此缺少认同，那就更谈不上对此的遵循；如果社会上大多数人缺乏一定的道德信念，也不去坚持一定的道德原则，那么习惯与道德调节的作用就不可能明显，于是就会形成市场调节、政府调节、习惯与道德调节都弱的格局。这种情况下的社会经济秩序必定混乱不堪，资源配置必然在无序中低效率地、甚至负效率地进行。反之，尽管客观上市场调节作用弱，政府调节作用也弱，但只要人们遵循传统所形成的习惯，信奉并坚持一定的道德信念和道德原则，习惯与道德调节就能在社会经济生活中发挥应有的作用，并可以填补因市场调节与政府调节不足而留下的空白。前面提到的历史上某些移民社会的发展，就是市场调节与政府调节虽弱，但习惯与道德调节作用却强的例证。

这说明：习惯与道德调节作用的强弱不一定与市场调节、政府调节的弱或强有直接的联系，而在很大程度上取决于人们主观上的努力程度，取决于人们是否重视并积极发挥习惯与道德调节的作用。

同样的道理，在市场调节作用得到充分发挥时，在政府认真地执行高层次调节任务时，习惯与道德调节究竟能起多大的作用，习惯与道德

调节的作用究竟是弱还是强，也要根据具体情况而定。前面已经谈到，自从市场出现和政府形成以后，由于市场调节与政府调节发挥了作用，所以习惯与道德调节的范围要比市场出现和政府形成以前缩小了，本来由习惯与道德调节起支配作用的领域，不少由市场调节或政府调节来替代。但要指出的是：习惯与道德力量的调节范围的缩小同习惯与道德调节作用的强弱并不是一回事。在市场调节与政府调节都能充分发挥应有的作用的大环境中，只要人们重视并注意发挥习惯与道德调节的作用，习惯与道德调节的作用就显著，效果就好。事在人为，千真万确。关于这些，留在本书以下各章中再详加阐述。

1.2 Non-traded Sector

1.2.1 Various Relationships in the Non-traded Sector

In the first section, we clarified this issue: A third type of regulation beyond market and government did exist in history, namely regulation by custom and morality. Its strength or otherwise, its clear results or otherwise, depend on whether people attach importance to it and whether they care that it plays its role. In other words, the crucial factor is people's subjective effort. In this section, we analyze the various relationships in the non-traded sector. In social and economic life, the traded sector and the non-traded sector co-exist. In the former, market rules play the major role in terms of regulating resource allocation, etc. Government guides and manages the market, makes up for the limitations of regulation by market and rectifies the defects of the market. In the traded sector, regulation by market is basic in nature whereas regulation by government is at a higher level. But the same is not true of the non-traded sector, since market rules have no role here and the market mechanism does not exist here. Because of the absence of regulation by market in the non-traded sector, the role of regulation by government differs from its role in the

traded sector.

To better explain the features of the non-traded sector, let us first discuss human needs, human behaviors and interpersonal relations. In real life human beings are "social men" living in communities, having their own needs, pursuits, aspirations and emotions. They have relatives, friends, colleagues and townsmen with whom they are in contact. In social contacts, they have to consider various relationships, follow conventions and take care not to overstep boundaries. They are influenced by their surroundings and may influence others as well. They persuade others and are themselves persuaded. Their experiences constantly change, as do their emotions and their ways of thinking. As "social men" they behave thus in the traded sector and in the non-traded sector this is even more the case. Therefore, the study of various activities and relationships in the non-traded sector is in a certain sense the study of countless individual "social men" and the various groups they form.

The non-traded sector not only exists but constitutes a rather large part of social and economic life. The American economist Kenneth Boulding pointed out that a price-centered trading economy is far from capable of including all human economic activities. As well as the exchange economy, there is the "grants economy," an economy that is not founded on exchange but on bestowal. According to Boulding, the "grants economy" has three origins: love, fear and ignorance.⁴

What is "bestowal" originating from "love"? People have relatives and other close ties. Out of "love", they are willing to grant part or all of their properties and incomes to others, a behavior that has nothing to do with price-centered exchange economy.

What is "bestowal" originating from "fear"? For example, a man is threatened by robbers whose goal is to take his belongings. This man has to choose between money and life. Obviously he will choose the latter by giving his money to the robbers. This is also "bestowal behavior," but "bestowal" engendered by "fear."

What is "bestowal originating from "ignorance"? According to Boulding, when two parties conduct an unequal exchange, one party takes advantage of the "ignorance" of the other, gaining more whereas the other suffers losses. This is the equivalent of bestowal behavior, bestowal out of "ignorance," and is plainly different from an exchange economy situation.

Boulding came to the conclusion that the "grants economy" was different from the exchange economy and that traditional economics could analyze phenomena only in the exchange economy, not in the "grants economy."

Boulding's statement is not without merit and his proposal of "grants economy" is educative. But it is hard to sum up relationships and activities in the non-traded sector as "grants." To be more precise, though social and economic life can be classified into traded and non-traded sectors, to say it comprises only exchange economy and "grants economy" is incomplete. The traded sector might be equivalent to exchange economy, but the non-traded sector is far more complicated than a "grants economy" and the relationships within do not stop at "love," "fear" and "ignorance." Those relationships, such as ties among families, clansmen, relatives, neighbors, townsmen, schoolmates, friends, or teachers-and-students, are not trade-centered, so they cannot be summarized under the three origins. Academic activities, social gatherings, charitable events, etc., are generally non-trade-oriented, but they cannot be summarized under the three origins, either. Therefore, it is more accurate to say "various relationships and activities in the non-traded sector" than merely use the word "grants."

Relationships and activities in the non-traded sector are not in the realm of regulation by market, nor are they subject to market rules. The market mechanism does not intervene in the non-traded sector. As for regulation by government, its main role in the sector is to set boundaries for those relationships and activities, namely, that none of them should overstep the limits established by law or violate laws, at pain of punishment for infringement. However, government does not

involve itself in how the activities are conducted or how the relationships are handled, but allows the force of custom and morality to play the main role here. This is an important distinction between the non-traded and the traded sectors.

1.2.2 Rationality of Individual Behaviors in the Non-traded Sector

A society is formed by countless individuals, who have dealings with each other and sometimes conflicts. Individuals have individual goals but the important issue is how to avoid one person's goals conflicting with those of others. If realizing one person's goal entails damaging that of the other, then the rationality of their behavior and goals should be probed. The question of rational behavior and rational goals applies in economic and social activities alike. A person's rational economic behavior and goals may well be at one with his own rational social behavior and goals, but they might be irrational when considered from the perspective of social activities. Therefore, as "social persons," we have to consider the rationality of our behavior and goals from an economic perspective and from a social perspective too. Why do we raise such a question in discussing the relationships and activities in the non-traded sector? It is because this question is linked to the limitation of regulation by market and by government as well as to the effectiveness of regulation by custom and morality.

Of course, society expects the behavior of individuals to be in line with social norms and individual goals to be in line with those of social development. If an individual's behavior is not in line with social norms but will not actually harm normal social and economic operation or hamper achieving society's development goals, there is no need for society to regulate it. If an individual's goal is not in line with that of social development, provided it will not harm the interests of other individuals or hamper the realization of their goals,

there is no need for society to regulate this, either. The need for society to regulate arises only when individual behavior and goals are at odds with social norms, with the goals of social development and the interests of others or overstep the limits set for them.

In the traded sector, regulation appears simpler: On the basis of regulation by market, regulation by government can roughly coordinate individual behavior and goals with social norms, so regulation by custom and morality plays only a supplementary role here. In the non-traded sector, things get more complicated. As addressed above, relationships and activities here are independent of the market mechanism, i.e. regulation by market has no role in this sector. Nor does regulation by government interfere too much here: Its main role is to set boundaries for those relationships and activities, i.e. none of them should overstep or violate laws. This leaves considerable space for regulation by custom and morality, which is the form of social regulation most relied on and acceptable to the majority when individual behavior and goals are out of line with social norms or overstep boundaries.

Then we hit a problem: In the non-traded sector, individual rational behaviors may be legal, but to be rational does not imply legality, nor does legality imply that a behavior is rational. But we have to ask: Why does the traded sector have no such problem of rationality/legality in individual behavior? In the traded sector, provided the market mechanism is complete, regulation by government is effective and laws are executed seriously, individual behaviors usually can be legal and rational at the same time. In trading activities, even incomplete laws in need of modification are still effective and have to be abided by. Only thus can the trading parties be protected by law. Since a trade involves the economic interests of both parties, it has to be both rational and legal. No trading activity or individual behavior, even if it is considered rational, will go on happening if it is not legal: at most it will be a one-off. In general, in the traded sector, economic interests determine

that legality is generally equivalent to rationality.

Things are different in the non-traded sector. Laws only set boundaries within the non-traded sector and no activity should overstep them. Relationships and activities within this sector are mainly regulated by custom and morality. Therefore there is a direct correlation between the boundaries of rationality of non-trading behaviors and the scope defined and endorsed by custom and moral beliefs and principles. In the non-traded sector, the fact that a behavior on the part of an individual is rational does not equate to its being legal, and it certainly does not mean such a behavior is illegal. In fact, within the boundaries defined by law, many relationships are not managed by specific laws, but depend on regulation by custom and morality and by cultural traditions. The fact that an individual's behavior is legal does not equate to its being rational, and it certainly does not imply that legal behavior is irrational. Since there are no specific laws to follow in handling many relationships in the non-traded sector, when a law is brought in it might not be in accord with custom or traditions, thus giving rise to a situation which is legal but not rational.

Unlike in the traded sector, if the situation arises in the non-traded sector where an individual behavior is rational but not legal or legal but not rational, this is considered quite normal. This is because when we talk about legal or non-legal in this context it does not mean whether those relationships or activities have or have not overstepped boundaries defined by laws: it is about whether or not there are specific laws to follow within those boundaries. The reason we say regulation by custom and morality is extremely important to the non-traded sector is because the greater the lack of specific laws to follow, the greater the need for this type of regulation; the more individual behaviors need to be in harmony with social norms, the greater the need for regulation by custom and morality.

The fact that people are "social men" is more obvious in the non-traded sector. Since people are "social men," the ability of regulation

by market and government to deal with issues involving people is rather limited, and regulation by custom and morality is more applicable here. If we consider this argument from the angle of "social men," we will have a deeper understanding.

贰 非交易领域

一、非交易领域内的各种关系

在第一节，我们主要阐明这样一个问题：从历史上看，社会经济生活中的确存在着市场调节与政府调节以外的第三种调节，即习惯与道德调节。习惯与道德调节作用或强或弱，其效果或明显或不明显，关键在于人们是否重视习惯与道德调节，是否注意发挥它的作用，换言之，关键在于人们主观上努力与否。

在这一节，我们将转入非交易领域内的各种关系的分析。

在社会经济生活中，交易领域与非交易领域并存。在交易领域内，市场规则起着作用，市场机制调节着资源的配置，政府指导市场，管理市场，对市场调节的局限性加以弥补，对市场的缺陷进行纠正。市场调节作为基础性调节，政府调节作为高层次调节，是就交易领域而言的。

而在非交易领域内，则是另一种情况。既然是非交易领域，市场规则是不起作用的，市场机制也进入不了这个领域。同时，由于不存在市场调节这样的基础性调节，政府调节在这里所起的作用也就不同于交易领域了。

为了更好地说明非交易领域的特点，让我们先着手讨论人的需要、人的行为、人与人之间的关系。现实生活中的人，是“社会的人”，是一个生活在人群之中的人，他有自己的需要、自己的追求、自己的抱负，以及自己的喜怒哀乐。他同别人接触、往来，他有自己的亲戚朋友、同乡同事。他在社会交往中，要考虑各种各样的关系，要遵守社会中习惯形成的约束。他会受到周围环境的影响，他也会影响别人。他会听从别人的劝说，他也会劝说别人。特别是，他的经历仍在变动之中，他的情绪也会有波动，他的思想方式不是固定不变的。他正是这样一种“社会的人”，在交易领域内是这样，在非交易领域内更是这样。因此。对非交易

领域内各种活动和各种关系的研究，从某种意义上说，就是对无数个“社会的人”以及由他们组成的各种各样的群体的研究。

非交易领域不仅存在着，而且占据了社会经济生活中相当大的份额。美国经济学家肯尼思·包尔丁（Kenneth Boulding）曾经指出，以价格为中心的交换经济远远不能包括人类社会的全部经济活动，除了交换经济而外，还存在着一种“赠与经济”，即不通过交换而通过赠送产生的经济。据包尔丁的解释，“赠与经济”有三个来源：一是出于“爱”，二是出于“害怕”，三是出于“无知”。⁴

什么是“爱”产生的“赠与”？这是因为，人与人之间存在着亲属关系或其他密切的关系，赠与者出于“爱”，自愿地把财产或收入的一部分或全部赠送给被赠与者。这种赠送同以价格为中心的交换经济无关。

什么是“害怕”产生的“赠与”？比如说，一个人被强盗拦住了，强盗索取的是财物，于是这个人只好在“要命还是要钱”两者之间作出选择，乖乖地把财物交给强盗。这也是一种赠与，但这是出于“害怕”而产生的“赠与行为”。

什么是“无知”产生的“赠与”？包尔丁举例说，假定交易双方进行的是一种不等价的交换，较强的一方利用自己的优势，在交易中占了便宜，较弱的一方则由于自己“无知”而在这场不等价交换中吃了亏。这同样相当于赠送，因为较弱一方是“无知”的。这显然不同于交换经济中的情况。

包尔丁由此认为，“赠与经济”与交换经济不一样，传统的经济学只适宜分析交换经济中的现象，而解释不了“赠与经济”中的现象。

包尔丁的上述论述不是没有道理的，“赠与经济”的提出有启发性。但我们很难把非交易领域内的关系与活动简单地归结为“赠与”。准确地说，社会经济生活可以分为交易领域和非交易领域。如果把它分为交换经济与“赠与经济”，那就不够完整了，因为交易领域与交换经济是一致的，而非交易领域内的问题则要比“赠与”复杂得多，非交易领域内的关系要比“爱”、“害怕”、“无知”所造成的关系复杂得多。在非交易领域内，存在着多种多样的关系和活动。例如，家庭内部关系、家族内部关系、亲戚关系、街坊邻居之间的关系、同乡关系、同学关系、师生关系、朋友关系等，都不属于交易关系，也不是用“爱”、“害怕”或“无知”就能概括的。又如，学术活动、社交活动、联谊活动、公益活动等，一般都是非交易性质的，同样难以包含在“爱”、“害怕”、“无知”所产生

的活动范围之内。因此，用非交易领域内的各种关系和活动，要比采用“赠与”一词更为准确。

非交易性质的关系和活动，是不在市场调节之列的。这些关系和活动不按照市场规则进行，市场机制也就不介入非交易领域。至于政府的调节，则主要为非交易领域内的关系和活动划定边界，即所有这些关系和活动，都不得越过法律所划定的边界，不得同法律相抵触。超越了法律划定的边界是违法行为，要被追究。但非交易领域内的这些活动是如何进行的，这些关系是如何处理的，政府并不介入，而让习惯与道德力量在这里起主要作用。这就是非交易领域与交易领域的一个重要的区别。

二、非交易领域内个人行为的合理性问题

社会是无数个个人组成的。人与人之间有交往，有冲突。各人有各人的目标。具有重要意义的是如何使一个人的目标与另一个人的目标不冲突。假定为了实现一个人的目标而不得不使另一个人的目标受到损害，那就要探讨这个人或那个人的行为的合理性以及他们各自的目标的合理性。行为的合理与否和目标的合理与否都不仅是指经济活动方面的，而且也包括社会活动方面的。不仅如此，一个人经济活动方面的行为合理或目标合理，有可能同他在社会活动方面的行为合理或目标合理一致，也有可能从社会活动方面来看是不合理的或不尽合理的。所以，人作为“社会的人”，在行为和目标上不能不同时考虑经济与社会这样两个方面的合理与否。在讨论非交易领域内的关系和活动时，为什么要提出这个问题？因为这涉及市场调节与政府调节的局限性，以及习惯与道德调节的有效程度问题。

如果个人的行为与社会规范一致，个人的目标符合于社会发展的目标，那当然是社会所期望的。如果个人的行为与社会规范并不一致，但这种不一致还不至于影响到社会经济的正常运行，不会损害社会发展目标的实现，那么这种不一致并不需要社会加以调节。如果个人的目标虽然并不符合社会发展目标，但只要这既不会损害其他人的利益，也不会妨碍其他人去实现自己的目标，那么这种不一致同样不需要社会加以调节。只有在个人行为和个人目标与社会规范和社会发展目标，以及其他人的利益不一致而又超过上述限界时，才需要由社会来加以调节。交易

领域内的调节比较简单，在市场调节的基础上由政府进行调节，大体上可以使个人行为与目标同社会规范协调一致，习惯与道德调节在交易领域内可以起到补充作用。而非交易领域内的调节要复杂些。正如前面所指出的，非交易领域内的关系和活动与市场机制无关，因此谈不上什么市场调节，而政府调节则是划定限界，让所有的关系和活动不得超过法律规定的范围，政府并不深入到非交易领域之内去过问或干预各种关系和活动的处理。这就给习惯与道德调节留下了相当大的空间。无论是经济活动还是社会活动，在个人行为与个人目标同社会规范不一致并且超过了上述限界，从而需要社会加以调节时，主要应当依靠习惯与道德力量，这既是人们易于理解的，也是大多数人可以接受的一种调节。

这里会遇到一个难题，这就是：非交易领域内，个人行为的合理可能是合法的，但合理不等于合法；同样的道理，个人行为的合法可能是合理的，但合法不等于合理。为什么这里需要突出的是非交易领域内个人行为的合理与合法问题，而不是交易领域内个人行为的合理与合法问题？主要是因为，在交易领域内，只要市场机制是完善的，政府调节是有效的，法律的执行是认真的，那么个人行为的合法与合理一般可以统一起来。即使某些法律还不够完善，但在这些法律尚未被修改与通过之前，它们仍然有效，交易活动唯有按照现行法律所规定的去做，当事人才能得到法律的保护。这涉及交易双方的经济利益，因此交易行为的合理只可能在合法的前提下被确认，否则，即使交易活动被认为是合理的，个人的行为也被认为是合理的，但由于不合法，那就很难持续进行下去，至多也只是一次性的交易而已。所以在交易领域内，交易双方的经济利益决定了合法与合理一般是一致的。

然而非交易领域内的情况有所不同。如上所述，法律只规定了非交易领域内活动的边界，即各种活动都不得越过这条边界，至于内部关系的处理和非交易活动的运作则由习惯与道德调节起主要作用，所以合理还是不合理的界定同习惯与道德信念、道德原则所认可的范围直接相关。在非交易领域内，所谓个人行为的合理不等于合法，并不意味着合理的个人行为一定不合法，而是说，在法律划定的边界之内，对许多关系的处理并没有法律细则可循，于是只好依靠习惯与道德来调节，依靠文化传统来调整关系。所谓个人行为的合法不等于合理，也并不意味着合法的个人行为一定不合理，而是说，既然非交易领域内对许多关系的处理没有法律细则可循，于是当有人沿用某些法律条文来处理非交易领

域内的关系时，很可能同习惯或传统不符，从而出现合法但不合理的情况。

与交易领域内的情况不一样，在非交易领域内处理各种关系时如果发生了个人行为虽然合理但不一定合法，或者虽然合法但不一定合理，应该认为这仍是正常的。因为这里所说的合法还是不合法，并不是指非交易领域内的关系或活动是不是越过了法律所划定的边界，而是指在法律划定的边界之内有没有法律细则可循。习惯与道德调节对非交易领域之所以非常重要，正因为越是缺少法律细则可循，就越需要习惯与道德调节；在个人行为同社会规范之间越是需要协调的场合，就越需要有习惯与道德调节。

人作为“社会的人”，在非交易领域内更能体现出来。人作为“社会的人”，市场调节与政府调节在对待人的问题上都会遇到较大的局限性。习惯与道德调节对非交易领域有更大的适用性，假定从人作为“社会的人”的角度来理解，可以理解得更深刻些。

1.3 Between the "Visible Hand" and the "Invisible Hand"

1.3.1 The Nature of Regulation by Custom and Morality

As modes of resource allocation, regulation by market is usually called the "invisible hand" and regulation by government the "visible hand." So, is the third mode, regulation by custom and morality, an invisible hand or a visible one? We may approach this interesting question by analyzing the nature of these modes of regulating resource allocation.

The nature of regulation by custom and morality falls between that of the "invisible" and "visible" hands. Regulation by market is called the "invisible hand" because it is based on the mechanism of supply and demand, is by nature a form of spontaneous regulation beyond the will of people and the result of the continuous contest and

interaction of two forces, namely, supply and demand. Regulation by government is called the "visible hand" because it is regulation by departments of government on social and economic life through the application of different measures, is by nature a form of man-made and conscious regulation, the result of administration's effect on economy, and its execution is based on laws, rules and policies. Regulation by custom and morality shares common ground with but also differs from the other two modes of regulation. Therefore, in terms of its nature, it falls between the "invisible" and "visible" hands: Just like the Way of Nature in Daoism, it is visible yet invisible; invisible yet visible.

The similarities between regulation by custom and morality and regulation by market are as follows. One: Regulation by custom and morality originates within the behavioral agents, who influence social and economic life in the light of the cultural traditions, moral beliefs and principles with which they identify, and bring about changes in resource use efficiency and allocation patterns. By contrast, regulation by government relies on an external force, namely, administrative power, to intervene in social and economic life, and to influence resource allocation and allocation patterns. Two: Like regulation by market, regulation by custom and morality acts in a spontaneous and gradual way to bring order to disordered resource allocation. By contrast, regulation by government attempts to establish order from the outset, an order that exists, unfortunately, only in the government's mind or plan, but not necessarily in real social and economic life. The outcome of regulation by government might be true orderliness or lack of it. It could even turn an orderly state into disorder.

Regulation by custom and morality and regulation by government are similar in that neither mode is separable from people's conscious behavior and both perform in social and economic life as a man-made means of guiding, adjusting or restricting resource allocation; unlike regulation by market, these modes of regulation can be changed if

there is the will to do so. Of course, when discussing man-made guidance of economic life and resource allocation, the following difference between the two should also be noted: In regulation by government, the regulator is government, manifested as an external administrative power, whereas in regulation by custom and morality, the regulator is the agent personally or a group he identifies with and is a part of. That is to say, in regulation by government, guidance, adjustment and restriction are realized by an external administrative power, whereas in regulation by custom and morality, it is the members of society themselves who regulate socioeconomic life and resource allocation: it is they who restrict their own behavior.

Considering all those similarities and differences, we can say that regulation by custom and morality is similar to but not equivalent to the "invisible hand": Although it is not equivalent to the "visible hand," there are some points of similarity. Actually, it lies in the space between the two "hands." If each "hand" represents an extremity, where then is the location of regulation by custom and morality?

Regulation by custom and morality is sometimes closer to the "invisible hand" and sometimes closer to the "visible hand." In other words, it comes in many different forms. Why so? It is because this regulation is manifested by agents influencing social and economic life through self-or mutual-restriction, restrictions that come from the agents themselves, from identification with a group, from respect for and insistence on certain cultural traditions. On different occasions such restriction can take different forms and can be more powerful or less. These different forms and degrees of power can cause this type of regulation to keep shifting position, moving closer to invisibility or closer to visibility. Suppose the restricting power is stronger, for example taking the form of village rules, articles of associations, then regulation by custom and morality is closer to the "visible hand." When the restricting power is weaker, such as in self-discipline, or a group persuading one of its members, then this type of regulation is closer to the "invisible hand." But beware: "Closer" does not mean

"equivalent," and "closer" to one end is bound to mean "farther" from the other. Therefore, we may conclude as follows: No matter what form it takes or how strong its restricting power is, regulation by custom and morality always lies between regulation by market (the "invisible hand") and regulation by government (the "visible hand").

Among many ethnic groups, regulation by custom and morality often appears as a historical or cultural phenomenon: For example some groups practice cremation, others water burial, others interment and others sky burial. Every group thinks its own practice is better than other forms, in that it is a respectful send-off for the deceased, whereas all other practices are unthinkable. Can one actually say which practice is the most respectful? Since each group has its own unique customs and moral norms, it's hard to say; but respect for the dead is universally seen as essential and the only difference is the form that respect takes.

1.3.2 Forms of Regulation by Custom and Morality —Corporate Culture

Let us examine this question further.

Many researchers have turned their attention to how the corporate culture of an enterprise influences its production, operation and management. But the effect of corporate culture on social and economic life does not fall within the scope of regulation by market or government. Rather, corporate culture is both an expression of regulation by custom and morality and a result of it.

In the micro sense, the impact of corporate culture on resource allocation is firstly manifested in its influence on how each employee feels about the enterprise. Of all resources, human resource is the most precious, in terms of quantity as well as quality. Quality is manifested in aspects such as technical skills, range of knowledge, health condition and mental attitude. When the number of staff is

fixed, the high quality of staff is a reflection of rich human resource. People often ask: What are the most important factors for developing economy and enterprise? Capital, technology and information are very important indeed. But capital needs people to raise and utilize it, technology needs people to develop and operate it, and information needs people to gather and process it. But in every one of these tasks, a good mental attitude is especially important. Without it, the roles of capital, technology and information cannot be brought into play. Accordingly, the most important factor for economic and enterprise development is people, people of enterprising and pioneering spirit. If a society's material wealth is destroyed, new wealth will rise to replace it provided that society still has people of enterprising and pioneering spirit. If it is pioneering spirit and not wealth that is lost, that wealth will wither away in the future, society fall into poverty, its economy incapable of recovery.

So, there is a direct correlation between an enterprise's ability to prosper and the quality of its human resources and of its employees' pioneering spirit. The spirit of the enterprise is embodied in every employee as is the quality of human resources, though this is more evident in some individuals than others. The major target in building a corporate culture is that the enterprise's pioneering and enterprising spirit be strongly expressed in every employee, forming a spiritual driving force. It is a reflection of the improved and enriched quality of its human resources. So, how is such a spirit formed and developed? It is not through regulation by market or government, although both can, up to a point, inspire people to pioneer new fields and make progress. The formation of such a spirit within an enterprise, apart from the related qualities that employees already have prior to joining it, relies mainly on educating its staff and on the influence of its cultural environment. In this sense, regulation by custom and morality plays a role far more important than the other two types.

An enterprise's employees form a group. The harmony of their relationship is significant to the performance and cohesion of the

enterprise. If there is internal disunity, interpersonal friction, lack of harmony, maneuvering for position, departmentalism and back-biting, and unwillingness to listen and cooperate, the resource advantage of the enterprise cannot be leveraged. Moreover, the enterprise will be damaged as the result of lowered or even negative efficiency. An approach to solving this problem could be to put greater effort into management and into building the corporate culture. Firm but fair enterprise rules are helpful in defining the responsibilities of every unit and post, in order to raise the efficiency of the enterprise. The building of corporate culture is beneficial for harmonizing interpersonal relations within the business, improving cohesiveness and transforming negative factors into positive ones. Resource utilization and competitiveness can be improved thereby. Moreover, the influence of the cultural environment thus shaped can improve the quality of new starters and inspire them to be enterprising and pioneering. These things are the embodiment of regulation by custom and morality. They are also the fruits of such regulation.

As one form of regulation by custom and morality, corporate culture has some points of similarity with regulation by government, but the two are different in nature. Under the latter form, government uses regulatory techniques to influence supply and demand of products and labor, thereby influencing cost, price and profit. In this process, production factors are recombined and resource allocation patterns are changed. An enterprise can also recombine production factors and influence resource allocation patterns just as government does, but in developing its corporate culture the mode of regulation it takes is different from that of government. Three points are worth noting here:

One: When regulation by government starts to exert influence on the production and operation of an enterprise, the enterprise has actually been put in a passive position. If regulation by government is direct, the enterprise must accept such regulation irrespective of its own considerations. Even when such regulation is indirect, if it

influences the production, operation, cost, price and profit of the enterprise, the enterprise must consider these influences, adjust its own actions and adapt to the changes caused by those influences. Corporate culture is different: because the factor influencing production and operation comes from a force within the enterprise—its employees' own efforts—the enterprise is in an active position. If a business does not value the development of its corporate culture, that culture will have little influence on its production and operation. Conversely, the more it values corporate culture and the better it builds it, the greater influence the culture will have on the enterprise's production and operation and the greater the likelihood of improved performance.

Two: Study of efficiency involves distinguishing three concepts: production efficiency, resource allocation efficiency and X-efficiency. Production efficiency indicates the ratio of output to input, reflecting an enterprise's utilization efficiency of production factors. Resource allocation efficiency refers to the rationality of resource allocation and its resultant efficiency: Rational allocation improves efficiency and irrational allocation lowers it. X-efficiency refers to the efficiency (or inefficiency) caused by reasons other than output to input ratio or resource allocation. X-inefficiency is a loss of efficiency for reasons as yet unidentified but have to do with insufficient effort on the part of individuals, interpersonal discord or employee dissociation with the goals of the enterprise.⁵ An enterprise has advanced facilities and its resource allocation is proper, it will still suffer from lower efficiency (X-inefficiency) if its workers lack enthusiasm and slack off in their duties, do not work for a single purpose but follow their own agenda. Regulation by market as the "invisible hand" can influence production efficiency and resource allocation efficiency, but has basically no effect on the formation or elimination of X-inefficiency. Exactly the same can be said of regulation by government as the "visible hand." The main thing that can influence, reduce or eliminate X-inefficiency is regulation by custom and morality, and corporate culture is a form

of such regulation. Why can regulation by custom and morality do this when the other two forms of regulation cannot? It is because X-efficiency is linked to whether employee enthusiasm has been brought into play and whether interpersonal relations are harmonious. Such issues come within the scope of regulation by custom and morality, and more exactly, are the task of corporate culture.

Three: In the second section of this chapter we examined the various relationships and activities within the non-traded sector, noting that the effective agency here is regulation by custom and morality, not regulation by market or government. We should further note that although we have made a distinction between traded and non-traded sectors, the two can often influence each other and the activities of both have an economic and social impact. Regulation by market functions only in the traded sector, regulation by government also operates mainly in this area, not interfering with activities in the non-traded sector apart from defining boundaries for them by means of law. Only regulation by custom and morality plays a role in both sectors. As a form of this, corporate culture plays such a role as well, supplying what the other two modes lack. Hopefully, in building corporate culture, interpersonal relations in the non-traded sector will be harmonized and employee enthusiasm be brought into play, which in turn will exert positive influence on these same aspects in the traded sector. At the same time, developing corporate culture should help the enterprise shape its unique style, spirit and objectives, something that can only be achieved through regulation by custom and morality, not the other two modes.

The analysis on corporate culture clearly illustrates the special feature of regulation by custom and morality. In addition to corporate culture, community culture and school culture play a similar role in harmonizing interpersonal relations, encouraging an enterprising and pioneering spirit and restricting behaviors. As two other forms of regulation by custom and morality, they should also be given their due weight.

叁 介于“无形之手”与“有形之手”之间的调节

一、习惯与道德调节的性质

市场调节作为资源配置的一种方式，通常被称做“无形之手”。政府调节作为资源配置的另一种方式，通常被称做“有形之手”。那么，习惯与道德调节作为资源配置的第三种方式，究竟是“无形之手”还是“有形之手”呢？这是一个有趣的问题。让我们从资源配置调节方式的性质来着手分析。

从习惯与道德调节的性质来看，它是介于“无形之手”与“有形之手”之间的。市场调节之所以被称做“无形之手”，因为市场调节所依靠的是市场供求机制，从性质上说是一种自发的、不以人们的意志为转移的调节，是市场上供给与需求两种力量反复较量、反复起作用的结果。政府调节之所以被称做“有形之手”，因为政府调节是政府部门运用各种手段对社会经济生活所进行的调节，它依靠的是法律法规和政策措施，从性质上说是一种人为的、有意识的调节，是市场外部的行政力量对经济起作用的结果。习惯与道德调节同市场调节相比，既有相似之处，又有区别；习惯与道德调节同政府调节相比，也是既相似，又有区别。所以从性质上说，习惯与道德调节介于“无形之手”与“有形之手”之间：道是无形却有形，道是有形又无形。

习惯与道德调节同市场调节的相似之处在于：一方面，它也来自经济中的行为主体内部，即来自每一个行为者自身，它表现为各个行为者按照自己的认同所形成的文化传统、道德信念、道德原则来影响社会经济生活，使资源使用效率发生变化，使资源配置格局发生变化，而不像政府调节那样由来自外部的行政力量介入社会经济生活，对资源配置进行干预，影响资源配置格局；另一方面，它同市场调节一样，使资源的配置自发地、逐渐地从无序走向有序，而不像政府调节那样一开始就想建立某种有序状态，其实，这种所谓的有序还只是政府心目中的有序、计划中的有序，不一定等于实际经济生活的有序。政府调节的结果可能真正有序，也可能依然无序，甚至还有可能把本来多多少少的有序变成无序。

习惯与道德调节同政府调节相似之处在于：无论是政府调节还是习惯与道德调节，都同人们的自觉行动分不开，都表现为对于社会经济生活，对于资源配置的一种人为的引导、调整或约束，而不像市场调节那样不依人们的意志为转移。当然，在谈到对社会经济生活和资源配置的人为的引导、调整或约束时，也应当注意到两者的下述区别，即在政府调节之下，调节者是政府，它表现为一种外部的行政力量，而在习惯与道德调节之下，调节者是行为者本身，或者是行为者认同并参加的群体，也就是说，在政府调节之下，是由外部的行政力量对社会经济生活和资源配置进行人为的引导、调整或约束，而在习惯与道德调节之下，则是由社会成员自己来调整社会经济生活和资源配置，由他们自己来约束行为。

正由于习惯与道德调节既与市场调节、政府调节相似，又与市场调节、政府调节不同，所以它既相似于“无形之手”，但又不等于“无形之手”；它既不等于“有形之手”，却又与“有形之手”有相似之处。实际上，它介于“无形之手”与“有形之手”之间。假定“无形之手”为一端，“有形之手”为另一端，两端之间有一段距离，那么习惯与道德调节的位置究竟在哪里呢？

可以这么说，有时习惯与道德调节比较接近“无形之手”，有时则比较接近“有形之手”。或者说，习惯与道德调节有各种不同的形式，有些形式距离“无形之手”近一些，有些形式距离“有形之手”近一些。为什么会这样？这是因为，习惯与道德调节表现为行为者对社会经济生活中的行为的自我约束或相互约束，这种约束来自行为者自身，来自行为者对群体的认同，来自行为者对某种文化传统的尊重和坚持。在不同的场合，这种约束可能以不同的形式出现，而且约束的力度有大有小。约束形式的不同和约束力度的不同，使得习惯与道德调节在“无形之手”这一端与“有形之手”另一端之间游移不定，其位置或者靠拢这一端，或者靠拢那一端。比如说，假定习惯与道德调节的约束力较强，例如体现于乡规民约、行会章程之类的形式中，它就比较接近“有形之手”；假定习惯与道德调节的约束力较小，例如体现于行为者的自律、群体对某一成员的劝说之类的形式中，它就比较接近“无形之手”。应当指出，接近、靠拢毕竟不是相等、一致。而且，接近这一端必定远离另一端，这样，可以作出如下的判断：习惯与道德调节不管以何种形式出现，不管约束的力度如何，它始终位于市场调节（“无形之手”）与政府调节（“有形之

手”）之间。

从各个民族的历史文化的角度看，习惯与道德调节往往表现为一种历史文化现象。比如说，有的民族实行火葬，有的民族实行水葬，有的民族实行土葬，还有的民族实行天葬。实行某一种葬法的民族总认为自己的葬法要优于其他葬法，认为这是尊重死者的葬法，而认为其他各种葬法不可思议。能认为究竟哪一种葬法最为尊重死者？很难说清楚，因为每个民族都有自己行之多年的风俗习惯和道德规范。然而，尊重死者却被所有的民族认为是必要的。不同的葬法，只不过是不同的尊重死者的形式而已。

二、习惯与道德调节的形式之一——企业文化

让我们对这个问题再做进一步的考察。

企业文化对企业的生产、经营、管理的影响，已被研究者们所注意到。企业文化建设对社会经济生活的作用既不属于市场调节的范围，也不是政府调节的内容。企业文化建设是习惯与道德调节的表现，也是习惯与道德调节作用的成果。

企业文化对微观意义上的资源配置的影响首先表现于对企业中每一个成员的精神状态的影响。在资源中，人力资源是最宝贵的。人力资源不仅由人力的数量来表示，而且也由人力的素质来表示，人力的素质体现在技术水平、知识面、体质、精神状态等方面。在人力数量为既定的条件下，人力的素质越高，越能反映人力资源的充裕。人们常问道：什么是经济发展、企业发展最重要的因素？当然，资本、技术、信息都很重要。但资本是靠人来筹集和运用的，技术是靠人来改进和操作的，信息是靠人来收集和加工的，而人的精神状态在资本的筹集和运用、技术的改进和操作、信息的收集和加工方面所起的作用尤其重要；否则资本、技术、信息的作用也就发挥不出来。因此，经济发展、企业发展的最重要因素是富有进取精神、开拓精神的人。如果社会的物质财富被破坏了，但只要人还存在，体现在人的身上的进取精神、开拓精神仍然存在，那么很快就会有新的物质财富来代替被破坏的物质财富。如果失去的是进取精神、开拓精神而不是物质财富的话，那么财富将会枯竭，社会将陷于贫困，经济将一蹶不振。

就一个企业来说，企业能否兴旺发达，同企业人力素质的高低、企

业成员是否具有进取精神、开拓精神有着直接的关系。企业的进取精神、开拓精神体现于企业的每一个成员身上。这种素质可能在某些人身上较为明显，而在另一些人身上则可能不明显。企业文化建设的业绩主要是使进取精神、开拓精神在企业各个成员身上都能强烈地表现出来，并形成一种精神上的动力。这反映出企业人力素质的提高、企业人力资源的丰富。

进取精神、开拓精神是怎样产生与发展的？主要不是靠市场调节而来，尽管市场调节在一定程度上能够激发人们进取与开拓。这也主要不是靠政府调节而来，尽管政府调节在一定程度上也能促进人们去进取、去开拓。在一个企业内部，进取精神、开拓精神的形成，除了同每一个成员在进入企业以前就已具备的素质有关之外，主要依靠的是企业对成员进行的教育和企业文化环境对成员的影响，习惯与道德调节在这里所起的作用远远大于市场调节与政府调节所能够起的作用。

企业成员组成一个群体。人际关系的融洽对于企业效益的增加和企业凝聚力的增强也有着重要意义。如果企业内部不团结，人与人之间存在着摩擦、不协调，甚至钩心斗角，车间之间、班组之间、职能部门之间如果互不服气、不合作，那么不仅资源优势无从发挥，而且一定会带来低效率、负效率，使企业遭受损失。对这样的问题，可以从加强企业管理和企业文化建设两个角度来解决。加强企业管理，严明企业纪律，有助于明确企业内部各单位、各个岗位的人员的责任，以促进企业效率的提高；加强企业文化建设，则有利于企业成员之间关系的协调，增强凝聚力，化消极因素为积极因素，这样，一方面可以由此达到提高资源使用效率、增大企业竞争力的目的，另一方面又可以由此形成一种文化环境，对以后进入企业的人员施加影响，提高他们的素质，激发他们的进取精神、开拓精神。这些正是习惯与道德调节的体现，也是习惯与道德调节的成果。

从习惯与道德调节的形式之一——企业文化——的性质来看，它同政府调节虽有相似之处，但却是两类不同性质的调节。在政府调节之下，政府运用调节手段来影响社会经济中产品和劳务的供给量与需求量，影响成本、价格和利润，并导致生产要素的重新组合，进而影响资源配置格局。在企业文化建设中，企业虽然也能产生生产要素的重新组合，影响资源配置格局等结果，但企业所采取的调节方式与政府所采取的调节方式不一样。具体地说，有以下三点值得注意：

第一，在政府调节之下，当政府的调节手段对企业的生产经营产生影响时，企业在这方面实际处于被动的地位。如果政府的调节是直接的，那么不管企业自身如何考虑，企业都不得不接受这种调节。即使政府的调节是间接的，但由于政府的间接调节也会对企业的经营、成本、价格和利润产生影响，从而企业也需要考虑这些影响，并通过调整自己的行为来适应由此发生的变化。然而企业文化则是通过企业成员自身的努力，从企业内部来影响企业的生产经营过程的。企业在这种调节中处于主动的地位。企业的这种主动性表现为：企业不注重企业文化建设，企业文化起不了多大作用，对企业生产经营过程就不会有什么影响或影响很小；反之，企业越是注重企业文化建设，企业文化建设越有成效，对生产经营活动的影响就越大，企业的效益也就越有可能增长。

第二，在有关效率的研究中，要区分生产效率、资源配置效率和X效率。生产效率是指企业投入与产出之比，反映的是企业生产过程中生产要素的使用效率。资源配置效率是指资源配置是否合理以及由此而带来的效率。资源配置合理，效率得以提高；资源配置不合理，效率必定下降。X效率是指由于投入产出比例与资源配置以外的原因而产生的效率或低效率。X低效率就是一种尚未查明原因的效率损失，它与个人的努力程度不足有关，与人们之间的不协调有关，也与企业目标同职工目标不一致有关。⁵这就是说，即使采用了先进的设备而且资源配置得当，但只要职工的积极性不高、混日子、出工不出力，或企业内部人心涣散、各有各的打算，那就照样会出现低效率，即X低效率。市场调节作为“无形之手”，能影响生产效率和资源配置效率，但对X低效率的形成或消除基本上是不起作用的。政府调节作为“有形之手”，也能影响生产效率和资源配置效率，但同样解决不了X低效率问题。能够对X效率或X低效率产生影响，并能减少或消除X低效率的，主要是习惯与道德调节。企业文化作为习惯与道德调节的一种形式，不仅可以影响生产效率和资源配置效率，还可以影响X效率，使X低效率减少或消除。为什么市场调节与政府调节难以对X低效率发生作用，而习惯与道德调节则有可能减少或消除低效率呢？这是因为，X效率的高低同人的积极性是否发挥、一个单位内部人际关系是否协调有关。这是习惯与道德调节起作用的范围。企业文化作为习惯与道德调节的一种形式在减少或消除X低效率方面之所以能起作用，原因正在于此。

第三，本章第二节曾专门对非交易领域内的关系和活动作了考察，

并指出在非交易领域内起作用的不是市场调节，也不是政府调节，而是习惯与道德调节。现在需要进一步说明的是，尽管我们可以把社会经济生活分为交易领域和非交易领域，但这两个领域彼此会发生影响，并且两个领域的活动都对社会经济产生作用。由于市场调节只是在交易领域内起作用，政府调节也主要在交易领域内起作用，政府调节并不介入非交易领域而只是为非交易领域内的活动划定法律的边界，因此，唯有习惯与道德调节在交易领域和非交易领域这两个领域内都发生作用。企业文化作为习惯与道德调节的一种形式，正具有市场调节或政府调节所缺乏的在交易领域和非交易领域都起作用的特点。在企业文化建设过程中，非交易领域内的人际关系协调了，个人的积极性发挥出来了，肯定会对交易领域内人际关系的协调和个人积极性的发挥起积极的作用。同时，企业文化建设的成果是形成一个企业独有的企业风格、企业精神、企业目标，这些都要依靠交易领域和非交易领域内习惯与道德调节发挥作用，这也是市场调节或政府调节无法完成的使命。

以上我们通过对企业文化的分析，清楚地说明了习惯与道德调节的特点。除企业文化而外，社区文化、校园文化也都与企业文化相同，都有协调人际关系，使人们焕发进取精神、开拓精神，以及对人们的行为进行约束的作用。社区文化、校园文化作为习惯与道德调节的形式，同样应当引起重视。

1.4 Moral Standards and the All-round Development of the Person

1.4.1 Reflection on the Monotonization of Life

In trying for a deeper understanding of regulation by custom and morality we could start by discussing the monotonization of life, something caused by industrialization, a process that every developed country has gone through. Industrialization brings with it more in the way of material goods, but brings greater monotony to people's lives. This has been an important topic for many economists in recent years. For example, in *Democratic Ideals and Reality*, Halford J. Mackinder

asked: What are the toxins of modern industrial life? In his view it was the monotony of work, boring social life and the monotony of the boring collective life. He thought it no wonder that the British bet on football matches in order to escape the monotony of their reality.⁶

Mackinder compared pre-and post-industrialization Europe to the effect that: In ancient Greece and medieval Europe, social organization was fragmented, but every town of a certain size had considerable scope to develop. In Florence, people shaking hands in its streets or people related by marriage, were actually rival masters in the same industry or competing merchants on the same exchange. A young and talented Florentine did not need to pursue a career in some faraway capital since he had many choices to work for and within his own city. He could be the mayor, the prime minister, a general or a commanding officer; he might lead an army to war, a small-scale one admittedly but big enough to call on all his mental resources and his leadership skills. If he were a painter, sculptor or architect, he might be given sole responsibility for designing a commemorative building in the city, rather than watch the work go to a big name architect from elsewhere.⁷ In the end, Mackinder says regretfully: Of course no one suggests that you should or could return to institutions on the Athenian or Florentine scale, but the fact remains that you have drained your local life of most of its value and interest by the development of nationwide class organization...If you pursue relentlessly the idols of efficiency and cheapness, you will give us a world in which the young will never see life but only an aspect of life...⁸

We cannot say for sure whether urban life in ancient Greece or medieval Europe was truly so humanistic and full of variety, but what is certainly true is that post-industrialization urban life was as monotonous as Mackinder asserted. If technological progress and automated production are inevitable, it is also inevitable that workers become more and more tightly fettered to assembly lines. As a result, their feelings of boredom, depression and apathy will get worse. Since

an industrialized country has no way to revert to a pre-industrial society, the sense of depression can only increase.

Here comes a question of practical significance: With technology advancement and social progress, the content of man's foremost needs will expand. When essential material goods are in short supply, man's foremost needs are food, clothes and shelter. But once these material essentials are adequate, man will seek self-development including the need for a spiritual life being met, and these should count as basic needs too. A society is seriously defective if it possesses material but not spiritual wealth, or if it can satisfy material but not spiritual needs. The two kinds of needs are closely connected. Once material needs are met, people will have spiritual needs that they hope to satisfy. The meeting of spiritual needs will further develop material production, which in turn will engender higher spiritual needs. Through the interaction and mutual promotion of the two needs, people will develop in an all-round way rather than partially.

The monotony of post-industrialization life can only be overcome by meeting material and spiritual needs. But the questions do not stop there. How can we ensure that both are met? Can we rely solely on economic growth to do so? Will economic growth inevitably result in fully rounded people? Once one form of monotonous living is overcome will it not be replaced by another? What should we focus on in order to avoid the re-emergence of monotony? These questions all merit exploration. Let us now analyze the relations between morality, belief and the all-round development of people.

1.4.2 Definition of "All-round Development of the Person"

What is meant by all-round development of the person? Scholars have yet to reach a conclusive answer. However, no matter what the differences of opinion, there is at least some consensus regarding the

premise of this concept. There are three points.

Firstly, the all-round development of people should be based on productivity being developed to a high level. Without this, there will be insufficient supply of material goods and thus the material conditions necessary for all-round development of people and for satisfying their material and spiritual life needs will be absent. At the same time, a sufficiency of free time is also necessary for such development, but there has to be higher productivity before working hours can be cut or annual leave increased.

Secondly, such development should be based on a certain level of education. Without this, a person's material needs may not be met, let alone his spiritual life needs. If the average educational level in a society is low, this will severely limit the development of productivity in that society; consequently, neither material nor spiritual needs can be met and all-round development of people becomes impossible.

Thirdly, such development should be based on a certain belief and level of morality. A society without morality and belief cannot help its members realize all-round development even if its productivity is high and can provide material products in abundance. In such a corrupt atmosphere people will dissemble, cheat and jostle for advantage in order to be spared difficulty and people's all-round development becomes a pipe dream. Furthermore, these negative elements will surely undermine public security, people will feel unsafe and talk of personal development will be pointless.

Not one of the three points of the premise is dispensable. Highly developed productivity, better education, and good morals and customs are all essential to it. The all-round development of the person means one should not only be equipped with knowledge but also be a person of virtue. No matter what interpretation is put on "all-round development of the person," education and morality are unquestionably components of the premise.

I wrote in my book *System, Targets and People: Challenges Facing Economics*: "People always aspire to improve their lives. In the process

of improving it, they increasingly sense that their individual improvement is connected to the improved lives of those around them.... Even if one person's life improves, but that of others does not or actually deteriorates and the social environment becomes more unstable than before, then it's hard to say that life quality overall shows improvement."⁹ This passage actually pertains to the connection between moral standards and interpersonal relations, as well as to the understanding of "all-round development of the person."

Morality as a norm is both a power to encourage or constrain individuals and also a principle to be followed in handling relations between people. Everyone hopes his life can improve, i.e. that his material and spiritual needs can be satisfied. However, if his environment lacks a good moral ethos, if those around him do not trust each other, lack a sense of security or have a worsening life situation, then his aspiration cannot become reality. If he alone is well fed, well clothed and well housed, can this really be called a better quality of life? Sadly, the conclusion must be this: In a society without a good moral environment or moral standards it can hardly be said that he is more blessed or that his life quality has improved.

The all-round development of people needs a normal environment, at least in the opinion of the majority. In an anomic society where people must lie to survive, can they be carefree and happy even if they do have food, clothes and shelters? Can their quality of life improve? To understand the concept of all-round development it is crucial to know that an individual is inseparable from a group, from the people around and from the social environment in which he lives and grows. This awareness helps in understanding the role of morality in the all-round development of people.

1.4.3 Fostering a Fine Social Ethos

The all-round development of people relies on the formation of a

fine social ethos and for this to take place there must be moral constraints on individual and group behaviors. As mentioned above, without necessary moral constraints society and economy will fall into disorder and the social ethos will be poor. From an economic operation perspective, if a behavioral agent does not have moral constraints and if there is no mutual moral constraint between agents, the behavior will be short-term oriented, since the agents will anticipate lack of stability and thus lose confidence in the prospects for the economy.

The term "behavioral agent" here covers a very wide range and variety of people: investors reluctant to invest, short-sighted consumers, staff uncertain of the future who just muddle along without initiative or enthusiasm, students unwilling to study hard because of an uncertain future. All are illustrative of anticipated disorder. Granted, there are various reasons for this but there is no denying that lack of moral constraint and an unhealthy social atmosphere number amongst them. The resulting short-termism will distort resource allocation and bring down resource utilization efficiency. Therefore, through regulation by moral force, by establishing moral standards and by fostering a fine social ethos the agents' behavior will be normalized, thereby preventing the emergence of anticipated disorder and short-termism.

Social ethos, visibly or invisibly, guides people in the forming of their beliefs and this guidance is especially important in market economy. Where both the market mechanism and government sectors exert regulation, there are at least two types of guidance on enterprises and individuals: guidance by market and guidance by government. The former can be summed up as profit-led, with "economic man" as its premise, since "economic man" will do all in his power to seek maximum personal profit at the minimum cost. Governmental guidance can be summed up as target-led, although it too can be profit-led sometimes. That is to say, when governmental guidance operates, it too takes "economic man" as its premise. Since

man as "economic man" aims for maximum personal profit and minimum loss, the government can take measures to guide people in the direction the government wants them to take. In this way the individual's interest can be guaranteed and government targets reached. As for an individual, he will always approach things from the angle of cost and profit. If he does not act in accordance with government policies he will pay more and get less, but if he does he will get more and pay less. In this sense, government's guidance can help individuals to achieve a healthy combination of target and profit.

Man is not just "economic man." He is also "social man." Government should ensure people understand what is worth doing and what is not, what should they strive for and what they should not. It amounts to guidance of people's belief but is expressed in the targeted guidance of government. Predominantly by means of education, government manages to get people to see the achievement of government's targets as their own belief. In regulation by government, there is no possibility of belief orientation that is divorced from government targets. But actually, belief orientation can stand alone: this is the task of regulation by moral force. Independent belief orientation is exercised by the individual or a group formed of individuals. However, since individual or group targets are not those of the government, the individual or group belief orientation is different from that of government. For example, adherence to a particular religion may provide a belief orientation, but that orientation can also be independent of religion. Also, adhering to a principle of how to treat others can provide a belief orientation, and this too can be independent.

In the formation of a fine social ethos, the belief orientations of government, of an individual or of a group are often mutually potentiating. Social ethos has an influence on people, helping them develop, strengthen or change their belief, whereas belief orientation can play a positive role in fostering a fine social ethos and thereby further influences the allocation of society's resources. A clear

illustration of this is the influence of social ethos on consumer behavior, and the changes in consumer spending and structure in turn influence resource allocation. This is because consumption has a demonstration effect, an effect that is by nature a social one. What society does or does not uphold can find reflection in consumer behavior. For instance, extravagance is a form of irrational consumption that may have a negative impact on the social ethos, since it may exceed one's income or financial capability, or it may excessively take up resources, causing limited resources be used in an irrational way. To take another example: There are often undesirable spending customs in less developed societies that people feel obliged to follow. Cases in point include the staggering outlay on extravagant funerals, building expensive tombs even during the lifetime of the intended occupant, expensive betrothal gifts from the groom's family, preparing costly dowries, lavish wedding banquets, etc. Such undesirable consumption customs reflect a backward culture. But it is difficult for poor families to resist the invisible pressure exerted by customs; hence the consumption behavior thus formed has a detrimental effect on resource allocation.¹⁰

Another illustration is that a fine social ethos has a positive influence on the caliber of citizenry and efficiency and that improvement here will in turn have a positive influence on resource allocation. Raising the caliber of the people—in education, health, mentality, morality—can also have a positive impact. History makes abundantly clear, when a country is in transition towards the developed state it should be alert to the possibility of social problems that can occur pursuant to achieving economic development and take measures to nip them in the bud. One such problem is how, in the context of ever higher incomes and ever more abundant material goods, to make people's lives more colorful and meaningful. An advanced society cannot be materially rich but spiritually void: it should meet all material, spiritual and self-development needs. The social ethos should not be allowed to slide downhill, but should be

directed towards better and healthier development. And this is where regulation by morality comes in.

1.4.4 Fine Social Ethos and People's Self-development

A society undergoes constant change during its progress from non-developed to developed condition. But one must not confuse social changes with acceptance of those changes by members of society. They are two different things—a distinction between human society and the natural world. Changes in the natural world can be observed and understood by human beings and they can discover the laws behind such changes, but nature will not change its laws as the result of such knowledge. Human society is different. Society's activities are people's activities and through them they come to understand that society. They can not only observe and understand social changes but also adjust their behaviors to adapt to those changes. They can also take measures to change society. That is to say, human beings and society are mutually influential and adaptive: In adjusting, societies advance and in adapting men develop. In this interaction, the influence of social ethos on social development and on people's self-development is revealed. On the one hand, a fine social ethos helps people to a correct understanding of social change and to timely adjustment of behavior. On the other hand, when there is a fine social ethos, people's behaviors are more conforming and their understanding improves, which is helpful in tackling problems that emerge as society develops.

Undoubtedly, the creation and nurturing of a fine social ethos is a much tougher job than managing or building culture in an enterprise or community. Even at the surface level, in creating a fine social ethos there are no hard targets to meet, nor are there obvious reliable indicators for evaluating whether or not that ethos has been created.

That is to say, the fine social ethos concept is an elastic one. However, on further analysis, we will find it does follow certain rules: The higher people's educational and moral level, the better they love life, care about others and support public welfare, and the easier it is to foster and promote a fine social ethos. It is true that effective management or culture building of an enterprise or community can help foster a fine social ethos, but they cannot replace the joint efforts of society at large to enhance the national caliber and foster such an ethos.

People's self-development, the fostering and promoting of a fine social ethos are mutually complementary. The higher the level of man's pursuit, the stronger his sense of social responsibility will be. Such dedication to the public interest will have a beneficial role model effect and help foster and promote a fine social ethos.

Here we need to clear away a misconception, namely the supposition that if a society is economically underdeveloped, people's self-development and caliber improvement will be constrained and it therefore follows that there is no fine social ethos to foster and promote. The reason that this is wrong is because it treats as an absolute the relationship between the degree of economic development and the fostering and promotion of a social ethos, as if a developed economy is the sole factor bearing on the latter. In actual fact, in some very underdeveloped areas (including the underdeveloped stage common to every nation in history) or even in comparatively poor remote villages in developed countries, the social ethos can be a very good one. In general, the correlation between ethos and economy is rather complex and deserves further research before coming to any conclusions.

But history also demonstrates that the corruption of a country or area often sets in during the transition stage from economic underdevelopment towards developed state. In such a period, the impact of external influences, both good and bad, begins to increase. Moreover, because old social organizations or structures are falling

apart and new ones are taking shape and there may be a long period of dividing and re-forming, then social usage and customs, people's mental attitudes, social values and standards will inevitably undergo some changes, drastic changes even. The question of whether the social climate is heading in a good or bad direction involves how we evaluate the changes. If we look at these changes through the prism of the original social structures, values or customs, we may find nothing positive about them. However, if we look at the changes from a different perspective, from the angle of the to-be-reached state of social development, our perception might be reversed and all will seem positive. To speak objectively, in the transitional period, the two trends co-exist, except that negative changes are more easily perceived, and therefore more likely to be discussed and cause dissatisfaction. This situation tends to persist for quite a long time and may not turn for the better until the economy develops, average income rises and national caliber improves. In this process, pure economic growth is not enough: the role of education and culture building cannot be neglected since they will have a positive influence on people's self-development, thereby helping mitigate changes for the worse in the social environment or even prevent such changes.

It's necessary to point out the relation between two works of Adam Smith: *An Inquiry into the Nature and Causes of the Wealth of Nations* and *The Theory of Moral Sentiments*. In my book *The Birth and Development of Macroeconomics* (1997) I wrote: "In his books *The Theory of Moral Sentiments* (1759) and *An Inquiry into the Nature and Causes of the Wealth of Nations* (1776), Adam Smith used the term 'invisible hand.' What he really meant was: A good social order that promotes the public good can be the spontaneous and unintended consequence of human behavior."¹¹

In fact, the "invisible hand" in *Wealth of Nations* mainly refers to regulation by market, whereas in *The Theory of Moral Sentiments* it encompasses the role of the law of market and the role of moral sentiments. In the history of economic thinking, the idea of "invisible

hand" first appeared in *The Fable of the Bees* (1714), a book written by the Dutch philosopher Bernard Mandeville.¹² Mandeville put forward a proposition that is indicated in the book's subtitle: *Private Vices, Publick Benefits*. In his opinion, individual greed and selfish behavior promote social prosperity and if people abandon their vices and live a poor and simple life, it will spell desolation for society. Adam Smith did not agree. In his opinion, the notion that private vices could create public benefits was an ultra-egotistic and unbridled system. Man, in Smith's view, is more than "economic man" seeking only private benefits. Instead, he must follow rules, respect the interests of others and have a sympathetic heart. Professor Zhao Xiuyi has made a thorough explanation of this point. He points out that Adam Smith's system "affirmed the rationality of people pursuing private interest and well-being on the one hand; on the other, it stressed that such pursuit must be proper, i.e. it must conform to general social rules, and not be intemperate and greedy."¹³ Then how did Adam Smith integrate his two books into his theory? According to Zhao's analysis, "Smith's desire was that a country and people's enrichment by market force must rise in step with the maintaining and promoting of morals."¹⁴ In my opinion, Zhao's analysis is both true to Smith's true meaning and brings a fresh insight. Something deserving mention here is that, although Smith did not talk about government intervention functioning as the "visible hand," he always put great emphasis on the role of market rules and laws. In the traded sector, the consequences of violating laws and the consequences of offending moral standards were equally serious and equally not to be dismissed.¹⁵

肆 道德规范与人的全面发展

一、生活单调化所引起的思考

对习惯与道德调节的理解还可以再深入一步。不妨先从工业化进程

中所造成的生活单调化谈起。

一个国家从不发达状态进入发达状态，要经历工业化的过程。工业化固然给人们带来较多的物质产品，同时也使人们的生活变得单调。这是近些年来经济学界所关心的重要课题之一。麦金德（Halford J. Mackinder）在其所著的《民主的理想与现实》一书中，曾以相当大的篇幅来讨论工业化进程中所带来的生活单调问题。他指出：现代工业生活中的毒素是什么，是工作的单调、无聊的社会生活和无聊的集体生活的单调，怪不得英国人要买足球票来打赌，为的是逃避现实中的单调。⁶

麦金德把欧洲工业化以前和工业化以后的情况作了有趣的对比。他说，在古希腊时代和中世纪的欧洲，尽管社会的组织十分分散，但任何一个相当规模的城镇都有很大的发展余地。当时的佛罗伦萨，在城区街道上握手的人、家庭彼此通婚的人，就是同一行业互争雄长的首脑人物，就是同一交易场所抢做生意的商人。年轻有为的佛罗伦萨人有多少机会可以选择进行什么活动，并且记住，是在本城为了本城而从事活动，不必到某个遥远的首都。他可能当市长、当首相、当将军、当长官，统领人马打仗，当然是一场小规模战争，但足够他绞尽脑汁，运筹帷幄。如果他是个画家、雕刻家、建筑师，他便会被请去担任本地纪念建筑物的工作，而不是眼看哪里来的一位大师设计这些建筑物。⁷麦金德最后不无感慨地说：当然没有人建议你应该或者能够回到佛罗伦萨的体制去，但工业化开始以后，生活越来越单调，以前城市生活中的价值和利益就被汲走了，留下的是死气沉沉、单调的气味：一味以效率和廉价作为追求的偶像所给予人们的，是永远看不到生活，而只能看到生活的一面的世界。⁸

且不说古希腊和中世纪欧洲的城市生活是不是真的那么丰富多彩和富有人情味，至少麦金德所揭示的工业化以后城市生活的单调，仍是事实。如果说技术进步和生产自动化是不可避免的，那么劳动者越来越被束缚在流水作业线上也是必然的。在这种情况下，工人会越来越感到单调、苦闷、没有生气。一个国家已经走上工业化的道路，要想再倒退到工业化以前的社会，根本行不通，于是沮丧的情绪只可能有增无减。

由此涉及一个有现实意义的问题：随着生产技术的发展和社会的进步，人们的基本生活需要的内容将不断丰富。缺乏必需的物质产品时，人们首先需要的是吃饭、穿衣、住房方面的满足。必需的物质产品得到满足以后，人们就要求自身的发展，包括精神生活能得到满足，这些也

应该包括在基本生活需要之中。一个社会，如果只有物质财富，而精神上的财富却是贫乏的；如果只能给人们以物质生活上的某种满足，而不能满足人们在精神生活上的需要，那么这样的社会是有重大缺陷的。加之，人们物质生活上的需要与精神生活上的需要紧密联系。在一定的物质生活上的需要得到满足的基础上，人们就会产生精神生活方面的一定的需要，并希望它们得到满足。精神生活需要的满足，又将促进物质生产的进一步发展，并在此基础上使人们产生更高的精神生活上的需要。正是在物质生活需要与精神生活需要相互推动、相互促进的前提下，人将不再是片面发展的人，而成为一个全面发展的人。

工业化以后所出现的生活单调，只有在物质生活需要与精神生活需要都能得到满足的基础上被克服。但问题还不仅限于此。试问：怎样才能使物质生活需要与精神生活需要都能被满足呢？单靠经济增长能解决这个问题吗？经济增长的结果就一定能使人们成为全面发展的人吗？一种形式的生活单调被克服以后，难道不会出现另一种形式的生活单调吗？为了不再出现生活单调感，我们更应当强调什么？所有这些问题都是值得探讨的。下面，让我们转入有关道德、信念与人的全面发展之间关系的分析。

二、对人的全面发展的理解

人的全面发展是指什么？这是一个在学术界尚无定论的问题。但无论在这个问题上有什么看法的分歧，至少在有关人的全面发展的前提方面是有比较一致的认识的。这是指：

第一，人的全面发展应该建立在生产力高度发展的基础上。没有生产力的高度发展，就不可能有充裕的物质产品供给，那么，人的全面发展就缺少必要的物质条件，人的物质生活需要和精神生活需要的满足也就缺少物质前提。同时，人的全面发展是需要在工作之余有较多的自由支配时间的，工作日长度的缩短和年休假日的增多也只有在生产力高度发展之后才能实现。

第二，人的全面发展应当建立在具有一定的文化知识的基础上。一个人，如果没有一定的文化知识，不仅他的物质生活需要不易得到满足，而且他的精神生活需要也很难满足。一个社会，如果平均每人的文化知识水平低，那么社会的生产力发展将受到极大限制，从而无论是人

们的物质生活需要还是人们的精神生活需要都是无法得到满足的，这样，人的全面发展也就成为不可能的事。

第三，人的全面发展应当建立在具有一定的道德、信念的基础上。一个社会，即使生产力发展程度较高，能够提供比较丰裕的物质产品，但如果社会风气败坏，人们缺乏良好的道德，没有信念，社会上尔虞我诈，相互倾轧，人们必须靠虚伪才能立足，甚至要靠欺骗才能免于受难。在这样的社会环境中，人的全面发展简直成为一种空想。不仅如此，由于社会风气败坏，道德沦丧，社会治安状况也必定恶化，人们缺乏一种安全感，人的全面发展也就无从谈起了。

作为人的全面发展的前提，上述三个方面是缺一不可的。没有生产力的高度发展，固然不行；没有文化知识水平的提高和良好的道德风尚的形成，同样是不行的。人的全面发展，包括了人的文化知识水平的提高和良好的道德的具备。不管对人的全面发展有什么样的解释，对文化知识和道德应当成为人的全面发展的考核内容这一点，看来并无争议。

我在所著《体制·目标·人：经济学面临的挑战》一书中曾有这样一段论述：“人们有不断改善自己的生活的愿望。人们在改善自己的生活的过程中，会越来越感觉到个人生活的改善同周围的人的生活的改善是联系在一起的。……尽管个人的生活改善了，但如果周围的人的生活不仅没有改善，反而有恶化的趋势，从而个人生活的社会环境比从前更不安定了，那么这也很难说明生活质量是否真的有所提高。”⁹这一段实际上涉及了道德规范同人际关系之间的关系，也涉及了对人的全面发展的理解问题。

道德是一种规范，它不仅是对个人的一种激励或约束，而且也是处理人与人之间关系的一种原则。每个人都希望自己的生活能够改善，也就是物质生活需要与精神生活需要都能得到满足。但如果他生活在一个缺乏良好的道德风尚、人与人之间缺少信任感、个人缺少安全感的环境中，如果周围的人的生活状况在恶化，那么无论如何他的改善生活的愿望是无法实现的。难道单单自己有吃、有穿、有住，吃得好、穿得好、住得好，这就叫做生活质量的提高？这就算幸福了？恐怕得不出这样的结论。在社会缺少良好的道德风尚和人际关系之中缺少道德规范条件下，很难把这称做幸福或生活质量的提高。

再说，人的全面发展需要有一个正常的环境，至少对社会上大多数人来说是如此。假定社会的道德沦丧，人们为了求生存而不得不顺应那

种不说假话就难以自保的潮流，吃得、穿得、住得再好，难道精神上就会舒畅、痛快？生活质量就会上升？人离不开群体，离不开周围的人，离不开赖以生存和发展的社会环境，这就是了解人的全面发展的关键所在。懂得了这些，对道德力量在人的全面发展中的作用也就易于理解了。

三、优良社会风尚的培育

人的全面发展有赖于优良的社会风尚的形成。要形成优良的社会风尚，必须在社会上建立对个人行为和群体行为的道德约束。道德约束对于优良社会风尚的培育有着重要作用。

如上所述，在社会经济生活中，如果各个行为主体自身没有道德约束，相互之间也缺少必要的道德约束，社会肯定是无序的，经济生活肯定是紊乱的，社会风气也肯定不正。从经济运行的角度看，行为主体如果缺少道德约束而彼此之间又没有相互的道德约束，行为必定短期化，因为行为主体会因缺乏稳定的预期而对经济前景失去信心。

这里所说的行为主体所包括的范围是很广泛的，可以把各种各样的人都包括在内。比如说，投资者不愿投资；消费者只顾眼前，不顾将来；职工认为未来是不可知的，得过且过，没有主动性、积极性；学生不愿好好学习，因为前途未卜；等等，都表明预期的紊乱。人们预期的紊乱必然导致行为短期化。当然，造成预期紊乱的因素很多，但不可否认，道德约束的缺乏和社会风气的不正也是原因之一。行为短期化的结果必然是资源配置的扭曲、资源使用效率的下降。因此，通过道德力量的调节，通过道德规范的建立和优良社会风尚的培育，将有利于行为主体行为的规范化，防止出现因预期紊乱而导致的短期化。

社会风尚有形或无形地对人们进行信念的引导。在市场经济中，这种引导尤为重要。在市场机制与政府部门共同进行调节的条件下，对企业和个人这些行为至少有以下两种类型的引导：一是市场本身的引导，二是政府所进行的引导。市场的引导可以归结为利益引导，它是把人作为“经济人”为前提的，因为人作为“经济人”，追求自身利益的最大化，力争以尽可能小的代价去获取尽可能多的利益。政府的引导可以归结为目标引导，但也不排斥利益引导。这就是说，政府在进行引导时，主要也以人作为“经济人”为前提。既然人作为“经济人”，要实现自己的最大

利益，要趋利避害，所以政府就有可能采取措施，把人引导到政府希望达到的目标方面去，这样，个人的利益可以得到保证，政府预定的目标也就能实现。至于个人，他总是从代价和收益两方面来考虑。如果不遵照政府的政策措施，代价就大，收益就小，如果遵照政府的政策措施去做，收益就大，代价就小。从这个角度来看，政府对个人的目标引导与利益引导可以相容、统一。

但要知道，人不仅仅是“经济人”，人还是“社会的人”。政府要让人们懂得，什么是值得去做的，什么是不值得去做的；什么是应该争取实现的，什么是不应该实现的。这种引导就是信念引导。政府也对人们进行信念引导，但政府的信念引导体现在目标引导之中。政府主要是通过宣传教育来引导人们把实现政府预定的目标作为一种信念。在政府调节中，不可能有脱离政府目标的信念引导。

信念引导实际上是可以独立存在的，这是道德力量调节的任务。独立存在的信念引导由个人自身或由个人组成的群体来进行。个人会有自身的目标，群体也会有自身的目标，独立存在的信念引导在不同程度上同个人的目标或群体的目标有联系，但由于个人目标或群体目标毕竟不是政府目标，因此个人自身的信念引导与群体的信念引导毕竟不同于体现在政府的目标引导中的政府信念引导。比如说，信仰某种宗教，可以给人们以一种信念引导，后者可以独立存在。又如，恪守某种待人处世原则，也可以给人们以一种信念引导，后者同样是可以独立存在的。

优良社会风尚的形成与来自政府的、个人的、群体的信念引导往往是相互促进的。社会风尚本身有一种潜移默化的功能，它能够使人们产生某种信念，或加强某种信念，或转变某种信念。而信念引导又会对社会风尚的培养产生积极作用，进而通过社会风尚的发扬对社会的资源配置发生作用。

一个明显的例子就是社会风尚对人们的消费行为发生影响，进而通过消费支出数量的变化和结构的变化影响资源配置。这是因为，消费是有示范效应的，而示范效应则具有社会性。社会崇尚什么，不崇尚什么，从消费行为中可以反映出来。比如说，奢侈性消费是不合理的消费行为中的一种，它会对社会风尚产生消极的影响，以至于某些消费的支出超过了与个人收入或财力相适应的程度，或者，奢侈性消费所占用的资源过多，使社会本来有限的资源用于不合理的方面。又比如说，在社会上经常存在一种迫于落后的习惯势力而不得不令人屈从的消费陋俗，

如为死者大办丧事，修造坟墓，甚至为活着的人预修坟墓，或婚前高索彩礼，大置嫁妆，嫁娶之日大摆宴席，耗资惊人。消费陋俗代表一种落后的文化，但家境贫寒的人则难以违背习惯势力的无形压力，由此所形成的消费行为显然对资源配置是不利的。¹⁰

另一个明显的例子是社会风尚对国民素质和效率的影响，国民素质在优良的社会风尚影响下的提高，效率在优良的社会风尚影响下的增长，都会对资源配置产生影响。国民素质既包括文化素质、身体素质，也包括思想素质、道德素质。国民素质的提高，又会对优良的社会风尚的发扬起着积极的作用。

历史经验已充分说明，一个国家在由不发达状态向发达状态过渡时，应当及早注意经济逐渐发达以后可能发生的社会问题，并及早采取措施来加以预防。这里所说的社会问题，包括了如何使人们在收入水平不断提高和物质产品不断丰富条件下日益充实生活的内容，使生活更有意义的问题。一个发达的社会不应当只是一个单纯追求物质产品而精神空虚的社会。在人们的物质生活需要得到满足的同时，精神生活的需要、发展自身的需要也应得到满足。社会风尚不应该滑坡，而应该朝着更好、更健康的方向发展。这些都属于道德力量调节的任务。

四、优良社会风尚与人自身发展之间的关系

一个国家从不发达状态向发达状态转变的过程中，社会将不断发生变化。但社会变化本身是一回事，社会成员对社会变化的认识又是另一回事，两者不可混同。这是社会与自然界的区别。自然界发生的变化可以被人们观察到、认识到，人们能发现自然界变化的规律性，然而自然界并不因它被人们认识而改变自己的活动规律。社会与此不同。社会活动是人们进行的活动，人们在社会活动中逐渐认识了社会。人们不但会察觉、认识社会的变化，而且会调整自己的行为来适应社会的变化。人们还会采取一定的措施来改变社会，从而社会的活动作为人们进行的活动，在被人们察觉到、认识到之后也会发生变化。这就是说，人与社会是双方连续彼此影响、彼此适应的，社会在调整中前进，人在适应中发展。社会风尚对社会发展的影响以及对人自身的影响，正是在社会与人的相互适应过程中表现出来的。优良的社会风尚一方面有助于人们正确认识社会的变化，及时调整行为以适应社会的变化，另一方面，在优良

的社会风尚影响下，人们的行为规范了，认识提高了，从而也有助于社会发展过程中新出现的问题的解决。

毫无疑问，优良社会风尚的培育和形成要比一个企业或一个社区的管理或文化建设困难得多。尽管从表面上看，优良社会风尚的形成是没有硬性指标的，而且也难以选择若干硬性指标作为考核优良社会风尚是否形成的依据。也就是说，优良社会风尚具有较大的弹性。但如果深入地进行分析，我们就会发现，优良社会风尚的形成仍有一定的规律可循，这就是：社会成员的文化程度越高，道德水准越高，社会成员越热爱生活，越关心其他人，越支持公益事业，那么优良的社会风尚就越容易形成，也越容易发扬。一个企业、一个社区的管理或文化建设如果有成效，对优良社会风尚的培育是有帮助的，但这代替不了社会各界共同的努力以促进国民素质的提高，促进优良社会风尚的形成。

人自身的发展同优良社会风尚的形成和发扬也是相辅相成的。当人的追求走向更高层次时，人的社会责任感会逐渐增大，为公共利益作出贡献的思想将对社会起着有益的示范作用，这些都将有助于优良社会风尚的形成和发扬。

在这里有一种不正确的认识需要澄清，这就是，认为经济不发达时，人的自身发展受到限制，国民素质的提高受到限制，从而优良的社会风尚也缺乏形成和发扬的前提。这种认识之所以不正确，是因为它把优良社会风尚的培育同经济发达程度之间的关系绝对化了，似乎经济发达是培育和形成优良社会风尚的唯一因素。实际上，在有些经济很不发达的地区（包括历史上每个民族都曾经经历过的经济十分落后的阶段），以及在经济发达国家中发展相对滞后的某些偏远的乡村里，社会风尚可能是很好的。优良的社会风尚同经济发达程度之间的关系，相当复杂，这是一个值得深入研究的课题，现在下结论似乎为时过早。

但历史经验也表明，一个国家或地区，社会风气的败坏常常发生在经济不发达状态开始走向经济发达的转变阶段。在这个阶段，外界对这个国家或地区的影响增大了，其中既有好的影响，也有坏的影响。加之，在转变阶段，这个国家或地区原来的社会组织与结构在解体中，新的社会组织与结构则在形成中，社会的分化与重组可能持续较长的一段时间，于是社会的风俗习惯、居民的心理状态、社会的崇尚和评价都不可避免地会发生一些变化，甚至是激烈的变化。在这种情况下，社会风气既有可能朝坏的方向变化，也有可能朝好的方向变化。这涉及对这些

变化的评价问题。假定只从原来的社会组织与结构、社会的崇尚与习惯的角度来看，可能发现不了社会风气朝好的方向的变化，所看到的尽是社会风气朝坏的方向的变化。假定换一个角度，即从将要达到的社会发展状态的角度来看，有可能发现不了社会风气朝坏的方向的变化，所看到的尽是社会风气朝好的方向的变化。客观地说，在一个国家或地区从经济不发达状态向经济发达状态转变的过程中，社会风气变好或变坏这两种趋向是并存的，只是社会风气的变坏更容易被人们所察觉，由此产生的问题更明显些，也更易于被人们所议论或引起人们的不满。这种情况一般会持续相当长的时间，往往要等到经济发达和人均收入水平上升以及国民素质提高以后才有比较显著的好转，而且单纯依靠经济的增长是不够的，教育和文化建设的作用不可轻视。教育和文化建设将对人自身的发展产生影响，从而有助于减轻经济转变阶段社会风气变坏的程度，并有可能防止社会风气的变坏。

在这里，有必要重提一下亚当·斯密的《国富论》和《道德情操论》这两部著作之间的关系。我在1997年出版的《宏观经济学的产生和发展》一书中曾写下这样一段话：“亚当·斯密在《道德情操论》（1759年出版）中与《国富论》（1776年出版）中都用过‘看不见的手’这个术语。亚当·斯密的本意是说：由于个人行为的非故意性，即自发性，客观上形成了一种可以促进社会利益的良好社会秩序。”¹¹应当说，在《国富论》中提到的“看不见的手”主要是针对市场调节而言，而在《道德情操论》一书中提到的“看不见的手”，既包括了市场规律的作用，也包括了道德情操的作用。从经济思想史的角度来看，关于“看不见的手”的思想在荷兰哲学家孟德维尔1714年出版的《蜜蜂的寓言》一书中即已出现。¹²但孟德维尔却提出了一个命题，即正如《蜜蜂的寓言》一书的副标题所显示的：私人的恶德即公众的利益。在孟德维尔看来，个人的贪婪和自私行为，促成了社会的繁荣，而个人放弃邪恶，清贫自守，却会带来社会的萧条。亚当·斯密是不同意孟德维尔这一观点的。他认为，所谓“私人恶德即公众利益”的说法是一个极端利己主义的体系、一个“放荡不羁的体系”。人，在亚当·斯密的体系中并不是一个只顾追逐个人利益的“经济人”，人还必须遵守规则，必须尊重他人的利益，必须具有同情心。关于这一点，赵修义教授作了很好的阐释。他指出，在亚当·斯密的体系中，“一方面，他肯定了人们对自身利益和幸福的追求有其合理性；另一方面，他强调这种追求必须是合宜的，也就是必须符合社会一般规

则，而不是无节制和贪婪的”。¹³那么，亚当·斯密的这两本书在自己的体系中是如何统一的呢？赵修义分析道：“斯密期望，经由市场达致富国裕民，必须与道德的维系和提升一致起来。他对此持乐观的态度，相信‘富之路’与‘德之路’能够统一。”¹⁴这种对亚当·斯密体系的解析，我认为是符合亚当·斯密本意的，也是有新意的。当然，在这里还应提到的是：虽然亚当·斯密并未提出政府干预这只“有形的手”的作用，但他一直重视市场规则的作用、法律的作用；在市场交易领域中，不遵守法律的结果和不讲道德的后果同样严重，同样不容忽视。¹⁵

CHAPTER 2 EFFICIENCY AND COORDINATION

第二章 效率与协调

2.1 The True Source of Efficiency

2.1.1 Mechanism for Low or High Efficiency

As mentioned in the first chapter, regulation by custom and morality can increase allocation efficiency. In order to clarify why such regulation can promote higher efficiency we need to discuss further the source of efficiency.

Efficiency is a category of economics and has to do with the effective use and allocation of resources. In the realm of economics, all resources are limited, only to different degrees of scarcity, both current and future. The key point is: How to utilize and allocate resources effectively? If both utilization and allocation are rational, a given resource can be used to greater effect, and the result is greater efficiency. Conversely, irrational use and allocation will mean resources are unused or wasted, resulting in lower efficiency. Therefore, from the perspective of resource use and allocation, rationality and irrationality in these areas are the respective sources of high and low efficiency.

In recent years, economic circles in China have come to value efficiency more and more. One reflection of this is the effort directed to transforming the economic growth mode, namely, a shift from the extensive mode of production and operation to the intensive mode. Compared with the long neglect of efficiency in the past, this is a welcome change. But probably quite a number of people have an

incorrect understanding of efficiency and where its source lies. Some people think that to emphasize efficiency is to emphasize profit, that if profit is high efficiency must be high, and that low profit equals low efficiency. Some people think output value reflects efficiency, that high efficiency means high output value, and vice versa. It is one-sided to equate efficiency with profit or output value: Output value involves valuation, and profit also has to take into account taxation or price subsidy. Some people think efficiency is connected with input; that high efficiency comes from high input and low efficiency from low input. Some even say, "Our enterprise provides a living for many, which is our contribution to society and represents our efficiency." The foregoing interpretations all misunderstand efficiency by simply looking at input and ignoring output. Irrespective of how many employees an enterprise has, it cannot account for the level of efficiency. These examples prove that many do not correctly understand the word "efficiency."

What efficiency reflects is the ratio of input and output, and change in efficiency shows change in resource utilization. From a macroeconomic perspective, in a country or a region, if people and materials are brought into full play, goods are delivered smoothly and land use optimized, then it signals rational use and allocation of resources, which is an indication of efficiency. The smooth delivery of goods implies speedier circulation, lower inventory and idle resources. This is greater efficiency.

The relationship between efficiency and resource allocation is as follows: From the perspective of economics any resource is considered limited, so society as a whole must consider into which production and services to rationally invest resources. Input of one particular resource might well produce different outputs, which are needed by society to different degrees. In this sense, investing one kind of resource can produce different results and therefore different efficiency. To output one kind of product rather than another can result in higher or lower efficiency, so one cannot consider different

outputs from the same input as having equal efficiency. This is the relationship between efficiency and resource allocation.

On the other hand, when the resources invested are of different degrees of scarcity, even if the eventual output is the same the efficiency will not be. This is because using lower-scarcity resources is more beneficial to socio-economic development; hence resource allocation is more efficient.

Having understood the foregoing, we can move on to another question: Since input of the same resource can have different outputs, since different scarcity of resource can cause different efficiency, then why don't investors invest only in high-efficiency areas and leave low-efficiency areas well alone? Is it through compulsion, ignorance or other considerations? Perhaps high or low efficiency is neither here nor there to these investors. Since one resource can produce high efficiency and a different one low efficiency, why do investors sometimes choose the latter instead of the former? Surely they cannot prefer low efficiency, can they? Behind the selection of investing fields and resources, and behind efficiency, there must be a mechanism at work, a mechanism more worth exploring than efficiency *per se*.

This output efficiency mechanism actually involves the source of efficiency. Efficiency comes from a mechanism and the mechanism determines the level of efficiency; when resources are of different degrees of scarcity the crucial nature of this mechanism becomes particularly apparent. Therefore, we must study under what kind of mechanism it is that people choose the efficiency increase mode of minimum input or maximum output, and how it is that people start caring about increased efficiency and figuring out how to achieve it.

As previously noted, efficiency cannot be understood purely on the basis of the amount of profit or output value. In the production process, if resources are wasted or the environment polluted and destroyed, we cannot call it "efficient," no matter how huge the profit or output value. Nor can we call it "efficient" if there is excess inventory of product. The mechanism behind efficiency is simply

benefit-driven and target-led. Benefit-driven means: If an investor is strongly concerned with the result of his input, then high efficiency will bring him gains and low efficiency loss, so he is bound to compare cost, price and profit so as to select the investment area or mode likely to produce the highest efficiency. Targetled means: An investor has his own target or targets, and to realize them, he will consider in which fields and which ways to invest. If increased profit is his target, then the two aspects—benefit-driven and targetled—combine into one. If his targets are multiple and increased profit is only one element, the situation will be more complicated and the mechanism behind efficiency will be determined by how the two aspects are combined.

2.1.2 The Roles of Efficiency and Moral Force

In the market economy, efficiency is regulated by market and the benefit motivator is one manifestation of such regulation. In order to achieve interests, an investor must improve efficiency by combining production factors on the basis of supply-and-demand and price conditions. Therefore the mechanism behind efficiency is actually the benefit mechanism or market mechanism. In a market economy situation the investor seeks to maximize benefits, so two aspects—benefit motivation and target orientation—combine in the issue of efficiency.

Suppose, as well as regulation by market, that there is also regulation by government, then behind efficiency there must be the influence of the latter, and the effect of this can be seen mainly in target orientation. Government has its own diverse, multiple targets. To realize them, it needs to exert influence on investors by various means of regulation so that the investment fields and modes they choose are in line with its own targets, thereby influencing changes in efficiency.

Since regulation by market and by government function at the

same time, efficiency is actually influenced by both of these. However, our analysis should not stop at this level. This is because those who conduct activities in the market are traders, and every trader is an investor of resource. It is government that applies its regulation on the market, it is itself an investor. It is the traders on the market who are affected by government regulation; as agents of investment they should consider their own interests as well as how government regulatory measures may affect their own interests. So we have to ask: What are the investors' considerations? Apart from regulation by market and government, are there other factors at work that may impact efficiency?

Let's take the example of an enterprise. Inside an enterprise there are people-to-material relations and people-to-people relations. The former is mainly reflected as the relation between the user of production materials and the production materials. The condition of production materials and the average amount of materials used per worker basically reflect the technical level of the enterprise, which in turn influences efficiency. The people-to-people relation is more complicated than the former, in the sense that it can be classified into different types, such as executives-to-ordinary workers, cooperative relations within the executive tier, executives-to-managers, managers-to-managers at all levels, cooperative relations among managers and relations between ordinary workers. Not all those relations are harmonious. Some are harmonious, some not quite, and others absolutely not, and the harmony can vary in certain situations. The degree of harmony will influence efficiency, an influence that is different from that of the technical level. Technical level and efficiency can both be increased if the enterprise increases input, purchases new equipment, builds new factories, trains employees or encourages research into new technology. But if people-to-people relations are not harmonious, can increased investment have much effect or surely efficiency would improve as a result?

When technology reaches a certain level, human factors become

more prominent, and the efficiency of an enterprise depends on how great the role played by human factors. Of these, working hours, the educational level and clarity of duties of every employee are known quantities. But others are unknown quantities; for example, the degree of effort each worker puts in is hard to determine. All have a certain level of laziness, but the smaller its influence, the more a worker's initiative and creativity come into play, and vice versa. But the degree to which workers can overcome laziness is an unknown quantity too. Moreover, if their personal targets are in harmony with those of the enterprise, efficiency will increase. If not, the opposite will be true. But the degree of harmony between their targets is an unknown quantity likewise. The influence of those unknown factors on enterprise efficiency is a subject worthy of research, and it is a knotty problem that regulation by market or government may not be capable of solving.

Study of efficiency must go beyond regulation by market and government. But this is not to imply they are not important factors in raising or lowering efficiency, just that their influence has limits, particularly so when it comes to analyzing the source of efficiency. For example, in the study of people-to-people relations, analysis of human factors such as workers' diligence or slackness needs to go deeper. In other words, in many aspects moral factors influence human behaviors and thus efficiency. Then what is the true source of efficiency? The true source lies in bringing people's initiative and creativity into full play. In achieving this, the role of moral force cannot be ignored. Through its influence, people's initiative and creativity come fully into play and efficiency greatly increases.

It must be emphasized that the above-mentioned analysis is based on the premise of a fixed technology level. From the people-to-material perspective, the relative level of technology has a bearing on efficiency. It's hard to compare two countries, two regions or two enterprises in terms of the degree of the influence of moral factors on efficiency if the technology level of one side is much higher than the

other's. Only on the assumption of a fixed technology level can the influence of moral factors on efficiency be shown accurately and can the comparison be meaningful.

2.1.3 Two Kinds of Cohesion: Group Cohesion and Society Cohesion

To recap: in the context of a certain technology level, the true source of efficiency lies in bringing fully into play people's initiative and creativity, and for this to happen there must be a rational economic operation mechanism, and there must be harmonious interpersonal relations.

The degree of cohesion shows the existence and extent of harmonious interpersonal relations. There are two types: group cohesion and society cohesion. Both have to do with interpersonal relations, the former with those in a group and the latter with those in a society. Cohesion engenders efficiency, group cohesion produces group efficiency and society cohesion produces social efficiency.

A group can be an enterprise, a community, an association, a village or a family, etc. Large or small, each has its own cohesion. Some are tightly organized and others are looser, but tight organization does not mean stronger cohesion nor does looseness imply the converse. Whether a group has cohesion and the extent of its cohesion is directly related to whether there is a harmonious relation between the group and its individual members, and between individual members themselves. A tightly-organized group cannot be cohesive if its members scheme and plot against each other or if its members are at odds with the leadership. By contrast, a loosely organized group may have strong cohesion if its members maintain harmonious relations with each other and with the leadership and if its members unite and work together for the development of the group.

An enterprise is a group formed by its employees, and its cohesion is group cohesion. Developing corporate culture helps build enterprise cohesion. Strong cohesion can help constantly increase efficiency and also help the enterprise come through difficult times, of which there is little doubt. But how is cohesion formed? Is there a connection between group cohesion and society cohesion? How to correctly handle this connection so as to achieve both types?

Society cohesion means all its members unify as one and try their best to realize their common purpose. For example, when a country or ethnic group is hit by a terrible natural disaster or is invaded, its people will show their spirit of unity, resilience and self-sacrifice. Such cohesion can bring high efficiency and is capable of producing miracles. Even in peacetime, harmonious interpersonal relations can also strengthen social cohesion and harmony and thereby increase efficiency.

Group cohesion and society cohesion may be mutually-promoting or mutually-restricting, depending on the nature and targets of the group. If it is a separatist political group aiming to change the *status quo*, the more cohesive that group, the more harmful it is to society and its cohesion. Of course, this is an extreme case: Generally, group targets are compatible with and even in total accord with those of society. As a result, group cohesion and society cohesion are usually mutually-promoting. Let us stay with the enterprise example.

In market economy, since an enterprise as commodity producer makes its own management decisions and takes full responsibility for its own profits and losses, it will take as its prime target the achievement of optimal benefits. It is in a competitive relationship with other enterprises, and in order to win it constantly adjusts its production and management direction and enhances its internal cohesion. On the premise of fair and legal competition, enterprises share common interests: The more stable a society and the more prosperous its economy, the more they are benefited. The prosperity of one enterprise is not necessarily predicated on the decline of

another. In a stable and prosperous social environment, every enterprise has opportunities for development and for realizing its aspirations. However, reality shows that even in a benign environment, some enterprises, owing to poor production management, wrong investment decisions, inability to adapt to rapidly changing technology, are obliged to shrink production, go bankrupt or be merged with other enterprises. But these are normal reflections of resource restructuring. Provided such restructuring can enhance the efficiency of national economy and create new investment opportunities, cutbacks, bankruptcies or mergers will not harm the common interests of the enterprise community as a whole.

Group cohesion and society cohesion are of two different types. Whether strengthening group cohesion can promote society cohesion is closely related to an important stimulating factor of group cohesion, namely, the development of a culture (such as corporate culture, community culture, campus culture, etc.). Staying with the enterprise example, let us suppose that an enterprise's corporate culture sets store by both its own aims and those of society, that it cares about its own, its employees' and the public's interests, and that it strives to foster its own corporate spirit and a fine social ethos too. This being so, then its building of corporate culture will strengthen its own internal cohesion and society cohesion as well. Such accordance of enterprise and society cohesion truly manifests the social function and value of successfully developing corporate culture. Conversely, if an enterprise values only its own and its employees' benefits but neglects the social role and value of corporate culture, then, even with stronger internal cohesion, such cohesion cannot help in promoting society cohesion or even keep pace with the latter. This point should not be ignored when analyzing the source of efficiency.

If we take this analysis one step further, we will find that increase in national wealth, economic prosperity and the development of culture and education are all interlinked. A prosperous society with developed economy, culture and education is more advantageously

situated for building culture and promoting society and group cohesion. The role of regulation by custom and morality in promoting both types of cohesion is especially obvious, and cannot be substituted by market regulation or government regulation: only moral force can make group members realize that their group aims are basically at one with those of society and that their individual and group interests are basically at one with public interests. With the members' recognition and acceptance of society's aims, both group and social cohesion will be strengthened. Similarly, under the influence of moral force, both group efficiency and social efficiency will increase constantly.

This brings us to the following conclusion: Previous studies on the source of efficiency focus only on economic and technological factors at the neglect of non-economic and non-technological factors, on the influence of interests but not on the effect of awareness of social responsibility and public aims, emphasizing only the realization of material value but neglecting human value. Guided by such traditional ways of thinking and methodology, these studies cannot really explore efficiency changes at a deeper level, neither can they reveal the fact that the real source of efficiency lies in the role of people and person-to-person relations, not exclusively in the role of material or the people-to-material relationship. Group cohesion produces group efficiency and society cohesion produces social efficiency. This being the case, we should not go looking to the market mechanism or regulation by government to find out how efficiency is produced and increased, but to moral force and its influence on people.

壹 效率的真正源泉

一、产生高效率或低效率的机制

第一章已经谈到，习惯与道德调节对资源使用与资源配置的作用表现为效率的提高。因此有必要在这里再就效率的源泉问题作一些探讨，

以便阐明为什么习惯与道德调节能够促进效率提高。

效率是一个经济学范畴，这是指资源的有效使用与有效配置。在经济领域内，任何资源都是有限的，不同的资源主要的区别在于有效供给不一样。有的资源最为稀缺，有的资源则比较稀缺；有的资源目前已经稀缺，而有的资源今后将越来越稀缺。问题在于：既然任何资源都是有限的，所以必须考虑如何才能有效地使用资源，以及如何才能有效地配置资源。如果使用合理，配置合理，一定的资源可以发挥更大的作用，其结果将是效率的增长；反之，如果使用不合理，配置不合理，形成资源的闲置或浪费，那么一定的资源只能发挥较小的作用，其结果必定是效率的下降。从资源使用与配置的角度看，高效率或低效率的原因在于资源的使用合理还是不合理，资源的配置合理还是不合理。

近年来，国内经济界已经越来越重视效率。实现经济增长方式的转变，即从粗放型生产经营向集约型生产经营的转变，就是对效率问题日益重视的反映。与过去长时期内不注意效率的情况相比，这无疑是一个可喜的变化。但社会上相当一部分人对效率的理解未必那么正确，对效率的源泉的认识也未必那么正确。例如有人认为，重视效率就是重视利润，利润大表示效率高，利润小则表示效率低。还有人认为，产值反映了效率，效率高时产值就多，效率低时产值就少。应当指出，把效率等同于利润或产值，都是片面的。产值有一个计价问题，利润还涉及税率或价格补贴问题，产值多少或利润大小不能同效率的高低画上等号。也有人说，效率来自投入，投入意味着效率，多投入才有高效率，低效率必定是由于投入太少了。甚至有人说，“我们这个企业养活了多少人，这就是给社会作出的贡献，也就是我们的效率”。诸如此类的看法，同样是对效率一词的曲解。单看投入，不看产出，怎能说明效率？至于一个企业能吸纳多少人就业，无论从哪个角度来分析，都不能说明效率的高低。这些看法反映了社会上不少人还没有弄懂“效率”一词的真正含义。

效率反映的是投入产出之比，效率的变化表明资源使用状况的变化。从宏观经济看，在一国或一个地区范围内，能做到人尽其才，物尽其用，货畅其流，地尽其利，就表明资源使用合理，资源配置合理，这就代表效率。人尽其才，物尽其用，地尽其利，意味着各种资源都得到了有效利用。货畅其流，意味着流通速度的加快和闲置、积压的资源数量的减少，这就是效率的提高。

从效率同资源配置之间的关系来说，由于任何资源从经济学的角度

来看都是有限的，所投入的一切资源都是有限的资源，所以社会必须考虑资源究竟投入到哪一种产品和服务的生产之中。投入某一种资源，可以有各种不同的产出。社会对这些不同的产出有不同的需求程度。从这个意义上说，一种资源投入会有不同的结果，从而效率也是不一样的。不生产这一种产品而生产另一种产品，效率可能较高，也可能较低，不能认为同一种投入的不同产出会有相等的效率。这就是效率同资源配置之间的关系。

另一方面，在社会各种资源的稀缺程度不相等的条件下，不利用这些资源去投入而利用另一些资源去投入，即使最终的产出是相同的，但效率却不一样。这是因为，能够利用稀缺程度较低的资源而不用资源稀缺程度较高的资源，对社会经济的发展更有利些，从而资源配置的效率也就会更高一些。

了解了上述这些，我们就可以再深入一步来考察这样一个问题：既然投入某一种资源可以有不同的产出，也就是在资源稀缺程度不等时有不同的效率，既然同一种产出可以利用这种资源或另一种资源，在资源稀缺程度不等时会产生不同的效率，那么，投入资源的主体为什么不把某一资源投入效率高的领域，偏偏要把它投入效率低的领域呢？是迫不得已，还是无知？或是另有考虑？或是效率高低对于投入资源的主体来说是一种无所谓的事情，即“与己无关，听之任之”？既然投入资源的主体利用这种资源可以带来较高的效率，而利用另一种资源只能带来较低的效率，那么，为什么他不利用这种资源而偏偏利用另一种资源呢？难道他偏爱低效率吗？……可见，在投入领域的选择和资源的选择的背后，在效率高低的背后，肯定有一个机制问题。产生高效率或低效率的机制，比效率高低本身更值得经济学界去探讨。

这里所说的产生高效率或低效率的机制问题，实际上已经涉及效率的源泉问题。效率来自机制，机制决定效率的高低，在资源稀缺程度不等的条件下，机制的关键意义尤为明显。因此需要研究在什么样的机制之下，人们才会选择投入最少或产出最多的效率增长方式，人们怎样才会关心效率的增长并为效率的不断增长而动脑筋、想办法。

正如前面已经指出的，不能单纯根据利润的大小或产值的多少来理解效率。对有限的资源的浪费，在生产过程中造成严重污染而使环境破坏和资源破坏，即使利润再大，产值再多，绝不等于有效率。产品生产出来之后如果积压在仓库中，也不等于有效率。效率背后的机制问题，

无非是利益的驱动和目标的吸引。利益的驱动是指：如果投入资源的主体对投入的结果有很高的关切度，效率高将给他带来利益，效率低将使他受到损失，那么他一定会根据成本、价格、收益的比较，选择最有利的资源投入领域，或选择可以带来最大效率的资源投入方式。目标的吸引是指：投入资源的主体有自身所要达到的目标，而且目标很可能不是单一的，这样，为了实现自己的目标，他就会考虑选择什么样的资源投入领域和什么样的资源投入方式。假定某个资源投入主体的目标就是利益的增加，那么利益的驱动和目标的吸引就会合而为一。假定某个资源投入主体的目标是多元的，利益的增加只是多元目标的一个组成部分，除了利益增加以外还有其他的目标，那么问题就会复杂些，效率背后的机制将取决于利益驱动与目标吸引两者的结合状况。

二、效率与道德力量的作用

在市场经济条件下，效率是受市场调节的。利益的驱动就是市场调节起作用的表现。每一个资源投入主体为了取得利益，必须根据市场上生产要素的供求状况和价格水平来组合生产要素，提高效率。因此，效率背后的机制实际上就是利益机制或市场机制。在市场经济条件下，资源投入主体的利益最大化就是其所追求的目标，这样，利益驱动与目标吸引在效率问题上就统一起来了。

假定在市场调节之外还有政府调节，那么在效率的背后必定存在着政府调节的影响，目标的吸引主要是政府调节起作用的表现。政府有自己的目标，政府目标不是单一的，而是多元的。政府为了使自己的目标得以实现，就需要通过各种调节手段对资源投入主体产生影响，使他们在资源投入领域的选择上与资源投入方式的选择上作出符合政府目标的选择，从而影响效率的变动。

由于市场调节与政府调节是共同起作用的，所以高效率或低效率的产生实际上受到市场调节与政府调节的共同影响。但对这个问题的分析不应到此为止，还需要作深入一层的探讨。这是因为，在市场上进行活动的是各个交易人，每一个交易人就是一个资源投入主体。对市场进行调节的是政府，政府自身也是资源投入主体，受到政府调节的是市场上的交易人，他们作为资源投入主体，既要考虑自己的利益，也要考虑政府采取的调节手段对自己利益的影响。于是就出现了另一个问题：资源

投入主体是怎样考虑的呢？他们的行为受哪些因素影响呢？效率除了受到市场调节与政府调节而外，是不是还受其他力量的影响呢？

让我们先以一个企业为例。

一个企业内部的关系可以分为人与物之间的关系和人与人之间的关系。人与物之间的关系主要反映为生产资料使用者与生产资料之间的关系。企业的生产资料状况和平均每个劳动者所使用的生产资料数量的多少，基本上反映了这个企业的技术水平，技术水平的高低影响着效率的高低。从人与人之间的关系来看，问题要比人与物之间的关系复杂些。可以把企业内部的人与人之间的关系分为若干种关系，例如，企业领导层同一般职工之间的关系，企业领导层内部的合作共事关系，企业领导层与各级管理人员之间的关系，各级管理人员内部的合作共事关系，一般职工相互之间的关系，等等。这些人际关系中，有的协调，有的不那么协调，还有的完全不协调。有些人际关系在这种情况下比较协调，在另一种情况下却不协调。人际关系的协调程度影响着效率的高低，而且对效率的这种影响同技术水平对效率的影响是不一样的。如果技术水平低，企业通过增加投入，或增添新设备、修建新厂房，或进行职工培训、鼓励职工钻研技术，就可以大幅度提高技术水平，达到效率增长的要求。但如果企业内部人际关系不协调，增加投入能有多大成效？难道效率会因此而大幅度提高？

再从企业从业人员（包括各级管理人员与工人）的角度来看，在一定的技术水平之下，人的因素被摆到了显著的位置，企业的效率取决于人的因素所发挥的作用。在人的因素中，职工的工作时间、每个人已达到的文化技术等级、每个人在自己的工作岗位上的责任明确程度都是已知的。但在人的因素中，还有一些未知数。例如，职工的努力程度就是未知的，因为每个人在工作中究竟使出了多大的劲，不易确定。又如，每个人都有一定的惰性，惰性的影响小，积极性、创造性就发挥得充分；反之，惰性的影响大，职工的积极性、创造性的发挥就受到阻碍。职工自身能在多大程度上克服惰性，也是一个未知数。再如，如果职工个人的目标同企业目标是协调的，效率将会增长；反之，职工个人目标同企业目标不协调，效率将会下降。但职工个人目标同企业目标究竟在何种程度上协调或不协调，同样是未知的。这些未知因素的存在对企业效率的影响，是值得研究的课题，也是市场调节或政府调节都难以解决的难点。

由此可见，对效率的研究有必要在市场调节与政府调节以外展开。这并不意味着市场调节与政府调节对效率的增减不重要，这只是表明市场调节与政府调节在影响效率方面有局限性，特别是在分析效率的源泉方面有局限性。比如说，在企业内部人与人之间关系的研究中，在与人的工作努力程度、人的惰性等有关的一些未知因素对效率的影响的研究中，都需要深入到更深的层次。这就是说，道德力量在许多方面对人的行为发生作用，进而影响效率。什么是效率的真正源泉？效率的真正源泉在于人的作用的充分发挥、人的积极性和创造性的充分发挥。而要做到这一点，道德力量的作用不可忽视。在道德力量作用之下，人的作用充分发挥了，人的积极性和创造性充分发挥了，效率将会大大提高。

应当强调的是，上述分析是以技术水平既定作为前提的。技术水平的高低，从人与物之间的关系的角度来看，关系到效率的大小。比如有两个国家、两个地区或两个企业，如果一个国家、地区、企业的技术水平高出另一个国家、地区、企业很多，那么道德力量对效率发生作用后所产生的后果就难以进行比较。因此，只有把技术水平作为既定，道德力量对效率的作用才能准确地显示出来，这样的对比才有意义。

三、两种凝聚力：团体的凝聚力和社会的凝聚力

前面已经指出，在一定的技术水平的条件下，效率的真正源泉在于人的积极性、创造性的充分发挥，而要充分发挥人的积极性、创造性，必须有合理的经济运行机制，必须做到人际关系的协调。

凝聚力的大小是人际关系是否协调或协调到何种程度的体现。凝聚力基本上分为两类，一是团体的凝聚力，二是社会的凝聚力。团体的凝聚力以团体内部人际关系的协调为条件，社会的凝聚力则以社会中人际关系的协调为条件。凝聚力产生效率：团体的凝聚力产生团体的效率，社会的凝聚力产生社会的效率。

这里所说的团体，包括企业、事业单位、社区、社团、村、家庭等。团体有大有小，各有各的凝聚力。团体的组织有松有紧，紧密不等于有较大的凝聚力，松散也不等于缺少凝聚力。团体组织的松散或紧密，是从组织形式上说的，团体有没有凝聚力或凝聚力有多大，则同团体与成员协调与否、各个成员之间协调与否有直接的关系。比如说，某个社团，有严密的组织，但成员彼此之间可能钩心斗角，难以形成一股

力量；或者成员对社团的领导层离心离德，存在着强烈的离心倾向，那么不管社团的组织形式多么严密，照样没有凝聚力。反之，某个社团尽管组织形式上是比较松散的，但成员之间的关系协调，成员同社团的领导层的关系协调，成员们为社团的发展齐心协力，这样的社团不仅有凝聚力，而且凝聚力还可能是很强的。

企业是由企业工作人员组成的一个团体。企业的凝聚力是团体的凝聚力中的一种。企业文化建设有助于企业凝聚力的形成。一个企业，如果有较大的凝聚力，不仅能够促使企业效率不断增长，而且在企业遇到困难时，能够使企业克服困难，闯过难关。关于这一点，人们一般是不会产生疑问的。

需要深入探讨的问题是：社会的凝聚力如何形成？团体的凝聚力同社会的凝聚力之间存在什么样的关系？怎样正确处理这两种凝聚力之间的关系，以便既有团体的凝聚力，又有社会的凝聚力？

社会的凝聚力是指社会成员们能够团结一致，各尽所能来实现共同的目标。最显著的例子就是，一个国家、一个民族在反侵略战争时期或遇到严重自然灾害时，社会成员所表现出来的齐心协力、艰苦奋斗和自我牺牲的精神。社会的这种凝聚力带来社会的高效率，会出现许多奇迹。即使在正常的情况下，如果社会上人际关系协调，社会凝聚力强，那么也会出现社会协调的环境，同样有利于效率的增长。

至于团体凝聚力与社会凝聚力之间的关系，应当认为，两者之间可能存在着相互促进的关系，也可能存在着相互制约的关系，关键在于团体的性质与团体的目标是什么样的。社会上有各种各样的团体，性质互异，目标互异。假定某个团体是政治性的组织并具有分离主义政治倾向，它的目标是要求改变现状，使某个区域从一个国家分离出去，那么，这样的团体内部越有凝聚力，对社会越不利，社会的凝聚力越会受到损害。当然，这是极端的例子，我们可以把这一类团体作为特例，略去不谈。在一般情况下，团体的目标同社会的目标是相容的，也是可以协调一致的，因此团体的凝聚力与社会的凝聚力通常有着相互促进的作用。这里仍以企业为例。

在市场经济中，企业作为自主经营、自负盈亏的商品生产者，有自己的目标，而首要的目标就是争取实现最大利益。企业之间存在着竞争的关系。为了使自己在竞争中取胜，企业不断调整生产和经营方向，不断改进管理，增加内部凝聚力。正当竞争、合法条件下竞争，是处理

企业之间关系的前提。在这一前提下，企业之间有着共同的利益。这就是：社会越稳定，经济越繁荣，企业越能受益。一个企业的兴旺并不是必定以另一个企业的衰败为条件的。在社会稳定和经济繁荣的大环境中，企业都有发展的机遇，并且都能实现这一愿望。从现实生活中可以看到，即使这样的大环境中，也总有一些企业由于生产经营不善，或投资决策失误，或适应不了技术迅速变化的形势，发生生产收缩、企业倒闭或被其他企业兼并等情况，但这是正常的，这只不过是资源重新组合的反映。只要资源的重新组合能给国民经济带来效率的增长，为投资者创造新的机遇，那么某些企业收缩、倒闭或被兼并不会损害企业界的共同利益。

团体的凝聚力同社会的凝聚力是两种不同类型的凝聚力。团体的凝聚力能否同社会的凝聚力统一起来，或者说，团体凝聚力的加强能否促进社会凝聚力的加强，与作为促进团体凝聚力的重要因素的文化建设（如企业文化建设、社区文化建设、校园文化建设等）的内容和成效有密切关系。不妨仍以企业为例。在一个企业中，假定企业文化不仅强调企业自身的目标，而且同样强调社会的目标；不仅关切企业自身的利益和本企业职工的利益，而且也关切公共的利益；不仅致力于企业精神的培育，而且也致力于优良的社会风尚的培育——这样，企业文化建设的成就既表现于企业凝聚力的加强，也表现于社会凝聚力的加强，企业凝聚力与社会凝聚力是一致的。这正体现了成功的企业文化建设的社会功能和社会价值。反之，假定一个企业单纯看重企业自身利益与本企业职工利益的追求而忽略了企业文化建设的社会功能与社会价值，这样，尽管企业的凝聚力也有可能某种程度上加强，但却无法使企业的凝聚力同社会的凝聚力协调一致，也无法使企业凝聚力的加强带来加强社会凝聚力的结果。在分析效率源泉问题时，我们不当忽视这一点。

如果再作进一步的分析，那么可以了解到，国民财富的增加、社会的经济繁荣、文化教育事业的发展是联系在一起的。一个经济繁荣、文化教育事业发达的社会，将更有条件来进行文化建设，促进社会凝聚力和团体凝聚力共同加强。习惯与道德调节作用在促进社会凝聚力和团体凝聚力共同加强方面表现得尤为明显，习惯与道德调节的这种作用是市场调节或政府调节无法替代的。这是因为，只有运用道德力量，才能使团体的成员认识到团体目标的实现从根本上说是同社会目标一致的，个人的利益、团体的利益从根本上说是同公共利益一致的，于是团体的成

员就会从内心认同社会目标，其结果将是既增强了团体的凝聚力，又增强了社会的凝聚力。团体的效率和社会的效率将在道德力量的影响下不断提高。

由此可以得出下述结论：以往在效率源泉问题的研究中，通常只看重经济因素和技术因素而忽略非经济因素和非技术因素，只注意利益的影响而不注意社会责任感和公共目标的作用，只强调物的价值实现而忽视人的价值实现。在这种传统的思想和方法的指引下，实际上研究不了效率变动的深层次问题，也揭示不了效率的真正源泉还在于人的作用以及人与人之间的关系，而不仅仅在于物的作用以及人与物之间的关系。团体凝聚力产生团体的效率，社会凝聚力产生社会的效率，在这种情况下，效率的产生和提高的原因不应当到市场机制中去寻找，也不应当到政府的调节行为中去寻找，而只能到道德力量及其对人的影响中去寻找。

2.2 Coordination and Adaptation

2.2.1 The Significance of Coordination and Adaptation

In the first section we pointed out that factors such as social and interpersonal harmony, people's adaptation to society and to others are of very great significance to the increase of efficiency. In this section, we will follow and further explore this train of thought.

As we know, a society is formed by countless individuals. Once established, a society like a human being is capable of self-adjustment so as to maintain or recover balance, a mechanism to ensure its survival and development. In *Economics and Political Science of Socialism*, I made this statement on society as a whole: Like a society, human beings also have the ability of self-adjustment. Once this ability is lost or weakened, a person will get sick, just as a society will lose balance. Such ability of a human body or society divides into two types: sthenic and inhibiting. Sthenic ability plays a role that is outer-

directed, animated and positive, whereas inhibiting ability's role is inner-directed, conservative and negative. In normal circumstances, the two play their roles simultaneously, helping the human body or society to self-adjust, to maintain or recover balance. That is to say, normally the human body or society will not be over-sthenic or over-restrained. Even if there are occasions when the former surpasses the latter or vice versa, they will return to equilibrium naturally after a certain process.¹

Now what we must discuss is this: In the absence of regulation by government, would a society still be able to adjust itself? The answer is obviously yes: otherwise, how could human society survive for so long a time prior to the emergence of government and regulation by government? If there were no regulation by government or by market, would society still have this ability? The answer is still obviously yes: otherwise, before the emergence of regulation by government and market, or in areas where neither regulation can reach, or in periods of serious disturbance when neither regulation functioned normally, how could human society still exist and run normally? So, where exactly does this self-adjustment and self-balancing ability come from, and how does it exert its effect?

A society is formed by myriad individuals, who live or work together and are associated in various relationships. For every individual member of society, order is one of the most important things determining whether that person can settle down and enjoy a peaceful life and normal work. Order in society is something desired by all. Irrespective of its nature, the existence of order is always better than lack of it. Lack of order always results in confusion which in turn harms people's normal working and living, even threatening their continued survival. Accordingly, for members of society, order is imperative to avoid such things. Regulation by market and regulation by government are both forms of order. Once regulation by market emerged, the reason that all places with market activities had order under regulation by market is because order is what people want.

Once government has formed, why is it that wherever there is government or wherever government power can reach, government always wants to maintain a kind of order? Because people wish for order and are glad to accept it, and because governments also wish for order and require people to follow it.

Since people generally want order and abhor disorder, this gives society the ability to self-adjust and to recover balance. Self-adjustment means to incline towards and to adapt to order. Recovering balance can be seen as recovering order or rebuilding it anew. When a society's economy is overheated or too cold, it indicates damage to the normal rhythm of that economy and disruption to its order. This being so, through people's need to recover balance, i.e. recovering order or building it anew, the economy will undergo constant self-adjustment. Therefore, even without regulation by market or government, after a period, possibly a long period, characterized by sthenic or restraining action, a society's economy will gradually regain equilibrium. This tells us that the desire of the vast majority of people for normal, orderly life and work gives a society's economy an internal balancing mechanism. If on top of that there is appropriate regulation by market or government, balance will be recovered more quickly.

Normal order has something to do with the harmonized and adaptive nature of a society. Since man is not purely "economic man" but also "social man," social coordination or harmony cannot be achieved through economic development alone. As regards adaptation of people to society and to other people, this can still less be summed up as economic adaptation. The significance of harmonization and adaptation goes way beyond questions of economy. Let us take real enterprise situations to illustrate this point.

To improve efficiency, enterprise management often uses such economic tools as granting or withholding bonuses, increasing or reducing wages, etc. Although material incentives and penalties certainly work, exclusive reliance on such methods evidently has

considerable limitations. In cases where the mentality of employees has changed, or their income has reached a certain level and the bonus or fine represents only a small part of their wages, or the commodities they can afford are unavailable because of market shortage, the employees will no longer care about bonuses or fines, rendering such methods less effective than previously. So, in the area of enterprise management, it has become an inevitable trend to replace the "incentive principle" with the "adaptation principle." The latter emphasizes adaptation between the subject and the object, aiming to make the object feel that the subject is indispensable and vice versa. Such adaptive relationship has been called "oneness," referring to the coordination, in its most complete and perfect sense, of interpersonal relations. Take, for example, the interpersonal relations in an enterprise or between the leaders and the led. The "adaptation principle" implies that employees feel inseparable from the enterprise, seeing it as a family of which they are a part; the leaders feel that they and the employees are one, and that the employees' concerns are theirs also. The enterprise and its employees share the same fortune and their relations are harmonized. When technology reaches a certain level, such adaptation between the subject and the object is bound to produce high efficiency.

Adaptation is not limited to interpersonal relations within an enterprise; the principle is also applicable to relations among various social forces and is similarly capable of raising efficiency. We may analyze the relationship between government and public as follows: the maintenance of social order is among the duties of government, and to achieve this it has to resort to compulsive means. But the latter do have limitations, so in addition, the government must do all in its power to establish an adaptive relationship so that the public feels the government is their own, its target is their own target and that they and government are inseparable. This is a manifestation of "oneness" of subject and object in the socio-political field. From the point of view of government, if it has truly built adaptive relations in socio-

political life, the cost of maintaining social order will greatly reduce and its management effect will constantly improve. In short, in the social field, coordination and adaptation are both sources of efficiency.

It's hard to imagine that efficiency will not decrease when the subject feels alienated from the object. Similarly, it's hard to see how efficiency can increase when the object feels it can never agree with or unite in concerted efforts with the subject whether in thinking or in action. What is true of an enterprise is true of society also.

2.2.2 Coordination and Adaptation in a Changing Society

It is easier to realize social coordination and adaptation in a static society than in a dynamic one, where it is much more difficult to do so.

For a very long period, human society was basically a static one, which is to say a fixed society. In this, the scope of activity in an individual's life was usually very limited because of low social mobility. Life was lived from childhood to adulthood in the same environment and among the same narrow range of people. Moreover, from that person's childhood environment it would be possible to predict with a great degree of accuracy what that person's future career, life, spouse and children would be like. This is the nature of static society. Being thus, it is very much simpler for individuals to adapt to the people with whom they come into contact.

But it is not possible for modern society to be like this. It is a dynamic, constantly changing and non-fixed society. Not only is its social mobility higher, it will keep on getting higher, and its pace of change will get ever faster. Development of science and technology gives rise to such changes, and along with social changes, interpersonal relations are in a state of constant change. In a static

society, the knowledge and manual skills acquired in youth can enable a person to earn a lifelong living; in a dynamic society, what is learned in youth soon becomes outmoded, and one must keep on learning, never able to discontinue learning because of the ever-quickenning pace at which knowledge is updated. In such a society, from childhood to adulthood, activities are conducted in various environments and contacts are made with different groups. The circumstances of an individual's childhood cannot predict that person's future. Opportunities keep coming up, but may disappear before being grasped. Everything is in constantly accelerating flux. In order to survive and develop, it is vital to learn how to adapt to the environment, to social changes and to changes in interpersonal relations. In general, adaptation is a life essential.

In static society, despite the minimal changes in an individual's life, despite the fact that incomes and living standards remain very low because of slow or no economic development, the great majority of people derive from it a feeling of stability; stability seems to equate to well-being, and therefore contentment. Moreover, it tells people: This is what life is like, you don't have to change it and no one can change it, either. In such a society, one usually knows spontaneously how to adapt to the surroundings. There are numerous groups, including groups formed by blood ties, regional ties, and by economic or political relationships; every person can belong to more than one group. Following group standards forms the normal order: Individual behavior obeys group standards and individual interests are subordinate to group interests. Such things stem from people's desire for normal order and also from their desire for stability and their dislike of unnecessary change. The more stable and contented people feel, the less likelihood there is for social change.

A dynamic society is totally different. The fast development of economy and technology brings people many opportunities and improves their income level and material life, but it also brings them a sense of instability. It seems that instability is a source of worry and

that to live in a constantly changing society is to live in never-ceasing worry. Moreover, because groups are also changing, the sense of that stability they provide members is shattered. People frequently relocate, change jobs, or even spouses and adult children live separately from parents, all of which means they change from one group (community, trade, profession or family) to another. Sometimes the groups are incompatible or even opposed. This will undoubtedly exacerbate the sense of instability.

It's inevitable for a society to move from static to dynamic. However, those in whom the change process produces a sense of instability cannot adapt to the reality, and are very likely to find the changes unacceptable or even feel hostile to the dynamic society. They want to return to the static society, the only one they feel able to adapt to and accept. They are unhappy with reality, hoping to find their consolation and spiritual moorings in memories, which always seem better than current reality even if life in the past was actually harder. They will have no passion or positivity for work, so efficiency improvement becomes impossible. In some people the strong hankering to go back to the old ways becomes a barrier to efficiency improvement and social progress. This is really just a problem among some ill-adapted individuals, but it has the potential to gradually become a problem for society, a socio-psychological problem.

Why do we say this? Once a society leaves the static phase, it cannot return to it. Some people who are quite clearly at odds psychologically with the change but can do nothing to stop it may well form a countercurrent against the tide of social progress. In his analysis of this problem, sociologist Elton Mayo found there to be just two principles of social organization: the "established" society and the "adaptive" society. the former, at the lowest level we may look to the ritual procedures of Aboriginal Australians, and at the higher level to British society in the Victorian age, early industrial society in New England of the United States, or some Australian cities in the 1880s. With the advent of socio-economic development the established

society ceases to exist. Since return is impossible, some will be discontented with reality. In Mayo's opinion, most modern liberal or revolutionary movements had their origins in a fervent desire to return to the established society from the current unsettled situation, and these aspirations were really reactionary and counter to the spirit of the age.²

There are four main aspects to adaptation to a changing society:

One, accepting reality: One should accept the fact that society cannot return to the past and that the reality is unchangeable. As long as there are important scientific discoveries and application of new technology, there will be corresponding change in social organization or life. This is the reality, and if one cannot accept it, hankering after the static society, there can be no talk of adaptability. Therefore, accepting reality is the starting point for adaptation.

Two, understanding the reality: Accepting the reality is a prerequisite for understanding it. Compared with the past, the social environment has changed in many aspects. But deeper comparison is necessary to discover where these changes come from and where their significance lies. An obvious example is an individual living in agricultural society, almost totally isolated from and having very limited contact with the outside world, knows little of the real situation there. Hence, he believes society is stable and adaptable. Once an agricultural society becomes an industrial society, everything changes. Those long accustomed to life in the agricultural society may feel things have changed too fast and too much, feel unable to get a handle on the outside world and themselves unable to adapt to it or even discarded by it. And with the advent of the information society, those long accustomed to life in industrial society may also feel things are changing too abruptly, exacerbating their sense of feeling outmoded and discarded by the world, which contributes to their inability to adapt. In light of this, for an individual to adapt to the social environment, to feel in harmony with the outside world, he should get a deep understanding of the social reality, and understand

where this inability to adapt comes from.

Three, change of thinking mode: Once reality is accepted and understood, he should change his way of thinking in line with reality, and abandon the misconception that he is destined not to adapt to the changing society, and so as to recover self-confidence. For example, the transformation from a planned economy to a market economy is a profound social reform, a change that calls for a corresponding updating of one's concepts. Those who lived and worked in the planned economy for many years got used to the "iron rice bowl" (lifelong secure job) and "big pot meal" (egalitarianism), but with the advent of the market economy those things have disappeared, and new challenges have arisen, such as lay-offs and re-employment. It is by no means impossible to adapt oneself to a new reality and a changing social environment. On any occasion, provided one exerts oneself, it is possible to increase one's adaptability. Complaining and sighing will only make the discontentment worse; society will carry on changing, but the gap between them will only get wider and wider.

Four, positive engagement: One should actively engage with socio-economic development and help society move toward its target, positively adapting oneself to social changes rather than passively accepting them. In terms of China's current stage, it is of particular practical importance to adapt to systemic changes. When a society undergoes change, so do its systems and people live within systems that are always changing. Systems are the products of social accumulation that build the social environment for life and work. Changes to systems are occasionally rapid, but more usually gradual. In fact, all are involved in gradual systemic change without necessarily being aware of it. Such gradual change is imperceptible in the short term, but it becomes apparent after a few years or decades. Hardly have people got used to the change before the next round of systemic change has quietly got underway. Therefore, only by actively participating in social and economic development can people better adapt to social and systemic change.

2.2.3 Relieving Individual's Sense of Depression or Loneliness

In a context of constant social change, if an individual cannot adapt to the changing society or the changing interpersonal relations—neither of which is reversible—his psychological equilibrium will be disturbed, possibly resulting in depression and loneliness, a state of mind engendered by disturbed balance, a reflection of feeling helpless and a strong wish to escape society. In other words, in a changing society, the reason that some people feel depressed and lonely is because, after their relatively stable life is broken, they feel unable to adapt to the changes, increasingly alienated, "forgotten" and "discarded." Even though society has never actually abandoned anyone, some people at odds with reality believe themselves abandoned.

In a changing society, such feelings are not confined to a handful of individuals. When such people get together, pouring out their discontent with real life, a "group sense of depression" or "group sense of loneliness" will emerge. It is one source of the discontented mood that appears in the process of social change, and possibly one manifestation of the clash as the old culture is replaced by a new one. As a society changes, its culture changes from old to new. An old one incapable of adapting to a changed society will inevitably be replaced by the new one.³

Individuals or groups harboring a sense of depression and loneliness will be, whether consciously or not, inclined to champion old culture, distancing themselves from new culture or rejecting it. When reflected in social and economic life, this is bound to reduce efficiency in an enterprise, an institution or the whole society. Generally, such loss is not directly linked with the technology or educational level of its employees, but comes from lack of adaptability and coordination.

An individual's sense of depression and loneliness might also be

connected with aging and life experiences. Social adaptability might decrease as a person's age increases, giving rise to the phenomenon of being able to keep pace with social change as a young person, but not when old. When young, there is no sense of depression or loneliness, but when old it is present. Of course, this problem is not an insoluble one. It should be noted that in a dynamic society, even though there are clashes between new and old cultures everywhere, some people can fit themselves only to old culture and never the new; others like neither, there are still many narrow cracks between the old and the new cultures. People who like neither culture can find a shelter in these cracks or can just hang around by the entrance to the new culture. In real life such situations are not at all uncommon.

In fact, when a society is in flux, the new culture waxing and the old culture waning, the cracks between the two are also changing and to run away from reality is no solution. People must always make choices. In the main it is the individual who can relieve his own sense of depression and isolation. The only way to solve the problem is: Whoever you are, however old and whatever your experiences, reality must be accepted and understood, outmoded concepts and ways of thinking must change to reflect the demands of real life, and you must actively engage in socio-economic development so as to help society to proceed along the right track.

In its long process of socio-economic development, a changing society has a transitional character: It never can be and never should be a terminal point. It is always a "work in progress," and will hence have shortcomings. Compared with static society, a dynamic society will certainly have other defects apart from giving people a sense of instability. The fact that an individual does adapt to a changing society does not imply he considers that society to be defect-free, still less that he interprets its defects as good points: all it indicates is an acceptance of reality and an ability to adapt to reality's demands by adjusting his behavior and way of thinking. If those defects are the inevitable results of the change process and not readily overcome, or

if they are the price that must be paid for the change, then a person understanding the reality should see the situation clearly, try hard to adjust and participate actively in socio-economic development in a bid to rectify those defects and mitigate their negative impact.

In general, harmony and adaptation produce efficacy whereas lack of them brings about loss of efficiency. The three are constant companions. In the process of social change, only with constant harmonization and adaptation can efficiency constantly improve.

贰 协调与适应

一、协调与适应的意义

第一节已经指出，从效率源泉的角度来看，社会的协调、人际关系的协调、人对社会的适应，以及人们彼此之间的适应，对效率的增长有着十分重要的意义。在这一节，让我们循着这一思路作进一步的探索。

要知道，社会虽然是由无数个个人组成的，但人们一旦组成社会之后，社会就同人一样，也有一种自我调节以保持平衡或恢复平衡的功能，这是社会得以持续存在并得到发展的机制。在《社会主义政治经济学》一书中，我曾对作为一个整体的社会作了如下的论述：

人同社会一样，都具有一种自我调理的功能。一旦这种自我调理的功能消失了或减弱了，人就会生病，社会就会失调。人体的自我调理的功能，以及社会的自我调理的功能，如果细分一下，可以分为亢进性的和抑制性的功能。亢进性的功能指外向的、活动的、积极的作用的发挥，抑制性的功能指内向的、保守的、消极的作用的发挥。一般情况下，两种功能同时发挥作用，使人体或社会自我调整，保持和恢复平衡。这就是说，在正常状态下，人体或社会既不会过于亢进，也不会过于抑制，而且即使有时亢进多于抑制或抑制多于亢进，在经历一个过程后也会自然恢复过来，又回到平衡之中。¹

现在需要讨论的是：假定不存在政府调节，社会还有没有这种自我调理以恢复平衡的功能。显然是有这种功能的，否则在政府尚未形成、政府调节尚未出现时，人类社会怎会持续存在了那么多年？假定既不存

在政府调节，又不存在市场调节，社会还有没有这种自我调理以恢复平衡的功能。显然也是有这种功能的，否则，正如本书第一章中已经谈到的，在市场调节与政府调节都还没有出现时，人类社会怎会持续存在了那么多年？在市场调节力量与政府调节力量都达不到的偏远地区，或者，在市场调节与政府调节都已不起作用的社会大动乱的年代里，人类社会不是照样存在，照样运转吗？那么，社会的这种自我调理以恢复平衡的功能究竟来自何处？它是怎样起作用的？

社会由无数的个人所组成，人们在一起生活，一起工作，人与人之间存在着各种各样的联系，秩序对于每一个社会成员来说，都是关系到自己能否安定地生活和正常地工作的头等大事。人人要求社会有秩序，不管什么样的秩序，有秩序总比无秩序好得多。无秩序必然造成混乱，混乱不仅使社会成员无法进行工作，生活上遭到损害，甚至连继续生存都有问题。因此，社会成员对秩序的要求是迫切的，为的是避免混乱，避免受到损害。市场调节提供的是一种秩序，政府调节提供的也是一种秩序。市场调节一经出现，为什么在凡是有市场活动的地方都有市场调节下的秩序，是因为人们希望有一种秩序。政府一经形成，为什么凡是在有政府的地方，或者说，凡是在政府的力量能够达到的地方，政府总是要维持一种秩序？原因在于，一方面，人们希望有秩序，从而能够接受某种秩序；另一方面，政府也希望有秩序，并要求人们遵守这种秩序。

由于人们普遍要求秩序，谁也不愿意看到无秩序状态的出现，于是社会便具有一种自我调理以恢复平衡的功能。自我调理，意味着趋向秩序，适应秩序；恢复平衡可以看成是恢复秩序或重新建立秩序的另一种表述。社会经济的过热或过冷，都表明社会经济正常运行的节奏被破坏、社会经济的秩序被打乱了。在这种情况下，通过人们对恢复平衡，也就是恢复秩序或重新建立秩序的要求，社会经济自身就会不断地进行调整。因此，即使没有市场调节与政府调节，社会经济在经历一段时间的亢进或抑制之后，也会逐渐地恢复过来，逐渐趋向于平衡，只不过所需要的时间可能较长而已。这就告诉我们，对绝大多数社会成员来说，对正常的生活和工作秩序的要求使社会经济有一种内在的趋向平衡的机制。如果再有市场调节，那么这种使社会经济趋向平衡的过程就会加快；如果再有政府调节，而且政府调节是适当的，那么社会经济也可以较快地趋向平衡。

正常的秩序同社会的协调与适应有关。由于人不是单纯的“经济人”，而是“社会的人”，所以社会的协调不仅是从经济上着手就能实现的问题。至于人同社会的适应、人们彼此之间的适应，那就更不可能归结为经济方面的适应，协调与适应的意义远远超出经济问题以外。可以用企业中实际存在的情况作为例证。

在一个企业中，为了提高效率，在管理中经常使用经济手段，例如发放奖金或扣发奖金，增加工资或降低工资，等等。依靠物质奖励或处罚的做法固然有用，但不难发现，诸如此类的做法具有较大的局限性。当职工的想法发生了变化，或者当职工的收入达到一定的水平而奖金或罚款相形之下只占较小的份额，或者市场上可供职工选择的商品很少，职工即使有钱也买不到自己所想要的商品时，职工会感到有没有奖金是无所谓的，罚不罚款也是无足轻重的，于是奖金或罚款就不再像以往那样起作用了。在企业管理领域内，以“适应性原则”来代替“激励原则”，便成为不可避免的趋势。“适应性原则”强调的是主体与客体的适应，即如何使客体感到自己与主体是不可分的，也使主体感到自己与客体是不可分的。这种适应关系有时被称做“视为一体”，也就是指人际关系中的充分的、完整意义上的协调一致。以企业内部的人际关系或领导与被领导之间的关系来说，“适应性原则”的实现意味着：职工感到自己同企业是不可分的，“企业就是我的家，我就是企业的一分子”；企业领导人则感到自己同职工是合为一体的，职工的事情就是自己的事情。于是在企业工作中，企业与职工共命运，两者的关系协调一致。在一定的技术条件下，这种主体与客体的适应必然产生高效率。

适应不限于企业内部的人际关系。社会各种力量之间的关系，也适用于“适应性原则”。“适应性原则”在社会范围内，同样能产生高效率。可以把政府与民众之间的关系作如下的分析：维持社会秩序是政府的任务之一，要维持社会秩序，政府有必要依靠强制手段。强制手段是不可少的，但强制手段存在着局限性。因此，政府在维持社会秩序的过程中，除了要依靠强制手段以外，还应当尽可能有效地建立适应关系，让人们感到政府是自己的政府，政府的目标就是自己的目标，自己同政府是不可分的。这就是社会政治生活领域内主体与客体的“视为一体”。而从政府的角度来看，如果在社会政治生活中真正建立了适应关系，不仅管理成本，即维持社会秩序的成本会大大减少，而且管理的效果也会不断提高。在社会领域内，协调与适应同样是产生效率的源泉。

很难设想，当一个主体感到自己同客体总是格格不入时效率会不下降？也很难设想，当任何一个客体处处感到自己同主体“想不到一起”、“做不到一起”、“力量使不到一起”时效率会有所提高？企业如此，社会也如此。

二、社会变动中的协调与适应

在一个静态的社会中，社会的协调与适应一般是比较容易实现的。而在一个动态的社会中，在一个不断变动着的社会环境中，社会的协调与适应就会困难得多。

长期内人类社会基本上是一个静态的社会。静态的社会也就是一种定型的社会。在这样的社会中，一个人一生的活动范围往往是很有限的，因为社会流动性很小。一个人，从小到大，几乎都在相同的环境中活动，同相同的一些人来往，人与人的交往范围是很窄的。不仅如此，从一个人小时候的处境，大体上就可以预测到他今后会从事什么职业，怎样生活，同什么样的人结婚，他的孩子会怎么样，等等。这种预测基本上是准确的，这就是静态社会的特征。既然如此，一个人同他所交往的人们的适应，无疑简单得多。

现代社会已经不可能再是这样的社会。现代社会是动态的社会，也可以称做变动中的、非定型的社会。在这样的社会中，社会流动性不仅相当大，而且会越来越大，社会的变动也会越来越快。这种变动是由科学技术的发展所引起的。随着社会的变动，人际关系也在不断变动之中。在静态社会中，一个人在青少年时代所学到的知识、手艺，一辈子都有用，他完全可以靠那时掌握的技能生活下去，而在动态社会中，一个人在青少年时代所学到的一切很快就不适用了，他必须继续学习，而且随着知识更新速度的加快，继续学习一直不能放松。在动态社会，一个人，从小到大，是在各种不同的环境中活动的，同一批又一批不同的人交往。一个人小时候怎样，不能由此预料他将来会怎样。机遇会不断涌现，但机遇如果未被抓住，又会迅速丧失。总之，一切都是变动的，变动的速度还在加快。人为了生存，为了发展，就必须学会如何去适应环境，适应社会的变动，适应人际关系的变动。适应，已经成为生活的必需。

在静态的社会中，尽管每个人的生活变化不大，尽管由于社会经济

的缓慢发展甚至停滞而使人们的收入水平很低，生活质量也很差，但却给绝大多数人一种稳定的感觉。稳定似乎等同于幸福，这样绝大多数人身在静态社会之中，也就知足了。静态社会给人们带来的这种稳定感，甚至还告诉人们：生活就是这样，不需改变它，而且谁也改变不了它。一个人往往不需要思索就知道如何同周围的环境相适应。在静态的社会中存在着一些团体，包括由血缘关系组成的，由地域关系组成的，或由经济或政治关系组成的，个人总会属于某些团体，这时，遵守团体的规范就形成正常的秩序，个人行为服从团体的规范，个人利益从属于团体的利益，这些都出于人们想有一种正常秩序的愿望，也同人们不愿变动或认为不必变动的稳定感有关。人们越是有稳定感，越是感到知足，社会变动的可能也就越小。

动态社会的情况与此截然不同。尽管由于社会经济的发展加快和技术进步的加快而给人们带来不少机遇，带来收入水平的上升，带来物质文化生活条件的改善，但却给人们一种不稳定的感觉。不稳定似乎就是烦恼产生的源泉，生活在变动的社会环境中仿佛就是生活在无休止的烦恼之中。不仅如此，团体给团体成员以稳定的感觉也破灭了。团体本身同样在变动。比如说，人们多次迁移就意味着不停地由一个团体（社区）转移到另一个团体（社区）；人们多次改变职业也意味着不停地由一个团体（行业或职业组织）转移到另一个团体（行业或职业组织）；甚或婚姻的变故、成年子女同父母的分居和自立门户，同样意味着由一个最小的团体（家庭）改换到另一个最小的团体（家庭）。甚至有的团体同另一个团体处于不和谐或对立的状态，这就加重了人们的不稳定感。

社会从静态转向动态是不可避免的。然而，在社会变动过程中有不稳定的感觉的人，不仅适应不了现实社会，而且很可能看不惯社会的变动，对动态的社会有反感，而总想再返回到静态的社会去，自认为只有过去那种静态的社会才是可以适应和可以接受的。在他们看来，现状总是不能令人满意，回忆似乎更好些，哪怕过去的日子并不如现在，但从回忆中仍可以得到某种安慰，找到一种精神上的寄托，这样，既谈不到有什么激情，也不会有什么积极性，效率当然不可能提高，因为有这样情绪的人是不会有什么工作动力的。返回静态社会的愿望在有些人身上会表现得比较强烈，于是就会形成效率增长的障碍、社会前进的障碍。本来这只是一部分人对变动中的社会不适应的个人问题，但却有可能逐

渐变成社会问题、社会心理问题。

为什么说这可能成为社会问题、社会心理问题呢？要知道，社会一旦走出了静态社会的阶段，就再也不会回到那个阶段去。在一些人身上，心理的不协调表现得很明显，但又无可奈何，这样，在社会前进的大潮中很可能形成一股逆流。社会学家梅欧（Elton Mayo）对这个问题曾作过分析，他指出，社会组织有两种不同的原则，一是已经定型的社会，一是适应变动的社会。定型社会的例子，在最低的层次上，例如澳大利亚土著居民的成套仪式；在较高的层次上，例如维多利亚时代的英国社会、美国新英格兰的早期工业社会，或19世纪80年代澳大利亚的城市等。社会经济发展起来了，定型社会不再存在了，人们想回到过去是不可能的，于是就会产生不满，即对于现实社会的不满。梅欧认为，现代大部分自由主义运动或者革命运动，正是起源于从目前的不安定局面返回到定型社会的一种强烈的愿望，而这种愿望实际上是反动的，同时代的精神是相反的。²梅欧的分析有事实根据，对变动中的社会的适应已经成为现代社会经济生活中的一个重要问题。

对变动中社会的适应大体上包括四个方面：

第一，承认现实。要承认社会已经不可能返回到过去了，现实是难以更改的。只要有重大的科学发现和新技术的应用，便会有社会组织或社会生活方面的相应变化。这就是现实。如果不承认现实，总是留恋静态社会，那么任何适应也就无从谈起。所以承认现实是适应的出发点。

第二，了解现实。了解现实以承认现实为前提。现实的社会环境与过去的社会环境相比，有许多不同之处。但不能只看表面现象，而需要深入进行比较，才能发现这些不同从何而来，其意义何在。一个明显的例子是：当一个人生活在农业社会中时，他同外部世界几乎是隔绝的，他同外部世界的联系局限于十分狭窄的范围内，外部世界的实际情况并不被他所了解，因此，他认为社会是稳定的，是可以适应的。从农业社会转变到工业社会后，一切都改变了，一个在农业社会中长期生活的人会感到变化太大，也太快，对外部世界难以把握，总是感到自己不但不能适应外部世界，甚至被外部世界所遗弃，不适应主要由此而来。而一旦进入信息社会之后，在工业社会中长期生活的人，同样会感到变化太大太快，落伍于时代的感觉、被世界所遗弃的感觉会更加突出，这样就产生了不适应。由此可见，一个人要取得同社会环境的适应，要实现同外部世界的协调，就应当深入了解现实社会的特征，了解这种不适应的原

因何在。

第三，在承认现实和了解现实之后，就应当按照现实社会的要求来改变自己已经不适应的观念和思考问题的方法，而不能认为自己是注定不能同变动中的社会相适应的，不能信心丧失。例如，从计划经济体制向市场经济体制的转变就是一场深刻的社会变革，相应地需要有观念的更新。在计划经济体制下生活和工作多年的人，已经习惯了“铁饭碗”、“大锅饭”，而在市场经济体制下，过去习惯的东西消失了，过去不习惯的东西涌来了，下岗与再就业就是一个新问题。如何适应于现实社会，如何同变动中的社会环境保持协调，这并不是不能解决的。在任何场合，只要通过努力，总会增加自己的适应能力。如果对变动中的社会与周围的人际关系只是抱怨，只是嗟叹，不仅问题无法解决，而且不满情绪还会增长，结果，社会在继续变动，自己同现实社会的距离却越来越远了。

第四，用自己的行动来参与现实条件下的社会经济发展，使现实社会继续朝着符合社会经济发展目标的方向变化，在社会变动过程中成为一个主动的适应者，而不仅仅是一个被动的适应者。对现阶段的中国人来说，适应体制的变化尤其具有现实意义。社会在变化，体制也在变化，人们总是生活在逐渐变化中的体制之中。体制是社会积累的产物，它构成人们生活和社会工作的社会环境。体制的变化，有些是急剧的，但更多的是渐进的，每一个人实际上都在参与体制的逐渐的、缓慢的变化，但可能自己并未意识到。体制的渐进式变化，不是每天、每月，甚至每年都能察觉的，但隔了一段时间，几年、十几年、几十年，再回头看一看，体制的变化就明显了。人们也许刚刚适应目前已经发生的体制的变化，而下一步的体制的渐进式变化却又悄悄地起步了。所以人们只有用自己的行动来参与社会经济发展，才能更好地适应社会的变化、体制的变化。

三、个人压抑感或孤独感的化解

从另一个角度来考察，在社会不断变动的过程中，一个人如果不能同变动中的社会相适应，不能同变动中的人际关系相适应，而无论社会还是人际关系又都不可能返回到以往的状态，那么个人心理上的不协调就有可能形成一种压抑感或孤独感。这是一种相对稳定的平衡状态崩溃

时所产生的个人压抑感或孤独感。这种压抑感或孤独感的存在，表明个人在不适应社会时产生了一种从心理上远离社会，甚至躲避社会的无可奈何的思想情绪。换句话说，在变动的社会中，某些人之所以会有压抑感或孤独感，主要原因在于自己感到相对稳定的生活遭到破坏之后而又不能同变动了的社会相适应，从而感到自己越来越不合群，越来越感到自己成为“被遗忘的人”。尽管社会并未抛弃任何人，但某些不能适应于现实的人总认为自己被社会所抛弃了。

变动中的社会不可能只有个别人存在着压抑感或孤独感。当一些有压抑感或孤独感的人相聚在一起时，当倾吐对现实生活的不满成为他们共同的话题时，就会出现一种“集团性的被压抑感”或“集团性的孤独”。这是社会变动过程中不满情绪产生的根源之一，也可能是新旧文化交替过程中新旧文化冲突的表现之一。社会发生变动时，新旧文化也一直处于不断交替之中，旧文化无法适应变动着的社会，新文化不可避免地逐渐取而代之。³有压抑感、孤独感的个人或集团，自觉或不自觉地倾向于维护旧文化，疏远或拒绝新文化。这反映在社会经济生活中必然导致效率的损失，包括某个企事业单位的效率损失和整个社会的效率损失。这种效率损失一般说来同技术水平或工作者的文化程度没有直接的联系。效率损失主要来自不适应、不协调。

个人的压抑感或孤独感还可能来自个人年龄的增大和经历的变化。社会的变动是不间断的，当人的年龄增大后，同社会的适应程度却有可能随着年龄的渐增而逐渐下降，于是将出现这样一种情况，即年轻时能跟上社会变动的节奏而同社会的变动相适应，年纪大时却跟不上社会变动的节奏了。年轻时不感到压抑或孤独，年纪大时却渐渐产生了压抑感或孤独感。当然，这绝不是不可改变的状况。应当明确，在动态社会中，尽管处处都有新旧两种文化的冲撞，总会有人只适应旧文化而不适应新文化，或者有人既不喜欢旧文化也不喜欢新文化，然而新旧文化的夹缝也是处处存在的。既不喜欢旧文化也不喜欢新文化的人，有可能在新旧文化的夹缝中暂且栖身，或在新文化的入门口附近徘徊。现实生活中这种情形并不是罕见的。

其实，既然社会在不断地变动，旧文化在渐渐退却，新文化在悄悄成长，那么变动的社会中的新旧文化的夹缝也是变动的，逃避现实总不是办法。人们总要作出选择。已经形成的压抑感或孤独感，主要应由个人自己设法去化解，而解决这个问题的途径只能是：不管什么人，多大

年纪，有过什么样的经历，在变动的社会中都需要承认现实，了解现实，按照现实社会的要求来转变过时的观念和思想方法，以及不断用自己的行动来参与社会经济的发展，促使社会朝着符合社会经济发展的方向变化。

还需要指出，在社会经济发展的漫长过程中，变动着的社会依然带有过渡性质，它不可能、也不应该是终点站。变动着的社会仍处在继续变动之中，所以它不会是一个完美无缺的社会。与静态社会相比，动态社会除了给人们以一种不稳定的感觉而外，肯定还有某些缺陷或不足之处。一个人同变动着的社会相适应，并不等于他认为这样的社会是没有缺陷或不足之处的社会，更不是说他会把这些缺陷或不足当成优点，这只是表明他承认现实，接受现实，按现实的要求来调整自己的行为 and 思想方法，以适应现实。假定这些缺陷或不足之处在社会变动过程中很难避免，也很难立即被克服，甚至它们是作为社会变动中必须付出的代价而出现的，那么一个了解现实的人就应当清楚地认识到这些，并力求在与变动着的社会相适应的同时，在自己所参与的社会经济发展中，为纠正这些缺陷，弥补这些不足之处，以及尽量缩小它们的不利影响而出力。

总之，不协调、不适应带来效率损失，协调、适应产生效率。效率始终伴随着协调与适应。在社会变动过程中，只有不断协调，不断适应，效率才会不断地提高。

2.3 Mutual Relief and Efficiency Improvement

2.3.1 On Flood Containment and the Traditional Chinese Spirit

In Section 2.2 we proposed that harmonization and adaptability is connected with the replacement of old culture by new. To further understand culture, we begin our analysis by looking into Chinese history and the containment of flooding.

Historical materials show that ancient China frequently suffered

from catastrophic floods and rulers in all periods attached great importance to taming the waters. Some foreign sinologists concluded that it was the need for flood containment that catalyzed the birth of highly centralized autocracy in China, reasoning that such enormous flood containment projects could hardly be organized without a highly centralized autocracy. It seems that the autocracy of ancient China was born of frequent flooding and flood control projects. Flood control, centralization and autocracy seem to be three inseparable elements. This opinion has appeared in foreign publications on Chinese history. Some even regard the high degree of centralization and autocracy necessary for flood control as oriental traditions.

The establishment of a highly centralized autocracy in ancient China is too complex a topic to go into here. There is no denying that large flood-control projects were connected in some degree with autocratic governments, organizers of those projects. However, from the perspective of flood control, we see that what history has given to the Chinese people is certainly not the highly centralized and autocratic "oriental tradition." If there is a relationship between the flood containment cause and Chinese tradition, it should be described as follows: to channel rather than to obstruct; to ease off rather than let stagnate; to act together on all fronts rather than going it alone; to help each other rather than forget all moral principles at the sight of profits. This is China's spiritual wealth, the legacy of millennia of flood containment.

To channel and not obstruct is one of the most precious crystallization of experience from the flood control efforts of many generations. From feudal dynastic monarchs down to government officials of different levels, whoever had experience of water conservancy and managing flood prevention completely understood the rightness of it. Obstruction might work in the short term but would only lead to failure. To channel was the only effective path to taming the waters. It was the natural way. This experience was later widely applied in other fields of social and political life, exerting a far-

reaching and not to be under-estimated influence on China's past and present. People even use channeling and persuasion to address family conflicts and neighborhood disputes. The connotations of easing and channeling are similar, and are invariably involved when dealing with the accumulated grievances produced by conflicts and frictions in interpersonal relations. It would not be going too far to claim that the greatest influence of hydraulic history on the Chinese people lies in their valuing the concepts of channeling and easing. It was certainly no accident that "harmony is precious" became the principle for dealing with others among the Chinese people.

Through the lens of economics, human factors play an important role in efficiency improvement. Running production, just like managing flood containment, calls for the human factor to be used to its fullest possible effect. Similarly, in dealing with interpersonal relations, it's important to create channels rather than obstructions, to clear conflicts rather than deposit problems like silt. Such actions are both the source and guarantee of higher efficiency.

Thanks to the emphasis on "creating channels" and "clearing," Chinese history has enjoyed long periods of peace and prosperity. It was in such periods that the spirit of "creating channels" was mainstream and many social conflicts were solved. By contrast, periods of turmoil and chaos were perhaps, in a certain sense, caused by government's departure from this principle.

There are two characters in the Chinese expression "to channel": the first means to dredge and the second to guide. Similarly, the Chinese expression "to clear," contains "to dissolve" and "to resolve." To dissolve means to spate and dilute. To resolve means to dissect, untie, and disperse. These concepts are based on tolerance. Addressing friction and conflicts in interpersonal relations in a spirit of tolerance can gradually dissolve grievances accumulated over years, whereas an obstructive approach will pile even more grievances on top of those already built up and make it even tougher to solve problems. For this reason, the experience drawn from flood control is so precious for

Chinese.

To tame a great river needs cooperation and help from different sides, such as the upper and lower-and-medium reaches, the left bank and right bank, towns and villages, this county and that one, this village and that one, the whole forming a huge cooperative net. For the prevention and containment of floods channeling and cooperation are both essential. Whether under the rule of a highly centralized regime, or the fragmentary regimes of dukedoms, without inter-regional cooperation, flooding and consequent disasters would have been hard to eliminate or mitigate. Regional cooperation, non-governmental cooperation in particular, is an excellent part of China's national tradition. Cooperation produces and consolidates group and social cohesion, a cohesion that has enabled the Chinese people, the nation and its economy to survive numerous civil disturbances, foreign aggressions, wars and natural disasters. This is a high efficiency, an efficiency that few economists have studied or even noticed, and behind it lies the cooperative spirit of a society and enormous social cohesion.

2.3.2 Lessons from Mutual Help and Relief

Out of the history of flood containment from dynasty to dynasty rose a national tradition, one characterized by a spirit of "channeling," "easing off," "tolerance" and "cooperation." A historical and cultural tradition such as this is beyond market and government: society cohesion comes out of it and efficiency is born of it.

For thousands upon thousands of years, China has suffered disaster after disaster, of which flooding is only one: floods, earthquakes, wars and banditry have all inflicted enormous losses on the people. After flooding, riverbanks and homes needed rebuilding; after earthquakes, towns and villages needed reconstructing; and after the chaos of wars and banditry, people needed to return to their homeland and resume normal life. As refugees or in rebuilding homes,

people needed to help each other. By mutual relief and support the Chinese people have not only survived countless adversities but have kept on developing output, economy and culture. The spirit of mutual help has equipped Chinese with more resilience in combating various disasters.

This spirit originates with the general public. When a disaster strikes, people come from all directions to help the victims, donate or provide shelters for relatives, friends and strangers, embodying this spirit. Such non-governmental mutual help is a special social underpinning, because it is spontaneous in nature. If it were not spontaneous, could help to the disaster-stricken people last long? Or could the spirit of mutual help be promoted and passed on generation after generation? This spirit embodies the force of custom and morality, and the role of these factors in building this special social underpinning cannot be replaced either by market or government.

Of course, once governments took shape they naturally took on responsibility for social relief, spending more or less on helping refugees or the needy out of consideration for safeguarding social stability. But government relief for, say, refugees, was more often than not insufficient, thus popular relief and help always played a very important role in this respect, especially in disaster years. The main priority of government relief was keeping social peace, whereas popular relief, though having an element of this, stems more from sympathy and concern for the lives of others in trouble. People give, not for the sake of any return to themselves, but to fulfill a social responsibility. The greatest distinction between regulation by custom and morality and regulation by market and government lies in the fact that, under the influence of the former, people's assistance is purely voluntary and comes from the heart.

What connection is there between mutual help and efficiency? In preventing, containing and fleeing floods, in rebuilding homes, villages and towns after floods, mutual help promoted higher efficiency. Had there been no popular mutual help, the loss of lives

and property sustained by the disaster-stricken people would have been much worse and subsequent recovery and rebuilding nowhere near as effective. With the existence of mutual help, people's daily lives were to some degree guaranteed and their confidence as regards resisting disasters, self-help and reconstruction increased. With greater confidence comes greater efficiency. History has proved this true on countless occasions. Therefore, the legacy of flood containment, quite apart from our valuing "channeling" and "easing off" and our cherishing of the cooperative and tolerant spirit, is the tradition of mutual help. Efficiency is something that springs from interpersonal cooperation and increases constantly as relations become more harmonious, thanks to channeling, easing off, cooperation and mutual help.

2.3.3 Further Analysis of Mutual Help Behavior in History

Let us return to the newly emerged medieval cities of Western Europe for an example of mutual help behavior, so as to understand further the correlation between mutual help and greater efficiency: this will give a different perspective on the source of increased efficiency. In medieval Western Europe, newly emerged cities suffered from frequent natural disasters and wars and citizens had to rely for food and other daily necessities on outside sources. But the supply was not guaranteed, and once cut, the social order and normal economic activities could not be sustained; even daily life could not carry on. When simply surviving was a big problem, how can one talk of efficiency at all, let alone increased efficiency!

Under such special conditions, some of these cities took certain measures and set rules to regulate the urban economy and life, measures that were greatly supported by the citizens. The setting of such measures and the fact that they were respected reflect the spirit

of mutual help. For example, some rules forbade coemptive buying of foodstuffs, some prohibited bakers buying wheat surplus to their actual needs, some forbade urban workshops or citizens making forward purchases of grain in the countryside. Some cities set a limit on food purchases per household per period. All these rules were to prevent any one family dying from hunger for lack of access to food.⁴

Some cities forbade "privileged purchase." This meant that all commodities brought in from outside had first to be sold in designated markets and in retail within a certain period, with equal access for all residents. For example, in Würzburg, Germany, when a ship with coal arrived, for the first eight days the coal could only be sold retail and, moreover, each household could buy no more than 50 baskets. After eight days, wholesale selling of the remaining coal was allowed.⁵ In some British cities such as Liverpool, all necessities arriving at the port would first be bought by the city authority, which then allocated them to merchants, craftsmen and residents so that everyone could have one portion. In some French cities such as Amiens, salt, as a necessity of daily life, was distributed by the city authority. And in Venice, all trade in food was the monopoly of the city authority to ensure the needs of all Venetians would be met. Some Western European cities in the Middle Ages practiced a system along the following lines: When a merchant ship arrived carrying goods from elsewhere, the merchants aboard had to attest on oath to the cost and transportation expenses of their cargo. This oral declaration formed the basis on which the city government's price commissioner set the selling price, and only then could the goods be offloaded and sold. Granted, all of the above were government actions to ensure normal supplies in their city, but they were undertaken in the spirit of mutual help, a spirit prevalent in cities in those days and one that contributed to citizens' receptiveness to regulation by government and economic measures.⁶

These mutual help measures were not limited to the supply of daily necessities. Some cities even set up "public ovens" for poor families to bake bread. Some cities reserved public woods and

pastures for urban residents to cut twigs as firewood or to feed their livestock freely. Some cities set up publicly operated pawnshops, charging low or no interest so that the poor were not victimized by usurious rates.⁷ In medieval Western Europe, city streets were narrow and flanked either side by tightly-packed timber houses vulnerable to fire. To prevent fire disasters, many cities set up community service fire brigades and took fire prevention as an important part of urban life. In order to maintain the peace, some cities set up night patrol systems requiring all adult males to do night patrol service.

The above examples show how, in medieval Western European cities influenced by the mutual help spirit, both city authorities and residents were fully aware of the importance of civic service and facilities. Economically speaking, this had to do with the low social productivity and the adversity prevailing in these newly emerged cities. Given low productivity, inadequate supply of necessities, isolation from and even opposition to the country areas, how could these cities have survived without taking such measures? It was the mutual help spirit that helped those cities stand the test of hardship and made them centers where more and more merchants and serfs gathered. If we bring this factor into our analysis of efficiency it becomes very clear that the ability of cities to survive and grow was itself a manifestation of efficiency, a kind of efficiency inseparable from the mutual help spirit. Mutual help not only protected the weak within the cities, but also safeguarded the common shelters of the weak and the strong alike, namely the medieval cities of Western Europe as a whole. In this sense, mutual help was a protection for every city dweller. No matter his origin, occupation or wealth, as long as he came to the city he would receive its protection, including the protection by its mutual help spirit.

2.3.4. The Never-fading Spirit of Mutual Help

From these examples it is evident that the spirit of mutual help

truly did play an important role in ensuring and promoting efficiency. But it brings us to another question: Since measures by the city authorities later become obstacles to technological progress and inimical to increased efficiency, does this mean that mutual help also had something of a negative and oppositional effect?

To approach this question we need to begin with the medieval cities of Western Europe. When the cities were still in their infancy, in the interests of maintaining stability and creating good prospects for their trade and to ensure a peaceful life for its practitioners, urban craftsmen took a series of measures to restrict market competition. For example, in many cities, the guilds set rules for their members: Those running shops were not allowed to engage in transportation business; workshops were not allowed to post advertisements to attract customers, to pull customers into their shops or to sell goods at discounted prices. In some cities, the guilds did not allow its members to provide door-to-door services. For example, in early 14th-century Germany, tailors in Helm were not permitted to solicit customers from door to door, and in mid-14th-century Frankfurt shoe-makers were also prohibited from selling their making and repairing services in this fashion. Door-to-door selling was regarded as a practice that would sharpen competition, deepen friction and widen income disparities among people of the same trade.

According to guild rules, working hours of the manual workshops were restricted. Normally, the production and running hours were from sunrise to sunset; workplaces could only be illuminated by natural light, no work should be done by lamplight and night shifts were strictly forbidden. The guilds had rules on payment too: Apprentices had board and keep supplied but no wages. The wage level and working day duration for journeymen were both fixed and no extra payment or bonus was allowed. They were paid once a day or a week. Piece-rate payment was forbidden in many cities lest it should intensify competition, but later, when epidemics left many cities short of workers, this was relaxed somewhat and piece-rate payment was

adopted in some fields. Even so, the payment level was still subject to a unified standard. The guilds also forbade its members to affiliate or merge with each other in a bid to prevent the formation of large-scale workshops.

The role of such restrictive measures on competition shall be analyzed from a historical view. In the early period of the medieval cities, such restrictions played a positive role in promoting urban stability and development, the peaceful life of the inhabitants and increased efficiency. However, with economic development and enlargement of market scale, those measures became obstacles to productivity development because they bound the initiative and creativity of the producers and hindered the progress of technology and efficiency increase. As a result, they were gradually abandoned. The question we now need to discuss is this: how do we see the mutual help spirit? Since the competition restricting measures taken in the light of this spirit played a positive role in the early stage of medieval cities in Western Europe, this spirit should be regarded as positive. When those measures became obstacles in the later Middle Ages, does it mean this spirit had become outmoded? The answer is no. The fact that the measures had become outmoded does not at all mean that the mutual help spirit was obsolete.

As discussed previously, the mutual help spirit is spontaneous, emerging from a sense of sympathy and social responsibility: people are motivated to help those in difficulties, not by what return they might get. Under its benign influence, in different historical periods and situations, governments or organizations took measures aimed at ensuring that none should starve, particularly the most vulnerable poor. We should evaluate the objectives of the measures taken by medieval Western European cities.

Evaluation of measures taken by government or organizations, including the city authorities and guilds of medieval Western Europe, is impossible without taking into account the historical context. Once the economy had developed to a certain stage in the above-cited

medieval cities the measures became obstacles to productivity development and efficiency increase and were inevitably abandoned. But this means only that the measures had become obsolete, not the spirit of mutual help as an embodiment of moral force. In a new historical period with a new social and productivity level, this spirit can and should be manifested in forms appropriate to the time. To hold that the mutual help spirit can only be manifested under such old measures and that they therefore should remain unchanged is to misunderstand and distort that spirit. Changes in historical conditions may necessitate specific changes to policies and measures, whereas the spirit of mutual help will live forever.

In his famous work *Mutual Aid*, P. Kropotkin has a brilliant statement to this effect: The absorption of all social functions by the State necessarily favoured the development of an unbridled, narrow-minded individualism. In proportion as the obligations towards the State grew in numbers the citizens were evidently relieved from their obligations towards each other. In the guild—and in medieval times every man belonged to some guild or fraternity; two "brothers" were bound to watch in turns a brother who had fallen ill; it would be sufficient now to give one's neighbour the address of the next paupers' hospital. In barbarian society, to assist at a fight between two men, arisen from a quarrel, and not to prevent it from taking a fatal issue, meant to be oneself treated as a murderer; but under the theory of the all-protecting State the bystander need not intrude: it is the policeman's business to interfere, or not. And while in a savage land, among the Hottentots, it would be scandalous to eat without having loudly called out thrice whether there is not somebody wanting to share the food, all that a respectable citizen has to do now is to pay the poor tax and to let the starving starve.⁸

Arresting though Kropotkin's statement is, it fallibly smacks more of emotional reaction than rational analysis. State behavior is not the same as popular mutual help and the two should not be mixed up. The mutual help spirit should be championed and will carry on, though in

certain circumstances it is stronger and in others weaker. State policies and measures, on the other hand, should be adjusted in accordance with historical conditions rather than copied blindly irrespective of the age. Kropotkin used three examples here: that of the medieval age, of barbarians, and of the unenlightened.

As regards the example of the medieval age, the group (guild) behavior, i.e. guild members taking turn to care for the sick, was not a government behavior, but a behavior of mutual help and a duty its members willingly took on in accordance with their spirit of mutual help. The guilds disbanded, but such spirit should be preserved and continued; as to how people should take care of their sick neighbors or colleagues, that is another question and it is not essential to follow the ways of the old guilds. The real problem, and one that must concern us, is that with the disintegration of guilds and the change of times, the mutual aid spirit has faded.

In Kropotkin's example of the barbarians blurred the boundary between law and custom, or between law and morality. In a pre-legal age everything had to be dealt with in the light of custom or moral principles. Therefore an onlooker failing to intervene to stop a fight would be punished according to these principles. This means that the barbarians respected mutual help as a moral principle. However, with the coming of government and laws, things changed. Murders had to be handled by policemen, not by following tribal custom as the barbarians did; otherwise, social order would be lost. No longer could a non-intervening onlooker be convicted as a murderer for not stopping a fight, but this did not imply the acceptability of a third party to look on without helping. From the perspective of social order, that third party should not idly stand by with folded hands: there is a social responsibility to try to prevent it.

As to Kropotkin's example of the unenlightened, sharing food was normal at that stage, as well as reflecting custom and morality. But were modern people to emulate the Hottentots' behavior by yelling three times before eating it would be unworkable or quite likely to

bring disorder to distribution and consumption in society. But surely modern people have their own equivalent of the Hottentots' sharing. They have their own way of caring for the needy without having to adopt the customs of primitive society: The spirit of mutual help should be preserved and promoted, but its forms should change in line with the historical situation.

叁 互助共济与效率增长

一、从治水与中国传统精神说起

第二节中曾提到协调与适应同新旧文化的交替有关。为了对文化问题有较深刻的理解，让我们先对中国历史上的治水问题作一些分析。

史料表明，中国古代屡遭严重的水灾，历朝历代的政府都把治水当做一件大事。由于中国古代就着重治水，于是国外有的研究中国历史的人便由此断言，出于治理洪水的需要，在中国这块土地上很自然地形成了高度集权的专制制度。他们的逻辑是这样的：没有一个高度集权的专制政府，怎能组织如此宏大的治水工程？似乎中国古代的专制制度渊源于经常性的洪水泛滥和庞大的治水工程。于是治水、集权、专制制度三者就不可分割地被拴在一起了。这种观点曾经在国外出版的一些有关中国历史的书籍中被宣传过，以至于有人把治理洪水所需要的高度集权与专制制度称做东方的传统。

为什么在中国古代会形成高度集权的专制制度，这是一个十分复杂的问题，不可能在这里展开讨论。庞大的治水工程同专制政府作为治水的组织者之间有一定的关系，看来也不能完全予以否认。但就从洪水泛滥与治水事业来考察，历史所给予我们民族的影响，绝不是用以高度集权与专制制度为特色的所谓东方传统所能概括的。如果说中国的民族传统同治水事业有关的话，那么所得出的结论应当是这样的：是疏导而不是堵截，是化解而不是瘀结，是多方协调而不是独断独行，是互助共济而不是见利忘义，这就是几千年治水经验所留给后人的精神财富。

重在疏导而不在堵截，这是中国人历代治水宝贵经验的汇集。从封建王朝的最高统治者到各级政府官员，只要办过水利，处理过水灾水

患，全都明白这个道理。堵截，至多成功于一时，但最终没有不失败的。疏导，才是有效的治水途径。疏导就是顺应自然。重在疏导，这个由治水得到的经验后来被广泛用于社会政治生活的其他方面，从而在中国历史上和现实中产生了深远的、不可低估的影响。即使在民间，人们也往往用疏导二字来处理家族矛盾、邻里纠纷。化解的含义同疏导是相似的。人际关系中经常会发生一些摩擦或冲突，甚至逐渐留下了积怨。怎样对待它们？离不开疏导，离不开化解。如果说历年治水对中国民族传统的重大影响之一在于对疏导的重视和对化解的重视，可能并不过分。和为贵之所以成为中国民间待人处世的原则，不是偶然的。

从经济学的角度来看，人的因素在效率增长中起着重要作用。生产经营和管理同治水一样，都要尽可能地发挥人的因素的作用。而在处理人际关系时，同治理水灾水患一样，重在疏导而不在堵截，重在矛盾的化解而不在问题的淤积，这是效率增长的源泉，也是效率增长的保证。

正因为重在疏导，重在化解，所以在中国历史上的某些年份出现了盛世。盛世，是疏导精神占据主流的年代，是社会上不少矛盾得以化解的年代。至于中国历史上某些年份之所以发生大的动荡、混乱，从某种意义上说，可能恰恰是由于政府背离了疏导原则和以化解为主的处理矛盾的方式。

疏导，既有疏，又有导。疏是疏通、疏散之意，导是指引、分流之意。化解，既有化，又有解。化是指化开、稀释，解是指剖析、松绑、消散。疏导和化解包含着宽容。矛盾宜疏不宜堵，宜解不宜结。以宽容的精神来处理人际关系中的摩擦、冲撞，即使是多年累积而成的疙瘩，也会逐渐消散。如果用堵截的方法来处理社会上的矛盾和纠葛，更有可能使矛盾越积越多，使日后的处理更加困难。治水给中国人的宝贵经验正在于此。

治理一条大江大河，需要多方协调，需要互助共济。上游与中下游，左岸与右岸，城市与乡村，这一州县与另一州县，这一村庄与另一村庄，无不处于同一个大协作网之内。对洪水的防治，对水灾水患的治理，既要靠疏导，也要靠协作。无论是在高度集权的政治结构之下还是在诸侯割据的政治格局之下，没有各个地区的协作，洪水及其造成的灾害依然是难以消除或减轻的。与治水有关的地区协作，尤其是民间的协作，历史久远，它们同样形成了中国的民族传统中的优秀部分。协作意味着齐心，团体的凝聚力、社会的凝聚力是在协作的基础上产生并巩固

的。正由于有这种凝聚力，使得中国在历史上尽管曾遭到多少次内忧外患、战乱和灾难，但社会没有解体，民族没有衰亡，经济照常运转，人民照常生息、繁衍。什么是效率？这就是最大的效率，是经济学家一般不考察或不注意的效率。效率的背后是社会的协作精神，是社会的巨大凝聚力。

二、互助共济的启示

从中国历朝历代的治水可以清楚地了解到，在中国这块辽阔的土地上，存在着以疏导、化解、宽容、协作精神为特征的民族传统，这是一种超越市场与超越政府的历史文化传统。社会的凝聚力由此而来，效率也由此而生。

几千年来，中国这块土地是多灾多难的。水灾，只是若干种灾难中的一种。洪水、地震、兵灾、匪乱，都给人民造成巨大损失。洪水过后要重修堤岸，重建家园。地震过后要在废墟之上新盖民居，新建村镇。兵灾匪乱之后，人们重返故土，恢复平常的生活。在避难中，离不开人们的互助共济；在重建家园时，同样离不开人们的互助共济。正是依赖这种互助共济，中国人在历尽磨难之后，不仅生存下来了，而且继续发展生产、发展经济和文化。互助共济，使中国人增添了同各种灾难抗争的毅力。

互助共济是来自民间的。一方有难，八方支援。捐资解囊，是互助共济；投亲靠友，也体现了互助共济。来自民间的这种互助共济，是一种特殊的社会保障，因为它非组织性质的、自发的，而这种非组织性质和自发性质的互助共济，依旧带有一种浓厚的自觉成分。假定人们缺乏自觉性，对受灾受难的人的帮助能持续存在吗？互助共济的精神能发扬吗？能被一代一代继承吗？互助共济的精神是习惯与道德力量的体现，而习惯与道德力量在建立这种特殊的社会保障中的作用是市场与政府都无法替代的。

当然，在政府形成以后，政府理所当然地承担了社会救济的责任。在政府的支出中，不管数额多少，用于社会救济的支出总是支出项目之一。政府用财政支出来救济灾民或给鳏寡孤独者以补助，是从维持社会安定的角度来考虑的。以对灾民的救济来说，政府的救灾支出通常满足不了需要，所以来自民间的互助共济性质的社会救济始终起着重要的作

用，在某些大灾之年，这种社会救济的作用更为突出。此外，与政府救济灾民主要着眼于维持社会安定这一出发点不同，来自民间的社会救济尽管也含有维持社会安定的意思，但更为重要的，则是出自人们对受灾受难的人的同情心，出自人们对其他人的命运和遭遇的一种关怀。捐资解囊的人并不打算从自己的捐助中得到什么回报，他们这样做，只是表明自己在尽到一份责任。如果说习惯与道德调节同市场调节、政府调节相比有种种区别的话，那么在习惯与道德力量影响下，人们出于同情心和责任感而对灾民或其他受难者的救济，就是区别之一，因为这种救济行为纯粹发自人们的内心。

互助共济与效率之间是什么关系？在防御洪水侵袭的过程中，在洪水成灾迫使居民逃难的过程中，以及在水灾过后人们重建家园、重建村镇的过程中，互助共济促使效率增长。不妨设想一下，如果没有来自民间的互助共济，受灾地区人民的生命财产损失不知会增加多少！水灾过后，灾区的恢复重建工作怎会取得这么大的成效？这不是效率的增长又是什么？有了互助共济，灾民不但生活上有了一定的保障，而且抗灾、自救、恢复重建的信心会增大。有了充沛的信心，效率将会提高，这已被无数史实所证明。因此，治水和战胜水灾的历史所留给我们民族的，不仅是对疏导和化解的重视，不仅是对协作精神和宽容精神的强调，而且还包括这种互助共济的传统。效率是在人际关系协调中涌现的，疏导、化解、协作、互助共济，在促进人际关系协调的同时，也带来了效率的不断增长。

三、对历史上互助共济行为的进一步分析

让我们再以西欧中世纪城市刚刚兴起时的互助共济行为作为例子，对互助共济与效率增长之间的关系作进一步的分析。这将有助于我们从另一个侧面来了解效率增长的源泉。

在中世纪的西欧，在城市刚刚兴起之际，自然灾害频繁，战争时常发生，城市居民所需要的食物和其他生活必需品要靠外界供应。但这种供应并不是有保证的，一旦供应中断，不仅城市的社会秩序和正常的经济活动无法维持，连城市居民的日常生活也维持不下去，效率增长问题就无从谈起。简言之，连人都活不下去了，还谈什么效率或效率增长！

为此，一些中世纪的西欧城市在当时的特殊条件下，采取了组织城

市经济生活的措施，城市居民拥护这些措施，遵守城市立下的规章制度。城市组织经济生活的措施以及城市居民对城市有关规定的遵守，都体现了互助共济精神。例如，有的城市规定不许囤购粮食，不许面包作坊购买超过实际需要的小麦，不许城市里的作坊或居民到农村去预购粮食。有的城市还规定每个居民家庭一定时间内或一次购置粮食的最高限额。诸如此类的规定为的是不要让任何一个居民家庭因断粮而饿死。⁴

又如，有的城市公开宣布禁止“优先购买”，这就是说，由外地运入本城市的商品，必须先运送到城市指定的公开市场去出卖，供市民们自由选购，在一定的时间内，只零售，不批发。例如，在德国的符茨堡，当外地一条运煤的船到达该城市后，前八天只准零售，每户居民都可以来购买，但至多不超过50筐煤。八天以后，剩下的煤才准许批发出售。⁵在英国的利物浦等城市，规定到达港口的全部生活必需品，都先由城市当局以城市的名义买下，再由城市配售给商人、手工业者和一般城市居民，人人都得到规定的一份。在法国的亚眠等城市，盐作为生活必需品，是由城市配售的。在意大利的威尼斯，一切粮食的买卖都由城市经营，以保障每个城市居民的需要。在中世纪的西欧，有些城市还实行过这样一种制度：外来的商船靠码头时，船上的商人要立誓，说明货物的成本和运费，然后由城市派遣的价格评议员根据商人的申报，定出价格，这才准许商船卸货，在本城发售。以上所列举的这些，尽管都属于中世纪西欧城市为保证城市供应正常的政府行为，但政府的行为仍同当时城市中流行的互助共济精神有关，而市民们之所以接受这些政府调节经济生活的措施，也同当时城市中的互助共济精神的影响有关。⁶

中世纪西欧城市在刚刚兴起时所采取的互助共济性质的措施有较广的范围，不限于组织生活必需品的供应。例如，为了更好地组织城市经济生活，有些城市设立了“公灶”，让家里有困难的人到那里去烘烤面包；有些城市在郊外保留了公共林地和公共牧场，允许市民到那里去砍伐树枝，作为燃料，或在牧场自由放牧；有些城市中还设立了公营的当铺，在建立之初往往不收利息，或者只收很低的利息，其目的是使城市中的穷人免受高利贷的盘剥。⁷在中世纪的西欧，城市刚兴起时，街道狭窄，住户拥挤，许多房屋是用木料建造的。为了防止火灾，不少城市很早就成立了义务消防队，把防火作为城市生活中的一个重要组成部分。有些城市为了保证本城市的居民能正常生活，还规定义务的巡街值夜制度，成年男子都有巡街值夜的义务。

以上所有这些都清楚地说明了在中世纪的西欧城市中，在互助共济精神的影响下，公益性的、公共服务性的设施被城市当局和城市居民们看得何等重要。从经济上看，这显然是与当时社会较低的生产力水平和城市在兴起时的艰难处境有关的。在社会生产力水平低下，城市生活必需品供应不足，而城市与乡村又处于彼此对立、彼此隔绝的状态中，不采取这样一些措施，城市怎能继续存在下去？怎能进一步发展？可以认为，是一种互助共济的精神，使城市在艰难的年代里经受了考验，使城市以后逐渐成为吸引商人前来和吸引农奴前来的中心。如果要联系到效率问题来进行分析的话，十分明显的是：城市能够持续存在，能够不断发展，这本身就体现了效率，而且这种效率是同城市中的互助共济精神分不开的。互助共济，既保护了城市中的弱者，也保护了无论是弱者还是强者的共同庇护所——中世纪西欧的城市。从这个意义上说，互助共济是对每一个城市居民的保护，不管他来自何处，从事什么职业，身边有多少财富，只要他来到这座城市中，他就受到城市的保护，包括城市中的互助共济精神的保护。

四、互助共济的精神不会消失

从中世纪西欧城市兴起时的情况可以看出，互助共济精神在历史上确实发挥过促进效率增长和保证效率增长的重要作用。但这也涉及另一个问题，城市当局所实行的组织城市经济生活等措施后来又变成了阻碍技术进步和不利于效率增长的措施，那么这是不是说，互助共济也有其消极的、反面的作用呢？

怎样看待这个问题？有必要仍从中世纪西欧城市的措施谈起。在城市刚刚兴起时，在当时的历史条件下，城市手工业者为了维持行业稳定，对于市场竞争采取了一系列限制性措施，其出发点也是想使本行业有较好的发展前景，并使本行业的从业者有安定的生活。例如，在不少城市中，由手工业者所组成的行会对会员的生产经营有下述规定：开店的手工业者不准从事贩运活动，即不准兼做行商；手工作坊不许招贴广告以招徕顾客，不准拉顾客上门，不准削价出售商品。在某些城市，行会还禁止手工业者游街串巷，上门服务。例如，14世纪初年，德国赫尔姆城禁止裁缝师傅上门干活；14世纪中期，德国法兰克福城禁止鞋匠上门补鞋做鞋。上门干活被认为会加剧竞争，扩大同行业人员之间的摩

擦，并使他们之间的收入差距拉大。

又如，在当时的手工作坊中，按照行业的规定，劳动时间的多少也是有限制的。一般只允许从日出到日落之间进行生产和营业，只准利用自然照明，不许在灯光下干活，夜班被严格禁止。关于工资制度，行会也有规定。学徒只供食宿，没有工资。帮工的工资水平和发放工资的日期都有规定，禁止超过标准支付额外的工资或奖金。工资一般实行日工资制或周工资制。由于计件工资会增加产品数量，加剧竞争，所以许多城市禁止采取计件工资制，只是后来由于瘟疫流行，城市一度缺乏劳动力，计件工资制度才被某些部门采用，即使如此，计件工资的支付标准仍然统一规定。此外，行会还禁止行东们采取任何形式的联营或合并，以防止大型作坊的出现。

对中世纪西欧城市的限制竞争措施的作用，要有历史的分析。在城市兴起的初期，这些限制竞争的措施对城市的稳定和发展、对城市居民生活的安定及效率的增长，都起过积极的促进作用。互助共济精神在这些措施的制定与实行中也表现得比较明显。但后来，随着城市经济的发展和市场规模的扩大，这种限制竞争的措施束缚了生产者的主动性、积极性、创造性，阻碍了技术的进步和效率的提高，它们与发展生产力的要求是抵触的，从而这些限制市场竞争的措施便逐渐被摒弃。现在要探讨的问题是：如何看待这种互助共济精神？如果说中世纪西欧城市兴起之初，带有互助共济性质的城市组织经济生活的措施、行会限制竞争的措施是有积极作用的，因此对互助共济精神应当予以肯定，那么到了中世纪西欧发展的后期，当这些措施已经阻碍技术进步，阻碍效率增长，同社会生产力的发展要求相抵触时，是不是认为互助共济精神过时了？不能得出这样的论断。限制竞争的行政措施过时了，但这不等于互助共济精神的过时。

前面已经谈到，人们的互助共济精神是发自内心的，它出于对他人的同情心和对社会的责任心，因此在他人遇到困难的时候给予帮助而不要求有什么回报。在这种精神的影响下，在不同的历史时期和不同的场合，政府或团体会实行一些措施，目的在于保证所有的人都能免于饥饿，尤其是使贫困的家庭不至于无法生活下去。对中世纪西欧城市采取的有关措施，应当结合这些措施的目标来进行评价。

然而，对任何政府措施或团体措施的评价，包括对中世纪西欧城市当局的措施和行会这样的团体的措施的评价，都不能脱离历史条件而孤

立地进行。当中世纪西欧城市的经济发展到一定阶段后，城市当局和行会的措施已成为生产力发展和效率增长的障碍时，历史上曾经起过积极作用的措施丧失了那种积极作用而变成了过时的东西，摒弃它们是必然的。但这只是表明具体的政策措施的过时，互助共济精神作为道德力量的一种体现，是不会过时，也不应消失的。在新的历史时期、新的社会生产力水平下，人们的互助共济精神可以而且应该体现于另一些与时代相符的形式。如果认定只有以前那种政策措施才能体现互助共济精神，从而不准备改变过时的政策措施，那是一种误解，其结果必定是互助共济精神的扭曲。历史条件变了，具体的政策措施可变，互助共济精神则会长存。

克鲁泡特金在其名著《互助论》中曾有一段精彩的论述。他写道：国家吞没了一切社会职能，这就必然促使个人主义得到发展。对国家所负义务愈多，公民间相互的义务愈来愈少。在中世纪，每一个人都属于一个行会和兄弟会，两个“弟兄”有轮流照顾一个生病的弟兄的义务；而现在，只要把附近的贫民医院的地址告诉自己的邻居就够了。在野蛮人的社会里，当两个人由于争吵而斗殴的时候，第三个人如果在场而没有劝阻，致使它发展成命案，这样的行为意味着他本人也将被当做一个凶手看待。但是，按照现在的一切由国家保护的理论来说，旁观者是用不着去干涉的：干涉或不干涉，那是警察的事情。在蒙昧人的土地上，在霍屯督人中，如果在吃东西之前不大叫三声，问问有没有人来分享，就被认为是可耻的行为；而现在，一个可敬的公民，只要缴纳济贫税就够了。他可以坐视饥饿的人在挨饿。⁸

应当指出，克鲁泡特金的这段论述虽然相当精彩，但却犯了感情胜过理性分析的通病。国家行为是一回事，民间的互助共济行为又是一回事，两者是不可混淆的。互助共济的精神是值得提倡的，而且这种精神会一直存在下去，只不过在某些情况下强烈些，在另一些情况下较弱而已。国家的政策措施则应随着历史条件的变化而调整，不能不顾客观情况而照搬以往采用过的办法。

克鲁泡特金在这里一共举了三个例子：中世纪的，野蛮人的，蒙昧人的。

关于中世纪的例子，可以这么说，这里所提到的是团体（行会）行为而不是政府行为，行会让成员们轮流照顾患病的成员，这属于互助共济的行为，而且同成员们出于互助共济精神而愿意承担这一义务有关。

在行会解体以后，这种精神是应当保存下来的，至于人们采取什么方式来照顾患病的邻居或同事，那是另一个问题。不能认为必须沿用行会实行过的那种办法。真正的问题在于：随着行会的解体与时代的变迁，互助共济的精神淡薄了。这才是应当注意的。

关于野蛮人的例子，可以这么说，克鲁泡特金把法律与习惯，或法律与道德之间的界限弄模糊了。在野蛮人那里，法律尚未出现，只能按习惯或道德原则来处理，所以当两个人发生斗殴时，如果在场的第三个人不出来劝阻，就要受到习惯或道德的制裁。这体现了互助共济作为一种道德原则在野蛮人中间是被人们遵守的。然而，在政府形成并有了法律之后，情况便不同了。命案照例应当由警察部门去处理，不能再像原始社会那样按照部落的习惯来处置，否则社会反而会变得无秩序。在场的第三个人的劝阻与否，不能视为是否把他定为凶手之一的依据。但这并不意味着第三个人可以袖手旁观或见死不救，从维护社会秩序的角度来看，第三个人应当前去劝阻，因为这也是一种社会责任。

关于蒙昧人的例子，可以这么说，在蒙昧阶段，众人分享食物是正常的，当时的习惯或道德规范正是如此。假定在现代社会仍要照搬霍屯督人的做法，不仅是行不通的，而且也有可能给社会的分配秩序和消费生活增添麻烦。难道现在能做到在吃东西之前大叫三声要周围的人来分享吗？一个人应当关心饥饿的人的生活，但现代有现代的做法，怎能沿袭原始社会的习惯？

由此可见，互助共济的精神要保持，要发扬，而互助共济的形式则是随着历史条件的变化而改变的。

2.4. The Moral Basis of Efficiency

2.4.1 The Dual Basis of Efficiency

It is generally accepted that efficiency has a material and technological basis. This basis is constituted by possession of certain production equipment and raw materials, a certain technology level and workers with a certain level of technical skills, and a certain level of social infrastructure (transportation and communication facilities,

water and heat supply, energy supply, etc.). The importance of this material and technological basis is also widely recognized: Without improving this basis, efforts to improve efficiency will be hampered.

However, is this the only sort of basis? If one has the requisite material and technology basis does it inevitably follow that efficiency will rise? The first three sections have made clear that a pure material and technology basis is not in itself enough reason for efficiency increase. There is another basis, namely morality. It is people who make use of production facilities and raw materials, and the deployment of technology is something determined by the qualification, initiative and creativity of people. People, a component in the material and technology foundation of efficiency, are animate beings with thoughts, ideas, emotions and goals: they are not machines. They have individual attitudes, some being enthusiastic about work and others indifferent. They are not isolated entities, but have various contacts and relationships with different degrees of harmony. All these form another basis of efficiency, namely, a moral basis.

The two bases co-exist and neither one on its own can account for an increase or decrease in efficiency. Suppose two enterprises have the same material and technology level and produce the same products with the same level of demand, but one has high efficiency and the other low. Why? The answer lies in their different moral bases. Therefore, the correct point to draw is that efficiency has a dual basis: a material and technology basis and a moral basis.

In any age and for any group—a family, an enterprise, a village, a society or a country—there is a need for spiritual cohesion, a moral standard as behavioral guide, and ethical concepts. They do not conflict with or disrupt science. In handling interpersonal relations, an area where science is impotent, regulation by custom and morality comes into play. When interpersonal relations become harmonious and individual creativity and initiative are fully deployed, efficiency will increase naturally. This shows that efficiency does have a moral

basis.

The follow-up discussion is as follows: Economic development, technology progress, technical improvement and the updating of workers' knowledge have changed the material and technology basis of efficiency, and this is a constant, ongoing process. This being so, is the moral basis subject to change also? Is there any constant moral principle as the moral basis of efficiency? If the moral basis does change along with the material and technology basis, is this pro-active change or adaptive change? "Pro-active change" indicates that the change of moral basis is directly caused by the factors forming the moral basis, such as moral norms, code of conduct, evaluation standards, etc. "Adaptive change" means the change of moral basis comes about because of change in the material and technology basis. Of course, distinguishing pro-active change from adaptive change can be difficult, since they often co-exist and are interwoven with each other.

To better explain this point, we will explore the relation between the two types of basis.

2.4.2 The Relation Between the Two Bases of Efficiency

Changes in moral norms, code of conduct and evaluation standards are influenced by changing economic and technological conditions and the development of productivity, but we cannot regard changes in the moral basis of efficiency simply as adaptations to changes in the material and technology basis.

If we take as example the change of the attitude toward interest on loans in Europe, this can show why changes in ideas of morality do not necessarily have a close or direct connection with the material and technology basis of efficiency. In medieval Western Europe, the Roman Catholic Church forbade charging interest on loans, and

regarded it as immoral. According to J. W. Thompson, the position of the church drew on Aristotle's maxim— "Money cannot bear fruit" — and a quote from the New Testament "lend, expecting nothing in return." Strict observance of this teaching was required and it was generally practiced. Any charging of interest was forbidden by the Church as an immoral act contravening Christian doctrine.⁹ Given this perspective, the ban was an unquestionable moral truth for the Church and the common people. In the 12th and 13th centuries, papal decrees were issued that people need not pay any loan interest and that interest already charged should be returned. Naturally enough, this papal instruction was received with enthusiasm among the people, who thought it the embodiment of morality.

However, the real situation is not as simple as how the Church envisaged it when issuing the banning decree. People dislike the charging of interest on loans, regarding it as against morality, but in reality loans are a necessary evil. If interest charges were banned, the following consequences would ensue: Those in need of funds would have no way to borrow, or loaning activities would be carried out in secret at higher interest rates, or interest would be charged in disguised forms. Hence, the belief that "interest on loans is immoral" gradually began to waver and their doubts about the ban grew day by day. The theory that "money should not produce money" also lost ground. "There was a huge gap between theory and reality, and the monasteries themselves often violated the Church's banning decree. Nevertheless, the religious spirit had left such a deep impression on the world that it took several centuries before people got accustomed to new routines fitting the subsequent economic recovery, became used to regarding as legal such concepts as commercial profit, employment of capital, and loan interest without a lingering sense of guilt."¹⁰

The question of interest on loans never went away, despite changes in people's belief or their re-evaluation of moral principles. When it came to the Protestant reformation period, the problem

intensified with the divergence of different Christian denominations. The Lutheran and the Calvinist churches, despite both being reformist, had opposite attitudes on the issue of loan interest and influenced their followers with their respective doctrines, which later become moral principles for their adherents. According to Eric Roll, "The same divergences existed even among the leaders of the Reformation, in spite of the fact that Protestant teaching was in general more in harmony with the economic trends of the time. Luther held views which were not very different from those of the Canonists. ... and his condemnation of usury was as strong as that of any of the schoolmen. Calvin, on the other hand, in a celebrated letter written in 1574, denied that the taking of payment for the use of money was in itself sinful. He repudiated the Aristotelian doctrine that money was infertile and pointed out that money could be used to procure those things which would bear a revenue. He nevertheless distinguished instances in which the taking of interest would become sinful usury, as in the case of needy borrowers oppressed by calamity."¹¹

From this it appears that people's judgment on loan interest is linked to particular beliefs or ethical principles and not necessarily directly connected to changes in economy and technology. Otherwise it's hard to explain why, on the issue of interest charging, there should be divergence of opinion between the Lutheran Church and Calvinist Church and why two different moral principles formed among their respective followers.

The moral basis of efficiency is independent of its material and technology basis and, for this reason, change to it is positive in nature. But change in the material and technology basis may to some extent produce change in the moral basis. Changed attitudes toward consuming are a case in point: When new kinds of consumer products appear, because of their scarcity and high price, they are affordable to just a few elite families but are beyond the reach of ordinary families, who regard consuming luxuries as degenerate behavior rather than virtuous. For example, when tea was first imported to Britain by the

East India Company, it was undoubtedly a luxury item, but as tea imports increased, by the mid-18th century it had become a popular beverage among ordinary people too. When coffee first came to Britain, it was drunk only by wealthy families and the London coffee houses were the exclusive preserve of gentlemen; it was not until the 1830s that cafés for the general public appeared, and even later that working people started drinking coffee. As to smoking, it was originally seen as an upper class indulgence in Europe, and took a long time to spread to the lower social classes. There are countless similar cases. In *The Theory of the Leisure Class*, T. Veblen wrote: "It frequently happens that an element of the standard of living which set out with being primarily wasteful, ends with becoming, in the apprehension of the consumer, a necessary of life; and it may in this way become as indispensable as any other item of the consumer's habitual expenditure. As items which sometimes fall under this head, and are therefore available as illustrations of the manner in which this principle applies, may be cited carpets...waiter's services, silk hats.... The indispensability of these things after the habit and the convention have been formed, however, has little to say in the classification of expenditures as waste or not waste in the technical meaning of the word."¹² This explains why consumers' judgment on the rights and wrongs of consumption behavior changes as the economic and technological situation changes and, obviously, the latter will lead to changes in people's ethical values.

In conclusion, the moral basis of efficiency is independent of but capable of being influenced by changes in its material and technology counterpart. The former will react to changes in the latter, producing corresponding changes. This is adaptive change in the moral basis of efficiency.

2.4.3 Potential for Efficiency Increase and Supranormal Efficiency

Since efficiency has a dual basis, the next questions to be posed are: Where does potential for efficiency increase lie? Where does supranormal efficiency come from? Which of the two bases makes the greater contribution to efficiency?

The supranormal efficiency of migrant societies in history has always interested scholars. In ancient China, for example, wars and chaos drove the Hakka people away from the Central Plains of China to Guangdong and Fujian in the southeast, where they blazed trails, drained the land for agriculture, totally changing the wild landscape. More recently, people from Shandong and Hebei provinces moved to northeast China and cultivated large tracts of land into fertile arable fields, making the region a huge granary of China. In Europe, from the 12th century on migrants started to reclaim wasteland in the north of the Netherlands. They built water conservancy projects, developed agriculture and animal husbandry, and formed autonomous organizations such as village associations for water conservancy, turning what had been deserted wasteland into bountiful fertile fields. In North America, wave after wave of European migrants came, built new communities and then spread westward, opening up vast areas of land. These are examples of high efficiency. Strictly speaking, they are supranormal, that is to say, they are rarely seen outside non-migrant societies. With crude tools, inadequate manpower and harsh conditions, how could such supranormal efficiency keep coming? During the course of migration and in the considerable period after the formation of an immigrant community, in the absence of regulation by market and government, what power was it that made people so enthusiastic and produced such high efficiency? We are drawn to the inevitable conclusion that it was the effect of moral factors, of cohesion and of creativity.

We may also conclude as follows: Migrants in history completed their mission of reclaiming wasteland with supranormal subjective powers in supranormal objective circumstances and even their social organizations were supranormal. They can be seen as miracles of

human history. Without a corresponding moral basis, supranormal immigrant organizations and individual subjective power would be impossible, as would supranormal efficiency.

The many examples of supranormal efficiency demonstrate the potential for increased efficiency. To develop this potential the main keys are the existence of a moral basis and the role of moral force. There are many further examples to illustrate how moral force, belief or faith can inspire man's resolution and capability: heroic resistance to invaders regardless of personal danger, selfless efforts in fighting natural disasters and in safeguarding the targets and honor of a group (e.g. family, clan, religious organization, nation). This is how supranormal efficiency comes about. Does the material and technology basis also contribute to supranormal efficiency? Of course, efficiency increase is always inseparable from material and technological conditions: For example, in the case of migrants opening up uncultivated land, irrespective of their levels of energy and enthusiasm, certain means of production were essential, and the same goes for combatting natural disasters. But we should be aware that without the effect of moral force, belief or faith, and with reliance on materials and technology alone, the best one could hope for would be normal efficiency: supranormal efficiency would be unachievable.

The contentious academic debate about the conflict between the efficiency standard and morality standard has actually been settled in our discussion of supranormal efficiency. The so-called conflict between the two standards usually refers to the existence of two different standards for judging economic behavior, namely, efficiency-oriented standard and morality-oriented standard. Under the first, efficiency increase is regarded as good and decrease as bad. Under the second, conformity to ethical principles is regarded as good and violation of them as bad. It is said that the two standards are often at odds, because sometimes efficiency increase is not consistent with ethical principles and sometimes what is consistent with them may result in reduced efficiency. This is an age-old conundrum: the

intractable difficulty being that one's judgment of what is right and wrong depends on one's perspective.

Efficiency standard and efficiency judgment are both research topics of economics, but moral standard and moral judgment are not. But when the question involves the relation between moral standard and efficiency standard, or whether moral judgment and efficiency judgment are identical, then it enters the sphere of economic debate. In *Economics and Political Science of Socialism*, I make the following statement on this topic: "Moral judgment on economic behaviors must be integrated with testing in practice. Otherwise, ethical principles in economy will be elusive... We can use 'workers' maximum interests' as a moral standard of economic behavior. That is to say, anything meeting the requirement of 'workers' maximum interests' is 'right' or 'good' and whatever does not is 'wrong' or 'bad'." ¹³

This is one way of coordinating efficiency standard and moral standard, and also a reference for judging certain economic behaviors. However, in judging other economic behaviors, conflict between the two standards persists, something that has long troubled economists. From the phenomenon of supranormal efficiency, we may well find efficiency standard is actually at one with moral standard. The generation of supranormal efficiency in itself means a substantial increase in efficiency, so efficiency standard is totally applicable here. But how is supranormal efficiency born? As discussed above, it is directly linked to the effect of moral force. Without its influence, supranormal efficiency would not appear in migrant communities, in wartime resistance or in combatting natural disasters. Therefore, using moral standard as our measure, we can say the birth of supranormal efficiency is consistent with both efficiency standard and moral standard.

2.4.4 More Thoughts on Moral Standard in Economic Behaviors

There are various viewpoints in society regarding moral standard in economic behaviors. For example, is it justifiable to award a huge amount of money to someone for a significant invention or for a great contribution to society? Is it justifiable to pay a very high salary for success in turning a loss-making enterprise into a highly profitable one? Responses range from "absolutely," "not entirely" to "absolutely not." How should we look at such questions? Obviously, they cannot be discussed in the abstract, because any economic behavior should be analyzed by bringing in specific situations, without which one cannot come to a judgment.

At least one thing is clear: moral evaluation cannot be divorced from estimation of the objective effect. Judging what is morally right or wrong has to do with the objective effect of certain economic behaviors. If someone is rewarded for an invention with a huge amount of money it is surely because that invention has produced a good objective effect and benefited society greatly. If an executive is paid a very high salary it must be because that person has brought huge profit for the enterprise. By comparison, what the society or enterprise receives is much larger than the inventor or the executive does. In this sense, a prerequisite for getting a reward bonus or high salary is extraordinary innovation or effective management, which makes the reward justifiable.

On further analysis, we may find that the great benefit to society is not confined to the innovation itself, and similarly it is not just effective management that benefits an enterprise: Effective management not only benefits the enterprise itself, but the society at large shares in it. This is because the reward has an exemplary effect in society.

A huge reward for a great innovation is public declaration that rewards are forthcoming for important innovations. The hope is that more people will devote themselves to science and technology and produce innovations. In the final analysis, the society will be the biggest beneficiary.

Similarly, paying a high salary for success in helping make a loss-making enterprise profitable is a declaration to all executives that rewards await those who can emulate such achievement. The hope is that executives will be spurred on to greater things and that capable talents will be attracted to the enterprise. Moreover, other enterprises may be inspired by such economic behavior and its objective effect: to pay capable managers a high salary will make the enterprise the biggest beneficiary. When many enterprises follow this example, thereby improving their performance and profit, is society at large not the biggest beneficiary?

This makes it possible to assert that in economic behaviors such as rewarding innovators or capable executives, efficiency standard and moral standard are not in conflict; rather they are organically combined and internally unified. Efficiency is measured according to the objective effect of a behavior; i.e., whether the behavior can benefit society and to what extent. Similarly, judgment on morality is inseparable from measuring the objective effect of a behavior; i.e., whether it can benefit society and to what extent.

We may shift to a new vantage point to examine the above-mentioned economic behaviors.

Suppose society is indifferent to a great innovator and the huge benefits he brings to society, makes no comment and bestows no reward. Suppose it is generally believed that what the innovator has done is no more than duty and no reward is necessary at all. The result of such thinking will be unhelpful to society because people will not devote themselves to science and technology or to innovation, believing that society pays it no respect and the effort will not be worthwhile. Their enthusiasm will disappear, and efficiency decreases correspondingly. It will be the same with an enterprise if it fails to reward capable and effective executives.

Suppose society decides to reward an innovator but that person does not go accept the prize or an executive refuses to accept the high salary the enterprise will pay him for his effective management, what

would the result be? In discussing this question, let us begin with two stories in Zhang Yuyan's article "To Know What Is Righteous and Act Heroically" published in *Dushu* (Reading) magazine in July 1996.

During the Spring and Autumn Period of ancient China, the State of Lu had a law that if a man of Lu came across a fellow citizen enslaved in another state, he could pay to redeem that person and on return to Lu he could apply to the state treasury to be reimbursed. It is said that one of Confucius' disciples paid to redeem a fellow citizen in a foreign state, but he did not submit a reimbursement claim on his return to Lu, this as an expression of his determination and sincerity in pursuing "righteousness." When Confucius heard this, he took the disciple to task, saying: Your action will prevent more Lu people being rescued from slavery. You were noble, paid to save another and asked for no return. You may be celebrated by society, but from now on, when any Lu person encounters a fellow citizen in slavery in another state, he will think: "Should I pay to free him or not? If I do, shall I get the money back when I return to Lu? If not, won't I lose a great amount of money? If I do submit a claim, will I be sneered at by others as a miser?" The most likely outcome is that if he does come across an enslaved fellow citizen he will pretend not to see. Will your behavior not deter others from rescuing enslaved citizens of Lu?

The second story goes like this. A disciple of Confucius, seeing someone falling into the water, jumped in and rescued him. The man gave his rescuer a cow as a gesture of thanks and he accepted it. Confucius highly praised his action, on the grounds that a rescuer's acceptance of gift of thanks would encourage more people to take a risk and rescue others, and therefore more people would be saved from drowning.¹⁴

In the final part of his article, Zhang comments: "People usually think 'righteousness' and 'gains' as being diametrically opposed. In the stories of Confucius and his disciples, the situation seems a little different. For Confucius, the 'great righteousness' is fulfilled by setting aside the 'lesser righteousness,' doing which will undoubtedly satisfy

people's need for 'lesser gains'."¹⁵ The only possible conclusion must be: "Individual behavior of 'benevolence and righteousness' may have results in opposition to the aims of society at large, whereas making 'righteousness' and 'gains' compatible may result in the needs of society being met."¹⁶

Now we come back to discuss the moral standard of economic behaviors. The previous analysis looked at rewarding innovators and paying high salaries to effective executives. If the innovator does not wish to accept the reward or the executive the salary, that depends on his own will and has to do with a spirit of dedication, a precious spirit indeed. The question would be much simpler if the majority of people had this spirit. But the reality is that they do not: most people hope to be rewarded for their efforts. Therefore, refusing rewards or high salary may lead to the following: Will it influence other great innovators to accept rewards? Will it influence other high-achieving executives to accept high payment? They might think acceptance could lay them open to being sneered at as inferior in character compared with those who refuse. The objective effect of such ambivalence, doubt and misgiving is not conducive to socio-economic development. In the end, it will be the society and enterprises that suffer losses. Some accept the reward and some forgo it, some accept high salary and some reject it. Do any of the refusers ever wonder how such behavior might embarrass or upset others? Efficiency standard and moral standard are capable of being compatible and unified, but such behaviors make a simple situation complicated.

What is the right way to handle things? One way is simply to accept. To do so is in line with both efficiency standard and moral standard. A second option, if the amount is considered excessive, is just to take it and then donate an amount to charitable organizations, which is also in line with both standards.

There is a supplementary point here: If some dedicated people only want to work hard but don't want to take rewards or high salary, we should on the one hand affirm their work achievements and their

choice and on the other hand ensure that they understand the reward or high salary to be totally justified as society's acknowledgement of them. Moreover, such reward plays a role of encouraging more people to work harder and contribute more to society. So they should be persuaded to take the reward or high salary. In this way, both efficiency standard and morality standard have been taken into account.

There is another question which should be conscientiously explored. What are the rules determining rewards? If an enterprise hopes to reward its employees (including executives) when it makes profits, it has to follow some rules, and the rule-making must also follow certain procedures. Once the rules are set, everything should be done according to them and any subsequent revisions must go through certain procedures too. Making rules without following procedures is wrong, and as well as inhibiting the stimulatory effect of rewards it may also lead to a variety of negative effects.

It reminds us of an ancient allocation method. Suppose a pot of food or a big pie is to be shared out so that everyone receives a portion. The fairest method is that whoever spoons out the food or cuts the pie should take the last portion. Shouldn't such a method be considered in discussing the payment or reward of senior executives of an enterprise?

2.4.5 Individual Autonomy and Harmonizing of Interpersonal Relations

In discussing the moral basis of efficiency, we need first to explore the following questions: Is it true that the stronger an individual's autonomy, the bigger the potential efficiency will be? Or is it true that the weaker an individual's autonomy, i.e. the closer the individual's affiliation to a group, an organization, or even society, the greater the potential efficiency will be?

Why do we raise such questions? They have to do with the moral basis of efficiency. When the technology level and the objective conditions of production are certain, and when the educational and technical level of an individual producer or worker are known, if an individual has greater autonomy, his initiative and creativity will be greater, which means greater potential efficiency. In other words, the more autonomous producers or workers in the economy, the more dynamic it will be, the greater efficiency potential it will have and the more easily that potential can be deployed. Therefore, it is incorrect to think of autonomy of producers or workers as not benefiting the economy. But seen from a different perspective, since the source of efficiency is in harmonious interpersonal relations and in individual's adaptability to group or society, when an individual subordinates himself to a group, an organization or society as a whole, it is more likely that interpersonal relations will be harmonious and individual's adaptability to group or society will be strong. Does this not mean greater potential for efficiency increase?

In fact, the two aspects, individual autonomy on the one hand and subordination to group, organization or society on the other can be compatible and co-exist rather than the reverse. The moral basis of efficiency encompasses both full exercise of people's initiative and creativity, and coordination and adaptation in interpersonal relations. It is wrong to emphasize one and neglect the other. It's hard to imagine efficiency increasing constantly in a society where individuals subordinate themselves to group, organization or society but are without autonomy, initiative and creativity. Nor can we imagine efficiency increase lasting long in a society where people have autonomy, initiative and creativity but where interpersonal relations are not harmonious or inadaptability keeps on worsening. Therefore, a reasonable situation would be one in which individual autonomy co-exists in a balanced way with harmonious and adaptive interpersonal relations; subordination of the individual to group, organization or society should co-exist with encouragement of individual initiative

and creativity. It is co-existence that ensures constant increase of efficiency.

However, although individual autonomy is compatible and co-exists with subordination to group, organization or society, is it possible that the two have different priorities? This is another contentious question. In the history of economic thought, we have not seen extreme emphasis on either one. Rather, we see some theories focusing more on the former, some on the latter. Actually, the debates on different economic doctrines such as liberalism versus statism, individualism versus collectivism, etc., took place around this central question.

However, in those debates, we sometimes find the main theme distorted by one side. One manifestation is this: They represent individualism as being self-seeking and caring solely for profit; liberalism as acting on one's own will and ignoring any restriction; statism or collectivism as a denial or obliteration of individual autonomy and pioneering spirit, an ideology that sees the nation or organization as overwhelmingly more important than individuals. Of course, this is not to claim that no such extreme opinions have been voiced in history of economic thought, but they are not the mainstream. The mainstream still focuses on individual autonomy and subordination to group, organization and society.

Individual autonomy should be put first, because groups, organizations and societies are formed of individuals. An individual should have self-respect, strive for self-improvement and be capable of using personal initiative and creativity. The group, organization or society should respect an individual and his autonomy, which is the prerequisite of his subordination to them. For efficiency to be increased constantly and for supranormal efficiency be produced and sustained, individual subordination must be whole-hearted; it cannot be reluctant or forced. If an individual or his autonomy is not respected, how can there be any sincere allegiance to the group, organization or society? Furthermore, to maintain harmonious

interpersonal relations, in addition to having self-respect, there should be respect for others too.

Real life is like this: Anyone who lives in a society is *per se* a member of society and will surely be part of some group or organization. At the very least he belongs to a family, the smallest grouping of a society. If he works for an enterprise, he is possibly in a workers' union. If he is a farmer, he may be a member of the village autonomous organization. If he is an urban resident, he belongs to the street or community where he lives. If he owns a private enterprise or is a self-employed businessman, he belongs to some trade or professional association. In short, he is both a member of society and of groups or organizations. In this sense, he has to keep good relationship with others, seeking mutual accommodation and adaptation. At the same time, he has his own aspirations and needs, and his own principles in dealing with others, so he must feel autonomous before his initiative and creativity can be manifested. In other words, he is an animate creature. Autonomy is a prerequisite for his proper handling of interpersonal relations and adapting to group, organization or society. If he has not the least autonomy, vitality or energy, like a tool to be manipulated and ordered about by others, it will be meaningless for him to build good relations with others, let alone keep the relations harmonious and adaptive. Does this not mean that individual autonomy should take precedence over harmonious interpersonal relations?

Furthermore, a society is formed of countless individuals and in a group or organization there are a certain number of individuals. If all of them have autonomy and dynamism, if all can make use of their initiative and creativity and can conduct activities in light of their own personal aims while trying to coordinate and adjust their aims in line with those of the group or society, they will surely handle their relations with others well, which will in turn help efficiency to increase more rapidly and more widely. Is this not precisely what a group or a society hopes to see?

From the above analysis we see the moral basis of efficiency does objectively exist. However, efficiency increase may be realized or may just be a possibility. In order to bring this potential fully into play, one must respect individual autonomy so as to stimulate initiative and creativity. By the same token, individuals should coordinate their interpersonal relations and adapt themselves to the group, organization or society.

肆 效率的道德基础

一、效率双重基础的探讨

效率具有物质技术基础，这是人们所公认的。一定的生产设备和原材料，一定的技术条件和具有一定技术水平的工作者，以及一定的社会基础设施（如交通运输设施、通讯设施、供水供热设施、能源供应设施等），构成一定的效率的物质技术基础。效率的物质技术基础的重要性也得到了公认。没有效率的物质技术基础的改进，效率的提高会遇到障碍。

但是，效率是不是仅有一个基础，即物质技术基础呢？是不是只要具有效率的物质技术基础，效率就必定增长呢？从以上三节的论述中已经可以清楚地了解到，单有效率物质技术基础是不足以充分说明效率增减原因的。我们必须讨论效率的另一个基础，即道德基础。生产设备和原材料由人来使用，技术条件的发挥同人的素质有关，也同人的积极性、创造性有关。即以作为效率的物质技术基础的组成部分之一的具有一定技术水平的工作者来说，这些工作者是活生生的人，而不是机器人。他们有思想，有主张，有感情，也有目标。对待生活，他们可能持这种或那种态度；对待工作，他们可能热情，也可能冷漠。加之，他们一个个都不是孤立的人，他们同其他人交往，构成各种各样的人际关系，而这些关系的协调程度是不一样的。这一切成为效率的另一个基础，可以称之为效率的道德基础。

效率的物质技术基础和道德基础是并存的。单纯用物质技术基础或道德基础都解释不了效率的增长或下降。两家企业，假定物质技术条件

完全相同，生产出来的产品也相同，并且都被消费者所需要，但为什么其中一家企业的效率高而另一家企业的效率低？效率的道德基础的比较分析将会提供答案。

因此，正确的说法应当是：效率具有双重基础，即物质技术基础和道德基础。

在任何时代，小到一个家庭、一家企业、一座村庄，大到整个社会、整个国家，都需要有一种精神上的凝聚力，一种以道德规范为准则的行为引导，一种伦理观念。这些同科学是可以并行不悖的，而且也互不干扰。在处理人际关系时，凡是科学无能为力之处，就需要有习惯与道德力量来调整。人际关系融洽了，个人的积极性、创造性发挥了，效率自然会增长。这表明效率确实有自己的道德基础。

效率有双重基础，已如上述。接着要讨论的是：效率的物质技术基础是变化的，因为经济发展了，技术进步了，工艺改进了，使用生产资料的工作者的知识也更新了，效率的物质技术基础肯定发生变化，而且这种变化是不间断的；那么，效率的道德基础是不是也这样呢？难道会有一成不变的道德原则作为效率的道德基础吗？再如，既然效率具有物质技术基础和道德基础这样两个基础，物质技术基础是不断变化的，难道效率的道德基础就不会随之变化吗？如果说效率的道德基础是变化的，那么这种变化是主动的变化还是适应性的变化？所谓主动的变化，是指构成效率的道德基础的那些道德规范、行为守则、评价标准等自身发生了变化，从而导致了效率的道德基础的变化。所谓适应性的变化，是指适应于效率的物质技术基础的变化而引起的效率的道德基础的变化。当然，主动变化与适应性变化有时是很难分开的。效率的道德基础的变化可能既有主动变化，又有适应性变化，两者往往交织在一起。

为了较详细地阐明这一点，让我们转入下一个问题的讨论，即效率的两种基础之间的关系。

二、效率的道德基础同物质技术基础的关系

道德规范、行为守则、评价标准的变化虽然同经济、技术条件的变化和生产力的发展有联系，并受到后者的影响，但不能把效率的道德基础的变化简单地看成是适应于效率的物质技术基础变化的变化。

以欧洲人对借贷利息的看法的转变为例，可以说明道德观念的变化

不一定同物质技术基础有密切的、直接的联系。在西欧中世纪，天主教会禁止放债收息，认为收取借贷利息是不道德的。“教会从亚里士多德得来的理论：‘金钱是不结果实的’以及‘福音’的成语：‘放款，不希望再获得什么’，必须严格遵守而予以普遍实行；它把收取利息作为违反基督教义的和道德的行为，而予以禁止。”⁹从教义的角度来看，借债而收取利息既然是不道德的行为，禁止收息也就成为天经地义之事了。这就是当时的道德规范，从教会到民间都奉行这一准则。12~13世纪内，罗马教皇们曾一再发布谕旨，规定俗世间欠债权人的钱不必支付利息，已经收取了利息的要退还，尚未收取的不准再索取。教皇的谕旨当然得到民间的拥护，大家都认为这就是道德标准的体现。

然而，实际生活中的情形并不像教会颁布禁令时所设想的那么简单。人们厌恶借贷收息的行为，认为这违背道德，但实际生活中又往往离不开借贷。如果禁止借贷收息，结果是：或者确实需要钱的人借贷无门，或者借贷活动转入隐蔽状态，利率反而更高，或者变相的收息方式应运而生，同样会使借债人受盘剥。于是民间有关“借贷收息不道德”的信念逐渐动摇，对教会的禁令的怀疑不断滋长，所谓“货币本身不应增殖”的理论也站不住脚了。“理论与实际的距离很大，寺院本身也经常违反教会的禁令。但是，尽管如此，宗教精神给世界留下了极其深刻的印象，以致人们经历了几个世纪才逐渐习惯于日后经济复兴所需要的新惯例，才习惯于把商业利润、资本运用、放款取息看成是合法的，而在精神上没有太大的保留。”¹⁰

而借贷收息问题也并未因为人们信念的转变和对道德准则的重新考察而就此结束。到了宗教革命时期，这一问题又随着教派之间的观点分歧而激化了。路德派与加尔文派同属宗教改革派，对待借贷利息的态度却截然不同，各自有自己的信条，并以此影响各自的信徒，成为后者的道德准则。“尽管新教的教义一般是更符合当时的经济趋势的，在宗教改革运动的领袖们之间也存在着同样的分歧意见。路德所持的见解和经典学者们没什么两样……他对于高利贷的斥责正与任何经院哲学家们一样激烈。另一方面，在1574年写的一封著名的信件里，加尔文否认借钱使用收取报酬是一种罪恶。他拒绝亚里士多德认为货币不增殖的论点；他指出货币是可以用来取得那些会产生收入的东西。不过，他也把情况加以区别，例如在借款给为灾害所迫的穷人时收取利息，便是罪恶的高利贷”。¹¹

由此看来，人们对借贷收息行为的评价主要同某种信念或伦理观念有关，不一定同经济、技术条件变化有直接的关系，否则就很难解释路德派与加尔文派对利息的两种评价，也很难解释路德派的信徒们与加尔文派的信徒们为什么在利息问题上会形成两种道德准则。

效率的道德基础是独立存在的，它并不依附于效率的物质技术基础，这就是效率的道德基础变化的主动性。但效率的物质技术基础的变化也会导致效率的道德基础的变化。可以举人们对消费行为的评价的变化为例。一种新的消费品刚出现时，由于数量少，价格昂贵，所以只被少数上层家庭所享用，明显地被看成是与平民无缘的奢侈品，而享用奢侈品，在平民看来，不是一种善行而是一种堕落。例如，茶叶最初由东印度公司输入英国时，是一种昂贵的奢侈品，直到18世纪中叶，由于输入数量增多了，才成为大众的饮料。咖啡输入英国后，只被有钱的家庭饮用，在伦敦只有绅士咖啡馆，而到了19世纪30年代，开始出现平民咖啡馆，到更晚以后才成为工人的饮料。烟草的情况也相似。抽烟在欧洲一直被当做上流社会的奢侈性的嗜好，后来才普及于下层社会。类似的例子还可以举出许多。正如凡勃仑在《有闲阶级论》一书中所说，“生活水准下的某一因素，在开始时根本是属于浪费性的，而结果在消费者的理解下却变成了生活必需品。举例说，如地毯、服务员的侍应、礼帽等等。这类事物的使用习惯一旦形成，就具有必要性”。¹²这说明了消费行为的是非的评价是随经济、技术条件的变化而变化的。经济、技术条件变化所引起的人们伦理观念的变化，是正常的。

因此，效率的道德基础既是独立存在的，也是受效率的物质技术基础变化的影响的。效率的道德基础随着效率的物质技术基础变化而发生相应的变化，这就是效率的道德基础变化的适应性。

三、效率增长的潜力与超常规效率

既然效率具有双重基础，即物质技术基础和道德基础，那么接下来便会出现一个问题：效率增长的潜力来自何处？超常规的效率来自何处？是效率的物质技术基础为此作出较大贡献还是效率的道德基础为此作出较大贡献？

历史上移民社会的超常规效率，一直是学术界感兴趣的课题。在中国，中原战乱期间客家人分批南下，在广东、福建一带披荆斩棘，排水

造田，改变了当地蛮荒的面貌；后来，山东人、河北人闯关东，把东北大片大片肥沃的土地变成良田，使东北成为大粮仓。在欧洲，从12世纪起，移民们就开始在尼德兰北部地区从事垦荒事业，他们兴修水利，发展农牧业，并建立了村水利会这样的群众自治性组织，把本来荒无人烟的地带变成富庶的区域。在北美，来自欧洲的一批又一批移民，建立了自己的社区，并逐渐西进，开发了大片土地。这些都是高效率的例证。严格地说，这些移民们所表现的高效率，是超常规的，也就是在移民社会以外的地方不易看到的。工具，是简陋的；人力，是单薄的；环境，是艰苦的。为什么会涌现超常规的效率呢？在移民迁移过程中，甚至在移民社会形成后的较长时期内，既没有市场调节，也没有政府调节，那么是什么力量使他们产生如此大的热情，提供如此高的效率呢？这就不能不归因于道德力量的作用、凝聚力的作用、人的创造性的作用。也许可以下这样一个结论：从历史上看，这些移民都是在超常规的客观条件下以超常规的主观力量来完成拓荒任务的，甚至移民们的社会组织也是超常规的。这些可以被看成是人类历史上的一种奇迹。如果没有相应的道德基础，就不可能有超常规的移民社会组织，也不可能有超常规的个人主观力量，从而也就不可能有超常规的效率。

超常规的效率涌现向人们充分显示：效率增长是有潜力的。效率增长潜力的发挥，主要依靠效率的道德基础的存在，依靠道德力量的作用。除了前面提到的以移民社会为例而外，还可以列举一些例证，例如，反侵略战争时期人们种种奋不顾身的行为，在抗御重大自然灾害袭击时人们作出的种种努力，甚至在为了团体（小至一个家庭、一个家族，大至一个宗教组织、一个民族或国家）的目标的实现或团体尊严、荣誉的维护方面，都可以看到道德力量、信念、信仰在激发人们的意志和能力中的作用，超常规的效率正是这样产生的。那么，效率的物质技术基础是不是也能为效率的超常规作出贡献呢？当然，效率的任何增长总是离不开物质技术条件的。例如，移民拓荒过程中，无论人的积极性多么大，总需要有一定的生产资料；抗御重大自然灾害时，也需要有一定的物质技术条件。但要知道，假定没有道德力量、信念、信仰等在這些场合发生巨大的作用，依靠物质技术条件，人们仍然只能产生常规的效率，而不可能产生超常规的效率。

在学术界曾经长期引起争论的所谓效率标准与道德标准之间的冲突问题，通过对超常规效率的分析，这个问题实际上已经得到了解决。所

谓效率标准与道德标准之间的冲突，通常是指：对一种经济行为究竟如何判断，有两个标准，一是效率标准，即以效率是增长还是下降作为标准，效率增长是善，效率下降是恶；二是道德标准，即以伦理上的是非作为标准，符合伦理原则的是善，违背伦理原则的是恶。据说这两种标准在许多场合是不一致的，因为效率的增长很可能不符合伦理原则，而符合伦理原则的却可能引起效率的下降。这是一个由来已久的老问题，它之所以难以解决，主要在于伦理上的是非究竟是从什么角度来判断的。

效率标准是经济学的标准，效率判断也是经济学中的判断，而道德标准和道德判断都不是经济学的研究对象或研究任务。但是，当问题涉及道德标准同效率标准之间的关系，以及涉及道德判断同效率判断是否一致时，这些问题便进入了经济学的讨论范围。我在所著的《社会主义政治经济学》中，曾对这些问题作过如下的论述：“经济行为的道德判断必须和实践检验统一起来，否则经济中的伦理原则也就会变得难以捉摸……我们可以用‘劳动者的最大利益’作为经济行为的伦理标准。也就是说，凡是符合‘劳动者的最大利益’的，就是‘是’或‘善’，不符合‘劳动者的最大利益’的，就是‘非’或‘恶’。”¹³这是可以用来协调效率标准和道德标准的方法之一。如果采取这种方法，也许可以作为某些经济行为评价的依据。

但不管怎么说，在另一些经济行为的评价中，效率标准和道德标准的冲突仍有可能出现。这也是至今使经济学研究者感到困惑的事情。然而，单就超常规效率的产生来看，我们不难发现，效率标准和道德标准实际上已经一致了。超常规效率的产生，本身就已经表明效率的大大提高，所以效率标准在这里是完全适用的。而超常规效率是怎样产生的呢？正如前面已分析的，这与道德因素的作用直接有关。没有道德因素的作用，在移民社会中，在反侵略战争期间，在重大自然灾害来临时，是会产生超常规的效率的。因此，用道德标准来衡量，可以说明超常规效率的产生在符合效率标准的同时也符合道德标准。

四、关于经济行为道德标准的进一步思考

关于经济行为道德标准问题，在社会上有各种各样的观点。比如说，一个人有重大的发明创造，或为社会作出了巨大的贡献，从而取得

一大笔奖金，这究竟是不是合理？这个人该不该领取这笔奖金？又如，一个人经营管理一家企业，使企业扭亏为盈或盈利很多，企业给予他很高的报酬，这合理不合理？这个人该不该取得这些报酬？这些行为都是有争议的。有人认为合理，有人认为不尽合理，也有人认为不合理。应当怎样看待这样的问题呢？显然，不能抽象地议论，因为任何一种经济行为都需要结合具体的情形来进行分析，脱离了具体的情形很难下判断。

但有一点是明确的，这就是道德的评价离不开客观的效果的估算。道德上的是非判断，同一定的经济行为的客观效果有关。如果给予某个有重大发明创造的人以高额奖金，那么这必定是由于该项发明创造有良好的客观效果，使社会得到巨大的收益。如果给予某个企业的经营管理者以很高的报酬，那么这也必定是由于企业因此而得到巨大的收益。相形之下，社会因该项发明创造而得到的收益，肯定大大超过给予那个有重大发明创造的人的奖金数额，企业因经营管理得法而得到的收益，也肯定大大超过那个从事有效经营管理的人所获得的报酬的数额。从这个意义上说，取得奖金和报酬的行为以重大的发明创造与有效的经营管理为前提，所以取得奖金和报酬是合理的。

如果再作深入一步的分析，那么还可以了解到，社会所得到的巨大收益并不限于该项发明创造本身，企业所得到的巨大收益也并不限于有效的经营管理本身，而且，有效的经营管理所带来的好处不仅使有关的企业得到，甚至还使全社会享有。这是因为，奖励是有社会示范效应的。

在社会对某项重大的发明创造给予高额奖金之后，这就无异于向社会公开宣告：只要能有重大的发明创造，社会都会给以重奖，于是社会上将会有更多的人去钻研科学技术，提供更多的发明创造成果，这不是大大有利于社会吗？

在企业给经营管理卓有成效，使企业扭亏为盈或盈利很多的人发放很高的报酬之后，也就无异于向企业所有的经营管理人员公开宣告：只要能采取切实有效的经营管理措施而使企业扭亏为盈或盈利很多的，企业就会给予很高的报酬，于是企业中一切有经营管理能力的人的积极性就明显地被调动起来了，企业以外的有经营管理能力的人就被吸引过来了，这不正是企业发展壮大的有力保证吗？而对其他企业来说，它们同样会从这一经济行为及其客观效果中得到启示：给有经营管理能力的人

发放很高的报酬这一行为，更大的受益者是企业。于是它们便会仿效那个先行一步的企业，也采取以高报酬激励经营管理人员的做法。假定许多企业都这样做，它们的业绩都增强了，盈利都上升了，最大的受益者不正是全社会吗？

因此可以断言，在给予重大发明创造者以重奖以及给予有业绩的企业经营管理者以很高的报酬这些经济行为中，效率标准与道德标准不仅不是冲突的，而且是有机结合的、内在统一的。效率标准要以行为的客观效果来衡量，也就是以对社会是否有利和使社会得到多大好处来衡量；道德标准也离不开对行为的客观效果的判断，离不开是否有利于社会以及在多大程度上有利于社会这一判断尺度。

我们不妨再换一个角度来考察上述经济行为。

假定社会对于有重大发明创造者的发明创造成果及其带来的巨大效益无动于衷，不置可否，不予奖励；假定社会上流行着这样一种看法，即认为有重大发明创造者为社会所做的贡献是他的义务，是他本来应当做的事情，因此，给不给奖励是无所谓的。那么由此造成的后果将十分不利于社会，因为这样一来，人们就会想到：既然社会不尊重发明创造者的成果，那又何必去孜孜不倦地钻研科学技术，致力于发明创造活动呢？人们的积极性消失了，效率减退了，这岂不是既失去了对经济行为判断的效率标准，又失去了对经济行为判断的道德标准吗？同样的道理也适用于对企业给不给有效的经营管理者以高报酬这一经济行为的判断。

再说，如果社会决定给重大发明创造者以重奖，但有重大发明创造的人却不去领奖；或者，如果企业决定给有效的经营管理者以高报酬，但有效的经营管理者却拒绝接受这一报酬，试问这些经济行为又会带来什么样的结果？在讨论这个问题之前，让我们先从张宇燕先生发表于《读书》杂志1996年7月号的一篇文章谈起，那篇文章的标题是《“见义”与“勇为”》。文内讲了两个故事：

春秋时期的鲁国有这样一条法律，如果鲁国人在其他国家中遇见有鲁国人沦为奴隶的，可以垫钱把这个奴隶赎出来，回国后再到鲁国的国库去报销。据说孔子的一位弟子有一次在国外遇见了一个已沦为奴隶的鲁国人，于是便花钱把他赎出来了，但孔子的这位弟子事后并不到国库去报账，以显示自己追求“义”的决心和真诚。孔子知道此事后，严厉地训斥了这个学生，理由是：你的这种行为将阻碍更多的已沦为奴隶的鲁

国人被解救出来。这是因为，你品格高尚，自己掏钱救人，受到社会的赞扬，但今后，当别人在国外再遇见沦为奴隶的鲁国人时，他就会想：垫不垫钱去赎人？如果垫钱赎出了人，回国后去不去报账？不去报账，岂不是白白丢掉一大笔钱？如果去报账，岂不是在行为上会遭旁人讥笑，显得自己的品格不高？于是就会装作没有看见有鲁国人已沦为奴隶，这岂不是阻碍了对至今仍沦为奴隶的鲁国人的解救？这是故事之一。

另一个故事是：孔子的另一位弟子有一次见到有人掉进水里了，他奋不顾身地跳进水中，把遇难者救上岸来，被救者酬谢这位弟子一头牛，他收下了。孔子对这个学生的行为大加赞赏。为什么？这将会使得今后有更多的溺水者受到营救，因为救人于难是可以收受谢礼的，这就激励更多的人去冒险救人。¹⁴

张宇燕先生在该文的最后部分就此作了如下的评论：“人们通常认为，‘义’与‘利’针锋相对、此消彼长、水火难容。然而，在孔子的故事中，它们似乎或多或少有点儿不同。在孔子那里，‘大义’的实现是通过‘小义’的被放弃来完成的，而放弃‘小义’又无异于对人们的‘小利’网开一面，给予满足。”¹⁵结论只可能是：“个人的‘仁义’行为可能引发与社会目标相反的结果，而‘义利’相容反而可能会满足社会的需要。”¹⁶

现在让我们再回到经济行为的道德标准问题上来。以上的分析适用于对重大发明创造者的奖励和对企业有效经营管理者的高报酬。如果有重大发明创造的人不愿领奖，或者有效的企业经营管理者拒绝企业给他的高报酬，这当然取决于他本人的意志。这与他的奉献精神有关，而奉献精神是难能可贵的。如果社会上大多数人都有这种奉献精神，问题会简单得多。但现实生活中，多数人还缺少这样的思想，他们希望通过自己的努力而得到相应的报酬。于是，某些人拒领奖金、高报酬可能引发如下的效应：其他有重大发明创造者愿不愿意去领奖呢？其他在经营管理上有很大业绩的企业工作者愿不愿意接受高报酬呢？他们会不会认为自己一旦领奖或接受高报酬之后就会被别人嘲笑“在品格上不如某位放弃领奖或拒绝高报酬的人”呢？这种犹豫、这种疑惑、这种顾虑在客观效果上都是不利于社会经济的发展的。结果，受损失的是社会，是企业。假定有人领奖、有人放弃领奖，有人接受企业给予的高报酬、有人拒绝高报酬，那位放弃领取奖金或高报酬的人想过没有：这会不会使其他获奖者感到为难？使其他得到高报酬的人感到不安？效率标准和道德标准本

来是可以相容、可以统一的，这样一来，本来简单的事情又变得复杂了。

正确的做法如何？一是，该领奖的就领，该接受高报酬的就接受，这既符合效率标准，又符合道德标准。二是，如果某人认为奖金多了，报酬高了，那么不妨先领了再说，然后在其他场合再捐给公益事业，愿意捐多少就捐多少。这也可以在符合效率标准的同时，符合道德标准。

这里应当补充说明这样一点：如果社会上有些有奉献精神的人只愿辛勤工作而不愿领取奖金、高报酬，那么一方面需要肯定他们的工作成绩，肯定他们不计报酬的思想，另一方面则需要向他们说明，给予他们的奖金、高报酬是合理的，也是社会对他们工作成绩的肯定。不仅如此，这种奖励对社会上许多人有着激励作用，因为社会希望有更多的人能出色地工作，为社会作出更大贡献。所以应当奉劝他们收下这笔奖金、高报酬。这也就兼顾了效率标准和道德标准。

在这里，还有一个问题需要认真探讨，这就是奖励的规则问题。假定一个企业对自己的工作人员（包括高层管理人员在内）在企业盈利的前提下，究竟给他们多少奖励，这必须有规则可依，而规则的出台总是要经过一定程序的。在规则已被确认的条件下，一切按规则办理。事后可以根据实际情况修改这样的规则，这同样要经过一定的程序。违背了规则制定的程序，是不对的。这不仅起不到奖励本来可以发挥的激励作用，而且还会引发各种消极后果。

在这里可以提及一种古老的分配办法。假定由大家共享一锅菜或一张大饼，都要分成若干份，那么最公平的做法是：谁掌勺分菜或谁持刀切饼，谁就领取最后一份菜或最后一块饼。在谈到企业高管的报酬或奖励时，是不是也应当考虑这种做法呢？

五、个人自主性与人际关系的协调

在谈到效率的道德基础时，还有一个问题需要作进一步的探讨，这就是：是个人越有自主性，效率的增长潜力越大呢？还是个人的自主性越少，个人越是从属于某个团体、某个组织，甚至从属于整个社会，效率的增长潜力越大？

为什么会提出这个问题？这与效率的道德基础有关。在生产资料的技术性质和生产的客观条件为既定的前提下，在个人作为生产者、工作

者的文化技术水平已知时，如果个人有较大的自主性，那也就会有较大的积极性和创造精神，从而效率增长的潜力较大。这就是说，经济中自主的生产者、工作者越多，经济就越具有活力，经济增长的能力就越强，效率增长的潜力就越容易发挥出来，所以不能认为生产者、工作者的自主性越大对经济越不利。但从另一个角度来看，既然效率的源泉也在于人际关系的协调，在于人同团体或社会的适应，那么在个人从属于某个团体、某个组织，甚至从属于整个社会时，人际关系协调的可能性、人同团体或社会相适应的可能性也就越大，这岂不是表明效率增长的潜力越大吗？

其实，上述问题并不是不易弄清楚的。个人的自主性与个人对某个团体、组织，甚至社会的从属，可以相容并存，不能作出必然非此即彼、必须两者择一的结论。效率的道德基础，既包括了人的积极性和创造性的发挥，也包括了人际关系的协调与适应。只强调前一方面而忽视后一方面，或者，只强调后一方面而忽视前一方面，都是不对的。不能设想在个人从属于某个团体、组织，甚至社会，同时个人又缺乏自主性、积极性与创造性的情况下，效率会持续地而不是暂时地增长。也不能设想在个人虽有较大的自主性，而人际关系不协调、不适应的现象却不断加剧的情况下，效率会持续增长。因此，合理的情况应当是：既有个人的自主性，又有人际关系的协调与适应，两者不可偏废。个人对某个团体、组织，甚至社会的从属，与团体、组织、社会对个人的尊重，对个人发挥积极性、创造性的鼓励应当是并存的。这种并存保证了效率的不断增长。

那么，尽管个人自主性与个人对某个团体、组织，甚至社会的从属两者是并存的、相容的，两者之中是不是也有主次轻重之分呢？这可能又是一个有争议的问题。在经济思想史上，那种一味强调前者或后者的学说并不多见，常见的则是侧重于前者或侧重于后者的学说。自由主义经济思想与国家主义经济思想之争，或个人主义经济思想与集体主义经济思想之争，实际上都是围绕着上述问题而进行的。

然而，在经济思想史上的有关争论中，我们有时会看到，一方在反驳另一方时把讨论的主题扭曲了。表现之一就是：把个人主义说成是个人唯利是图或自私自利，把自由主义说成是个人为所欲为或摆脱任何约束，或把集体主义、国家主义说成是对个人自主精神、进取精神的否定或抹杀，国家或组织压倒一切，个人是无足轻重的。当然，并不是说在

经济思想史上不曾存在过持有上述主张的人，但应该说这些毕竟不是主流。主流依然是侧重于个人自主性的发挥还是侧重于个人对团体、组织，甚至社会从属的有代表性的学说。

个人自主性应当放在首位。团体、组织、社会都是由个人组成的。个人应当自重、自强，个人应有发挥自己的积极性、创造性的可能性，然后才能谈得上如何发挥这种积极性、创造性。团体、组织、社会对个人的尊重和对个人自主性的尊重，是个人对团体、组织、社会从属的前提。要使效率持续地增长，要产生超常规的效率并使之持续，个人对团体、组织、社会的从属应当是发自内心的，而不是强加的、被迫的。如果团体、组织、社会不尊重个人，不尊重个人的自主性，怎会出现个人发自内心的对团体、组织与社会的从属呢？要人际关系保持协调的状态，人与人之间也应当在各自自重的基础上相互尊重。

现实中的情况正是如此。一个人生活在社会中，他必然是社会的成员。一个人在社会中总会参加一定的团体、组织。家庭是最小的团体，一个人总属于某个家庭。如果他是职工，他会在一家企业中工作，也许他还加入工会。如果他是农民，他所在的那个村，或许有村民自治组织。如果他是城市居民，他从属于他所在的那个社区、街道。如果他是私营企业主或个体工商户，那么他有自己的协会之类的组织。总之，他既是社会的成员，又是某个团体、组织中的一员，为此，他必须尽可能地处理好人际关系，以求得相互协调，彼此适应。但与此同时，作为一个人，他有自己的愿望，自己的要求，自己待人处世的原则，他必须有自主性，然后才有积极性和创造性。换言之，他是有活力的。一个人的自主性，是他处理好人际关系的前提，也是他同团体、组织、社会协调与适应的前提。假定他连一点自主性都没有，纯粹被当做一件工具似的被别人所使唤、支配，他没有活力，没有生气，处理好人际关系又有什么意义？人际关系的协调、适应等又从何谈起？这不正说明个人的自主性同人际关系的协调相比，应处于首位吗？

进一步说，社会上有无数个个人，一个团体、组织中有若干个人，如果这些个人都有自主性，都有活力，都能发挥积极性、创造性，也都能够按自己的目标进行活动并力求同社会的目标、团体的目标相协调、相适应，那么人际关系必定处理得更好，效率的增长会更快，幅度更大，这不正是社会或团体所希望实现的吗？

以上的分析告诉我们，效率的道德基础是客观存在的。但效率的增

长既有可能是现实的，也有可能是潜在的，效率增长的潜力不一定能充分发挥出来。要发挥这种潜力，一要靠对人的自主性的尊重，以便人的积极性、创造性能得到发挥，二要靠人际关系的协调，靠人同团体、组织、社会的适应。

CHAPTER 3 FAIRNESS AND IDENTIFICATION

第三章 公平与认同

3.1 A Deeper Understanding of Fairness

3.1.1 A Rational Income Divide

The issue of fairness has been a perennial subject of study and contention in the history of economic theory. For quite a few people, the very existence of disparity of income and property demonstrates unfairness. On a superficial level this is not wrong. Since all are born equal, how does it come about that some are rich and others poor, that some have plenty and others little? The distribution gap does indeed reflect unfairness in society. But this is not the right way to look at things. If we look deeper, we must enquire: What are the causes of wealth and poverty, and how wide is the gap between them? Without clarifying these issues judgments on what is fair and unfair will be difficult.

For example, some get rich by dint of hard work whereas others are poor because they are too lazy to work, or indulge their every whim and squander all their money. Can we call this unfair? Similarly, suppose two people work in the same place. One works hard with outstanding achievements, so he earns much money. The other is lazy, with no achievements at all, so he earns little. Is this unfair? How wide must be the income disparity before it is considered unfair, and how narrow to be considered fair? There is much to be said on the subject and it is plain that judgment on fairness and

unfairness in income distribution will not be easy.

If equality of income and property is seen as a symbol of fairness, to suppose that fairness has been achieved if everyone has the same income and property is a more serious misinterpretation, and one that does great harm to economic development and efficiency. I have expressed my views on this topic in several of my books.¹ I outline below the main ideas about this question as set out in my writings:

First and foremost, fairness means equality of opportunity; i.e., in socio-economic life everybody begins from the same starting line and objectively there is no discrimination against anyone. Equalizing income and property is a manifestation of egalitarianism, which cannot be taken as fairness without distorting the concept. It is more reasonable to understand fairness as equality of opportunity.

Can fairness be understood as coordination of income distribution? Yes, to some extent it can, but we need to remember that coordination of income is not equivalent to equalizing income. Actually the concept of coordinated income distribution here implies a rational disparity of income, since the existence of a disparity is a form of coordinated income distribution. In addition, this understanding is compatible with seeing fairness as equality of opportunity. This is because it is only through engaging in economic activities on an equal opportunity footing that people truly get what they deserve in return for their efforts. Thus, although there is still an income gap, the size of the gap can be kept within reasonable bounds. Conversely, if there are no equal opportunities to engage in economic activities, an excessively large income divide will inevitably appear, causing uncoordinated income distribution.

This gives rise to a further question: Can equality of opportunity be realized? If not, fairness remains an empty phrase and the discussion is rendered meaningless, but to look at the question in such terms is to be too absolute. In real socio-economic life, people have different family and educational backgrounds and live in different places, so unequal opportunity is an objective fact of life. But this does

not mean we cannot draw close to equal opportunity through regulation by government. Government can do something about it, such as forbidding discrimination by law, setting up rules on fair and open competition, fixing penalties for unfair competition, etc. Even if equality of opportunity in the fullest sense cannot be realized, at least it is possible to gradually get closer and, by and large, the conditions for equal opportunity will appear. With effective government regulation, coordinated income distribution will gradually be realized.

Since coordination of income distribution implies shrinking income disparity; i.e., keeping the gap within reasonable bounds; and when fairness is seen as coordinated income distribution predicated on equality of opportunity, there is bound to be a gap. So, what constitutes a reasonable gap? How to decide whether it is reasonable or not? In my book *Ethical Issues in Economics*, I distinguish between the economic sense and the social sense of the term reasonable income gap, which is a key to the meaning of fairness at a deeper level.²

In the economic sense, the rationality or otherwise of the income gap hinges on whether or not income is distributed according to the profit principle. In a market economy situation, provided the income distribution is the result of activities of production factor suppliers in the market with equal opportunity as a prerequisite, and provided every supplier gets income distributed according to profit principle, then, irrespective of the size of the gap, the primary distribution can be regarded as reasonable and coordinated. If the government, from its policy and target considerations, deems it necessary to adjust the result of the first round distribution, it can reduce the gap by such measures as individual income tax and inheritance tax or by means of poverty-relief, subsidies, etc. The result of regulation by government, or secondary income distribution, however, does not negate the reasonable nature of the gap in the primary distribution, i.e. the distribution focusing on economic results. What the government adjustment of income distribution focuses on is whether or not the distribution is reasonable in the social sense.

Undoubtedly, to demarcate the boundary between rational and irrational income gap in the social sense is far more difficult than to do so in the economic sense. This is because:

Firstly, when coming to a judgment on whether the gap is reasonable in the economic sense one can consider whether production factor suppliers have, by and large, equal opportunities for market activities and whether their income is based on the profit principle. But in judging the disparity in its social sense, it is harder to find strict standards than it is with the economic sense.

Secondly, provided the income gap in terms of economic results is rational in the economic sense, irrespective of its size, the economic results it reflects will be efficiency increase, productivity improvement and increase in per capita income. Therefore we can say the existence of a gap that is rational in the economic sense will produce positive results, results that are perceptible within a short time frame.

However, if the income gap in the social sense is dramatically out of balance, it may lead to social instability, even if the gap is rational in the economic sense. But such instability cannot be perceived in the near term, since the problems accumulate over a long period, becoming more acute by the day before ultimately exploding. This shows the similar difficulty in judging the rationality of the income gap in the social sense on the basis of the results it produces. Despite this, given no other choice, one can still come to a judgment on the basis of whether it will lead to social instability.

One important aspect of making a distinction between the social and economic rationality of income gap is that it provides an objective basis for judgment on fairness, namely the existence and size of a gap. Moreover, it also considers people's feelings; i.e., whether they feel fairly treated or unfairly in the distribution. Such feelings will influence their level of satisfaction with their income, to what degree they accept the gap and further influence the level of social stability. In light of this, we need shift our focus to absolute income and relative income of individuals.

3.1.2 Individual Absolute Income and Relative Income

Before delving into this topic, we should first briefly review the points made by J. A. Geschwender.³

In his analysis, scholars make five hypotheses about why a social group can become dissatisfied and revolt.

The first hypothesis is absolute deprivation: When a group feels its living conditions are worsening, it will become dissatisfied and ultimately revolt.

The second is increased aspiration: Although the living conditions of a group are improving, the group's aspirations are growing faster than the pace of the former. This leads to discontent and revolt.

The third is relative deprivation: Although the living conditions of a group are improving, it notices that living conditions of other groups are improving faster. This leads to discontent and revolt.

The fourth is rise and fall: On the heels of improvement, a group's living conditions then go into decline. Since the process is irreversible, people will be dissatisfied and rise up.

The fifth is status inconsistency: Income level and living conditions are just two of many status attributes apart from educational status, career status, and racial equality status, etc. Therefore, even if a group experiences improved living conditions, if it believes its other status attributes to be inferior to those of other groups, it may still become dissatisfied and revolt.

Geschwender gave the example of the black Americans in the early 1960s. He argued that the black men's discontent and revolt could not be explained by the first hypothesis, since their living conditions were not worsening. Nor could it be explained by the fourth hypothesis, since their living conditions had not declined subsequent to improvement. The second hypothesis of increased aspiration could not explain it either, since, as Geschwender pointed out, this hypothesis had neither been proven nor refuted by any data.

That left only the third and the fifth. The third hypothesis, relative deprivation, was supported by the data, which showed that black Americans were dissatisfied with the society because by comparison with white Americans, they felt their own living conditions had not improved as much. The fifth hypothesis, status inconsistency, was also proven by the data. There was a widespread sense among black Americans at that time they were not treated equally with whites in terms of education, employment, income, etc. He concluded that a combination of the third and fifth hypotheses would provide a convincing explanation for the social instability of American society at that time. In addition, in Geschwender's opinion, the two hypotheses were the same in character, except that the fifth had richer content.

Although Geschwender's discussion was about the situation of black Americans in the 1960s, it remains inspirational for studies of how changes of absolute income and relative income may cause social unrest. The question of social unrest is one of great complexity since irrational income gap is just one among many possible influencing factors, and social unrest is not necessarily the result of an irrational income divide. People's living standards may rise and then fall, but even a small fall after a large rise may lead to social unrest, but this has nothing to do with the rationality or otherwise of any income gap. A more typical situation would be: Even if the income gap is constant, a decline in absolute income level across the board may lead to social unrest. However, social unrest is always to a great extent linked to change in relative income, since people are inclined to compare themselves with those around them in terms of income, employment, benefits, promotion opportunities, etc. Few will seriously consider the real meaning of "fairness" when they make such comparisons. For the most part, people consider themselves unfairly treated on the grounds of lower income, less good careers or fewer benefits than others. If the number of people experiencing feelings of unfairness is small this will not generally lead to social unrest, but if a great many do or if their level of dissatisfaction grows, this may develop into trouble. It means,

social unrest originates with the disappointment, complaints and dissatisfaction of some members of society when they deem themselves unfairly treated by society. The degree of individual's satisfaction with relative income refers to the extent of one's satisfaction or dissatisfaction when he compares his income with others. It is a concept different from the degree of individual's satisfaction with absolute income, namely, one's own income. Although the latter is the basis of the former, the two differ as regards how they influence social instability: The former is often more influential than the latter, since comparison is more likely to ignite feelings of unfairness and dissatisfaction with society.

For instance, under the planned economy system, despite limited productivity growth, very low personal incomes, frequent product shortages and rationing, the income divide was small and the degree of individual satisfaction with relative income was passable. The mindset of "everyone getting roughly the same" mitigated social dissatisfaction. "Leveled-down income" characterizes that time, but it did give people a sense of "fairness," albeit a distorted one.

With the change to a market economy, productivity and incomes improved, product supplies became sufficient and coupon rationing came to an end. However, because income improvement did not happen everywhere at the same rate, the income gap grew wider. As a result, the degree of individual's satisfaction with relative income fell, giving a sense of "unfairness" and social discontentment among some people, which could clearly impact social stability.

Then, how are we to regard the income gap in real life? It has always been a fundamental task to develop economy and raise the absolute income level of society's members. To achieve this goal, the government needs to employ certain adjustment measures to shrink the income gap without hampering efficiency increase, to rectify discrimination in socio-economic life, and to create equal opportunity conditions so as to reduce the sense of "unfairness" experienced in certain parts of society. Government also needs to educate people in

the true meaning of "fairness," to clear up misunderstanding so that they will no longer mistake "egalitarianism" for "fairness." The more that "fairness" is properly understood the greater the benefit to social stability.

Of course, it is not always easy to help everyone correctly understand "fairness" from their own rank and situation. People with different ranks and situations surely have different feelings on the issue. It is not hard to imagine that the question of "fairness" will continue to bother people so long as there is any income gap at all, whatever the government's efforts to regulate and to educate the public as to the real meaning of "fairness." Moreover, there is no objective standard to judge individual satisfaction or dissatisfaction with relative income. The degree of satisfaction may actually be higher when the economy or income per capita is at a low level, since all are in the same boat. In a situation where the economy and income per capita have grown but some incomes have improved more than others, the degree of individual satisfaction will inevitably decline and the sense of "unfairness" will intensify. As a result, society will have to work hard constantly to dispel such feelings, which, though genuinely experienced, are nevertheless a misperception.

It at least reveals one point to economists: Exploring the concept of fairness from the angle of the rationality of income gap leads only to a dead end and a new road must be opened up. In light of this, we will discuss fairness from a new angle: identification.

壹 对公平的深层次理解

一、收入分配的合理差距问题

公平问题在经济思想史中是一个反复被人们所研究和争论的课题。在不少人看来，收入分配有差距，财产持有状况有差距，都表明了不公平的存在。从表面上看，这种看法并不算错：既然人人生而平等，为什

么分配的结果却是有人有钱，有人没钱？有人钱多，有人钱少？分配的这些差距反映了社会中的不公平。但这种看法是不确切的。如果要深入研究的话，那就要询问：有钱没钱，原因何在？钱多钱少，因何而来？钱多钱少的差距有多大？这些疑问不弄清楚，很难得出公平还是不公平的论断。

比如说，有钱，是依靠自己出力挣的；没钱，是因为懒而不愿去工作，或者是恣意享受，大把大把地挥霍掉了，能说这不公平吗？又如，两个人在同样的环境中工作，一个人勤勤恳恳，成绩卓著，挣的钱多，另一个人疲疲沓沓，成绩平平，挣的钱少，能说这不公平吗？再说，收入差距多大可称做不公平，收入差距多小可算公平，这也是大可讨论的。可见，我们一下子很难就收入分配的差距作出公平还是不公平的判断。

反过来说，假定把收入的平均、财产的平均看成是公平，似乎只要人人收入、财产一样多就实现了公平，那将是更大的误解。这种误解对经济的发展、效率的增长都是十分有害的。

我已经在自己的好几本著作中就收入分配与公平问题发表过看法，¹现在先把我在那些著作中陈述过的观点作一些归纳：

公平首先意味着机会的均等，即在社会经济生活中，人们站在同一条起跑线上，客观上不存在对某些人的歧视。收入、财产的平均化是平均主义的体现。把平均主义理解为公平，是对公平概念的曲解。把公平理解为机会均等，要合适得多。

那么，能不能把公平理解为收入分配的协调呢？这种理解是有道理的，但需要指出，收入分配协调不等于收入分配的均等，实际上，收入分配协调已经包含了收入分配合理差距的意思，因为合理差距的存在也是收入分配协调的一种形式。加之，把公平理解为收入分配的协调，同把公平理解为机会均等是统一的。这是因为，只有在机会均等的前提下参与经济活动，人们才能真正凭借自己的努力程度而获得应有的收入，从而尽管收入分配有差距，但这种差距大体上能保持在合理的范围内。反之，如果人们是在机会不均等条件下参与经济活动的，那么收入分配差距的过大将会难以避免，其结果必然是收入分配不协调。

由此引起一个问题：能不能实现机会的均等？假定实现不了机会均等，那么公平就始终只是一句空话，讨论公平问题还有多大的现实意义呢？如果这样看问题，可能把问题绝对化了。应当说，在现实的社会经

济生活中，由于各人家庭背景不同，居住的地域不同，受教育状况不同等等原因，机会不均等是客观存在的。但这并不是说在政府的调节下不可能向机会均等的方向靠拢些。政府是可以有所作为的。例如，用法律来规定不得有歧视，规定竞争的公平性、公开性，规定对不公平竞争的处罚，等等，这样，即使不能完全实现机会均等，至少可以逐渐接近机会均等，大体上机会均等的条件也是可以出现的。政府的调节如果能做到这些，收入分配的协调在政府有关调节措施起作用的情况下也就可以逐渐实现了。

由于收入分配的协调意味着收入分配差距的缩小，即收入分配的差距大体上保持在合理的范围内，所以在把公平理解为机会均等条件下收入分配的协调时，收入分配保持一定差距是必然的。于是又引出另一个值得探讨的问题：什么是收入分配的合理差距？如何衡量收入分配差距合理还是不合理？我在《经济学的伦理问题》一书中，把收入分配差距的合理性区别为经济意义上的收入分配差距的合理性与社会意义上的收入分配差距的合理性。这是从较深层次上考察公平含义的一个关键性步骤。²

经济意义上收入分配差距的合理与否，取决于收入是否按效益分配原则进行分配。在市场经济条件下，只要收入分配是以机会均等为前提的生产要素供给者参与市场经济活动的结果，并且各个生产要素供给者都按照效益分配原则取得了收入，那么不管收入分配差距的大小，就收入的第一次分配而言，都属于收入的合理分配，从而都可以被看成是收入分配协调的表现。假定政府从政策目标的角度考虑，收入的第一次分配的结果仍需要加以调节，那么政府可以通过征收个人所得税、遗产税等方法，以及通过扶贫、救济、补贴等方法，使第一次收入分配后形成的差距缩小些。政府调节的结果就是收入的第二次分配的结果。但这并不排除经济意义上第一次收入分配所形成的差距的合理性。政府进行的收入调节所着重的是社会意义上的收入分配的合理与否。

毫无疑问，社会意义上的收入分配差距合理还是不合理的界定，要比经济意义上的收入分配差距合理还是不合理的界定困难得多。这是因为：

第一，在判断经济意义上的收入分配差距合理与否时，通常可以按照各个生产要素供给者是不是在大体上机会均等条件下参与市场经济活动，以及各个生产要素供给者是不是根据效益分配原则取得各自的收入

而作出判断。但在判断社会意义上的收入分配差距合理与否时，却找不到像判断经济意义上收入分配差距合理与否那样严格的标准。

第二，经济意义上收入分配的差距只要是合理的，那么不管差距有多大，在经济上所反映出来的结果将是效率的增长、生产力的发展、人均收入水平的提高。于是可以认为，经济意义上收入分配合理差距的存在将带来积极的后果。这一积极的后果在近期内就可以被观察到。然而，社会意义上收入分配的差距如果偏大，却会导致社会的不安定，而不问这种差距在经济意义上是否合理。加之，由于社会意义上收入差距偏大而引起的社会不安定，不一定是近期内就可以被观察到的，这往往需要经过一段时间，等到问题越积越多，矛盾越来越尖锐时，才会爆发出来。这就表明，要从所产生的后果方面来判断社会意义上收入分配差距的合理性，同样不是一件容易的事。尽管如此，我们在没有其他选择的情况下，仍然可以把收入分配差距的存在是否引起社会不安定看成是判断社会意义上的收入分配差距合理与否的一种依据。

把社会意义上的收入分配的合理差距同经济意义上的收入分配合理差距分开来论述，一个重要的意义在于：公平与否的判断不仅有客观上的依据，即收入分配差距的存在及其大小，而且也同每个人的自我感觉有关，即人们从收入分配的差距中感觉到自己受到了公平的对待呢，还是受到了不公平的对待？这种自我感觉会影响到个人对收入的满意程度，以及个人对收入分配差距的接受程度，进而会影响社会的安定程度。因此，我们有必要从收入分配合理性问题转入个人绝对收入与相对收入问题的研究。

二、个人的绝对收入与相对收入

在讨论个人的绝对收入与相对收入问题之前，让我们先回顾一下1964年格施温德（J. A. Geschwender）发表的下述观点：³

他认为，关于一个社会集团之所以会有不满，会奋起反抗，学术界曾经有过五种不同的假设。

第一种假设：当一个集团感到自己的生活状况越来越坏时，它将越来越不满意，终于起来反抗。这就是绝对贫困的假设。

第二种假设：虽然一个集团的生活状况比过去有所改善，但它的欲望也在增长，而且欲望增长的速度比生活状况改善的速度更快，于是它

也会感到不满，于是起来反抗。这就是欲望增长的假设。

第三种假设：虽然一个集团的生活状况比过去有所改善，但它同时注意到其他的集团的生活状况正以更大的速度在改善，于是感到不满，起来反抗。这就是相对贫困的假设。

第四种假设：当一个集团感觉到自己的生活状况比过去改善之后，接踵而来的却是生活水平的下降。由于生活水平的提高是不可逆的，于是人们对这种情形感到不满，便起来反抗。这就是先升后降的假设。

第五种假设：一个集团拥有许多地位属性，收入多少、生活状况好坏，只是这些地位属性中的两个，除此以外还有其他一些地位属性，例如受教育状况、职业状况、种族上的平等性等。一个集团即使自己的生活状况比过去改善了，但它如果感到自己在其他地位属性上仍不如其他集团，它同样会产生不满，进而起来反抗。这就是地位不一致性假设。

格施温德认为，以60年代初美国黑人为例，美国黑人为什么对社会不满而有反抗行为，不能用第一种假设来解释，因为他们的生活状况并非越来越坏；也不能用第四种假设来解释，因为他们的生活水平上升后并未发生逆转的情况。至于上述第二种假设，即欲望的增长比生活状况改善的速度更快，从而引起不满的假设，格施温德指出这既未被资料所证实，也未被资料所否定，所以无法用它来进行解释。于是剩下的只有第三种假设和第五种假设了。第三种假设，即相对贫困的假设，已被资料所证实，这表明美国黑人之所以对社会不满，是由于他们在同白人对比时，总感到自己生活状况的改善不如白人。第五种假设，即地位不一致性假设，也被资料证实了，因为当时美国黑人普遍感到自己在受教育、职业、工资待遇上不如白人。所以第五种假设可以同第三种假设一起，用来解释美国社会不安定的原因。此外，格施温德认为第三种假设和第五种假设在性质上是相同的，只是第五种假设所包含的内容更多一些。

尽管格施温德是就60年代初美国黑人的处境进行讨论的，但上述分析对于我们研究个人绝对收入和相对收入的变动对社会不安定的影响仍然有所启发。社会不安定问题的复杂之处在于：影响社会不安定的因素很多，收入分配差距不合理虽然会导致社会不安定，但社会不安定不一定来自收入分配差距不合理。以收入因素而言，比如说，人们生活水平先上升，后下降，即使是大上升，小下降，也会引起社会不安定，但这不涉及收入分配差距的合理与否。更为典型的是，即使收入分配差距不

变，如果绝对收入水平普遍下降，同样会引起社会的不安定。但无论如何，社会不安定在相当大的程度上总是同人们的相对收入变动有联系的。人们经常在收入分配、工作岗位、福利待遇、升迁机会等方面把自己与周围的人作比较。不少人并不能从自身的收入与别人的收入的对比中，或从自身的就业和福利状况与别人的就业和福利状况的对比中，去认识公平的真实含义。他们在同别人对比时，多半感到收入不如别人多，职业没有别人好，福利也不如别人，从而认为自己在这方面或那方面受到了不公平待遇。如果有这种不公平的自我感觉的人数较少，一般还不至于引起社会的不安定，但如果有了这种感觉的人多了，或他们不满程度在增长，那么这种情况就有可能发展为社会的不安定。这说明，社会不安定可能来自一部分社会成员自认为受到不公平待遇，来自他们在同别人相比后所产生的一种失望、埋怨、不满。个人的相对收入满意度是指一个人在同别人进行收入对比之后满意或不满意的程度，以区别于个人的绝对收入满意度，即一个人对自己的收入满意或不满意的程度。尽管个人绝对收入满意度是个人相对收入满意度的基础，但两者对社会不安定的影响大小是不一样的：个人相对收入满意度的影响常常会大于个人绝对收入满意度的影响，因为个人相对收入满意度涉及同别人的比较，从而更容易使人产生不公平感，产生对社会的不满。

比如说，在计划经济体制下，生产力发展受限制，居民的收入水平都很低，商品供应非常紧张，生活必需品要凭票证供应，但由于收入分配差距小，个人的相对收入满意度还过得去，人们相互比较后得出的较一致看法是“大家差不多”，于是对社会的不满就有所缓解。“低水平下的收入平均化”正是当时实际情况的写照，但它却给人们一种“公平感”，尽管这是一种被扭曲的“公平感”。

而在从计划经济体制逐步过渡到市场经济体制之后，生产力发展了，居民的收入水平普遍提高了，商品供应充裕了，生活必需品敞开供应而不再需要发票证了，但由于各人收入增长的幅度不一样，收入分配的差距扩大了，于是个人相对收入满意度的下降使一些人产生了“不公平感”，产生了对社会的不满，这显然会使社会的安定受到影响。

那么，应当怎样对待现实生活中的收入分配差距呢？发展经济，提高社会成员的绝对收入水平，始终是基础性的工作。此外，这既要靠政府采取适当的收入调节措施，在不至于妨碍效率继续增长的条件使得收入分配的差距有某种程度的缩小，特别要设法纠正社会经济生活中存

在的歧视现象，为接近机会均等创造条件，以减少社会上一部分人的“不公平感”，同时，也要正确宣传公平的含义，避免人们把平均主义当做公平，消除人们对公平的各种误解。社会上正确理解公平含义的人越多，越有利于维持社会的安定。

当然，要让各人从自身的地位与遭遇出发来正确地理解公平的含义，很不容易。地位不同，遭遇不同，感受必然不一样。因此，可以设想，只要存在着一定的收入分配差距，尽管政府采取了收入调节措施，尽管社会上对公平的正确含义作了不少宣传，但公平问题仍会长期存在，并会困扰着人们。这是因为，相对收入满意还是不满意始终没有一个客观的评价标准。甚至可以说，经济发展水平低和人均收入水平低时，人们的相对满意度可能还好一些，因为“你穷我也穷，大家都穷嘛！”经济发展水平提高了，人均收入水平上升了，在各人收入增长幅度不一的情况下，人们的相对满意度的下降是难免的，“不公平感”的增长也是难免的。结果，社会将不断地为消除这种尽管是扭曲的、但却是客观存在的“不公平感”而努力。

这对经济学研究者意味着什么？至少说明了这样一点：从收入分配差距合理性的角度来探讨公平问题，原来的路可能已经走到头了，再也深入不下去了，必须另辟新径。本书准备在研究新思路的探索中迈进一步：从认同的角度来讨论公平问题。

3.2 Meaning of Identification

3.2.1 Identification and Outlook on Common Fate

A person is a member of a group and the term identification refers to the relationship between an individual and the group. As a member of a group, an individual should feel it is his/her own organization, adapting to and coordinating with the group and with other members. In other words, identification means recognizing the self and the group as one, and being part of that entity.

Groups of whatever size are formed by a certain number of people. A country, ethnic group and society are examples of big

groups. A block, village, community, small enterprise, and a small family are examples of small groups. A family can be big or small depending on the number of members. But whatever the size, all groups face the question of whether its members identify with it or to what extent they do so in essence, not just superficially.

An individual probably belongs to several groups. For example, a college student is firstly a member of his immediate and extended family, then of a college, a department, a class, a team. If he joins a student association, he is an association member. Before college, he has been a member of a high school. According to his local origin, he is also a member of the association of fellow townsmen. If he has religious belief he will be a member of a religious group, and if politically active a member of a party. It goes without saying that he is a member of his motherland. Belonging to so many groups, he inevitably identifies with many, although to varying degrees.

The degree of identification reflects the level of concern a person feels for a particular group or the extent of the "oneness" experienced. The degree of group or society cohesion discussed in Chapter Two also reflects the extent to which an individual identifies with a group or society. The extent varies among different individuals and different situations. An enterprise is a case in point: Its employees, though all being members of it, have different degrees of identification with it, which means that their individual attitudes toward it and their passion for work vary. When the enterprise is booming, the differences are not so obvious, but when it encounters hard times, the different degrees of identification will become glaringly obvious. Employees with a low degree of identification are indifferent to the enterprise's current and future situation, and if it gets into real difficulties their only concern is to find a new job. Those who identify more with the enterprise feel real concern for its troubles, regard them as their own troubles and will do all in their power to help minimize them. In light of this, an alternative interpretation of identification is: Individuals regard the group as their own organization. They and the group form

a community sharing a common fate, honor and frustration— "we're all in this together." The greater the level of identification, the more obvious the belief in a common fate will be.

What makes an individual identify with a group cannot be merely summed up as "self-interest." Though this may be a consideration, on many occasions there are other considerations that transcend one's own interests. For instance, identification with a family or clan cannot be interpreted as self-interest. Some people join an academic association and greatly identify with it, not for any benefit they may derive but because of interest in the field or they respect and trust it, or out of a sense of duty to promote academic research. Joining a charity or public welfare organization may have nothing to do with self-interest but is motivated by a passion for such activity. Therefore, we cannot write off considerations beyond self-interest, since these factors may be more dominant in identification with a group.

Identification with a native country can better explain that self-interest is not necessarily a basis for identification, nor do people always identify with a group for this consideration.

We should bear in mind that country and government are two different concepts. Who exercises government power and whether they care about the people and protect the interests of the nation, is determined by the character of those in power. Citizens might support or even oppose some governments, but this has nothing to do with how they identify with their country. China's history has given many examples of this. In some dynasties, the ruler was incompetent, the court corrupt and people were opposed to the government, but they still loved their country and identified with it. Their opposition to the government was for national salvation. Although dissatisfied with or actually opposed to the government, in the face of foreign invasion citizens would risk death in fighting to save their country. So it is plain that self-interest is an inadequate explanation for identification: Patriotism, sense of national honor, society cohesion or national cohesion trump self-interest by a mile.

3.2.2 Identification and Interest Groups

The last section elaborated that on many occasions group identification is not spurred by self-interest, but this does certainly not imply that a person's interests do not play a role. There are many different types of groups, especially in the economic world. For instance, if some investors co-found an enterprise the relation of individual investors with the enterprise is bound to be profit-oriented. There is also an interest relationship between the enterprise and the employees working for it.

We can analyze such interest-oriented relations further. Sometimes people use the term "interest group" to describe such relations, but its meaning is not very precise and there are different interpretations of the term. But a generally agreed view is this: people who share the same or roughly the same social, political and economic interests, and who accordingly have similar propositions and aspirations, work together to maintain and expand their interests and thus form, tangibly or intangibly, an interest group.⁴

In his famous work *An Economic History of Modern Britain*, J. H. Clapham illustrated the nature of interest groups by citing the examples of the West Indies interest group and that of mine-workers in British history. He pointed out the long tradition of interest groups. The West Indies interest group, a lasting and powerful political group, was formed by people living in London but with links to the sugar producing British colonies of the West Indies. As to the mine-workers, in the 18th century, isolated from urban life, they kept some old clan traditions, refusing to marry with the outside world and seldom going to church. Even in the mid-19th century when they had moved from the mine area into towns, they remained isolated and had little to do with other manual workers.⁵

The two interest groups in Clapham's book are similar to classes or social ranks. But both in history and in real life, some interest groups cannot be pigeonholed as class or rank groups. In his

Democratic Ideals and Reality, H. J. Mackinder pointed out the important role of dialect and education in forming interest groups: Speakers of the same dialect were more likely to congregate, and a society with diverse dialects was likely to have different groups. The same went for education. In England, the professional and upper class and landowners went to the same schools and universities, and important men of business circle sent also their children to the same institutions.⁶ Of course, after graduating, they belonged to the same group, a group that cannot be defined in terms of class or social rank but of interests. Sometimes interest groups have a tangible form, but in most cases they do not.

One point is certain, namely that in analyzing individual identification with a group, we can approach it from the perspective of interests, of non-interests, or of transcendence of interests. Since an interest group does not equate to class or social rank, an individual can belong to more than one interest group. Take, for example, a number of privately owned food production and export enterprises in a region. In terms of export production and operation, the owners have interests in common with their business counterparts in other forms of ownership, so they can be included in the same interest group. In terms of food production and operation, the owners have common interests with other food producers and can be included in the same interest group. In terms of private ownership, they have interests in common with privately owned enterprises in other regions and can be included in the same interest group. In terms of local enterprise, they can be included in the same interest group with all other enterprises in the region. This situation is a good illustration of the point raised above that one individual may belong to several different groups and identify with all of them.

The different groups one belongs to are not necessarily mutually incompatible. One group's gain is not necessarily built on the loss of another group. Different interest groups do have conflicts, but they also have common interests. If the economy is developing, there is

every reason to believe that all groups can benefit. In this way, the significance of identification can be further elaborated: Even if an individual belongs to different groups and identifies with them all there is not necessarily a conflict. Even if he does act from interest considerations, it is still possible for him to identify with this or other groups.

The above analysis took a social perspective, but things might appear different when taking a historical perspective. In the course of history, the relative status of an interest group will change, rising or falling, its power waxing or waning. Especially in periods of social disturbance, some interest groups will leave the stage of history and new ones emerge. Conflicts between the old and new groups undeniably exist. Old groups feel they are less and less valued, are being overtaken by the new ones, and are losing more and more whilst the new ones are gaining. But is this surely to be expected as the inevitable result of social change? Not necessarily. The rise of certain interest groups and the decline of others is just one possible result of social change. The result might be that an old interest group, after some differentiation, gradually integrates with a new one and forms a different new interest group. The interests of the old and the new are both reflected in the integrated group, but with a different weighting.

Now we may discuss how people's identification changes. Membership of a group or of an interest group is not necessarily a permanent thing. Changes in an individual's income, status, outlook and aims may alter the extent of his identification with a particular group or interest group: As this identification diminishes, he may become estranged from the old group and join a different one with which he increasingly identifies. It is understandable that such things happen, especially in periods of social change, with changes in the relative status of old and new interest groups and the likelihood that they will merge.

3.2.3 Identification and Factors Beyond Interests

We have seen that what causes an individual to identify with a group cannot be merely summed up as self-interest. Although this factor is a consideration on some occasions, on others considerations beyond one's own interests weigh much more heavily. Therefore, we should explore the relationship between these latter considerations and identification.

To explain what these considerations are, we need begin with the relationship of an individual with a group. An individual's membership of a group can be classed into four different situations: (1) non-optional; (2) optional; (3) from non-optional to optional; (4) from optional to non-optional. All of the four situations actually exist in reality.

Non-optional: One belongs to a group not from free will but because there is no room for choice. For example, one cannot choose family, birthday, birth place and how and where he lives and studies in childhood. One's relationship with these places and groups are not subject to choice.

Optional: Having reached a certain age a person is free to make choices regarding education, job, and life, also which groups to be part of. For example, a high school graduate can choose his/her future major, college, degree, career and, as a consequence with which groups he/she wants to be linked. He/She is free to choose a spouse and thus becomes a member of the spouse's family. The same goes for decisions on political party, social organization or religion, the kind of people he/she wants to make friends with, therefore becoming a member of those groups.

From non-optional to optional: This is relatively unusual but a typical case would be a change of nationality. One's nationality by birth is non-optional, but one may change it in adulthood, shifting from nation A to nation B. Correspondingly, he has a further group with which to identify, namely nation B. For another example, in a

society where careers are hereditary, it is a convention for a son to inherit the career of his father. But later on, he may change his career for some reason and it follows that the group with which he identifies will also change.

From optional to non-optional: This is even more uncommon, but a possible example would be clandestine religious sects or mysterious organizations whose members are not permitted to quit. Before joining such a group the individual is free, but having made the choice to join lifelong identification is obligatory and quitting is impossible.

Non-optional membership of a group has nothing to do with either interest or interest-transcendent considerations, since belonging to the group is not a choice. People consider interest or interest-transcendent factors mainly in situations where they are free to join in or leave a group. On some occasions, interest weighs heavily with them, on other occasions interest-transcendent factors are the more important, and on others both types play a role. There is nothing strange about this. After all, man is both "social man" and "economic man." So his considerations are multi-faceted, and he may consider any identification with a particular group and the extent of that identification from many angles.

There are five types of interest-transcendent considerations in optional identification with a group.

One, emotion: For instance, in choosing a spouse and thus being a member and identifying with the spouse's family, emotion is often a major factor.

Two, faith or convictions: For example, when one is free to choose which religious group or political party to join, identification in these aspects plays an important role.

Three, reasoning: After careful consideration, one believes that compared with other groups, the group chosen is more suitable for practice of his/her ideals or more consistent with his/her own moral standards. For instance, someone feeling a responsibility to develop the economy, education and culture of his hometown or believing

charitable causes beneficial to society will choose to be part of group he finds better suited for realizing his goals and will identify with it greatly.

Four, personal enthusiasms: This consideration may prompt someone to join an association or club.

Five, a sense of honor: One may choose to become a member of a group enjoying social prestige and respect in order to share in these things by association.

The above mentioned five interest-transcendent motivations in free-choice situations (emotion, beliefs, reasoning, personal enthusiasm, sense of honor) are not mutually exclusive: indeed they may overlap. For example, identification with a particular group might derive from one's belief, reasoning, sense of honor, or all three. In sum, in free choice situations, interest-transcendent factors cannot be neglected when considering identification.

Having discussed the meaning of identification, we can proceed to further discuss sense of fairness with a view to a new understanding of the concept.

贰 认同的含义

一、认同与共同命运观

人是群体中的一员，认同是就个人同群体之间的关系而言的。认同的含义是：一个人作为群体中的一员，他把这个群体看成是自己的组织，他不仅同这个群体协调、适应，而且也同这个群体中的其他成员彼此协调、适应。换言之，认同就是一个人承认自己同群体是一致的，是合为一体的。

群体一般也可称之为团体，它是若干人的组合。群体有大有小。有的群体很大，例如国家、民族或全社会。有的群体很小，例如一条街道、一个小村庄、一个小社区、一个小企业、一个小家庭。家族也是一个群体，它可大可小，大的家族人数众多，小的家族人数不多。群体无

论大小，无论成员人数多少，都存在成员对本群体是否认同或究竟认同到何种程度的问题。这里所说的认同，是实质上的，而不是形式上的。

社会上有各种各样的群体。一个人生活在社会之中，可能是若干个群体的成员。以一个大学生来说，首先，他是自己家庭的一员、家族的一员；其次，他是学校的一员，学校中某个院系、某个年级、某个班组的一员；如果他加入了某个学生社团，他还是这个学生社团中的一员；他在读大学之前，毕业于某所中学，那么他也是自己曾经就读过的那所中学的校友；他的籍贯是某省某市某县或某个乡镇，从同乡这个角度来看，他也是同籍贯者组成的群体中的一员；他如果有宗教信仰，他就成为那个宗教团体的一员；他如果加入了党派，他就成为那个党派的一员。至于他作为国民，是国家这个大群体中的一员，那就不在话下了。一个人作为这么多的群体中的一员，认同必然是多重的，只不过对不同的群体，认同的程度有所差别而已。

认同程度的高低反映了一个人对某个群体的关切程度，或他对某个群体“视为一体”的程度。第二章所谈到的团体凝聚力的大小、社会凝聚力的大小，就是成员们对群体的认同程度高低的反映。认同程度因人而异，也因客观形势不同而异。以一家企业为例，企业中有若干名职工，所有的职工尽管都是企业这个群体的一员，但由于各人的认同程度不一，各人对待企业的态度和工作热情也就不一样。在企业兴旺发达时，职工们认同程度的差别可能表现得不很明显。假定企业因某种原因而陷入了困境，职工们认同程度的差别就会显著地反映出来。比如说，有的职工对企业的认同程度较低，他们不关心企业的现状和前景，企业遇到困难了，他们就竭力寻找自己新的去处。也有的职工对企业的认同程度较高，他们关心企业的困难，认为企业的困难就是自己的困难，于是出主意，想办法，并在自己的工作中尽心尽力，以便减少企业的困难。可见，认同的另一个解释就是：群体的一员把群体看成是自己的组织，他同这个群体形成了“命运共同体”，一荣俱荣，一损俱损。认同程度越高，俱荣俱损的共同命运观就表现得越明显。

个人对某一群体的认同，不能简单地用“利益”二字来概括。认同，固然有利益方面的考虑，但在许多场合，还有超越利益的考虑。不妨举几个常见的例子来说明。例子之一是：一个人属于自己的家庭、家族，他对家庭、家族的认同，是不能用“利益”二字来解释的。另一个例子是：一个学术团体，如某某学会、某某研究会之类的组织，有若干成

员，这些成员之所以参加某一学术团体，并对它有较高度度的认同，不一定同利益有关，他可能是出于对学术的兴趣、爱好，或出于对该学术团体的尊重和信任，也可能出于一种责任感，即认为自己有责任振兴学术。还可以举一个例子：一个人参加了某个公益团体、某个慈善组织，他热心于公益、慈善事业，而根本不考虑什么利益。因此，超越利益的考虑是不能抹杀的。有各种各样的群体，个人对某些群体的较高度度的认同，超越利益的考虑可能占据主要地位。

怎样解释一国国民对国家这个群体的认同呢？这个问题更能够说明利益不一定是认同的依据，也不一定是出于利益的考虑，人们才认同群体。

要知道，国家和政府并不是一个概念。政府由谁掌权，掌权者是否关心国民，是否维护国家的利益、国民的利益，依掌权者的性质而定。国民可能拥护某届政府，也可能不拥护某届政府，甚至有可能反对某届政府，但这与国民是否认同国家不是一回事。历史上经常出现这样的情况。某些朝代，君主昏聩，朝政腐败，国民同政府处于对立状态。但国民是爱国的，对国家是认同的，国民反对政府，是为了拯救国家。历史上也经常发生这样的事，尽管国民不满意政府，甚至同政府相对立，但在外族入侵，国家处于危急关头时，国民仍奋不顾身地抗御入侵者。由此看来，国民对国家的认同绝不是用“利益”两个字就能作出解释的。爱国心、国家的荣誉感、社会的或国民的凝聚力远远超越对利益的考虑。

二、认同与利益集团

以上谈到了在某些场合，人们对某些群体的认同不是从利益的角度来考虑的，但这并不意味着利益关系在认同中没有作用。由于群体是多种多样的，经济领域内的群体为数甚多，例如，一些投资者共同发起组建一个企业，投资者个人同这个企业之间的关系肯定属于利益关系之列；职工在企业中工作，他们同这个企业之间也存在着利益关系；等等。

关于利益关系，还可以作进一步的分析。人们有时使用“利益集团”一词，实际上，“利益集团”一词的含义不是很明确的。究竟什么是利益集团，解释不一，但大体上形成这样一种看法，即社会上有一些人，彼此有着共同的或基本上一致的社会、政治、经济利益，因此他们往往

有共同的或基本上一致的主张和愿望，使自己的利益得以维持与扩大，这些人有形或无形地构成了一个利益集团。⁴

克拉潘（J. H. Clapham）在其名著《现代英国经济史》中曾以英国历史上的西印度利益集团和矿区工人利益集团为例来说明利益集团的性质。他指出，“利益集团”是历史留下的一种传统，比如说，西印度利益集团就是由居住在伦敦但又与产糖的英属西印度殖民地有关的人们所组成的一个集团，这是一种绵延不绝的、强有力的政治势力。至于矿工们，在18世纪内，他们自成一体，与城市生活隔绝，他们有些还保留了古老的氏族传统，不与外界通婚，很少上教堂，甚至到了19世纪中叶，他们不住在矿区而搬到城镇居住了，他们仍然是一个封闭性的集团，很少与其他手工业者们来往。⁵克拉潘列举的这两个利益集团类似于阶级或等级，但历史上和现实生活中有些利益集团是很难套用阶级或等级这样的概念的。麦金德在《民主的理想与现实》一书中，曾提到方言与教育在利益集团的形成中起着重要的作用。比如说，同一种方言会使得使用这种方言的人结合在一起，一个社会中如果有多种方言，那就会形成若干个不同的集团。受教育的情况也如此，在英格兰，专业人员上层与地主出自同一所学校、同一个大学，工商界头面人物也把自己的子弟送到这个学校中来。⁶可以设想，这些人毕业以后便成为同一个集团中的人，这就很难用阶级或等级概念来替代利益集团。利益集团可能是有形的，但多数却是无形的。

在讨论个人对群体的认同时，既可以从利益关系上进行分析，也可以从非利益或超越利益的角度进行分析，但不能仅仅从利益关系上考虑，这是可以肯定的。由于利益集团不等于阶级或等级，所以一个人可能既属于这一利益集团，又属于第二个或第三个利益集团。比如说，假定某一地区有一些私营企业主经营食品的出口生产和经营。就出口商品的生产和经营而言，这些企业主同其他所有制形式的企业主有着共同的利益，他们可以归入一个利益集团；就食品的生产和经营而言，这些企业主同其他从事食品生产和经营的企业主一样，有共同的利益，他们也可以归入一个利益集团；再就私营企业而言，这些企业主同其他地区的私营企业主之间也有共同的利益，他们又可以归入一个利益集团；而就同一个地区的企业而言，所有这些企业都有地区的利益，于是同样可以归入一个利益集团。这正同以上所说的一个成员可以属于若干个群体或团体，从而将同各个群体或团体分别发生认同关系一样。

一个人属于不同的群体，而这些群体不一定是彼此不相容的。同样的道理，一个人被列入不同的利益集团，但这些利益集团之间也不一定是不可协调的。不能简单地认为这一利益集团得到的好处必定以另一个利益集团受到损失为条件。不同的利益集团之间固然有矛盾，但也有共同的利益。如果经济是增长的，完全有理由相信这些利益集团都会在经济增长过程中受益。认同的意义也可以从这里得到进一步的说明。尽管一个人可以属于不同的群体，与各个群体之间都发生认同关系，但这也可以是不冲突的。一个人，即使是出于利益上的考虑，那么也有可能既认同这个群体，又认同其他群体。

以上是从社会的横截面所进行的分析。如果从历史的角度，从纵向进行分析，情况可能有所不同。这是因为，社会是发展的，历史是一个过程，在这个过程中，各个利益集团的相对地位会有升有降，各个利益集团的力量也有增有减。特别是在社会变动时期，总有一些利益集团渐渐退出历史舞台，同时又会出现一些新的利益集团。新老利益集团的冲突往往是客观存在的，不容否认。老利益集团会感到自己越来越不受重视，感到新利益集团在超过自己。老利益集团也会认为自己失去的越来越多，而新利益集团得到的却越来越多。这种情况不值得奇怪，因为社会变动的结果正是这样。但是，是不是社会变动在利益集团相互关系中所造成的结果只可能这样呢？不一定。一个利益集团兴起而另一个集团衰亡，只是社会变动的一种结果。可能还有另一种结果，即在社会变动的过程中，老利益集团在经过分化之后逐渐融入了新利益集团，并与后者一起形成了另一个利益集团。新老利益集团融合而成的另一个利益集团往往既反映了老利益集团的一部分利益，也反映了新利益集团的一部分利益，只是这一部分所占的比重和另一部分所占的比重不一样而已。

由此涉及人们的认同的变化。人作为某一群体或某一利益集团的一员，不是永恒不变的。一个人自身的收入、地位、观念和目标等的变化会引起他对某个群体、某个利益集团的认同程度的变化，也会使他同原来所属的某一个群体渐渐疏远，认同程度渐渐降低，而使他参加或归属于另一个群体，对后者的认同程度渐渐提高。特别是在社会变动时期，随着新老利益集团相对地位的变化，随着新老利益集团可能的融合，人们对某一利益集团认同程度的下降或对另一利益集团认同程度的上升，也是可以理解的。

三、认同与超越利益的考虑

正如以上已经指出的，个人对自己所属的某一群体的认同，不能简单地用利益关系来概括。认同固然在某些场合有利益方面的考虑，但在另一些场合则出于超越利益的考虑，甚至在某些情况下，超越利益的考虑要比利益的考虑重要得多。因此，我们有必要在这里就认同与超越利益的考虑之间的关系作较深入的探讨。

什么是超越利益的考虑？应当从一个人与某个群体之间的关系谈起。一个人之所以会成为某个群体的成员，大体上可以分为四种不同的情况：

- (1) 不可选择的；
- (2) 可选择的；
- (3) 由不可选择的变为可选择的；
- (4) 由可选择的变为不可选择的。

这四种情况都存在于现实生活之中。

不可选择的是指：一个人之所以属于某个群体，是不以个人意志为转移的，他对此没有选择的余地。例如，一个人出生在某个家庭、某个家族，他本人无法选择。一个人出生于何地，祖籍是何地，年幼时生活、学习于何地，从而同什么样的地区有关，同什么样的群体有联系，这也是不可选择的。

可选择的是指：一个人在达到一定年龄之后，在学习、工作、生活方面自己可以作出选择，对于参加什么样的群体也有自己的主意。例如，一个人在可以选择升学志愿的前提下，他选择什么学校、什么专业，取得何种学历、学位，将来从事何种职业，从而会同什么样的群体发生关系，这些都是可以选择的。在婚姻可以自主的条件下，一个人选择什么人作为配偶，从而成为配偶的家族中的一员，这同样属于可以选择之列。更为普遍的是：一个人参加什么党派、什么社会团体，信仰什么宗教，经常同什么样的人交往从而成为某个群体中的一员，这些都取决于本人的选择。

由不可选择的变为可选择的，则是一种比较特殊的情况。一个常见的例子是国籍的更换。一个人的国籍，出生时不依他本人的意志为转移，但成年之后却有可选择的机会：由甲国的国民变为乙国的国民，相应地，他所要认同的群体也就增加了一个，即除甲国之外，还有乙国。

又如，在职业世袭的社会中，子承父业被认为是惯例，不依他本人的意志为转移，但以后，他可能出于某种考虑，变更了自己的职业，这样，他所要认同的群体也就改变了。

由可选择的变为不可选择的，也许是更加特殊的情况。比如说，某些秘密的教派组织或其他带有神秘色彩的团体，是不允许自己的成员脱离的。一个人在未加入这种组织或团体时，是自由的，但一旦他作出了选择，成为这种组织或团体的成员后，就必须终身认同，不得离去。

就一个人不可选择地成为某一个群体的一员来说，这就谈不到什么利益或超越利益的考虑，因为他是不由自主地从属于这个群体的。利益的考虑或超越利益的考虑主要出于可以选择的个人与群体的关系中，即一个人在经过考虑之后，为什么会选择这一群体而不是另一群体，为什么会放弃这一群体而加入另一群体，总是有自己的想法的。在某些场合，利益的考虑是主要的，在另一些场合，超越利益的考虑是主要的，或者利益的考虑与超越利益的考虑起着同样重要的作用。这并不奇怪。既然人不是单纯的“经济的人”，而是“社会的人”，所以人的考虑是多方面的，人对某一群体的认同和认同程度的高低也就会从多方面考虑。

在人对某个群体的认同可以作出选择时，超越利益的考虑大体上可以分为以下五种：

一是出于某种感情。比如说，在一个人可以自主地选择配偶的场合，他之所以会成为配偶的家族中的一员并同配偶的家族有认同关系，感情因素往往是主要的。

二是出于一种信仰或信念。比如说，一个人在可以作出自由选择时，为什么他会参加某个党派或某个政治团体，为什么他会信奉某个宗教，这种认同在很大程度上同信仰或信念有关。

三是出于一种理性的选择。这里所说的理性的选择，是指一个人经过考虑，认定自己所选择的某个群体与其他群体相比，更适合于实现自己的理想，或更符合于自己的道德判断标准。比如说，一个人认为自己有责任帮助家乡发展经济、教育或文化，或者一个人认为发展慈善事业是有利于全社会的，当他发现某个群体更加适合于从事此项工作时，他便作出选择，参加这个群体，对它有高度的认同。

四是出于个人的兴趣和爱好。出于这种考虑，他可能选择某个协会或俱乐部，成为其中的成员。

五是出于一种荣誉感。这是指，某个群体在社会上的声望高，受人

们敬重，一个人认为自己如果能成为这样群体中的一员，是一种荣誉，于是他便作出这种选择。

以上所说的五种在个人可以选择时的超越利益的考虑（感情因素、信仰或信念、理性的选择、个人兴趣和爱好、荣誉感）并不是相互排斥的，它们之间可以有交叉、重叠。比如说，一个社团的成员对本组织的认同，从超越利益的角度考虑，既可能出于一种信念，也可能同时出于理性的选择，还可能出于一种荣誉感，也许三者兼有。总之，认同在个人可以选择时，超越利益的考虑是不可忽视的。

在对认同的含义有了上述了解之后，我们就可以进而讨论公平感的问题，并可以对公平概念有一种新的认识。

3.3 The Relationship Between Fairness and Identification

3.3.1 Individual Sense of Fairness in a Group

Where should we look for fairness criteria? As previously concluded, it's hard to find answers if we confine the analysis to income distribution and income gap. From the perspective of either absolute or relative income there is no objective and standardized measurement for fairness. As for the perspective of equal opportunity, the difficulty lies in defining an equal start line, since in reality not all start from the same. Therefore, we need approach the question of fairness from a different angle, and perhaps identification may lead us to the answer.

To put it simply, fairness is based on an individual's identification with a group. The more its members identify with the group, the greater sense of fairness they will have. Conversely, the less they identify with it, the weaker their sense of fairness will be. If members do not identify with their group but nevertheless remain part of it, they are likely to have no sense of fairness at all.

Why is there such a correlation between the level of identification

and sense of fairness? Through his interpersonal relations with other group members an individual member will get a sense of his position and other members' attitude toward him. If he gets along with others and handles those relations well, he will have greater identification with the group and stronger sense of fairness. Conversely, if he fails to maintain harmonious relations with others, always feeling being left out in the cold, marginalized or discriminated against, he will certainly have little identification with the group, giving rise to a sense of unfairness. From the perspective of the relation between individuals and their group, the sense of fairness or otherwise reflects the degree to which the individual identifies with the group.

Groups can be big or small, comprising different numbers of individuals. We may start our analysis with small groups and work our way up.

The family is possibly the smallest group. Being a member of a family is not usually a matter of personal choice, but an individual's identification with the family is a different matter. Provided there is strong family identification, he will not quibble over differential treatment of him, for example parents favoring a sibling. A sense of fairness comes from identifying with the family itself. Of course, there are exceptions: People whose relations with family become strained or whose identification decreases when they find themselves less well treated than a sibling. Of course, such occasions are not very common. Generally, despite some sense of unfairness, it does not decrease his identification, and the individual still loves his family.

In an enterprise, big or small, employees' sense of fairness is directly linked to the degree of identification with this group. There may be different salaries for different people, different promotion opportunities and different levels of labor intensity. As long as there are such differences, even though rational in an economic sense, employees may not see this rationality as fairness. What if there were no differences? Some people would probably regard the lack of differential in salaries and benefits as unfairness. Only from the angle

of individual identification with the group can we get to a reasonable explanation of sense of fairness.

We may say, therefore, that when employees identify highly with the enterprise and their salary differentials are economically rational, they will accept such differences and have no sense of unfairness. Even when salary differentials are not so rational economically and a sense of unfairness is aroused, provided employees identify with the enterprise and can voice their opinions via proper channels this need not give rise to disharmony in employee-enterprise relations. Conversely, if employees have little or no identification with the enterprise, they will have a sense of unfairness even if the salary difference is economically rational. If the difference is not so rational economically, staff with low or no identification will have a strong sense of unfairness and may even go against the enterprise.

Stepping up the scale, society is a large group in which an individual is just one of countless individual members. But irrespective of that society's size, the individual's level of identification with it will influence his judgment on whether he has had fair treatment in many areas, including income, job, education and social status. Through comparison with other members he will form his sense of fairness or unfairness. Assuming a high level of identification with society, he will accept rational differences in those respects and will not have a sense of unfairness. He will express his dissatisfaction but will not go against society. The sense of unfairness increases as social identification decreases and vice versa. In other words, the higher the social identification, the stronger one's sense of fairness and the weaker the sense of unfairness.

3.3.2 Further Explanation on the Correlation Between Fairness and Identification

Based on the above examination of the correlation between

fairness and group identification, we can proceed to further explanation.

Firstly, although the above analysis has shown us that the degree of identification directly produces a cause of sense of fairness or unfairness, it does not deny the point that income gap rationality is related to fairness. Nor does it deny the proposition that equal opportunity implies fairness. The latter two concepts, namely, rational income gap and equal opportunity, are useful for understanding the meaning of fairness, except that their limitations in judging fairness standards do not facilitate further exploration of the fairness issue. Therefore we must return to the identification perspective so as to make up for what is lacking in previous studies. In addition, as previously stated, even if the income gap is rational, if members have little identification with the group they will still feel it unfair. Conversely, when their identification is great, even if the income gap is not so rational, they will still accept the gap, express their opinions, and not go against the group. This is enough to show that income gap rationality is too limited to be a criterion for fairness.

Secondly, groups can vary greatly in size. The smaller the group, the easier it is for an individual to identify with it, and the more helpful that level of identification is in showing the source of a sense of fairness or unfairness. It is a little difficult for members to identify with too large a group and the degree of identification will be of less importance in explaining fairness or unfairness. Take the case of two different enterprises, one with tens of thousands of employees and the other with fewer than one hundred. Staff in the larger one may find group identification more difficult than do those in the smaller one. Correspondingly, those employed in a small enterprise are more likely to have sense of fairness based on their high degree of identification; those employed in a large enterprise are less likely to have a sense of fairness and more likely to feel unfairness.

Thirdly, if employees find it difficult to identify with a large enterprise and producing a sense of fairness is difficult, does it not

follow that citizens will find it difficult to identify with their country, this being a group much larger than an enterprise? And would it not also follow that for citizens to have sense of fairness would be difficult? But as also mentioned above, citizens' identification with their country is different from employees' identification with their enterprise, since the latter is based on interests and the former on interest-transcendent considerations. Therefore, even though a country is much bigger than an enterprise, this does not make it harder for citizens to identify with a country. Interest-transcendent considerations play an important role. If a big enterprise can cause its employees to identify with it from interest-transcendent considerations, a high degree of identification will more easily be achieved.

Fourthly, one can be member of several different groups—family, community, company, academic society, association or club, to name just a few. No matter the group, all will engender a feeling of fair or unfair treatment within the group. Therefore, a sense of fairness is multi-sourced, and the number of groups will determine how many kinds of fairness or unfairness the individual senses. He may feel one group to be fair, another group unfair, and other groups to have varying degrees of fairness, from minor to extreme. To an extent this is related to group size: the smaller the group, the more easily its members coordinate with each other and vice versa. On the other hand, it is linked to the nature of the group, and to whether its individual members are in it for the sake of their interests. The more important to them such considerations are, the harder it will be for the individual to identify with the group and the greater the sensitivity to fairness and its opposite. Conversely, the more important the interest-transcendent considerations, the easier group identification becomes and the less the sensitivity to issues of fairness.

Fifthly, precisely since fairness is linked to social stability, an acute sense of unfairness may lead to social instability. It will be conducive to the maintenance of social stability and reduction of

destabilizing factors if the correlation between fairness and identification is clearly understood, since a sense of fairness or unfairness comes from more than just income differences (including individual absolute income level and income gap) or equal or unequal opportunities. The more a society is in tune with its members and the more its members identify with it, the easier it will be to reduce any sense of unfairness and the more stable the society will be. This is a seemingly indisputable conclusion, but achieving such social coordination and group identification so that members identify highly with society is no easy matter. Those working in social coordination should make a particular effort to solve this problem.

Sixthly, if an individual joins a group for interest-transcendent considerations, it is very likely that this group has lofty ideals and aims and it is these factors that inspire great identification from its members. However, if the group's leaders or responsible persons do not work hard to realize these ideals, do not live up to their words or are incompetent to achieve the goals, the members will be disappointed, seeing the truth. As the level of identification falls, the members' sense of unfairness will intensify, thinking that they have been cheated and taken for fools by those above them. They feel duped by the leaders and squeezed out or discriminated against by their followers; in consequence, their sense of unfairness grows more acute by the day.

3.3.3 Identification with Fairness of Starting Point and Fairness of Outcome

Fairness of starting point and fairness of outcome are not the same concept, but identification with the two can be unified.

The general explanation of starting point fairness is that all stand at the same starting line. Equality of opportunity implies fairness of starting line. But in reality, owing to differences of family background,

place of residence or educational level the same starting line for one is difficult, so equality of opportunity may not necessarily be achievable.⁷ Even so, equality of opportunity is always better than discrimination. The fact that laws do not discriminate against anyone is a major stride toward achieving a fair starting line. If jobs or trade are open to every person with the requisite qualifications, and if the discrimination and exclusiveness in careers and competition are eliminated, this will be the best form of equal opportunity we can achieve in real life. This is the only way for us to interpret starting point fairness.

The general interpretation of outcome fairness is that, as the results of fair competition, jobs go to the most qualified or outstanding persons, and that income in all trading is in accordance with the quantity and quality of production factors supplied. It is reasonable to see outcome fairness in this way despite differences still existing. It stands counter to the egalitarianist concept of outcome fairness, which is a serious distortion, but even so it does have its limitations in interpreting outcome fairness.

For example, it is true that jobs should go to the most qualified or outstanding candidates through competition, but why should we not ask: What is the standard for being "most qualified or outstanding"? Is the judgment comprehensive and accurate? Are the decision makers just and disinterested? Do they have a complete grasp of the information? In other words, are the decision makers themselves proven to be the most qualified persons?

For another example, distribution based on labor was once regarded as manifesting outcome fairness, being consistent with the principle that income produced in trading activities should be distributed in accordance with the quantity and quality of production factors supplied. Distribution based on labor is at least an applicable standard for judging whether an individual's absolute income is fair or not. But it has defects. What does "labor" exactly mean here, the qualification for income that one has achieved through one's "labor" in

the past or the "labor" one is contributing to current work? Can we convert all kinds of "labors" into one universally accepted "labor"? Furthermore, who is the allocator of labor here? How can he do his job in a proper way? These theoretical questions still await solution. Besides, as a standard of judging outcome fairness, distribution based on labor faces many problems in operation. Who can tell which salary levels for government or enterprise employees are reasonable and consistent with this distribution principle? Since it is hard to say distribution based on labor is a manifestation of outcome fairness, it is harder to make the case for distribution based on production factors. However, pending the appearance of anything better, the principle of being "in accordance with quantity and quality of production factors supplied" is still feasible, because at least it links outcome fairness with supply of production factors and with economic outcome.

For people to accept starting point and outcomes as fair, we must first help them correctly understand the meaning of fairness, and this is by no means an easy task. Each person will understand the concept in the light of personal experience and current status, and they are bound to have different feelings about it.

A person may count the starting point as being fair only when, in addition to equality of opportunity, his status, income or financial circumstance at the starting point are roughly comparable with others. Suppose he has equal opportunities but none of the other aspects are of comparable status at the starting point, he probably will feel unhappy; perhaps he can tolerate this, perhaps not. If he has generally the same social rank, etc., but not equal opportunities, he will also feel unhappy; perhaps he can tolerate this, perhaps not. If he is far behind others in social rank, etc., and moreover does not have equal opportunities, he will surely not tolerate it since he believes the starting point to be patently unfair. Therefore we see, only when all conditions are met—equal opportunities, roughly equal rank, income and property status at the starting point—will people deem the starting point fair.

Acceptance of the fairness of outcomes might be more difficult to achieve. If the starting point is believed unfair, then whatever the outcome—for example the absolute income level and income gap being within rational range—then the outcome will still be deemed insufficiently fair. If a person believes the starting point is fair, then he will make his own judgment regarding fairness of the outcome on the basis of specific circumstances: When absolute income level lies within a rational range, he might think the outcome is fair and acceptable. If he thinks the relative income level—i.e. the income gap—is not rational he will still deem the outcome insufficiently fair. If one believes in the fairness of neither the starting point nor outcome, one is bound to regard this as unacceptable. Social stability can only deteriorate if there are increasing numbers who feel this way.

From the above analysis we know that we should not only consider people's feelings about the starting point and outcome fairness, but also help them to integrate the two: Accepting the starting point as fair but not the outcome is not enough and neither is the converse. So how can we approach this question of integration? We shall need to return to the discussion of harmonization between individuals and the group.

If an individual has harmonized relations with the group and other members, he will more easily integrate his acceptance of fair starting point with his acceptance of fair outcome. Even if neither aspect is totally satisfactory, provided such things are quite easily pursued through proper channels, the contradiction will generally not intensify. For a large group such as a society, the more its members identify with it, the easier it is for them to integrate their acceptance of starting point fairness with outcome fairness. Just as pointed out previously, in the absence of an objective or universally accepted standard for fairness, we only have harmonious interpersonal relations to increase the sense of fairness and reduce the sense of unfairness.

叁 公平与认同的关系

一、关于个人在群体中的公平感

公平的标准何在？前面已经指出，如果仅仅在收入分配及其差距方面寻找答案，这个问题是不容易解决的。无论从收入的绝对水平还是从收入的相对水平来看，对公平的衡量都不可能有客观的、统一的尺度。甚至从机会均等的角度来考虑，由于在现实生活中并非人人都处在一条起跑线上，所以也很难把某一条起跑线称做公平的起跑线。这样，我们不得不另找解决或近似地解决公平问题的途径。从认同的角度分析，也许可以走出一条新路来。

简要地说，公平以对群体的认同为基础。在一个群体内部，成员对这个群体的认同程度越高，他们的公平感就越强；反之，成员对这个群体的认同程度越低，他们的公平感也就越少。假定成员完全不认同这个群体而他们却依然留在这个群体之中，他们可能就没有公平感。

那么，为什么一个人对某一群体的认同程度同公平感有关呢？这是因为，一个人在某一群体之中，就会同群体的其他成员发生联系，并从这些人际关系中感受到自己所处的位置和其他人对自己的态度。如果他同群体中的其他成员相处得比较协调，人际关系处理得较好，他对这个群体的认同程度就比较高，于是他在群体中的公平感也比较强；反之，如果他同群体中的其他成员的关系不协调，总感到自己在这个群体中受冷落，受排挤，受歧视，他肯定对这个群体的认同程度较低，他在群体中的不公平感即由此而来。由此看来，从个人同群体之间的关系角度来看，公平感还是不公平感都是他对这个群体的认同程度的反映。

群体有大有小，群体中的人数有多有少。我们不妨按小群体到大群体的顺序作一些分析。

家庭可能是最小的群体。一个人成为家庭的成员，通常不依自己的意志为转移。尽管一个人同父母、兄弟姐妹的血缘关系是不可选择的，但他对家庭的认同程度仍然因家庭而异，因人而异。如果他同家庭的其他成员（如兄弟姐妹）相比，即使感到自己所受到父母的宠爱程度不如兄弟姐妹，在家庭中所得到的照顾也不如兄弟姐妹，但只要他对家庭的认同程度高，他不会对上述的差别待遇斤斤计较，也不会由此产生不公平感。他在家庭这个群体中的公平感来自对家庭的认同。当然，也会有

如下的情况：在他发现自己在家庭中受到的对待不如兄弟姐妹之后，他同家庭的关系疏远了，认同程度下降了。但这毕竟不是普遍的。也就是说，尽管他多多少少有一种不公平感，但他仍是热爱这个家庭的，他的认同程度并未因此而降低，大多数情况正是如此。

再以企业的情况为例。企业是一个群体，不管企业规模大小和职工人数多少，职工对这个群体的认同程度同职工在企业产生公平感与否有着直接的关系。在企业内部，职工们的工资总是有差别的，各种工作岗位的工作劳累程度、待遇高低、升迁机会大小也是不一样的。只要有上述这些差别，即使这些差别在经济上是合理的，但职工们不一定把这种经济上的合理性看成是公平性。如果没有这些差别呢？那么同样会有人认为这种无差别的工资和待遇是不公平性的反映。因此，这是一个从这边看有人认为不公平，从那边看又有人认为不公平的难题。只有从个人对群体的认同程度的角度来考虑，个人的公平感或不公平感才能得到较好的解释。

可以这样说，假定某个职工对本企业这个群体的认同程度高，而且企业内部所存在的工资和待遇等方面的差别在经济上是合理的，那么这种差别就能够被职工所接受，他不会由此产生不公平感。即使企业内部所存在的工资和待遇等方面的差别在经济上还不尽合理，职工在对企业认同的基础上也会通过正当渠道向企业反映自己的想法，但不至于由此因不公平感而同企业处于不协调的状态。反之，假定某个职工对本企业这个群体的认同程度很差或者缺乏认同。那么，尽管企业内部所存在的工资和待遇等方面的差别在经济上是合理的，职工仍会产生不公平感；如果企业内部所存在的工资和待遇等方面的差别在经济上不尽合理，那么职工不仅会产生强烈的不公平感，而且有可能同企业相对立。

接着，让我们对社会作为一个群体进行分析。社会是一个大群体，一个人在社会这个大群体中，只是无数个成员中的一员。但无论群体的大小，成员对社会的认同态度也影响着他在许多问题上对自己是否被公平对待的感受。收入、就业、受教育状况、受尊重的程度等，都会使一个人在同社会的其他成员比较后产生公平感或不公平感。假定他对社会的认同程度较高，他会接受社会上存在的合理差别，不会产生不公平感；即使他认为社会上的某些差别还不合理，他会陈述自己的看法，但不会因此而同社会处于不协调状态。他的不公平感，是随着对社会的认同程度的下降而递增或随着对社会的认同程度的上升而递减。还可以得

出这样的结论：对社会的认同程度越高，社会成员的公平感就越浓，不公平感则越淡。

二、公平与认同之间关系的进一步说明

以上是把公平与对群体的认同联系在一起所作的考察。在这一考察的基础上，就可以就公平与认同之间的关系再作一些说明。

第一，尽管通过上述分析，我们已经了解到个人对群体的认同程度同公平感或不公平感的产生有着直接的联系，但这并不否定有关收入分配差距的合理同公平之间的关系的论点，也不否定机会均等意味着公平的论点。收入分配差距的合理和机会的均等，对我们理解公平的含义是有用的，只是由于它们在公平标准的判断上存在着这样或那样的局限性，使得公平问题的研究难以深入下去，所以我们认为有必要再从认同的角度展开讨论，以弥补以往对公平问题研究的不足。加之，正如前面已经指出的，在一个群体内部，即使收入方面的差距合理，但如果成员对群体的认同程度低，成员仍会感到不公平；反之，如果成员对群体的认同程度高，即使收入方面的差距不尽合理，群体的成员也会接受它，同时陈述自己的看法，而不会因此而同群体对立。这就足以表明用收入差距合理与否作为公平与否的依据是有局限性的。

第二，群体有大有小，而且大小相距甚多。群体越小，个人对群体的认同越容易，个人对群体的认同程度也就越有助于揭示公平感或不公平感产生的原因。群体太大，个人对群体的认同就难些，个人对群体的认同程度在解释公平或不公平方面的重要性也就会降低，这是完全可以理解的。比如说，一个企业有职工好几万人，另一个企业的职工不到一百人，前一个企业中的职工对企业的认同必定难于后一个企业中的职工对企业的认同。也就是说，小企业较容易实现职工对本企业的较高度度的认同，企业过大则很难做到这一点。相应地，小企业既然较容易实现职工对企业较高度度的认同，那么小企业的职工在较高度度认同于企业的基础上，将比较容易地产生公平感，而企业过大时，职工在本企业中则不容易产生公平感，更容易产生不公平感。

第三，按照以上所说的来推论，国家是一个比大企业还要大得多的群体，既然大企业都不容易实现职工对本企业的认同，公平感的产生都这么难，那么要一国的国民对国家的认同岂不是还要困难得多？要一国

的国民产生公平感岂不是也要困难得多？的确如此。但前面也曾提到，一国的国民对国家的认同与一个职工对企业的认同是不一样的：职工对企业的认同，一般说来主要出于利益的考虑，而国民对国家的认同则主要出于超越利益的考虑。正因为如此，所以尽管国家比大企业还要大得多，但要实现国民对国家的认同并不会难于大企业的职工对本企业的认同。超越利益的考虑在这里起着重要的作用。如果一个大企业也能使得本企业职工出于超越利益的考虑来认同本企业，那么它也未尝不可以实现职工对本企业的较高程度的认同。

第四，一个人可以是若干个群体的成员，比如说，他是家庭的成员，家族的成员，社区的成员，所在工作单位的成员，某个或某些学会、社团、俱乐部的成员，社会的成员，等等。他作为任何一个群体的成员，都会产生自己在这个群体中是否被公平对待的感觉，因此他的公平感或不公平感并非只有一种，而是他参加多少个群体，就有多少种公平感或不公平感。很可能有如下的情况：在这个群体中，他感到很公平；在另一个群体中，他感到比较公平；在第三个群体中，他感到比较不公平；而在第四个群体中，他却感到很不公平。出现上述情况，应该说是正常的。一方面，如上所述，这在一定程度上同群体的大小有关，即群体越小，群体的各个成员之间容易彼此协调，个人对群体的认同程度比较高，而群体越大，则越不容易做到这些。另一方面，则同群体的性质有关，同个人是出于利益的考虑还是超越利益的考虑而成为某个群体的一员有关：利益方面的考虑越占重要位置，个人对群体的认同就越不容易，个人对公平还是不公平的感受也就越敏感；反之，超越利益的考虑越占重要位置，个人对群体的认同就越容易，个人对公平感或不公平感也就不那么敏感了。

第五，正由于公平同社会安定有关，不公平感的加剧会导致社会的不安定，而且公平或不公平作为人们的一种感觉并非仅仅来自收入方面（包括个人绝对收入水平与收入分配差距的大小），也并非仅仅来自机会均等与否，所以弄清楚公平与认同之间的关系，对于维持社会的安定和减少社会上的不安定因素是有好处的。在社会中，越能够使社会成员同社会这个大群体相协调，使社会成员对社会的认同程度提高，就越有助于减轻他们的不公平感，从而也就越有利于社会的安定。这个结论虽然看起来不会引起多大争议，但要真正做到个人同社会这样的大群体的协调，使社会成员们产生对社会的较高的认同，这不是一件容易的事

情。这也正是社会协调工作中特别需要注意解决的问题。

第六，在一个成员们出于超越利益的考虑而参加的群体中，群体很可能有崇高的理想和目标，成员们正是注意到这些崇高的理想和目标而对群体产生高度认同的。但问题往往出在群体的领导者或实际负责人并未为实现这些理想和目标而努力，他们或者口是心非、言行不一，或者缺乏领导群体去实现这些理想和目标的能力，这样就使得成员们失望，从而大大降低了对这个群体的认同程度。因此，即使当初成员们是出于超越利益的考虑而参加群体的，但随着群体领导者或实际负责人的真相被成员们所识破，随着成员们对群体的认同程度的下降，成员们的不公平感也必定增大，因为他们首先会感到自己被群体的领导者或实际负责人所欺骗了，愚弄了，同时他们也会感到自己同那些追随口是心非与一味谋取私利的群体领导者或实际负责人的成员们相比，在群体内部是处于被排斥、被歧视的位置上，于是就会产生不公平感，一种特殊的不公平感。

三、对起点公平性的认同与对结果公平性的认同

起点的公平性与结果的公平性不是一个概念，然而，对起点公平性的认同与对结果公平性的认同却是可以统一的。

对起点的公平性的一般解释是：大家都站在一条起跑线上。机会均等意味着公平，是对起点的公平而言。实际上，由于各人家庭背景不同、所在的地区不同、受教育状况不同等原因，所有的人很难站在同一条起跑线上，所以机会均等不一定能成为现实。尽管如此，机会均等总是优于对一些人的人为的歧视，法律面前人人平等总是向起点的公平性方面迈进了一大步。通过努力，能够做到职位向一切有资格的人开放，交易让一切有条件的人参加，消除歧视，消除职业和竞争的排他性，这就可以称做现实生活中能够做到的机会均等了，对起点的公平性也只能按这种方式来理解。

对结果的公平性的一般解释是：作为公平竞争的结果，所有的职位让最有资格或最优秀的人取得，交易中的收入按所提供的生产要素的数量和质量而取得。如果这样来理解结果的公平性，那么差别虽然存在，但却是合理的。这种理解是同把平均主义看成是结果公平性反映的观点对立的，后者显然是对结果公平性的严重歪曲。实际上，即使按上述这

种方式来理解结果的公平性，仍然有较大的局限性。

例如，所有的职位在通过竞争之后让最有资格或最优秀的人取得，这并不错，但不妨再追问一句：最有资格或最优秀的人的确定究竟依据什么？这种判断是不是全面的、准确的？裁判者是不是公正无私？是不是掌握了完整的信息？或者说，裁判者本人是不是通过竞争而被证明是最有资格成为裁判者的人？

又如，按劳分配曾经被认为是结果公平性的一种体现，因为这符合交易中的收入按所提供的生产要素的数量和质量而取得的原则。至少，在判断个人绝对收入是否公平这个问题上，按劳分配被认为是适用的标准。其实，这个标准仍然存在缺陷。按劳分配，按的是什么“劳”？是过去的“劳”所形成的取得收入的资格，还是实际工作中付出的“劳”？是不是存在可以把各种“劳”统一折算为某种通用的“劳”的办法并被普遍接受？再说，按劳分配由谁来进行分配？怎样做才叫做按劳分配？这些问题至今并未在理论上得到很好的解决。何况，按劳分配作为一种判断结果公平性的标准，在操作时是会遇到困难的。对政府工作人员来说，什么样的工资水平是合理的，是符合按劳分配原则的，谁能说得清楚？即以一个企业来说，能说得清职工们的收入在何种程度上符合按劳分配吗？既然按劳分配能否成为结果公平性的体现都这样难以确定，那么按其他生产要素的分配就更加难以被视为结果公平性的体现了。但无论如何，在缺少比“按所提供的生产要素数量和质量”更好的判断方式时，采取这种判断方式仍是可行的，因为这至少把结果的公平性同生产要素的提供联系在一起，同经济效益联系在一起。

要人们认同公平，包括认同起点的公平和结果的公平，都需要先让人们对公平的含义有正确的认识，这是很不容易的。由于各人都从亲身的遭遇和现实中所处的地位来理解公平，而彼此遭遇不同，地位不同，感受必定不一样。

从对起点公平性的认同来说，当一个人感到不仅机会均等，而且在起点上地位、收入或财产状况也大致相同时，他也许会认为这才算起点的公平。假定只有机会均等而没有起点上地位、收入或财产状况的大致相同，他会感到不满意，从而他可能容忍这一点，也可能容忍不了这一点。假定只有起点上地位、收入或财产状况的大致相同而没有机会的均等，他同样会感到不满意，从而他可能容忍，也有可能认为这是无法容忍的。假定既无机会的均等，起点上的地位、收入或财产又有较大差

别，那么他肯定容忍不了，因为他认为这是明显的起点不公平。由此可见，只有全部满足了下列条件，即机会是均等的，起点上地位、收入或财产状况大致相同，人们才会感受到起点的公平。

再从结果的公平性来看，对结果公平性的认同可能比对起点公平性的认同更困难。这是因为，一个人如果认为起点就是不公平的，那么无论结果如何，比如说，即使绝对收入水平和收入分配差距在合理范围之内，他也会认为结果的公平性有所缺陷；一个人如果认为起点是公平的，那么结果究竟是否公平，他将根据具体情况作出判断：如果绝对收入水平在合理范围之内，他可能接受这一结果，认为结果是公平的，但他也有可能认为相对收入水平还不合理，即收入分配差别还不合理，所以他仍然会认为结果的公平性有所缺陷。假定一个人认为起点既不公平，结果也不公平，那么他肯定会认为这是无法接受的事实，于是社会的不安定程度将因有这种感受的人数的增多而加剧。

通过以上的分析可以了解到，不仅应当注意人们在起点上是否公平或者对结果的感觉是否公平，而且还应当使得人们对起点公平性的认同与对结果公平性的认同统一起来，单有起点公平性的认同，或者单有结果公平性的认同，都是不够的。那么，怎样才能使人们对起点公平性的认同与对结果公平性的认同统一呢？问题仍然需要回到前面已经谈过的个人与群体是否协调上来。

如果个人在群体中既同群体处于协调状态，又同群体内的其他成员处于相互协调之中，对群体内的起点公平性与结果公平性的认同比较容易统一，即使在起点公平或结果公平方面还有某些不能令人满意之处，但一般说来，这些不满较易于通过正常渠道来陈述，而不至于使矛盾激化。甚至对于社会这样的大群体而言，社会成员如果对社会认同程度较高，他们对起点公平性与结果公平性的认同也比较容易统一，这正如前面已经指出的，在公平尚缺少客观的、公认的判断标准的条件下，公平或不公平作为群体中的成员的一种感受，只有人际关系的协调才能增加公平感，减少不公平感。

3.4 Identification and Mutual Understanding and Accommodation

3.4.1 Historical Overview of Correlation Between Identification and Mutual Understanding and Accommodation

In a group, mutual understanding and accommodation are very important for harmonizing members' relations and enhancing their group identification. It is also an effective way of abating an individual's sense of unfairness within the group.

Mutual understanding and accommodation among members has been present. Without this, members or groups could hardly survive in difficult circumstances, let alone make progress. Even in favorable conditions, this spirit is still indispensable for strengthening group cohesion, improving group efficiency and enhancing members' identification with the group. Otherwise, friction or disharmony among members might lead to the group splitting, possibly even to its collapse and extinction.

In static society, small producers provide the most obvious illustration of mutual understanding and accommodation helping the survival and development of groups and their members. Unfortunately, when discussing small producers, it is often their conservatism, egalitarianism and fear of reform that is emphasized, while ignoring their spirit of mutual understanding and accommodation and related attributes of tolerance, diligence, teamwork spirit and group cohesion. In his *Mutual Aid*, Kropotkin had the following passage:

"As to the social characters of the medieval guild, any guild-statute may illustrate them. Taking, for instance, the skraa of some early Danish guild, we read in it, first, a statement of the general brotherly feelings which must reign in the guild; next come the regulations relative to self-jurisdiction in cases of quarrels arising between two brothers, or a brother and a stranger; and then, the social duties of the brethren are enumerated. If a brother's house is burned,

or he has lost his ship, or has suffered on a pilgrim's voyage, all the brethren must come to his aid. If a brother falls dangerously ill, two brethren must keep watch by his bed till he is out of danger, and if he dies, the brethren must bury him—a great affair in those times of pestilences—and follow him to the church and the grave. After his death they must provide for his children, if necessary; very often the widow becomes a sister to the guild."⁸

Mediation, as an approach for solving disputes between people has been around for a long time, probably even longer than guilds existed in Medieval Western Europe. Mediation is carried out according to custom, and moral force plays an important part too. Effective mediation relies not just on the authority and prestige. If one of them refuses to compromise in the slightest, the mediation will be in trouble and reconciliation will be impossible no matter how much authority and prestige the mediator enjoys. Mutual understanding and accommodation is more than a question of "who suffers more losses and who suffers less" or that of "who enjoys more benefits and who enjoys less," but a question of how to co-exist in the same group. The two parties to the argument could be members of a small group, such as two brothers in a family. They might not be in the same group, family, village, or community, etc., but they are members of society as a large group. Thus, what mutual understanding and accommodation is really about is this: In the same group and for the common interests of the group and its members, it is necessary on some occasions for parties to give ground for the sake of harmony. This applies in good times and in bad.

Mutual understanding and accommodation of members cannot be regarded as a negative force. Being negative or positive depends on how it influences socio-economic development. In fact, it can strengthen group cohesion, raise members' identification with the group, and reduce their sense of unfairness. Isn't it helpful to group growth as well as socio-economic development? So it's convincing to say mutual understanding and accommodation is a positive force.

A group may be a temporary organization, but the same spirit is essential. This is clearly reflected in a record of a Hanseatic League voyage in medieval times:

When the captain of a Hanseatic League ship called a meeting of crew and passengers on deck, according to the record of one witness, he made this announcement: " 'As we are now at the mercy of God and the waves,' he said, 'each one must be equal to each other. And as we are surrounded by storms, high waves, pirates and other dangers, we must keep a strict order that we may bring our voyage to a good end. That is why we shall pronounce the prayer for a good wind and good success, and, according to marine law, we shall name the occupiers of the judges' seats(Schoffenstellen).' Thereupon the crew elected a Vogt and four scabini, to act as their judges. At the end of the voyage the Vogt and the scabini abdicated their functions and addressed the crew as follows: 'What has happened on board ship—we must pardon to each other and consider as dead (todt und ab sein lassen). What we have judged right, was for the sake of justice. This is why we beg you all, in the name of honest justice, to forget all the animosity one may nourish against another, and to swear on bread and salt that he will not think of it in a bad spirit. If any one, however, considers himself wronged, he must appeal to the land Vogt and ask justice from him before sunset.' On landing, the Stock with the fredfines was handed over to the Vogt of the sea-port for distribution among the poor."⁹

Without mutual understanding and accommodation, it's hard to envisage crew and passengers remaining in harmony when cooped up together on the same ship for days on end, especially in the economic and technical conditions of that age. It was precisely that accommodating spirit that enabled this temporary group to overcome all difficulties and arrive safely.

Of course, we cannot claim that tolerance and yielding has no negative influence at all on socio-economic development. Actually, this may have extended the life of the outmoded traditional socio-economic structures and thereby slowed down socio-economic

reforms. However, if we look at the process of economic development through history, the positive effects still predominate. Now, let's turn to the question of how to evaluate the role of mutual understanding and accommodation in modern socio-economic times.

3.4.2 Identification and Mutual Understanding and Accommodation in Modern Socio-economic Times

In modern socio-economic times, the positive influence of mutual understanding and accommodation extends beyond small groups such as family, reaching large groups such as entire societies and moderately large groups such as enterprises. We may begin our analysis with the partnership enterprise.

A partnership enterprise is a group founded on mutual understanding and accommodation, and this is its distinctive feature. As we know, a partnership enterprise is established on the basis of agreement between all partners who invest, share benefits, assume risks together and bear unlimited joint and several liabilities. Such liability in particular needs mutual trust between partners. Besides, harmonious relations and mutual respect are a premise for the sound operation and development of such an enterprise. If the partners cannot accommodate each other or put the overall interests of enterprise first, it's hard to imagine they will coalesce.¹⁰

Partnership is a long-standing form of enterprise. Some countries have established laws for partnership enterprises, but in the long period before those laws existed and in countries that still have no such laws how did partners found partnership enterprises for which they bore unlimited joint and several liabilities? The answer is reliance on custom and identification on the basis of moral force. Only by such means could they establish an enterprise and ensure its survival and growth. In fact, legal provisions, though being specific in

rights and obligations of partners, under what circumstances they can transfer assets, when one partner should compensate others, when a partner can withdraw from the enterprise, etc., are not exhaustive, and cannot cover every detail of running an enterprise. The special feature of a partnership enterprise is "people together," in other words "people in harmony." Without mutual trust and respect, there is no harmony, and no partnership enterprise. If partners quarrel fiercely over every disagreement, their business cannot go soundly. All in all, the partners are well aware that without harmonious relations the enterprise has no chance of surviving.

Moreover, since partners are investors with unlimited joint and several liabilities, they identify themselves with the group to a high degree. Each partner is expected to feel a sense of fairness; i.e., each one thinks he has the same status as all the other partners and is treated equally. Otherwise, no partner would shoulder the liabilities. In other words, in a group like a partnership enterprise, if one partner has a sense of unfairness, he will eventually withdraw from the group. How could he be willing to carry unlimited joint and several liabilities for other partners if he thinks himself discriminated against?

In modern socio-economic times, the limited liability company is a common form of business organization. Like a stock corporation, it is a kind of stock company but it differs from the former in its method of stock transfer: In a stock corporation, a stockholder does not need the approval of other stockholders to transfer his stocks, but in a limited liability company, a stockholder must have the approval of the majority of stockholders before he can do this. This shows that in a limited liability company, harmonious people-to-people relations are still very important even if each investor shoulders only limited liability; i.e., each stockholder bears responsibility based on the amount of his investment and the company assumes full liability, with its total assets as pledge. With harmonious human relations, a limited liability company can be built up, survive and grow. Without these, the company may be established but will not survive. Therefore, the

stockholders' identification with the company and their mutual understanding and accommodation are vital and inseparable. All limited liability companies are required by law to protect the rights of investors, but the law cannot cover each and every specific issue relating to business operations. When there is dispute or disagreement among investors, only negotiation, mutual understanding and accommodation can work to resolve the problems. Mutual understanding and accommodation functions on the premise of protecting the rights of investors; they result in better cooperation among them and smoother development of the company. An investor's sense of fairness comes from his identification with the group, i.e., the limited liability company and the shareholder committee, since he believes his status equal to that of all other group members. A sense of fairness will in turn foster mutual understanding and accommodation, since no one thinks he will be forced to give way. Mutual understanding and accommodation and the good it does the company will further strengthen the sense of fairness among stockholders, because they all consider themselves benefited by the company's development and their mutual understanding has deepened too.

Apart from relations between investors (partners in partnership enterprises or shareholders in limited liability companies), mutual understanding and accommodation has a positive role in building relations between employees, traders or different interest groups. Mutual understanding and accommodation does not equate to weakness, surrender, or a deviation from principles, but tells us that since there are all kinds of relations involved in the modern socio-economic age and only with sound development can everyone benefit, if all yield a little problems are more readily solved. This point can be seen more clearly from the perspective of human beings as "social men."

Even in a modern family, the smallest group, identification and its inseparable partner—the spirit of mutual understanding and accommodation—have positive importance. With the highly

developed economy and great increase of income per capita, family size has become smaller and smaller: Once grown up, children leave their parents and form their own families. They have less and less contact with their parents, the lonely residents of the "empty nest." Consequently, within the family a feeling emerges of *ennui*, or boredom with family life. In this context, it is extraordinarily important to advocate family identification and mutual understanding and accommodation among all generations of family members. It is not only an issue of restoring pleasure and confidence in family life, but one of better deploying the role of the family group.

Now, we have a new interpretation of the sense of fairness or unfairness: Identification and mutual understanding and accommodation will increase group members' sense of fairness and reduce any sense of unfairness. This is particularly so in the absence of a universally accepted standard for evaluating equality of opportunity and coordinated income distribution.

肆 认同与互谅互让

一、认同与互谅互让之间关系的历史考察

在一个群体中，要使得成员之间关系协调，以便增加每一个成员对群体的认同程度，成员之间的互谅互让是非常重要的。这也是使每一个成员减少在群体中的不公平感的一种有效的方式。

群体的各个成员之间的互谅互让，可以说是自从群体出现以来就已经存在的事实。在群体和群体的成员们处境艰难的条件下，如果没有成员间的互谅互让精神，群体就难以维持生存，更谈不到进一步发展了。即使在群体和群体的成员们处境比较顺利的条件下，成员之间同样需要有互谅互让的精神，只有这样，群体的凝聚力才会增强，群体的效率才会增长，群体的成员对群体的认同程度也才会提高。否则，群体成员之间的摩擦、失和很可能导致群体的分裂，甚至导致群体的瓦解和消亡。

在静态社会中，尤其是在小生产者那里，互谅互让而使得群体和群

体的成员们得以生存和发展的情况是最为明显的。可惜的是，一般在讨论到小生产者意识时，往往只注意到小生产者的保守主义、平均主义、害怕变革等精神，而忽略了互谅互让精神以及与此有关的容忍和顽强拼搏精神，忽略了同互谅互让不可分的团结精神和群体的凝聚力。克鲁泡特金在《互助论》一书中有这样一段论述：

“关于中世纪行会的社会性，任何一个行会的规章都可以用来阐明它。以早期丹麦人的某一行会的规章为例。我们在其中看到的，首先是一段陈述支配整个行会的兄弟般的情感的说明文，其次便是关于两个会友之间或一个会友和外人之间发生争执时的独立裁判的规定，最后是列举会友们的社会职责。如果一个会友的房子被烧掉了，或者他的船遭了难，以及他在朝香的途中遭遇了不幸，那么所有的会友都必须帮助他。如要一个会友患了重病，那么所有的会友都必须帮助他。如果一个会友死了，会友们必须把他送到教堂的墓地去埋葬……在他死后，如果需要的话，他们还必须抚养他的子女，他的寡妻则时常成为行会的一个姊妹。”⁸

调解作为解决人与人之间纠纷和冲突的一种方式，也是由来已久的。很可能比中世纪西欧的行会的历史还要早得多。调解按照习惯进行，道德力量在这里起着重要的作用。要使调解取得成效，不仅要依靠调解人的权威和信誉，而且要依靠当事人的互谅互让。如果当事人中有一方，拒不作任何让步，调解将遇到困难，即使这时运用调解人的权威和信誉，也难以达到和解的目的。互谅互让，并不单纯是“谁吃的亏大一些，谁吃的亏小一些”，或“谁占的便宜多一些，谁占的便宜少一些”之类的问题，而是如何在一个群体中共处的问题。当事人双方可能在一个很小的群体之中，比如说，兄弟两人发生纠葛，他们是家庭的成员。当事人双方也可能不在同一个小群体之中，例如不是一个家庭或家族的成员，不是同一村镇或社区的成员，但他们都是社会这个大群体的成员。因此，互谅互让所涉及的是，同在一个群体之中，为了群体和群体的成员的共同利益，在某些场合是需要各自后退一步以取得协调的，在群体处境艰难或处境顺利时都应如此。

不能把群体成员之间的互谅互让看成是一种消极的东西。对消极还是积极的评价，离不开对社会经济发展的影响的看法。成员之间互谅互让，将增强群体的凝聚力，提高他们对群体的认同程度，减少各自心中的不公平感，从而有利于群体的发展，而对于社会经济的发展也起着推

动的作用。这就是对互谅互让的积极作用的认识。

群体也可能是一种临时性的组合。这同样需要有成员之间的互谅互让精神。一段有关中世纪汉撒同盟航海的记载清楚地反映了当时的情况：

当汉撒同盟的一条船在离开港口完成了它的第一个半天航程时，船长便把所有的船员和旅客召集到甲板上，向他们发表如下的一段谈话（根据当时一个人的记载）：“船长说：‘由于目前我们是在上帝和大海的摆布之下，人与人必须平等相待。由于我们被狂风巨浪以及海盗和其他危难所包围，我们必须保持严格的秩序，以便顺利完成我们的航行。这就是为什么我们要祈祷一帆风顺，并且按照航海法的规定，提出坐裁判席位的人。’于是船员们便推举出一位裁判长和四位裁判。旅行终了，裁判长和裁判便辞去职务，并且对船员说：‘在船上发生的一切事情，我们必须彼此原谅，把它们看作已成过去了。我们裁判得当的，是为了正义。这就是为什么我们要以诚实的、正义的名义请求你们忘掉可能产生的互相仇恨，并且以面包和盐为誓，决不以错误的精神看待这种仇恨。任何一个人，如果认为他受了委屈，可以向陆地上的裁判长提出申诉，并且请他在日落以前秉公裁判。’在上岸的时候，便把收存的罚款和资财交给海港的裁判长去分给穷人。”⁹

完全可以设想，在当时的经济技术条件下，如果没有互谅互让精神，海船的船员和乘客怎能协调一致地在一艘船上共处若干天？不管航行中会遇到多大困难，正是依靠这种互谅互让，才使这个由船员和乘客共同组成的临时群体得以战胜风浪，渡过难关。

当然，容忍和退让的做法，在社会经济发展过程中也不是没有一点消极作用的，因为它可能在某种程度上使已经不合时宜的传统社会结构和传统经济结构不适当地延续较长久的时间，从而延缓了社会经济变革的速度。但从社会经济发展的整个历史进程来看，积极作用仍是主要的。那么，在现代社会经济中，如何对容忍和退让的做法进行评价呢？让我们接着就这个问题作一些探讨。

二、现代社会经济中的认同与互谅互让

在现代社会经济中，认同与互谅互让的积极意义不仅依然存在于家庭这样很小的群体中，而且也存在于社会这样的大群体中。在企业组织

中，认同与互谅互让所起的作用也是不可忽视的。我们可以从合伙企业分析起。

每一个合伙企业都是一个建立在认同与互谅互让基础上的群体，而且合伙企业中的互谅互让具有明显的特征。要知道，合伙企业是各个合伙人根据协议而建立的共同出资、共享收益、共担风险的企业，合伙人对合伙企业的债务承担无限连带责任。合伙人由于承担了连带责任，因此合伙人之间的相互信任尤其重要。合伙人之间的关系融洽，相互信任，相互尊重，是合伙企业经营顺利和发展的前提。如果合伙人之间不能互谅互让，不以合伙企业的大局为重，那么合伙人就不可能集合在一起。¹⁰

一些国家制定了有关合伙企业的法律，但在相当长的历史时期内，这些国家还没有合伙企业的法律。此外，世界上还有一些国家并没有制定合伙企业法。然而，合伙形式却是一种古老的企业组织形式。在没有关于合伙企业的法律条件下，合伙人是怎样建立起由合伙人负无限连带责任的合伙企业的呢？靠的是惯例，靠的是以道德力量为基础的认同。合伙人正是依靠这些才能建立合伙企业并使它存在和发展。即使有了关于合伙企业的法律，但仅仅依靠法律条文是不够的。法律可以规定合伙人的权利与义务，可以规定在什么情况下合伙人之间能转让财产，什么情况下合伙人应对其他合伙人进行赔偿，以及什么情况下合伙人可以退伙等等，但法律不可能把合伙经营中的一切细节都规定得十分具体。合伙企业的特征是“人合”，或者说，是“人和”。合伙人相互不信任，不尊重，就谈不到什么“人合”，合伙企业就无法建立。合伙人之间凡事都争得面红耳赤，不可开交，合伙企业的业务就无法展开，人不和，合伙企业必定存在不下去。合伙人对这一点是非常清楚的。

不仅如此，还应当指出，由于合伙人是负有无限连带责任的投资者，所以合伙人作为投资者，对于合伙企业这个由若干个投资者组成的群体应有高度的认同，而且每个合伙人在这个群体中应当有公平感，即认为自己与其他合伙人所处的地位和所受到的对待是相同的，否则合伙人就不愿意承担无限连带责任。换言之，在合伙企业这个群体中，有不公平感的合伙人即使参加了合伙企业的组建，但最终还是会退伙。一个合伙人认为自己在这个群体中是受歧视的，他难道肯为其他合伙人承担无限连带责任吗？

在现代社会经济中，有限责任公司是一种普遍的企业组织形式。有

限责任公司和股份有限公司都是股份制企业，两者的区别之一是股份转让方式不同：在股份有限公司中，股东要转让自己持有的股份，不需要征得其他股东的同意；而在有限责任公司中，股东要转让自己持有的股份，则必须事先取得其他股东多数人的同意，否则转让是不被允许的。这表明，在有限责任公司这种企业组织之下，即使每个投资者只负有限责任，即每个股东以自己的出资额为限对公司承担责任，公司以自己的全部资产对公司的债务承担责任，但“人合”或“人和”因素仍然十分重要。人合，则有限责任公司得以建立、生存和发展；人不合，有限责任公司很可能建立不起来，就算当初建立了，也维持不下去。因此，在有限责任公司的股东们所组成的一个投资者群体（股东会）之中，互谅互让不可缺少，认同与互谅互让是不可分的。投资者各自的权益要得到保护，这是法律的规定，任何有限责任公司都必须做到这一点，但业务经营的各种各样的具体问题又岂是法律所能全部写进去的？投资者之间难道会没有矛盾，没有不一致之处？这些都需要协商，需要互谅互让。互谅互让是在保护投资者权益这个大前提下起作用的，互谅互让的结果只会使投资者之间合作得更好，使公司的发展更加顺利。投资者对自己这个群体，即有限责任公司及其股东会的认同，将使每个投资者感到自己在群体中与其他成员处于同等的位置上，他由此将产生公平感。公平感使得股东之间的互谅互让易于成为事实，因为谁也不认为自己是被迫作出让步的。互谅互让的实际行动及其对公司发展所产生的有利结果，又增强了股东们在这个群体中的公平感，因为大家都会认为自己从公司发展获得了利益，而且通过互谅互让，彼此进一步了解了。

以上是就投资者之间的关系（合伙企业中合伙人的关系、有限责任公司中的股东们的关系）而言的，除投资者之间需要互谅互让而外，在企业职工之间、市场上的各个交易人之间，以及社会中各个不同的利益集团之间，互谅互让也是有积极作用的。互谅互让不等于怯懦，不等于屈膝投降，也不等于在原则问题上的背离。互谅互让主要是表明，既然在现代社会经济中人与人有着各种各样的联系，只有在发展中才能使大家都得到好处，那么在一些问题，各自从原有的位置上退后一步，事情反而容易得到解决。从人是“社会的人”的角度来考察，可以更清楚地认识到认同与互谅互让的意义。

即使在现代社会的家庭这个最小的群体内，认同以及与此不可分割的互谅互让精神也是具有积极意义的。在经济高度发展和人均收入水平

较大幅度地提高之后，家庭规模通常越来越小，子女一成年就离开父母的家庭而单独成立家庭，原来的家庭逐渐变成“空巢”，只剩下老人独立生活，与子女的联系减少了。于是一些家庭会出现没有生气的状况，所谓的“人生疲倦感”便相应地产生。“人生疲倦感”在某种意义上是对家庭生活感到乏味的一种情绪。在这种背景下，提出对家庭的认同，并提出家庭成员之间、上一代人与下一代人之间的互谅互让，就显得格外重要。这不仅是恢复对家庭生活的乐趣和信心的问题，也是更好地发挥家庭这个群体的作用的问题。

至此，我们可以对公平感或不公平感作一个新的解释：认同与互谅互让增加群体中各个成员的公平感，减少他们的不公平感，在机会均等与收入分配协调依然缺少公认的评价标准的情况下尤其如此。

CHAPTER 4 LAW AND SELF-DISCIPLINE

第四章 法律与自律

4.1 Market, Government and Law

4.1.1 Regulation by market and regulation by government must be in accordance with law

In modern society, regulation by market and regulation by government must operate in accordance with law.

It is extremely important that market operation is underpinned by a sound legal system and strict legal enforcement. Markets comprise multiple traders, each one of them independent from and in competition with other traders; they are the market actors and their behavior must be subject to standards and their competition must be carried on in the economic context of a normal market order. The lack of a complete legal system makes it hard for traders to make judgments and choices or to understand other traders' choices. We can imagine that in a market without a reliable and enforced legal system, traders will have difficulty in formulating strategic decisions.

Law can prevent illegal operation and unfair competition in trading activities and at the same time protect legal operations and fair competition. Any infringement on the legal rights of traders, namely, enterprises or individuals, will be investigated. Without law, the market will suffer from chaos and nobody wins. Even supposing some enterprises or individuals benefit from a disorderly market, there is no guarantee that it won't crash in the next round of disorderly competition. Therefore, regulation by market must be in accordance

with law. Provided there is law, even incomplete law, and it is strictly followed, traders can make proper choices and their trading will be sustainable.

Regulation by government, manifested in government socio-economic administration and control of the macro-economy, also needs the support of a legal system. The government itself should act within the legal framework. Regulation by government and regulation by law are not opposites and nor can one replace the other. When a government organ acts as a party in a trading activity, such as procurement, hiring new staff or selling assets, it must be subject to law and the stipulations of the contract. As a party to the contract, out of respect for the contract and for the legal rights of the other party, the government position should be equal to that of the other party, not higher. In this way, government behavior in market economy can be normalized.

It is worth making the point that, whether under regulation by market or by government, integrity and credit are principles that must be observed. In regulation by market, all competitors enjoy equal legal rights and bear equal responsibilities and traders violating the principles of integrity and trust are subject to legal penalties. Under regulation by government, the government, in the capacity of socio-economic manager, should also follow this principle and earn respect from the public. Without this its management will be ineffective. The government cannot circumvent the principle of integrity simply because it is not in the role of trader. When a government organ is one party of a contract and a trade, it should follow the principle of integrity and credit, so that it does not encroach on the rights of other traders. In short, government, both as manager and trader, is subject to the restricting power of law. This premise is an important guarantee of effective regulation by government.

History has proven this to be the case on countless occasions. Any government that is not bound by law, no matter how powerful the state machine or how mighty its control, would forfeit the trust of the

people when trespassing beyond legal boundaries. What's worse, the loss would be huge and not quickly retrievable. Unfortunately, those governments behaving this way would mistakenly assume they were omnipotent and could succeed forever, getting deeper and deeper into this delusion and ultimately being unable to extricate themselves.

In short, the authority of law lies in its generality, equality and openness. Law is universally applicable, rules that all see as having to be followed, and treating everyone by the same standard. At the same time, the law must be known in order for people to obey it. Such things embody the authority of law, without which it would serve no useful purpose.

The above-cited attributes of law—generality, equality and openness—also apply to government employees. Regulation by government implies that government staff should know, obey and handle affairs in accordance with law. This often involves the relationship between power and law and the perennial question of which one is superior. Is power subordinate to law or vice versa? We now proceed to discuss how this conflict should be handled, strict observance of law ensured and legal violations investigated and punished.

4.1.2 Contradiction Between Power and Law in Regulation by Government

Regulation by government is implemented by government departments and organs, whose leaders wield power proportional to their positions. They may employ their power in regulation, sometimes conducting normal and effective socio-economic management, but sometimes seeking private benefits for themselves or their relatives. This is what is meant by the term "abuse of power for personal gain."

To extirpate this abuse phenomenon, the government's

management and regulation should be conducted in accordance with law. Of course, the first problem is to establish a legal system. Once a legal system is established, will things be handled according to law? Will those who have power be spared penalties if they ignore the law? Will such people put power over law in their regulation and management? These questions are the crucial points of the law-power relation. If those who have power think law is not essential and things can be handled without following the law, if they think provided they have power they can just discard a law or change its articles, if they think law is just for restricting people other than themselves and has no personal significance, if they think provided they wield power they can interpret law according to their own will, if they think their words are law and that their authority is higher than law ... this is not law bestowing, restricting and standardizing power but power controlling and overriding law. The conflict between law and power is a millennia-old struggle that still awaits a very good solution.

This question is particularly important for developing countries undergoing the change from traditional political and socio-economic structures to modern structures. Socialist countries are no exception. To develop their economy, developing countries must break through many barriers including the above-mentioned two closely related traditional structures. The traditional political structure protects the traditional socio-economic structure and vice versa; both are pre-capitalist in nature, mainly feudalist. Under a feudal political structure, no matter how the rulers have gained their power, the governments they form are autocratic in character. The power of the supreme ruler overrides everything. There is no law and even if there is, it exists in name only, being subordinate to power and interpreted at will by the ruler. In such a society, the government's control of or intervention in socio-economic life is direct, arbitrary and peremptory. The conflict between power and law exists in all developing countries but to different degrees of intensity.

In some developing countries, especially in rural areas, rule by

family or rule by a family elder or clan elder, is part of the traditional political structure, and the same can be said of religious power in some areas. Rule by family, rule by a family elder or clan elder, or rule by religious power, is usually the basis of the political structure in underdeveloped urban or rural areas. What is law to them? Family elders, clan elders or religious power are the true authority in local life. Law is an alien concept for local people. Even if there is law, it plays no role or is subordinate to those in power locally.

In fact, an important question involved in the conflict is the relative importance of power and rights. Power is both bestowed and defined by law; rights are something safeguarded by law and defined by it too. A further manifestation is that those given power should use it to protect the rights stipulated by law. The two aspects can be unified. Over-emphasis on power to the detriment of rights is a violation of legal principles and tantamount to riding roughshod over law. When an ordinary person acts this way it reflects a weak legal awareness, but for a ruler it is much more than that: It reflects a sense of superiority and privilege cultivated in the traditional political structure, and reflects contempt for law.

The central question for law is how to guarantee rights. To emphasize power only will give insufficient prominence to this aim. In the power-rights relation rights should take priority, and power should be regarded as a means of protecting rights. Rights should also take precedence over obligations in the rights-obligations relation. Obligations are formulated to ensure the realization of rights, so in the absence of rights, obligations become meaningless. The abuse of law or riding roughshod over law often begins with solely emphasizing citizens' obligations and neglecting their rights. Such distortion of law should be supervised so that power will be standardized and restricted by law, no power abused and no law overstepped. In Chapters Six and Seven, there is more detailed discussion on the question of supervision. Now let us discuss the relation between custom, morality and law.

壹 市场、政府与法律

一、市场调节与政府调节都必须依法

在现代社会中，存在着市场调节与政府调节，但两者都需要依据法律来进行。

市场运行中，有法可依和有法必依是十分重要的。要知道，市场上有众多交易人，每个交易人都独立地作出选择，这些选择是分散的，因此交易人之间存在竞争。交易人就是市场主体，市场主体的行为必须规范化，他们之间的竞争必须在市场秩序正常的经济环境中进行。法律不完善，会使得每一个交易人无法作出判断，无法选择，也无法了解其他交易人可能作出的选择。法律不完善时尚且如此，那么在缺少法律（即无法可依），或法律不起作用（即有法不依，不按照法律办事）时，交易人难以作出决策就更可理解了。

法律既制止市场交易过程中一切企业和个人的非法经营与不正当竞争，又保护一切企业和个人的合法经营与正当竞争，于是企业和个人的合法权益受到保护，侵害企业和个人合法权益的行为将被追究。没有法律，市场交易一片混乱，谁都得不到好处。即使有的企业或有的个人在这场无规则的竞争中有可能占一些便宜，谁能保证他们在下一场无规则的竞争中不会输掉？在无规则的市场竞争中，赢家究竟在哪里，谁也不清楚。所以市场调节必须依法。尽管某些法律还不完善，但只要有了法律，并依照法律，交易人就可以作出选择，交易也就能持续下去。

再以政府调节来说，政府对社会与经济的管理，政府所实行的宏观经济调节，同样需要有法律作为依据，政府行为也应当以法律作为准则。政府调节与法律的制定和实施不是对立的、或可以彼此替代的。假定政府机构作为交易活动中的一方出现，如政府采购、政府雇用工作人员、政府出售资产等，政府机构必须守法，必须遵守合同的规定，并受合同的约束。政府尊重合同，就是尊重缔约的另一方的平等地位与合法权益。政府作为缔约的一方不应处于高于另一方的位置上。如果做到了这些，政府在市场经济中的行为也就规范化了。

应当指出，无论在市场调节之下还是在政府调节之下，诚实信用原则都是需要遵循的。在市场调节之下，一切竞争主体都依法平等地享有权利，平等地承担责任。各个交易人在进行交易时，都应当诚实，讲信

用，守信用，杜绝欺诈行为。违背诚实信用的原则将受到法律的制裁。而在政府调节之下，当政府以社会与经济的管理者的身份出现时，政府仍然应当遵循诚实信用原则，应当取信于公众，这才能使政府的管理有效，否则公众会以种种方式来抵制政府不讲诚实信用的行为。这时，政府不能认为自己不是市场的交易者而违背诚实信用原则。至于政府机构在以合同当事人的身份出现时，政府机构作为交易的一方、合同的一方，同样应当遵循诚实信用原则，否则就会侵害其他交易人的权益。法律对于政府作为管理者与交易人都是具有约束力的。这是政府调节有效的重要保证。

这一点已为历史上无数事实所证明。任何一个不受法律约束的政府，不管它有多大的威权，也不管它所掌握的国家机器多么强大，但只要政府越过法律的界限，实际上它就成了一个失去民众信任的政府，失信于民给政府带来的损失是沉重的，也是难以在短期内能够弥补的。不幸的是，不受法律约束的政府反而会因此产生错觉，以为自己无所不能，无往不利，结果，政府在错误的泥沼中会越陷越深，最终不能自拔。

总之，法律的权威在于法律的一般性、平等性和公开性。法律是普遍适用的，法律对任何人来说都是必须遵守的一种规则，法律对任何人都按同一个标准来对待，同时，法律必须让任何人都事先知道，知法才能守法，这些就体现了法律的权威。如果法律没有权威，它就会失去作用。

以上所说的法律的一般性、平等性和公开性，对一切政府工作人员同样是适用的。政府调节要依法，意味着政府工作人员要知法、守法，并依法办事。但这往往涉及权与法之间的关系。权大还是法大？权服从法还是法屈从权？这是一个长期存在的老问题。究竟如何处理权与法的矛盾，如何切实做到有法必依，执法必严，违法必究，还需要从理论上再作一些阐述。下面，让我们对这个问题进行讨论。

二、政府调节中权与法的矛盾

政府调节由政府有关部门主持。政府部门的掌权者手中有权力，他们在主持或执行政府调节工作的过程中，可以动用手中的权力，这种权力是同他们的职务联系在一起的。因此，政府部门的掌权者既有可能运

用权力对社会与经济进行正常的管理，对经济进行有效的调节，也有可能运用权力来为个人及亲属谋取利益。通常所说的“以权谋私”就是指此而言。

为了杜绝种种以权谋私现象，政府的管理和调节都应当依法进行。有没有法律可依，这当然是需要首先解决的问题。在有了法律之后，是不是根据法律来办事；在不根据法律办事时，掌权者是不是免于法律的追究；在掌权者进行管理和调节时，是不是以权压法，以权代法，所有这些都是法律与权力之间的关系的的关键所在。权力是归掌权者握有的。如果掌权者认为，法律是可有可无的，不依法律一样能办事；如果掌权者认为，只要有权，可以随意摒弃法律而不顾，或者可以随意更改法律的规定；如果掌权者认为，法律只对别人有效，对自己是没有约束力的，甚至是没有实际意义的；如果掌权者认为，只要手中有权，没有法律可以制定一条法律来为自己的行为作诠释，即使有法律也可以按照自己的意图来解释它；如果掌权者认为，什么是法律，我说的话就是法律，甚至比法律更有权威性……那就不是法律赋予权力，法律制约权力，法律规范权力，而是权力支配法律，权力凌驾于法律之上了。人类历史上权与法的冲突已经有几千年的历史，这个问题直到现在也还没有很好地得到解决。

对于由传统政治结构和社会经济结构向现代政治结构和社会经济结构转变的发展中国家来说，这个问题尤为重要。社会主义制度下的转型发展中国家，也不例外。发展中国家的经济发展都是在突破重重障碍以后实现的。发展中国家在经济发展中必须突破的巨大障碍是传统的政治结构与传统的社会经济结构，这两者是紧密地联系在一起的。传统的政治结构维护着传统的社会经济结构，而传统的社会经济结构又必然地支撑着传统的政治结构。无论是传统的政治结构还是传统的社会经济结构，都是前资本主义性质的，主要是封建的。在封建的政治结构之下，不管掌权者以何种方式取得了政权，但取得政权以后所建立的政府都是专制的政府，最高掌权者高于一切，权力大于一切，没有法，或者法律形同虚设，法律屈从于权力，法律替掌权者的行为作诠释。在这样的社会中，政府对社会经济生活的支配或干预，是直接的。由于没有法或法律屈从于权力，所以政府对社会经济生活的支配或干预也必然是任意的、专横的、个人说了算的。权与法之间的冲突在所有的发展中国家都存在，只不过冲突的激烈程度有所不同而已。

在一些发展中国家，特别是在农村，家族制度、家长或族长统治，也构成传统的政治结构的一部分。在某些地区，宗教势力同样被包括在传统政治结构之中。家族制度、家长或族长统治、宗教势力的统治，往往是经济不发达的城乡的政治结构的基础。什么是法律？对当地来说，是完全陌生的。没有法律，当地有权有势者不照样进行统治吗？家长、族长或宗教势力代表着当地实际生活中的权威，法律或者不存在，或者不起任何作用，或者屈从于当地的掌权者。

实际上，权与法的冲突中所涉及的一个重要问题是权力与权利孰轻孰重。权力是法律所授予的，并经法律确定下来；权利是法律所要维护的，也由法律加以确定。法律保护权利，对权力进行制约，这是权力与权利之间关系的一个方面。法律授予权力，权力的被授予者要运用这种权力来保护法律所确定的权利，这是权力与权利之间关系的另一个方面。这两个方面是统一的。重权力而轻权利，与法律的原则相违背，这等同于重权力而蔑视法律、践踏法律。如果说普通居民重权力而轻权利，是法律意识淡薄的表现，或者说是受传统政治结构的影响所致，那么掌权者的重权力而轻权利，就绝不仅仅表现了法律意识的淡薄，而是反映了一种来自传统政治结构的优越感和特权思想，反映了对法律的轻视。

法律的中心问题是对权利的保障。只强调权力，必然把法律所要保障的权利置于无足轻重的地位。不仅在权力与权利的关系中应把权利放在首位，把权力看成是维护权利的手段，而且在权利与义务的关系中，权利同样应处于首位，保障权利才是法律的目的；没有权利，义务也就失去了意义。如果说权利与义务是对称的，有此必定有彼，那么应当做这样的理解：义务是为了保证权利的实现而设定的。只重视公民应尽的义务而忽视公民应得到保障的权利，往往为权力的不受制约或权力的滥用埋下伏笔。这是对法律的一种曲解。为什么需要监督？监督是使得权力受法律的规范和约束的必要手段。监督的基本目的是防止越权，防止权力被滥用。关于这个问题，本书第六章和第七章中都将较细致地进行分析。下面，让我们考察习惯、道德与法律之间的关系。

4.2 Custom, Morality and Law

4.2.1 The Role of the Third Type of Regulation Since the Birth of Law

In Chapter One we defined the notion of regulation by custom and morality as the third mode of regulation, one distinct from regulation by market and regulation by government, and in the first section of this chapter we discussed the relationship between regulation by market, regulation by government and law in modern society. In this section, we will discuss the relationship between the third-mode regulation and law.

As mentioned above, regulation by custom and morality emerged long before the other two modes. It is only after government is formed and its rule is effective that laws are enacted and implemented. Therefore, when regulation by custom and morality or even when regulation by market were at an early stage, there was really neither government nor law. That is to say, in the absence of law, both regulation by custom and morality and regulation by market were at work.

With the appearance of law, although regulation by custom and morality continued to have a role, it must act within the boundaries defined by law and never break it. The question is: What is the relation between regulation by custom and morality and the law? Can we say the former is subordinate to the latter? Apparently, we cannot reach that conclusion. To say that regulation by custom and morality must stay within legal bounds and not violate the law is not the same as saying it is subordinate to law.

We begin our discussion with the supplementary role of regulation by custom and morality following the emergence of regulation by market and by government, especially when regulation by market is the basic regulatory form. We can examine this in three aspects:

Firstly, in the market economy one must have and protect fair competition, in order to maintain normal trading order and prevent

panic if trading order is at odds with traders' anticipation. How to ensure fairness of competition and allay the fears of traders? As we know, regulation by market is a mechanism in which changes of supply and demand will cause prices to rise or fall. The price movement has nothing to do with morality: it is obeying the objective law of supply and demand. But in the market, whether one party in a trading behavior has business morality or not and whether this behavior breaks the principle of fair competition or not, they will certainly influence price. The market is not short of traders violating business ethics, cheating other parties and making exorbitant profits; punishment for such behavior is necessary under a complete and effective legal system. But this is not enough. Since trading activities are going on at every moment of every day and countless traders are involved, even the most complete legal system has loopholes and even the strictest legal provisions cannot ensure that every law breaker gets his just deserts. It's obvious that one cannot rely purely on law to maintain fair competition, maintain trading order and eliminate cheating behavior. Cultivating and promoting business ethics is important too. On the one hand, trading activities should be restricted and standardized by law and violators should be punished. On the other hand, traders should be educated in law; business ethics should be inculcated, teaching how to resist behaviors inconsistent with business ethics. Traders should exercise self-discipline. The greater their self-discipline, the greater will be the likelihood of their following business ethics and keeping their trading activities within the law. Consequently, regulation by market will better exercise its role as the basic form of regulation, and the role of law in maintaining fair competition and trading order will be more prominent. This is one embodiment of the supplementary role of regulation by custom and morality to regulation by market.

Secondly, enterprises and individuals are both behavioral agents in market economy. An enterprise is a group formed by a certain number of individuals and has many different person-to-person

relations such as between investors and between managers. Interpersonal relations in an enterprise would normally include those of investor-to-manager, senior executive-to-manager, manager-to-lower level employee, and employee-to-employee. In a market economy situation, if an enterprise harmonizes those relations well, its efficiency will be improved, an effect discussed in Chapter Two. In harmonizing those relations, improving efficiency, fully motivating all individuals involved (investors, managers and staff), it is essential to keep to the law: But one should not rely totally on law since it cannot reach such details as interpersonal relations. The role of law in regulating interpersonal relations boils down to putting standards on those relations so that they do not violate law and at the same time protect the rights of everyone. These relations need to be made harmonious through regulation by custom and morality. Customs and morality regulation is helpful for coordinating the common interpersonal relations in an enterprise, particularly when they are at odds with but not actually violating any law. This is regulation by custom and morality supplementing the role of regulation by market.

Thirdly, from the perspective of trading activity we can regard enterprises and individuals as behavioral agents in a market economy. But as pointed out in Chapter One, socio-economic activity covers diverse fields, some belonging to the traded sector and others to the non-traded sector, the latter often accounting for the lion's share. Even in a developed market economy, a large portion of socio-economic activities are non-traded in nature, and in these regulation by custom and morality plays an important role, the law just defining boundaries for these activities so they will not overstep them. Within these boundaries, they rely on regulation by custom and moral force. This is the third aspect of the supplementary role of regulation by custom and morality.

From these three aspects it is evident that even in market economy, in the presence of regulation by market and government and where law is seriously enforced, regulation by custom and

morality not only exists but plays a role that neither law nor the other two forms of regulation can replace. Even if its role is supplementary, it is nevertheless indispensable. With this third form of regulation, the other two forms are more effective and the role of law is better deployed.

4.2.2 Relationship Between Law and Regulation by Custom and Morality

Since regulation by custom and morality plays an irreplaceable role in supplementing the other two forms of regulation, then in modern-day society its relation with law is very clear. There are two aspects to this relation.

Firstly, law defines the boundaries within which all the three types of regulation must operate. Take regulation by custom and morality for example. It can function both in a very small group (family, small village or small enterprise) and a large group (society), but once effective law is operating the regulation cannot overstep the boundaries defined by law. This does not mean there is no such thing as conflict between law and regulation by custom and morality or that it does not play a role. But since this form of regulation transcends legal boundaries, there will be friction and conflict with law, accumulating, intensifying and finally becoming an obstacle to normal order, and possibly losing its original role.

Take the question of property inheritance for example. Different places have different customs governing inheritance of family property, for example the oldest son being the heir, the youngest son being the heir, all sons co-inheriting, all family members co-inheriting, etc. The inheritance mode is decided by many factors. Before the establishment of relevant laws on inheritance, people followed the customary ways and no one raised objections: even if there were objections, it would not change the custom at all. However, once laws

on property inheritance were stipulated, such as all children, sons and daughters alike having the right to inherit, conflict between law and regulation by custom and morality became apparent on this question. Some advocate property inheritance according to convention, but this is inconsistent with legal requirements; others advocate inheritance according to law, but this is inconsistent with convention. The result is confusion, and when regulation by custom and morality oversteps the boundaries defined by law, crisis occurs. At the very least, the convention of family property inheritance is shaken and will no longer be embraced by so many people, the fissure between law and this form of regulation will widen and in the fullness of time inheritance conventions are gradually replaced by legal stipulations.

The hiring of apprentices is another case in point. Small enterprises, especially manual workshops, frequently hire apprentices. In different periods of historical and different places different conventions have applied in the hiring of apprentices. There were situations where apprentices received no payment at all, received very low pay, or paid to become apprenticed. There were similar variations concerning whether masters or bosses had the right to inflict physical punishment on their apprentices. In some places, apprentices were even required to sign a disclaimer exempting the master from liability in the event of their death. Apprenticeship periods also differed from place to place, lasting three years in some and seven years in others. The way apprentices were hired was determined by many factors, not just on the say-so of the master or boss. The conventional ways were followed by local people for many years without any objections raised, because this was how things were always done. Apprentices had to work in excess of 10 hours a day, not only doing productive labor, but domestic service for the master or boss. However, with the setting of legal rules on hiring apprentices, the clash between custom and law would become evident. For example, law might set the maximum daily or weekly working hours of apprentices, their minimum age, minimum wage, prevent employers from meting out physical

punishments or getting them to sign disclaimers. The customary modes of apprenticeship were unreasonable in many places and the legal rules aiming to rectify these shortcomings were to protect the apprentices. However, since these conventions have been accepted for a very long time, the clash between law and convention may not be correctly understood by all. Consequently, the retreat of customary apprenticeship from the stage of history will be a slow one, and the process of making convention subject to law will be a long one.

On the other hand, there are other situations in the relation between law and regulation by custom and morality. On some occasions, certain aspects of custom and morality or some of its regulatory methods could be adopted and written into law, becoming permanent legal articles. This is a quite normal phenomenon since the laws of a society are always a reflection of its values and concepts, and one function of law is to regulate the interests of all sides. Hence, in enacting laws certain moral principles have to form the basis for regulating these interests. If certain specifics of regulation by custom and morality are inconsistent with law, then the friction or clash between law and this mode of regulation will intensify. Although the clash will persist for a rather long period, regulation by custom and morality will gradually draw close to law and finally become subject to it. If some ways of regulation by custom and morality conform to law, it is entirely possible that they will be absorbed into law.

One example of this is the autonomous organizations that have existed and evolved in various forms in rural areas. In many places, under the chronic influence of feudal rule, the autonomous organizations of rural residents were autonomous in form only, mere appendages to power-wielding clans, with a strong tinge of feudalism and superstition. But, undeniably, in some places, despite the feudal influence, since the autonomous organizations are of a mass character, they still have a certain function in mediating disputes between residents, in initiating social programs and in promoting mutual aid among residents; hence they are supported and trusted by local

people. This helps to account for the longevity of such autonomous organizations of rural residents. Here the role of law is: in line with ethical principles, to discard the unhealthy and irrational content of those organizations and their activities; to introduce things consistent with the aims of law into the legal articles on autonomous organizations, so that the majority interests of residents will be protected. If this can be realized, regulation by custom and morality will not weaken; instead, its role will become more important.

For another example, non-governmental associations have been around for a very long time. Formed on people's own initiative and in accordance with custom, they have their own objects, activity modes, and discipline. They regulate the custom and morality of their members within a certain scope. As they evolve through history, some associations gradually fall apart and disappear; others change their properties. These are all normal phenomena and show that it is impossible to prohibit non-governmental organizations. Governments usually deal with them in three ways: to ban those that are harmful for achieving social targets; to let them run their own course, neither banning them nor acknowledging their legality; to set up rules and bring those conforming to the rules into the scope of legal restriction and protection. The third of these entails establishing law on associations and absorbing into law relevant aspects of regulation by custom and morality. In this way, regulation and law can be unified. Of course, there is no conflict between the third way and the first. In other words, government can admit the legal status of associations that conform to the rules and ban those that do not.

4.2.3 The Relation Between Law and Self-Discipline

Self-discipline is a manifest effect of regulation by custom and morality. The fact of some aspects being absorbed into law does not

mean this mode of regulation itself has lost importance; it means these aspects now have a legal basis and can play their role better within the scope of law. Furthermore, these aspects account only for a small part of regulation by custom and morality.

Whether adopted as part of the law or not, regulation by custom and morality will still play a role according to their own nature, because they regulate people's behavior and define their behavioral and social norms, i.e., principles all members of society should follow in their daily activities and life. Individuals may have various activities and life styles motivated by their own will, interests, hobby, sense of responsibility, public spirit or pursuit of personal advantage. But all behaviors should conform to social norms; otherwise, they will be harmful to society, to others and to the individual personally. As one of countless individuals of a society, an individual should not seek advantage or pursue aims at the cost of other peoples' advantage and aims. If harm transpires, the rationality of such aims and behavior should be questioned. What seems reasonable to one person may not seem so to another, and social norms, i.e. the principles all are required to follow, can be the only standard for judging the rationality of the behavior. If a person's behavior does not conform to social norms, in other words if his aims and his way of realizing them violate these principles, he should have restrictions imposed—by society and by himself. If law reflects social norms or social norms have been absorbed into law, a society's restriction on individual aims and way of achieving them is tantamount to legal restriction and self-restriction amounts to being law-abiding and self-disciplined. Self-discipline amounts to spontaneous observance of social norms.

It is important to point out the significance of self-discipline in circumstances when law is in effect. In market economy, the role of law lies in maintaining market order and guaranteeing the legal rights of traders or every behavioral agent in the market. No matter what his occupation, if an individual can always and everywhere restrict himself with social norms, the effect of regulation by market and

government will be evident and socio-economic order will become normal. Law requires self-discipline on the part of individuals for it to operate more effectively.

Self-discipline means following a certain code of conduct established by regulation by custom and morality, a code that defines what an individual in a society "should" and "should not" do, "how to do" and "how not to do." As repeatedly stated in previous chapters, individual behavior is not driven just by personal interests. Otherwise, it would be difficult to account for their sense of social responsibility, public spirit, their awareness and protection of public interests and goals. But it would also be off the mark to say individual behavior is driven by public interests and goals, since for most individuals, their initiative and motivation is not separate from their personal interests. In other words, you cannot set up a code of conduct for people without considering their own benefits. In an economy, an individual's self-discipline is based on an awareness of both public and personal interests and goals, and such self-discipline is consistent with legal rules.

The consistency can be explained as follows: How an individual considers public interests and goals is influenced both by legal rules and by regulation by custom and morality; the same goes for his personal interests and goals. Since an individual belongs to and identifies with one or several groups, he must participate in group activities within the boundaries defined by law. At the same time, under regulation by custom and morality, his concern for and identification with the group equates to concern for and identification with the public interests represented by the group. His personal interests are connected with his group identification as well as whether he obeys law. Therefore, his self-discipline, from the perspective of observing the law and identifying with group interests and goals, includes consideration of his personal interests and goals.

贰 习惯、道德与法律

一、法律产生以后第三种调节的作用

本书第一章中已经说明习惯与道德调节是市场调节、政府调节以外的第三种调节。关于现代社会中市场调节、政府调节与法律之间的关系，本章第一节作了论述。在这一节，准备就现代社会中第三种调节与法律之间的关系进行分析。

如前所述，习惯与道德调节的出现远远早于市场调节与政府调节。法律的颁布和施行是在政府建立并有效地实行统治之后。因此，不仅习惯与道德调节最初发挥作用时客观上不存在政府，也不存在法律，而且在市场调节最初发挥作用时，政府和法律都是不存在的。可见，习惯与道德调节、市场调节都曾经在没有法律的情形下发挥过作用。

自从有了法律之后，虽然习惯与道德调节继续发挥着自己的作用，但它必须以法律的规定作为边界，习惯与道德调节不得违背现行的法律，这是没有疑问的。问题在于：习惯与道德调节同法律之间究竟是什么关系？能不能说习惯与道德调节是从属于法律，依附于法律的？看来是得不出这样的结论的。习惯与道德调节必须以法律的规定作为边界，习惯与道德调节不得违背现行的法律，不等于它对法律的从属或依附。

让我们先从市场调节与政府调节出现以后习惯与道德调节的补充作用谈起。在市场调节中，市场调节是基础性的调节。习惯与道德调节在市场发挥基础性调节作用的条件下究竟如何起补充作用，可以从以下三个方面来分析：

第一，在市场经济中需要有公平竞争，要维护公平竞争，以保证交易秩序的正常，使每个交易人的预期不会因交易秩序的不正常而紊乱。怎样才能保证竞争的公平性，保证交易秩序的正常，以及使得交易人放心呢？要知道，市场调节是一种机制，在这种机制之下，供给的变化与需求的变化都会引起价格的上升或下降，价格水平的这种上下波动与道德无关，因为这是由客观的供求规律所引起的。但在市场上，某一具体交易行为的当事人是否具有商业道德，以及这种行为是否违背公平竞争原则，对价格的升降仍然是有影响的，市场上不乏交易人违背商业道德、欺骗对方、牟取暴利的现象。对于这种行为，固然要依赖法律的健全，依赖法律的有效执行，使一切违反公平竞争规定的人受到惩戒，但

这显然是不够的。再完善的法律也并非没有空隙可钻。法律中对不公平竞争、欺诈行为和破坏正常交易秩序的现象处分的规定再严厉，也并不意味着某些人不会设法逃脱法律的制裁。何况，交易时时刻刻都在进行，每天发生许多次交易，而交易者的人数多得数也数不清。难道单靠法律的规定，就能维护竞争的公平性吗？就能保证交易秩序的正常化吗？就能杜绝交易中的欺诈行为吗？当然不能。于是就产生了培育和发扬商业道德的问题。在依靠法律约束交易者的行为、规范交易者的行为，以及制裁各种违法事件的同时，要教育交易者守法，培育商业道德，抵制种种不符合商业道德的行为。交易者应当自律。交易者越能增强自律性，越能自觉地遵守商业道德，越能用法律来规范自己的交易活动，那么市场调节就越能充分发挥基础性调节作用，而法律的维护公平竞争和维护交易秩序的作用也就越能体现出来。这就是市场调节之下习惯与道德调节的补充作用的体现。

第二，企业和个人都是市场经济中的行为主体，而企业又是由若干个人所组成的群体。企业中的人际关系是多种多样的，既包括投资者内部的关系、管理者内部的关系、一般职工内部的关系，也包括投资者与管理者之间的关系、高层管理者与基层管理者之间的关系、基层管理者与一般职工之间的关系等。在市场经济条件下，如果能够协调好上述这些人际关系，企业效率肯定会提高，关于这一点，在本书第二章中已有论述。但要协调好企业中的人际关系，促进企业效率的提高，使企业中的个人（包括投资者、管理者和职工）的积极性和潜力发挥出来，既不能脱离法律的规定，又不能完全依赖法律，因为法律不可能深入到企业内部的人际关系之中。也就是说，法律在协调企业内部人际关系的作用主要表现于规范这些人际关系，使之不违背法律的规定，同时，法律保护每一个人的权利，使之不受侵害，法律的作用也就到此为止了。企业的人际关系在许多方面要靠习惯来调节，靠道德力量来调节。习惯与道德调节有助于一般地协调企业中的人际关系，特别是对于那些并不违法而又处于不协调状态下的各种人际关系，唯有通过习惯与道德调节，才能使这种关系由不协调转为协调。这同样体现了习惯与道德调节在市场调节下的补充作用。

第三，把企业和个人作为市场经济中的行为主体，是从交易活动的角度来考察的。但正如本书第一章所指出的，社会经济活动是一个广泛的领域，其中有交易活动，也有非交易活动，而且非交易活动所占据的

比重还相当大。即使在发达的市场经济中，社会经济活动中仍有很大一部分是非交易活动，或称之为交易以外的活动。在这些活动中，习惯与道德调节起着重要的作用。法律只是规定了非交易活动的边界，使这些活动不得越过法律规定的界限，而在界限以内，要依靠习惯与道德力量的调节。这同样反映了习惯与道德调节在市场经济中的补充作用。

从以上三个方面的分析可以清楚地了解到，即使在市场经济中，在市场调节与政府调节都起作用的场合，在法律产生并被执行的场合，习惯与道德调节不仅存在着，而且它的作用是市场调节与政府调节所替代不了的，也是法律所替代不了的。尽管这里所说的是习惯与道德调节在市场调节作为基础性调节之下的补充作用，但这种补充作用却是不可缺少的。有了习惯与道德调节，市场调节与政府调节的效应就越明显，也越有效，而法律的作用也将发挥得更好。

二、习惯与道德调节同法律之间的关系

既然习惯与道德调节在市场调节与政府调节都起作用的条件下的补充作用是存在的，而且是不可替代的，那么在现代社会中，习惯与道德调节同法律之间的关系也就十分清楚了。概括地说，这种关系包括两个方面：

一方面，法律既是市场调节与政府调节的边界，又是习惯与道德调节的边界，无论是市场调节、政府调节还是习惯与道德调节都应当在法律规定的范围内进行。以习惯与道德调节来说，它可以在一个很小的群体（如一个家庭、一个小村或一个小企业）中起作用，也可以在一个很大的群体（如全社会）中起作用，但在法律产生并被执行之后，不能越过法律规定的边界。同法律相抵触的习惯与道德调节，不是不可能存在的，也不是不可能发生作用的，但既然它越过了法律规定的边界，那么就会产生习惯与道德调节同法律之间的摩擦或冲突，而且矛盾会越积越多，不断激化，终于成为维护正常秩序的一种障碍，并且会使习惯与道德调节渐渐失去原有的作用。这里不妨举两个例子。

例子之一是有关家庭财产的继承问题。不同地方有不同的家庭财产继承的习惯，例如长子继承、幼子继承、诸子析产、家族成员均沾等。某一地方采取什么样的家庭财产继承方式，是由多种因素决定的，在没有关于家庭财产继承的法律之前，习惯的家庭财产继承方式被当地的人

们所遵守，没有人提出异议，即使提出异议也没有用处，改变不了这种习惯。然而，一旦法律对于家庭财产继承方式作出了规定，比如规定了无论儿子或女儿全都享有继承权。这样，习惯与道德调节同法律之间的矛盾，在家庭财产继承问题上便公开化了。有人主张按习惯方式继承财产，但这与法律不符，有人主张依照法律来继承财产，而这又与习惯不合。于是便产生混乱，不管怎样都会使习惯与道德调节在越过法律规定的边界之后发生危机，至少习惯的家庭财产继承方式开始动摇了，不再被那么多人所信奉了，而且习惯与道德调节同法律之间的裂缝还会扩大，久而久之，习惯的家庭财产继承方式会逐渐被法律的规定所替代。

例子之二是有关企业雇佣学徒方面的问题。小型企业，特别是手工作坊，经常雇佣学徒。历史上不同地方、不同时期对于学徒的雇佣有各种不同的惯例。例如，学徒在学艺期间有没有工资收入，有的地方不付任何工资，有的地方可以付少量工资，有的地方还要学艺的人自己付钱；又如，师傅或老板是否有权对学徒实行体罚，各地也有不同的习惯，有的地方甚至要学徒先立下生死合同；再如，学徒学艺的时间长短，各地的习惯不一样，多则七年，少则三年。某一地方采取什么样的雇佣学徒的方式，是由多种因素决定的，并不是师傅或老板一个人说了算，习惯的雇佣学徒方式被当地的人们遵守，实行了多年，谁也没有异议，因为习惯就是如此。学徒当然是要干活的，劳动时间长，常常一天十几小时，而且不仅从事生产性劳动，还帮助师傅或老板干家务活。但是，一旦法律对企业雇佣学徒事项作出了规定，习惯同法律之间便会明显地发生冲突。比如说，法律可能规定学徒每天或每周的劳动不得超过多少小时；规定学徒的最低年龄不得小于多少岁，否则就是违法使用童工；规定雇主对学徒参加劳动应当付以一定的报酬，最低工资标准为多少；规定雇主不得对学徒施行体罚，更不得订立生死合同，等等。习惯的雇佣学徒方式中确有若干不合理之处，法律如果针对这些不合理之处作出了规定，显然是对受雇的学徒的一种保护。但是，既然习惯的学徒制在许多地方已长时期被人们所接受，所以法律同习惯的学徒制之间的冲突就不一定能被人们理解，从而习惯的学徒制只会缓慢地退出历史舞台，习惯服从于法律将是一个相当长的过程。

另一方面，在有关习惯与道德调节同法律之间的关系中还存在着下列情况，即在某些场合，习惯与道德的一定的内容或调节的方式有可能被某些法律所吸收，被写进这些法律之中，成为法律中的某些条款，甚

至还可能被政府以法律的形式把习惯与道德调节的某些内容固定下来。如果出现这种情形，那是很正常的。这是因为，一定社会中的法律总是反映那个社会中的价值观念的，法律要调节一定社会中的各种利益关系。因此，法律不可能不以一定的伦理原则作为各种利益关系调整的依据。假定习惯与道德调节的某些内容同一定社会的法律不相符，那么如前所述，习惯与道德调节同法律之间的摩擦或冲突会越来越尖锐，尽管在相当长的时间内会出现法律同与之不相符的习惯与道德调节并存的现象，但最终，习惯与道德调节将缓慢地、逐渐地向法律靠拢，服从于法律。假定习惯与道德调节的某些内容是同一定社会的法律相符的，那么法律完全有可能采纳习惯与道德调节的这些内容，使之成为法律的一部分。这里不妨也举两个例子。

例子之一是有农村居民的自治组织。无论在历史上还是在现实生活中，农村居民中间都存在过不同形式的群众性自治组织。它本身也有随着时代的变迁而渐渐演变的历史。在不少地方，由于长期封建统治的影响，农村居民的自治组织或者徒有自治的形式，实际上成为当地有权有势家族进行统治的附属物，或者在其活动中带有封建文化和迷信的色彩。但不可否认的是，在有些地方，即使受到封建传统的影响，农村居民的自治组织由于具有群众性，所以在调解居民纠纷，兴办公益事业，以及推动村民互相帮助等方面仍有一定的作用，从而受到当地村民的信任。这种农村居民的自治组织之所以会长时间存在，不是没有道理的。法律的作用在于：按照社会的伦理原则，摒弃农村居民自治组织及其活动中的不健康、不合理成分，而把其中同法律的宗旨相符合的内容吸收到有关群众性自治组织的法律之内，这将保护广大村民的利益，防止出现损害村民利益的现象的发生。如果能够做到这一点，农村中的习惯与道德调节不仅不会削弱，反而会发挥更大的作用。

例子之二是有关民间结社的情形。民间结社由来已久。有各种各样的民间结社，民间自发结成的社团，有自己的宗旨、自己的活动方式、自己对成员的要求。它们通常是在自愿的基础上按照习惯而组成的，它们在一定的范围内对社团的成员起着习惯与道德调节的作用。在历史演进的过程中，有的民间结成的社团活动一段时间后，渐渐解体了，消失了；有的又转变为另一种社团。这些都属于正常的现象，表明民间结社是禁止不了的。政府对待民间结社一般可能采取以下三种做法，一是取缔被认为不利于实现社会目标的结社；二是既不取缔它，也不承认它，

任其自发地结社和进行活动；三是作出规定，把符合规定的社团纳入法律约束与保护的范围内。假定采取的是上述第三种做法，那就需要制定有关社团的法律，并把与民间结社有关的习惯与道德调节的某些内容纳入法律之中。这样，法律同习惯与道德调节在民间结社问题上便可以统一起来。当然，上述第三种做法与第一种做法也不是抵触的，即承认符合法律规定的社团，取缔不符合法律规定的社团。

三、法律与自律的关系

自律体现了习惯与道德调节的作用。即使在习惯与道德调节的一部分内容被吸收到法律之中并成为法律的一部分之后，这不仅不意味着习惯与道德调节就此失去了意义，而且还表明习惯与道德调节的一部分内容已有了法律依据，从而可以在法律的范围内更好地发挥作用。何况，被纳入法律之中的只是某些同法律相符的习惯与道德调节的一部分内容而已。

纳入了法律也好，未纳入法律也好，习惯与道德调节始终按照自己的特点发挥着作用，因为它们调节着人们的行为，它们所要确立的是人们行动的规范，也就是社会的规范。社会规范是指社会各个成员在一切行动和生活中都应当遵守的原则。个人根据自己的志愿、兴趣、爱好、责任感、公益心或出于自己的追求利益的动机，可以有各种不同的行为和生活方式，但这些行为和生活方式要符合社会规范，否则对社会是不利的，对别人是不利的，归根到底对个人也不利。社会由无数个人组成，一个人的利益或个人目标的实现应以不损害其他人的利益或其他人目标的实现为条件。如果这里确实存在着损害，那就要探讨个人目标及其实现方式的合理性了。对某一个人来说是合理的，并不一定对社会上的其他人也是合理的。判断个人行为的合理性的标准只能是社会规范，即人人都应当遵守的原则。如果个人行为不符合社会规范，或者说，如果个人目标及其实现方式违背了人人都应当遵守的原则，那么它们就应当受到约束，包括社会对他的约束和他的自我约束。如果法律体现了社会规范或社会规范已被法律所吸收，那么社会对个人目标及其实现方式的约束就等于法律的约束，个人的自我约束就是守法，就是自律。自律等于一个人自觉地遵守社会规范。

在这里，特别需要指出在法律起作用的条件下个人自律的意义。在

市场经济中，法律的作用在于维护市场的秩序和保障交易人或市场上每一个行为主体的合法权益。一个人，不管他从事什么工作，如果他能够时时处处以社会规范来约束自己，那么市场调节与政府调节的效应就会明显地表现出来，社会经济秩序也就能正常化。法律要求个人自律，个人自律使法律能更好地被执行。

自律所遵守的是由习惯与道德调节确定的一种行为准则。这种行为准则表明一个人在社会上“应该做什么”，“怎么做”，“不应该做什么”和“不应该那么做”。当然，正如本书前几章已经反复阐明的，个人行为不可能只受个人利益因素的影响，如果那样的话，个人的社会责任感、公益心或个人对公共利益、公共目标的认识和维护就得不到解释了。另一方面，如果认为个人行为仅仅受公共利益、公共目标的影响，那也是片面的，因为对社会上的多数人来说，要使个人有主动性、积极性，不能离开个人利益关系去规定一个人“应该做什么”和“怎么做”。市场经济条件下个人的自律，实际上把个人对公共利益、公共目标的考虑和对个人利益、个人目标的考虑结合在一起。这种自律与法律规定是一致的。

对自律与法律规定的一致性可以作出这样的解释：个人对公共利益、公共目标的考虑，既来自习惯与道德调节的作用，也来自法律的规定；个人对个人利益、个人目标的考虑，同样来自习惯与道德调节的作用和法律的规定。由于个人总是属于某一个群体或若干个群体，他同自己所属的群体有认同关系，因此，他必须在法律所规定的限界内参与群体的活动，同时，在习惯与道德调节之下，他对群体的关心和认同就是对以群体为代表的公共利益的关心和认同。他的个人利益既与他对群体的认同有关，也与他法律的遵守有关。他的自律，从守法和对群体利益、群体目标认同的角度来看，也包含了他对个人利益、个人目标的考虑。

4.3 Further Discussion on Self-discipline

4.3.1 Self-discipline and the Heidegger

Controversy

We have clarified the nature and meaning of self-discipline, so now let us discuss this question further. Traders are required to follow business ethics and administrators to follow professional ethics. That is to say, people in all walks of life, businessmen, enterprise or government employees, etc., should be self-disciplined. But self-discipline is more than business or professional ethics. It also means law observance and the restriction of moral factors on people's behavior.

In the intellectual world, the meaning of self-discipline might be broader. One feature of this community is that intellectuals involve in social, political and economic activities not only by action but by expressing their thoughts and opinions on those fields. Any government that hopes to realize its goals must rely on the support of intellectuals and their knowledge and technology. Their academic status, influence and reputation serve as a standard and demonstration for the public. Therefore, intellectuals face bigger tests than other social groups, since in their view they face a severe choice between the so-called truth and power.

The actions, words and writings of scholars in relation to the Nazi regime provide a good example of the extreme and necessary self-discipline exercised by intellectuals in that period. The prominent German philosopher Martin Heidegger (1889-1976) was regarded as "perhaps the most influential philosopher of this century...whose thought shook the world of philosophy,"¹ but that did not prevent him being a controversial figure. He was elected rector of the University of Freiburg in late April 1933, just three months after Hitler took office as Chancellor. His predecessor had been dismissed for forbidding pro-Nazi students to stick up anti-Jewish posters. The predecessor and some professors supported Heidegger for the rectorship, believing his international reputation would help preserve academic freedom and stop the most destructive behavior of the Nazis. Heidegger agreed to

stand and the school Board passed the proposal unanimously.² In his inaugural address on May 27 "The Self-assertion of the German University," he expressed his support of Nazism and many of his proposals were exactly in tune with Nazi propaganda. But in February 1934, he resigned the rectorship and refused to attend the ceremony handing over to the incoming Nazi rector. His lectures about Nietzsche starting in 1936 marked his separation from the Nazi movement, and thereafter he was subjected to Nazi surveillance and persecution. In summer 1944, he was drafted to dig trenches on the west bank of the River Rhine, the oldest of the enlisted teachers, because he was not on the list of 500 most prominent scholars, scientists and artists exempted from hard labor. After Germany was liberated by the Allies, Heidegger was forbidden to teach because of his Nazi connections and the ban was not lifted until 1951, shortly before he retired.³ The words, actions and thoughts of such a scholar with a short record of Nazi cooperation left commentators many topics to explore. In his book *Introduction to Heidegger's Philosophy* Chen Jiaying comments: "Heidegger's involvement in the Nazi movement was no mistake or accident. He always detested civilian politics and longed for elite rule. Even in his twilight years, he made clear his distrust of democracy. He probably still sympathized with Nazism, even if disappointed with it. Scholars have long been aware that even though Heidegger cut his connection with Nazism later, he never directly condemned the Nazis for their crime against humanity."⁴ An intellectual's academic viewpoint and standpoint, what he approves and opposes is one thing; his political attitude, particularly if he yields to and cooperates with a dark force even for a very short period is quite another. It is his self-discipline in his political attitude that is germane to our discussion.

In his article "Don't Let Bygones Be Bygones: On the Heidegger Controversy," Zhang Rulun commented: "If intellectuals do not act in defense of the truth and justice they claim to believe in and advocate, what is the value of justice and truth? And what indeed is the value of intellectuals? Not every intellectual has the courage of Bruno, but at

the very least they should not tell lies if they cannot tell the truth; even if they are not strong enough to resist the Devil, they should never sell their souls to him."⁵ He also made the point: "In modern society, an intellectual should be the inheritor and creator of culture, the critic of reality and represent the conscience of society, which are three of his basic obligations. He should be both pro-science and pro-democracy. A convincing example is the contrast between the great scientist Albert Einstein and the philosopher Martin Heidegger. Both thinkers exerted important influence on human culture, but when justice was being trampled on, Einstein stood up to safeguard the conscience and justice of humanity, whereas Heidegger compromised with the Devil, fancying it could produce good. So, Einstein became the perfect role model for modern intellectuals whereas Heidegger has a stain on his character that can never be washed clean even if his great academic achievements were the greater."⁶ These two passages are indeed very insightful comments on Heidegger.

Let us further analyze some of Zhang's comments, bringing in specific times and places. "Even if they are not strong enough to resist the Devil, they should never sell their souls to him" is the right attitude to have on whatever occasion. An intellectual's self-discipline, indeed any person's self-discipline should encompass this. "At the very least they should not tell lies if they cannot tell the truth" is correct too. But there are lies and lies: In circumstances where one has no choice and where even silence is not permitted, the insincere parroting of a formula, going through the motions, such lies are pardonable. But Heidegger's lies in his cooperation with the Nazis clearly do not fall into this category. They were either the truth, i.e., his opinions were in line with Nazism, or they were a different sort of lie, i.e., he did not agree with the behavior of the Nazis, but he flattered them for his personal purposes. This is why Heidegger has been blamed in German academic circles for so long. Even though his cooperation with the Nazis was of short duration, the stain on his character is indelible. The Heidegger controversy tells us how

essential self-discipline is for intellectuals.

4.3.2 More on the Relation Between Observing Law and Self-discipline

Above we discussed the relation between observing law and self-discipline, but since this question involves how intellectuals could exercise self-discipline in the context of Nazi Germany, it is necessary to go deeper into the issue of observing law.

Normally, observance of law goes hand in hand with following moral standards. We often say an individual who does not observe law does not follow moral standards or the generally recognized code of conduct either. However, this statement makes the assumption that the law is consistent with moral standards and embodies the generally recognized code of conduct. The question is: Who makes the law? Who interprets and enforces it? Without law, the question of abiding by law is meaningless; moreover, in its absence no one knows where the boundaries of individual behavior lie and moral restriction will replace legal restriction. However, if law is made, interpreted and enforced by a tyrannical regime, how can it be in tune with moral standards or the generally recognized code of conduct? Must people at any time in history and in any country unconditionally accept laws made in their times? Clearly not. But are all laws created in conformity with legal procedure and voted through by representatives consistent with public interests and goals? Not necessarily. Nazi Germany is a case in point. As we know, Hitler came into power, not through a military coup, but by due process of German law, in the sense that he was voted into by the majority of the German people. The electorate chose him because they were misled by the guiding principles of his party, were attracted by his personal charisma or pinned all their hopes on him, believing he could rescue the German nation from crisis. That majority included many German intellectuals.

Of course, at the time of that election they might have not foreseen the dramatic change of politics, a change that would take the German people into the abyss. But surely they could see the possible disaster when Hitler enforced the measures enacted immediately after assuming power? Surely violence against Jews on city streets would waken them to the danger? This brings us to the question of intellectual self-discipline, without which, black can be seen as white in terms of legal issues.

When an autocratic government uses laws it brought or interprets at its will in order to strangle truth and justice, it isn't hard to tell the character of such laws. But why do some people retreat in the face of morality? Why does the spirit of self-discipline fall apart? It undeniably has to do with personal interest. In other words, they do so either in defense of or to increase their individual interests. One might ask, since the government issued the laws, surely they should abide by them? What's wrong with that? Under Nazi rule, how could German intellectuals not obey law as they had always done since there were laws to obey? This is actually self-deception. As previously pointed out, as soon as Hitler took office the injustice of the policies he implemented was plain for all to see. An individual might not have the power to resist such government and rule, but at least he could keep silent. Isn't silence also a form of observing law? Couldn't such famous scholar, professor and philosopher as Heidegger keep silent if he had self-discipline? And if remaining silent was not permitted, could he not have uttered a few empty phrases? Why did he have to cooperate even for a short time with the Nazis? Why did he defend and even praise them? The answer is he lacked self-discipline. Therefore, he ended in retreating and falling apart in the face of morality.

Let us subject individual interest to further analysis. On the assumption that motivation comes from individual material interest, individual behavior is controlled by this, and the term material interest usually refers to the increase of individual income or property.

We also assume that individual behavior is controlled by material as well as non-material interests such as getting more honors, spiritual fulfillment, etc. As individual income increases, non-material interest accounts for an ever greater proportion of individual interest in the broad sense. On the assumption that motivation comes from not only personal interest (including material and non-material interest), but also from factors beyond interest (concern for public interests and targets, etc.) it follows that individual behavioral standards are actually influenced by two coexisting factors, namely personal interest and public interest. Law and self-discipline play a positive role in both factors. Whether in striving in one's own or the public interest, individuals should never overstep legal boundaries. Self-discipline means abiding by law. Individuals striving to achieve public interests and targets are usually inspired by morality. In drawing up personal goals, in evaluating personal gains, and especially in striving to achieve them, individuals should restrict themselves with the moral standard that they should not fight for what is not worthwhile and abandon measures that are not proper. Self-discipline is shown as moral restriction.

Self-discipline is probably an individual's last line of defense: it is through this that moral strength is fully displayed. Why is keeping to the law not the last line? It is because, as discussed above, before following the law, we need to judge what kind of law it is, who makes it, who interprets it and who executes it. Under tyrannical regimes are the laws consistent with moral principles? In circumstances where "one cannot tell the truth but should not utter lies" to remain silent is to observe law, but more important is self-discipline. Suppose a ruler, in the name of law violates moral standards and does as he pleases, then strictly self-disciplined people will never be his blind followers or try to win his favor. Strict self-discipline will cause them to at least keep silent even in the most dreadful circumstances and safeguard their last line of defense—their moral standard.

Thus we learn that since individual behavior is influenced by both

private and public factors, an individual's code of conduct too is influenced by these things and individual behavior is restricted by moral standards, therefore, in judging a person's behavior we should not forget the public interest principle, one that comes above private interests and should be followed by all. Although individual behavior differs between members of society, provided such behavior does not harm the public interest, this is a normal and reasonable thing to happen. Self-discipline makes us safeguard our last line of moral standard, namely, not going against the public interest.

4.3.3 Fairness of Punishment and Limitations of Self-discipline

Since self-discipline is an embodiment of regulation by custom and morality, we must ask: In practicing self-discipline what are the criteria for judging between good and bad? For regulation by custom and morality, such criteria do really exist, not criteria drafted by the minority that wields power but gradually formed and accepted by the majority. We can take public interests and targets as the criteria, which people will accept. So, by what criteria do we judge public interests and targets when, as we know, public interests and targets have been used as a pretext for many shameful and immoral actions in history? And are there not many different interpretations of public interests and targets? Sometimes, they are used as a fig leaf, covering up all kinds of disgraceful deals. Even among dark forces have "martyrs to the cause" who disregard their personal interests, but can we say such people are without self-discipline? We cannot. Though the aims of the dark forces are unworthy of protection and practice, they see them as public targets. This shows self-discipline has its limitations, in that when there is no precise knowledge of what constitutes public interests and targets, self-discipline can lead individuals along a dark road counter to public interests and targets.

In such situations, the greater one's self-discipline the deeper and more inextricable the pit one may dig for oneself.

Let us take fairness or justice as the basis for judging right and wrong in self-discipline. Then what is fairness and what is justice? In *Living Issues in Ethics* by Nolan et al. there is a passage to this effect: Since Aristotle, people have usually divided fairness into *retributive* fairness and *distributive* fairness. *Retributive* fairness means to punish those who violate other people's rights or to restore enjoyment of a right. *Distributive* fairness means to ensure, on the basis of *proper* differences, *fair* allocation of rights and privileges among members of society.⁷ In Chapter Three we discussed fairness of distribution. Now we will discuss the issue of fairness of retribution, which involves whether justice can be upheld. Fair retribution means, as a Chinese folk saying puts it, "bad deeds, as well as good, may rebound upon the doer. If it hasn't rebounded, it is because it is not yet the time." Unfair retribution means: not distinguishing evil from good, turning good and bad on their head; the good cannot get a good outcome; the bad escape their due punishment. When moral force exerts its effect, even if a person cannot change the perverse situation, he can at least by self-discipline, tell right from wrong, refuse to do or support evil but despise and condemn it. However, self-discipline cannot realize fair retribution or punish the bad.

It is quite plain that, since the emergence of governments, fair retribution has never been realized through the self-discipline of individuals. "Bad things redounding on the bad" cannot be brought about by self-discipline. Fair retribution must rely on fair legal verdicts, and if law cannot produce them other means are needed to bring law onto the road of upholding justice, and people's self-discipline is not one of them. This illustrates the limitations of self-discipline.

Therefore, to uphold fairness and ensure that it lasts depends on the joint functioning of law and self-discipline. Law can do things that self-discipline cannot, and the self-discipline of the makers and

enforcers of law can ensure its fairness. In other words, in terms of fairness, if more people in society have self-discipline and constrain themselves with moral standards, bad things will greatly decrease: in terms of law, it ensures that the good are protected and the bad are punished, and thereby achieve fair retribution.

In life we often come across the following situation: the legislators are fair and the laws are fair, but because the enforcers of law do not follow the law, and citizens' rights, though guaranteed by law, come to nothing: for example, law enforcers' arbitrary arrest and detention of citizens, random body searches, constraints on citizens' freedom, and even siding with offenders. Retributive fairness cannot be realized at all in such situations. Of course, the above violations of law and justice cannot happen if law enforcers are self-disciplined. But what if they are not? Self-discipline on the part of others is no substitute for law enforcers' self-discipline, nor can it rectify the lack. Only law can do that job, rectifying the behavior of law enforcers and punishing all offenders including the law enforcers.

4.3.4 Self-restriction in Abnormal Situations

Ever since the emergence of governments, corruption of government employees, bribery and other such problems have been present. At times when supervision departments had tighter control, corrupt practices would decrease or be more covert; when control was looser, such practices would increase greatly and even be more flagrant. But corruption in the supervision department itself was an even tougher problem to eradicate.

In a market economy the market needs fair competition and normal trading order. Normal trading order in turn helps the market mechanism play its regulating role to good effect and helps to prevent corruption in socio-economic life, because the breeding and spreading of corruption is connected with market disorder and unfair competition based on power, and this in turn is connected with

unsupervised and unchecked abuse of power. Those who abuse their power support unfair competition and get benefits from it, and traders who try to gain benefits by unfair competition always count on those in power and their abuse of power to achieve this. So, inevitably, embezzlement, bribery and other corrupt practices grow and spread. In general, the joint effect of law and self-discipline includes not just the maintenance of market and trading order and prevention of corruption, but also restraining those in power and preventing abuse of power.

In this sense, for government employees, self-discipline has at least two aspects: One, they should expect the very best of themselves, not violate professional ethics under any circumstances but particularly when the market is in disorder, obey law and perform their duties well; two, they should be careful in using the power at their disposal, not abusing power in their private interest or applying it according to their own likes and dislikes. The self-discipline required of government employees is to protect social justice. Any casual and arbitrary use of power and deciding policy is a violation of social justice. The law forbids such behaviors and self-disciplined government employees should keep their distance from them, prevent them and expose people who act this way. Detachment from, prevention and exposure of wrongdoing are manifestations of moral constraint; they are the results of the influence of moral force.

The great importance of stronger self-discipline on the part of government employees can be more clearly seen through further analysis of the abnormal situations that actually exist on a large scale in reality. In normal situations, the legal system is complete, law enforcement is strict, and lawsuits follow formal procedures. Abnormal situations are characterized by incomplete legal system, haphazard law enforcement and lawsuits not following formal procedures. In normal situations, all actions have legal basis, boundaries and responsibilities are clearly defined and people are allowed to express their opinions on and appeal against government

actions. In abnormal situations, the basis of law is absent, boundaries and responsibilities are unclear, people are without freedom of speech and thought, etc. The most worrisome thing for enterprises is to operate in abnormal situations and what individuals fear most is to work and live in such an environment. In both cases, this is because they don't know what to do: in the absence of traffic rules, with no one on traffic duty and no traffic lights, drivers don't know how to drive and any action on the part of a driver faces a high possibility of penalty, without possibility of appeal. How could the driver not worry?

Abnormal situations give the best opportunity for government employees with no self-discipline to abuse their power to further their own interests, or to attack anyone they dislike. They are also a breeding ground for all manner of corrupt phenomena in socio-economic life. In abnormal situations, there are either no game rules at all, or they have ceased to be effective; they are increasingly likely to be interpreted at will, or not followed at all. Given such a situation and add to this government employees without self-discipline, then deterioration in the socio-economic order is quite conceivable. It should be pointed out that in abnormal situations supervision of government employees is often ineffective: even worse, some employees under inspection actually use the supervisors to work in their service. When government employees are not self-disciplined, can legal restriction have any effect on them? It is a question worth further study and needs to be solved. It is discussed further in Chapter Six.

叁 自律问题的进一步探讨

自律的性质和自律的意义，上文已经作了说明。现在让我们再对自律问题作进一步的探讨。

自律不仅是个人遵守商业道德与职业道德的问题。交易者要遵守商

业道德，管理者要遵守职业道德。工商界人士、企业职工、政府机构工作人员等，当然都要自律。自律既意味着守法，也意味着道德力量对人的行为的约束。

对知识界来说，自律的含义可能还要广泛些。知识界的特点在于他们既用自己的行动来参与各种社会、政治、经济工作，也用自己的思想和言论来表达自己的对社会、政治、经济的看法，并以此影响社会上的其他人。任何一个政府，为了实现自己的目标，都需要知识分子来为政府目标的实现出力，包括让他们提供各自的文化、技术和知识，也包括以他们的学术地位、声望、信誉作为标榜，向社会产生示范作用。于是知识界便面临着比社会上其他人更大的考验，因为通常所说的真理与权势之间的选择对知识分子来说是更为严峻的。

关于纳粹统治时期德国知识界某些人的所作所为，所言所书，可以作为知识分子需要有高度自律性的例证。德国著名哲学家马丁·海德格尔（Martin Heidegger，1889～1976年）是一个有争议的人物，不妨就学术界对他的评价作一些讨论。海德格尔被认为“也许是本世纪最有影响的哲学家……他的思想震撼了整个哲学界”。¹他于1933年4月底当选为德国弗莱堡大学校长，这时距离希特勒任总理（1933年1月底）刚好三个月。他的前任校长之所以被解职，是因为曾经禁止纳粹倾向的学生在校园内张贴反犹太人的布告。前任校长和一些教授希望由海德格尔出任校长，据说是由于他们当时相信海德格尔的国际声誉将有利于保存部分学院自由和阻止纳粹党的极端破坏行为。海德格尔同意出面，校委会一致通过。²海德格尔于1933年5月27日发表的题为《德国大学的自我主张》的就职演说中，有大量拥护纳粹和与纳粹宣传合拍的提法。1934年2月他辞去校长职务，并拒绝参加与纳粹党人新校长交接的典礼。1936年开讲的尼采课表明他同纳粹运动的分手，从此他受到纳粹的排挤、监视和迫害。1944年夏天，他被送到莱茵河对岸去挖战壕，他是被征召的教师团体中年纪最大的一个，而免除500个最著名的学者、科学家和艺术家战时劳役的名单上却不包括他。盟军解放德国以后，海德格尔因其与纳粹的牵连被禁止授课，直到1951年解禁。解禁后不久，他就退休了。³正是这样一个在纳粹德国时期同纳粹有过短期合作经历的著名学者，其所言所行所思却留给评论者们不少值得探讨的东西。陈嘉映先生在其所著的《海德格尔哲学概论》一书中有如下的评述：“海德格尔之卷入纳粹运动却又不是一个偶然的失误。他一直厌恶平民政治，憧憬优秀

人物主政的往昔，直到晚年仍明言不信任民主制度。纳粹运动确实颇合他的口味。即使在他对纳粹的实际发展失望之后，恐怕仍怀有不少惋惜。研究者们早注意到一个事实：海德格尔后来虽愿辩清自己和纳粹的牵连，却从未正面谴责纳粹犯下的滔天罪行。”⁴一个知识分子，本人持有什么样的学术观点和赞成什么、反对什么，是一回事，他的政治态度，特别是他对黑暗势力的屈从，以及同黑暗势力的合作，哪怕只是短时期的合作，则又是一回事。自律主要不是指前者而言，而是针对后一种情况而言的。

张汝伦先生在《既往可咎：谈海德格尔公案》一文中曾这样写道：“如果标榜服膺真理，主张正义的知识分子不能因自己的行动来维护真理和正义，那么真理和正义还有什么价值？知识分子本身又还有什么价值？并非每个人都有布鲁诺的勇气，但至少应该做到：在不能说真话的情况下，也决不说假话，在无力与魔鬼抗争时，也决不把灵魂抵押给魔鬼。”⁵文内还指出：“在一个现代社会中，知识分子应该既是文化的传承者和创造者，又是现实的批判者和社会的良心。这是他的三种基本责任。知识分子应该既是赛先生，又是德先生。在这方面，把爱因斯坦和海德格尔加以对照是很说明问题的。一个是科学家，一个是哲学家，两人都对人类文化产生了重要的影响。但是，在正义遭到践踏的时候，一个挺身而出，维护人类的良知和正义；一个却幻想魔鬼能做好事而与魔鬼妥协。爱因斯坦是现代知识分子的完美典范，而海德格尔的艺术成就再大也无法洗刷他人格上的耻辱。”⁶这两段对海德格尔的评论是相当深刻的。

如果要根据每个时代、每个地方的具体情况来进行考察的话，那么还可以对上述第一段评论中的两句话再作些分析。“在无力与魔鬼抗争时，也决不把灵魂抵押给魔鬼”，这是应有的态度，适用于任何场合。知识分子的自律，或者说，一切人的自律，都要做到这一点。“在不能说真话的情况下，也决不说假话”，这也是正确的，但对假话本身，似乎需要分析得再深刻些。有不同的假话——如果处于某种不得已的环境中，连沉默都不被允许，那也只好人云亦云，言不由衷地说几句应付性的套话、假话。这是可以谅解的。但海德格尔在同纳粹合作时，显然不是在说应付性的、套话式的假话。海德格尔要么说的是真话，即他的想法同纳粹主义的想法是合拍的；要么说的是另一种假话，即内心虽然不同意纳粹的所作所为，但出于个人的某种目的，却说些恭维纳粹的假话，向

纳粹讨好的假话，等等。这正是海德格尔多年以来一直在德国学术界受到人们谴责的原因。尽管他只是短时间内同纳粹合作过，这仍是洗刷不掉的耻辱。知识分子的自律之所以必要，从海德格尔的经历可以得到启示。

二、再论守法与自律的关系

前面已经谈到法律与自律之间的关系。但既然这里的问题涉及在纳粹德国的环境中知识分子如何自律，那就有必要对守法问题再作深入一层的探讨。

照理说，遵守法律同遵守道德规范应当是统一的。一个人，如果不遵守法律，通常也就谈不上什么遵守道德规范或遵守社会公认的行为准则。但这种说法应当有一个前提，即法律是符合道德规范的，法律体现了社会公认的行为准则。问题在于：法律是谁制定的？由谁来解释？由谁来执行？如果是无法可依，那就无所谓守法还是不守法，而且，既然没有法律可依，个人行为的边界究竟在何处，谁也不清楚，这样，道德约束自然而然地代替了法律的约束。但是，如果法律是由专横暴虐的统治者所制定的，由他们来任意解释并由他们来执行，难道这种“有法可依”、“执法必严”、“违法必究”能同道德规范一致，同社会公认的行为准则一致？难道各国历史上一切被制定和实施的法律都应当无条件地被该国当时的人民所接受吗？显然不能如此。即使某一法律的制定是符合法律程序的，并且是代表们投票通过的，难道它必定符合公共利益、公共目标？也不一定。仍以纳粹德国的统治为例。众所周知，希特勒不是靠军事政变上台的，而是在符合德国当时法律的条件下取得政权的，当时大多数德国人投票选择了希特勒。当时的选民之所以选择了希特勒，或者是被他所在政党的纲领所迷惑，或者是被他个人的魅力所吸引，或者是寄希望于他，以为这样一来，危机中的德意志民族就有救了。当时德国知识界中不少人正是这样看待希特勒及其政党的。但是，如果说希特勒竞选时，知识界中不少人还不了解德国政坛可能发生的剧烈的变化——一种将把德国人民引入深渊的变化，难道在希特勒执政后立即颁布的措施被推行后还不了解这一点？难道德国城市大街上公开对犹太人施暴的行为不能让德国知识界惊醒过来？这就同知识分子的自律有关了。不自律，就会在法律问题上分不清是非。

当一个专制的政府试图用自己所制定或随意解释的法律来扼杀真理与正义时，并不是很难识别这种法律的实质。但为什么会有人在道德面前退却与溃散呢？为什么自律精神竟丧失殆尽呢？不能不认为这同个人利益有关，即或者是为了保住个人既得利益，或者是为了谋取个人的更多利益。也许有人会问，既然政府已颁布了法律，难道不应该守法吗？守法有什么不对？比如说，在纳粹统治时期，德国就是这样，有法律可依，一贯守法的德国知识分子怎能不守法呢？这实际上是一种自欺之词。正如前面已经指出的，在希特勒上台后所推行的政策已明显地暴露其不公正性和非正义性时，即使个人无法同这样的政府与统治者抗争，沉默依然是可行的。沉默不也表现为守法吗？像海德格尔那样的著名教授、大哲学家、国际知名学者，如果自律的话，保持沉默不也可以吗？退一步说，即使沉默也不被允许，讲几句套话应付一下，也说得过去。但为什么一定要同纳粹合作（哪怕只是短暂的合作）呢？为什么要为纳粹赞美或为之辩护呢？不自律，就必定落得在道德面前退却和溃散的下场。

关于个人利益问题，还可以再作一些分析。根据动力来自个人物质利益的假设，个人行为是受自己的物质利益支配的，并且通常所说的物质利益是指个人收入或财产的增加。根据动力来自个人的广义利益的假设，个人行为要受到自己的物质利益和非物质的利益的支配，通常所说的非物质的利益是指个人得到的荣誉的增加、个人在精神上的满足等。随着个人收入水平的上升，非物质的利益在个人广义利益中所占的比例将逐渐增大。根据动力并非全部来自个人利益（包括个人物质利益和个人非物质的利益）的假设，个人行为还要部分地受到利益以外的因素（如对公共利益、公共目标的关心等）的影响。这样，对个人来说，实际上存在着两种因素共同影响之下的行为准则，这两种影响个人行为因素就是个人利益因素和公共因素。法律与自律是对这两种因素都发生作用的。在法律的约束下，个人无论在争取实现个人利益与个人目标时，还是在为公共利益与公共目标的实现而努力时，都不应越过法律所规定的边界，自律就是守法。在道德力量的影响下，个人为公共利益和公共目标的实现所做的努力通常受到道德的激励，而个人在制定个人目标时，在评价个人利益时，尤其是在争取实现个人利益和个人目标时，都应当以道德标准来约束自己：不值得争取的，就不应当去争取；不应当采取的方法，就坚决摒弃。自律表现为道德的约束。

由此可见，自律很可能是个人的最后一道防线。通过自律，道德力量的作用将充分显示出来。为什么守法不是个人的最后防线呢？这是因为，正如前面指出的，需要判别要守的是什么样的法律，是谁制定、谁解释、谁执行的法律？难道专横暴虐的统治之下的法律能符合道德原则？“在不能说真话的情况下，也决不说假话”，沉默也是守法，但沉默更主要是自律。假定统治者在法律的名义下违背了道德规范而胡作非为，那么严格的自律会使得人们不附和，不趋炎附势，不盲从，不献媚。严格的自律会使他们即使在恶劣的环境中至少能保持沉默，守住道德规范这道防线。

从这里还可以了解到，由于个人行为受到个人因素和公共因素的共同影响，个人行为准则是个人因素和公共因素共同影响之下的行为准则，以及由于个人行为要受到道德规范的制约，所以在评价个人行为时要记住，在个人利益之上存在着社会上人人都应当遵守的原则，即公共利益原则。尽管不同的社会成员之间在个人行为方面存在着差异，但这是正常的现象，只要个人行为不违背公共利益，它们就是合理的，就有理由存在。自律所把住的道德规范的防线，就是不违背公共利益的防线。

三、报应的公正与自律的局限性

既然自律体现了习惯与道德调节，那就要问：在自律时，有什么可以判断是非的标准呢？虽然习惯与道德规范都不是少数人所能拟定的，而是长期内逐渐形成并被大多数人所承认的，但判断是非的标准始终是客观存在的。我们可以用公共利益和公共目标作为标准，这样人们都可以接受。那么公共利益和公共目标又按什么标准来判断呢？在公共利益和公共目标的名义下，历史上不也曾发生过多违反道德规范的事件吗？对公共利益和公共目标，不也有各种各样的解释吗？有时，公共利益和公共目标会变成一种遮羞布，遮住了形形色色见不得人的勾当。腐朽势力也会有“殉道者”，或者说，“殉葬者”，他们之中有些人也能置个人利益于不顾，能说他们没有自律性吗？不能。原因恰恰在于他们不把腐朽势力的目标看成是不应当争取实现和不值得维护的目标，而把它当成了公共目标。这表明，自律也是有局限性的。这种局限性反映为在不明确究竟什么是公共利益和公共目标的情况下，自律可能把人引导到为

反公共利益和反公共目标而努力的邪路上去。在这种情况下，一个人越是自律，可能在错误的立场上陷得越深，越不能自拔。

让我们姑且用公正或正义作为自律时判断是非的依据。那么什么是公正？什么是正义？在诺兰（Richard T. Nolan）等人所著的《伦理学与现实生活》一书中有这样一段话：“从亚里士多德以来，人们通常把公正区分为报应的公正和分配的公正。报应的公正要惩处侵犯他人权利的行为，或者恢复对一种权利的享受。分配的公正，只根据恰当的差别，来确保所有社会成员之间权利和特权的公平分配。”⁷关于分配的公正或公平分配问题，本书第三章中已经进行了论述，这里只讨论报应的公正问题。报应的公正涉及正义是否得到伸张，用中国民间的语言来说，报应的公正意味着“善有善报，恶有恶报，不是不报，时候未到”。不公正则指：善恶不分，甚至善恶颠倒，善得不到善的结果，恶得不到应有的惩处。在道德力量发挥作用的条件下，一个人即使无法扭转善恶不分、善恶颠倒的大局，但通过自律，可以分清是非善恶，做到心中有数，不作恶，不从恶，不扬恶，鄙视恶，斥责恶。但自律不能实现报应的公正，自律无法惩恶。

毫无疑问，自从政府形成之后，报应的公正从来不是每个人的自律就能实现的。自律不能实现“恶有恶报”。报应的公正要依靠法律的公正裁决。如果法律还做不到公正的裁决，那就需要通过其他途径来促使法律走向维护正义的道路，这仍然不是靠人们的自律就能解决的。自律的局限性也表现于此。

因此，公正的维护与公正的持久存在，要依靠法律与自律的共同作用。法律能做到自律所做不到的事情，立法者和执法者的自律能保证法律的公正性。换言之，从自律的角度看，社会上有更多的人用道德规范来约束自己，恶可以大大减少；从法律的角度看，法律能使善得到保护，使恶得到惩处，从而报应的公正就可以实现了。

在社会生活中有时会遇到这样一种情况：立法者是公正的，所制定的法律也是公正的，但执法者不公正，不遵照法律行事，以至于法律所保障的公民权利落空，比如说，执法者违背法律，随意扣押、拘留公民，随意搜查和限制人身自由，甚至偏袒违法的一方等等，这样，报应的公正就实现不了。当然，执法者应当自律。如果执法者能够自律，那么上述这些违背法律、违背执法公正性的事情就不会发生了。如果执法者不自律，怎么办？其他人的自律代替不了执法者的自律，或许也纠正

不了执法者的不自律现象。所以，在这种情况下，唯有诉诸法律，才能纠正执法者的不公正行为，也能惩罚一切违法者，包括违法的执法人员。

四、非正常状态下的自我约束

自从政府出现之后，政府工作人员的贪污、受贿、腐败问题几乎一直伴随着政府而存在着。在政府监察部门抓得紧的时候，这类丑恶现象可能减少一些或隐蔽一些，而在监察工作放松时，这类丑恶现象便大大增加，甚至公开化。监察部门本身的贪污、受贿和腐败，更是一个不易消除的问题。

以市场经济中的情况来说，市场需要有公平竞争，需要有正常的交易秩序，而正常的交易秩序也有助于发挥市场机制的调节作用，有助于遏制经济与社会生活中的腐败现象，因为腐败现象的滋长与蔓延是同市场秩序混乱、以权力为基础的不正当竞争有关。以权力为基础的不正当竞争又同权力不受监督、不受制约的滥用联系在一起。滥用权力者支持不正当竞争，并从中捞取种种好处，而一切指望通过不正当竞争获得利益的交易人总是把希望寄托在掌权者身上，依靠后者对权力的滥用使自己达到目的。这样，权与钱之间的交易便不可避免，贪污、受贿和各种腐败现象就滋长和蔓延开来。因此，法律与自律两者的共同作用，不仅在于使市场有秩序，使交易正常化，从而遏制腐败，而且也在于对权力的制约，对掌权者的监督，防止出现对权力的滥用。

从这个意义上说，对政府工作人员而言，自律至少包含两方面的含义：一是政府工作人员要严格要求自己，在任何情况下，尤其是在市场秩序不正常时，不违背政府工作人员的职业道德，遵守法律，奉公尽职；二是政府工作人员要谨慎使用手中的权力，切不可滥用权力来为自己谋取私利，也不可凭个人的好恶滥用权力。政府工作人员的自律，正是为了维护社会的公正。一切不受规则约束的、变化无常的、随意性的决策，一切带着偏见来运用权力和规则的行为，一切任意地、专断地使用权力和作出决策的行为，都是违背社会公正的。法律禁止这些行为，自律使政府工作人员不仅自己远离这些行为，抵制这些行为，而且要揭露别人的类似行为。这种远离、抵制和揭露，是来自道德的约束，是道德力量起作用的结果。

政府工作人员加强自律的重要性，还可以通过对非正常状态的分析而得到进一步的认识。非正常状态，在实际生活中是大量存在的。正常状态中，法律是完善的，执法是认真的，诉讼按一定的程序进行；而常见的法律不完善，执法不认真，诉讼不按程序，都属于非正常状态。正常状态中，工作有法可依，界限清晰，责任明确，人们对政府的行为有意见可以发表，可以申述；而常见的无法可依，界限模糊，责任不清，人们缺乏言论自由，思想受压抑等等，就属于非正常状态。企业最担心的是在非正常状态中经营，个人最害怕的是在非正常状态中工作与生活。这是因为，非正常状态使得企业与个人无所适从，正如一个驾驶汽车的司机最发愁的就是在缺乏交通规则、交通无人管理、红灯绿灯显示不明的情况下行车，这样开，可能遭罚，那样开，也可能遭罚，而且罚款者爱怎么罚就怎么罚，答辩无用，躲又躲不掉，怎不让司机愁煞？

非正常状态恰好是某些缺乏自律的政府工作人员最容易利用手中的权力来获取私利或凭个人好恶来打击他人的机会，也是社会经济生活中各种腐败现象滋生的温床。在非正常状态中，游戏规则或者不存在，或者不那么有效了，随意解释游戏规则的可能性增大了，甚至谁也不遵循游戏规则了，如果政府工作人员缺乏自律，社会经济秩序的恶化是可想而知的。还应当指出，在非正常状态中，对政府工作人员的监督形式往往无效。这些工作人员作为被监督者，不仅不受监督，甚至还操纵监督者，使后者为自己服务。假定政府工作人员不自律，法律约束又能对他们起多大作用呢？这是一个值得研究和设法解决的问题。本书准备在第六章中再就此展开论述。

4.4 Moral Inspiration

4.4.1. Source of Enduring Initiative and Positivity in Individuals

Self-discipline is usually regarded as a kind of voluntary moral restraint but this is a rather narrow understanding of the concept. Self-discipline also has positive and enterprising aspects: Whatever the profession or occupation pursued, an individual should be dedicated

and enterprising and should work hard to make achievements. The spiritual motivation is important, so moral inspiration can be regarded as another aspect of self-discipline, one that complements moral restraint.

Concerning the relation between one's moral inspiration and the spirit of dedication and of enterprise, we could do worse than start by discussing the driving force of economic life. In economic analysis, the assumption that motive comes from personal material benefits has its limitations since personal interests are not just material gains. Man is "social man," whose interests range wider than purely material or economic considerations. Therefore we make the assumption that motivation does not completely lie with interests. At any income level, individual behavior will be influenced by factors other than this, and when personal income rises non-interest considerations come increasingly to the fore. That is to say, when a person's income reaches a certain level, his initiative and positivity will become less driven by material considerations, his perspective will increasingly consider non-material benefits, and these may become a bigger, or perhaps the biggest, source of initiative and enthusiasm in his economic activities.

Precisely because some motivation comes from non-interest factors, a person's motivation in economic activities is less likely to diminish. Diminished motivation is the phenomenon in which an individual's initiative and positivity weakens as his economic activities go on and his income increases. When motivation has its only source in material benefit, diminished motivation may well occur, since income is no longer the spur it once was. Here we come to the substitution relationship between getting income and the effort expended in order to get that income. When an individual's income has increased, he will consider whether it is worth continuing to invest the same effort in order to get a certain income, as time and energy are now possibly more important to him. This is how income and material interests lose their incentivizing power. However, when

factors other than material benefits take a more and more important part in a person's economic activities, it does not necessarily follow that his motivation drops off as his income rises. On the contrary, he may be as active and positive as ever and perhaps even more so, because he no longer has economic worries and can invest most of his time and energy in non-benefit-driven causes.

From this perspective the limitations of the premise that motivation has its source in personal material benefits become plain, and we can now proceed to further explore the source of lasting initiative and positivity in an individual's socio-economic activities.

Of course, in considering this topic we should not solely take the individuals' perspective: Analysis of objective conditions is equally necessary. Personal effort is undoubtedly important for lasting initiative and positivity, but equally important is the capacity of the enterprise to inspire these qualities among its employees. If it neglects such things, it will be hard for an employee to sustain initiative and positivity. An enterprise's attention to these things is very closely linked to the economic system operating. For example, when the market mechanism has replaced the plan and control mechanism, when fair competition has replaced differential treatment, and when sole responsibility for enterprise financial performance has replaced State unified revenue and expenditure, an enterprise has no choice but to stimulate the initiative and enthusiasm of its employees.

So, supposing economic and enterprise mechanisms are consistent with the requirements of a market economy, how is personal initiative and positivity generated and made long lasting? This question leads us to the issue of moral inspiration, because of its connection to the source of lasting initiative and positivity among individuals.

4.4.2 Compatibility of Morally-inspired and Interest-driven Motivation

Is it possible for a person's own moral inspiration to be compatible with his benefit-oriented motivation? To discuss this question, we cannot simply say that the moral inspiration will disappear once he is benefit-oriented. Nor can we refuse to admit that he is still influenced to a certain degree by benefit even though he has formed lasting initiative and enthusiasm because of moral inspiration. The qualities under discussion may be motivated partially by interest and inspired partially by personal morality. The same can be said about the enduring character of these qualities, except that moral inspiration plays a bigger part here. Furthermore, when one's activities are interest-driven, one still needs to be dedicated and trustworthy in dealing with others, which is also an aspect of moral inspiration.

Most people in society probably take personal benefit as their target whilst also wanting the public targets to be achieved, since they do not consider the two as contradictory. For example, an entrepreneur may believe that if he succeeds and his enterprise booms, his personal gains will increase and society will benefit too, and this surely helps the achieving of public targets. An employee believes if he does well in his job, he can improve the living conditions of his family as well as help improve the enterprise's results, which will in turn benefit society. In this way, the motivation of personal benefit and public targets is unified in that individual. Granted, every period in history has had totally selfless individuals considering only public targets, but they are very few indeed.

For anyone valuing personal benefits and public targets, it is a big challenge to make a choice between the two considerations when they clash. Most of the time, for most people personal benefits and public targets are a single, combined consideration, which means they need not choose between them, since achieving the former will benefit the latter and vice versa. However, when it is compulsory to choose one, no means everyone can make the right decision. On these occasions, moral force comes into full play. Those who choose private interest over public targets obviously have shrunk back before moral force.

History and modern life is full of such cases. Nevertheless, many people still put public targets ahead of their own interests, a result of their self-discipline. Self-discipline means they are both constrained and inspired by morality. Their personal restraint causes them to guard the defense line of moral standards, doing nothing injurious to public interests and targets. Meanwhile, if they are forced to choose between private interest and public targets, they will not sacrifice the latter for the former. Moral inspiration will drive their enthusiasm and concern for public interests and targets, causing them to put public targets ahead of private interest if ever the two should clash. In general, morality-inspired restraint and inspiration are equally important.

The concept of personal morality inspiring one's socio-economic activities is sometimes misunderstood: it is believed wherever there is an element of interest motivation in an individual's socio-economic activities and he gains benefits, then he is seen as acting from his private concerns only. Self-imposed moral restraint exists but the moral inspiration does not, and has no role. According to this analysis we can make the following judgment. Such misunderstanding is based on the premise that moral inspiration is incompatible with benefit-oriented motivation. According to the above analysis, we can infer as follows:

When a person does not need to choose between private interest and public targets, the two things seem mutually compatible, and both are helped by personal moral inspiration. Here, moral inspiration and private interest motivation are in line with each other because, inspired by his spirit of dedication and principle of integrity, an individual will do a better job to realize his private interest goals and his products and services will be better received in society.

When an individual has to make a decisive choice between his private interest and public targets, whether he chooses the former and gives up the latter or vice versa, he will feel the conflict of the two. If he opts to follow his private interest over public targets, then clearly

moral inspiration has not had an effect or his moral inspiration is not in line with his private interest motivation. If he chooses public targets this shows that moral inspiration is at work and that moral inspiration is compatible with his private interest motivation. Consequently, he is making the right choice. Therefore, whether he strives for one's personal interest without harming public interests and targets or chooses to give up his own interests if they conflict with public targets, both choices demonstrate that moral inspiration is at work in him and that this is not incompatible with private interest motivation. This compatibility is based on the recognition that public targets encompass personal benefits.

From this we see that moral inspiration and private interest motivation can be compatible, but not necessarily in each and every case. If an individual must choose between his private interest and public targets and opts for the former at the expense of the latter, the incompatibility of the two motivating forces is exposed.

4.4.3 Self-discipline as the Unification of Moral Self-restraint and Inspiration

Previous analysis shows the undoubted importance of one's own moral restraint and moral inspiration. In socio-economic life, if individuals have the former but not the latter, society may lose its vitality and enterprising spirit and its people are likely to be ultra-cautious, concerned only not to make a mistake. If there is only individual moral inspiration and no moral restraint people might let slip their standards of behavior and possibly fail to safeguard the moral standard defense line. Only when these two driving forces work together can a society be energized and give due attention to both public targets and individuals' benefits. A producer or worker with strict self-discipline is likely to be a dedicated and enterprising person, one whose income constantly rises. This dedication, enterprising

spirit, career success and increasing income are all linked to his own moral inspiration and restraint.

In abnormal situations it is even more necessary for an individual to have his own moral restraint and moral inspiration. Just in terms of modern-day life, in order to live in society man must survive, develop and adapt to all kinds of living and working environments. Apart from the ability to survive and progress in normal situations, he needs such abilities to face the challenges of abnormal situations, for without them, he will be too fragile to survive or to endure any frustration or attack. The often used term "adaptability" means more than just an ability to adapt to normal situations: It means an ability to adapt to the abnormal. An important standard for judging a person's ability and vitality is whether he can survive and progress in abnormal situations and whether he can adapt to various adverse circumstances.

But, given the same abnormal situation, why do some people get depressed while others remain enthusiastic? Why do some go to the bad while others rise above things? It is the joint effect of personal moral restraint and inspiration. The reason for an individual's ability to maintain enthusiasm and morale in abnormal situations should be sought in attitude of spirit, in particular the effect of moral inspiration. Having moral inspiration in the service of his convictions, ideals and goals, allows an individual to squarely face and overcome difficulties, treating the hard environment as character-building. Moral inspiration helps him adapt to abnormal situations and develop his capabilities. In this sense, the worse the situation, the greater the need for moral inspiration and the more obvious the role of moral strength.

No matter who the person, on occasion apathy can be a problem and a restraint on action. How can it be overcome? We need depend on the formation and influence of a good social ethos on the one hand, and on unflagging individual moral inspiration on the other. Under the influence of the former, when those around can overcome apathy and remain creative and enterprising, it is more likely that the

apathetic person can shake off this feeling. But personal moral inspiration is more important in such circumstances for this reason: Irrespective of the morale of those around, provided the individual draws on moral inspiration to try hard, he will not only overcome his own apathy but also influence others, giving them the resolve to emulate him.

To sum up, as a unified manifestation of personal moral restraint and inspiration, it goes without saying that self-discipline is highly valued by society. Moral restraint requires people to be strict with themselves in socio-economic activities and to do nothing that violates moral standard or harms public interests and targets. Moral inspiration requires people to be enterprising and dedicated, qualities that enable them to defeat apathy, overcome difficulties and achieve more in their work even if conditions are adverse.

肆 道德激励

一、个人持久主动性、积极性的源泉

自律通常被理解为个人的一种道德上的自我约束。这种理解未免有些狭窄。自律还有积极的、进取的一面，这就是：一个人，不管从事哪一种工作，不管在什么样的岗位上，都应当有敬业的精神、进取精神，在自己的工作岗位上努力工作，做出成绩来。精神上的动力是重要的，可以把道德的激励称做自律的另一面，它与道德的约束是相辅相成的。

关于自我的道德激励同敬业精神、进取精神之间的关系，不妨从经济生活中的动力谈起。在经济分析中，动力来自个人物质利益的假设是有局限性的。前面已经提到，个人利益不以物质利益为限。人是“社会的人”，他的利益要比单纯的物质利益或经济利益广泛。动力并非全部来自利益的假设正是这样被提出来的。在任何一级收入水平上，个人的行为都会受到利益以外的因素的影响，而在个人收入增长后，非利益的考虑往往更加突出。这就是说，在个人收入达到一定水平后，物质利益对个人主动性、积极性的激发会有所减退，个人会较多地从利益以外的角度

来考虑问题，而他在经济活动中的主动性、积极性的一部分或较大部分也可能由此而来。

正因为个人的动力中有来自非利益的部分，所以在经济活动中一般不可能出现个人动力递减的现象。这里所说的动力递减，是指个人在从事经济活动时，随着经济活动的进行和收入的增长，他的主动性、积极性会逐渐减弱。在动力唯一地来自个人物质利益的条件下，动力的递减是可能出现的，因为收入不再像过去那样有那么大的刺激作用了。这里涉及收入的取得和为了取得这种收入而付出的努力之间的替代关系。对个人来说，当收入水平增长后，个人将考虑是否值得继续投入同过去一样多的努力去取得一定的收入，时间和精力也许对他更为重要些。个人收入激励作用的递减、物质利益动力的递减就是这样形成的。而当利益以外的考虑在个人经济活动中占据越来越大的位置时，即使个人的收入水平上升了，但个人的动力不一定下降，这时，他完全可能同以往一样地有主动性、积极性，甚至比以往更加主动，更加积极，因为经济方面的顾虑已经解除，他可以把主要的时间和精力投入非利益动机的事业之中。

如果我们从这个角度来考察，那么动力来自个人物质利益的假设的局限性就很清楚了，我们可以由此进一步探讨社会经济活动中个人持久的主动性、积极性的源泉。

当然，我们也不能忽视，个人持久的主动性、积极性不能只从个人的角度来考虑，对客观条件的分析同样是必要的。一个人能否持久地有主动性、积极性，他自身的努力固然重要，但如果他在某个企业中工作，那么，那家企业是否注意发挥职工的主动性、积极性，也是十分重要的。如果那家企业漠视对职工主动性、积极性的调动和发挥，个人就很难迸发出持久的主动性、积极性。而要让企业注意调动和发挥职工的主动性、积极性，又同经济体制有关。比如说，市场机制取代了计划指令，公平竞争代替了对企业的差别对待，企业的自负盈亏代替了国家对企业的统收统支，这样，企业就必然重视调动职工的主动性、积极性。

假定经济体制与企业体制都符合市场经济的要求，那么人的主动性、积极性怎样才能产生并能够持久化呢？让我们转入道德激励问题的讨论，因为个人持久的主动性、积极性的源泉与此有关。

二、道德激励与利益动机的相容性

一个人自我的道德激励，同一个人在工作时具有利益动机是不是可以相容？这个问题是值得探讨的。不能简单地认为一个人有了利益动机，道德的自我激励就消失了；也不能简单地因为一个人在道德激励之下产生了持久的主动性、积极性，就不承认他还受到利益动机的某种程度的影响。一个人的主动性、积极性很可能部分地来自利益动机，部分地来自自我的道德激励；持久的主动性、积极性也可能如此，只是道德激励起的作用更大一些而已。再说，当个人以利益作为活动的动机时，也需要有敬业精神，在同其他人进行交易的过程中应当讲信用，这里也包含了道德的自我激励的内容。

对社会上大多数人来说，可能既以个人利益为目标，同时也有实现公共目标的愿望，因为他们认为个人利益的实现与公共目标的实现是不矛盾的。比如说，一个人兴办某个企业，他认为，如果他成功了，企业越办越兴旺，不仅他的个人利益增长了，而且对社会也有好处，这不也有利于公共目标的实现吗？又如，一个人在某个企业中工作，他想，自己的这份工作不仅能给家庭带来收入，改善生活，而且工作的出色将使得企业的效益增加，而企业效益增加对社会是有利的，这样，个人利益动机与公共目标在他的身上也就统一起来了。不考虑个人利益而只考虑公共目标的人，虽然每个时代都有，但毕竟只是少数人。

当个人利益与公共目标发生冲突，而且两者只能择一时，对每一个既考虑个人利益又考虑公共目标的人是一场考验。如上所述，社会上大多数人是把个人利益与公共目标结合在一起考虑的，个人利益与公共目标的兼顾使他们不需要作出两者只能择一的决策，因为实现了个人利益，对公共目标的实现也有利，而公共目标的实现中也包含了个人利益的实现，没有两者只能择一的必要。然而一旦个人利益的实现与公共目标的实现只能两者择一时，并不是所有的人都能作出正确的决策和选择。道德力量的作用在这种场合将充分地显示出来。选择个人利益而放弃公共目标的人，在道德力量的面前退缩了。在历史上和现实生活中不乏这方面的例子。但仍然有不少人能选择公共目标而舍弃个人利益。这也是自律的结果：自律使他们既有道德的约束，又有道德的激励。道德的自我约束，使他们谨守道德规范的防线，不做违背公共利益和公共目标的事情，在个人利益和公共目标只能两者择一时，不会为了个人利益

而牺牲公共目标。道德的自我激励，激发了他们为公共利益和公共目标的实现而努力的热情，自愿地在个人利益和公共目标冲突时把公共目标的实现置于个人利益之上。道德的自我约束与道德的自我激励是同等重要的。

在社会经济活动中，道德的自我激励有时会被人们所误解，即认为凡是个人在经济活动中因存在利益动机而获利时，就会被看成是出于个人的利益考虑，道德的自我约束可能还存在，而道德的自我激励却不存在了，不起作用了。这种误解之所以出现并会被人们所接受，是因为他们把道德激励与利益动机说成是互不相容的。根据以上的分析，我们可以得出如下的论断：

在某些个人利益与公共目标之间不需要作出两者只能择一的场合，对个人来说，个人利益的实现与公共目标的实现可以相容。道德的自我激励既有助于公共目标的实现，也有助于个人利益目标的实现。在这种情况下，道德激励与个人利益动机也是一致的，因为个人受到敬业精神和诚实信用原则的激励，为了实现利益目标，工作应当做得更好，提供的产品和劳务应当更加得到社会的欢迎。

在个人利益与公共目标之间存在着只能两者择一而且必须作出果断决策的场合，对个人来说，无论是选择公共目标而放弃个人利益还是选择个人利益而放弃公共目标，都能感受到个人利益与公共目标的冲突。假定他选择个人利益而放弃公共目标，那么道德激励没有起到作用，道德激励同他的利益动机是不协调的。假定他选择了公共目标而宁肯放弃个人利益，那就表明，在这种情况下道德激励已经发生了作用，道德激励与个人利益动机可以相容，从而个人作出了应有的选择：一个人在不违背公共利益和公共目标的条件下争取实现个人利益，以及他在个人利益与公共目标有冲突时选择公共目标而放弃个人利益，都有可能受到道德激励的影响。这都表明了道德激励与个人利益动机不是不可以相容的：两者的相容表现为认定公共目标中包含了个人利益。

由此可见，道德激励与个人利益动机可以相容，但又并非必然相容，因为在个人利益与公共目标之间存在着只能两者择一，而个人选择个人利益而放弃公共目标时，道德激励与个人利益动机的不相容就暴露出来了。

三、自律是道德自我约束与道德自我激励的统一

以上的分析已经说明，道德的自我约束固然重要，道德的自我激励同样重要。社会经济生活中，假定只有个人的道德自我约束而没有道德自我激励，社会也许会失去生气，失去活力，失去进取精神，人们可能谨小慎微，但求无过。假定只有个人的道德自我激励而没有道德自我约束，人们在行动中可能失去应有的警惕而放松自己行为的检点，也就是有可能守不住道德规范的防线。只有道德的自我约束与道德的自我激励并重，才能使社会既能充满生气和活力，又能兼顾公共目标和个人利益。一个严于自律的生产者、工作者，可以是一个具有奉献精神的人，也是一个具有进取心的人；可以是一个有敬业精神的人，也是一个收入不断增长的人。他的奉献精神、进取心、敬业精神，以及事业成功并取得不断增长的收入的事实，都同他的道德自我激励和自我约束有关。

一个人在非正常条件下不仅更加需要有道德的自我约束，而且也更加需要有道德的自我激励。历史上的情况暂且不谈，就以现实生活中的例子来说，人生活在社会中，要生存，要发展，要适应各种不同的生活环境和工作环境。他除了要能够在正常条件下生存和发展而外，还要有在各种非正常条件下生存和发展的能力，否则，这个人的生存能力是脆弱的、经不起挫折和打击的。还应该看到，人们通常所说的适应能力，主要不是指适应正常条件的能力，而是指适应非正常条件的能力。判断一个人的能力大小和生命力是否旺盛，一个重要的标准就是看他能否在非正常条件下生存和发展，能否适应种种逆境。

然而，在处于相同的非正常条件下的若干人之中，为什么有些人消沉，有些人奋进？为什么有些人堕落，有些人却能自持不屈？道德的自我约束和自我激励同时发挥了作用。一个人，如果在非正常条件下能够自持、奋进，应当从精神方面去寻找产生适应非正常条件的能力的原因。这里尤其应当提到的是道德的自我激励的作用。在道德的自我激励之下，为了一种信念、一种理想、一种目标，他会正确对待困难，克服困难，把艰苦的环境作为对自己的磨炼。道德的自我激励会使他学会如何适应非正常条件，从而使自己得到发展。从这个意义上说，一个人越是处于非正常条件下，就越需要有道德的自我激励，道德力量的作用也更能显示出来。

任何一个人，有时都难以避免惰性的产生及其对自己行为的牵制。

如何克服惰性？一方面，这与良好的社会风尚的形成和影响有关；另一方面，又与个人不断的道德自我激励有关。在良好的社会风尚的影响下，当周围的人都能战胜惰性，不断创造与进取时，一个人即使存在着惰性，但摆脱惰性的可能性也将增大。而道德的自我激励在这种情况下之所以显得更加重要，原因在于：不管周围的人是否战胜了惰性，是否创造或进取，只要自己在道德的激励下能够奋发，那么不仅能克服惰性的牵制，还能影响周围的人，使他们有信心和毅力去战胜惰性。

总之，自律作为道德自我约束和道德自我激励的统一，理所当然地会引起社会的重视。当人们有道德的自我约束时，就会在社会经济活动中严格要求自己，不做任何违背道德规范的事，抵制一切损害公共利益和公共目标的行为。当人们有道德的自我激励时，就会有进取心、奉献精神、敬业精神，就会摆脱惰性，战胜困难，即使处于逆境之中也能使工作更有成绩，更为出色。

CHAPTER 5 THE THIRD DISTRIBUTION

第五章 第三次分配

5.1 Overview of the Third Distribution

5.1.1 Definition of the Third Distribution

In Chapter Four we discussed moral inspiration, a concept that involves dedication, enterprising spirit, adaptability to abnormal situations, ability to overcome apathy and determination to overcome adversity, etc. All the foregoing can have a positive impact in the area of production and thereby stimulate efficiency and national wealth to a great extent. Now, let us turn our attention to the field of distribution. Through the following analysis we may conclude that regulation by custom and morality, including moral restraint and inspiration, exerts considerable influence on income distribution.

In the market economy, income distribution via the market is usually called the first distribution and that via government the second distribution. The first distribution is conducted according to the economic results of the market. All suppliers of production factors get income corresponding to the quality and quantity of the production factors they provide, and through examination and endorsement by the market. The basic principle of the first distribution is: The higher the economic returns, the higher the income; no returns, no income. That is to say, in a market economy, we cannot just use the supply of production factors to judge whether there is income, and if so how much, because it involves examination and recognition by the market. Market is ruthless. If the production

factors supplied are not endorsed by the market, cannot stand up to its examination or cannot produce economic returns, then there will be no income. The second distribution is conducted by government. Government has its own targets and can adopt various regulatory tools to realize them. For example, on the one hand it collects personal income tax from those whose income reaches a certain threshold and collects legacy tax, gift tax, property transfer tax, etc., from those who transfer properties. On the other hand, it provides subsidies or allowances to the needy so as to coordinate income distribution. In works about economics, personal income after tax is called disposable personal income, income that can be used in consumption or be saved.

So, is there a third distribution following the first two; if so what is its nature? In my book *The Shareholding System and Modern Market Economy*, I made a preliminary discussion on the third distribution: "Besides the two distributions, there is a third distribution, a kind of income distribution based on moral belief."¹ It shows that the first distribution is the effect of regulation by market, the second the effect of regulation by government, and the third the effect of regulation by custom and morality.

The third distribution is transfer of private income. "Under the influence of morality, the transfer of private income, voluntary payments and donations may happen across a broad range. For example, an individual may be willing to donate to his hometown, to disabled welfare organizations, to disaster-stricken areas, and to various cultural, sports, educational, healthcare and religious groups. These are not compulsory actions, but made under the influence of morality."² In other words, "The third distribution, or distribution under the influence of morality, has to do with personal belief, sense of social responsibility or a feeling for particular causes. Government regulation or compulsion is not involved here. That is to say, it is a voluntary transferring of some of one's private income to others."³

Income distribution out of personal faith, sense of social responsibility or feeling for particular causes (e.g. education, arts,

charity, religion, etc.) is actually a behavior resulting from moral inspiration. People are under no outside pressure to donate. If they do not, they are breaking no law or group rule (assuming they belong to the group). So why do they donate of their own accord? They do so under the influence of their own moral inspiration, because they see making a donation as their social responsibility or contribution to society. Some people possibly do so from religious enthusiasm, from humanist considerations, or from compassion, and are all based on moral inspiration, since they are very likely to see donating as a way of moral improvement.

With moral inspiration, many people work hard to create new business, increase income, accumulate wealth and then donate again. The increase of private property always accompanies the increase of private donation. The former can stimulate the latter and the latter can encourage people to keep on working hard and accumulating wealth. Such cases are not rare both in history and today. As I pointed out in *The Shareholding System and Modern Market Economy*: "The greater the number of people with such belief, sense of social responsibility or feeling for particular causes, the greater the amount of money they volunteer to pay or to donate, the more prominent becomes the role of morality in narrowing the income gap. At the present stage, the number of people willing to transfer part of their income to others is very small and so the narrowing influence is small, but in the long term, the role of morality in narrowing the income gap, is becoming increasingly important, albeit slowly."⁴

5.1.2 Several Points on the Third Distribution

Having defined the third distribution, we need to elaborate a few things.

Firstly, suppose a society has no first or second distribution, how is its distribution conducted?

This brings us once more to the "gap-filling" role of regulation by

custom and morality. In the long period before the appearance of market and government, distribution of means of subsistence at the early stage of human society was conducted on the principles of custom and morality. Otherwise, old people and children could not survive. After tribes were formed, for a long time the distribution within the tribe, including distribution of means of production and means of subsistence, was regulated by custom and morality. At that time, there was no distribution regulated by market or second distribution regulated by government. Later, even with the advent of market and government, in remote villages or in times of great social chaos without market or government regulation of income distribution, it was the role of regulation by custom and morality in income distribution that ensured normal socio-economic operation.

History makes it very plain that distribution in light of regulation by custom and morality not only existed but played its due role. However, it is only when regulation by market and by government have a role in income distribution that distribution under regulation by custom and morality can be called the third distribution. When neither regulation by market nor by government operates, distribution under regulation by custom and morality is the sole mode of distribution.

Secondly, following the appearance of market and government, the role of the third distribution became supplementary. The degree of its influence on income distribution depends on the amount of income put into the third distribution, which in turn depends on the amount of gross income, the amount net of government taxes, and the extent to which morality can influence behavior.

If we merely recognize the first and the second distribution by market and by government respectively, while neglecting the third distribution which is beyond regulation by either of these, it is actually to over-simplify socio-economic activity and to deny the fact that human beings as the main body of economic activities have different targets and that income distribution is influenced by moral

inspiration. Without the third distribution, the economy can still run normally because of the effect of the first and second distributions. But with it, income distribution in society can become more coordinated and the economy runs more smoothly. Furthermore, under the influence of morality, the third distribution can help promote cultural and public welfare causes, etc.

Thirdly, the third distribution happens more frequently in smaller groups. The smaller the group, the more common third distribution among its members will be. The bigger a group, the rarer the distribution will be.

The family is the smallest group, and within a family the individual members have different earning capacities and different income levels. One embodiment of mutual help among family members is income transfer, and this has nothing to do with market or government regulation, but is purely a result of regulation by custom and morality.

The clan is also a small group, although larger than the family. Under the market economy, it is no longer common in urban areas that people from the same family voluntarily transfer their income inside the clan. But in rural areas, it is still quite a common phenomenon, especially when natural disasters strike, or at weddings, funerals or ceremonies for celebrating newborn babies. One important reflection of mutual help among clan members is still income transfer.

When it comes to a very large group with many members, such as a city, province or country, income transfer among members cannot possibly be common, but influenced by custom and morality factors some members still volunteer to donate part of their income to help others.

Generally speaking, the donors either give directly to group members who are even strange to them or via intermediary organizations (charity organizations, public institutions, etc.): the donors firstly donate to intermediary organizations, which then donate to other members or use the donation for public welfare

undertakings. The bigger a group is the more commendable is the income transfer taking place under the influence of regulation by custom and morality and the more strongly the power of morality is displayed.

Fourthly, income distribution regulated by custom and morality can be classified into two types. The first type is voluntary personal donation after the first and the second distribution, and is motivated by individual belief, sense of social responsibility, feeling for particular causes, etc. This voluntary giving is called the third distribution because it is a further distribution following the first and second ones. It is a manifestation of individual moral inspiration. The second type is a mode of distribution operating in the absence of regulation by market or government or when both have ceased to have effect, and it relies on regulation by custom and morality. The reason it is called the third distribution is because it results from factors of custom and morality.

However, the main distinction between the two types of distribution is the extent to which they are voluntary. The first type, under regulation by custom and morality, is totally a voluntary donation. None are forced to donate, but they do so anyway. For the second type, because there is no regulation by market or by government on income distribution, the distribution is conducted in light of customs and group rules based on those customs. Therefore, the degree of members' identification with the group, with its customs and rules, and with the distribution outcomes will influence how willingly people conduct such distribution. If a member identifies highly with those things, he will be more likely to follow and accept the distribution rule of the group. Conversely, if his identification with these things is poor, he will be less willing to support this kind of distribution despite still observing group rules and customs. Whether his disagreement on distribution within the group is openly expressed or not, he will inevitably feel estranged from the group and other members. If the majority of group members have low identification

with their income distribution based on customs and if their disagreements increase, they will drift apart from the group, and crisis may result.

In such situations there will be two possible results: The group accepts the different views of its members and makes some adjustment to the custom-based mode of distribution so as to increase the members' identification with the group; or, the divergence inside the group continues to grow until the group falls apart or ceases to exist except in name. Such cases are not rare, neither in the past nor in the present.

Fifthly, income distribution regulated by custom and morality after the first distribution by market and second distribution by government is obviously a kind of voluntary or non-compulsory income transfer, but it is not totally disconnected from market or government. For example, if the government has drawn up measures on collecting inheritance tax, including a rule that donations to charity or public welfare can be deducted from the value of the inheritance and therefore not subject to tax, it will encourage people to donate or make a will leaving part of or all their income to charity or public welfare. It is true that donating is voluntary, non-compulsory behavior and directly connected with the donor's own moral inspiration, but we cannot deny that measures on inheritance tax collection also act as a stimulus.

For another example, under regulation by market, the quality and quantity of production factors supplied have a bearing on economic results and consequently on income. Suppose an investor starts an enterprise in an under-developed county or town and at the same time donates toward building a school or hospital. The former investment is market behavior prompted by market considerations, whereas the latter is a behavior for public welfare and prompted by moral considerations. But the two aspects are related to some extent: (1) A school will help raise the educational level of the local people and improve labor qualification, which will in turn benefit the donor's

enterprise. Similarly, a hospital will help to improve local healthcare conditions, make the workers stronger, reduce diseases and improve attendance rate, which will also in turn benefit the donor's enterprise. (2) With a school, hospital and a stable labor force, the enterprise will attract more talents, which is beneficial for the long-term development of the enterprise. (3) An investor who starts an enterprise and at the same time builds a school and a hospital will gain a reputation among local people, which means the enterprise will enjoy good public relations. In spite of this, we should remember that a donation toward building a school and hospital is not a market behavior, but an outcome of regulation by custom and morality and belongs to the third distribution, since the donor is not forced to do it.

壹 第三次分配概述

一、第三次分配的定义

第四章所讨论的道德激励问题，涉及敬业精神、进取心、对非正常条件的适应、对惰性的摆脱，以及战胜逆境的决心和毅力，等等，所有这些都会对生产领域发生积极的影响，从而将大大促进效率的增长与国民财富的创造。现在，让我们把讨论的范围延伸到收入分配领域。通过分析可以了解到，习惯与道德调节的作用，包括道德约束与道德激励的作用，对收入分配的影响同样是非常显著的。

在市场经济中，人们通常把市场进行的收入分配称做第一次分配，把政府主持下的收入分配，称做第二次分配。第一次分配是按照市场的经济效益进行的。各个生产要素的供给者按照各自提供的生产要素的数量和质量，经过市场的检验与认可，取得相应收入。市场经济中第一次分配的基本原则是：经济效益越高，收入越多；无经济效益，则没有收入。也就是说，在市场经济中，不能简单地用是否提供了生产要素和提供了多少生产要素来判断有没有收入或收入多少，因为这里存在着市场的检验与认可问题。市场是无情的，如果所提供的生产要素不被市场所认可，经不起市场检验，没有经济效益，那么还是不会有收入。第二次

分配是由政府主持的，政府有自己的目标，为了实现这一目标，政府可以采取各种收入调节手段，例如，一方面向达到一定收入数额的个人征收个人所得税，向转移财产的个人征收遗产税、赠与税、财产转移税等，另一方面给贫困户以补助、津贴，以促进收入分配的协调。在经济学书籍中，把纳税以后的个人收入称做个人可支配收入，个人可支配收入或用于消费支出，或用于储蓄。

那么，在第一次分配和第二次分配之后，是不是还存在着第三次分配？如果存在的话，第三次分配是什么性质的？关于收入的第三次分配，我曾在所著的《股份制与现代市场经济》一书中作了初步探讨，我写道：“在两次收入分配之外，还存在着第三次分配——基于道德信念而进行的收入分配。”¹这表明，第一次分配是市场调节的效应，第二次分配是政府调节的效应，第三次分配则是习惯与道德调节的效应。

第三次分配是个人的一种收入转移。“在道德力量作用之下，个人收入转移与个人自愿缴纳、捐献的范围是较广泛的。比如说，个人自愿为家乡建设捐赠，为残疾人福利组织捐赠，向灾区人民捐赠，向各种文化、体育、教育、卫生、宗教团体捐赠等等，都是非强制性的，这些行为与道德力量的作用有关”。²换言之，“第三次分配，即在道德力量作用之下的收入分配，与个人的信念、社会责任心或对某种事业的感情有关，基本上不涉及政府的调节行为，也与政府的强制无关。这就是说，这是在政府调节之后，个人自愿把一部分收入转让出去的行为”。³

这里所谈到的出于个人的信念、社会责任心以及个人对某种事业（如教育事业、艺术事业、慈善事业、宗教事业等）的感情而进行的收入分配，实际上就是出于道德激励的行为。捐赠财物的人并未受到任何来自外界的压力。他如果不捐赠，既不违法，也不违背某个团体（假定他参加该团体）的规定。那么，他为什么会自觉自愿地捐赠呢？是道德的自我激励使他这样做的，因为他把这种捐赠看成是自己的社会责任，是一种为社会作出奉献的行为。还有一些人，可能是出于宗教的热忱，或出于人道主义的思考，或出于爱心而这样做的，这同样以道德自我激励为基础，因为他们可能把这种捐赠看成是个人在道德上追求完美的行为。

在道德的激励之下，不少人可能不断地创业，增加收入，积累财富，而在收入增长和财富增长后，又一再捐赠。个人财产的增加和个人捐赠的增加，相伴而行。个人财产的增加会促使个人捐赠的增加，而个

人捐赠行为又会推动个人继续致力于敬业创业，积累财富。在历史上和现实生活中不乏这样的例子。正如我在《股份制与现代市场经济》中所指出的：“社会上有这种信念、社会责任心或对某种事情有感情的人越多，个人自愿缴纳或捐献的数额就越多，道德力量对缩小社会上收入分配差距的作用也就越大。在现阶段，社会上可能只有少数人自愿转移出一部分收入，从而对缩小收入差距的影响很小，但从长期来看，道德力量对于缩小收入分配差距的作用是会逐渐地（尽管是缓慢地）增大的。”⁴

二、关于第三次分配的几点说明

在说明了第三次分配的定义之后，还需要再对第三次分配作一些解释。

第一，假定社会上不存在第一次分配和第二次分配，社会的分配是怎样进行的？

这就是我们在前面已经讨论过的习惯与道德调节“填补真空”的问题。比如说，在市场和政府出现以前的漫长岁月里，人类社会最早的生活资料分配是按习惯与道德准则进行的，否则老人和小孩就无以为生了。部落形成以后，很长时间内部落内部的分配，包括生产资料的分配和生活资料的分配，也由习惯与道德力量来调节。这时既没有市场对分配的调节，也没有政府主持下的第二次分配。以后，尽管市场和政府相继出现了，但在偏远的山村，或在社会大动乱的年代，在市场对收入分配的调节和政府收入分配的调节都难以生效的场合，又是习惯与道德调节在分配中发挥作用，使社会经济照常运行。

历史十分清楚地告诉我们，在人类社会，按习惯与道德调节方式进行的分配确实存在着，并起着应有的作用。只不过在市场和政府都对收入分配进行调节的情况下，习惯与道德调节下的分配才是名副其实的第三次分配；而在市场调节与政府调节都不起作用的场合，习惯与道德调节下的分配便成了唯一的分配方式。

第二，在市场形式和政府出现之后，在分配领域内，第三次分配是起着补充作用的分配。第三次分配对社会的收入分配的影响程度，取决于被用于第三次分配的收入数额的多少，而被用于第三次分配的收入数额的多少，既取决于总收入的多少和收入总额中扣除政府征收的税额之

后剩余的多少，也取决于道德力量对人们的行为有多大的影响。

假定我们只承认有市场进行的第一次分配和政府主持下的第二次分配，而忽视市场调节与政府调节之外的第三次分配，实际上就是把社会经济活动过于简单化，不承认人作为经济活动主体的目标的多元性，不承认人们的道德自我激励对收入分配的影响。虽然在社会中不存在第三次分配时，经济仍可以照常运行，因为有了第一次分配和第二次分配，经济运行已趋于正常。但由于有了第三次分配，一方面，社会的收入分配可以由不协调走向协调，社会的经济运行可以更为顺畅，另一方面，在道德力量的影响之下，社会文化领域、公共服务领域以及其他领域内的一些事业可以在第三次分配调节之下较快地发展起来。

第三，第三次分配在一个小群体内部是经常存在并起作用的。群体越小，成员的第三次分配越有普遍性；群体越大，成员的第三次分配越有特殊性。

家庭是最小的群体。家庭成员中，各人赚取收入的能力大小不一，收入多少不一。家庭成员之间的相互帮助表现之一就是收入的转移。这种收入转移与市场调节、政府调节都无关，它纯粹是习惯与道德调节的结果。

家族是比家庭稍大的一个群体，但也属于小群体之列。在市场经济条件下，生活在城市中的同一家庭的成员，尽管在家族内部仍然存在自愿的收入转移现象，但这已经不很普遍了；而在农村中，家族内部的成员间收入转移仍是比较常见的，尤其是在天灾发生之际，以及在嫁娶、丧葬、添儿添女时，家族成员的相互帮助的表现之一仍然经常在于收入转移。

如果群体很大，例如一个城市、一个省区，甚至全社会，成员人数众多，在这种情况下，一个群体的成员之间的收入转移就不可能是普遍性的或经常发生的，但有些成员仍会自愿地捐出一部分收入去帮助其他成员，这同样是习惯或道德力量起作用的结果。

总的说来，群体的成员如果捐赠自己的部分收入的话，那么或者是直接捐赠给某些素不相识的群体成员，或者是通过中介组织（如公益机构、慈善机构等）进行的，即先捐赠给中介组织，再由后者捐赠给其他成员，或由后者举办公益事业等。因此，群体越大，人们在习惯与道德调节之下的收入转移也就越难能可贵，这种捐赠越能显示道德力量的作用。

第四，我们可以把习惯与道德调节下的收入分配分为两类。一类是在市场调节所进行的第一次分配和政府调节所进行的第二次分配之后，当个人收入已经成为个人可支配收入时，个人出于某种信念、社会责任感、爱心或对某种事业的感情而自愿作出的捐赠。这种自愿的捐赠之所以被称为第三次分配，因为这是第一次分配和第二次分配之后对个人收入的再一次分配。它是个人的道德自我激励的表现。另一类则是在不存在市场调节与政府调节的情况下，或者是在市场调节与政府调节都不起作用的情况下的一种分配方式，这时要依靠习惯与道德调节进行分配。它之所以被称做第三次分配，因为它也是习惯与道德力量起作用的结果。

但是，这两类习惯与道德调节下的收入分配是有区别的。区别主要在于自愿程度的不同。在前一类习惯与道德调节之下，个人完全出于自愿而捐出自己的收入。没有人强迫他必须这么做，但他却这么做了。而在后一类习惯与道德调节之下，由于没有市场对收入分配的调节，也没有政府对收入分配的调节，而是依靠某种习惯以及在此种习惯基础上形成的群体内部规则来进行分配的，因此，群体的成员对群体的认同程度，对某种习惯以及在此种习惯基础上形成的群体内部分配规则的认同程度，对分配的后果的认同程度等等，都会影响到习惯与道德调节下的分配的自愿程度。如果某个成员在上述各方面的认同程度较高，他会遵从群体的分配规则，他对这种分配的自愿程度就比较高；反之，如果某个成员在上述各方面的认同程度较差，虽然他仍会服从群体的规则，遵守习惯，但他的自愿程度却是比较低的。他在群体内部的收入分配方面的分歧意见，不管是不是公开显露出来，他同群体的关系都会因此而疏远。这样，就会逐渐影响他本人同其他成员之间的关系。假定一个群体中有比较多的人对群体内部按习惯进行的收入分配的认同程度降低了，他们的异议增大了，他们同群体的关系疏远了，群体的危机就会产生。

如果出现了这种情况，不可避免地会导致以下的结果：或者群体吸收有异议的成员们的意见，对习惯所形成的分配方法作某种调整，以换取他们对群体的认同程度的增加；或者群体中的裂痕扩大，引起群体瓦解或名存实亡。历史上和现实生活中都可以找到一些例子。

第五，在市场调节与政府调节之后通过习惯与道德调节而进行的收入分配，虽然是一种自愿的、非强制性的收入转移，但并不是同市场与政府完全没有关系的。比如说，如果政府制定了遗产税的征收办法，并

且规定向公益事业、慈善事业的捐赠可以从遗产中扣除，免于缴纳遗产税，这将会鼓励人们在生前向公益事业、慈善事业捐赠，或立下遗嘱，把收入的一部分或全部捐赠给公益事业、慈善事业。这种捐赠行为仍然属于自愿的、非强制性的行为，同捐赠人的道德自我激励直接有关，但不能否认的是，遗产税征收办法起了推动、促进的作用。又如，在市场调节之下，生产要素供给者所提供的生产要素数量和质量与经济效益有关，从而与收入有关。假定某一个投资者在一个经济较不发达的县或乡镇办了一家企业，同时他又捐款在那里办了一所学校或一家医院。前一种投资是市场行为，出于市场的考虑；后一种投资（捐赠）是公益行为，出于道德方面的考虑。但两种投资可能有某种联系，这就是：

（1）办了学校，将会提高当地的文化教育水平，提高劳动力素质，对企业的发展有利；办了医院，将会改善当地的医疗卫生条件，使劳动者的体质增强，减少疾病率，提高出勤率，从而也有利于企业的发展。

（2）有了学校和医院，企业职工队伍稳定了，企业对人才的吸引力增加了，从较长时期考察，这也是对企业发展有利的。（3）同一个投资者，在兴办企业的同时又在当地办了学校和医院，将增加当地人民对该企业的好感，公共关系的改善对企业的发展同样是有利的。尽管如此，仍应当注意到，捐款办学校、办医院，是习惯与道德调节的结果，是第三次分配的内容，它不是市场行为。没有人命令投资者这样做，他的捐赠是自愿的。

5.2. The Role of the Third Distribution in Coordinated Social Development

5.2.1 The Gap Left by the First and Second Distributions

The role of the second distribution by government in harmonizing social development in a market economy has had plenty of academic attention and research. On the other hand, the role of the third distribution under regulation by custom and morality has not even had academic notice, let alone research. This is an undeniable gap in

income distribution studies.

The basic principle of the first distribution is to distribute according to economic results, which will encourage suppliers of production factors to pay more attention to the quality of their products and the extent of market demand for them so that they can adjust their supply accordingly. At the same time, those requiring the various production factors will pay more attention to their usage of them, increase the utilization efficiency and reduce the situations that production factors are used irrationally or are set aside. In this way, gross national income will increase, which is in turn an essential condition for harmonious and coordinated social development. Therefore, the three aspects, distribution according to economic results, increase of national income and harmonious social development, are consistent. However, based on the experience of China's economic reform and development in the last 20 years, researchers recognize that fairness should also be considered even in the first distribution. This is because, in the transformation of economic system, the original status of production factor owners was different; i.e., their starting points were unequal. In the first distribution, some people have privileges and some (in particular large numbers of farmers) are disadvantaged, leading to a rather large income disparity that can only increase with the passage of time. Therefore, it is necessary for the government to pay attention to fairness in the first distribution and ensure that the proportion of labor income in the first distribution will increase appropriately rather than continue falling.

In the second distribution, the government should follow the principle of joint consideration to efficiency and fairness. Neglect of fairness will stretch the income gap even wider and make it hard to realize harmonious social development. Neglect of efficiency will impede the growth of national income and thus have a negative effect on social development. Therefore, to consider both efficiency and fairness in the second distribution will promote coordinated social

development.

However, both distributions have some limitations in this regard, mainly because the market economy principle of distributing according to economic results itself has limitations. Since human beings are not only economic beings but social beings too, non-material benefits will play a more important role once per capita income has risen to a certain level. People's outlook values will also change with it and the importance of the economic results principle to national income increase might progressively decrease. The government, by second distribution and through regulating measures such as taxation and poverty relief, may make social development more harmonious than before the second distribution, but it is not so easy for government to give joint consideration to efficiency and fairness all the time. When its regulating measures are effective the two goals may both command attention, but most of the time there is lack of balance, sometimes efficiency being over-emphasized at the expense of fairness, sometimes too much weight is put on fairness and the result is less than ideal efficiency improvement. If government regulation is not working well or its measures are seriously flawed, then neither efficiency nor fairness will materialize. The two main reasons for this are as follows: one, inappropriate government policies and systems that are unable to produce a balance of efficiency and fairness; two, the absence of necessary supervision systems in the implementation of policies, resulting in the systems or policies going off course. To address these problems, government needs to rectify weaknesses in its policies and systems, whilst also beefing up supervision of how they are implemented and improve the qualification of relevant government departments and employees.

The above analysis shows that following the first and second distributions, there is still a space for development of social coordination. When the first and second distributions are correct, the gap will be smaller and when the two, in particular the second, are not right, the gap will be bigger. Whether the gap is small or big,

more needs to be done for harmonized social development.

Hence, from the perspective of income distribution, the importance of the third distribution becomes more obvious. Since it is a form of voluntary donation, its influence is far-reaching and the fields it can affect are beyond those of regulation by market or government. Moreover, since the third distribution is a result of regulation by custom and morality, it is a kind of income transfer with compassion, unlike the first distribution regulated by the indifferent market. It is also a kind of non-compulsory and non-utilitarian income transfer, unlike the second distribution regulated by government, which is usually compulsory and utilitarian. In light of this, the third distribution can play a better role in filling the space for coordinated social development.

5.2.2 Interpretations of Coordinated Social Development and the Role of the Third Distribution

Before discussing the role of income distribution (all three types) in coordinated social development, we should first clarify what is meant by that term. In my book *Transformational Development Theory*, I explain it in three ways.⁵

One: coordination of income distribution, i.e. the income gap between regions and families, should be appropriate rather than excessive.

Two: harmonized development of all social sectors. Apart from economic development, sectors such as culture, education, health, environmental protection, welfare, public service, etc., should also develop correspondingly so as to meet the multi-faceted needs of society's members.

Three: improving life quality. Only when people's life quality is in line with the requirements of modern society can we say coordinated

social development has been achieved.

The three explanations, as reflections of the content of coordinated social development from different perspectives, all have their basis, and using them we can better discuss the role of the third distribution in promoting coordinated development. But first it needs observing that no matter how coordinated social development is interpreted, it could not be achieved under the planned economy system. In planned economy the policy is to paper over conflicts. Ostensibly there is problem-free social development when in fact discord is getting more acute by the day, conflicts accumulate and the situation worsens, until ultimately there is an explosive social crisis. For example, in planned economy, peasants are enclosed in small areas, toiling hard for miniscule incomes. Their mobility is severely restricted. It is against the way of harmonious development. For another example, also under the planned economy, people cannot choose their own careers and their strengths cannot be used to the full. As the economy is under-developed, real jobs are limited, but there is over-staffing in government offices, and there are many in disguised unemployment. This cannot be called coordinated social development, either. And again, in planned economy, productivity is low with few consumer goods on the market, and supply in exchange for tokens is extremely unreasonable, excluding peasants from the consumer market. Such things, supply-by-token or shortage of goods, mean great lack of coordination, rather than signaling harmonized social development. In short, the planned economy system must be abandoned in order to achieve coordinated social development. This is a basic premise.

Now, with reference to the three points made above, we will discuss the role of the third distribution in promoting coordinated social development.

1. The Third Distribution and Coordination of Income Distribution

Point one: coordinated social development means the

coordination of income distribution.

Under regulation by market, all kinds of production factors are supplied to society at a certain quantity and quality according to market demand. Because income distribution is conducted according to economic results, the income gap is bound to exist and to be of long duration.

Moreover, in this situation the gap in income distribution may very well get wider because, from a dynamic view, the income situation of the earlier stage will influence that of the later stage. Suppose there are two different groups of market participants, and leaving aside any differences in their talent, the first group is superior to the second in terms of family background and living area, so it has more advantages and higher income level than the second, which is in an inferior position and has lower income level. This can be regarded as the result of first-round market competition. Then the second round follows right on. In the market, those already advantaged will continue to be so and those in an inferior position will continue to be disadvantaged. After rounds and rounds of development, the income gap between them will keep on growing. This reflects the limitations or shortcomings of income distribution on the principle of economic results under market regulation.

As to the limitations of the second distribution by government, it has been pointed out above that whether or not the government regulating measures are right, there are just four situations that can ensue: (1) both efficiency and fairness are achieved; (2) efficiency is achieved but fairness is low; (3) fairness is realized but efficiency is low; (4) neither efficiency nor fairness is achieved. The first result would obviously be the best and the hardest outcome to achieve. The other three will leave a distribution gap, one waiting to be filled by the third distribution; i.e., narrowed down by people's voluntary giving. This will on the one hand make social development more harmonized and on the other hand, under the impact of moral force, help to strengthen society cohesion, ease interpersonal friction and

improve efficiency. Even if that happy outcome is realized, this does not mean the third distribution is unnecessary: this is because there is still potential for efficiency improvement and the realization of fairness to a great extent hinges on identification with fairness. Thus the third distribution can still play a role in harmonizing social development.

We should not or need not ask about the motivation of those who voluntarily donate part of their income to low-income families or public welfare causes: to do so would only make things more complicated. We cannot deny that there are differences between one person and the next: different people have different considerations and even the same person may think differently about donating on different occasions. Many donate from a certain ideal, belief or sense of responsibility, others do so out of sympathy, some for self-fulfillment, regarding donation as a symbol of career success or as another form of career; for others it is for spiritual consolation or to redeem a pledge along the lines of promising to donate part of one's property to society if surviving a catastrophe. Some possibly donate in order to get free of mental burden, believing themselves undeserving of this income or property and that giving will make them feel better. In general, donors may differ in what and why they give, but we do not need to know their motivation. All we need to know is that voluntary donation can help narrow the income gap and promote harmonized social development.

2. The Third Distribution and the Coordinated Development of Various Social Sectors

Point two: Coordinated social development means the coordinated development of all social sectors including economy, culture, education, health, environmental protection, welfare, public service, etc.

Under regulation by market, culture, education and health sectors, although socially highly beneficial, are of low economic interest. Therefore, they often face the problem of inadequate

investment, which has hindered their normal development. This is a reflection of the limitation of regulation by market on harmonized development of the social sectors. Under government regulation, if government has enough funds and effective measures, it is possible to effect improvement in the uncoordinated structure of those sectors. But without the right funds and measures, the condition will be made worse rather than improved.

Thus, after regulation by market and by government, a gap is left for the harmonized development of these sectors, a gap that needs to be filled up by the third distribution. Some people donate because of their ideals, belief, sense of social responsibility, or a passion for causes such as education, health, environmental protection, public welfare, public service, etc. Society may create various groups like foundations to receive such donations and to work for the development of those causes. These are bound to promote harmonized social development.

The influence of the third distribution on the development of those sectors is sometimes direct and sometimes indirect. Direct influence is: after some people donate part of their income or property directly to culture, education, health, environmental protection, etc., or to foundations working for the development of those sectors, those sectors will have rather rapid and harmonious development. Indirect influence is: when people use part of their income or property to help develop poor areas or to help its inhabitants out of poverty, the per capita income in those areas will improve, which will in turn stimulate local development in culture, education, health, environmental protection, etc., and thus promote the harmonized development of those sectors.

3. The Third Distribution and Improved Quality of Life

Point three: harmonized social development means improved quality of life, a concept that generally includes but is not limited to the following issues: To what degree can people's basic living needs be satisfied? To what degree can people's dwelling conditions be

improved? How much can be provided in terms of education, health, culture and entertainment services? How much leisure time can people spend? In what kind of environment can people work and live? Improved life quality is an indicator of social development heading in the direction of harmony.

Since improved life quality depends on both economic growth and how much society can invest in it, the role of regulation by market and government in promoting such improvement is still evident. Under regulation by market, economic growth will continue, which creates a favorable condition for improvement. Under regulation by government, apart from maintaining continuous economic growth, the government can also adjust the amount of investment into improvement and thus help improve life quality as well as promoting coordinated social development.

It should be noted that regulation by market and by government have at least three limitations in improving life quality. Firstly, the investment of the market or government in this aspect is limited, so non-governmental investment is needed. Secondly, good life quality also includes good social atmosphere, harmonious interpersonal relations, more concern and better care for the elderly, the weak, the sick and the disabled, things that cannot be realized by the power of market or government only. Thirdly, good life quality includes people's being able to spend their leisure time reasonably, change outlook on spending pattern, etc., which also cannot be achieved solely by market or government. It is evident that, after regulation by market and government, a gap is left for life quality improvement, a gap that the third distribution and regulation by moral factors can fill.

If there is a third distribution after the first and second distributions, i.e., donations from members of society that are used to develop sectors bearing on life quality (such as culture, education, health, environmental protection, public welfare and public service), these sectors will develop more rapidly. Moreover, through the third distribution and the effect of moral factors, the social ethos will

change for the better and the public will have more concern and better care for the elderly, the weak, the sick and the disabled. In this way, coordinated social development will be achieved more smoothly. As to how people will spend their leisure time reasonably or how they will correctly treat consumption behavior and pattern, such things are not directly connected with the third distribution. However, when more and more people care about life quality and are willing to devote themselves to its improvement, when they invest their time, energy and some of their disposable income in it, they actually do know how to spend their leisure and consume rationally. This too is conducive to coordinated social development.

贰 第三次分配在社会协调发展中的作用

一、第一次分配与第二次分配后留下的空白

在市场经济条件下，关于政府主持的第二次分配在社会协调发展中的作用，已经得到学术界的重视，并对之进行了研究。至于习惯与道德调节下的第三次分配在社会协调发展中的作用问题，直到现在还没有被学术界注意到，研究工作就更谈不上了。这不能不说是收入分配领域内研究的不足。

在第一次分配中，按经济效益进行分配是基本原则。按经济效益进行分配，将促使生产要素供给者更加注意自己所提供的生产要素的质量，以及自己的产品被市场需要的程度，从而就会根据市场的需要来调整供给。与此同时，各种生产要素的需求者在按经济效益分配的原则的指引下，也会更加注意生产要素的使用状况，提高生产要素的利用率，减少对生产要素的不合理使用或闲置。其结果必然是国民收入总量的增长，而国民收入的增长又是促进社会协调发展的必不可少的条件。因此，按经济效益分配、国民收入增长、社会协调发展三者是一致的。但根据最近20年来我国经济改革和发展所提供的经验，研究者感觉到，即使在第一次分配中也应当注意到公平问题。这是因为，在经济体制转型过程中，各个生产要素拥有者和持有者原先的地位是有差异的，他们并

未处于机会平等的出发点，所以在第一次分配中往往有些人拥有优势，而另一些人（尤其是人数较多的农民）处于弱势，彼此在第一次分配中所得的收入存在较大的差距，日积月累，彼此的收入差距会不断增大。这样一来，政府就有必要在第一次分配中关注公平，使劳动收入在第一次分配中的比重不仅不能继续下降，而且要有适当扩大。

在第二次分配中，政府遵循的是效率与公平兼顾的原则。如果只顾效率而不顾公平，收入分配差距将扩大，社会的协调发展难以实现。如果只顾公平而不顾效率，那么国民收入的增长将受到阻碍，这也不利于社会的协调发展。所以第二次分配中政府对效率与公平的兼顾将促进社会发展的协调。

然而，无论是第一次分配还是第二次分配，在实现社会协调发展方面都会受到一定的限制。这主要是因为，市场经济中按经济效益分配原则本身有局限性。由于人不是单纯的“经济人”，而是“社会的人”，非物质利益因素在人均收入提高后起着越来越重要的作用，人的价值观念也将在人均收入提高过程中发生变化，按经济效益分配对国民收入增长的积极作用可能是递减的。再说说第二次分配的情况。通过政府主持下的第二次分配，即通过税收调节措施和扶贫措施的实行，社会的协调发展状况会比第二次分配前有所改善，然而效率与公平兼顾的原则往往是很难掌握的。在政府的调节措施比较有效时，效率与公平两者都可能被注意到，但有时偏重于效率一端，公平的实现就不尽理想，有时又偏重于公平一端，效率的提高也不尽理想。如果政府的调节不得力，或者政府的调节措施有严重偏差，其结果将是既无效率又不公平。造成这种情况的主要原因有两个：一是制度设计、政策设计时考虑欠妥，以致不能兼顾效率和公平，或者偏重于这一侧，或者偏重于另一侧，甚至形成既无效率又缺少公平的结果；二是在执行过程中，缺少监督机制，以致制度变型或政策走样。假定出现了这两种情况，有必要双管齐下，既纠正制度设计、政策设计中的不完善之处，又强化执行过程中的监督的机制，提高政府有关部门和工作人员的素质。

以上的分析还表明，在第一次分配和第二次分配之后，社会协调发展方面依旧会留下一个空白。只不过在第一次分配和第二次分配得当时，留下的空白较小；而在第一次分配，特别是第二次分配不当时，留下的空白较大。不管留下的空白较大还是较小，都意味着在社会协调发展方面还有一些工作需要去做。

因此，从收入分配的角度来看，第三次分配的重要性就突出了。由于第三次分配是人们出于自觉自愿的一种捐赠，因此它的影响是广泛的，它所发挥作用的领域是市场调节与政府调节无法比拟的，或者说，是市场调节与政府调节力所不及的。不仅如此，由于第三次分配是习惯与道德力量起作用的结果，它是有情的收入转移，而不像市场调节那样是一种无情的收入转移；它是非功利性、非强制性的收入转移，而不像政府调节之下的收入转移往往带有某种功利性或强制性。正因为如此，在社会协调发展过程中，由第三次分配来填补空白，效果更为显著。

二、对社会协调发展的不同解释和第三次分配的作用

当我们谈到收入分配（包括第一次、第二次和第三次分配）对社会协调发展的作用时，还应当事先明确一下，即社会协调发展的含义究竟是什么？它包括哪些内容？我在所著的《转型发展理论》一书中，曾提及对社会协调发展的三种不同的解释：⁵

第一种解释是：社会协调发展是指收入分配的协调，即社会上各个地区之间、各个家庭之间的收入差距应该适当而不宜过大。

第二种解释是：社会协调发展是指社会上各个部门能协调发展，比如说，除了各个经济部门得到一定发展而外，文化、教育、卫生、环保、福利、公共服务等部门也能相应地发展，从而可以满足社会成员的多方面的需要。

第三种解释是：社会协调发展是指生活质量的提高，只有在生活质量上符合现代社会的要求，才能称做社会的协调发展。

这三种解释都是有根据的，它们从不同的角度反映了社会协调发展的内容。第三次分配对社会协调发展的促进作用，可以根据这三种不同的解释来加以论述。在论述之前，需要指出的是：当我们讨论社会协调发展时，不管对社会协调发展有什么样的解释，社会协调发展都不可能在计划经济体制下实现。计划经济体制采取掩盖矛盾的做法，表面上似乎社会发展中没有出现什么大问题，实际上却使社会发展的不协调程度日益加剧，以至于矛盾越积越多，不协调状况越来越严重，最后终将爆发成一场社会危机。比如说，计划经济体制之下，农民被封闭在很狭小的区域内，从事劳动，获得微薄的收入，农民的流动受到极大限制，这是与社会协调发展背道而驰的。又如，在计划经济体制下，不仅人们不

可能根据自己的专长来选择职业，专长得不到发挥，人不能尽其才，而且由于经济不发达，就业岗位有限，各个单位人浮于事，不少人处于隐蔽性失业状态，这也就谈不上社会发展的协调。再如，在计划经济体制下，生产力发展受到限制，短缺现象严重，市场十分狭小，而且仅限于一些消费品，凭票证供应消费品的做法又极不合理，例如把农民排除在凭票证供应之外等，这些都只能说明社会不协调问题的严重性，根本不能把凭票证供应与短缺看成是社会协调发展的标志。总之，要实现社会的协调发展，必须抛弃计划经济体制，这是社会得以协调发展的前提。

下面，可以按照上述对社会协调发展的三种不同的解释来说明第三次分配在促进社会协调发展中的作用。

（一）第三次分配与社会收入分配的协调

上述第一种解释是：社会协调发展是指收入分配的协调。

前面已经指出，在市场调节之下，各种生产要素供给者根据市场的需要向社会提供一定数量和质量的生产要素，收入分配是按经济效益分配的，人们之间的收入差距必定存在，而且会长期存在。

不仅如此，人们之间的收入差距在按经济效益分配的条件下还有扩大的可能性。这是因为，从动态上看，前期的收入状况将影响后期的收入分配。假定社会上两组不同的市场参与者，姑且不谈他们的天赋差别，专就他们的家庭背景和居住地区而论，一组市场参与者的家庭背景优于另一组市场参与者，其居住地区的条件也优于另一组市场参与者，于是前者在市场竞争中处于优势，收入较多；后者在市场竞争中处于劣势，收入较少。可以把这看成是第一轮市场竞争的结果。接着，第二轮市场竞争又开始了。在市场上，已经处于优势地位的，将继续处于优势，处于劣势地位的则继续处于劣势，如此一轮一轮发展下去，两组市场参与者的收入差距会更大，这反映了市场调节下按经济效益分配原则进行的收入分配的局限性或缺陷。

至于政府主持下的第二次分配的局限性，前面也已经指出，无论政府的收入调节措施是否得当，总会产生以下四种情况中的一种，这四种情况是：（1）既有效率又实现公平；（2）虽有效率但公平程度较差；（3）虽实现公平但效率低下；（4）既无效率又不公平。如果政府调节之后出现了上述第一种情况，当然是最好的结果，但这是很难做到的。其他三种情况之下，都在收入分配方面留下空白，有待于第三次分配去填补，即社会上一些人自愿的捐赠将有助于收入分配差距的缩小，从而

促进社会发展的协调，同时，通过道德力量的作用，社会的凝聚力有可能增强，人际关系中的摩擦有可能缓解，效率也可以提高。即使在上述第一种情况下，也并非不再需要第三次分配了，因为效率的增长总还有潜力，公平的实现在很大程度上要依赖于人们对公平的认同，所以第三次分配仍能起到协调社会发展的作用。

对那些自愿把可支配收入的一部分用于帮助低收入家庭的行为或用于资助公益事业的行为，不应当、也不需要去探寻捐赠者的动机是什么。如果追问动机，问题将复杂化。不能否认人与人之间的差别，不同的人会有不同的考虑，同一个人有不同的捐赠场合也会有不同的想法。不少人是出于一种理想、一种信念、一种责任感；也有些人可能出于同情心；还有些人可能出于一种自我实现感，即认为自己已经取得了成就，于是把捐赠行为看成是个人事业有成就的表示，或看成是个人事业的另一种形式；另有一些人可能出于某种精神上的寄托，通过捐赠而得到安慰，或者过去曾经许过愿：如果能够渡过某场灾难，将来一定要捐赠若干财产，于是捐赠行为便以还愿的方式出现；也不排除社会上个别可能出于某种求解脱的心理，即认为自己本来不应该有这些收入或财产的，对此总抱有某种愧疚，捐赠以后心理上会平衡些。总之，各种各样的人都有可能自愿捐赠，多少不拘，动机不一，动机是说不清楚的，何必去探寻呢？只要从客观效果上看，自愿捐赠的行为有助于收入分配差距的缩小，有助于社会协调发展，就行了。

（二）第三次分配与各部门的协调发展

接着，就前面提到的对社会协调发展的第二种解释作一些讨论。第二种解释是：社会协调发展是指经济、文化、教育、卫生、环保、福利、公共服务等部门的协调发展。

在市场调节之下，文化、教育、卫生等部门虽然社会效益很高，但经济效益却很少，因此常常苦于投入不足而难以正常地发展。这是市场调节在部门协调发展方面的局限性的反映。在政府调节之下，如果政府的经费充裕，调节措施又得力，那么部门结构不协调的状况可以改善；反之，如果政府的经费短缺，调节措施也不得力，那么部门结构不协调的状况不但得不到改善，甚至有可能恶化。

这样，市场调节与政府调节之后，在部门的协调发展方面也会留下一个空白，这个空白同样要依靠第三次分配来弥补。社会上，有些人出于理想、信念、社会责任感，或出于对文化、教育、卫生、环保、福

利、公共服务等事业的热忱和感情，自愿地为这些事业的发展而捐赠。社会上也有可能建立各种基金会之类的团体，从事这些事业的发展，它们将接受人们的捐赠，为发展这些事业而出力，结果必将有助于社会的协调发展。

第三次分配对各部门协调发展的影响可以分为直接影响和间接影响。直接影响是指：当一些人把自己的一部分收入或财产直接捐赠给文化、教育、卫生、环保等部门，或捐赠给发展这些事业的基金会之类的团体后，这些部门由于得到了追加的投入而能较快地发展，从而促进了各部门发展的协调。间接影响则是指：当一些人把自己的一部分收入或财产用来帮助贫困地区发展经济时，或用来帮助贫困地区的人们脱贫时，虽然这些收入或财产并未直接投入文化、教育、卫生、环保等部门，但由于贫困地区的经济发展了，贫困地区的人均收入提高了，这样也就会促进当地的文化、教育、卫生、环保等事业的发展，从而也有助于各部门发展的协调。

（三）第三次分配与社会生活质量的提高

关于社会协调发展的第三种解释是：社会协调发展是指社会生活质量的提高。生活质量大体上包括如下内容：人们能够在多大程度上满足基本生活需要？能够在多大程度上改善自己的居住条件？能够得到多少社会提供的教育、医疗、文化娱乐的服务？能够有多少供自己支配的闲暇？能够在什么样的环境中工作和生活？生活质量的内容当然还不止这样几项，还可以列举一些。生活质量水平的上升表明社会发展不断趋向协调。

由于生活质量的提高既取决于经济增长，也取决于社会可用于改善生活质量的投入的多少，所以市场调节与政府调节在促进生活质量提高方面的作用仍是明显的。在市场调节下，经济增长将持续，这就为生活质量的提高创造了条件；在政府调节下，政府除了能维持经济的持续增长而外，还能调整用于改善社会生活质量的投入量，从而有助于生活质量的提高，促进社会的协调发展。

应当指出，市场调节与政府调节在促使生活质量提高方面至少存在着以下三个局限性：一是靠市场和政府所提供的改善生活质量的投入毕竟是有限的，提高社会的生活质量往往需要有来自民间的追加投入。二是社会生活质量还包括了诸如社会风尚良好，社会上人际关系融洽，社会对老弱病残者的进一步关心和照顾等内容，而这些并非仅仅依靠市场

或政府就能解决。三是社会生活质量也包括了人们合理支配闲暇、人们对消费方式的观念的转变等内容，这些也不是市场或政府所能解决的问题。由此看来，在市场调节与政府调节之后，在不断提高社会生活质量方面同样留下了空白，第三次分配以及发挥道德力量的调节作用将有助于填补这方面的空白。

假定在第一次分配和第二次分配之后还存在着第三次分配，社会成员的自愿捐赠的一部分将被用于发展与生活质量有关的部门，如文化、教育、卫生、环保、福利、公共服务等部门，这些部门有了追加的投入，将加快发展。此外，通过第三次分配，通过道德力量的作用的发挥，社会风尚的好转和社会对老弱病残者的进一步关心和照顾都将比第三次分配之前有所进展，这样，社会的协调发展也会更加顺利一些。至于人们如何合理地支配闲暇，以及人们如何正确对待消费行为和评价消费方式，尽管与第三次分配之间没有直接的联系，但可以认为，当社会上有越来越多的人更关心社会的生活质量，并且自愿地投身于社会生活质量的提高时，当他们不仅用自己的时间和精力，而且也用个人可支配收入的一部分致力于社会生活质量的提高时，人们实际上也就会合理地支配闲暇并使自己的消费行为理性化。这同样是有助于社会的协调发展的。

5.3 The Third Distribution and the Relation Between Generations

5.3.1 "Life Hopes" and the Third Distribution

For a clan, especially a family, the relation between generations is inevitably involved in the transfer of individual disposable income. When an individual volunteers to donate part of his income or property, he will have less left for his children or other relatives, which might cause some conflict between custom and morality. The conflict forms in this way: It is a tradition, a convention, a custom or even a moral recognition that a person should leave one's property to one's children or junior relatives. However, the decision, prompted by

one's ideals, sense of responsibility, etc., to donate to families, non-families, public welfare or charity organizations, is one made mainly under the influence of moral factors. It may have some connection with custom, but to a minor degree.

To further explain this question let us begin by discussing "life hopes."

All members of society hope for gradual improvement in their own lives and that their children will have better lives than their own generation. This is what we mean by "life hopes" and the drive for economic development across society comes from the same source. Those despairing of their lives or believing that irrespective of their efforts a better life will elude them have no such drive. From another perspective, having life hopes for oneself and the next generation actually implies a certain dissatisfaction with the current situation; dissatisfaction will generate drive and make people try all kinds of means to realize their life hopes. It is so for individuals, families, clans and the whole society: a society that is not satisfied does not lack drive for progress.

A family or clan usually uses the standard of another family or clan enjoying a better life as a spur to reach that standard as early as possible, and once this goal is reached, it is spurred on by a new standard, a higher one. Life hopes are thus realized step by step. Why does a family or clan aspire to a life one step up? The main reason is because the next step up is achievable through hard work in the foreseeable future. No one wants a life standard lower than the existing one, and a standard wildly higher than the current one is not a realistic goal for the near future. Therefore, a family or clan usually compares its own life with life one level higher.

For a family or clan, the standard of living they currently enjoy encourages them to prevent any fall-off in life quality and to strive for something even better. In normal circumstances, what is meant by their life goals means pursuit of something rather better than what they currently enjoy. "Life hopes" encompass such pursuit, but also

imply the hope that this goal can be made reality for the next generation and the current one too.

However, in the eyes of most family or clan members, that group has a dual role. On the one hand, they hope it can help them improve their life or at the very least not obstruct this; on the other hand, they take it as an insurance institution, one on which they can rely for help (specifically financial help) if in a desperate plight. Public opinion often sympathizes with the underdog, so if a family or clan refuses, without good reason, the request of a member for help or shelter, it will be condemned by public opinion. This is particularly common in Eastern cultures.

People hope that the next generation of their family will have a better life, but their outlook on the next generation is gradually changing. That is to say, with economic and social development, parents' opinions about their children are undergoing constant change. For example, in Western society where market competition is intense, parents may find having children an obstacle to improving their quality of life and the expenditure on children a heavy burden on family finances. They do not count on their children making a contribution to the family or shouldering any responsibility for the family in the future. In Eastern cultures, this change in outlook is much slower, but a similar trend is discernible.

The fact that parents hope their children's lives will be an improvement on their own is not the same thing as and should not be confused with the fact that parents expect a material return from their children or that they can contribute something to the family. If the life quality of a family keeps on improving, children will become more and more a comfort or even a treasure for the family. Moreover, having children will become a family goal, and parents will not place hope of material return on their offspring: the family's only aspiration will be that the next generation gets as many development opportunities as possible. This sentiment will influence the pattern of family expenditure. One influence is: in order to create more

opportunities for the younger generation, parents may spend more on their education, so educational spending will take up an increasingly large share of family income. Another influence is: since parents do not count on their children to keep them in their old age, nor do they expect any material return from their offspring, they are likely to put aside more money for their retirement. When a considerable part of individual savings is for this purpose, it too will influence the pattern of family expenditure. The third influence is: parents might not give much consideration about how much to leave to their children. If the parents die before the children reach adulthood, they might leave enough for their children to complete higher education and start their own families. If the parents die when the children are self-supporting adults, there is no need to leave all of their property to them. Such influences are not difficult to understand.

Thus we can see how the change of parents' outlook on offspring can influence the third distribution. Since the third distribution refers to voluntary transfer of disposable personal income, including donation to public welfare, charity, or a favorite cause, the above influences on family spending pattern will consequently affect the third distribution. The degree of influence differs between high-income families and average-income families.

(1) When educational spending accounts for an increasing share of family income.

In average-income families, when educational spending from their disposable income increases there is a corresponding decrease in what they can save as assets; consequently, less of their assets will be available for the third distribution. High-income families might increase their donation to the cause of education.

(2) When parents put aside more money for their retirement.

In average-income families, when more of their disposable income is saved for retirement, their assets available for the third distribution will decrease. High-income families might donate more for building welfare facilities for the elderly.

(3) Parents may not leave much for their children, apart from sufficient funds for their non-adult children to finish higher education and start their own families.

In average-income families, this consideration does not have evident influence on the third distribution. High-income families may increase their donations to various public welfare and charity causes.

In general, the change in outlook on offspring will have considerable influence on the third distribution by high-income families. It is not contradictory to the wishes of most families (including rich ones) for realizing life hopes. As mentioned above, the fact that parents hope their children's lives will be an improvement on their own is not the same as expecting a material return or contribution from their children, nor is this wish the same thing as the third distribution (mainly from high-income families) increasing with economic and social development.

5.3.2 The Third Distribution and Family Conflict

As mentioned above, the change of parents' outlook on offspring will influence their attitude toward the third distribution (mainly from high-income families). But their attitude may not be the same as their children's and this may give rise to conflicts between family members or between generations. To explain this point, it must take the issue of "life hopes" as our starting point once more.

Compared with past expectations, children are not as burdened with the mission of making the family richer in future, but neither this nor changes in parental attitude mean that "life hopes" have ceased to be the driver of a family's development. The wider the gap in life quality between different families, the more dissatisfied many families will be when they compare themselves with families a step up from themselves, and the stronger their drive for a better standard of life. If there are any obstacles to this, the main one is the limited horizon of the family itself. For example, if some family members do not identify

"life hopes" with increase of family income or a better living standard, are satisfied with an impoverished life, make a virtue out of asceticism, or believe any effort to increase family income is futile and it is best to be content with one's lot, etc., then they are unlikely to work hard to improve the family income and its standard of living.

The psychological factors hindering the achievement of higher family income are also expressed as being risk-averse, fearing little gain and great loss, fear of appearing different, fear of competition, etc. When the system allows people to become rich by dint of hard work, the obstacles to increasing family income, in addition to lack of technical skills, include lack of enterprise, insufficient competitive sense, lack of confidence, and of resolve to change one's situation by hard work. Such inertia is a negative factor for the development of any family.

Such things have a bearing on the attitude taken by the younger generations of different families to property left by their parents. The issue is not how much the grown-up children own, but their mental dependence on their parents, how content they are with the *status quo* and whether they fear risk and competition. If they depend little on the family mentally, have strong enterprising spirit and competitive sense and will take risks, then even with few assets and little income, they will not quibble about their parents' morality-inspired donations nor about how much their parents will leave them. Conversely, if they are seriously mentally dependent on the family, lack enterprise, competitive sense and willingness to take risks, then even if they own a lot or have a high income, they will still quibble about their parents' charitable giving and how much their parents will leave them. In such a situation, conflict between custom and morality will be evident. In other words, the third distribution will meet much more resistance in the second situation than in the first.

Thorstein Veblen pointed out that: What is known as living standard is in essence a custom, an accustomed standard and pattern in response to certain spurs. It is usually difficult to fall back from an

accustomed level, i.e. to break the custom. Since an individual's current living standard is integrated into his life style, he will stubbornly believe this standard to be right, and since his living standard is known to those around, he believes he will be looked down on and excluded if he doesn't keep to this standard.⁶ Veblen's opinion is enlightening for discussing the third distribution and the relation between generations. For the younger generation of a family, since the current living standard has become a custom, they must follow it in order to have the respect of those around: they cannot fall back from it. For most families, when donations by parents will impact the living standards of their offspring, it is totally understandable if tension materializes between the generations and if resistance from family members strengthens. This is perhaps an internal checking mechanism of the third distribution.

In discussing how the relation between generations is linked to the third distribution, there is another point worth making: The younger generation will to a great extent shuffle off the influence of traditional values and thus change greatly their views on family property and personal future. Generally speaking, the more a region or a country is influenced by market economy, the larger its strides toward modernization, the greater its marketization and modernization, the more the younger generation's notions of family will change. We can imagine that more and more young people will realize that a rich life comes mainly from personal industry, not from legacies from the parents' generation. The main task of the older generation is to provide proper condition and opportunities for their development and the younger generation must improve their living standard through their own efforts. Without hard work it is impossible to raise one's living standard no matter how excellent the conditions are or how many opportunities are provided. The older generation's enthusiasm for and donations to public welfare causes and charities, their sense of social responsibility and beliefs, will set a good example to the younger generation.

In study of the third distribution or of legacy amounts, we cannot deny the problem of generational conflict within a family, but the general trend is that with the gradual change of the younger generation's values, the conflict will ease. As I pointed out in *Ethical Issues in Economics*: "Whether it is the current or the next generation, they should both help toward creating a social ethos along the following lines: Give more consideration to other people and to the next generation. There will always be self-indulgent pleasure-seekers who greedily consume resources. But they are not likely to be in the majority. Most are still hard working and social development depends on their efforts. Even if some of the younger generation think only of pleasure, they are nevertheless in the minority."⁷

叁 第三次分配与代际关系

一、“生活中的希望”与第三次分配

对一个家族，特别是家庭来说，个人可支配收入的转移不可避免地涉及代际关系。这是因为，在个人自愿把一部分收入或财产捐赠出去之后，个人留给子女、晚辈亲属的财产就减少了，于是在习惯与道德力量之间可能发生冲突。冲突是这样形成的：个人把财产留给子女或晚辈亲属是一种传统，出于约定的或认同的习惯，其中也包括了道德上的考虑；而个人出于理想、信念、社会责任感等而把财产捐赠给家庭、家庭范围以外的社会成员，或捐赠给社会上的某个公益机构、慈善机构，则是在道德力量影响之下作出的决策，其中虽然在某种程度上同习惯有关，但主要不是出于习惯。

为了进一步说明这个问题，让我们先从“生活中的希望”谈起。

社会成员总希望生活渐渐好起来，总希望子女的生活能过得比自己这一代好一些。这就是“生活中的希望”。经济发展的动力，从整个社会来说，也来自“生活中的希望”。对生活已经感到绝望的人，或者自认为无论怎样努力也不能改善生活的人，是不会有动力的。所以从另一个角度来看，对生活寄以希望，对下一代会过上较好的生活的希望，实际上

意味着对生活的不能满足。不满足，就会有动力；不满足，就会设法使“生活中的希望”得到实现。个人是这样，家庭、家族是这样，社会也是这样。不感到满足的社会，就是不会缺乏前进的动力社会。

在社会上，一个家庭或家族通常会用生活水平比自己高一个档次的标准来督促自己，以便及早达到这个档次的生活水平；在达到了这个档次生活水平后，接着又会用比这个档次更高一个档次的标准来督促自己，“生活中的希望”往往就是这样一步一步实现的。为什么一个家庭或家族通常所要争取达到的是高一个档次的生活水平呢？主要是因为，这是近期内通过努力就可以达到的。比自己生活水平低的那个档次，没有人认为这是争取实现的目标；比自己生活水平高很多的那个档次，看来近期内不容易达到。因此，一个家庭或家族通常先同比自己高一个档次的生活水平相比。

现有的生活水平对一个家庭或家族来说，既起着阻止从现有生活水平下降的作用，又起着推动家庭或家族成员去努力争取达到较高的生活水平的作用。一个家庭或家族在生活上的追求，在通常情况下，就是指这种实现较高生活水平的追求。“生活中的希望”不仅包含了这种追求，而且包含了下一代人，甚至本代人就能够使这种追求变为现实的希望。

然而，在一个家庭或家族的大多数成员看来，家庭或家族有着双重作用。一方面，他们希望家庭或家族将帮助自己实现生活的改善，至少不要成为自己实现生活改善的障碍，另一方面，他们又把家庭或家族当做一种保险机构，在处境不利时可以依赖家庭或家族的接济，尤其是能够得到家庭或家族中某些成员的具体的资助，直到最后——在万不得已时，把家庭或家族当做落难时的庇护所。社会舆论往往是同情弱者的。假定一个家庭或家族的成员在落难时希望得到接济或庇护的请求被家庭或家族所拒绝而又没有正当的拒绝理由，家庭或家族就会受到舆论的谴责。这种情况在东方文化背景之下尤其普遍。

在家庭或家族中，尽管上一代有一种希望下一代生活得更好的愿望，但家庭或家族对下一代成员的看法却会逐渐发生变化，也就是说，随着经济和社会的发展，父母对子女的评价处于不断变化之中。比如说，在市场激烈竞争的西方社会，父母会发现生儿育女是改善家庭生活的一种障碍，用于子女的支出是家庭财政的一个沉重包袱，而且还认为子女将来对家庭的贡献是无所谓的，父母也不指望子女将来对家庭承担什么义务。在东方文化背景之下，这种变化可能缓慢得多，但仍能看到

有相同或近似的变化趋势。

家长希望子女的生活过得比自己这一代好一些，同家长想从子女那里得到物质上的回报或家长希望子女为家庭作出贡献是两回事，不可混为一谈。子女在家庭生活水平不断提高的条件下，越来越成为一种安慰，子女甚至被当做家庭的一种珍藏物。生儿育女被渐渐看成是目的本身，父母并不在子女身上寄予得到回报的愿望，家庭只希望下一代有尽可能大的发展机会。这种思想情绪对家庭的支出格局是有一定影响的。影响之一在于：为了使下一代有更大的发展机会，家长为子女受教育的支出可能较多，从而使教育支出在家庭收入中所占比例有上升的趋势。影响之二在于：由于家长不指望靠子女来赡养自己，也不打算从子女那里得到回报，所以家长可能为自己多准备一些养老的费用，个人储蓄中的较大部分是留做养老的，这也会影响家庭支出格局。影响之三在于：至于父母会留下多少财产给子女，父母不一定考虑得很多。如果父母去世时子女还未成年，可能会留下足以供养子女升学和成家立业的费用；如果子女已经成年，并且自立，父母不需要把所有的财产都留给子女。上述这些影响的存在，是可以理解的。

由此可以看到家庭对子女评价的变化所给予第三次分配的影响。第三次分配既然是指个人可支配收入的自愿转移，包括对公益事业、慈善事业的捐赠，以及出于个人对某种事业的感情而作出的捐赠，那么上述有关家庭支出格局的三个方面的影响也将是对第三次分配的影响。具体地说，对第三次分配的影响可以分为高收入家庭和一般收入家庭来分别讨论：

（1）教育支出在家庭收入中所占比例有上升的趋势。

对一般收入的家庭而言，个人可支配收入中因用于教育的支出的增加会使得财产的积余有所减少，也就是会减少可供第三次分配的财产数额。对高收入的家庭而言，则有可能增加个人对教育事业的捐赠。

（2）个人储蓄中有较大部分是为本人留作养老的需要。

对一般收入的家庭而言，个人可支配收入中，因用于养老的部分的增加而会减少可供第三次分配的财产数额。对高收入的家庭而言，则有可能增加个人对老年福利设施的捐赠。

（3）除了为未成年的子女留下足以供养子女升学和成家立业的费用而外，父母不一定会给子女留下很多财产。

对一般收入的家庭而言，这种考虑对第三次分配的影响不明显。对

高收入的家庭而言，则有可能增加个人对社会各种公益、慈善事业的捐赠。

总之，家庭对子女的评价的变化将在不同方面对高收入家庭的第三次分配发生较大影响。这与多数家庭（包括高收入家庭）使“生活中的希望”得以实现的愿望是不矛盾的。前面已经指出，家长希望子女的生活过得比自己这一代好一些，同家长想从子女那里得到物质上的回报或家长希望子女为家庭作出贡献是两回事；现在可以再补充一句：家长希望子女的生活过得比自己这一代好一些，同第三次分配（主要指高收入家庭的第三次分配）随着经济与社会的发展而增长的趋势也不是一回事。

二、第三次分配与家庭内部的矛盾

家长对子女的评价的变化会影响家长对第三次分配的态度（主要对高收入家庭而言），已如上述。但应当认识到，家长对第三次分配的态度不等于子女对第三次分配的态度。家庭内部的矛盾，或家庭的代际矛盾，可能因此而产生。为了说明这一点，我们仍有必要以“生活中的希望”的实现问题作为讨论的出发点。

要知道，尽管家庭对下一代的看法会发生变化，尽管子女已经不再像过去那样被赋予为家庭的未来增加收益的使命，但这并不使得“生活中的希望”不再成为家庭发展的动力。不同家庭之间在生活水平方面的差距越大，意味着不少家庭在同高一个档次的家庭比较时的不满足感越明显，于是家庭为提高生活水平的动力也越大。如果说在这方面会存在阻力的话，那么主要的阻力来自家庭自身在观念上的受束缚。比如说，某些人如果认为“生活中的希望”并不在于家庭收入的增加和生活水平的上升，或乐于过清贫的生活，或崇奉禁欲主义，或认为争取提高家庭收入的努力是白费心机，不如乐天知命等等，这样，他们也就不会致力于提高家庭收入和改善生活状况了。

阻碍着某些家庭增加收入这一愿望实现的心理因素还表现为一种怕冒风险、怕得不偿失、怕出人头地、怕竞争的思想。在体制上容许人们通过努力而致富的条件下，家庭增加收入的障碍除了缺乏赚取更多收入的技能而外，还有可能在于缺乏进取精神，缺乏竞争意识，缺乏自信心，缺乏依靠个人努力来改变现状的决心和毅力。这就是一种惰性。这种惰性的存在，对任何一个家庭来说，都是发展中的消极因素。

以上所说的这一切，都关系到不同家庭的下一代对父母留下的财产的态度。问题不在于已成年的子女自身拥有的财产的多少，而在于他们身上保留了多少依赖思想、安于现状的思想、害怕冒风险和害怕竞争的思想。假定他们对家庭的依赖思想较少，或者具有较强的进取精神、竞争意识和风险意识，那么，即使他们自身拥有的财产较少，或收入较少，他们不会计较家长出于道德信念的捐赠行为，也不会计较家长为下一代留下财产的多少。反之，假定他们对家庭的依赖思想较重，既缺乏进取精神，又缺乏竞争意识和风险意识，那么，即使他们自身拥有的财产较多，或收入较多，也会计较家长出于道德信念的捐赠行为，计较家长究竟留下了多少财产给后人。习惯同道德之间的冲突就会明朗化。换言之，第三次分配在上述后一种情况下所受到的来自家庭内部的阻力会远远大于前一种情况下所受到的来自家庭内部的阻力。

凡勃仑曾经指出：所谓生活水平，本质上是一种习惯，它是对某些刺激发生反应时一种习以为常的标准和方式。从一个已经习以为常的水平退却时的困难，就是打破一个已经形成的习惯时的困难。由于已有的生活水平已经同本人的生活方式合而为一了，因此一个人会认为执行这个消费水平是对的。由于已有的生活水平已经被周围的人所承认，所以一个人也会认为不遵守这个水平是要受到轻视、排斥的。⁶凡勃仑的这一论述，对于有关第三次分配与代际关系的探讨具有启发性。在家庭的下一代成员看来，既然已有的生活水平已经成为一种习惯，要遵守这种习惯并以此得到周围的人的尊重，那么要从已有的生活水平上后退是不可能的。所以当家长的自愿捐赠会影响子女的已有生活水平时，对大多数家庭来说，代际关系的紧张和来自家庭内部的阻力的增大就完全可以理解了。这也许是第三次分配的一种内在制约机制。

在讨论家庭代际关系同第三次分配之间的关系时，还有一个问题值得提出，这就是：下一代人将在较大程度上摆脱传统观念的影响，从而对家庭的财产和个人的前途的看法也可能有较大的变化。一个地区、一个国家受市场经济的影响越大，在现代化道路上迈出的步子越大，市场化程度与现代化程度越高，一般说来，后代人在家庭观念上的转变也就越大。可以相信，必将有越来越多的下一代人懂得，生活的富裕主要靠自身的努力而不能依靠上一代人的遗产；上一代人主要为下一代人的发展提供适当的条件和机会，但下一代人必须通过自身的努力才能使自己的生活日益好起来。自己不努力，上一代人提供的条件再好，机会再

多，生活水平的提高依然无望。上一代人对公益事业、慈善事业等的热忱和捐赠，他们的社会责任感和信念，都将为下一代人作出良好的榜样，对下一代人起到示范作用。

家庭内部的代际冲突，在第三次分配或留下多少遗产等问题的研究中虽然不可被否认，但总的趋势仍然是：随着下一代人的观念的逐渐转变，代际冲突也会缓和下来。正如我在《经济学的伦理问题》一书中说过的：“无论对于本代人还是对后代人，都应当树立这样的社会风气：多为他人着想，多为下一代着想。社会上总有一些人贪图享乐，尽情消费资源。但社会不可能主要由这些人构成。社会上大多数人是勤奋工作的。社会的发展依赖着大多数社会成员的努力。即使后代人当中有一些人成了专门享乐的人，那也只是少数而已。”⁷

5.4 Trend of the Third Distribution

5.4.1 How People Understand Quality of Life

What is the trend of the third distribution? The question was brought up at the end of the previous section, so let us now explore it further, bringing in how people understand quality of life.

In any society, production is not an end in itself, because people are not put on this earth purely as a labor force. Production is for people, not people for production: it is for improving their life and providing better care and nurture. If more and more goods are produced but living standards or educational levels do not improve, this is at odds with the purpose of production. Based on this simple reason we know that for every member of society the important thing is not by how much output value increases, but how to use that increased value to improve and enrich their lives, to make and provide better education, care and nurture.

If the purpose of production is to deliver a better material and cultural life, then how do people understand quality of life? Does it only mean having enough to fill your belly and clothe your back? If

quality of life can be expressed as "happiness," then what does "happiness" mean?

In the traditional outlook, "happiness" is always connected with high income. It seems that happiness and income rise in tandem, but as the economy develops and incomes grow, "happiness" takes on new connotations, as does quality of life. In fact, the more abundant the material goods the higher the demand for cultural life becomes. People need more than just material comfort but a good environment, good health and spiritual enjoyment too. As they become richer in material things people's attitude to time starts changing also: In the past, property was seen as most important, but now time is more precious to them than money. Money can be saved, but time cannot. A more worthwhile use of time will bring people more happiness.

This means that the understanding of quality of life will become deeper as the economy develops and incomes rise generally. This kind of change is related to the trend of the third distribution: On the one hand, with deeper understanding of quality of life people will pay greater attention to the development of culture, education, health, environment, public welfare and public service, etc., and they will donate to those causes so as to improve quality of life in society as a whole. At the same time, as incomes rise and charitable giving takes up a bigger share of their disposable income, people will come to a new understanding of the meaning of life and will care more about its quality, about society and the future.

On this issue, an important question is how to get people in the process of economic development to discard their "old notions" and change their ideas. By "old notions" we are mainly referring to two long influential concepts, namely: "warm clothes and a full stomach: don't ask for more" and "charity begins at home." These notions prevent a correct understanding of the meaning of life, and have a negative impact on the third distribution.

Some people, especially farmers in under-developed regions, are often content with the *status quo*, having adequate food and clothing,

but still on a low income. Their ambitions stretch no further than these important things. The influence of attitudes such as "warm clothes and a full stomach: don't ask for more" plus a lack of enterprise, competitive sense, technical skills and market information accounts for this. With such old notions, the economy and income will stagnate; consequently, there will be no prospect of pursuing a better quality of life and the amount of income available for the third distribution will be very modest indeed.

The "charity begins at home" notion is bound to hinder the development of public welfare and charitable causes, and its influence prevents the potential of the third distribution being brought into play. Moreover, since socio-economic development needs better communication and cooperation between people, if this notion spreads, further economic development will be blocked. As a result, it will be hard for the amount of income available for the third distribution to increase.

Therefore, a society must help people in the process of economic development toward a deeper understanding of the meaning of life, so as to gradually dispel old attitudes regarding higher income and public welfare and charitable causes.

5.4.2 From the Material Approach to Making People the Key

To understand the trend of the third distribution, we should analyze from the perspective of socio-economic development strategy, which leads us to the vital question: which is more important, man or material?

When material goods become plentiful, the driver of socio-economic development will be not just meeting people's material needs but also meeting their spiritual needs, and there can be many ways of understanding the latter.

For some, doing something oneself is a spiritual enjoyment. For example, once an individual gets rich, preferring to do the housework in person, regarding it as a distraction, spiritual pleasure and satisfaction of a "spiritual need."

For some, spending more on culture, arts, sports, travel, etc., is a spiritual enjoyment and a satisfaction of spiritual needs.

Some believe donating to public welfare and charities is more in line with their inclinations and satisfies their "spiritual needs."

It should be pointed out that there is no conflict between these things—doing things for oneself, spending more on culture, arts, etc., and charitable giving—and that one person might do all three. Although charitable giving is still the behavior of just some people, their numbers will increase as material goods become more plentiful and income level rises.

Whether it is self-service, spending more on culture, arts, etc., or it is donating for public welfare and charity, all three behaviors should be seen as countering the traditional approach of putting the material first and people second, since all of the behaviors imply prioritizing people and putting greater emphasis on improving life quality than on supplying material goods. From the perspective of socio-economic development strategy, if a society can shift its focus onto making people the key, it amounts to a change of development strategy, which will in turn greatly influence the role of the third distribution in income distribution. This is because the third distribution is born out of morality, convictions, sense of social responsibility, sympathy, etc.: in other words, it proceeds from a concern for the care and nurture of others. With such a change, the trend of social development will be roughly in line with the trend of the third distribution. The more a society cares about people, the greater the role of the third distribution in the changed socio-economic development strategy. When the number of donors increases, the role of morality in social income distribution will be more important, as will be the influence of the third distribution.

When a society changes its orientation from prioritizing the material to making people the key, this does not equate to ceasing to put effort into increasing production of material goods, nor that it will concern itself only with people's spiritual needs to the exclusion of their material needs. The fact is society will keep on producing more and more material goods, and will engage with satisfying people's increasing spiritual needs but with a greater focus than before on improving life quality. Such a situation cannot correctly be formulated as "prioritizing people at the expense of material considerations." It might also give equal weight to both elements. To emphasize people means making their care and nurture the priority, one that takes precedence over output increase. Just as pointed out above, people are not for production, production is for people and for providing better care and nurture. The connotations of focusing on the material are: Without solid economic and material foundations, it would be impossible to improve quality of life, let alone provide better care and nurture. Therefore, the reason behind proposing a material focus was ultimately to focus on people. The view that a material focus sees only this as important and gives scant regard to people's care and nurture is a distortion of the conception. In this sense, society must change its traditional development strategy, shifting its center of gravity to making people the key.

Basically speaking, making people the key is not just a development strategy. More importantly, it should be established by society as a basic principle to be strictly followed. Moreover, it should not only find expression in income distribution: it should be an unwavering principle in social issues, economics, politics and culture too.

肆 第三次分配的趋势

一、关于人们对生活质量的认识

第三次分配的趋势如何？上一节的结尾部分已经提到了这个问题。现在让我们结合人们对生活质量的认识进行较深入的探讨。

在任何社会中，生产本身都不是目的，因为人不是单纯作为劳动力而生活在世上的。人不是为了生产，生产是为了人。生产的目的是使人们的生活不断得到改善，使人们得到关心和培养。如果只顾生产出越来越多的产品，而人们的生活水平没有提高，人们的文化教育水平没有提高，这就不符合生产的目的。根据这个朴素的道理可以了解到，对社会的每一个成员来说，重要的不是社会的产值增长了多少，而是如何使社会产值的增长被用来改善人民的生活，使人民能够过富裕的生活，有较高的文化教育水平，使人民得到社会更多的关心和培养。

如果说生产的目的是让人们能够过上更好的生活，包括物质生活和文化生活，那么，人们对生活的质量又是怎么理解的呢？难道生活质量仅仅意味着吃穿不愁吗？假定生活质量高可以用“幸福”二字来表示，那么“幸福”又是对什么而言呢？

在传统观念中，“幸福”总是同收入多联系在一起的，似乎收入越多就越“幸福”。随着经济发展和收入水平的普遍提高，“幸福”便有了新的含义，生活质量也有了新的含义。实际上，物质产品越丰富，人们对文化生活的要求就越高，人们不仅要求有物质上的舒适，而且要有良好的环境，有健康的身体，有精神生活的享受。物质产品丰富以后，人们的时间观念也发生了变化。过去人们认为，财产最为重要；后来人们认为，物质产品丰富后，时间比金钱更可贵。货币可以储蓄，而时间是不能储蓄的。时间的更有价值的利用，会给人们带来更多的幸福。

这一切表明，人们对生活质量的认识将随着经济发展和收入水平的普遍提高而逐渐深化。这种认识的转变同第三次分配的趋势有关，即一方面，由于人们对于生活质量的认识的深化，将促使他们重视文化、教育、卫生、环保、福利、公共服务等部门的发展，并自愿地向这些部门捐赠，以便提高社会的生活质量；另一方面，随着人们收入水平的上升和可支配收入中用于自愿捐赠的部分所占比例的增长，人们对生活的意义也会有新的认识，人们将更加关心生活质量，关心社会，关心未来。

在讨论人们对生活的意义的认识时，一个重要的问题是如何让人们能在经济发展的过程中摆脱旧观念的影响，不断转变观念。这里所说的旧观念，主要是指以下两种历来影响人们的观念，一是“温饱即安，无所奢求”，二是“各人自扫门前雪，休管他人瓦上霜”。这两种旧观念不仅影

响人们对生活意义的正确认识，而且对于第三次分配也有消极的影响。

在“温饱即安，无所奢求”的观念的影响下，社会上一些人，尤其是经济不发达地区的农民，由于缺乏进取精神和竞争意识，以及既缺乏技术又缺乏市场信息，常常会满足于已经达到的虽然温饱但仍然是低水平收入的生活，似乎生活目标就在于粗具温饱，得过且过。在这种旧观念的影响下，经济就会趋于停滞，收入也难以增长，结果，不仅谈不到对高生活质量的追求，而且可用于第三次分配的收入数额也必定是很少的。

在各人只顾自己的旧观念的影响之下，社会公益事业、慈善事业等等的发展必然受到极大的限制，第三次分配的潜力也就无从发挥。不仅如此，社会经济发展的趋势是人与人之间交流、协作的增加，如果“各人自扫门前雪，休管他人瓦上霜”的观念滋长，经济的进一步发展也会受阻，这样，可用于第三次分配的收入数额是难以增长的。

因此，社会有必要针对这些情况，在经济发展过程中，让人们对生活的意义的认识不断深化，使得阻碍人们收入提高和对公益事业、慈善事业关心的旧观念逐渐消失。

二、从“重物轻人”到“以人为本”

要了解第三次分配的趋势，还应当从社会经济发展战略的角度进行分析。社会经济发展战略研究中的一个重要问题是：人与物相比，孰重孰轻？

物质产品丰富以后，社会经济发展的动力不完全是在物质上满足人们的需要，而且包括了在精神上满足人们的需要。对“精神上满足人们的需要”这一点，可以有不同的理解。

在一些人看来，自我服务就是一种精神上的享受。比如说，一个人有钱后，偏要自己动手做家务，从事体力的家务劳动，他认为这种自我服务是一种消遣，也是精神上的享受，可以满足自己“精神上的需要”。

在另一些人看来，增加文化、艺术、体育、旅游方面的消费支出是为了精神上的享受，他们会把这些看成是“精神上的需要”的一种满足。

还有一些人则认为，捐资赞助公益事业、慈善事业更加符合于自己的意向，也更加符合于“精神上的需要”的满足。

应当指出，自我服务、增加文化艺术等方面的消费支出、捐资赞助

公益事业和慈善事业，三者是不矛盾的。在同一个人身上，可能三者并存。尽管捐资赞助公益事业、慈善事业的行为还只是一部分人的自愿行动，但它会随着物质产品的丰富与收入水平的上升而呈增长的趋势。

无论是看重自我服务、增加文化艺术等方面的消费支出，还是对公益事业、慈善事业的捐赠，都应当被看成是对“重物轻人”这一传统的抵制，因为上述三者之中的任何一项都意味着要把人的需要放在首位，把提高生活质量看得比提供物质产品更加重要。从社会经济发展战略的角度来看，如果社会能够改变“重物轻人”的传统做法，由“重物轻人”转为“以人为本”，那么这就是发展战略的转变，它将对第三次分配在社会收入分配中的作用发生重大的影响。这是因为，第三次分配来自人们的一种道德信念、社会责任感、同情心等，或者说，第三次分配以对人的关心和培养作为出发点。社会经济发展战略转变以后，社会发展趋势与第三次分配的趋势基本上是一致的。社会越是关心人，第三次分配在实现转变后的社会经济发展战略中所起的作用也越大。社会上出于道德信念、社会责任感、同情心等而自愿捐赠的人越多，意味着道德力量在社会收入分配中所起的作用越大，第三次分配的影响也越大。

社会从“重物轻人”向“以人为本”的转变，并不等于社会今后不再致力于物质产品的增产，也不等于社会今后只注意如何满足人们的“精神上的需要”，而不再注意如何满足人们的“物质上的需要”。实际情况将是这样的：社会仍将致力于物质产品的增产，致力于满足人们不断增长的“物质上的需要”，但由于社会越来越重视生活质量的提高，越来越重视对人们不断增长的“精神上的需要”的满足，因此，不宜采取“重人轻物”的提法，或者说，“重人轻物”实际上是一种不很确切的说法，“重人”不一定“轻物”，而很可能出现的是“既重人，也重物”，但“重人”指的是把关心人、培养人放在首位，而不能把单纯增加产量、产值作为主要任务，因为正如前面所说，人不是为了生产，生产是为了人，生产的目的在于关心人，培养人。“重物”的含义在于：没有坚实的经济基础、物质基础，生活质量的提高可能是力所不及的，对人的关心和培养也可能因物质条件的不足而难以成为现实，所以“重物”是为了落实“重人”而被提出的。假定把“重物”理解为“只重物”，而把对人的关心和培养置于无足轻重的地位，那就是对“重物”的一种曲解。正是在这个意义上，社会有必要从传统的“重物轻人”发展战略转变为“以人为本”的发展战略。

从根本上说，“以人为本”不仅仅是一种发展战略，更重要的是，它

应当被社会确定为必须遵守的基本原则。而且，不仅在收入分配中才体现“以人为本”，而且在社会、经济、政治、文化各种领域中都应坚持“以人为本”的原则，毫不动摇。

CHAPTER 6 MORAL CHECKS AND BALANCES IN SOCIO- ECONOMIC OPERATION

第六章 社会经济运行中的道德制 衡

6.1 Restriction and Oversight Mechanism

6.1.1 Uniting Mechanisms for Screening, Guarantee and Incentive, Restriction and Oversight

In Chapter Four, we discussed law and self-discipline. In this chapter, we discuss the relation between moral regulation and society's checks and balances in socio-economic operation via an analysis of these check-and-balance factors.

Whatever the country, government employees should be empowered as necessary to help realize government targets, but they should also be subject to restriction and oversight to prevent them abusing their power, failing in or neglecting their duties. In ancient China, systems of reviewing and supervising government officials were established and at the same time "proper salaries were paid to officials to keep a clean government." In modern times, some countries have established quite complete systems for reviewing and supervising officials, and in addition, as a way of preventing official corruption, they also "give a high salary to encourage integrity." The ancient

system and the modern one both had reasonable measures for preventing corruption in public service. Without decent conditions of service the government will struggle to attract and keep outstanding persons; moreover, poor remuneration might cause corruption among some officials, such as abuse of their powers or seeking personal benefits. However, the high salary approach has limitations. Therefore, to keep a clean government, three types of mechanism are needed: screening, guarantee and incentive, restriction and oversight, all of which are discussed in my book *Transformational Development Theory*.¹

Screening: all appointments and promotions of civil servants should be conducted by competition, which is in effect a selection mechanism. All vacancies are open, as is the competition. With such a mechanism anyone with the right qualifications has the chance to be appointed or promoted.

Guarantee and incentive: In order to keep a stable team of civil servants and solve any living concerns, when a person is employed by the government, his employment terms should not be inferior to those of people with the same level of education and working experience employed in other institutions. Also, once in service, there is a regular review system for deciding promotions and salary increases.

Restriction and oversight: The behavior and working attitude of civil servants should be supervised from every angle. They must follow the code of practice for civil servants and be punished for any violation of it. They should also be self-disciplined and expect very high standards of themselves.

The three mechanisms should be unified. The lack of any one will undermine the stability of the civil service, make it difficult for their initiative to come into play, and make it harder to root out corrupt practices.

From this we can further explore the sources of government employee power. According to *Comparative Economic Systems* co-authored by Egon Neuberger and William J. Duffy,² power has four

basic sources: tradition, force, ownership and information. They are not necessarily incompatible and the decision makers can get power from more than one source.

Tradition: Tradition is custom, the earliest base and source of power. Before countries were established, tribes or similar organizations ruled, their power coming from tradition and custom. After countries took shape, community-level institutions probably still relied on tradition for their power.

Force: Force is also violence. Rule of government relies on force and its power is also built on this foundation. Under an autocratic regime, government power is certainly based on force or violence, but even democratic government needs force or violence to take power. The difference between the two is whether, when wielding the force or violence, the government must follow a certain procedure and whether there are restrictions on the government before and after using force or violence.

Ownership: Ownership is possession of economic power. Without economic power as its base, or without clear ownership of scarce production factors, a government may either not get power or lose the power it once had. This is particularly obvious in a market economy.

Information: Information is a special kind of resource. Those who have it will be in a more advantageous position than those without it, and thus win power.

The analysis of power sources drives home the need to build a restriction and oversight mechanism for government employees. Since power might come from tradition or custom, we should really know the nature of the tradition or custom, and how rational they are. Citing tradition or custom when taking power similarly needs restriction and oversight; even more important is restriction and oversight when power comes from the force mechanism, including restriction and oversight. This is because the "force-to-power-to-force" situation can be divided into two parts. The first is "force-to-power": i.e., winning power through violence; the second is "power-to-force,"

i.e., using force or violence once in power. If restriction and oversight applies not to the getting of power but only to the procedures and circumstances for government use of force, this is both woefully inadequate and neglects an important duty of restriction and oversight.

Restriction and oversight is of great importance in the areas of ownership, control of information and the exercise of power. This is a base from which government can exercise its power on the economy. If we want to restrict and supervise the exercise of power by government employees, it is necessary to increase transparency and keep the public informed about the extent of government ownership, information resources, and monopoly. This openness will benefit efficiency in restriction and oversight. A further point is that oversight by public opinion is also a counter to abuse of power. Power should be exercised in line with the government code of conduct, and the key to oversight by public opinion lies in checking whether government and its employees behave in conformity with the code of conduct.

It is not by moral norms, but by law that power is bestowed on government and its employees. Abuse of power is firstly a violation of law and then a violation of moral norms. Therefore, to restrict and supervise the behavior of government and its employees, both law and self-discipline are indispensable. At a time when old systems are being replaced by new, because of over-rapid political change or because economic activity leaps ahead while legal construction lags, a policy or legal vacuum appears, and there may be no legal base for restriction and supervision of government and its employees. In this situation, restriction by moral norms and supervision by public opinion become exceptionally important.

6.1.2 Moral Restriction and Limiting of Power

Limiting the powers of government and its employees means that anyone in a government post should exercise power under restriction

and oversight, in order to prevent abuse of power or exploiting it for personal gain. To do this, the exercise of power should be standardized and transparent. For example, procedures should be strict and open to public scrutiny. All should be handled in line with procedures, not creating new rules or delays, not sitting on hands. In this way it will be possible to reduce the incidence of exceeding powers.

From a broader view, the exercise of power is inseparable from a certain macro-environment and organization. The famous philosopher Bertrand Russell expounded in his influential book *Power: A New Social Analysis*³ that power must be exercised within an orderly structure and in an organized manner. Deng Yong, summarizing Russell's argument, said that all power relies on orderly structure and must be run within this structure. This orderly structure is what we call organization. When organization falls apart, it leaves the scattered individuals with no power to speak of. Where there is organization, power can emerge. According to Russell, an organization is a group of people who gather together and act for the same goals; therefore the birth of power must be connected with this grouping for the same purpose. He makes the distinction between traditional power and newly won power: the former has the force of tradition behind it and is therefore more dependent on public opinion; the latter, including power won by arms, is a power united around a particular new doctrine, manifesto or sentiment. Its salient feature is that a new faith replaces an old one.⁴ Deng's conclusion of Russell's argument clearly reflects this point: Since power comes from and resides in organization, restriction and oversight of power is inseparable from restriction and oversight of the organization by society, and that of its members by the organization itself.

The restriction and oversight of organizations by society means: Since an organization is a group of people gathered for the same goals, society should have restriction and oversight on how the organizations are formed, what power they possess and how they

exercise it, lest they harm public interests for sake of their group interests in this process. Restriction and oversight of its members by an organization means: Since those who exercise power are members of an organization, the organization should have restriction and oversight on how they exercise that power, lest its members' personal interests harm those of the organization as a whole. The restriction and oversight of the organization by society and that of its members by the organization itself are two aspects of restriction and oversight, neither of which should be neglected.

Now let's discuss the relation between abuse of power and information as a special resource. Possession of information is hugely significant. If the person concerned is given sufficient information it helps reduce risk in his conduct and may help him gain by it. The value of information lies in accuracy, timeliness and usability. Those in power enjoy a special and even monopolistic position of getting and giving information, so their privileged access may allow them to profit by having such information or by providing it to others. Monopoly on information creates opportunities for abuse of power. That is to say, abuse of power often occurs when competition is forbidden or when the terms of competition are unfair. In a certain sense, competition is an effective counter to the abuse of power. This illustrates the necessity of the open competition mechanism in restricting and supervising the exercise of power.

Restriction and oversight can be prevented from playing its role effectively by factors such as confused concepts, muddled standards of right and wrong, mistaken values and distorted mentality. Such phenomena are closely linked to the long existing official-oriented outlook and reality, as illustrated in such folk sayings as "high official with absolute control over those below," "no matter how high your rank, direct control is best," "use your power before it expires." These comments have deep social roots: they tell us that it is far from enough to rely purely on establishing a mechanism for restriction and oversight of government employees. To make the mechanism

effective, we need to explore more deeply in search of a social method of checks and balances.

It is undoubtedly essential to punish whoever abuses power, but it is similarly essential to establish a compensation system for victims of the abuse. This would amount to a restriction on power, since potential power abusers would probably refrain when considering the possible penalties, including economic compensation (state compensation will be calculated separately and here it solely refers to compensation made by the power-abusers) payable to the victim out of their own pockets. Although the punishment (including compensation) would still have limitations in practice, such a mechanism is better than not having it. Oversight of government employees should include supervision of how the compensation system is put into practice.

After these discussions, we can return to the topic of regulation by morality. Government employees need moral restriction and inspiration. As discussed previously, moral restriction is manifested in self-discipline, whilst moral inspiration is displayed as sticking to and promoting the spirit of devotion, serving the public and dedication. Now we need to discuss several questions: Since power relies on organization and the macro-environment, how then to get morality to play a role in the inner workings of an organization, and make restriction and oversight on the organization and its members more effective? How to make morality play a role in the macro-environment so that more people will be concerned with the issue of checks on power, and so that the issue of restricting and supervising the exercise of power becomes a focus of public opinion?

Those questions go beyond the self-discipline of government employees; they pertain to the self-discipline of an organization on which power is based. According to Russell, an organization is a group of people acting for the same goals. The self-discipline of an organization means its individual members should exercise restraint on themselves in order to achieve their common purpose and no

member should be allowed to hinder it by abusing power. Self-discipline of an organization is equally important as individual self-discipline. The organization should behave itself and its behavior should never conflict with its purpose. This is a manifestation of moral restriction. The existence of norms for an organization's conduct and its behavior conforming to a certain code constitute the premise and guarantee of normalizing the behavior of its members. For them, dismissal from the organization for abuse of power terminates their road to power.

From the macro-environment perspective, to prevent government employees abusing power or using it for personal gain, the public's involvement in oversight is necessary. But can the public be free of fear from those in power and their possible revenge? Can they speak boldly in defense of justice? Dare they take on those who abuse power? This can be seen as a question of the national caliber as a whole. There are always people in society who, motivated by the public interest, reveal abuses of power by government employees, but if this is an act of just one person with a grievance, it is not enough to constitute public oversight. The person is likely to become isolated since many would keep their distance despite admiring him at heart. If more and more people, in the public interest, take on government employees who abuse power, this would reflect an improvement of national caliber as a whole. Only when this happens can public oversight be effective. Therefore, we cannot neglect the role of morality in improving national caliber or its role in making effective public supervision over those with power.

In discussing the role of morality in the restriction and supervision of power (including the self-discipline of those exercising power and, in the public interest, the public's oversight on them) there is another question to be clarified, namely this: even if government is the manager of social order and regulator of the market, does this mean it can place itself above society? It must be said, it's not right to regard government as a manager in a superior position to society. If

such is the prevailing opinion, building a mechanism of public restriction and oversight of government behavior becomes problematical. A society is formed by the public and the public needs social order. As the keeper of social order, government is responsible for setting standards of behavior for all(including government employees) in accordance with law, established procedures and the protection of people's legitimate rights. But this does not mean it can set itself above society. If it thinks itself so or is regarded as so, this can only lead to abuse of power and damage to socio-economic order.

壹 约束与监督机制

一、筛选机制、保障与激励机制、约束与监督机制的统

—

本书第四章已经就法律与自律问题作了分析。在这一章，准备从社会经济运行中的制衡因素的角度来讨论道德调节与社会制衡之间的关系。

在任何国家，一方面要赋予政府官员必要的权力，以便他们实现政府的目标；另一方面又要对这些官员进行约束和监督，以防止他们滥用手中的权力或渎职、失职。在中国古代就有对政府官员的考核制度和监督制度，同时又有“以俸养廉”的说法。在近代，有些国家除了建立比较完善的对官员的监察制度外，也以“高薪养廉”作为防止官员腐败的方法之一。“以俸养廉”或“高薪养廉”是有一定道理的。政府官员待遇偏低，可能留不住优秀人才，吸引不了优秀人才，而且还有可能使一些政府官员靠手中权力谋取私利，造成腐败现象。然而高薪的作用仍是有限的。对于政府机构工作人员，需要有三种机制：筛选机制、保障与激励机制、约束与监督机制。我在《转型发展理论》一书中对这三种机制作了解释：¹

筛选机制是指：国家公务员的任用和提升应当通过竞争，竞争就是一种筛选。筛选机制就是择优机制。职务是公开的，竞争也是公开的。这种机制能够使得一切符合条件的人都有被任用和提升的可能。

保障与激励机制是指：国家公务员在被任用以后，生活待遇应当不低于相同学历和经历的其他事业人员，以保证国家公务员队伍的稳定，并解除其生活上的后顾之忧；而且在定期考核后，有职务提升与收入增加的规范化的制度。

约束与监督机制是指：国家公务员的行为和工作态度应当受到各方面的监督，他们必须遵守国家公务员的工作守则，违者受到规定的处分；国家公务员自身也必须加强自律，严格要求自己。

上述三种机制是统一的。缺少其中任何一种机制，或者政府机构工作人员的队伍难以稳定；或者他们的积极性难以充分发挥；或者不容易消除腐败现象。

由此可以进一步探讨政府机构工作人员手中权力的源泉问题。根据埃冈·纽伯格（Egon Neuberger）和威廉·达菲（William J. Duffy）等人在《比较经济体制》一书中的论述，²权力共有四个基本的来源：传统、强制、所有权、信息，权力的这四个来源不一定彼此排斥、互不相容。决策者可以从几个来源（而不仅是某一个来源）取得权力。具体地说：

传统——传统也就是习惯。权力的最早来源以传统和习惯为基础。国家形成以前，部落或类似的组织在行使统治，这种权力来自传统和习惯。国家形成以后，基层的机构也有可能仍依靠传统和习惯取得权力。

强制——强制也就是暴力。政府的统治依靠强制，权力也是建立在强制基础之上的。专制政体下的政府权力固然依靠强制或暴力，即使在民主政体之下，政府权力同样要依靠强制或暴力，区别主要在于政府行使强制或暴力是否有一定的程序可循，是否必须按程序行使强制或暴力，以及政府在行使强制或暴力之前、之后是否受到制约。

所有权——所有权也就是指拥有经济力量。没有经济力量作为基础，没有对稀缺的生产要素的明确的所有权，可能得不到权力，或者，有了权力也会失去。在市场经济条件下，这一点尤其明显。

信息——信息是一种特殊的资源，这种特殊的资源使拥有它的人比未拥有它的人处于优势地位，并能得到权力。

对权力的来源的分析有助于理解建立对政府机构工作人员的约束与监督机制的必要性。由于权力可能来自传统或习惯，那就要分析究竟是些什么样的传统或什么样的习惯，它们的合理程度如何。对援引传统或习惯而取得的权力也同样要有约束，要有监督。更加重要的是对于来自强制的权力的约束与监督。这里包括了对政府行使强制的程序及其履行

情况的约束与监督，也包括对政府如何取得权力的过程的约束与监督。这是因为，“强制—权力—强制”的情况可以分为两个过程，一是“强制—权力”，即依靠暴力取得了权力，二是“权力—强制”，即有了权力之后就行使强制或暴力。如果不对取得权力的过程进行约束与监督，仅仅有对政府行使强制的程序及行使强制的情况进行的约束与监督，那是很不够的，而且往往忽略了约束与监督的重要职责。

至于对所有权和信息的掌握情况以及由此行使权力的情况进行约束与监督，也具有重要意义。这是政府在经济方面行使权力的凭借。如果要对政府机构工作人员在权力行使方面有约束与监督的话，有必要使政府掌握的所有权和信息资源及其垄断程度增加透明度，使公众对之了解。这种公开性有助于约束与监督的有效程度的提高。还应当指出，舆论监督的作用也是对权力滥用的抵制。权力的行使要符合政府的行为准则，舆论监督的要点在于监督政府本身以及政府机构工作人员的行为是否同规定的行为准则相符。

政府及其工作人员的权力，不是道德规范所赋予的，而是法律所赋予的。而政府及其工作人员对权力的滥用，首先是对法律的违背，同时也是对道德规范的违背。因此，要约束和监督政府工作人员的行为，法律与自律都是不可缺少的。在新旧体制交替时期，由于政治形势变化过快，或经济活动超前，法制建设相对滞后，从而在政策上或法律规定上出现某种真空，对政府工作人员的行为的约束与监督可能缺乏法律依据。在这种形势下，道德规范的约束和舆论监督就显得格外重要。

二、道德约束与对权力的限制

对政府及其工作人员的权力的限制，意味着任何一个政府职务和担任这一职务的政府工作人员在行使权力时，既要受到制约，又要受到监督检查，以免其滥用权力或利用权力谋取私利。为此，就要求权力的行使规范化、公开化。比如说，程序是严格规定的，并公之于众，一切按规范的程序操作，经办人员不得另立规章，不得拖延不办。这样就可以减少越权的操作。

从较广泛的范围来看，权力的行使与一定的宏观环境和一定的组织是分不开的。著名哲学家罗素（B. Russell）撰写过一本有影响的著作《权力论》，³阐述了权力的行使必须在有序的结构中进行，权力的行使

必定是组织化的。邓勇先生在概括罗素的论点时这样指出：权力都要依赖于一种有序结构，必须在有序结构中栖身运行。这种有序结构就是组织。当组织瓦解，在溃败后的散兵游勇之间就没有权力可言。哪儿有组织，哪儿就会产生权力。罗素把组织解释为一批因追求同一目标的活动而结合在一起的人，因此，权力的产生必然是同一群人有针对性地聚集在一起有关。按照罗素的组织观，权力可以分为传统的权力和新获得的权力两类。传统的权力拥有习惯的力量，所以更依赖于舆论。新获得的权力包括以武力形式取得的赤裸裸的权力，以及依赖于一个因某种新教义、纲领或情感而团结一致的革命的权力，其特点是新信仰取代了旧信仰。⁴对罗素论点的上述概括，清楚地反映了这样一点，这就是：既然权力来自组织，权力栖身于组织，所以对权力的制约与监督的关键也离不开社会对组织的制约与监督，以及组织对成员的制约与监督。

社会对组织的制约与监督是指：既然组织是追求同一目标的一群人的集合，那么社会对于组织的形成及其取得权力和行使权力的过程就要有所制约，有所监督，以免组织在取得权力和行使权力的过程中为了这一群人的利益而损害公众的利益。

组织对成员的制约与监督是指：既然行使权力的人是组织中的一员，那么组织对于自己的成员行使权力的过程就要有所制约，有所监督，以免成员在行使权力的过程中为了个人的利益而损害组织的利益。

社会对组织的制约与监督，以及组织对成员的制约与监督，是制约与监督的两个方面，缺一不可。

接着，让我们再讨论信息作为一种特殊的资源同权力滥用之间的关系。信息的提供有重要意义，给当事人提供足够的信息不仅有助于减少当事人行为的风险，而且有助于使当事人获得利益。信息的价值取决于所供给的信息的准确性、及时性和适用性。掌握权力的人由于自身处于一种获得信息和给予信息的特殊地位，甚至垄断地位，这既有可能使他们在获得信息方面占有优势，并借此获利，又有可能使他们将权力的行使与信息的给予相结合，从中获利。信息垄断为权力的滥用创造了机会。也就是说，权力往往是在不容许竞争或只容许某种不正当竞争的条件下被滥用的。竞争从一定意义上说就是对滥用权力的有效抵制。这说明了在约束与监督权力行使方面运用公开竞争机制的必要性。

观念上的混乱、是非标准的模糊、错误的价值取向，以及人们被扭曲的心态，都有可能使得对权力的约束与监督起不到应有的作用。可以

说，这是与长期存在于社会中的官本位观念及现实密切有关的。“官大一级压死人”、“现官不如现管”、“有权不用，过期作废”等虽然是民间流行的语言，但却有深刻的社会根源。这反映出单纯靠建立对政府机构工作人员的约束与监督机制是远远不够的。要使得约束与监督有效，还需要从更深入的层次进行探讨，找到社会制衡的方法。

对滥用权力者的惩罚固然必要，但同样有必要的是对因被滥用权力而遭到损害的人实行赔偿制度。确立对受害者的赔偿制度，是对权力的又一种限制。滥用权力者如果考虑到因滥用权力而会受到处罚，包括对受害者的经济上的赔偿（国家赔偿另行计算，这里指的是滥用权力者的个人赔偿），他们也许在行使权力时有所约束。虽然处罚（包括赔偿）在实行中仍会有局限性，但有赔偿制度要优于缺少这样一种制度。对政府机构工作人员的监督，应当包括对受害者实行赔偿制度的情况的监督。

在讨论了上述这些之后，我们可以回到道德调节这个课题上来。政府机构工作人员需要有道德的约束与道德的激励。道德的约束体现为政府机构工作人员的自律。关于这一点，前面已经作了论述。道德的激励体现为政府机构工作人员的敬业精神、为公众服务的精神、奉献精神坚持和发扬，对此，前面也已分析过。现在要讨论的是：既然权力的行使同组织有关，也同宏观环境有关，那么，如何使道德力量在作为权力所依托的组织内部发生作用，使得对组织及其成员的约束与监督更为有效呢？如何在权力所依存的宏观环境中使道德力量发生作用，使得更多的人来关心对权力的制约问题，使约束与监督权力行使问题成为舆论所关注的焦点之一呢？

这里提出的问题已经不限于政府机构工作人员个人的自律，而且包括了作为权力所依托的一个组织的自律。罗素把组织解释为一批因追求同一目标的活动而结合在一起的人，组织的自律意味着这批结合在一起的人要为同一目标的实现而约束自己的行为，不容许组织内部任何一个成员因滥用权力而阻碍同一目标的实现。组织的自律同组织成员的个人自律一样重要。组织的自律将从组织自身做起，即组织的行为不能同组织目标的实现发生抵触。这是道德约束的体现。组织行为的规范化和组织行为符合一定的行动准则，是组织中任何一个成员的行为规范化的前提和保证。对组织的成员来说，如果因滥用权力而被组织所清洗，那就意味着通往权力的道路的终结。

从宏观环境来看，要使得政府机构工作人员不滥用权力，不利用手中的权力谋取私利，需要有公众对监督工作的参与。但公众能不能不畏权势，不怕报复，仗义执言呢？公众敢不敢同滥用权力的掌权者进行抗争呢？这可以被看成是整体的国民素质问题。这是因为，社会上总有人会 from 公共利益出发来揭发政府机构工作人员滥用权力的行为，但如果这只是个别人的义愤行为，那还不足以形成公众的监督，个别有义愤的人在社会上很可能是孤立的，不少人甚至心里佩服他，但却敬而远之。如果社会上有越来越多的人从公共利益出发，同滥用权力的政府机构工作人员进行斗争，这就反映了整个国民素质的提高。只有整体国民素质提高后，公众的监督才是切实有效的。因此，我们不能忽视道德力量在提高整体国民素质方面的作用，也就是不能忽视道德力量在发挥公众对掌权者的有效监督方面的作用。

讨论道德力量在实现对权力的约束与监督中的作用（包括行使权力的人的自律和公众从公共利益出发对行使权力的人的监督）时，还需要明确一个问题，即尽管政府是社会秩序的管理者、市场的调节者，但政府是否有凌驾于社会之上的地位呢？应当说，把政府看成是凌驾于社会之上的管理者是不正确的。如果受这种看法的支配，那就很难建立公众对政府行为的约束与监督机制。

社会由公众组成，公众需要社会秩序。政府作为社会秩序的维持者，责任在于按照法律的内容和规定的程序去规范所有的人（包括政府机构工作人员）的行为，保护人们的合法权益。这并不等于政府凌驾于社会之上。假定政府自认为或被认为凌驾于社会之上的，只会导致权力被滥用，造成社会经济秩序的破坏。

6.2 Selection and Competition

6.2.1 Psychological Factors in Selection and Competition

In socio-economic life, without selection or competition, it would be hard to give play to people's initiative and enterprise; apathy could not be overcome, society would stagnate and malpractices such as

abuse of power and wanton conduct would remain unexposed and uncontested. Public involvement in supervision is inseparable from enthusiasm for achieving public targets and public interests. It's hard to imagine someone with no concern for the public interest or enterprising spirit having any enthusiasm for getting involved in oversight of power.

The checks and balances in socio-economic life firstly rely on law and then on the self-discipline of every member of society. Self-discipline means being both restricted and inspired by a code of conduct based on moral standards. Law depends on people to make and to enforce it, and a code of conduct needs people to identify with it, accept it and observe it. Social restriction and supervision applies not only to those in power and those exercising power, but to every member of society. Even for those who don't have power, individual behavior needs to be restricted and supervised, including oversight by public opinion.

The effectiveness of restriction and oversight depends on national caliber as a whole and the function of selection and competition is to ensure improvement in this regard. However, selection must be based on equality of opportunity and on free, fair and open competition. Free competition means no human factors interfering with or restricting the competition process. Fair competition means all competitors have equal opportunities, with no individual having monopolistic or exclusive qualification. Open competition means the competition rules and relevant notices should be announced to all competitors. In general, in selection and competition, all principles should be universally applicable, no major factor should be excluded in advance of the competition and no selection should be conducted behind closed doors. To do otherwise is grossly unfair, and can do only harm to social checks and balances.

In discussing the importance of selection and competition to society's checks and balances, we should note the particular significance of equal employment opportunities and fair competition

for vacancies. Restrictions and exclusivity in occupations will cause frustration and economic stagnation. Actually, this is by no means a recent problem: In feudal times, aristocrats occupied the highest ranks and the hereditary right system was universal in appointing officials. So as to hang on to their privileges and wealth, officials employed all manner of stratagems including political marriage, etc. The result was deeper conflict between the upper class and the middle and lower classes; it also made enmity and conflict among upper class families inevitable. Whether in China or in Europe, the hereditary nature of appointment and career was socially and economically detrimental, and both took measures to break its power. In China, perhaps the best known example is the imperial examination system. In medieval Europe, the churches had enormous power, and to prevent this power being hereditary, Pope Gregory VII (1073–1085) enforced celibacy for the priesthood. As Russell observed, "When priests were married, they naturally tried to pass on Church property to their sons. They could do this legally if their sons became priests.... Therefore clerical celibacy is essential to the moral authority of the Church."⁵ Pope Gregory's decision was supported by the public, and, as Russell noted, "The laity, however, everywhere preferred their priests celibate. Gregory stirred up riots of the laity against married priests and their wives, in which both often suffered brutal ill-treatment."⁶ The public's hatred of church property becoming hereditary and absorbed into families reflected a desire for fair and open selection and competition.

Increased social mobility, including both horizontal and vertical mobility, is an important measure for opening up job opportunities and breaking down career restriction. Horizontal mobility means that people may choose among regions, sectors and enterprises for occupations and positions that play to their strengths and can best stir their enthusiasm. Social mobility is often inseparable from competition: competition gives rise to mobility and where there is mobility there is competition. In this way, career restriction will gradually be broken down. Vertical mobility can help break free from

restriction on occupational ranks and counter attempts at appointment by right of heritage. Apart from functioning to arouse enthusiasm, vertical mobility challenges those who occupy high government positions by virtue of inheritance and social rank. In China's imperial examination system and the European Church, personnel promotion regardless of family background helped account for the longevity of those institutions in their respective historical conditions. It was an important breakthrough for social vertical mobility.

The cancellation of career restriction, open appointment and fair competition are undoubtedly beneficial to checks and balances in society. However, once competition is instituted there will be winners and losers, usually a very few winners but many losers. The losers may not see the winners as better in every aspect than themselves; they may think the selection is unfair to some extent and complain that competition is still strewn with obstacles. Their complaints are not always unfounded. However, even if one loses, at least one knows that even imperfect selection and competition is way better than none at all, and that the conditions are being created for improving competition and realizing true fairness. From the complaints of the losers we may discover that in addition to the obstacles in selection and competition, people's psychological barriers cannot be overlooked either. Such barriers mainly present as lack of enterprise and competitive sense, apathy or willingness. Something else to bear in mind is that systemic obstacles may make people pessimistic and disappointed, aggravating their mental burdens. This is because when people experience unreasonable restriction on selection and competition, they will feel that hard work will bring little reward. As a result, the enterprise and competitive sense they once had will dwindle almost to nothing; apathy will increase and even end up as fatalism.

The difficulty in selection and competition should get attention. To those competing for employment, equal opportunity may seem simply a promise for the future. For example, according to law,

occupations should be open to anyone suitably qualified, any unwarranted exclusivity is forbidden, as is any career or job monopoly created by the privileged. The law cannot guarantee that a particular position will go to the best qualified candidate, but what it can guarantee is that it will not go to an unqualified person. Law can make rules on unfair competition, but it cannot guarantee the accuracy of selection. Selection, after all, has a rather high degree of freedom, which consequently leaves room for regulation by morality.

Set procedures should be drawn up for the opening up of occupational opportunities, selection and competition. To act according to established process is very important for removing systemic and psychological barriers in selection and competition. Open selection and putting competition on a procedural footing calls for the following: The job description and requirements should be made public in advance so candidates can apply on this basis; the competition process should be open and fair; the selectors should have no bias for or against any candidate, choosing the most suitable person on the basis of the original criteria. All of the above should be subject to oversight. Provided selection and competition are put on a procedural footing and are monitored, the selection will produce better results and the psychological barriers will gradually be erased.

6.2.2 Legal and Moral Constraints in Selection and Competition

Now let's go a little deeper into the issue of selection and competition.

To make selection and competition fair and orderly, it is necessary to legislate on the rules of selection and competition and on monitoring the execution of these rules. Law is used to constrain those who would abuse their power and damage the rules, as well as to constrain the candidates and selectors. But as mentioned above, law is

only able to prevent the exclusion of qualified candidates from competition: it cannot guarantee that a particular post will go to the most qualified person, which boils down to the fact that, in selection and competition, legal constraint is necessary but not enough by itself.

An enterprise will serve as example. For ongoing efficiency increase and development progress, an enterprise must bring its outstanding personnel to the fore. Law cannot guarantee it. Managers can make all manner of rules to govern personnel selection, recruitment, dismissal, etc. They are undoubtedly useful but cannot guarantee that the best personnel are appointed to important positions. Why should this be so? It is because in daily life, including that of enterprises, the phenomenon of "mediocrity rising to the top" is not uncommon. In other words, the excellent do not stay long whereas the mediocrities stay. This is incompatible with fair competition. It causes society to lose its vigor, enterprises to become moribund and inefficient, and it may lead to disunity and discord. On top of this, promotion of mediocrities means that social operations lack element for check and balance, undermining the effectiveness of restriction and oversight.

Why is it that the mediocre rise to the top in some workplaces? I looked at this issue in *Transformational Development Theory*.⁷ Generally speaking, the phenomenon has to do with the incompleteness of mechanisms for competition and mobility. The less complete these things are the more serious and intractable the problem will be. Therefore, it would be worthwhile to do broader and deeper studies on how to conduct effective personnel selection, how to bring excellent talents to the fore rather than allowing them to be overlooked, excluded, driven out or attacked; and on how to fully deploy the competition mechanism in selecting and appointing personnel.

To make sure that more people obtain work more suited to their talents through fair competition and that all can use their abilities to the full inside an enterprise, recruiters have to know more about their

potential employees, and job-hunters and job-changers have to understand the vacancy and relevant duties in greater detail. On this matter the law seems impotent, because it only creates fair and open conditions for selection and competition, defines the boundaries within which selection and competition activities must remain, but it cannot ensure that employers will select the most suitable persons, nor can it guarantee that those competing will find the most suitable employers. It only tells both sides of the selection process that they should understand and obey the law and have a duty to resist and disclose any violation, but it cannot guarantee that those selecting will get the most suitable people or that job candidates will find the most suitable employers. Regulation by morality is the only thing that can fill the gap, and its role in selection and competition is truly multifaceted.

Firstly, we will discuss the existence of moral restriction and the necessity for it. In selecting talented people, moral restraint applies to selectors and candidates alike. The selectors should follow norms recognized by society, behave with justice, appoint on the basis of merit and never be swayed by selfish interests. Candidates should also follow the norms, be honest and trustworthy, not resorting to deception. In other words, both sides should be self-disciplined in the process of selection and competition to guarantee its effectiveness and orderliness. Although this guarantee is not compulsory, provided all concerned can restrain themselves according to moral standards, the abuses and shortcomings of this process will diminish and ultimately disappear.

Regulation by morality is also reflected in the selectors' and candidates' own moral inspiration. As mentioned above, self-discipline encompasses personal moral restriction and moral inspiration. Since the selection and appointment of talented personnel is highly pertinent to the future efficiency and prospects of the enterprise, then the selectors should approach their task with a sense of responsibility and dedicated spirit, and thereby do a good and conscientious

recruitment job. The dedicated spirit will allow selectors to do a better job and better meet the needs of the enterprise. As for the competing candidates, they also need their moral inspiration. Since they see the process as an opportunity to find a suitable enterprise, they should treasure it, display their enterprise and down-to-earth spirit, be unafraid of challenges and not fixated on ephemeral reputations. If they have these qualities, even if they lose out more than once, they will not lose heart and give up; they will keep on going.

Corporate culture in the workplace is very important for harmonious interpersonal relations, but its role may be even more important in selection and hiring, increasing understanding between people and promoting communication and trust between selectors and aspirants. It cannot totally eradicate the rise of the mediocre, but it can help an enterprise find talented people, know everyone's strengths and weaknesses, keep the management tier in the picture as to how things stand below, and thereby reduce the rise of the mediocre. Building corporate culture is a product of regulation by morality.

In selection and competition, "unreasonable but not illegal" conduct is frequent. It is impossible to punish such conduct since there is no legal basis to do so. That does not mean they are not subject to moral judgment nor does it make it unnecessary to use regulation by morality to improve personnel selection and appointment in the enterprise. The role of regulation by morality in this respect cannot be replaced by law. If we look at issue from the higher vantage point of building check-and-balance mechanisms for socio-economic life, then we will have a deeper understanding of the significance of an enterprise's corporate culture.

贰 选择与竞争

一、选择与竞争中的心理因素

在社会经济运行过程中，如果没有选择，没有竞争，不仅人的积极性、进取精神、创业精神不可能发挥出来，惰性不可能被克服，社会必定出现停滞和僵化，而且权力被滥用及掌权者肆意横行等丑恶现象也不可能受到抵制和被揭露。公众参与对权力的监督，是与公众有参与公共目标、公共利益实现的积极性分不开的，也是以公众具有进取精神为前提的。不能设想一个既不关心公共利益，又不思进取、创业的人会有参与权力监督的积极性。

社会经济运行中的制衡首先要靠法律，同时要依靠每个社会成员的自律。自律就是以道德规范所形成的行为准则来约束自己和激励自己。法律依靠人们制定与执行，行为准则则需要人们的认同、接受与遵从。社会上的约束与监督，既是对掌权者、权力行使者而言，也是对每一个社会成员自身而言。即使不是掌权者，同样需要有对个人行为的约束与监督，包括舆论的监督。

约束与监督的有效程度取决于整体国民素质，选择与竞争的作用在于保证整体国民素质的提高。但是，选择必须是机会均等条件下的选择，竞争必须是自由的竞争、公平的竞争、公开的竞争。竞争的自由性是指竞争过程中不应受到人为因素的干扰和限制。竞争的公平性是指参加竞争的各个主体的机会是均等的，不存在垄断性的、排他性的竞争资格。竞争的公开性是指应该向一切可以参加竞争的主体公布竞争的规则和竞争的应知事项。总之，对选择与竞争而言，原则应普遍适用，不能事先就把某些主体排除在竞争活动之外，不能把“选择”关闭在黑箱中操作，否则就是最大的不公平，对社会制衡只有弊而不利。

在讨论选择与竞争对于社会制衡的重要性时，应当注意到，就业机会的均等和职位的公平竞争尤其重要。职业的限制、职业的排他性，只能挫伤大多数人的积极性，引起经济的停滞、僵化。实际上，历史上早已注意到这样的问题。封建时代，贵族占据了社会的高级职位，世袭制渗透到政府官员职务的安排之中。他们为了保住世袭的地位和财富，采取了各种手段，包括政治性的联姻。其结果，不仅社会上层与中下层之间的矛盾加深了，而且在社会上层，家族之间的仇恨与冲突也难以避免。无论在欧洲还是中国，职位的世袭化和职业的世袭化都给社会经济带来了危害。为了打破这种职位和职业的世袭制，封建时代的欧洲和中国也都曾采取过一些措施。在职位的非世袭化方面，中国的科举制度所起过的作用是人所共知的。在欧洲，中世纪的教会拥有巨大的权力。为

了制止教会权力的世袭化，教皇格雷高里七世（Gregory VII，1073～1085年）强行贯彻僧侣独身主义。正如罗素所说，“僧侣们一旦结婚之后，他们自然企图将教会的财产传给他们的子嗣。假如他们的子嗣当了僧侣，那么他们更可以进行合法地授与……僧侣的独身对于教会的道德权威来说是必不可少的。”⁵格雷高里七世的决定当时是受到民众的支持的，所以罗素接着评论道：“俗众到处渴望他们的祭司过独身生活。格雷高里煽起俗众暴乱用以抵制结婚的祭司和他们的妻子，这时僧侣夫妻经常遭到令人发指的虐待。”⁶不管怎样，民众对教会财产世袭制与家族化的痛恨，反映了他们对于选择与竞争的公平性和公开性的希望。

实际上，促进职业机会开放和打破职业限制的重要措施是增加社会的流动性，包括水平的流动和垂直的流动。社会的水平流动使人们可以在地区、部门、企业之间选择最能发挥自己长处的岗位，以调动他们工作的积极性。同时，社会流动与竞争往往是不可分的，有竞争，就会促进社会流动；有社会流动，竞争就是必然的，于是职业的限制将被逐渐打破。社会的垂直流动则可以使人们摆脱职业的等级限制，抵制想把职位世袭的企图，它除了在调动人们的积极性方面有更大的作用而外，还向一切依靠职位世袭和等级制而占据政府高位的人提出了挑战。中国的科举制度和欧洲教会的不问出身而提拔教职人员的制度在当时的历史条件下之所以长期维持，正是由于在社会的垂直流动方面有重要的突破。

职业限制的取消、职位的开放和公平竞争，对社会运行中的制衡无疑是有利的。但一旦进行竞争，必定有失败者和胜利者，而且胜利者可能是少数，失败者是多数。失败者中不少人并不认为胜利者在各方面都优于自己，他们会认为选择有欠公正，也会抱怨竞争中仍存在种种障碍。这种抱怨不一定没有根据。然而，即使是失败者，至少可以知道有选择与竞争要比没有选择与竞争好得多。这就为改善竞争状况和真正实现公平竞争创造了条件。从失败者的抱怨中还可以了解到，除了在制度上可能存在着对选择与竞争的各种障碍以外，人们心理上的障碍也是不可忽视的。心理上的障碍主要表现为个人缺乏进取精神和竞争意识，或存在惰性，甘愿放弃被选择的机会。同样不容忽视的是，制度上的障碍还会导致人们产生悲观失望的情绪，加重了他们的心理负担，这是因为，当人们感到制度上存在着对选择与竞争的不合理的限制时，他们会感到即使个人付出很大的努力，但收效甚微，于是原有的进取精神和竞争意识就减退了，几乎消失了，惰性将随之增大，甚至最终产生一种听

天由命的思想。

选择与竞争本身的难度也应当引起注意。机会均等对于职位的竞争而言，很可能停留在一种承诺之上。比如说，通过法律可以规定职位向一切有资格的人开放，禁止任意的排他性，禁止有特权的人造成某种职业的垄断、职位的垄断。但法律并不能保证最有资格获胜的人一定能取得某个职位，法律只能保证没有资格的人不可能取得这个职位。法律对竞争的不正当性可以作出规定，但法律对选择的准确性却无法作出保证。选择毕竟有相当的自由度，这就给道德调节留下了空间。

无论如何，职业机会的开放以及职务的公开选择与竞争，应当程序化。一切按规定的程序办事，对消除有关选择与竞争的制度障碍和心理障碍是十分重要的。职务公开选择与竞争的程序化主要包括以下内容：需要什么样的人来填补什么样的职务空缺，应当事先按一定程序公布，以便人们在了解情况之后参加竞争；被选择者参与竞争的过程应当公开、公平；选择者对于参加竞争的被选择者不应抱有偏见，而应当按照原来规定的标准来挑选合格的人。所有这些都应当受到监督。只要选择与竞争能够程序化并受到监督，那么不仅选择的效果会改善，而且人们对选择与竞争的心理上的障碍也会逐渐消除。

二、选择与竞争中的法律约束与道德约束

让我们对选择与竞争问题再作一些探讨。

为了使选择与竞争公正有序，应当制定有关选择与竞争规则的法律以及监督这些规则实施情况的法律。法律对那些滥用权力来破坏选择与竞争规则的人进行约束，也对一切参加选择与被选择的人、参加竞争的人进行约束。但正如前面已经指出的，法律能做到的是不排斥有资格参加竞争的人参加竞争，法律无法保证让最能胜任的人在竞争中胜过其他人。这就是说，选择与竞争之中，法律约束是必要的，但仅靠法律是不够的。

不妨以一个企业为例。为了使企业不断提高效率和不断发展，要让优秀人才脱颖而出。如果仅仅依靠法律，则无法保证做到这一点。企业管理中也可以制定若干规则，如人员选拔规则、人员录用规则、人员辞退规则等，这些规则当然有用，但依旧不能保证优秀人才在企业中一定得到重用。为什么这么说？因为在日常生活中，包括在企业日常工作

中，经常可以发现一种不正常的情况，这就是“庸才沉淀”。“庸才沉淀”是指：在一个单位内，优秀人才留不住，平庸之辈往往留下来了。“庸才沉淀”与公平竞争是不相容的，它使得社会失去生气，使得一些单位失去活力，暮气沉沉，效率低下，而且会产生离心离德现象。不仅如此，“庸才沉淀”还使得社会运转中缺乏制衡的因素，使得约束与监督机制不发生作用。

为什么一些单位内会出现“庸才沉淀”？对此，我在《转型发展理论》一书中曾作了分析。总的说来，“庸才沉淀”是同竞争机制、人员流动机制的不完善联系在一起的。竞争机制、人员流动机制越是不完善，“庸才沉淀”现象就越显著、越不容易解决。因此，究竟怎样进行人才的有效选择，怎样让优秀人才脱颖而出而不至于被埋没、被排挤、被逐走、被打击，以及怎样让竞争机制在人才选拔和使用方面充分发挥作用，值得进行更广泛、更深入的研究。

为了使社会上有更多的人能通过公平竞争而从事更加适合自己的才干的工作，为了让一个单位内部能真正做到人尽其才，需要让用人单位对于供选择的人有更多的了解，也需要让那些正在寻找工作的人、待更换工作的人、被挑选的人对于某项工作和某个工作岗位有更多的了解。在这种情况下，法律显得无能为力，因为法律只是为选择与竞争创造公平与公开的条件，法律只是规定限界，即选择与竞争活动不得越过法律规定的范围，法律并不能保证用人单位通过对被选择者的了解而选择到最适合的人，也不能保证参加竞争的人通过对工作岗位的了解而找到更适合自己的用人单位。法律的约束只是表明，无论是选择者还是被选择者，都应当知法、守法，都有责任对一切违法现象进行抵制和揭露，但法律的约束依然不可能使选择者一定能选择到最适合的人，或使被选择者一定能找到更适合自己的用人单位。

留下的空白只能由道德调节来弥补。道德调节在选择与竞争方面的作用实际上是多方面的。

首先要讨论的是道德约束的存在及其必要性。在人才选拔过程中，道德约束既表现在选择者身上，也表现在被选择者身上。选择者应遵守社会所承认的规范，公正行事，任人唯贤，不徇私情。被选择者同样应遵守社会所承认的规范，诚实信用，不弄虚作假。换言之，选择者和被选择者都有必要在选择与竞争过程中加强自律。这是使得选择有效和竞争有序的一种保证。尽管这种保证是非强制性的，但只要大家都能以道

德规范来约束自己，选择与竞争过程中的弊端和不足就会减少，直到消除。

道德调节也反映于选择者和被选择者的道德自我激励方面。正如前面已经指出的，自律既包括对自己的道德约束，也包括道德的自我激励。既然人才的选择与使用对一个单位来说是关系到单位的效率和单位的前途的大事，那么，选择者就应当有一种责任感、一种事业心，从而兢兢业业、认真负责地把人才选拔和使用的工作做好。这就是选择者不可缺少的敬业精神。有了这种敬业精神，选择者会把工作做得更仔细，更符合用人单位的要求。至于被选择者，在参加竞争的过程中同样需要有道德的自我激励。既然他们把工作岗位的选择当做寻找更适合发挥自己才能的单位的机遇，他们就应当珍惜这样的机会，在参加竞争时充分体现自己的进取精神和务实精神，不畏困难，不图虚名浮誉。有了这种进取精神和务实精神，即使在一次竞争中失利了，他们也不会泄气、自弃，而会继续进取。

在一个单位中，文化建设对于人际关系的协调固然十分重要，但就人才的选拔和使用来说，文化建设可能还有更重要的作用，即增加人们的相互了解，促进选择者与被选择者之间的交流和信任。文化建设尽管还不可能从根源上消除“庸才沉淀”现象，却有助于单位发现人才，了解每个人的所长和所短，使下情上达，从而减少“庸才沉淀”现象的发生。而文化建设正是道德调节的产物。

在选择与竞争过程中，经常遇到所谓“不合理但并不违法”的行为。对这一类行为，不可能施以法律惩罚，因为对一种行为进行法律上的惩罚，必须有法律上的充分依据。既然这一类行为并不违法，所以施以法律惩罚的依据不足。但不施行法律惩罚，不等于不进行道德评价，更不等于不需要采取道德调节方式来改进一个单位的人才选拔和使用工作。道德调节在这方面的作用是法律无法替代的。如果我们把选人和用人的问题提到建立社会经济运行中的制衡机制的高度来认识，那么对一个单位的文化建设的意义也将有更深入的了解。

6.3 Belief and Social Check and Balance

6.3.1 Understanding Belief

Check and balance in social and economic running also involves the issue of belief. This is both an important component of moral regulation and an important factor for effective regulation. It is inseparable from politics and from economic development.

In some senses, belief is a question of loyalty, but it doesn't mean a person with belief must be loyal to a specific person, family or clan. In feudal society, the loyalty of a subject to the monarch and his family or clan, that of a subject to his lord and his family or clan, and that of a servant to his master, might or might not have something to do with belief. Loyalty in those situations was basically a consequence of control by power, involving some political or economic benefits, and might also involve a ritual or pledge. However, in this analysis of social check and balance, the loyalty we refer to is closely linked to belief, and basically does not involve control by power or personal benefits. Belief means loyalty to an ideal, a principle of how to conduct oneself and treat others, a moral principle, etc. For a person to abandon his original belief and loyalty is to abandon long held ideals, principles and morality.

Belief-linked loyalty is a product of personal volition and thus can be called loyalty to one's own belief. Talking about Confucian culture, Du Weiming remarked, "Unfortunately, what has actually affected China's politics and culture is not the concept of 'be a saint to be a king,' but that of 'be a king to be saint.' The two are completely opposite. In the former, only those of outstanding morality and dignity were qualified to be political leaders. In the latter, after becoming a political leader, having won power through political struggle, uprising or violence, he does not require democratic loyalty, but loyalty in politics and morality...I believe that if morality and politics are combined and used well, it will be obvious which one has precedence. Of course, morality comes first and politics second. If the order is reversed an extremely harsh method of control is likely to emerge."⁸

This passage reflects a fact: There is first belief based on one's own volition and moral loyalty, and after that comes political loyalty; this is, after all, consistent with the humanistic Confucian tradition. If loyalty to politics based on force comes first and then unity of thinking and loyalty to morality, this not only goes against the humanistic Confucian tradition, it is a form of tyranny. Such loyalty is the total opposite of the social checks and balances under discussion.

Setting aside the topic of Confucian culture, let us now discuss how belief and loyalty to a faith are related to social checks and balances. Generally speaking, a belief based on some ideal, principle or morality is always connected to corresponding behaviors. A person with belief will act in some way to show his belief, which will develop into a spiritual drive for socio-economic development. A person is more likely to be optimistic and enterprising, more composed and braver in the face of challenges. Inspired by his belief, he believes his ideals, principles and morality are bound to win and the victory will benefit society. This is the spiritual power that gives courage to people of different regions, occupations and classes and those dedicated to the public interest to resist authorities whose conduct they deem at odds with moral standards. Without their belief or loyalty to it, they would perhaps not risk offending those authorities.

Therefore, moral check and balance in socio-economic life firstly means that those who are loyal to their beliefs will, from their commitment to their ideals, principles and morality, and based on self-restriction, will resist and fight authorities that go against moral standards. Such resistance and fight will greatly strengthen society's restriction and oversight mechanism. The belief we are talking about here includes religious faith but it is more than that. It also includes adhering to a certain social ideal or political belief, demanding change in unreasonable social and political structures and insisting on certain principles or morality, etc. For those who have belief, belief and practice are mutually constraining and intermingled. Belief encourages practice, which in turn justifies and enriches belief.

Without belief, practice will lack spiritual support, lose its purpose and not endure. Without practice, belief will remain just that and finally become empty and illusory. Society is not short of people who practice a lot but have no belief, and vice versa, but there are still many who have both. They care about the public interest and participate in public political life, and this adds an element of moral check and balance into socio-economic life.

There is a broader understanding of belief, one that draws in some life philosophy. Such belief might be combined with religious faith; i.e., someone with a particular life philosophy might simultaneously be a pious follower of a religion. Or, a person might not follow a particular religion, but simply in the belief that his life philosophy is right, will conduct himself and treat others in light of that conviction. Whether he is a religious person or not, as long as he believes in this life philosophy, he will have spiritual drive and confidence, determination and courage in life, which is also beneficial for social check and balance.

6.3.2 The Role of Belief in Social Checks and Balances

The conclusion that belief is beneficial for checks and balances in socio-economic operation is not drawn only from an individual perspective. From such a perspective, if a person acts according to his belief, he will use that belief as his yardstick for deciding right and wrong; he will make demands of himself and judge others by it. This brings an element of check and balance into socio-economic life. It is possibly a strengthening of self-discipline and possibly resisting and fighting abuse of power. We can describe this as social moral check and balance, i.e., producing social check and balance by relying on moral force. Moreover, when the law stipulates that abuse of power is a violation punishable under law, moral check and balance might

prompt law to pay greater heed to the exposed abuse of power, and to whether those responsible for restriction and oversight have dealt with it according to law. In this way, moral check and balance is combined with legal check and balance (i.e. legally based check and balance). Thus we can see that analysis from the individual perspective is useful and indispensable.

But the role of belief in social check and balance goes further than this. We need also explore this question from a group perspective.

As frequently reiterated, an individual is a member of one or several groups. His identification with the group(s) will, as a moral factor or spiritual support, play a bigger role in socio-economic life. We can discuss the question by separating religious belief from non-religious belief.

Religious people form a group or, more precisely, religious people join an existing religious organization. They are influenced by this group in terms of ideals, principles and morality, and their judgment of right and wrong follows the group's standards. At the same time, they have influence, albeit perhaps very weak, on group behavior. The question is: all religious groups require the believers to be self-disciplined, not to do anything against the group's moral standard, and to resist any behavior detrimental to it. If a member violates that moral standard, there would be no forgiveness, because this would adversely affect realization of group ideals and damage its image. Under such influence, the believers will be more self-disciplined and more willing to follow the guidance of common ideals, principles and morality, to resist and fight abuse of power or any behavior against moral standards. This will consequently help the social check and balance mechanism play a more effective role.

A person with belief of a non-religious nature may join an existing group or form a new group of people with common ideals, principles and morality. Once a member, his belief and behavior will influence those of other members and his in turn will be influenced by

theirs. Thus, group belief and individual belief become virtually indivisible. Although in a non-religious group the extent to which members identify with the group will vary among them, this will not prevent them, under the guidance of common ideals, principles and morality, from strengthening self-discipline and resisting any behavior counter to the group's ideals, principles and morality. Therefore, group belief and behavior play a bigger role in check and balance in socio-economic life than do individual belief and behavior.

A society whose members have no beliefs is a society without hope. Such a society will fall into disorder and there will be no social check and balance to speak of. Belief, whether of the religious or non-religious variety, is always a loyalty to some established ideal, principle or morality, a restriction on the believers themselves, an oversight on others and check and balance for society. This is summation of the role of belief in socio-economic operation.

Even in an individualistic society, a group still has obvious influence on its individual members. For example, the sense of responsibility a member feels for the group and the group's concern for individual members, are both based on a shared belief. Only with the common belief can they identify with each other. Within a group, individuals' rights co-exist with their obligations. Among individuals, a set of interpersonal relations is formed, and if the members only demand rights and shirk obligations, if they expect the group to care about them but have no sense of group responsibility in return, then they will leave it sooner or later, or the group will ultimately cease to exist even in name. The relationship between the individual and group forms a foundation from which belief plays an important role in check and balance in socio-economic life. Since the precondition of the existence and activities of a group is shared belief, and this implies the existence of order, it follows that the relation between members and group is also built on state of order. Each and every group has its own purpose, target or mission, which, major or minor, always represents a certain belief and ideal. That is to say, the effectiveness and

orderliness of group activities are ultimately built on the beliefs of its members. Check and balance in socio-economic life is carried out in the process of various groups' practicing their beliefs and ideals. Sometimes, a group also depends on the efforts or even dedication of its members to resist activities that damage social order. In practicing their beliefs and ideals, a group or its members might not be aware of its role in promoting social order, but it is nevertheless the case.

6.3.3 Reason and Belief

Groups come in many shapes and sizes. Is it true that every group has an ideal or principle? Is it true that people become members of a group because they are attracted by its ideals or principles? Is it true that every member in every group will be in step with the group in belief, be loyal to the belief and therefore willing to work hard to realize its ideals or principles? These are complicated questions. Actually, it is not just groups that are diversified: individuals join groups for different reasons: Some volunteer to join a group after careful thought; some join because they have no option; some join without careful prior consideration and just remain for some reason even though they are not completely at one with the group's ideals or principles. All this reflects the complexity of the situation. In some groups, members are loosely connected, not by a definite ideal or principle, but by leisure interests. When this is the case, it cannot be said that there is unanimity of belief within the group. Such groups can be excluded from this discussion.

Generally speaking, most groups have their ideals or principles. At the very least they will take continuous development of their group as an ideal and protecting its interests as a principle. As long as its members identify with this, they can be in step with the group and the power of belief will be born. For example, every individual is a member of a small group such as a family, a small village, a city street. A family always aspires to prosperity and a village or city street

wishes to be a peaceful and happy place to live. Individual members feel the same way as their family, village or street. Groups such as political parties, religious organizations and social organizations have more definite ideals or principles, and provided group members identify with these they will be in step. The role of check and balance in socio-economic life is connected with such identification and the group behavior that stems from this. But, irrespective of group size, does belief come first for its members, or is it reason?

In fact the two situations co-exist. When belief comes before reason, it may result in greater spontaneity, whereas reason may make belief play a bigger role in practice. When reason comes before belief, belief may become conscious and help to deepen reason. On some occasions, belief tends to come before reason; on others the reverse situation is the case. The same variance of priorities is seen in people too: it depends on the actual situation.

Whether "belief comes before reason" or vice versa, it shows that belief and reason can be combined. But in daily life we may come across "belief beyond reason" or "non-reasonable belief," situations that have no benefit for social check and balance or can even drain vitality from the society and economy and cause both to stagnate. Let us take an illustration from the planned economy that had dominated China for a considerable period. Individual rights and freedom were strictly restricted. People, in common with means of production, were allocated under a centralized plan. They had no right of free choice as regards career, home, where they lived or how they lived. Their conduct was totally subject to government arrangement. In this situation, the government took sole charge of economic risk. "Everything is arranged" meant individuals did not need to make choices or shoulder any risk. Although the living standard was very low, both unemployment and inflation were kept hidden. Despite being called the "sharing a big pot" system, people actually did not eat from the same pot: there were "different levels of pot."⁹ Even so, there was actually a pot to eat from. The term "iron bowl" did not mean

people need no longer worry about losing their food "bowls" any more, but that they would have a "bowl" provided they accepted the planned economy arrangement. Conversely, it would result in having no "bowl," having the "bowl" taken away or being dismissed from office.¹⁰ But in the eyes of those accepting the planned economy arrangement they did, after all, have "iron bowls," and the situation gave people the impression that the planned economy system was superior: it even gave rise to the idea that "sharing a big pot" and "iron bowl" equated to a socialist society. Thus was born a belief beyond or without reason. Such belief can also produce a spiritual drive, such as striving hard to safeguard the "sharing a big pot" and "iron bowl" system. But this was an unsustainable belief, being so far divorced from reality. It could not play a social check and balance role since the system it upheld was at odds with reality and hindered social productivity. It resulted in individual abilities atrophying for lack of use, the loss of willingness to take risk and absence of personal enterprise. Society lost its vitality. More serious still, under the planned economy, those who carried out the plan quotas wielded great power: the system was itself a source of power abuse. They could use their power to attack anyone trying to slip the bounds of the system. Even so, given such belief in the system, however unjustified, there was a submissive rather than resistant attitude to such abuse, blind following rather than doubt. No social check and balance mechanism could possibly take shape in circumstances like these.

To repeat: a society whose members have no belief is a society without hope. We can fill out this point: A society whose members have belief beyond or without reason is not just without hope: it is a society in despair.

叁 信仰与社会制衡

一、对信仰的理解

社会经济运行过程中的制衡还涉及人们的信仰问题。在道德调节中，信仰既是一个重要的组成部分，又是促使道德调节有效的重要因素。信仰不仅同政治不可分开，而且也同经济发展不可分开。

信仰在某种意义上是一个效忠问题。这不是指有某种信仰的人需要对某一个人、某一个家庭或家族效忠。在封建时代，臣民对君主及其家庭或家族的效忠、受分封的藩臣对分封者及其家庭或家族的效忠、奴仆对主子的效忠等，可能同某种信仰有关，也可能同信仰无关。这种情况下的效忠，基本上是一种权力支配的后果，包含着政治或经济的利益。这种情况下的效忠，还可能是一种仪式或誓约。在讨论社会制衡问题时，我们所要分析的效忠，是同信仰紧密地联系在一起的，基本上不涉及权力的支配，基本上与个人的利益无关。这是指人们对一种理想的效忠，对一种待人处世原则的效忠，或对一种伦理观念的效忠，等等。一个人，如果放弃了原来的信仰，放弃了原有的效忠，那就意味着放弃了原来曾经坚持和信奉过的理想、原则、伦理观念。

同信仰紧密联系在一起的效忠，是出于自愿的，因此可以称之为对于自己信仰的效忠。杜维明先生在谈到中国儒家文化时，曾有一段精彩的论述。他指出：“不幸的是，在中国政治文化中实际发生作用的，不是圣王思想，而是王圣思想，王圣与圣王思想是截然相反的。圣王思想认为只有具备高超道德尊严的人才当有资格当政治领袖。王圣思想指的是一个通过权力斗争、叛乱或暴力而夺权的政治领袖在当政后，不要求民主的效忠，而是要求政治及道德上的效忠……我想如果这种道德与政治的结合运用得当，何者为优先的观念应该是很清楚的，也就是道德为先政治其后。但如果情况刚好相反，就可能出现一种非常严峻的控制手段。”⁸这段话反映了这样一个事实，即先有出于自愿的信仰并有道德上的效忠，然后再有政治上的效忠，那么这毕竟还是符合儒家人文主义传统的；反之，如果先有强制性的政治上的效忠，然后再统一思想而有道德上的效忠，那不仅违背了儒家的人文主义传统，而且正是专横暴虐的统治者所施行的一种统治手段，这种所谓效忠与我们在这里讨论的社会的道德制衡恰恰相反。

现在，让我们撇开儒家文化这个主题，仅就信仰与对信仰的效忠同社会制衡之间的关系进行论述。一般说来，对某种理想、原则和伦理观念的信仰总是同相应的行为结合在一起的。有信仰的人，为了忠于自己的信仰，总要在行动上有所表现，这样就会形成社会经济发展中的一种

精神动力。有信仰的人在社会经济生活中往往有乐观精神、进取精神，而且也会比较沉着，敢于面对所遇到的困难。他在信仰的激励之下，总是相信自己的理想必胜、原则必胜、伦理观念必胜，并且认为这种取胜将会给社会带来好处。正是这样一种精神上的动力，成为社会上不同地区、不同职业、不同阶层的热心公共利益的人奋不顾身地同被他们认为不符合道德规范的掌权者抗争的力量。没有信仰，没有对自己的信仰的效忠，他们可能不会去冒犯那些掌权者。

因此，社会经济运行中的道德制衡，首先是指有信仰并效忠于信仰的人，出于对理想、原则、伦理观念的坚持，在约束自己行为的基础上，对违背道德规范的掌权者进行抵制与抗争。这种抵制与抗争大大增强了社会的约束与监督机制。

这里所说的信仰当然不仅是指宗教信仰，非宗教性的信仰也包括在内，例如对某种社会理想或政治信念的坚持，要改变某种社会政治的不合理结构，或要贯彻某种原则和伦理观念等。对于有信仰的人来说，信仰与实践彼此制约，互相渗透。信仰鼓励实践，实践印证并丰富信仰。没有信仰，实践时缺乏精神支柱，实践不可能持久，也可能没有目标。没有实践，信仰始终是信仰，而且会逐渐变得空泛、虚幻。社会上不乏只有实践而没有信仰的人，或只有信仰而没有实践的人，但毕竟仍有不少人把信仰与实践两者结合在一起。这些人对公共利益的关心和对公共政治生活的参与，给社会经济运行过程加入了道德制衡的因素。

对于信仰，还可以有一种更为广泛的理解，这就是把某种人生哲理的信奉也纳入信仰之中。这种信仰有可能同某种宗教信仰相结合，即信奉某种人生哲理的人同时也是一名虔诚的教徒；但也有可能同任何宗教信仰都无关，即信奉某种人生哲理的人并不信奉任何宗教，他只是认为这种人生哲理是正确的，待人处世都应按照这种人生哲理的要求去做，等等。不管对某种人生哲理的信奉者是不是教徒，只要他信奉了这种人生哲理，他就有了精神上的动力，并在自己的经历中依靠这一精神上的动力而产生信心、毅力或生活的勇气，这也有利于社会的制衡。

二、信仰在社会制衡中的作用

信仰之所以有利于社会经济运行中的制衡，并非仅仅是从个人的角度进行分析的结果。从个人的角度来看，如果一个人有信仰并根据自己

的信仰来行动，他将会用自己的信仰作为判断是非曲直的尺度，一方面以此要求自己，另一方面也以此衡量别人，从而社会经济运行中就增添了制衡的因素。这有可能是自律的强化，也有可能是对社会上权力滥用现象的一种抵制和抗争。可以把上述这些称做社会的道德制衡，即依靠道德力量使社会产生制衡。不仅如此，在法律规定了权力滥用是一种违法行为并应受到惩罚时，道德制衡可能促使法律重视已被揭露的权力滥用问题，监督法律的执行者是否依法处理了这种问题，于是道德制衡便同法律制衡（即依靠法律使社会产生制衡）结合起来了。可见，从个人的角度进行分析是有用的，也是不可缺少的。

但信仰在社会制衡中的作用不限于此。还有必要从群体的角度对这个问题作一些考察。

前面已经多次指出，人总是一个或若干个群体中的一员。个人对群体的认同和群体对个人的认同，将使得体现为一种道德力量或精神支柱的信仰在社会经济运行中发挥更大的作用。可以把宗教信仰与非宗教性的信仰分开来阐述。

以宗教信仰来说，有宗教信仰的人组成了一个群体，说得更确切些，有宗教信仰的人加入了已经存在的宗教组织这样一个群体。有宗教信仰的人在理想、原则和伦理观念上受到宗教组织这个群体的影响，个人的是非判断要服从这个群体的标准，同时，个人也在影响群体的行为，尽管这种影响可能是很微弱的。问题在于：任何宗教都要求信教者加强自律，不做违背本宗教的道德规范的事情，并要抵制有损于道德规范的行为。即使本宗教组织中有人违背了道德规范，也不应宽恕，因为这将使本宗教的理想的实现遭到损害，使本宗教的形象遭到破坏。在宗教组织这个群体的影响下，信教者们不仅自律性加强了，而且能在共同的理想、原则、伦理观念的指引下抵制社会上滥用权力或其他违背道德规范的行为，并同这些行为抗争，从而使社会的制衡机制能更好地发挥作用。

再以非宗教性的信仰来说，一个有非宗教性信仰的人可能参加有共同理想、原则、伦理观念的人已经组成的群体，或者联合有共同理想、原则、伦理观念的人新组建一个群体。一旦有非宗教信仰的人成为这样的群体中的一员时，他的信仰与行为会影响群体的其他成员，而群体的信仰与行为又会对他发生影响，于是群体的信仰与个人的信仰很难再分开。尽管在这些非宗教性质的群体中，成员个人与群体之间的认同程度

会有差异，但这并不妨碍他们在共同的理想、原则、伦理观念这一前提下，既加强自律，又抵制违背群体的理想、原则、伦理观念的行为。可见，群体的信仰以及由此产生的群体行为在社会经济运行中的制衡作用肯定要大于单个的个人所起的作用。

由没有信仰的成员所组成的社会，是一个没有希望的社会。社会的成员如果没有信仰，社会将变得无序，社会制衡也就无从谈起。不管是宗教信仰还是非宗教性的信仰，信仰都是对一种既定的理想、原则、伦理观念的效忠，对有信仰者本人是约束，对其他人是监督，对社会是制衡。这就是对信仰在社会经济运行中的作用的概括。

哪怕是在一个以个人为中心的社会中，个人作为这一群体或那一群体中的一员，群体对于个人的影响仍是显而易见的。比如说，个人对群体有一种责任感，群体对成员个人的关心，都建立在信仰一致的基础上，有一致的信仰才会有彼此的认同。在群体中，个人的权利与个人的义务是并存的。群体各个成员构成了一套人际关系，群体是靠成员对群体本身的信任和认同，以及成员之间的协调来维持存在的。如果群体中的成员只要求对自己权利的承认而不承认所担负的义务，如果他们只要求群体对自己关心而缺乏对群体的责任感，其结果，要么是个人迟早离群体而去，要么群体将名存实亡，甚至名亡实也亡。个人与群体之间的上述关系，正是信仰得以在社会经济运行中发挥较大制衡作用的基础。道理很清楚，因为群体的存在和活动既然是在信仰一致的前提下进行的，那就意味着有序，群体与成员个人之间的关系也建立于有序状态之中。任何群体总有自己的宗旨、目标或任务，不管这些宗旨、目标或任务多大还是多小，它们总代表着一定的信念和理想，也就是说，群体活动的有效性和有序性最终建立在成员的信仰之上。社会经济运行中的制衡就是在各个群体实现自己的信念和理想的过程中进行的。有时，群体还要依靠成员们的努力，甚至献身，才能抵制破坏社会秩序的行为。群体及其成员们在实现自己的信念和理想时可能并未意识到这对于社会制衡、对于维持社会的有序状态会有多大的促进作用，但结果却必然如此。

三、理性与信仰

群体多种多样。是不是所有的群体都会有一种理想或原则呢？是不

是所有各个群体的成员都会因群体的理想或原则对自己的吸引而成为群体的一员呢？是不是所有各个群体的成员都会同群体保持信仰的一致，都效忠于这一信仰，从而愿为群体的理想或原则的实现而努力呢？这是一个比较复杂的问题。事实上，不仅群体各不相同，而且个人参加群体的情况也是很不一样的：有的人经过思考以后而自愿参加某一群体；有的人则是不容选择地加入到某一群体；还有的人事先并未经过思考而参加了某一群体，参加之后虽然发现同群体的理想或原则有不一致之处，但却因种种原因而未退出。这些正反映了情况的复杂性。另有一些群体，是松散的，或者并没有什么明确的理想或原则，只是出于某种兴趣、爱好而组成的，这样，成员们也就谈不上同群体之间有什么信仰上的一致了。这样的群体可以不列入本章所讨论的范围。

总的说来，大多数群体总是有自己的理想或原则的，至少会把群体自身的不断发展作为一种理想，把维护群体自身的利益作为一个原则。只要成员们认同这一点，那就可以同群体保持一致，信仰的力量也就产生了。举例来说，群体之小莫过于一个家庭、一个小村庄、一条街道，一个人必定是家庭的成员、村庄或街道的居民。家庭总希望自己能够兴旺，村庄或街道总希望这里平安无事，家家安乐。家庭成员同家庭这个群体、村庄或街道这个群体在这方面是一致的。至于一个政党、一个宗教组织、一个社会团体，它们的理想或原则就更清楚了，这些群体的成员在认同群体的理想或原则的基础上，就会同群体保持一致。社会经济运行过程中的制衡作用，正是与这种认同以及由此产生的群体行为联系在一起。但无论群体的大小，究竟是成员们的信仰先于理性呢，还是理性先于信仰，这是有争议的。

其实，信仰先于理性与理性先于信仰这两种情况是并存的。信仰先于理性，可能使信仰带有更大的自发性，而理性则可以使信仰在实践中发挥更大的作用。理性先于信仰，会使信仰带有更大的自觉性，而且信仰还可以起到使理性进一步深化的作用。在一些场合，多半是先有信仰，再有理性认识，而在另一些场合，则多半是先有理性认识，再有信仰。对一些人，可能是信仰先于理性，而对另一些人，则可能是理性先于信仰。这也符合实际情况。

“先信仰，后理性”或“先理性，后信仰”都表明信仰同理性是结合的。但在日常生活中还会遇到一种“超理性的信仰”或“非理性的信仰”，这样的信仰对于社会的制衡不会有什么好处，甚至还会使社会经济停

滞，失去活力。不妨以中国在计划经济体制下的情形作为一个例证。在中国，计划经济体制曾经在相当长的时间内占据着支配地位。个人权利和个人自由在计划经济体制下是受到严格限制的。那时，个人同物质生产资料一样受到统一的计划分配，对于职业、住所、居住地区、生活方式，个人缺乏自由选择的权利。既然缺乏自由选择，个人的行为就往往是被动的、受安排的。在这种情况下，国家实际上包揽了个人的经济风险，“一切是受安排的”意味着个人既不必选择，也不需要承担风险。尽管人们生活水平很低，但社会上只有隐蔽的失业而没有公开的失业，只有隐蔽的通货膨胀而没有公开的通货膨胀；尽管“大锅饭”并非大家都在一口大锅中吃饭，而是实行着“分档次的大锅饭”⁹制度，但毕竟有“大锅饭”可吃；尽管“铁饭碗”并不意味着任何人都不愁会丢掉饭碗，而是意味着，只要顺从计划经济体制的安排就会有一个饭碗可捧，如果试图摆脱计划经济体制的束缚或对计划经济体制持有不同意见，那么，没有捧上饭碗的就不会有饭碗可捧，已经捧上饭碗的则会丢掉饭碗，包括被开除公职等等¹⁰，但对于服从计划经济体制安排的人来说，“铁饭碗”毕竟是存在的。上述这一切，就给人们一种有关计划经济体制优越性的观念，甚至使人们形成了“大锅饭”、“铁饭碗”等于社会主义的想法，于是一种超理性的或非理性的信仰就产生了。这种超理性的或非理性的信仰也能产生某种精神上的动力，如为维持“大锅饭”、“铁饭碗”制度而努力，为坚持“‘大锅饭’、‘铁饭碗’等于社会主义”的信念而努力，等等。但这样的信仰不可能持久，因为它同事实有相当大的差距；这样的信仰也起不到社会制衡的作用，因为它是在坚持一种不符合实际的体制、一种阻碍社会生产力发展的体制，它引起的结果则是个人能力的钝化、风险意识的丧失、进取精神的缺乏，社会也就没有生气可言。更为严重的是，在计划经济体制之下，由于主持和执行计划配额的人握有很大的权力，他们滥用这种权力的现象是有体制上的根源的，他们可以用这种权力来打击一切企图摆脱计划经济体制束缚的人。然而，在存在着对计划经济体制有超理性的或非理性的信仰的情况下，对滥用权力的现象实际上采取的是驯服而不是抵制的态度，是盲从而不是怀疑的态度，于是社会制衡机制也就不可能形成。

前面曾经说过，由没有信仰的成员所组成的社会是一个没有希望的社会。现在可以再补充一句，由有着超理性的或非理性的信仰的成员所组成的不止是一个没有希望的社会，甚至可以说是一个绝望的社会。

6.4. Safety Valves in Social and Economic Operation

6.4.1 Limitations of Government in Easing Social Contradictions

By the expression "safety valves in social and economic operation" it is meant that there should be an outlet for channeling conflicts and dissatisfaction before such sentiments become intensified or accumulate to the point that they can no longer be contained. That is to say, contradictions should be solved rather than allowed to build up, and discontent should be channeled rather than blocked. Society should possess internal buffering and channeling mechanisms for this purpose—in other words, safety valves.

Here, we need to explain the limitations of regulation by government on easing social contradictions and channeling feelings of discontent. Although government has the initiative in regulation, regulating when it thinks necessary and vice versa, this does not mean that government is necessarily able to regulate in an ideal manner and the result is not bound to be ideal. Regulation by government is reality-focused rather than perfect. Generally speaking, the limitation lies in the following: restricted by some subjective and objective conditions, government does not possess all the necessary facts and thus its decisions are based on incomplete information. Moreover, from the perspective of relations between government and the general public, the former takes an ideal view of its actions, whereas the latter assesses the reality and the possibilities on the basis of its past experience, making its own judgment and preparing countermeasures. Thus the actual situation cannot be as perfect as assumed by government and neither will the outcome live up to expectations. Furthermore, there is just one government but very many enterprises and people. The former, on which all eyes are focused, cannot itself

focus on every enterprise and person. Government behavior can be easily known by the public but the converse is not the case. In light of this, it is an undeniable fact that regulation by government is not in every sense ideal.

For a long time in the past, some people had the wrong idea about regulation by government. It seemed to them that whenever government tried to indoctrinate the public with a particular thought, they would accept it and the regulation would go smoothly. This view was based on two false premises: one, that the public trusts government totally, accepting any government measure as correct and in line with their interests, so whatever government says is fine by them; two, the public has no choice but to accept the government's indoctrination. That is to say, to do otherwise is not allowed, that any disagreement with government regulating measures is forbidden. So, ready or not, the public must accept the indoctrination. Obviously, these are false premises, even in the planned economy situation. Overestimating the effect of indoctrination can only get government intoxicated with itself and fall deeper and deeper in idealized delusion. It is true that government needs to explain things fully to the public before implementing its regulatory measures: Explanation of policies is a condition for making them more effective, since adequate explanation beforehand and dispelling people's doubts will indubitably help the regulatory program. However, explanation is not the same as indoctrination, which is applicable only to those whose belief in government behavior is not one based on reason. Actually, for people already in that category, indoctrination will be superfluous. Even without it they will still believe that the government is omnipotent and always right.

The side effects of indoctrination are plain for all to see. When the public are treated as passive receivers, information flows only in a top-down direction with little upstream feedback. Moreover, the information source is unitary, i.e., the public gets information from its sole provider, namely, government. In this situation, individuals only

exist as subjects of government departments. Although rather many people will not or dare not resist government measures openly, at the least they will still resist them secretly or find ways around them. As a result, the effects of government regulation will decrease.

Having understood the various limitations of regulation by government, let us specifically discuss its limitations in easing social conflicts and channeling feelings of dissatisfaction. There are three different scenarios to discuss: one, government is unaware of and gets little information about the reality of social conflicts and dissatisfaction; two, government knows something about the reality and decides to take alleviating measures, but the wrong ones; three, government knows the situation, decides on alleviating measures and these are apposite.
